LOLLIUS (2), MARCUS (*cos.* 21 B.C.), a *novus homo* and prominent partisan of Augustus, praised by Horace (*Carm.* 4. 9) for conspicuous integrity, but described by Velleius as crafty, corrupt, and rapacious. He was the first legate of Galatia (25), active in Macedonia, probably as proconsul (c. 19-18) and then in Gaul, where German raiders inflicted a defeat, capturing the eagle of a legion, but hardly causing a serious disaster. In 1 B.C. he was chosen to be counsellor and overseer of C. Caesar in the East. A bitter enemy of Tiberius, he influenced the young prince against the exile. As a result of quarrel or intrigue, however, he fell from favour, was accused of taking bribes from the Parthian king, and died before long, perhaps by suicide (A.D. 2). Lollius left enormous wealth.

R. Syme, *Roman Revolution* (1939), see Index.

R. S.

LOLLIUS (3) **BASSUS** of Smyrna has about a dozen epigrams in the *Greek Anthology*, of which one (7. 391) is a pompous reflection on the death of Germanicus, and another (9. 283 Plan.) a comment on his German expedition (A.D. 14-16). The rest of the poems are uninteresting, except for one joke (11. 72) in the manner which Martial was to perfect seventy years later.

C. Cichorius, *Röm. Stud.* c. viii. 7 (1922)

G. H.

LOLLIUS (4) **URBICUS**, QUINTUS, governor of Britain from A.D. 139 until after 142 (*JRS* xii. 66) and formerly legate of Legio X Gemina and governor of Lower Germany, built the Wall of Antoninus (q.v.) (*S.H.A. Pius* 5. 6; *CIL* vii. 1125; *Eph. Epigr.* ix. 1390). Inscriptions commemorating the erection of buildings under Urbicus come from Corstopitum (*JRS* xxvi. 264; *Eph. Epigr.* ix. 1146), and from High Rochester (*CIL* vii. 1041). He later became governor of Africa (*Apul. Apol.* 2) and *praefectus urbi* (*CIL* viii. 6705, 6706). I. A. R.

LONDINIUM (perhaps denoting 'place of Londinos', 'the fierce one'), originally stood on the eastern of two hillocks bounding the Walbrook at the mouth of the Thames. Tacitus states that at the time of Boudicca's revolt (61) it was an important trading-centre (*Ann.* 14.

33) and that at the principal towns, Londinium, Verulamium, and Camulodunum, 70,000 persons perished. Early vestiges have been found, but authority inclines against a pre-Roman origin for this considerable community.

Though originally merely a *vicus* of the Cantii (Ptolemy, 2. 3, 12), it soon became the financial centre of the province (*CIL* vii. 30 and *JRS* xxvi. 264-5), and eventually the capital, probably of Britain, certainly of one of the provinces into which Britain was subsequently divided. It was the principal road-centre, and is mentioned as a key-point in official activities. In c. 290-326 and 383-8 it was the seat of a mint, and a treasury official was stationed there (*Not. Dign. Occid.* xi. 37). The Council List of Arles calls it a 'ciuitas' and assigns it a bishop. It received at an unknown date (?326-65) the title of Augusta. Of its local divisions, a *vicinia* is known (*CIL* vii. 20).

The principal remains are subsequent to Boudicca's destruction, after which the settlement spread to the western hill. About 80 a vast *basilica* (500 feet long) and *forum*, enclosing perhaps an official temple, were built; c. 120 the town wall was built of squared stones and brick-bonders with bank and ditch or ditches. It enclosed an area of c. 330 acres, making Londinium the fifth largest town in the west. 'Traces of stone and timber foundations, mosaics, etc., are found with frequency within the walls, and there was a suburb on the south bank connected by a bridge. A serious fire seems to have occurred c. 120-30, and at various late dates bastions were added to the town wall, the river section of which was built (or rebuilt).

How far Londinium survived the Saxon invasions is the subject of controversy (see R. E. M. Wheeler, *Antiquity* viii. 290-302, ix. 443-7; *Antiquaries Journal* xiv. 254-63; *London and the Saxons*; J. N. L. Myres, *Antiquity* ix. 437-42; *JRS* xxvi. 87-92). Wheeler has ingeniously postulated a dual settlement, each community (Saxons and Romano-Britons) occupying one of the hillocks, a state of affairs for which Trier furnishes a parallel. But Londinium was certainly a town without a bishop in the seventh century (Bede, *Hist. Eccl.* ii. 3).

Complete account in *Royal Commission on Historical Monuments, London (Roman)* (1928); subsequent discoveries summarized in *JRS*. See also T. D. Pryce and F. Oswald, *Archaeologia* lxxviii (1928), 73 (the beginnings of Roman Britain). C. E. S.

LONG WALLS, THE (τὰ μακρὰ τεῖχη or σκέλη), were built between 461 and 456 B.C. to connect Athens with her ports, Phalerum and Piraeus. About 455 the Phaleric wall was replaced by a third, parallel to the north or Piraeus wall. They were destroyed by the Spartans to flute music in 404 but rebuilt by Conon in 393. The walls to Piraeus were about 4 miles long and c. 200 yards apart; the traces visible a century ago have now almost entirely disappeared. The course of the Phaleric wall is uncertain. The main road from Piraeus to Athens lay outside, the road inside being primarily military. The Long Walls were used in the Peloponnesian War to make Athens into an isolated fortress, in which most of the population of Attica could live on sea-borne provisions. The example of Long Walls was followed elsewhere, notably at Megara.

W. Judeich, *Topographie von Athen* (1931), 155 ff. (his course for the Phaleric wall is improbable); T. Lenczau, *PW* xiv, 88-9; R. L. Scrantom, 'The Fortifications of Athens at the opening of the Peloponnesian War', *AJArch.* 1938, 225 ff. T. J. D.

'LONGINUS' (*Pr.-Longinus*) is the name commonly assigned to the unknown author of *On the Sublime* (*Π. ὑψους*), owing to its long but mistaken association with Cassius Longinus. Author of two works (lost) on *oratória* (39. 1) and one (lost) on Xenophon (S. 1) the unknown, in the light of his consistent treatment of first-century problems, was probably a first-century rhetor (*fl. A.D.* 50?), with Theodorean sympathies (3. 5),

who endeavoured in *Π. ὑψους* to supplement Caccilius' early teaching on 'distinction' in style (1. 1; 8. 2). The work (despite gaps) is one of the greatest of all critical achievements. An illuminating dissertation on style, accompanied by many penetrating judgements, as well as suggestive pronouncements on critical standards and principles, the treatise is unique in its interpretation of the classical spirit, its compelling enthusiasms, its sanity, its freshness, and its unerring insight into the essentials of art. See LITERARY CRITICISM IN ANTIQUITY, 1. 5.

Texts, etc.: *On the Sublime*, ed. W. Rhys Roberts (1899); ed. W. H. Fyfe (Loeb, 1927); see also J. W. H. Atkins, *Lit. Crit. in Antiquity*, 2. 210 ff. J. W. H. A.

LONGINUS, CASSIUS (c. A.D. 213-73), eminent rhetorician, who taught (Porphyrius was one of his pupils) at Athens, and later (c. 268) became counsellor to Zenobia, queen of Palmyra, in whose service he was executed by Aurelian for rebellion. Of his philosophical writings (in Greek), *Π. τέλους* and *Π. ἀρχών*, a fragment of the former alone remains. He wrote also a *τίχνη*, of which three sections have survived (Spengel, *Rh. Gr.* i. 299-328), treatises on Homer and Homeric Problems, and the *Φιλόλογοι ὁμιλίαι*, upon which his fame as a critic rested. To him in later times the famous *Π. ὑψους* was falsely attributed. J. W. H. A.

LONGINUS, see also under CASSIUS (4), (5), and (6).

LONGUS, author of a Greek pastoral romance called *Daphnis and Chloe* (Ποιμενικά τὰ κατὰ Δάφνην καὶ Χλόην), was probably a native of Lesbos, which is the scene of his story and which has provided inscriptional evidence for his peculiar but unjustly suspected name. On the strength of style and supposed imitations he has been assigned to every century from the second to the sixth; if there is any relation between him and Alciphron, L. is more likely to be the model, and on general grounds his most probable date is the third century A.D.

Daphnis and Chloe, exposed in infancy and found in remarkable circumstances, pass their childhood together tending their foster-parents' goats and sheep. An idyllic existence, broken by occasional mishaps and adventures, is at once inspired and distracted by the bitter-sweets of love, of which in their innocence they know neither the meaning nor the remedy. Daphnis is taught the remedy, but only experiments on Chloe when they are married with the blessing of their true parents, who prove to be rich Mytileneans.

The story is exceptional both for its pastoral setting and for its maintenance of the unity of place; nevertheless L. contrives to introduce many of the incidents characteristic of the Greek Novel—piracy, war, the attentions of unwelcome suitors. The descriptions of pastoral life and country scenes are often charming, and the studied artificiality which lies behind the apparent simplicity is well concealed. Compared with the other Greek novels the tone is decadent, but the elegance of the composition has justly earned it praise and popularity.

LONGUS, see also VELIUS.

LORICA SEGMENTATA, see ARMES, ROMAN.

LOTOPHAGI, a fabulous people, living on the lotus (flower?), the effect of which is to make the eater forget his own country and desire to live in Lotus-land (*Od.* 9. 82 ff.).

LUA MATER. Cult-partner of Saturnus, Gellius 13. 23. 2 (Luam Saturni; cf. SATURNUS). Her name may be connected with *lues* and mean something like 'baneful'; she is one of the deities to whom captured arms may be dedicated and burned (*Livy* 8. 1. 6; 45. 33. 2).

LUCA, nowadays *Luca*, a town in Liguria (later incorporated in Etruria) on the river Auser (*Strabo* 5. 217). Both notices of the town before 100 B.C. are suspect (*Livy* 21. 59; *Vell. Pat.* 1. 15; preferably read Luna (q.v.) in each case). Luca was a border town of the Cisalpine province and became famous when Caesar, Pompey, and Crassus met there for their conference in 56 B.C. (*Suet. Jul.* 24, etc.). Under the late Republic Luca was a *municipium* (*Cic. Fam.* 13. 13), under the Empire a *colonia* (*Pliny HN* 3. 50). But, although a fairly important station on the Via Clodia, it is rarely mentioned until late Imperial times. E. T. S.

LUCAN (MARCUS ANNAEUS LUCANUS, A.D. 39–65) was born at Corduba (modern *Cordova*), 3 Nov. A.D. 39. His father, M. Annacus Mela, was a Roman knight and a brother of the philosopher Seneca. Mela migrated to Rome when his son was about eight months old. There Lucan received the ordinary liberal education, ending with the school of rhetoric, where he was a great success; there is also good reason to believe that he studied philosophy under the famous Stoic Cornutus. He continued his studies at Athens, but was recalled by Nero, who admitted him to his inner circle and conferred on him the offices of quaestor and augur. In A.D. 60, at the first celebration of the games called Neronia, he won a prize with a poem in praise of Nero. In 62 or 63 he published three books of his epic on the Civil War. Growing enmity between him and Nero, for which various reasons are given, finally caused the emperor to debar him from further exercise, or at least from public display, of his literary talent. Lucan recklessly joined the conspiracy of Piso, and on its disclosure was compelled to put an end to his life (30 Apr. 65). The story that he sought to win leniency by accusing his mother of complicity in the plot is probably a malicious fabrication (see F. Plessis, *La Poésie latine* (1909), 547–50).

WORKS. Lucan was a voluminous writer from early years. The titles of many of his works, both in prose and in verse, have come down to us, but nothing more than a few lines remains of any of them except the *Bellum Civile* (the title *Pharsalia* is due to a misunderstanding of 9. 985). It is in ten books, the last being unfinished. Beginning with the causes of the war between Caesar and Pompey, it carries the story beyond the death of Pompey until it breaks off with Caesar's occupation of Pharos in Egypt. The battle of Pharsalia is related in bk. 7. In all probability Lucan intended to continue the narrative to the death of Caesar, if not farther. His principal historical authority was undoubtedly *Livy*, but he probably consulted others, including Caesar. It is not his purpose to give a full account of the war. Several events are omitted, others receive only a brief perfunctory mention. He dwells at length on particular episodes, not solely for their intrinsic importance, but largely because they appealed to his emotions or offered scope for a display of his powers. There are a few glaring departures from historical truth, as when he makes Cicero, who was not present at Pharsalia, deliver a harangue to Pompey on the eve of the battle; but apart from instances of carelessness, his perversions of the facts consist mostly of a false colouring due to his Stoic and Republican bias. On the other hand, he shows some notable instances of penetrating insight.

Recent history is ill suited to be the subject of a sustained epic poem, and Lucan, by discarding (wisely, it is true) the traditional apparatus of divine interventions, made his task doubly hard. All the resources of rhetoric are enlisted to impress the reader; vehement declamation and brilliant epigrammatic utterances (*sententiae*) are everywhere in evidence. There are numerous digressions, many of them making a display of curious learning. In bk. 6, for example, we find 80 lines on Thessaly and 136 on witches, in bk. 9, 115 lines on serpents and their bites, in bk. 10, 138 lines on the Nile. In general Lucan shows an excessive fondness for the purple patch. There is much exaggeration, often absurd; bizarre effects and far-fetched paradoxes abound. Nevertheless, the poet's feeling is strong and sincere. The horrors of civil war stirred his heart, and as the poem proceeded (and especially after his estrangement from Nero) his detestation of Caesarism and of its founder became a ruling passion. But with all his prejudice he cannot entirely conceal, even from himself, the greatness of Caesar, and the attempt to exalt the unheroic Pompey above such a colossus was foredoomed to failure; he does, however, succeed in making Pompey a truly tragic figure and in evoking sympathy both for him and for his cause. The portrayal of Cato, the unflinching Stoic, arouses at best a qualified admiration without much appeal to the heart. The language of the poem, though not without vigour and occasional novelty, lacks the richness and colour of Virgil. The verse is deficient in flexibility and variety; the comparative rarity of elision and the great fondness for the 'hepthemimeral jerk' are conspicuous features. But with all its faults the work is a remarkable achievement for so young a writer. Permeated though it is, and often marred, by rhetoric, it soars at times to those higher regions where poetry and oratory meet, where vision, imagination, and emotion commingle and find noble utterance. Even where this has not been achieved, there are many passages whose stirring trumpet-tones vibrate in the memory and whose unsurpassed epigrams, incisive and often strangely thrilling, have become part of the world's literary heritage. Lucan had a great vogue in the Middle Ages, and his influence is often seen in the poetry and drama of the seventeenth century. In later times he has found more critics than admirers, but Shelley drew inspiration from him, and, like Southey, at first preferred him to Virgil. Macaulay considered him one of the most remarkable men that ever lived. See also EPIC POETRY, LATIN, para. 2.

Critical texts by Hosius* (1913) and (with much valuable exegesis) by Housman (1926, 1927). Commentaries by Oudendorp, Cortius and Weber, Lemaire, Haskins (with good introduction by Heitland). Text and prose translation: J. D. Duff (Loeb, 1928); verse translation, E. Ridley* (1919). Cf. K. Pichon, *Les sources de Lucain* (1912); E. Trampe, *De Lucani arte metrica* (1884). W. B. A.

LUCANIA, a mountainous region of southern Italy; recently its ancient name has replaced the medieval *Basiliata*. Its earliest recorded inhabitants are Oenotri (= Sicels?) and Chones (= Illyrians). C. 700 B.C. Greeks commenced colonizing its fertile coastlands. C. 420 Sabelli (q.v.), the pugnacious Lucani, began to subjugate the Greeks; by 390 they held all Lucania and were partly hellenized (*Polyaen.* 2. 10; *Diod.* 14. 91–102; *Strabo* 5. 253 f.). Lucanian communities had an official known as *meddix*; a generalissimo led their confederation in war (*Strabo* 6. 254). In the fourth century Tarentum was their chief enemy; apparently their decline began after her mercenary captain Alexander defeated them (326). Thereupon they prudently sought a Roman alliance (*Livy* 8. 24, 27; 10. 11; *Diod.* 20. 104). Later, however, Lucani opposed and were conquered by Rome in the Pyrrhic, Hannibalic, and Social Wars. These struggles completely ruined Lucania; malaria appeared and is only now being eradicated (*Zonar.* 8, 3 f.; *Livy* 22. 61; *App. BCiv.* 1. 90 f.). Sulla massacred both

Lucani and Samnites, and the Lucani as a separate nation disappeared. Chief towns: coastal Greek colonies and Grumentum, Atina, Potentia, and perhaps Bantia.

R. S. Conway, *Italic Dialects* i (1897), 11; K. J. Beloch, *Röm. Gesch.* 544, 591. E. T. S.

LUCCEIUS, **LUCIUS**, a senator who figured in the political moves of 64 B.C. Caesar, who was presiding over the *quaestio de sicariis*, encouraged the prosecution of two of Sulla's agents on a charge of murder (Suet. *Iul.* 10) in order to challenge the legality of his act of indemnity. Thereupon Lucceius brought a similar charge against Catiline, whom Caesar and Crassus were supporting for the consulship (Asconius 81). Catiline was eventually acquitted; but thereafter Sulla's agents were left in peace. Lucceius unsuccessfully stood for the consulship with Caesar in 60; later he devoted himself to history (Cic. *Fam.* 5. 12).

J. M. C.

LUCIAN (Λουκιανός) of Samosata (b. c. A.D. 120), author of some eighty pieces, chiefly in Dialogue form. For details of his career we have to depend largely on his writings. He received a sufficiently good education to become, first a pleader (Suidas), and later a travelling lecturer; he practised the art of Sophistic rhetoric as far afield as Gaul (*Δις κατηγορούμενος* 27). About the age of 40 (*Ἐρμώτιμος* 13), when he moved to Athens, he deserted rhetoric for 'philosophy'. From then onwards he proceeded to develop the special variety of Dialogue which made him famous. He later resumed the habit of public recitation and accepted a post under the Roman administration in Egypt. He died later than A.D. 180 (*Ἀλέξανδρος* 48).

Of his writings, certain *μελέται*, or exercises on set themes (e.g. *Φάλαρις*), probably belong to his early period; so also his first essays in Dialogue (e.g. *Θεῶν διάλογοι*). His *προοίμια* ('introductions') and certain epideictic pieces (*Μυίας ἐγκώμιον*, *Περὶ τοῦ οἴκου*) may belong to any part of his career. The strongest influence in his development was the Cynic humour of Menippus of Gadara (*Δις κατ.* 33); it was supplemented by that of the Mime, Attic Comedy (notably the Old), and in his later works the Platonic Dialogue. In his typically Menippean period he aimed his satire at such objects as popular religious ideas (*Ἰκαρομένιππος*, *Θεῶν ἐκκλησία*), human vanity (*Χάρων*, *Νεκρικοὶ διάλογοι*), and philosophic pretensions (*Βίων πᾶσις*). Contact with the Platonic Dialogue produced a series of pieces, some late in his life, in which he introduces himself as *Λυκίος* (*Ἐρμώτιμος*, *Πλοῖον*, *Εἰκόνες*). Beside the Dialogue form he adopted the epistolary, either direct (*Πῶς δεῖ ἱστορίαν συγγράφειν*), or as a setting for Dialogue (*Νεῦριος*). Notable among his productions in this style are *Περικρίτης* and *Ἀλέξανδρος*, the castigation respectively of a religious maniac and of a charlatan. His most famous narrative is *Ἀληθὴς ἱστορία*; the authorship of *Λοκίος ἡ ὄρος* is questioned.

Lucian compares favourably with his contemporaries, not merely in the variety of his literary resources and in his skill in handling them, but in the reality of his objects. He uses his Atticism, in which he yields to none of them, as a means rather than as an end. He illustrates contemporary life and manners; his comments on art, in particular, are more helpful than those of some professed critics. He cannot, however, be called either a great original literary artist or a profound thinker. His stock of ideas, except when he is dealing with topical subjects, is drawn either from classical literature or from the popular philosophy of the preceding age; he has no genuine philosophic position, but is essentially an opportunist, *προσαρτῶν τὸ πρὸς ἑκάστῳ* (Eunapius). At the same time, though he derived his forms from earlier models, the Satiric Dialogue as he ultimately developed it is a worthy addition to Greek literature of the second rank.

A certain adroitness of appeal to the less reflective side of human nature has preserved his work in spite of contemporary disregard.

LUCILIUS (1), **GAIUS** (c. 180-c. 102 B.C.), Latin satirist, born at Suessa Aurunca, was a well-educated friend of Greek philosophers, and possessed estates in Italy (possibly elsewhere). Coming to Rome after 160, he made political friends, especially Scipio Aemilianus, with whom he served in Spain 134-133, returning thence to live in a fine house at Rome. In 131 he completed books now numbered 26-7 (*septenarii*), 28 (*septenarii*, *senarii*, hexameters), 29 following c. 129 B.C. About 125 bk. 30 was written wholly in hexameters—henceforth his fixed metre. A new series began c. 123 with bk. 1, others following to bk. 21 between 125 and 120. Meanwhile he closely watched Roman politics (he was perhaps not a citizen), journeyed to south Italy (and Sicily and Sardinia?), suffered some ill health, and, being now a prominent man, made more friends (especially Junius Congus, C. Laelius, Q. Laelius Archelaus, Vettius Philocomus) and enemies (especially Metellus Macedonicus, Lentulus Lupus, Mucius Scaevola Augur, Lucius Oppidius). In 105 he retired to Naples, where perhaps he wrote little elegiac poems (bks. 22-5) on his slaves and freedmen, and died c. 102.

Surviving fragments (less than 1,300 lines) come from thirty books. Those now numbered 26-30 formed one volume c. 124 B.C., while bks. 1-21 were published in a second volume c. 106, bks. 22-5 later. New grouping, with present numbering, took place before the Imperial period, and resulted in books 1-21 (mature work in hexameters), 22-5 (occasional? elegiacs), 26-30 (various metres; early work). The fragments reveal a free-and-easy, not a fanatical, man, acquainted with country-life but living in a city where he watched society and politics—a man carelessly casting his thoughts into metre without much poetic art; recording bits of his own and others' lives in the first really extensive literary presentation of *satura* or medley (thus establishing a specially Roman form of literature, owing little to Greece except its metres) including politics, social life, and their problems; a journey; letters to friends; literary criticism (especially of Ennius, Pacuvius, and Accius and their heavy diction in tragedies); even rules of spelling. Posterity remarked on his satiric powers, how he lashed the city, tore away the mask of respectability, and scared the guilty; and called him variously harsh, bitter, agreeable, graceful, witty, learned, and so on. He first made Satire satiric, but of later satirists was more like gentle Horace, who imitated him, than fiery Juvenal.

Fragment (chiefly from Nonius): F. Marx, *C. Lucili Carminum Reliquiae*, Teubner, 1904 (text), 1925 (Latin commentary); E. H. Warmington, *Remains of Old Latin* iii (Loeb, 1938) (with translation). Important modern studies: C. Cichorius, *Untersuchungen zu Lucilius*; G. C. Fiske, *Lucilius and Horace* (U.S.A., 1922); N. Tertulian, *Lucilius* (1934); J. Wight Duff, *Roman Satire* (U.S.A., 1936). E. H. W.

LUCILIUS (2) **JUNIOR**, **GAIUS**, Seneca's friend and the recipient of *De Providentia*, *Naturalis Quaestiones*, and *Epistulae Morales*, was born at Pompeii, apparently in Augustus' last decade, without wealth or prospects. Ambition, energy, and personality gained him distinguished connexions and raised him to equestrian rank. He survived, under Gaius, a friendship with Gaius Calpurnius and, under Claudius, Metellina's displeasure; appears to have held procuratorships in Illyricum and Africa; and is last seen about A.D. 63-4, still dissatisfied and deploring his handicap, as procurator of Sicily. His unofficial

interests were philosophy and poetry. Seneca's estimate of his work was high: we cannot check it, as nothing survives but three verses, the attribution of the *Aetna* to him lacking substance. E. P. B.

LUCILLA, ANNIA (AURELIA GALERIA) (b. c. A.D. 148), daughter of M. Aurelius (q.v.), and married at Ephesus to L. Verus (q.v.) c. 164, with the title 'Augusta'. On Verus' death (169) M. Aurelius immediately married her—an unwilling bride—to Ti. Claudius (q.v.) Pompeianus. About 182 she conspired unsuccessfully against her brother Commodus (q.v.); exiled to Capreac, she was subsequently put to death.

See under AURELIUS (1), MARCUS, and VERUS; also *PIR²*, A 707. Coinage struck in her name: H. Mattingly and E. A. Sydenham, *The Roman Imperial Coinage* iii (1930). C. H. V. S.

LUCILLIUS (Λουκιλλίος) was the author of some 120 Greek epigrams in the *Anthology*. He was patronized by Nero (*Anth. Pal.* 9. 572), just as Martial (whom he closely resembles) was by Domitian. His poems are almost all exaggerated jokes on curious or repulsive people, many being extremely funny: thus we have the thief who stole everything, including the detective (*Anth. Pal.* 10. 177), and the thin man who had to wear a sinker when diving (10. 100). L. was one of the first poets to emphasize the climatic point in the last line of the epigram, and to make it exclusively a humorous point. The influence of Latin satire is obvious—he was contemporary with the *Apocolocyntosis* and the satire of Petronius.

E. Pertsch, *De Martiale Graecorum poetarum imitatore* (1914); K. Prinz, *Martial und das griech. Epigramm* (1914); C. Cichorius, *Röm. Stud.* c. viii. 13 (1922); A. Linnenkugel, *De Lucillo Tarrhaeo* (1926), identifies him with a distinguished scholar of the same period. G. H.

LUCILLUS of Tarrha, see PAROEMIOGRAPHERS.

LUCINA, see JUNO.

LUCRETIA, the wife of Tarquinius (q.v.) Collatinus, according to legend was outraged by Sextus, son of Tarquinius Superbus; having told her husband, she took her own life. This incident resulted in a popular rising led by Junius Brutus (q.v.) against the Tarquins, and their expulsion from Rome. While the story of Lucretia arose from popular poetry, independent of Greek literary influence, her father Lucretius (q.v. 1) was invented by annalists who elaborated the legend. P. T.

LUCRETIIUS (1) **TRICIPITINUS**, SPURIUS, the father of Lucretia (q.v.). When the annalists associated her with the fall of the monarchy, they placed Lucretius among the founders of Republican freedom by alleging that he had been appointed praefect of Rome by the last king, and had retained that office under the Republic. The tradition that he was consul in 509 is disproved by Livy (2. 5). P. T.

LUCRETIIUS (2) (TITUS LUCRETIIUS CARUS), poet and philosopher, probably 94 to 55 B.C. Jerome gives the date of his birth as 94 and says that he died in his 44th year, i.e. in 51 or 50. Donatus in his *Life of Virgil* states that Virgil assumed the *toga virilis* on 15 Oct. 55, and adds that 'it happened that on that very day Lucretius the poet died'. Cicero (*QFr.* 2. 9. 3), writing in 54, implies that both he and his brother had read the poem, but it is clear from its unfinished state that it was not published till after the poet's death. His death should therefore probably be placed in 55; if Jerome is right as to his age, he was born in 99.

2. Of Lucretius' life almost nothing is known. It is natural to assume that he was a member of the aristocratic Roman family of the Lucretii, whose names occur in the *Fasti* as holders of magistracies. This view has

lately been contested on the ground that Carus was not a cognomen of noble families, but of slaves and freedmen, and was possibly a romanized version of a Celtic name; Lucretius would then be a freedman attached to the house of the Lucretii. But inscriptions show Carus as a cognomen of free men. A more recent theory is that Lucretius was a Campanian—a landowner near Pompeii—and learned his Epicureanism at Naples, but the evidence is slender.

3. The only certain fact of his life is that he was a friend—or possibly dependant—of the aristocrat C. Memmius, the patron of Catullus and Cinna, to whom the poem is dedicated. A 'Life' prefixed to the *Editio Veneta* in the British Museum and written in the hand of Girolamo Borgia, secretary of Pontanus, states that he was intimate with Atticus, Cicero, Cassius, and Brutus, but this 'Life' is of doubtful authority. Jerome makes the famous statement that Lucretius was poisoned by a love-philtre, wrote the poem in his lucid intervals, and ultimately committed suicide. The attack on the passion of love in bk. 4 might be held to support this, but the poem itself does not show signs of insanity; it may be that the poet was of a melancholy disposition and that a love-philtre led to suicide. Jerome also says that Cicero 'emended' the poem, but this need mean no more than that he suggested corrections, not that he edited it for posthumous publication.

4. Lucretius' only work is the *De Rerum Natura*, a didactic poem in six books, in which the poet expounds the physical theory of Epicurus (q.v.) with a view to abolishing superstitious fears of the intervention of the gods in the world and of the punishment of the soul in an after-life. This he accomplishes by demonstrating that the world is governed by the mechanical laws of nature ('foedera naturae') and that the soul is mortal and perishes with the body. The bulk of the poem is occupied in setting out in detail the atomic view of the universe, which Epicurus adopted with modifications from the Atomists Leucippus and Democritus (qq.v.). Lucretius also touches from time to time on Epicurus' moral theory that pleasure is the end of life, and his thought is regulated throughout by Epicurus' rules of procedure (*Canonica*), which are to some extent expounded in bk. 4. The root-idea is that of atoms infinite in number moving in space infinite in extent and by their combinations bringing about the creation of things. Lucretius' philosophy is thus purely material, but not, like that of Democritus, deterministic; for he postulates free-will for man and corresponding to it a certain spontaneity of movement in the atoms (2. 216–93).

5. Book 1, after an introductory address to Venus as goddess of creation, starts from the principle of the permanence of matter and demonstrates the existence of matter in the form of 'first-bodies' or particles, and of void as empty space. L. then shows that the first-bodies are 'atoms', solid, indivisible, and eternal. In a digression he refutes the rival physical systems of Heraclitus the monist and Empedocles the pluralist, and the homocomeria of Anaxagoras; and in conclusion shows that the universe and its components, the atoms and space, are infinite.

Book 2 opens with a poem on the blessings of philosophy and deals first with the motions of the atoms, then with their shapes and the effects of difference in their shapes on compounds. L. then argues that the atoms do not possess secondary qualities, colour, heat, sound, taste, and smell, or sensation, and concludes with a section on the many worlds and their formation and destruction.

Book 3 deals with the soul. After a preliminary laudation of Epicurus, L. discusses the atomic formation of the soul and its relation to the body. There follows a long series of proofs of its mortality, drawn from its atomic structure and from the phenomena of disease

and its cure. The book ends with a triumph-hymn on the mortality of the soul and the folly of the fear of death.

Book 4, which opens with a picture of L.'s mission, treats mainly of the psychology of sensation and thought. L. demonstrates that sight is effected by means of 'images' coming off from things and entering the eye. He then discusses the nature of sensation and thought, and deals with false inferences of the mind based on sensation, which is itself infallible. In the end of the book he treats of certain functions of the body and especially of the passion of love, which he violently condemns.

Book 5 is devoted to the phenomena of our world. After another hymn of praise to Epicurus and an attack on the theological view, he shows that the world had a beginning and will have an end, describes its formation, and discusses certain problems of astronomy. He then speaks of the origin on the earth of vegetable and animal life, of the creation of man and the early development of civilization.

Book 6, whose poem is once more a laudation of Epicurus, deals with miscellaneous phenomena, celestial and terrestrial. Among the former L. discusses thunder, lightning, and thunderbolts, waterspouts, clouds, and rain; among the latter earthquakes, volcanoes, the Nile, infected lakes and hot springs, the magnet, and pestilences. The last leads to a description of the plague at Athens, with which the poem closes.

6. Lucretius regarded himself primarily as a philosopher and only secondarily as a poet (1. 931-4); posterity has been inclined to reverse this judgement. As a thinker he followed scrupulously in the steps of Epicurus, setting out his doctrine without alteration, though there is evidence that he avoided some of the more altruse of his master's discussions. His mind was visual rather than logical, and modern editors have erred in endeavouring by transposition, lacuna, and the assumption of passages written by the poet but not adjusted to their place, to establish a strictly logical sequence in the poem. On the other hand he adorned the dry exposition of Epicurus with a wealth of illustration and imagery, derived from a vivid observation of the world, which shows him as the true poet. Cicero (*QFr.* 2. 9. 3) recognized in him both 'high lights of genius' ('lunina ingenii') and 'artistry' ('ars'), and both elements are abundantly evident. In style L. represents a moment of transition between the crude work of the older Latin poets and the polish of the Augustan age, but he attached himself to the school of Ennius rather than to his Alexandrianizing contemporaries. He used alliteration and assonance, archaic forms and constructions, and many compound adjectives; verbs fluctuate between conjugations and substantives between declensions. He complains of the poverty of his native tongue and does not hesitate to invent words as he wants them. His hexameters, judged by the standard of Virgil, are rough and sometimes clumsy, and exhibit certain licences which later taste spurned. As philosopher he accomplished an amazing feat in expounding atomism in verse, and as poet his lines have a weight and majesty, and often a depth of passion and feeling, which have caused critics to rank him as the equal of Virgil, if not his superior. See also DIDACTIC POETRY, LATIN.

LUCRETIUS, see also GALLUS (1), OFELLA.

LUCULLUS (1) LUCIUS LICINIUS, consul 151 B.C. and founder of the nobilitas of his family, commanded in Hispania Citerior. Finding peace with the Celtiberians already established, he turned against the Vaccaean and afterwards the Lusitanians without any successes except a treacherous massacre at Cauca. On his return he was prosecuted, but not condemned, and erected a temple to Felicitas.

F. Münzer, *PW* xiii. 373.

A. M.

LUCULLUS (2) LUCIUS LICINIUS (c. 117-56 B.C.), born of a noble plebeian family, was Sulla's quaestor in 87. After raising a fleet from Egypt and Syria he campaigned successfully in the Aegean; when peace came he remained in Asia as proquaestor of Murena until 80 B.C. Thanks to Sulla's influence he was elected aedile for 79 and praetor for 78. After three years as proprator of Africa he was consul with M. Aurelius Cotta in 74 when the Eastern question came to the fore; Lucullus secured an extraordinary command to carry on the war against Mithridates and left for the East in the same year.

After relieving Cyzicus in 73 Lucullus prepared to invade Pontus. He advanced up the Lycus valley towards Mithridates' capital of Calceira, and after prolonged skirmishing defeated the king's forces so decisively that he fled to Tigranes (71). Lucullus spent the winter in the administration of Asia, where his firm and just settlement of a financial crisis saved the province from insolvency and ensured for him the hostility of the *Equites*. Advancing into Armenia, he defeated Tigranes at Tigranocerta and made for his capital Artaxata (69-68), but the disaffection of his troops compelled him to retreat. Meanwhile his eastern command had been gradually reduced in scope, and by the *Lex Manilia* (66) Pompey was entrusted with the further conduct of the war. Lucullus returned to Rome humiliated to celebrate a belated triumph in 63. The remainder of his life he devoted mainly to the art of elegant living.

Lucullus was a good strategist and a sound administrator. His failure was due partly to the intrigues of the *Equites* and the popular leaders at Rome, and partly to his own inability to inspire the affection of his soldiers.

ANCIENT SOURCES: fragments of Sallust's *Historiae*; Plutarch's *Life* (largely founded on Sallust; perhaps also on Lucullus' own memoirs); scattered references in Cicero (esp. *De Imp. Ca. Pomp.*); Appian's *Mithridatica*; Dio Cassius is of use from 68 B.C.

MODERN LITERATURE: G. Ferrero, *The Greatness and Decline of Rome* (Engl. transl., 1907-8); W. Drumann-P. Grobe, *Gründung Roms* iv (1908); J. M. Cobban, *Senate and Praetors, 75-49 B.C.* (1935). See also MITHRIDATES. J. M. C.

LUCULLUS (3) MARCUS TERENTIUS VARRO, brother of Lucullus (2) and adopted son of a M. Terentius Varro, rendered Sulla valuable service during the Civil War. In 73 B.C. he was, as consul, partly responsible for the *Lex Terentia Cincia* which authorized the distribution of cheap corn on a limited scale. As governor of Macedonia in 72 he reduced the country between Mount Haemus

and the Danube, and pressed on to the Black Sea. Returning home for his triumph, he arrived at Brundisium in time to check the retreat of Spartacus. In 67 he served on the senatorial commission which was sent to organize Pontus. (Cic. *Att.* 13. 6. 4.) J. M. C.

LUCUSTA, *see* LOCUSTA.

LUDI. The chief uses of the word touch diverse fields of Roman culture:

1. Formal sports and representations, generally with religious origin, motivation, and sanction, and counting as religious rites just as did sacrifices and processions; commonly annual, sometimes *ad hoc*. First, *L. Circenses*: the evolutions of the contestants suggested, eventually if not originally, the movements of the planets about the centre of the heavens—a form of sympathetic magic conceivably thought to promote the orderly progress of the seasons. Then, the gladiatorial and other displays in the fora and amphitheatres, a survival from the funeral games of the Etruscans and Campanians—whether their original purpose was to send the spirits of the brave as companions to the souls of the deceased, to satisfy the craving of the departed spirit for blood, or to release a high degree of emotion in replenishment of the vitality of the dead man, or perhaps something more vague or confused. Further there were priestly games like the dances of the Salii (q.v.), and these constituted an older type under the control of priests as contrasted with others, including the *Circenses*, which were under the control of magistrates. *L. Scaenici* were associated with literature, music, and the dance; they were held especially at the Apollinare in the Prata Flaminia (*L. Apollinares*) and at the temple of the Magna Mater on the Palatine (*L. Megalenses*), but every city in the Empire possessed at least one theatre as well as an amphitheatre. *Ludi*, part sport, part pre-military drill, entered into the routine of the Juventus (*see* IUVENES), probably an early Italic institution for the training of youth, revived by Augustus; they included the *Lusus Troiae* (Verg. *Aen.* 1. 545–603; E. Norden, *Aus altrömischen Priesterbüchern* (1939), 188 f.). There were eventually over forty different varieties of *ludi* in Rome itself, religious, votive, or commemorative, with specific names: *Magni* (regularized as *Ludi Romani*), *Florales*, etc.

2. Informal games, of which the Romans had fully as many varieties as the moderns, retaining the practice of some of them even in mature years; the Campus Martius contained a 'multitude of those exercising themselves with ball and hoop and in the sports field' (Strabo 5. 236). They are attested by numerous toys, dice, tablets, etc., in the museums; also by 'gaming-boards' scratched upon ancient pavements. The games of chance led to grave abuses, as the Church Fathers realized.

3. Schools of instruction, also training-schools for gladiators. Grammatical and literary instruction was largely in the hands of Greeks; training for the law and politics was acquired through apprenticeship until the schools of rhetoric replaced the old tradition (Quintilian; Tac. *Dial.*).

4. Buildings for housing *ludi* in the third sense: a school building has been identified with probability at the north-west end of the forum of Pompeii, scratched inscriptions testify to school-teaching in a hall adjoining the Forum of Julius Caesar in the Capitol, and the *L. Magnus* (recently discovered) and *L. Matutinus* in the Third Region of Rome served for the practice of the gladiators who were to perform in the Amphitheatre.

Wissowa, *RK*² 449 ff.; Habel, *PfV* Suppl. v. 608 ff. A. W. Van B.

LUDI CAPITOLINI, PLEBEII, *see* JUPITER, para. 3.

LUDI SCAENICI, theatrical shows, first added to the *Ludi Romani* in 240 B.C. (*see* LIVIUS ANDRONICUS); in 200 the *Stichus* was produced at the *Plebei*; in 194 the scenic *Megalenses* were instituted; in 169 the *Thyestes* was performed at the *Apollinares*; in 160 the *Adelphoe* was performed at the funeral games of Paullus. Under the Empire performances chiefly consisted of mime and pantomime. The cost was usually shared between State and presiding magistrates. Admission free; certain seats reserved; women and slaves admitted (Prologus, *Poenulus*).

Dar.-Sag., s.v. 'Theatrum'.

LUDI SEVIRALES, *see* IUVENES.

LUGDUNUM (1) (earlier Lugudunum, perhaps = 'bright hill'), modern Lyons. The Roman colony, founded in 43 B.C. by L. Munatius Plancus, occupied the hill of Fourvière, west of the Rhône. It was the capital of the Augustan province of Lugdunensis, and the financial centre of Gallia Comata. It owed its importance primarily to its geographical position, which caused it to become the centre of the Roman road-system. Its dominant situation was recognized by the location here c. 15 B.C. of the principal mint for Imperial coinage with a *cohus urbana* to protect it. The mint was closed in A.D. 38 on the opening of the imperial mint at Rome, but was reopened at times as a subordinate mint (Mattingly-Sydenham, *Roman Imperial Coinage*, i. 3–9). At the junction of Rhône and Saône, Drusus founded in 12 B.C. the altar of Rome and Augustus 'ad confluentem', the centre of the Imperial cult for Comata, from which a provincial Gallic assembly developed.

The colony (*Colonia Copia Claudia Augusta Lugdunum*) enjoyed the *ius Italicum* (Dig. 1. 15. 3. § 1), but it seems, like Alexandria, to have had no organ of local self-government.

Lugdunum flourished in the first and second centuries A.D., not however without crises, such as the fire of 65 and the disturbances of 68, when it suffered for its fidelity to Nero. A theatre, terraced *exedrae* climbing the hill, and aqueducts in fine preservation attest material prosperity to which the favour of Claudius (born here 10 B.C.) may have contributed; a Christian community developed from the numerous Oriental settlers, and the documents of its persecution in 177 are authentic. Lyons suffered severely in the rebellion of Albinus (197) and seems never to have recovered. It became the centre of the Burgundian kingdom c. 460.

Allmer et Dissard, *Inscriptions de Lyon* ii. 135–334; *CIL* xiii. 248; O. Hirschfeld, *Kleine Schriften*, 133–85; G. de Montauzon, *Aqueducs antiques de Lyon* (1909); C. Jullian, *Hist. de la Gaule* vi. 515–27; A. Grenier, *Manuel* i. 329–32.

(2) Capital of the Convenae (*St. Bertrand-de-Comminges*). Alleged to have been settled by Pompeius with Spaniards conquered in the Sertorian War (71 B.C.). Styled colony by Ptolemy (2. 7. 13); important remains of public buildings, forum, and temple have been recently uncovered.

R. Lizop, *Convenae* (1931) Lavedan, Lizop & Sapène, *Fouilles de St. Bertrand* (1922–29).

(3) Town of the Batavi, near modern Katwijk (not Leyden). J. H. Holwerda, *Nederlands vroegste Geschiedenis*² (1925), 190. C. E. S.

LULLABY, *see* CHILDREN'S SONGS, LATIN.

LUNA, Roman moon-goddess. Varro (*Ling.* 5. 74) names her among a number of deities introduced by Titus Tatius and therefore of Sabine origin. The latter statement may be doubted, but the existence of an early cult of Luna remains likely, though Wissowa (*RK*² 315), objects that no trace of it is to be found. This may be mere accident; in historical times she certainly had a cult and more than one temple (*ibid.* p. 316; cf. C. K. ch, *Gestirverehrung im alten Italien* (1933), 27). Ho. JR.

LUNA, a town in Liguria on the river Macra, the boundary with Etruria, a district still called *La Lunigiana* (Strabo 5. 222). The Romans early used its harbour (= the Bay of Spezzia? or the mouth of the Macra?), but the first certain reference to a town is in 177 B.C., a Roman citizen colony, which in 168 quarrelled with Pisae (q.v.) over boundaries (Livy 34. 8; 41. 13; 45. 13; Ennius fr. 1, 2 Steuart). Subsequently Luna became a *municipium* (derelict by 49: Lucan 1. 586). The triumvirs colonized it anew (*Lib. Colon.* p. 223), but it never became a place of consequence. The neighbouring Carrara marble quarries were extensively worked under the Empire.

L. Banti, *Lumi* (1937).

E. T. S.

LUPERCALIA, a Roman festival held on 15 Feb. After the sacrifice of a goat or goats and a dog, a rite generally in ancient and commonly in modern times thought to be directed to the god Faunus, at the Lupercal, a cave below the western corner of the Palatine, youths, naked except for girdles made from the skins of the victims, ran about the bounds of the Palatine city, striking those whom they met, especially women, with strips of the goat-skins, a form of fertility magic combined with the ritual beating of the bounds and with purificatory rites. Their name, *Luperci*, suggests aversion of wolves or propitiation of a wolf god, and the whole ceremony reflects the needs of a small pastoral community. It is described by Dion. Hal. 1. 80. 1; Ovid, *Fasti* 2. 19-36, 267-452 (see Frazer's commentary); Plut. *Ant.* 12, *Rom.* 21, *Caes.* 61; and elsewhere. At the Lupercalia of 44 B.C. the consul Marcus Antonius, being one of the *Luperci*, offered an enwreathed diadem to Caesar. Augustus added dignity to the ceremony (Suet. *Aug.* 31; Mommsen, *Staatsr.* iii 566 f.).

See PW, s.v., and especially, L. Deubner, *ARW* xiii (1910), 481-503; H. J. Rose, *Mnem.* ix (1933), 385 ff.; for another view, F. Altheim, *History of Roman Religion*, 206 ff. A. W. Van B.

LUPUS, see **RUTILIUS** (2).

LUSCINUS, see **FABRICIUS**.

LUSCIUS LANUVINUS (? **LAVINIUS**), Latin poet (attacked in prologues by Terence, whom he blamed for departing from Greek models and for 'contaminatio'—fusion of several plots into one), translated Menander's *Phasma* and (Menander's?) *Thesaurus*.

O. Ribbeck, *CRF* 83 (3rd ed. Teubner). (*Ter. Ad.* 1; *And.* 15; *Eun.* 9-10; *Hann.* 16; *Ph.* 1.) E. H. W.

LUSITANIA, a province of Imperial Roman Spain named from the most vigorous native tribe, the Lusitani. First mentioned in 193 B.C., the Lusitani submitted to Rome in 139 after the assassination of their greatest leader, Viriathus (q.v.), and a military demonstration by D. Junius Brutus (q.v. 2). At the close of the Republican period the entire western littoral had been occupied by the armies under the governors of Farther Spain from the Anas (Guadiana) to the Bay of Biscay. Augustus organized the territory as an imperial province, Lusitania, probably in 27 B.C. Between 7 and 2 B.C. the northern segment (Gallaecia and Asturia) was assigned to Hither Spain. Lusitania suffered in reputation from its proximity to wealthy Baetica. Its chief cities were Augusta Emerita (q.v.), Olisipo (*Lisbon*), Scallabis (*Santarem*), Pax Iulia (*Beja*); its chief exports were horses, pigs, and metals. The bridge at Alcantara and the regulations of the *Vipasca* (*Aljubarrot*) mining district are the most noteworthy remains.

Remoteness from the Mediterranean and relative paucity of natural resources, especially in the eastern marches, probably account for the separation by Augustus and the development of a modern State independent of Spain. J. J. van N.

LUSIUS QUIETUS, a Libyan Moor, was *praefectus alae Maurorum* under Domitian, by whom he was dismissed. With his cavalry he served successfully in Trajan's Dacian and Parthian campaigns, capturing Singara and later recovering northern Mesopotamia from Parthian attack. In 116 he ruthlessly quelled a revolt of Mesopotamian Jews. Raised to the consulship, in 117 he became governor of Judaea, where he stamped out revolt. Un-Roman, impetuous, and cruel, though loyal and capable, he was replaced after Hadrian's accession, and killed after the Conspiracy of the Four Consulars (118).

E. Grong, *PW*, s.v. 'Lusius (9)'; *PIR*, L 325; J. Carcopino, *Istori* (1934), 5 ff. C. H. V. S.

LUSTRATION. A *lustrum* is a purificatory ceremony conducted every five years by the censors (q.v.) at Rome; *lustrare* is to perform this or a like ceremony and *lustratio* is the performance of such ritual. The ultimate etymology of the words is uncertain, especially the connexion (recently defended by C. Koch, *Gestirnerklärung im alten Italien*, 1933, 25 f.) with *lustrare*, to illuminate. In all cases the general form of the ceremonial seems to have been the same, whether the object to be purified was a body of people (*lustratio exercitus, populi*), a piece of land (see **AMBARVALIA**), a city (see **AMBUINIUM**), or some other object. Plautus (*Amph.* 775-6) clearly knows of a like process for ridding a mad person of his disease or possession: 'quin tu istanc iubes pro cerrita circumferri?' The essential was to carry or lead materials having supposedly magical virtues around the object to be benefited; the speaker, believing *Aleumena* ('istanc') to be insane, proposes that this should be done to her.

Normally such a process would require a procession of some kind, small or great; hence the not uncommon use of *lustrare*, to move slowly around something, like a procession (Warde Fowler, *Anthrop. and the Classics*, p. 169 ff.; *Rel. Exper.*, p. 209; qq.v. for his discussion of the words and ideas involved). This is shown by the passages quoted s.v. **AMBARVALIA**, especially by Verg. *G.* 1. 345 ff.; the farmers go around the farm (or *pagus*), taking with them a *felix hostia*, that is a beast proper to be sacrificed to the gods and so full of good luck; they accompany this by a loud invitation to Ceres to come into the barn. In Cato, *Agr.* 141, the victims are three, *suonitaurilia*, and the prayer is to Mars (q.v.) to keep away all manner of evil from the land and its inhabitants. Ceres might fittingly be invited into a place thus made pure and lucky. In the case of the censors' *lustratio populi* it is not unlikely that the ceremony concluded with the burial or other disposal of the materials used; cf. the phrase *lustrum condere*. In an *amburbium*, the State clergy formed the procession (Lucan 1. 592 ff.); this could be reinforced by sacrifices at the gates, as at Iguvium (*tab. Iguvin.* vi A f.; i A f.; see I. Rosenzweig, *Ritual and Cults of pre-Roman Iguvium*, 26 ff., and s.v. 'Tabulae Iguvinæ'). The Lupercalia (q.v.) were an early and peculiar expression of the like idea (see Rose in *Mnem.* 60, pp. 385 ff.). In all cases the ceremonial keeps evil out and puts good in. H. J. R.

LUSUS TROIAE, see **IUVENES**, **LUDI**.

LUTATIUS, see **CATULUS**.

LUTETIA (or *Lutecla*), modern *Paris*. Originally a marshy island (c. 25 acres) in the Seine, and capital of the Parisii, it was burnt by them in Labienus' campaign (52 B.C.). Under the Empire it spread up the Mont Ste. Genevieve on the S. bank, where vestiges of important public buildings still exist. The town was laid out in irregular *insulae*. In the third century the island alone was inhabited, surrounded by a wall of re-used stones. It

was a favourite residence of Julian, who was proclaimed Augustus here in 360. Lutetia (from the 3rd c. called Parisii) fell to Clovis c. 493.

F. de Pachtère, *Paris à l'époque gallo-romaine* (1912). C. E. S.

LUXORIUS of Carthage (5th c. A.D.), an imitator of Martial in elegiacs and hendecasyllabics. His *Epithalamium Fridi* is a Virgilian cento (Buechler-Riese, *Anth. Lat.* 18).

Baehr. *PLM* iv.

LYCANTHROPY. It was occasionally believed in antiquity that a man might turn into a wolf. Plato (*Resp.* 565 d) knows a story that in the worship of Zeus Lycaeus a man is sacrificed and whoever tastes of his flesh becomes a wolf (cf. SACRIFICE). Pliny (*HN* 8. 34) has a circumstantial tale of a whole clan, one of whose members in each generation becomes a wolf for nine years. A sorcerer could turn himself into a wolf (Verg. *Ecl.* 8. 97; Petronius, *Sat.* 61-2). Cf. also LYCAON. Wolves are among the shapes into which Circe (q.v.) changes men (Verg. *Aen.* 7. 18).

R. P. Eckels, *Greek Wolf-Lore* (Philadelphia, 1937), 32 ff. H. J. R.

LYCAON, in mythology, (1) Son of Priam (q.v.) and Laiothe; killed by Achilles (*Il.* 21. 34 ff.). (2) Father of Pandarus (q.v.; *Il.* 2. 826-7). (3) Son of Pelasgus (q.v.), king of Arcadia, first mentioned in Hesiod, *fr.* 44 Rzach. According to Apollodorus (3. 96 ff.), who seems to follow Acusilaus, he had fifty sons, but accounts vary, partly owing to attempts to provide Arcadian towns with founders going back to remote antiquity (e.g. Halipherus and Mantinea, eponyms of Haliphra and Mantinea, in Apollod.; Phigalus, of Phigalia, Paus. 8. 3. 1). His character is an odd mixture of pious and extreme impiety. He founded the cult of Zeus Lycaeus (Paus. *ibid.*), but sacrificed a child on his altar, and therefore was turned into a wolf (for this story cf. R. P. Eckels, *Greek Wolf-Lore* (Philadelphia, 1937), 49 ff.). He tried to murder Zeus, also to trick him into eating human flesh (Ovid, *Met.* 1. 222 ff.), thus provoking the deluge, cf. DEUCALION.

H. J. R.

LYCAONIA. The original home of the Lycaonians was the mountainous country around Laranda (on the north side of Mt. Taurus), but they were already under Persian rule raiding and settling in the plain to the north, which came to be called Lycaonia. Subdued by Perdiccas in 322 B.C., they were subject to the Seleucids (280-189) and Attalids (189-133). Lycaonia became, it is uncertain when, a *conventus* of the province of Cilicia; the southern mountainous area was, however, ruled by a dynast, Antipater (50-36 at least). The plain, with Ieonium as capital, was granted by Antony to Polcomon in 39, and in 36 was transferred to Amyntas, who conquered Antipater. From 25 B.C. the plain was part of Galatia and Cappadocia-Galatia. The mountainous country was probably ruled by Archelaus I and II, and certainly by Antiochus IV, till A.D. 72, when it (Lycaonia Antiochiana) joined Cappadocia-Galatia. Trajan on dividing this province probably allotted the plain to Galatia, Antiochiana to Cappadocia. Under Antoninus Pius most of Lycaonia (excluding Ieonium and Laodicea) was added to Cilicia, within which it was a *κοινόν*. The Lycaonians were a backward people, still speaking their native language in the first century A.D. Most of their cities issued no coins till Antoninus Pius' reign.

Sir W. M. Ramsay, *BSA* xi (1901), 243, *JÖAI* 1904, Beiblatt 57. A. H. M. J.

LYCIA was subdued by the Persians in 546 B.C. Though the Lycians were freed by Cimon c. 468 and paid tribute to Athens in 446, they reverted to Persian rule, being governed first by their own princes, from c. 362 by

Mausolus and his successors, till they submitted voluntarily to Alexander. During the third century they were subject to the Ptolemics, under whom they abandoned their native language and script for Greek. Conquered by Antiochus III in 197, they were given by the Roman Senate in 189 to Rhodes, whose rule they bitterly resented. After three revolts they were freed by the Senate in 169. Their native federal institutions now attained full development. The League gave proportional representation to the cities, which varied greatly in size. There were twenty-three cities, of which six exercised three votes each, some two, the rest one; actually one vote was sometimes shared by a *sympolitia* of the smallest cities. The members of the federal council and assembly were elected on this basis; the latter body, which elected the principal officers, declared war, and ratified treaties, seems to have consisted of a limited number of elected delegates. Contributions to the federal treasury were paid and the federal itinerant courts were composed in the same proportion. The coinage, whether issued by the League, its districts, or individual cities, was uniform. The freedom of the Lycians was confirmed by Sulla and Antony, taken away by Claudius in A.D. 43, restored probably by Nero, and finally revoked by Vespasian. The league survived as a *κοινόν* of Lycia-Pamphylia, and, though the military offices (nauarch and hipparch) lapsed, the federal courts still functioned and federal officers (*archiphylakes*) collected the imperial tribute.

LYCON (302/299-228/225 B.C.; cf. Diog. Laert. 5. 68), Peripatetic philosopher. He was born in Troas, son of Astyanax (D.L. 65). When thirty years of age he succeeded Strato in the presidency of the school, which he held for forty-four years (D.L. 68).

Lycon confined himself mainly to ethics and rhetoric. From the time of his presidency the school loses its philosophic and scientific vigour and begins to decline. As a man L. must have been attractive (cf. D.L. 67).

U. von Wilamowitz-Moellendorf, *Antigonos von Karystos* 78 f.; *PW* xlii. 2303. K. O. B.

LYCOPHRON (1), tyrant of Pherae c. 406-390 B.C. He may have established his tyranny by championing a democratic element against the aristocracy, for he was opposed by the nobles of Larissa and other cities, whom he defeated in 404. He allied with Sparta and in 395 fought against Medius of Larissa. Medius, who captured Pharsalus with support from Boeotia and Argos, perhaps won a temporary advantage over Lycophron, but this does not appear to have been maintained. Lycophron's ambition to dominate Thessaly was achieved by Jason (q.v. 2), who was probably his son.

U. Kahrstedt, *PW*, s.v. 'Lycophron (3)'. H. D. W.

LYCOPHRON (2) (b. c. 320 B.C.), of Chalcis in Euboea, as a young man frequented the philosopher Menedemus at Eretria. C. 285-283 he went to Alexandria and was entrusted by Ptolemy Philadelphus with the *diorthosis* (preliminary sorting-out) of the comedies collected for the Library. He was included in the *Pleiad* of Tragic Poets. According to Ovid, *Ibis* 529-30, L. was killed by an arrow.

WORKS. (1) *Verses*: Tzetztes credits L. with 64 or 46 tragedies, and Suidas gives the titles of 20. The *Cassandra* must have been historical and based on recent events, since Cassandra was founded c. 316. The only fragment (4 lines) is from the *Pelopidae* (*TGF* 818). L.'s satyric drama, the *Menedemus* (*TGF* 817-18), depicted the high thinking and low living of Menedemus' circle. Suidas further credits L. with 'the Alexandria, the obscure poem'. This survives, a dramatic monologue in 1474 tragic iambs, in which the slave set to watch

Alexandra (Cassandra) reports her prophecies to Priam. Apart from prologue (1-30) and two epilogues (1451-74) the poem falls into three sections, 31-364 Destruction of Troy and crime of Ajax, 365-1282 Returns of the Greeks, 1283-1450 Struggle between Europe and Asia. At one time or another the poem touches on nearly all the themes of the Epic Cycle, but the central idea, the Greek sufferings as compensation for the Trojan, was probably suggested by Euripides' *Troades*. In 365-1282 the author devotes most space to early Greek and Trojan colonization of the West and here draws extensively on Timaeus. In 1226-80 Cassandra foretells Aeneas' arrival in Latium and the future glories of Rome. This passage and 1446-50, where the precise reference is disputed, raised doubts even in antiquity (cf. the scholia on 1226) about L., the tragic poet, being the author of the *Alexandra*. Since the two passages show no stylistic differences from the rest of the poem, excision is unjustified. Some see a reference to Pyrrhus in 1446-50 and attribute the recognition of Rome's power to her victory in the Tarentine war. On this view the poem was composed by the tragedian L., probably c. 273, when the Romans sent an embassy to Alexandria. Others refer 1446-50 to T. Quinctius Flamininus, who defeated Philip V at Cynoscephalae in 197. These date the poem not long after that event and suppose the author to have been a namesake, perhaps descendant, of the tragedian. General grounds favour the later dating. The obscurity of the *Alexandra* exceeds that of any other Greek poem. This is due to the recondite material, to the blending of inconsistent myths, but above all to the language. Of about 3,000 words used in the *Alexandra* 518 are found nowhere else and 117 appear for the first time (Scheer). Of the rest many are 'glosses' from Epic and Tragedy, especially Aeschylus. Neologisms too are frequent, and there are some modernisms and vulgarisms. The syntax is characterized by extravagant use of the figures of speech and rhetoric. The real names of gods and men occur rarely, and, when they do, usually refer to another character, e.g. Zeus means Agamemnon and vice versa. Normally the gods appear under some obscure cult-title, the heroes under the names of animals or disguised by a riddling periphrasis. Countries are indicated by some little-known town, mountain, or river situated in them. In metre the author is strict. There are few resolutions and the rule of the final cretic is uniformly observed. The explanation of the numerous coincidences between the *Alexandra* and the poems of Euphorion depends on the dating of the former. The first explicit reference to the poem is in Statius (*Silv.* 5. 3. 157), but soon after this Clement of Alexandria, Lucian, and Artemidorus all mention it, and later the lexicographers and Stephanus of Byzantium cite it frequently. Theon (*fl.* c. 40 B.C.) wrote a *hypomnema* on the *Alexandra*, and some of the material contained in the scholia and in the commentary of Tzetzes probably goes back to this scholar.

(2) *Prose*: The only known work of L. is a lexical compilation *Περὶ κατωρίστας* in at least nine books (Ath. 11. 485 d). This treatise, presumably a by-product of his labours in the Library, was much criticized by later workers in this field.

LYCORTAS, father of Polybius and friend of Philopoemen, represented with these the Mevalopolitan policy of Achaean independence in a unified Peloponnese with Egyptian support. Hipparch in 191-190 B.C. he defended Philopoemen's pressure on Sparta before the Senate (189-188), and, after visiting Egypt (186), renewed alliance with Ptolemy Epiphanes as General in 185-184. General suffragus in 182, after Philopoemen's death, he suppressed

the Messenian revolt and received Sparta again into the League. Possibly General in 182-181, he was prevented by Epiphanes' death from going to Egypt in 180. Against the pro-Roman Callierates he failed to gain Achaean neutrality in the Third Macedonian War or help for Egypt against Syria in 168.

LYCURGUS (1) a mythological personage, according to Homer, *Il.* 6. 130 ff., a son of Dryas, who attacked Dionysus (q.v.), driving him and his nurses before him till the god took refuge in the sea; thereafter Lyeurgus was blinded and died soon. This is vaguely placed on Mt. Nysa. Later, as in Aeschylus (Nauck, *TGF* 19 ff.), he is an Edonian; he and others elaborate the story in various ways. Apollodorus (1. 35) and Hyginus (*fab.* 132) say Dionysus drove him mad, and further embroider the story of his sufferings and death; their sources are uncertain. For details, see Rapp in Roscher's *Lexikon*, s.v., Marbach in *PfW*, s.v. H. J. R.

LYCURGUS (2), the traditional founder of the Spartan constitution and military system. The earliest mention of him is in Herodotus, where he appears as the author of the Gerousia and Ephorate (qq.v.). Greek writers of the fourth century, from Xenophon onward, ascribed to him almost everything that was peculiar in Spartan institutions. The prevalent belief was that Lyeurgus' legislation had been suggested or at any rate approved by the oracle at Delphi. But the widest diversity of opinions obtained as to the date of Lyeurgus (which ranged between 1100 and 600 B.C.) and as to the circumstances under which he became a legislator. These discrepancies, and the comparative lateness at which his name first appears in Greek literature, have led modern scholars to doubt whether Lyeurgus was an historical character; and the archaeological evidence from Sparta, which has established that many of its peculiar customs were not introduced until after 600 (see SPARTA), has left little scope for a great legislator of earlier date. Some scholars still accept Lyeurgus as a real person who may have assisted in the constitutional changes of the eighth or seventh century. Others identify him with a god of the same name who was worshipped in various parts of Peloponnesus and had a cult at Sparta itself, and suggest that the institutions of Sparta, though really the product of a long development, were fastened upon him in the sixth or fifth century. The fact that Lyeurgus received worship as a god and not as a hero tends to confirm the view that he was a deity before he became a legislator.

Herodotus 1. 65-6; Plutarch, *Lycurgus*. J. Wells, *Studies in Herodotus* (1923), 44-51; V. Ehrenberg, *Neugründer des Staates* (1924), 1-54.

LYCURGUS (3) (d. 324 B.C.), son of Lycophron, was a political ally of Demosthenes, came into prominence after the battle of Chaeronea, and was one of the ten statesmen whose surrender Alexander demanded in 336. In 338 he was appointed to an important financial office; the pseudo-Plutarch calls him 'Steward of the public revenues'. He brought the finances of the city into a sound condition, and was responsible for improving the harbour of Piraeus and the arsenal, and adorning the city with statues of the poets. He had an official copy made of the works of the great tragedians; this was borrowed by Ptolemy Philadelphus for the library of Alexandria, and never returned. L. was never a paid speech-writer, but as a man of strict probity and ardent patriotism he many times appeared as a public prosecutor of officials charged with corrupt practices, and was nearly always successful. He died a natural death in 324. According to a story contained in a letter ascribed to Demosthenes he was accused by his successor Menecleides of having

left a deficit; his sons were condemned to repay the money, and were imprisoned when unable to do so. They were released on the appeal of Demosthenes.

WORKS. Of fifteen speeches known in antiquity, the only one extant is *Against Leocrates*, who fled after the battle of Chaeronea and about 332 B.C., on returning to Athens, was prosecuted as a traitor.

The ancient opinion that Lycurgus was mercilessly severe in his prosecutions is supported by the study of his extant speech. His literary style was influenced by that of Isocrates, but he is a much less careful writer, being often negligent in the matter of hiatus, and in-artistic in the composition of his sentences. Evidently he cared more for matter than style. His disregard of proportion is shown by his inordinately long quotations from the poets.

LYCUS of Rhegium (fl. 300 B.C.), second in importance to Timaeus for his history of Sicily (*Περὶ Συκελίας*), and one of Timaeus' sources. The history of Libya (*Ἱστορία Λιβύης*) was a separate work.

FGH ii. 370.

LYDIA was a territory in the west of Asia Minor, centred in the lower Hermus and the Cayster valleys, bordered on the north by Mysia, on the east by Phrygia, on the south by Caria; the Phrygian and Carian borders were indeterminate, and the coastal cities (Cyme, Smyrna, Ephesus, etc.) were reckoned sometimes to Lydia, sometimes to Aeolis or Ionia. Lydia contained much natural wealth, and lying astride and along the two main routes from the coast to the interior of Asia Minor it was an entrepôt of trade and lay open both to Greek and to Oriental influences, and both are reflected in its civilization, art, and cult. Under the Mermnad dynasty (c. 700–550 B.C.) Lydia was a powerful kingdom which by the time of its last king Croesus had incorporated all the plateau of Asia Minor up to the Halys (q.v.). After the defeat of Croesus Lydia became the chief Persian satrapy, with its head-quarters at Sardes; this satrapy was in close political relations with the Greek States throughout the Persian period. The conquest by Alexander threw Lydia open to Graeco-Macedonian settlement; after the battle of Magnesia in 190 it became Attalid territory and passed to Rome with the rest of the Attalid kingdom in 133. It remained part of the province Asia till Diocletian made it a separate province, with Sardes as *metropolis*.

Lydian civilization and art were influenced by and reacted on Greece; Lydia was the first State to use coined money and was an innovator in music. The racial affinities of the Lydians are obscure; their language is carved on about 50 inscriptions of the fourth century B.C. excavated from the temple of Artemis—in Strabo's day it was still spoken on the border of Lycia.

G. Radet, *La Lydie* (1893); L. Büchner and J. Keil, *PIV*, s.v. 'Lydia'. W. M. C.

LYDIA, see APPENDIX VERGILIANA.

LYDIADAS (d. 227 B.C.), son of Eudamus (*SIG* 504), was Megalopolitan commander against Sparta in 251 (Paus. 8. 10. 5) and assumed the tyranny c. 243. Threatened by Achaea, he abdicated, brought Megalopolis into the Achacan League (235), and was elected general in 234, 232, and 230. He was a constant rival of Aratus and disobeyed his orders in the battle of Ladocea against Cleomenes III, when he charged with the cavalry and was killed (227). He was ambitious and generous, but was eclipsed by Aratus.

Plut. *Aratus, Cleomenes*; K. J. Beloch, *Griech. Gesch.* iv (1928); F. W. Walbank, *Aratos of Sicyon* (1933). F. W. W.

LYGDAMUS (b. c. 43 B.C.), an amateur poet of the Messalla circle and author of six frosty elegies which constitute bk. 3 of the Tibullus collection. Lygdamus is chiefly influenced by Tibullus, Propertius, and Ovid. He lacks, however, the inspiration of the two former and the technical skill of the last. He appeals in his elegies to Neacra, a lady of rank, whose love he wishes to win back. Like Neacra, the name of Lygdamus is also pseudonymic; attempts to identify him with Ovid's brother, with Propertius, with Ovid himself, and with others remain fruitless. That he was a Roman of distinction is evident from his connexion with Messalla's circle and from the presence of his work in the Tibullus collection.

Text in editions of Tibullus; commentary in the older editions by Heyne and Disen; see also G. Némethy, *Lygdami Carmina*, etc. (1906), and Postgate, *Selections from Tibullus*. Cf. Schanz-Hosius, *Gesch. röm. Lit.* ii (1935), and 'Lygdamus' in *PW*. J. H.

LYNCEUS (Λυγκεύς), see IDAS.

LYRE, see MUSIC, § 9.

LYRIC POETRY, GREEK. Lyric poetry, in the sense of song accompanied by a musical instrument which is normally but not necessarily the lyre, must have existed both as monody and as choral song from an early age in Greece. Homer hints at monody in the Linus Song which a boy sings (*Il.* 18. 570), and he knows of several kinds of choral song which were later to be practised by known poets, notably the Dirge (*Il.* 18. 50–1, 314–16, 24. 746–7), the Paean (*ibid.* 1. 472–4), the *Hymenaeus* (*ibid.* 18. 493), the *hyporchema* or song accompanied by mimetic dancing (*Od.* 13. 256–65), and the Maiden-Song (*Il.* 16. 182–3). In all these the procedure seems to be the same; there is a choir and a leader, each belongs to a definite occasion, and each is accompanied by music and dancing. These characteristics survived for centuries, and the different types of song known to Homer were standard parts of Greek life. Poets wrote words and music for them, so that all five kinds are, for instance, included in the different types of poetry written by Pindar. The earliest example of such a poem comes from Alcman's Maiden-Song (fr. 1), written in the seventh century. Its chief characteristics belong to its kind and lasted long after it. First, there is the attention paid to the gods at whose festival it is sung. Secondly, there are the moral maxims which the poet makes. Thirdly, there are remarks about the persons who take part in the festival. Fourthly, there is the myth or story, from which, in this case, the poet draws an emphatic moral. These main elements are to be found in Pindar and Bacchylides and seem to be essential to the choral ode as such. Of them the only one that needs some comment is the myth. In origin its presence must have been due to the song's being sung in honour of some god, and no doubt the myth told something about him. But even in Alcman the connexion of the myth and the festival is not clear, and in Pindar the myth might be introduced for different reasons, though often it gave an example of some law about god and man which the poet wanted to emphasize.

2. Another early type of choral song was the *Prosdion* or Processional Song. Homer does not mention this, but it was already in existence in the middle of the eighth century, when Eumelus of Corinth wrote one for the Messenian choir which was sent to Delos (Paus. 4. 4. 1). Only a little later came the Dithyramb, which, after being an unorganized song to Dionysus, was reduced to order by Arion and made like other choral songs in the seventh century. It is possible that some of Stesichorus' poems and a fragment of Alcman (fr. 37) were also of this kind, though its heyday came when it was made a subject for competition at Athens in the last quarter of the sixth century, and was written by Lasus, Simonides, Pindar, and Bacchylides. Later than this came songs which were

addressed not to gods but to pre-eminent men. Their development probably belongs to the age of the tyrants, and an early example may perhaps be seen in Ibycus' lines to Polyerates (fr. 3), in which all centres round the boy whom the poet wishes to honour. Encomia were written for distinguished persons like Scopas by Simonides, Hieron and Xenophon of Corinth by Pindar, Alexander of Macedon by Bacchylides. Similar to the *Encomium* in origin was the Epinician, a song written for a victor in one of the great games. This might be sung at the place where he won or at his home after his return. It came into prominence under Simonides, who seems to have treated it in a light-hearted way, but its real exponent was Pindar, who gave to it most of the characteristics of the formal hymn by writing for occasions when the victor was welcomed at the feast of some god in his home. It may be doubted whether earlier Epinicians had this religious character.

3. These different types survived into the middle of the fifth century, and even later, since Euripides wrote an Epinician for Alcibiades and Sophocles a Paean for Aeselepius. But with the rise of tragedy and the decay of the Greek aristocracies the choral hymn seems to have declined. The best poets seldom wrote them, and the occasions which required them were no longer as important as before. The only popular choral poetry of the later fifth and the fourth centuries was the Dithyramb, which underwent considerable changes, becoming less formal than before, more concerned with music than with words, more artificial in its language. Closely allied to it was the *Nomos*, an astrophic composition, like Timotheus' *Persae*, which aimed at sensational effects in words and music.

4. Outside this main stream of development other types may be observed. Monody grew to great distinction c. 600 B.C. in Lesbos, where Sappho and Alcaeus produced a personal poetry concerned with the emotions and interests of their own lives; they were followed a generation later by Anacreon in Ionia, and the example of all three may have helped Athenian aristocrats to produce their *skolia* or drinking-songs at the turn of the sixth and fifth centuries. But this art, like that of choral poetry, declined as the fifth century advanced, and *skolia* seem to have ceased to be composed. Quite separate from these was the poetry written by women for women in different parts of Greece. Corinna in Boeotia, Telesilla in Argos, and perhaps Praxilla wrote a special kind of traditional verse which in simple language told of local myths.

5. In the fourth century the old divisions of forms began to be confused. Aristonous wrote a Paean (proper to Apollo) to Hestia, Philodamus to Dionysus; Aristotle used the form of the Paean as a memorial hymn for his dead friend Hermias and addressed it to the abstract power *Ἄρεα*. This confusion persisted into the Hellenistic age, when Paeans were addressed to human beings, and the form of the folk-song was used by Hermocles for the entry of Demetrius Poliorcetes into Athens. But the lyric tradition survived both in the real Paeans which were still composed for Apollo and in other new types of monody, of which the most distinguished are the Sereenade, the Lovers' Dialogue from Marisa (Powell, *Coll. Alex.* p. 184), simple songs of work like that of the Nile Boatmen (*ibid.* p. 195), while more elaborate forms existed like Mesomedes' hymns to Nature and Isis, and the beautiful anonymous *Teliambi* (*ibid.* p. 197). There were still imitations of earlier poets like the Aeolic poems of Theocritus based on Alcaeus, and the rhapsodies of Melino, who seems to have lived in South Italy and used the form of personal monody to praise the grandeur of Rome.

LYRIC POETRY, LATIN. Latin lyric poetry, unlike Greek, is meagre in quantity and (excepting Catullus and Horace) mediocre in quality. The practical Roman temperament seems generally to have lacked the lyrical note, and to have found in the *sermo* a more congenial vehicle for the expression of personal thoughts and feelings. Lyrics were commonly regarded as *lusus* or *nugae*; Cicero (*Sen. Ep.* 49. 5) condemned the lyric poets as flippant triflers ('ex professo lasciuiunt'), and declared that, even with a double span of life, he would not find time to read them. Latin lyric poetry also differs from classical Greek lyric in that it followed the new Alexandrian tradition and was written to be read or recited instead of sung to music as solo or in chorus (cf. *Plin. Ep.* 7. 17. 3). The official *Carmen Saeculare* of Horace is the only certain exception to this rule.

2. The rudimentary beginnings of Latin lyric may perhaps be found in the primitive Saturnian *carmina*, e.g. the songs in honour of the dead, the religious chants of the Salii and Arval Brothers, and the intercessory hymn composed by Livius Andronicus in 207 B.C. (*Livy* 27. 37). These early efforts, however, were 'rough and unpolished' (*loc. cit.*); and it was only under Greek influence that Latin lyrics attained the rank of literature.

3. The first Roman poet to write lyrics on the Greek model was Lucius (*fl.* c. 100 B.C.), who treated mythological and erotic subjects in at least six books of *Erōtopaegnia*. A precursor of Alexandrianism at Rome, he experimented not only in language but also in metre; and his scanty fragments contain various lyrical metres popular at Alexandria, e.g. anapaests, dactylic tetrameters, and ionics. His historical importance appears to have been greater than his literary merit.

4. Catullus composed five poems in lyrical metres (11 and 51 in the sapphic strophe; 34 and 61 in stanzas of 3 and 4 glyconics respectively + 1 pherecratean; 30 in the greater asclepiad). Following the freedom of his Greek models, he admits trochees, spondees, and iambs as base in his glyconics and pherecrateans, and a short fourth syllable in the first three lines of the sapphic stanza. Caesura is not rigid, and elision and division of words between lines are sometimes bold. Many of C.'s poems in other metres (e.g. 5 in hendecasyllables and 31 in seasons), though not technically lyrics by ancient reckoning, display an intensity of feeling, beauty of language, and mastery of metre which entitle them to rank as great lyric poetry in the wider modern meaning.

5. The four books of Horace's *Odes*, which followed his early lyrical experiments in the *Epodes*, are the chief contribution to Latin lyric poetry (*Quint.* 10. 1. 96). H.'s purpose was to give Rome a body of lyric poetry which would bear comparison with that of Greece, and he claims (*Carm.* 3. 30. 1) that he has succeeded. Modelling himself upon Sappho and Alcaeus, he employed chiefly the alcaic and sapphic stanzas and the various types of asclepiad; he also experimented in archilochians, the greater sapphic, ionics, the alcaic and the hipponactean. In 'adapting Aeolian song to Italian measures' he modified Greek metrical practice to suit the greater proportion of long syllables in Latin and the delicate problem of reconciling accent and ienus. In general he admits only a long syllable where in Greek a short was a permissible variant. The alcaic anacrusis is normally long in bks. 1-3 (published 23 B.C.), and invariably in bk. 4 (published c. 13 B.C.). The rules of caesura are strict: the masculine caesura is general, but bk. 2 shows an increasing use of the feminine in sapphics. Synapsis is usually observed. The *Odes* take many forms (hymn, prayer, exhortation, serenade, triumph song, etc.), and contain great variety of style and theme. Some have the simplicity of Aeolian monody, others are complex and enigmatic like Pindar's choral lyric. In the great 'national' *Odes* (esp. 3. 1-6) the Latin lyric attains a new seriousness and dignity.

Text: E. Diehl, *Anth. Lat. Graec.*; J. M. Edmonds, *Loeb Graeco-Rom.*; Commentary: H. W. Smith, *Greek Metric Poets* (1902). Critical: C. M. Bowra, *Greek Lyric Poetry from Alcman to Anacreon* (1934). C. M. B.

6. Lyrics continued to be written in the first century A.D., but, although Quintilian (loc. cit.) praises Caesius Bassus and 'certain living poets', their work has not survived. We have, however, an alcaic and a sapphic Ode by Statius (*Silv.* 4. 5 and 7); and Annianus, Serenus, and other second-century 'neoterici' made many experiments in Alexandrian lyric metres to which Ausonius later was considerably indebted. The final development of Latin lyric poetry is the Christian hymn as written by Prudentius, Ambrose, and their successors; in this the quantitative system was gradually replaced by the accentual.

T. E. W.

LYSANDER (d. 395 B.C.), Spartan general and statesman. Appointed admiral for 408-407, he restored the efficiency of the Peloponnesian fleet, gained the friendship and support of Cyrus, and won a victory at Notium which caused the withdrawal of Alcibiades (q.v.). After the battle of Arginusae he resumed command, and, transferring his fleet to the Hellespont, destroyed the Athenian navy at Aegospotami (405). He conducted the blockade of the Piraeus and after the surrender of Athens (spring, 404) supported the establishment of the Thirty. In most of the States hitherto allied to Athens he set up 'decarchies' of his oligarchical partisans, reinforced by Spartan harmosts. His arrogance and unscrupulousness estranged the Spartan government, which reversed his policy by assisting in the restoration of the Athenian democracy and modifying his system of decarchies. Attempts to regain his autocratic position proved unsuccessful: his plot to introduce an elective monarchy at Sparta miscarried, and after he had secured for Agesilaus the kingship and supreme command in the war against Persia he found himself discredited by his protégé. At the outbreak of the Corinthian War he invaded Boeotia from Phocis, but before he could establish contact with Pausanias he was surprised and killed at Haliartus.

Xenophon, *Hellenica*, bks. 1-3; Diodorus, bks. 13-14; Plutarch, *Lysander*. W. S. Ferguson and M. Cary, *CAH* vols. v, ch. 12, and vi, ch. 2; U. Kahrstedt, in *PW*, s.v. 'Lysandros (1)'. H. D. W.

LYSIANAS of Cyrene (fl. 2nd c. B.C.), Alexandrian philologist, taught Eratosthenes, wrote *Περὶ λαυβομοιῶν* and Homeric studies (frs. listed by Gudeman, *PW*, s.v.).

LYSIAS (c. 459-c. 380 B.C.), son of Cephalus (a Syracusan whom Pericles persuaded to settle in Athens), went, with his brothers Polemarchus and Euthydemus, to Thurii, where they lived for some years. Returning to Athens in 412, they carried on a prosperous business at the Piraeus as manufacturers of shields. The evidence of Plato (*Resp.* i ad init.) makes it clear that they moved in the best intellectual society at Athens. In 404 they were proscribed by the Thirty, partly on the ground of their democratic sympathies, but chiefly because of their wealth; L. was arrested, but escaped to Megara; Polemarchus was put to death, and their funds were confiscated. While in exile L. still showed himself a true friend of the democracy and on his return in 403 the Ecclesia conferred on him the rights of citizenship. Owing to some informality this decree was pronounced illegal and L. lost his new privilege. Between this time and his death he is said to have composed over two hundred forensic speeches. As a *metoikos* he could not appear in court himself, but he could appeal to a far wider audience by his *Olympiac* speech of 388 B.C., which contained a solemn warning against the dangers of internal discord.

2. WORKS. In addition to the *Olympiacus*, an *Epitaphios*, and a fragment (*Or.* 34) of a deliberative speech, the following are preserved:

(i) *Speeches in public causes*: *Or.* 20, on a charge of subverting the democracy, which, if by L., is his earliest extant work (c. 407 B.C.); 27, 28, and 29, dealing with embezzlement and the betrayal of Greek cities in Asia;

21, a charge of taking bribes; 30, negligence in performing public duties; 22, prosecution of the public contractors for making excessive profits; 16, 25, 31, cases concerning *δοκμασία*; 1, 12, 13 murder-charges, of which 12 (*Against Eratosthenes*) provides first-hand evidence about the reign of terror under the Thirty, and 1 (*On the Murder of Eratosthenes*) throws an interesting light on the domestic life of the middle classes; 3 and 4, charges of malicious wounding; 5 and 7, sacrilege; 14 and 15, charges of (a) desertion, (b) evasion of military service, against the son of the great Alcibiades; 17, 18, 19, claims on confiscated property; 9, non-payment of a fine; 24 (*For the Cripple*), an excellent speech in defence of a man charged with receiving a state-pension under false pretences.

(ii) *Speeches in private causes*: *Or.* 32 against Diogiton, a dishonest guardian, is admirable for its character-drawing, its clear exposition of a complicated story, and the dramatic touches which enliven the narrative; 10 is in an action for defamation; in 23 the charge is not stated; 8 is a trivial declamatory exercise; 6 (*Against Andocides*) is probably spurious.

3. Lysias, by his exceptional mastery of idiom, turned the spoken language of everyday life into a literary medium unsurpassed for its simplicity and precision. He possesses a felicity of expression which is based on art skilfully concealed. He avoids rare and poetical words, striking metaphors, and exaggerated phrases, with the result that at times he may seem to lose in force what he gains in smoothness. His blameless style and unimpassioned tones may seem monotonous to some readers who would prefer a diction that rises above the level of conversation; to others his smoothness may seem more telling than the vigour of Antiphon or the solemnity of Demosthenes. Even when his own personal feelings are deeply concerned he is always moderate. The character of the Thirty is brought out by the calm narration of their actions rather than by denunciation. In the structure of sentences he passes without effort from a running style to the use of the period, which he employs with skill and moderation.

4. Lysias did not, any more than other orators, vary his language to suit his characters, but he succeeds, by subtle *nuances* of thought rather than of language, in suggesting their personality. We cannot fail to sympathize with the young Mantitheus (*Or.* 16)—ambitious and unaffectedly pleased with himself, he seems to have some ground for his harmless conceit; the 'Cripple' (*Or.* 24) strikes us as a plausible rogue. In the construction of his speeches L. is no less simple than in his language: they regularly consist of preface, narrative, proof, and epilogue—a form approved by Isocrates, but seldom adopted with such regularity as by L. It is noted, as a proof of his versatility and good taste, that he never used the same exordium twice, or borrowed from current collections of Prefaces (see PROOEMIUM).

For general bibliography see ATTIC ORATORS. Texts: O.C.T. (Hude, 1912); Teubner (Thalheim; ed. maior 1913; ed. minor 1928). Text and translation: Gernet and Bizos (Budé). Commentary: E. S. Shuckburgh, *Select Orations* (1882); Index: D. H. Holmes (1895).

LYSIMACHUS (c. 360-281 B.C.), companion and successor of Alexander. His father was probably a Thessalian Greek who migrated to Macedonia. He was one of Alexander's bodyguards, and in one of Alexander's lion-hunts he killed a beast at close quarters, though wounded himself. (This feat gave rise to the absurd story that Alexander had caged him with a lion.) After Alexander's death he received a province consisting of Thrace and the north-west of Asia Minor. In 315 he joined the coalition of Cassander and Ptolemy against Antigonus, but was mainly occupied with the consolidation of his power in Thrace, where he founded a new capital at Lysimachia (on the neck of the Thracian Chersonese).

In 306 he assumed the royal title. Four years later he drew Antigonos into Asia Minor and held him on successive prepared lines until Seleucus, coming from the eastern provinces, could join hands with him. In 301 he helped Seleucus to defeat Antigonos at Ipsus, and received northern and central Asia Minor as his share of the spoil. Crossing the Danube in 292, he was captured by a Thracian chief, but obtained his speedy release. In 285 he won Macedonia and Thessaly from Demetrius and thus became the strongest of the successors in manpower. But he was disliked for his high-handed administration and oppressive taxation, and was distracted by family quarrels. In 281 he was attacked by his former ally Seleucus and completely defeated in a battle at Corupedium (near Magnesia ad Sipylum), where he fell fighting. His kingdom was broken up after his death.

G. B. Possenti, *Il re Lisimaco di Tracia* (1901); Berve, *Alexanderreich*, no. 480; F. Geyer, in *PIV*, s.v. 'Lysimachos'. M. C.

LYSIPPUS (1), poet of Old Comedy. Won prizes in 435 and 410-409 B.C. (*IG* xiv. 1097). His *Βάκχαι* contained an attack on the seer Lampon (fr. 6).

FCG ii. 744 ff.; CAF i. 700-3.

LYSIPPUS (2), sculptor, of Sicyon; Pliny places his floruit in 328 B.C. (because of Alexander). Athenaeus connects him with the founding of Cassandreia (316). Selected works:

Dated: (1) Troilus, Olympic victor, 372; the statue probably later. (2) Coridas, Pythian victor, probably in 342. (3) Statues of Alexander, from about 340. Alexander allowed Lysippus alone to figure him because he preserved his lion-like and manly look as well as the turn of his neck and the softness of his eyes. Herm of Alexander in the Louvre has ancient inscription attributing it to Lysippus (Winter, *KB* 334. 1-2); bronze statuette in the Louvre (Winter, *KB* 334. 3) and head in the British Museum are near in style. Bronze statuette in Grado best fits Plutarch's description of Alexander with spear. (4) Agias of Pharsalus, epigram and signature preserved. The epigram without signature recurs under the Agias (Winter, *KB* 331. 3) of a group erected at Delphi by Daochus, tetrarch of Thessaly, 338-334; this Agias is probably a contemporary marble copy of the Pharsalus Agias. (5) Equestrian group, commissioned by Alexander after Granicus, 334. (6) Socrates, probably erected by

Lyeurgus, 338-326. Has been reconstructed by combining the Louvre bust (Winter, *KB* 317. 1) with seated body in Copenhagen. (7) Signatures from Corinth and Thermion, about 330. (8) Chilon, who fell at Lamia, after 322. (9) (with Leochares, q.v.) Alexander's lion hunt, erected by Craterus' son after his death in 321. Reflected in relief in the Louvre (Winter, *KB* 334. 8). (10) Seleucus, probably after 312. (11) Signature from Megara, about 300. Probably from base of Zeus and Muses.

Undated: (12) Colossal bronze Zeus at Tarentum. (13) Chariot of the Sun for Rhodes. (14) Eros at Thespiac. Lysippan Eros survives in copies (Winter, *KB* 332. 2). (15) Satyr in Athens. Borghese satyr may be copy (Winter, *KB* 343. 1). (16) Kairos in Sicyon. Reproduced on reliefs and gems. (17) Colossal bronze seated Heracles at Tarentum, later in Rome and Constantinople. Described by Nicetas. (18) Heracles Epitrapezius. Statuette described by Statius (*Silv.* 4. 6) and Martial. Copies are preserved. (19) Heracles at Sicyon. Original of Farnese Heracles by Glycon, q.v. (Winter, *KB* 333. 4). (20) Polydamas, Olympic victor. Base has been discovered. (21) Apoxyomenos. Copy in the Vatican (Winter, *KB* 331. 1-2).

Attributed: from likeness to 18, 22, seated Hermes (Winter, *KB* 333. 1); from likeness to 19, 23, Satyr with infant Dionysus in the Louvre; from likeness to 21, 24, athlete tying sandal (Winter, *KB* 332. 1).

Lysippus was famed for the new and slender proportions of his figures (although he called the Polyclitan Doryphorus his master), his representation of momentary appearance, the precision of his detail. The tridimensionalism of the Apoxyomenos is in advance of any earlier statue. His influence lasted into the Hellenistic period through his pupils, e.g. Eutychides (q.v.).

Overbeck, 923, 954, 1443-1516; F. P. Johnson, *Lysippus* (1927); F. Poulsen, *Delphi* (1920), 265; *Iconographie Studies* (1931), 31; F. von Lorentz, *Röm. Mitt.* 1935, 333. T. B. L. W.

LYSIS (1) of Tarentum, a Pythagorean who migrated to Aeliaea and then to Thebes and became the teacher of Epaminondas. It is uncertain whether he wrote anything.

Testimonia in Diels, *Vorsatz*, i. 420-1. *PIV* xiv. 64.

LYSIS (2) (fl. c. 300 B.C.), originator of *λυσισωδία*, and probably from Magnesia in Ionia, like his predecessor Sinus, inventor of *συμωδία*. See MACODIA.

M

MĀ, see BELLONA.

MACAR, sometimes called Maeareus (q.v.), in mythology a Lesbian king (*Il.* 24. 544), but usually a son of Helios and so a Rhodian (schol. Pind. *Ol.* 7. 135); for various accounts of his parentage and adventures, see Schirmer in Roscher's *Lexikon*, s.v. His name, very strange for a mortal because a stock divine epithet, has been interpreted as corrupted from Melqart.

H. J. R.

MACAREUS, when not identical with Macar (q.v.), is usually the name of a son of Aeolus (q.v. 2, for his incestuous love of his sister Canace). Several minor figures have the same name, e.g. a son of Lycaon (q.v.; Apollod. 3. 97); a Lapith (Ovid, *Met.* 12. 447). H. J. R.

MACCABEES, *THE*, see JEW, A.

MACCUS, the clown in *Atellana* (q.v.).

MACEDONIA. By its geographical position Macedonia forms the connecting link between the Balkans and the Greek peninsula. Three important routes converge on the Macedonian plain: from the Danube via the Morava and Vardar (Axius) valleys, from the Adriatic via Lake Ochrida, and from Thrace via Mygdonia. In climate Macedonia is intermediate between Europe and the Mediterranean. Contact with the south is made by sea or by the narrow vale of Tempe into Thessaly. Macedonia proper consisted of the coastal plain of the Thermaic Gulf, which has been formed by the rivers Haliacmon, Lydias, and Axius; these rivers, draining the wide plateaux of Upper Macedonia, cut the mountain-ring of the Macedonian plain at Berona, Aegae, and the defile of Demir Kapu respectively. Of the cantons of Upper Macedonia Orestis occupied the upper and Elimiotis the middle Haliacmon valley, Lynceatis the upper valley of the Ediza (tributary of the Axius), Paenonia the upper valley of the Axius, and Eordaea the basin of Lake Ostrovo west of Aegae. The Macedonian

plain comprised Bottiaea between the lower Haliacmon and Axios, Pieria south of the Haliacmon mouth, Almopia in the upper Lydias valley, Mygdonia in the Lake Bolbe basin leading towards the Strymon valley, Krestonia and Anthemus north and south respectively of Mygdonia. Upper Macedonia is girt by high mountain-ranges traversed only by the three important routes mentioned above; when united, it had strong natural defences. The Macedonian plain is vulnerable from the sea and from Mygdonia, but the defiles leading into Upper Macedonia are easily defensible. The natural products were horses, cattle, sheep, crops, wine, fruit, timber, and silver (at Mt. Dysoros between Krestonia and the Strymon valley), the last two being exported in antiquity.

2. Prehistoric Macedonia, occupied from neolithic times, possessed a uniform culture in the Bronze Age, little influenced by Mycenae, and was invaded c. 1100 B.C. by a northern people, who may also have provoked the Dorian invasion. Of the Dorian peoples some known as Macedni (Hdt. 1. 56) came from south-west Macedonia; a remnant of these perhaps formed the nucleus of the classical Macedonians. The tradition of the Macedonian royal house, the Argeadae (Hdt. 8. 137 f.; Thuc. 2. 99 f.), suggests that from the upper Haliacmon valley they conquered Eordaea, occupied Aegae, and captured the Macedonian plain c. 640 under Perdiccas I, the first in the Macedonian list of kings; while these Macedonians were probably of Dorian blood, the tribes of Upper Macedonia appear to have been composed of Greek, Illyrian, and Thracian elements. Until the reign of Philip II Macedonia struggled with the semi-independent principalities of Upper Macedonia, with the Odrysian kingdom in Thrace, with the Greek States in Chalcidice, with Persia, Athens, and Sparta. Hellenization began with Alexander I (q.v.), who claimed descent from Argos and issued State coinage, and urbanization followed in the fourth century B.C.

3. When Philip II incorporated Upper Macedonia and annexed the Strymon valley and Chalcidice, he created a State superior in military and economic strength to any Greek city-state; the military genius of Philip and Alexander raised Macedonia to a world power, but imposed a severe strain upon the nation, which was accentuated by the Wars of the Successors, and resulted in its collapse before the expanding power of Rome (167 B.C.). Disintegrated into four republics by Rome, Macedonia was annexed as a province in 146, and its history merged with that of the Roman Empire.

4. During its aeme Macedonia, a national territorial State with an enlightened monarchy, was the intermediary between Greek and Hellenistic culture, being herself a fusion of Greek and barbarian elements and transmitting a fused culture which long survived under the Roman Empire.

W. A. Heurtley, *Prehistoric Macedonia* (1939); S. Casson, *Macedonia Thrace and Illyria* (1926); F. Geyer, 'Makedonien bis zur Thronbesteigung Philipps II' (*Historische Zeitschrift*, Beiheft 19, 1930); U. Wilcken, *Alexander the Great* (1932). N. G. L. H.

MACEDONIAN CULTS. There are two distinct elements in the religion of early Macedonia. The first is the original worship of the dominant *Μακεδόνες*; the second, pre-existing cults of the regions conquered by the Argead kings.

(1) The religion of the *Μακεδόνες* was Greek, as is demonstrated by the names of the Macedonian months. Its emphasis seems to have been patriarchal and monarchic. Cults of most of the chief Hellenic deities are sufficiently attested for the early period. To Zeus, father of *Μακεδών*, and Heracles, progenitor of the royal house, the Macedonians were particularly devoted.

(2) Cults, largely Thracian, indigenous to the regions occupied by the Macedonians, were received and preserved. Such was the *βέδν*, the water-air spirit worshipped

at Edessa-Aegae, the capital. Sileni (*σανάδαι*) and Baechae (*Κλωδάνες* and *Μυμάλλωνες*) illustrate the worship of Dionysus-Sabazius (see SABAZIUS). Deities such as Ζεὶρῆνη (equated with Aphrodite) and Artemis Γαζωρία, both stated to be Macedonian, were in fact Thracian and took their names from localities east of the Strymon first conquered by Philip II. In western Macedonia Illyrian elements appear.

The Hellenistic and Roman periods show few developments peculiar to Macedonia. Only now is there evidence for the cults of Zeus Hypsistos (q.v.) and Heracles *Κωνυίδας*, which, however, are very early and are specifically Macedonian. The Egyptian triad and the Syrian Goddess appear by 200 B.C. By far the most popular cult in the Roman period was that of the Dioscuri-Cabiri (see CABIRI).

W. Baege, *De Macedonum sacris* (1913); C. Edson, *Harv. Stud.* xlv (1934), 226 ff.; O. Hoffman, *Die Makedonen, ihre Sprache und ihr Volkstum* (1906), 92 ff.; A. D. Nock, *Harv. Theol. Rev.* xxix (1936), 60 ff. C. F. E.

MACER (1), GAIUS LICINIUS, the Roman annalist, tribune in 73 B.C., when he agitated for popular rights (cf. Sallust, *Hist.* 3. 48), praetor in 68 or 67, was convicted of extortion in 66 and committed suicide. His history of Rome, in at least sixteen books, began with the origins; Pyrrhus appeared in bk. 2; its closing point is unknown. It reflected democratic and family bias (Livy 7. 9. 5) and was rhetorically composed. At the same time, it rationalized legends and quoted original authorities, particularly the *libri lintei* (Livy 4. 7. 12; 4. 20. 8; 4. 23. 2). The discrepancy with Tubero (Livy 4. 23. 2) shows error, but the accusation of deliberate falsifying is scarcely proven. Livy and Dionysius used his work.

H. Peter, *HRRel.* i² (1914), pp. ccel, 298; W. Soltau, *Livius' Geschichtswerk* (1897); G. Scaramella, 'L'annalista C. Lic. Macro', in *Annali Scuola norm. sup. Pisa* 1897; K. J. Beloch, *Röm. Gesch.* pp. 1, 105. A. H. McD.

MACER (2), AEMILIUS, of Verona, was an Augustan poet, older than Ovid (*Tr.* 4. 10. 43-4). A few lines of his didactic poems *Ornithogonia*, *Theriaca*, and *De Herbis* remain (Morel, *FPL*). In ancient times he was held in high esteem. Ovid mentions him first amongst recent 'bards' whom he worshipped (*Tr.* 4. 10. 41-56); and Quintilian (10. 1. 56, 87; 12. 11. 27) couples his name with that of Virgil and Lucretius. See DIDACTIC POETRY, LATIN.

R. M.

MACER, see also CLODIUS (2).

MACHAON (*Μαχάων*) and **PODALIRIUS** (*Ποδαλῖριος*), sons of Asclepius (q.v.), *Iliad* 2. 731-2, where they are described as physicians, but also as leaders of the contingent from Tricca, Ithome, and Oechalia. Whatever may be the character of their father, their names have no hieratic meaning; Machaon is 'Warrior', Podalirius apparently 'Lily-foot'. Machaon heals Menelaus (4. 200 ff.), but is also active as a fighter and is wounded by Paris (11. 505 ff.); Podalirius is too busy in the battle to tend Eurypylus (11. 836). Their further adventures consist mostly of healing (Machaon, or both, cure Philoctetes (q.v.), *Soph. Phil.* 1333, where see Jebb) and fighting (Machaon killed by Eurypylus, *Little Iliad*, fr. 7 Allen; Podalirius survives the war and settles in one of several places, see Türk in Roscher's *Lexikon* iii. 2588-9). They had a cult, both separately (Machaon at Gerenia, Paus. 3. 26. 9; Podalirius at Drion in Daunia, Strabo 6. 3. 9, p. 284) and together, generally with their father (references in Farnell, *Hero-Cults*, 420). There seems no reason for supposing them originally gods.

H. J. R.

MACHON (*Μάχων*), New Comedy poet, born at Corinth or Sicyon and resident in Alexandria, where he staged his comedies in the second half of the third century B.C.

From his epitaph by Dioscorides (Ath. 6, p. 241 f., *Anth. Pal.* 7. 708)—'O city of Cecrops, sometimes on the banks of the Nile too the pungent thyme of poesy grows'—it has been inferred that he revived the keen invective of Old Comedy in Alexandria, but the two extant fragments of two plays belong to the type of New Comedy, which was not devoid of *δριμύτης* (pungency).

In another genre Machon composed *χρῆται* (see *CIREIA*) or *bons mots* in iambic verse of the sayings and doings of notorious Athenian courtesans, parasites, etc. (462 verses, preserved by Athenaeus, bk. 13).

Fragments of comedies in *FCG* iv. 496 f.; *CAF* iii. 324 f.

W. G. W.

MACRIANUS, TITUS FULVIUS JUNIUS, commissariat officer of Valerian, who, after the latter's capture, joined with Ballista in rallying the Roman forces in the East, and then, in A.D. 260, in revolting against Gallienus. The two sons of Macrianus, Macrianus II and Quietus, were proclaimed emperors, and the two Macriani marched west to wrest the throne from Gallienus. Met by his generals, Aurcolus and Domitianus, in Thrace, they both fell in battle, and the whole cause soon collapsed (261). Macrian II and Quietus had won general recognition in the East before they hazarded all on one desperate stroke.

H. M.

MACRINUS, MARCUS OPELLIUS, a native of Africa, became praetorian prefect under Caracalla and from motives of personal safety contrived his assassination (A.D. 217). Saluted Augustus by his troops, he was the first Roman emperor who was not a senator. He quickly alienated the Senate by assuming the imperial titles before they had been decreed, and, more serious, he did not retain the soldiers' confidence. Macrinus was no general and patched up an inglorious peace with Artabanus. His subsequent retrenchments in pay and the retention of the European legions in Syria made the army ready to transfer its allegiance. Through the agency of Julia (q.v.) Maesa the story was put about that her grandson Bassianus, priest of the Sun-god at Emesa, was Caracalla's natural son. The soldiers of Legio III Gallica saluted him emperor (218), and disaffection spread till Macrinus was routed in a battle near Antioch and subsequently captured and put to death (see *FLAGADALUS*).

Herodian 4. 14-5; 4; Dio Cassius bk. 78; S.H.A. Parker, *Roman World*, 96-101; M. Besnier in Glotz, *Histoire Romaine* iv. 76-80; *CAH* xii, ch. 1, § 6.

H. M. D. P.

MACRO, NAIVIUS SERTORIUS, was Tiberius' agent in the overthrow of Sejanus in A.D. 31 and was Sejanus' successor as sole commander of the Praetorian Guard. He exerted strong influence in Rome in the last six years of Tiberius' life and was largely responsible, in 37, for the ease with which Gaius succeeded to the Principate. Unable to tolerate so powerful a minister, Gaius first promoted him to be Prefect of Egypt but, before he sailed, early in 38, forced him, together with his wife Ennia, to commit suicide.

J. P. B.

MACROBIUS, AMBROSIIUS THEOPHASTUS (fl. c. A.D. 400), 'uir clarissimus et illustis' (MSS.), is possibly the Macrobius mentioned in the Codex Theodosianus (16. 10. 15; S. 5. 61; 11. 25. 6; 6. 8. 1) as *praefectus praetorio Hispaniarum* (399), *proconsul Africae* (410), *praepositus sacri cubiculi* (422). His works show no trace of the Christianity that may be implicit in the last title. He was foreign to Italy (*Sat.* 1 *praef.* 11, 12), perhaps African.

WRITINGS. (1) *De differentiis et uocabulis Graeci Latineque uerbi*; fragments (excerpta) made by Iohannes Scotus, 6th c.) in Keil, *Gramm. Lat.* v. 599 ff.; cf. Manitius i, pp. 331, 338.

(2) *Commentarii in Somnium Scipionis*, a Neoplatonist work in two books, attached to Cicero's *Somnium Scipionis* in several manuscripts. Plato's *Timaeus* is often mentioned; perhaps M. used Porphyry's commentary.

Popular with medieval scholars (e.g. Dungal, Helperic, Hadoard), the book is important for the study of the twelfth-century philosophical poets of France.

(3) *Saturnalia*, a symposium in seven books, possibly imitating Athenaeus: 'praesens opus non eloquentiae ostentationem sed noscendorum congeriem pollicetur' (1 *praef.* 4). It is rich in philological, historical, and antiquarian lore; among its miscellaneous topics are dancing, drunkenness, indigestion, fishes. The central theme is Virgilian criticism, with interesting parallels from Homer, Ennius, Lucilius, Lucrētius. Virgil appears as the perfect rhetorician, and there now begins that tradition of his omniscience which ends only with Dante. Among M.'s sources are Varro, Gellius, and Plutarch. The interlocutors include Servius (then a youth), Avienus, and Symmachus.

Macrobius admits that, as a foreigner, he cannot write with native elegance; however, his style, though somewhat artificial, possesses some vigour and individuality; in the *Commentarii* he is much more involved than in the *Saturnalia*. His dialogue-form is unconvincing, and the flimsiness of his transitions is seldom redeemed by artistry. The *Saturnalia* (where, unlike Gellius in his similar work, M. employs orderly arrangement) contains valuable material for the scholar, besides throwing light on social conditions. M.'s attitude to Virgil has importance for the medieval tradition; James Henry (*Aeneidea passim*) accords his criticism some respect.

Text, F. Eyssenhardt (Teubner, 1893). T. R. Glover, *Life and Letters in the Fourth Century* (rp. U.S.A., 1924), ch. 8; T. Whitaker, *Macrobius* (1923); M. Schedler, *Die Philosophie des M.* (1916); D. Compagnon, *Virgil in the Middle Ages* (transl. E. F. M. Bencke, 1895; rp. 1929), ch. 5.

R. G. A.

MADAUROS in Numidia was ruled successively by Syphax and Masinissa (qq.v.). It was occupied by the Romans to dominate the powerful Musulamii. Under the Flavians its Berber-Phoenician population was supplemented by time-expired legionaries, and it received colonial rank. It was noted for its olives and its schools. Apuleius was born at Madauros; Augustine, as bishop, closed its pagan temples. It was a hotbed of religious strife between Donatists, Catholics, and worshippers of the old Berber and Phoenician gods.

S. Gsell and C.-A. Joly, *Khamissa, Mdaourouch, Announa* (1914-22).

W. M. C.

MAEANDER (*Μαίανδρος*), a river which rises in several sources, including the Marsyas, in and near Celsene-Apamea in Phrygia, and flows through the Peltene plain to engage itself first in a narrow valley and then in a canyon 1,500 feet deep, sunk in the western flank of the Anatolian plateau, whence it emerges to join the Lycus near Colossae, Laodicea, Hierapolis, and Tripolis. Thence to the Sinus Latinius it flows through a flat-bottomed, fertile valley, here dividing Lydia from Caria, and passing among other cities Tralles and Magnesia ad Macandrum. In this part of its course it winds much, and the Greeks described it as *σκολιός* and used its name to describe a winding pattern. The sand it carries has silted up much of the Latnian Gulf; the harbour of Miletus is now landlocked, and Lade, the scene of the naval battle of 494 B.C., is no longer an island.

W. M. C.

MAECENAS, GAIUS (d. 8 B.C.), a scion of the ancient Etruscan aristocracy, was a trusted friend, counsellor, and diplomatic agent of Octavian (Augustus). He accompanied him in the campaign of Philippi, negotiated his marriage with Scribonia, represented him in the discussions which preceded the treaty of Brundisium, undertook a diplomatic mission to Antony (36), and helped to negotiate the treaty of Tarentum. His luxurious habit and apparent indolence concealed his capacity for vigilance and firmness, and though he never held public office he was called upon on critical occasions to represent Octavian in Rome—during the campaign against Sextus

Pompeius in 36 and during or after that of Actium, when he detected the conspiracy of Lepidus. Of great importance to the Augustan Principate was the influence of Maecenas as a patron of literature: he was the friend and benefactor of Horace, and Virgil wrote the *Georgics* at his suggestion. His marriage with Terentia was temporarily disturbed by the attentions which Augustus paid to her, and in later years the emperor's friendship is said to have lost its earlier cordiality. Maecenas bequeathed his extensive property, including a magnificent house and gardens on the Esquiline, to Augustus. There is no good authority for the tradition that his full name was C. Cilnius Maecenas.

Horace, *Odes*, *Epodes*, and *Satires*; *Elegiae in Maecenatem*; Velleius 2. 88; Appian, *BCiv.* bks. 3 and 4; Dio Cassius, bks. 49-55. There are frequent references in the poets, especially Propertius and Martial. V. Gardthausen, *Augustus u. seine Zeit* (1891, etc.).

G. W. R.

MAECIANUS, LUCIUS VOLUSIUS, a Roman jurist of the second century A.D. His official career is now fully known by two inscriptions discovered in 1930 at Ostia (*CIL* xiv. 5347-8). Some of his official posts (*procurator bibliothecarum*, *praefectus vehiculorum*, *adiutor operum publicorum*, *praefectus fabrum*), are not known to have been held by any previous jurist. He was also *praefectus annonae*, a *libellis et censibus* under Antoninus Pius, and *praefectus Aegypti* about 160. He instructed Marcus Aurelius when he was heir to the throne, and was a member of the imperial *consilia* under Antoninus Pius and Marcus Aurelius. From the *Digest* we know the following works of Maecianus: a voluminous treatise on *fideicommissa* (16 books), *De iudiciis publicis* (14 books), and a monograph written in Greek on the *Lex Rhodia*. A booklet entitled *Assis distributio* and dedicated to Marcus Aurelius is preserved almost complete; it contains the terms used to denote fractions, particularly with reference to inheritance.

Best edition: E. Seckel and B. Kübler, in Huschke, *Jurisp. anteiust.* 1^a (1908).

A. B.

MAELIUS, SPURIUS, was a rich plebeian who is alleged to have relieved a food shortage and courted popularity by distributing corn at his own expense (440-39 B.C.); suspected of aiming at a tyranny he was killed (? by C. Servilius (q.v.) Ahala). Many modern critics have questioned his historicity and undoubtedly many features are late Republican inventions, but the story was told by Cincius (q.v.) Alimentus and is thus of the pre-Gracchan period when there was less reason to invent it, while the circumstances of the corn-shortage cannot easily be rejected (see MINUCIUS 1).

H. H. S.

MAENADS, also *Bacchae* or *Thyiades*, women inspired to ecstatic frenzy by Dionysus. Adorned with wreaths of ivy, oak, or fir, and draped with skins of animals they celebrate the power of Dionysus in song, music, and dance. They roam through mountains and woods and lead the life of animals. They are beyond all human concerns, conventions, and fears. Dionysus inspires them with strength so that they can uproot trees and kill strong animals. They also hunt animals and devour their raw flesh, an action which must be connected with the Dionysiac ritual *omophagia* (see DIONYSUS).

In mythology Maenads accompany Dionysus on his triumphal journey from Lydia or Phrygia to Thrace and Greece. The women of Thebes who follow Dionysus also become Maenads (Eur. *Bacch.* 329, 1021). They destroy his enemies Pentheus and Orpheus (Ov. *Met.* 11. 22; M. P. Nilsson, *Harv. Theol. Rev.* 1938, 190). M. form a contingent in the army of Dionysus during his campaign in India. But they are also associated with the peaceful aspect of Dionysus as inventor of wine and are frequently shown gathering grapes or preparing wine.

In literature Aeschylus (q.v.) had given a powerful picture of M. in his lost plays *Edonoi*, *Bassarides*, *Xantriai*,

and *Pentheus*, but the classic description of Dionysiac ecstasy of M. was drawn by Euripides in the *Bacchae*. This was the model of later accounts by Lycophrion, Accius, Pacuvius, ps.-Theocritus (26), Ovid (*Met.* 3. 511), and Nonnus.

From the middle of the sixth century B.C. onwards M. are distinguished in art from other Dionysiac female figures. Greek vase-painters delight in depicting their revelries in the *thiasus*, their amorous meetings with satyrs and silenoi, their nocturnal dances, their sacrifices to Dionysus, and their assaults on Pentheus and Orpheus. In classical and later art they are sometimes shown in more subdued mood, with Aphrodite and her circle, with Eirene, and even with Muses. Two fine types of statues show dancing M. The first (Dresden) is commonly assigned to Scopas, the other is a Hellenistic creation.

The Maenads of tragedy and myth are an idealized, mythological reflection of human Bacchantes modelled on the behaviour of women in the orgiastic worship of Dionysus in Thrace. More than any other figure of the Dionysiac worship they represent the complete liberation from conventions of daily life, the awakening of primeval instincts, and the union with nature achieved in the cult of Dionysus.

Theocritus 26; Catullus 63. 24; Ovid, *Met.* 3. 511, 11. 1; Nonnus 45. 273; Ps.-Eratosthenes xxiv, ed. Robert. Marbach in *PW*, s.v.; J. E. Sandys, *The Bacchae of Euripides* (1900); L. Lawler, *Am. Ac. Rome* 1927; H. Philippart, *Rev. belge phil. hist.* 1930, 35; E. R. Dodds, *Harv. Theol. Rev.* 1940.

G. M. A. H.

MAENIUS, GAIUS (*cos.* 338 B.C.), the only Maenius to reach the consulship. As consul he conquered the Antiatae fleet and subjugated the Latins; his statue was erected in the Forum, and the captured ships' beaks (*rostra*) adorned the speaker's platform (henceforth called *rostra*) (Livy 8. 13 f.). The *columna Maenia* in the forum, however, probably did not celebrate him; apparently it was a column of the Basilica Porcia supporting a projecting balcony (*maenianum*) erected by a descendant (M. Lehmann-Hartleben, *Altphil.* 1938, 290). Later Maenius was censor (318) and the first certainly attested plebeian dictator (314). An earlier dictatorship (320: *Fasti Cap.*) is apocryphal.

E. T. S.

MAEOTIS was the ancient name for the Sea of Azov. Greek colonists from Miletus and other Ionian towns were attracted by the fisheries at its mouth (the 'Cimmerian Bosphorus'), and here founded Panticapaeum (q.v.). They subsequently founded a city named Tanais (q.v.) at the upper end of the sea, but they do not appear to have explored its interior systematically. Greek geographers (Herodotus, Scylax, Strabo, Ptolemy) greatly exaggerated its size and were very hazy about the river Tanais (q.v.). But they noted the shallowness of the sea and prophesied that it would eventually be silted up.

M. C.

MAERA, see ICARIUS (1).

M(A)EVIUS belonged to a group of poetasters who criticized Horace and Virgil and incurred their contempt and enmity (*Ecl.* 3. 90). Undoubtedly he was conspicuous enough to induce Horace to write the whole tenth Epode against him.

MAGI, see MAGIC; RELIGION, PERSIAN.

MAGIC is commonly defined as the art of influencing the course of nature by occult practices characteristic of uncivilized peoples or of a more or less primitive state of mind. There is always some sort of constraint in all magic (unlike prayer and sacrifice to the official gods).

2. The word (*μαγική*, sc. *τέχνη*, or *μαγεία*, Latin *magia*) originally means the science of the *magi*, the members of the Persian priestly clan; later it covered all

sorts of magic, whether indigenous or foreign (*φάρμακεια*, properly the science of plants and simples, 'drugs'; *γοητεία*, often just 'charlatanry'). Designating as it does the practices of a foreign religion, the word tended to be equivalent to something secret or illicit, at any rate difficult to control, therefore anti-social and in opposition to the official religion. As a fact, magic exists everywhere at all times, and magical elements appear even in the most developed forms of religion. It therefore is often a question of orthodoxy whether a rite or a formula is to be termed magical or religious. As regards Greek and Roman civilization we may state that the growth of purified religious belief, the increasing insight into the laws of nature—physical and intellectual—inaugurated by the leading Greek philosophers, and finally the criticisms of Sceptics, Cynics, and Epicureans gradually undermined the use of magic and the belief in it in the upper social strata (this disesteem of magicians is already conspicuous in the 5th c. B.C.).

3. Our earliest examples of Greek magic come from Homer, but we may presume that the Greek invaders a long time before had taken over much pre-Greek magic (connected, e.g., with agriculture, navigation, and useful arts). An incantation can stop the flow of blood from the wounded Odysseus. Circe effects the most wonderful transformations by means of potions, salves, and a magic wand (which we also find in the hands of Hermes and Athena); she is also able to teach Odysseus how to summon the ghosts from the nether world. In the Homeric epics the great Olympian gods generally do not practise any witchcraft. Hermes, however, still preserves traits which remind us of the old magician; he presents the 'moly' to Odysseus, who by this means is able to outdo Circe. In Hesiod's *Opera et Dies* we get glimpses of agricultural and everyday usages, and his *Theogony* contains a unique glorification of Hecate (q.v.), elsewhere the protectress of all witches, as the greatest and most beneficent of all deities.

4. Greek myth affords still more material. We hear of the Telchines (q.v.; perhaps pre-Greek), skilful but malignant smiths, hostile to gods and fearful to men, well versed in magic; cf. the Curetes (q.v.) and Dactyli (see IDAEAN DACTYLS), the latter especially known as masters of medical charms and music (the same combination recurs in Chiron). Orpheus the magician, Musaeus, Melampus, Autolycus (Hesiod fr. 136 Rzsch) are other well-known names; but the female sex seems in literature as elsewhere to predominate, the most renowned enchantress through all antiquity being Medea. She commands all nature, puts the dragon at Colchis to sleep, makes warriors invulnerable and old men young. She also has the Evil Eye, terrible to all living things (see TALOS). Magic brings her victory, but love is her tragedy (see MEDEA); so far she remains a prototype for the jilted witch of later literature (cf. Canidia in Horace). The Thessalians claimed that she had lost her box of drugs on their fertile soil, and their wonder-working plants were just as widely known as their witches (see the equally brilliant *Metamorphoses* of Ovid and Apuleius).

5. Later literature gives us further evidence of the interest taken in magic and magicians by poets and writers, Greek as well as Latin. New fragments of Sophron give a vivid picture of a piece of Hecate-magic (the prototype of Theoc. 2), but we are still waiting for more of Sophocles' 'The female Herbalists' and Menander's 'Thessalian Woman', where the popular Thessalian feat of 'drawing down the moon' was mentioned. The dramatists on the whole were fully alive to the scenic possibilities of a *necromanteia*, the first description of which we find in Homer's *Odyssey* (cf. Aeschylus' *Perseus*, Aristophanes' *Frogs*, Seneca's *Oedipus*). Homer again inspired Virgil (*Aeneid* 6), and Seneca (*Apocolocyntosis*) as well as Lucian used it as a welcome satirical theme. Virgil and Horace have a specialist's insight into love-charms,

popular—and feared—in their time, and Lucan in his epic gave an illustration of Thessalian witchcraft which for completeness and gruesome description remains unrivalled. The keen interest felt in the theme is excellently illustrated by Apuleius' *Apologia*.

6. A clear insight into the whole magical technique of a syncretistic character, its practices, prayers, and faith in demons and demonic powers is furnished by the many finds of magical papyri in Egypt, now easily available in Preisendanz's collection, *Papyri Graecae magicae*. Thus we can now also measure the distance between ancient witchcraft in real life and the literary treatment of the subject.

7. From a sociological point of view we may divide the vast field of magic (of positive and negative *mana*) into official and private practices, but their mutual interpenetration is evident. A number of official Greek and Roman festivals, concerned with, e.g., the fertility of soil and man (*hieros gamos*: see MARRIAGE, SACRED), rain-making, war, etc., where public welfare is at stake, have preserved their old magic character. On the other hand, many apotropaic ceremonies to purify and avert, having an obviously magical character, were used in a public and in a private way; so likewise prayers (cf. HYMNS, PAEAN) and curses (see CURSES); even sacrifices offered to the gods on behalf of the State or the single family were magical in much of their ritual (cf. the use of fire and water, circumambulation), still more so the offerings to the dead. All the main events in man's life (birth, marriage, death, etc.) and the emotional force of such events called for supernatural help and defence.

8. Theoretically the division into *sympathetic* (*homoeopathic*, *similia similibus*) and *contagious* magic (*pars pro toto*) is of great help. You make an image of a person whose love you desire or whose death you wish, you melt it at a fire, you pierce it with nails, etc., and the person in question suffers correspondingly—this is a homoeopathic procedure (cf. Plato, *Leg.* 933 b, Theoc. 2, Verg. *Ed.* 8, Ovid, *Her.* 6. 91). If, when burning the image, you throw some of the victim's hair or a bit of his cloak (Theoc. 2. 53 ff.) or anything else that has been his (Verg. *Aen.* 4. 494 ff.) into the fire, you simultaneously make use of contagious magic. The combination naturally gives you a stronger hold upon the victim. Further we may call the transmission of disease into another person or beast (e.g. when stung by a scorpion you whisper into the ear of an ass: 'A scorpion has stung me'; Pliny, *HN* 28. 155) *direct* magic, as contrasted with the *indirect* where gods, demons, or spirits are at work (cf. *devotio*). Direct are, e.g., the apotropaic efficacy of rings and crowns of amulets (the phallus, *fascinum*, vulva, the Gorgoneion on wine-cups, etc.), the 'binding' practices (*δέσασθαι, ligare; κατὰδεσσις, defixio*, cf. R. Wuensch, *Defixionum tabellae Atticae* (1897); A. Audollent, *Defixionum Tabellae*), the use of the wryneck (*ὠρυξ*) in homoeopathic love magic, a host of medical charms, preserved in so many works of popular medicine (Marcellus, *De medicamentis*, Aëtius, Alexander of Tralles, etc.), innumerable concoctions, incantations (*ἐπιφθάναι*) and formulas to be found in the papyri (in Egyptian and Greek), magical sounds and tunes, finally the power of the spoken word and the name, the 'great name', of god or demon. We find an early example of *indirect* magic in the Homeric description of a *necromanteia*, the evocation of the spirits of the dead (*Od.* 11, cf. the witch of Endor in the O.T. and the definition of *γοητεία* in Cramer, *Anecd.* Ox. iv. 240). The necromancers (*ἐκψυχοποιῆς*) were a definite class of magicians (popular also in Etruria), and corresponding official oracles existed, cf. the incubation (q.v.), officially sanctioned at Asclepeia and elsewhere. Compare also the *δρακοντιομαντεία* of PGM. The introduction of foreign demons (and rites), characteristic of ancient magic from early times, culminated in the 'syncretistic' period after Alexander the Great. A wider outlook on all sorts of

magic and on the powers of the supernatural world now made possible the synthesis of magic and *theurgia* which the Alexandrian philosophic speculation attempted (cf. the magico-religious Gnostics: see GNOSTICISM). Accordingly, the prescriptions for consecration and prayer, for the material to be used (e.g. plants, stones, extensive use of lead), and for the ritual fitness of the persons became more and more complicated.

9. As civilization developed, the lawgivers in Greece as in Italy (where the Marsi and Paeligni were famous indigenous magicians) became more and more interested in repressing magic (so far the division into beneficent and mischievous witchcraft often materially coincides with public and private magic; cf. the later white and black magic). Already in Ancient Egypt a magician could be prosecuted, and the Homeric hymn to Demeter (228) contains a hit at witchcraft. Plato wants the abuse of magic (*φάρμακεία*) to be punished, and the Roman *decemviri* really did so. New laws under the Roman emperors repressed the new growth of magical influence (cf. Julius Paulus, *Sent.* 5. 23, 14 ff.; *Cod. Theod.* 9. 10; 16. 10; *Cod. Iust.* 9. 18). In spite of all criticisms magic is, if not 'the mother of freedom and truth' (Frazer), at least in many respects the mother of science, owing to its keen observations and bold experiments. See ASTROLOGY, CURSES, DIVINATION, SACRIFICE.

MAGISTER EQUITUM, or the master of the horse, was a subordinate official, nominated by every dictator on appointment, originally to control the cavalry, but, in later practice, to represent the dictator either on the field of battle or at Rome. He held derivatory *imperium* from the dictator and ranked with the praetors. His commission ended with that of his dictator. A notable but unsuccessful attempt was made in 217 B.C. to equate the *magister equitum* with the *dictator* as a colleague (see MINUCIUS 2). A similar though permanent magistracy is found in the municipalities of Italy, known as *magister iuventutis* or *magister iuvenum*. See also MAGISTER MILITUM.

For bibliography see DICTATOR.

A. N. S.-W.

MAGISTER MEMORIAE, the successor in the period after Diocletian of the *memoria* of the early Empire, who, in the second and third centuries, had drawn a salary of 300,000 HS, with the rank of 'uir perfectissimus'. The *scrinium memoriae*, receiving materials prepared by other offices, dealt with all petitions, drafted official letters and speeches, and edited official reports. The essential function of the head of the office, the *magister memoriae*, was to receive from the emperor the decisions taken and to communicate them to the public.

H. M.

MAGISTER MILITUM. Constantine deprived the praetorian prefects of their military functions, and in their place appointed two generals, the *magister peditum* and *magister equitum*, the former with supreme command over the infantry, the latter over the cavalry of the Empire. Despite the precedence of cavalry over infantry, the *magister peditum* was always the senior officer. Later the number of *magistri* was enlarged, and the limitation of their command to either infantry or cavalry was removed. By A.D. 350 two *magistri militum praesentales* are found at either imperial headquarters.

R. Grosse, *Römische Militärgeschichte*, 180-91.

H. M. D. P.

MAGISTER OFFICIORUM. From the time of Diocletian all *officia*, public bureaux, were organized on military lines, though kept distinct from military service

proper. The *officiales* were free from such obligations as those of the local *curiae* (see CURIA 1) and were subject to the principle of hereditary succession. They received payment mainly in kind, though money payments were added later. The lower assistants attached to the *officia* were organized in *scholae*.

The *Magister* (originally the *tribunus*) *officiorum* was in general charge of all *officia*, having under him the *scrinia* of correspondence, petitions, 'memoriae', 'dispositionum', 'admissionum', etc., and later also the 'agentes in rebus' (q.v.); from the latter he drew his own special *officium*.

Boak, *PW*, s.v. 'Officium'.

H. M.

MAGISTRACY, GREEK. Magistracy in Greek city-states was the heir of the old monarchy. According to Greek tradition, which, however, sometimes tends to over-emphasize the regularity of the process, firstly one or a few magistrates, elected by the ruling class, governed the State for life; these were mostly derived from the former assistants of the king. At an early stage military, judicial, and religious functions were separated, part of the religious duties being transferred to an official who preserved the royal title. Next the duration of office became limited, and official power was distributed among several colleagues. By a procedure which varied in each city the leaders of the State gradually became mere executive instruments. The number of officials was gradually increased. Besides the leading political and military magistrates there were officials needed for special tasks, e.g. finance or public works. But it was never usual to elect men with special qualifications, except to military offices. Officials were elected by the full citizens out of their own body. They received no salary and some magistracies were open to men of great wealth only. After their period of administration, all officials had to render account (*εὔθυνα*). In democracies the number of magistracies underwent a large increase, and their power accordingly diminished. Boards of three, five, or more colleagues were far more common than single officials. Their term of office never exceeded one year and they could not be re-elected. Some technical offices excepted, election was by lot (see SORTITION). Most of the lower officials received small daily salaries. Under such conditions Greek magistracy represented no political leadership whatsoever. It expressed the participation of all citizens in politics, and their equality; therefore all magistracies were of the same rank, and there existed no hierarchy or 'cursus honorum'.

In the Hellenistic monarchies magistrates were on a quite different footing. They were professionals, paid by the king in money, natural products, or gifts of land. The higher magistracies were occupied by Macedonians or Greeks, the lower mostly by natives, who did not rise to high positions before the second century B.C. Greek was the official language. The members of the central government resided in the chief city, but there were numerous higher and lower officials in every part of the realm. The most important provincial officials were generally called *strategi*. The administration was strictly centralized in Egypt, but entirely decentralized in the Seleucid Empire. In all cases there was a compact hierarchy, well organized and rather bureaucratic. Lower officials were often personally dependent on the higher, as the higher were on the king.

Besides the books on Greek political institutions, see F. Leifer, *Klio*, Beiheft 23 (1931); U. Kahrstedt, *Untersuchungen zur Magistratur in Athen* (1936).

V. E.

MAGISTRACY, ROMAN. Magistracy was one of the three basic elements of the Roman Republic, the other two being the Senate and the people. In the regal period magistracy was embodied in the person of the king, and the other executive officials were merely his representatives. But under the Republic magistrates were regarded

as the representatives of the whole State, for they were invested with rights, duties, and executive power (*potestas*) by the joint authority of the Senate and the people, although the latter's share was confined to confirming the election of patrician candidates. During the fifth century a new board was created in opposition to the senatorial magistrates, called *magistratus plebei*; but it soon lost its revolutionary character, since a process of compromise, beginning c. 366 B.C., led by the middle of the third century to the admission of plebeians to all the patrician magistracies and to the absorption of the plebeian offices within the sphere of authority of the Senate. Even earlier, however, excessive magisterial power had been successfully checked by several limitations. The *imperium* (q.v.) was restricted to the military sphere (*imperium militiae*), and thus was exercised only beyond the walls of Rome (*extra pomerium*); while the *imperium domi*, although, like the *imperium militiae*, it still included *iurisdictio* and *coercitio*, was considerably limited by the right of appeal (*provocatio*). Moreover, the principle of collegiality always made it impossible for a magistrate to start any revolutionary movement (until the age of Sulla and Caesar, when magistrates came to be commanders in chief of professional, mercenary armies). Magistrates became progressively more dependent on the Senate, with whom they were compelled to collaborate, especially when the Senate became a closed assembly of magistrates and ex-magistrates, from whose ranks alone the candidates for magistracies were mostly taken. As Polybius observed, it was this compromise between the Senate, conceived as the administrative power, and the magistrates invested with the executive, that assured the stability and continuity of the Roman constitution. To maintain the correct balance, measures were taken to guarantee the regular succession of magistrates, and the alternate and balanced exercise of authority by colleagues. The *leges annales* determined both the age-limits required for candidature and the intervals of time between the tenure of magistracies: this *certus ordo magistratum* remained essentially undisturbed from 180 B.C. (*Lex Villia*; see VILLIUS) until the Augustan age. Similarly the principle, emphatically maintained by Cicero, that public office and service was a civic duty, was observed until the end of the Republic. Since public service was never regarded as a profession, no remuneration was given to Roman magistrates, except for journeys, special celebrations, military commands and expenses, etc. This purely honorary aspect of magistracy was confirmed by regulations concerning the escort of lictors (q.v.) and their number, the dress to be worn, the use of the *sella curulis* (q.v.), different forms of homage due to magistrates, etc. These formalities were observed even under the Empire, at least down to the end of the fourth century A.D., when magistracies lost any independence and political significance. Imperial magistrates, being appointed by the emperor, were in fact reduced to the condition of civil and military subordinates.

Monro, *Röm. Staatsr.* (abridged in *Abrind. röm. Staatsrecht*, 1893, 82 ff.); B. Köhler, *PR* xiv. 400 ff. P. T.

MAGISTRI. A common title for the head of a religious or semi-religious organization in Rome was *magister*. This official was primarily not a priest, though he generally had some sacred duties, but rather a president (see De-Marchi, *Culto Privato* ii. 146 f.). Thus the *fratres Arvales* elected a *magister* annually to serve from one Saturnalia to the next (e.g. *Acta Arvalia* for 10 May, 87, p. cxix 30. Henzen); at the same time a different person was made *flamen*, *ibid.* 32). When Augustus restored, if he did, the worship of the Lares Compitales (see LARUS), he apparently organized it under *magistri vicorum*, perhaps on the analogy of the *magistri pagorum* or presidents of the rural districts (see

De-Marchi, i. 230; cf. Marquardt-Wissowa, *Staatsverw.* iii². 204-7).

For other uses of the term, and in particular for that revealed in Jotham Johnson, *Excavations at Minturnae* ii (Rome and Philadelphia, 1933), see Nock, *AJPhil.* lvi (1935), 86 ff. H. J. R.

MAGNA GRAECIA comprised the flourishing but mutually quarrelsome Greek cities of south Italy. Their inhabitants, the Italiotes, developed an amphictiony, Olympic champions, schools of philosophy, etc. Internecine strife started their decline (c. 500 B.C.); malaria and neighbouring barbarians accelerated it. By 280 B.C. Tarentum alone remained comparatively powerful.

Ciaceti, *Storia della Magna Grecia* (3 vols., 1927-32); A. Olivieri, *Civiltà Greca nell'Italia Meridionale* (1931); A. Blakey, *BSA* xxxiii (1932-3), 170; J. Bérard, *La Colonisation grecque de l'Italie méridionale et de la Sicile dans l'antiquité* (1931), and *Bibliographie topographique des principales cités grecques de l'Italie et de la Sicile dans l'antiquité* (1931). E. T. S.

MAGNES, one of the earliest writers of Old Comedy (Arist. *Poet.* 3. 1448³⁴). Born at ? Athens (Anon. *Περὶ κωμ.* 5) about 500 B.C. Victorious in 472 (*IG* ii². 2318). His later plays were unsuccessful (Ar. *Eq.* 520 ff.). He won eleven victories (Anon. *Περὶ κωμ.*)—a figure substantiated by *IG* ii². 2325 and by Aristophanes (loc. cit.), who says that of all comic writers M. had *πλεῖστα τροπαία* to his credit. Aristophanes adds: *πάσας δ' ὑμῖν φωνὰς ἰεῖς καὶ ψάλλων καὶ περὶ γύλων | καὶ λυδίων καὶ φηγίων καὶ βαπτόμενος βατραχείας | οὐκ ἐξήρκεσεν*. These participles have no doubt given rise to the list of M.'s plays as given in Suidas and schol. Ar. *Eq.* 522: *Βαπτιστοί* (the *Harpers*), *Ὀπιδες*, *Αυδοί*, *Ψήρες* (the *Gall-flies*), *Βάτραχοι*. Fragments of the *Αυδοί* only survive. We further possess fragments of *Διδύμοις α'* and *β'* and of a ? *Τιτακίδης*.

FCG ii. 9-11; *CAF* i. 7-9.

M. P.

MAGNESIA AD MAEANDRUM (*Μαγνησία πρὸς (or ἐπὶ) Μαίανδρον*), an Ionian city on a tributary of the Maeander, inland from Ephesus. Colonized by the Magnetes (q.v.), it and Magnesia ad Sipylum (q.v.) were the only Greek cities out of sight of the sea in pre-Hellenistic Asia Minor. Successively subject to Lydia and Persia, it was presented by Artaxerxes to Themistocles, whose female relatives were priestesses of the local goddess Artemis Leucophryene. Like Magnesia ad Sipylum it sided with Rome against Mithridates, and was made a *civitas libera* by Sulla when he reorganized the province of Asia. W. M. C.

MAGNESIA AD SIPYLUM (*Μαγνησία πρὸς Σιπύλῳ*) a city of Lydia lying in the fertile Hermus valley at the point where the roads from the interior and the Propontis converge on the way to Smyrna, the scene of the decisive battle between Antiochus and the Scipios in 190 B.C. See also MAGNESIA AD MAEANDRUM.

MAGNETES, a tribe occupying the mountain-systems of Ossa and Pelion on the eastern border of Thessaly. They became *Perioikoi* to the invading Thessalians and had to surrender the coastal district round Pagasae, which became the port of Pherae, but they retained their two votes on the Amphictionic Council. Pagasae was restored to the Magnetes when Philip expelled the tyrants of Pherae, but they lost the limited autonomy which they had previously enjoyed and became subjects of Macedonia. Their chief towns were Meliboea, Homolion, and Rhirus. In 293 Demetrius (q.v.) was founded through a 'synoecism' of the Magnetes.

P. Salza, *PR*, s.v. *Magnetes* (1).

H. D. W.

MAGNETISM, see PHYSICS, para. 8.

MAGO (1), the founder of the military power of Carthage as well as of the influence of his family, according to Justin (18. 7. 19; 19. 1. 1), flourished c. 520 B.C.

S. Gsell, *Histoire anc. de l'Afrique du Nord* 1² (1921), 480; ii (1918), passim; V. Ehrenberg, *PW* xiv. 495.

MAGO (2) was youngest brother of Hannibal, under whom he served in Italy (218–216 B.C.), fighting at Trebia and Cannae. He fought in Spain from 215 till his defeat at Ilipa (206). After failing to seize Carthago Nova and to re-enter Gades he attacked the Balearic Isles (Mahon in Minorca perpetuates his name) and in 205 landed in Liguria. After lengthy recruiting he advanced into the Po valley, where he was defeated by the Romans (203). He successfully re-embarked his army for Africa, but died of wounds on the voyage. H. H. S.

MAGODIA, a type of low-class mime or lyric, sub-literary (like *hilarodia*, *simodia*, and *lysiodia*), about which the ancient tradition (Ath. 14. 620 f., Strabo 14. 648) is far from clear. *Magodia* is defined as *ὄρχησις ἀπαλὴ* (Hesych.); the actor, accompanied by kettledrums and cymbals, represented in comic style the drunken lover and other low characters. The best example of a possible libretto of such a performance is the *Alexandrian Erotic Fragment* (ed. Grenfell, 1896) or *The Forsaken Maiden's Lament*, found on an Egyptian papyrus of the second century B.C. (see Powell and Barber, *New Chapters in Grk. Lit.* i (1921), 54 f.).

Maas, in *PW*, s.v. *συμφοδοί*; A. Dieterich, *Pulcinella* (1897) 29; H. Reich, *Mimus* (1897) i. 230–7. W. G. W.

MAHARBAL, Hannibal's chief cavalry officer, defeated a Roman cavalry squadron near Assisi after the battle of Lake Trasimene (217). After Cannae (216) he is alleged to have urged Hannibal to march on Rome ('for in five days we shall dine on the Capitol'), and when Hannibal wisely refused he added 'uincere seis, Hannibal, uictoria uti neseis.' H. H. S.

MAIA, (1) *Maia*, mother of Hermes (q.v.) by Zeus and daughter of Atlas; she is one of the Pleiades (Od. 14. 435, where she is called *Maia*; Hesiod, *Theog.* 938, fr. 275, 3 Rzach). Her name means simply 'mother' or 'nurse' (cf. M. P. Nilsson, *AJPhil.* lix (1938), 392 on the Attic sacrifice mentioned in a text published by W. S. Ferguson, *Hesperia* vii (1938), 5, 65 f.), and apart from her son she has little existence. (2) A Roman goddess, associated with Volcanus (Gellius 13. 23 (22). 2); on 1 May the *flamen Volcanalis* sacrificed to her (Macrob. *Sat.* 1. 12. 18), further confirming the association, which, however, is quite unexplained, since he is undoubtedly a fire-god (see VOLCANUS), while her name appears to come from the root *mag* and signify growth or increase; cf. the by-form *Maiesta* (Piso in Macrob. *ibid.*) and the month-name, appropriate to a time of year when all plants are growing. By a natural confusion with (1) she was associated with Mercurius (q.v.) and worshipped also on 15 May, the *natalis* of his temple, apparently under the title of *inuicta* ('*Maia* inuict.', *Fasti Antiaties* on that date).

Wissowa, *RK* 229, 304.

H. J. R.

MAIESTAS. Every State must safeguard itself not only against external enemies but against traitors within. In early Rome treason was *perduellio* (q.v.): the traitor was 'hostili animo aduersus rem publicam animatus' (*Dig.* 48. 4. 11). Later, when tribunes were exalting the people's sovereignty, since *maiestas* 'residet proprie in p. R.', anyone 'qui de dignitate aut amplitudine aut potestate p. R. aut eorum quibus populus potestatem dedit derogat' could be accused of lowering the *maiestas* of the State, and Saturninus (q.v.) introduced in 103 B.C., against incompetent generals, the *Lex Appuleia de maiestate*. Sulla (q.v.) established a permanent *quaestio*; henceforward, *inter alia*, for a governor

to leave his province, begin war, or invade territory, 'iniussu p. R. aut Senatus' would be treasonable (Cic. *Pis.* 21. 50; cf. Tac. *Ann.* 1. 72). The constitutional changes of Julius Caesar and Augustus naturally involved new meanings for *minuta maiestas*, since the *maiestas* of the State became slowly embodied in the *maiestas* attaching to the *princeps* (Phaedrus, 2. 5. 23; Pliny, *HN* 25. 4). The *quaestio de maiestate* remained; before it came men accused of plotting Augustus' murder (Dio 54. 3), of making war without leave (*ibid.*), of adultery with a member of the *princeps*' family (Tac. *Ann.* 3. 24), or of publishing 'prociacia scripta' (*ibid.* 1. 72). A man who had removed from a public square a statue bearing Augustus' name was detained at Augustus' pleasure (Cyrene Edicts, Malcovati, *Caes. Aug. Imp. operum fragm.*, p. 42), and the treatment of statues always provided difficult questions (e.g. Tac. *Ann.* 1. 74; *Dig.* 48. 4. 5). Definition being incomplete, at the beginning of Tiberius' reign informers, eager for rewards, brought all manner of frivolous charges, hoping to gain condemnation (Tac. *Ann.* 1. 73 and 74), but the good sense of Tiberius rejected them. Some trials provided genuine cases (e.g. Piso's: Tac. *Ann.* 3. 10–19), but sinister abuse began when Sejanus employed treason-trials to eliminate enemies. After Tiberius' death the hearing of charges of *maiestas* was abolished, but in 62 the law was invoked again for 'probrosa aduersus principem crimina' (Tac. *Ann.* 14. 48–9), and Nero used it frequently against suspected persons. Vespasian and Titus had no need for it, but Domitian found it a useful weapon for terrorization. We hear little of it under 'the good emperors', and those of the third century had a shorter way with their enemies.

The dangers in any law of treason are lack of precise definition and abuse for political terrorism; the Romans 'do not seem to have attained even a moderate degree of precision in the matter, and trials for *maiestas* were decided mainly on political considerations' (Jolowicz, *Hist. Intro. to the Study of Roman Law*, 324). A secure government does not need to use it, and Trajan wisely declared his policy 'non ex metu nec terrore hominum aut criminibus maiestatis reuerentiam nomini meo adquiri' (Pliny, *Ep.* 10. 82).

Digest 48. 4 is devoted to the *Lex Julia de maiestate*, and Tacitus' *Annals* recount cases under Tiberius and Nero. In general see Mommsen's *Strafrecht*. For cases under Tiberius see R. S. Rogers, *Criminal Trials and Criminal Legislation under Tiberius* (1935); E. Ciaceri, in *Processi Politici* (1918), 249–308; M. P. Charlesworth, *CAH* x. 626–41. M. P. C.

MAIORCA, see BALEARES INSULAE.

MALACA (nowadays *Malaga*), a Phoenician foundation on the southern coast of Spain, was an emporium for the opposite African shore. Its trade and industry (chiefly fish-curing) were not interrupted when it became an ally of Rome. This status it held until Vespasian conferred Latin Rights upon it. The remnants of the charter, issued by Domitian, are a valuable source for the study of Roman municipal administration.

Dessau, *ILS* 6089; Bruns, *Fontes*, p. 147, no. 30. J. J. Van N.

MALEA, south-eastern promontory of Laconia, and of the whole Peloponnesus, a dangerous corner for shipping, chiefly because of the sudden veering of the winds off a harbourless coast. It was denounced on this account from Homer down to Byzantine writers. But in part this perilousness was a literary tradition, and there was always much traffic through the narrow strait between Malca and Cythera.

Bölte, *PW*, s.v.

V. E.

MALLIUS THEODORUS (cos. A.D. 399) wrote a *De metris* (ed. Keil, *Gramm. Lat.* 6. 585–601). His philosophical and astronomical works are lost.

Cf. Teuffel, § 442, 3; Schanz-Hosius, § 1085.

MAMERTINES. A body of Campanian mercenaries, enlisted by Agathocles, treacherously seized Messana on his death (289 B.C.). Calling themselves *Mamertini* or Sons of Mars, they dominated and plundered north-east Sicily, although temporarily checked by Pyrrhus, until defeated on the Longanus river by Hieron of Syracuse (? 265). Tiring of a protective Carthaginian garrison which they had invited in, they appealed to Rome, thereby precipitating the First Punic War. When Rome accepted the alliance, they ejected the Carthaginian garrison and called in Appius Claudius (q.v. 5) Caudex, who drove back both Carthaginians and Hieron. H. H. S.

MAMERTINUS, see **CLAUDIUS** (16).

MAMILIUS (1) **TUSCULANUS**, **OCTAVIUS**, is said to have been the son-in-law of Tarquinius Superbus, and to have assisted the exiled king in his attempt to return to Rome by force. At the battle of Lake Regillus, in which he commanded the army of the Latin League, he was defeated and killed. Though Livy's account of him (2. 18. 3 ff.) ultimately may depend on popular ballads, this does not disprove his historical character.

P. T.

MAMILIUS (2), **LUCIUS**, dictator of Tusculum, is praised by tradition for the voluntary help which he brought to the Roman Republic when its safety was menaced by the Sabine Appius Herdonius, who had entrenched himself on the Capitol (460 B.C.). Mamilius is said to have been rewarded with the Roman citizenship (458).

P. T.

MAMILIUS (3) **LIMETANUS**, **GAIUS**. In the democratic agitation during the Jugurthine War, Mamilius (tribune in 110 B.C.), by a special *quaestio* set up (with M. Scaurus as chairman) to inquire into the conduct of various Roman commissions, secured the condemnation of a number of Optimate leaders, including Sp. Albinus, L. Bestia, C. Cato, C. Galba, and L. Opimius. M. H.

MAMURRA of Formiae, *praefectus fabrum* under Caesar in Spain (61 B.C.) and Gaul, where he accumulated great wealth. His extravagance aroused ill feeling, and Catullus (29, 41, 43, 51), who had personal reasons for disliking him, coupled his name scandalously with Caesar's.

Münzer, *PIB* xiv. 966-7.

C. E. S.

MANCINUS, see **HOSTILIUS**.

MANCIPATIO was a solemn transaction ending in the use of *aes et libra* (copper and scales, see **NEXUM**); it served for the transfer of ownership of *res mancipi*. This category included the most important objects in a primitive agricultural economy, such as land (*solum italicum*), slaves, and beasts of draught and burden. By a declaration in prescribed form (Gaius 1. 119) the recipient announced his ownership of the property; the act acquired a kind of publicity by the presence of five citizens as witnesses and the *libripens* holding the balance. *Mancipatio* was mentioned already in the XII Tables; its field of application gradually expanded: it was used for making a gift, for the constitution of a dowry or mortgage, for some acts of family law, such as *adoptio*, *emancipatio* (qq.v.), *coemptio* (see **MANES**), and for a will, called *testamentum per aes et libram*, in which the testator bequeathed his entire property. A. B.

MANCIPIUM, see **PATRIA POTESTAS**, **EMANCIPATIO**.

MANDATUM, see **CONSTITUTIONES**.

MANES, the spirits of the dead. The most generally accepted derivation is that from the old Latin adjective *manus*, 'poor'; the appellation may be euphemistic. (i) In early times the dead were thought of as an

undifferentiated mass with a collective divinity expressed in *Di Manes*; Cicero (*Leg.* 2. 9. 22) quotes the ancient ordinance 'deorum manium iura sacra sunt'. Graves were dedicated to them in the formula *DIS MANIBUS SACRUM*, and they were worshipped at the festivals of the Feralia, Parentalia, and Lemuria (qq.v.). From this primary sense there are two derivatives: (a) *manes* is used by the poets in a topographical sense for the realm of the dead, e.g. Verg. *Aen.* 11. 181. (b) *Manes* was applied to the Graeco-Roman underworld gods, Dis, Orcus, Persephone, etc., e.g. Verg. *Aen.* 10. 39. (ii) Later in a special, though still collective sense, the *Di Manes* were identified with the *Di Parentes*, the ancestors of the family, e.g. Ov. *Met.* 9. 407. (iii) Still later *manes* came to be used of the soul of individual dead persons. The first recorded instance is Cic. *Pis.* 16 'coniuratorum manes', and in Augustan writers the usage is frequent, e.g. Liv. 3. 58. 11 'manes Verginiae'; and so in the famous line of Virgil, *Aen.* 6. 743, 'quisque suos patimur manes'. From the beginning of the Empire it became customary on grave inscriptions to add to *DIS MANIBUS SACRUM* the name of the dead person in the genitive or dative case. See also **AFTER-LIFE**, para. 9. C. B.

MANĒTHO (fl. 280 B.C.), Egyptian high-priest in Heliopolis under the first two Ptolemies, who dedicated to Ptolemy II a history of Egypt (*Αἰγυπτιακά*) from mythical times to 323. His claim to have consulted the lists of kings (*ἱερά γράμματα*) implies that his version was more official than that of Hecataeus of Teos. The threefold division of the thirty-one dynasties corresponds with the recognized division into old, middle, and new kingdoms. Frequently used by Jewish and Christian writers to establish biblical chronology.

FIG ii. 511.

G. L. B.

MANIA, Roman goddess of whom nothing certain is known except her name. This apparently means 'the good one', cf. *manes*, and may be a euphemism for a death-goddess. By way, it would appear, of the theory that the Lares (q.v.) are ghosts, ancient speculation made Mania their mother (Varro, *Ling.* 9. 61), and this affects late cult (Henzen, *Acta Arvalium*, p. 145; add Dessau, *ILS* 9522).

Cf. Altheim, *Hist. Rom. Rel.* 117-18, 133.

H. J. R.

MANILIUS (1), **MANIUS**. After a not very successful praetorship in Spain (154 or 155 B.C.) Manilius as consul in 149 commenced the siege of Carthage in the Third Punic War, his colleague L. Marcius Censorinus co-operating by sea. After two expeditions to Nephesis (south-east of Tunis) had been saved from disaster by Scipio Aemilianus, Manilius was superseded in 148. In 133 he tried to check Tiberius Gracchus. He was introduced by Cicero as one of the speakers in the *De Republica*. He was a famous jurist, one of three who 'fundauerunt ius civile' (Pomponius). His works included *Monumenta* and forms for contracts of sale (*venalium vendendorum leges*); a few of his *actiones* and *responsa* survive (see Huschke, *Jurisprud. Antiqu.* 1. 5-7). H. H. S.

MANILIUS (2), **GAIUS**, on the last day of 67 B.C. carried as tribune a law distributing freedmen through all the tribes; this the Senate annulled next day for non-observance of the *trinundinum*. Manilius then (66) conferred on Pompey the command against Mithridates and Tigranes, with *imperium* over all the provinces of Asia Minor. On laying down his tribunate he was prosecuted for *repetundae* by Pompey's enemy Cn. Piso, but the case was dropped amid the disturbance of January 65, to which date Cicero, praetor for 66, had reluctantly postponed it. But Manilius was soon prosecuted for *repetundae* and condemned.

Asconius, 35. 37 ff.; Sol. Bob. *Cic. M.D.* 254 Or.; Dio, 37. 42. 4; Tac. *Gal.* 9. C. E. S.

MANILIUS (3), MARCUS, author of the *Astronomica*, a didactic poem on astrology, wrote under Augustus and Tiberius. (Book 1. 899 mentions Varus' defeat in A.D. 9, while in 384-6, etc. Augustus (who died in August A.D. 14) is still alive, as he is in 2. 508-9; in 4. 763-6 and 773-7 Tiberius is the reigning *princeps*.) Of the man himself we know nothing else whatever. Of his work we have five books. Book 1 (926 lines) describes the creation, the arrangement of the starry heavens, and the circles which mark them out; bk. 2 (970 lines) the signs of the zodiac, their characteristics, mutual aspects, and subdivisions; bk. 3 (682 lines) their division into twelve *sortes*, methods of determining the place of the horoscope, etc.; bk. 4 (935 lines) their influence on men born under them, their divisions as combined in decads, and other technicalities; bk. 5 (745 lines) the risings of the other signs and their effects on children born on each occasion. Thus many essential parts of the subject are omitted, for instance any discussion of the movements and influence of the planets; but whether the work is incompletely preserved or was never finished we cannot tell. Manilius writes as an enthusiast for his subject, anxious to make converts and to provide practical instruction for their use, but his poem even if complete would not serve as a technical treatise. He is not seldom inaccurate and sometimes appears to have misunderstood his sources; what these were is unknown, for much of what he tells us appears nowhere else. He is not a great poet, but his literary gifts are by no means negligible. If sometimes feeble or obscure, his language is correct, often forcible, and sometimes eloquent, and he writes with an easy mastery of the technique of hexameters; his skill in doing sums in verse is worthy of Ovid. Much of the poem is condemned by its subject to find few readers, but the non-technical books 1 and 5, and the proems to the others, deserve to be better known. To students of Latin he will always appeal as the object of some of the best work of three great latinists, Scaliger, Bentley, and Housman.

See also **ASTROLOGY**.

Text and commentary: A. E. Housman, 5 vols. 1903-30 (with Latin notes); text only, 1932. Book 2 (with English notes and translation) H. W. Garrod, 1911. R. A. B. M.

MANIPULUS. With the introduction, perhaps during the fourth century B.C., of the *pilum* or throwing spear, the legion ceased to be a phalanx and was organized for open-order fighting. It was subdivided into thirty maniples, which in the Polybian period varied in strength from 120 to 200 men. Each manipule comprised two centuries, was commanded by the centurion of the right-hand century, and had its own standard (*signum*). For tactical purposes the maniples were normally drawn up in three lines with the rear units covering off the intervals in the line in front. After the introduction of the cohort the manipule was retained as a constituent unit. See **COHORS**.

H. M. D. P.

MANLIUS (1), MARCUS, according to Roman tradition defeated the Aequi as consul in 392 B.C., held the Capitol against the Gauls, and repulsed a night attack after being awakened by the cackling of the sacred geese (387); hence he was surnamed *Capitolinus*. It is not unlikely that he or his kinsmen rendered distinguished service against the Celts, but the above story in its present form is probably an aetiological myth invented to explain the surname *Capitolinus* borne by a branch of the Manlii, because they lived on the Capitol even before the sack of Rome. In the crisis that followed the Gallic catastrophe Manlius probably supported the poor against Camillus, and may have made an abortive attempt at revolution, in which he fell. The traditional account was greatly elaborated by late annalists, who read back into the story of Manlius the aims and policy of the plebs in and after the Gracchan period.

Mommsen, *Röm. Forsch.* ii. 179 ff.

P. T.

MANLIUS (2) **TORQUATUS**, TITUS. Popular tradition and annalistic speculation made Manlius a striking embodiment of Roman virtue. He reputedly killed a gigantic Celt in a duel and despoiled him of his collar (*torques*), thereby winning the *cognomen* Torquatus (361 B.C.); the story is probably an aetiological myth invented to explain the surname Torquatus borne by a branch of the Manlii. Manlius' piety was displayed in saving his father from prosecution, and his stern justice in sentencing his son to death, while he was consul for the third time, as the son engaged the enemy against his father's orders. We may believe the accounts of Manlius' successful campaign as dictator against Caere (c. 353), and against the Latins, whose subjugation, the main object of his policy, he secured by the battle of Trifanum (340). P. T.

MANLIUS (3) **VULSO LONGUS**, LUCIUS, as consul (256 B.C.) with Regulus (q.v.) won the naval battle of Ecnomus and led the expeditionary force to Africa. He returned to Rome to receive a triumph, leaving Regulus in sole command in Africa. As consul II (250) he blockaded Lilybaeum. H. H. S.

MANLIUS (4) **TORQUATUS**, TITUS, as consul (235 B.C.) served in Sardinia. He closed the Temple of Janus, a symbol of restored peace, on the only occasion between Numa and Augustus. Censor 231, but *vitio creatus*. Consul II (224), he defeated the Boii, crossed the Po, and attacked the Insubres. He deprecated ransoming Roman prisoners after Cannae. He defeated a Carthaginian expeditionary force in Sardinia (215), celebrated games as dictator (208), and died in 203. H. H. S.

MANLIUS (5) **VULSO**, GNAEUS, curule aedile in 197 B.C., praetor in Sicily in 195, succeeded L. Scipio as consul in 189 in the East, concluding the peace with Antiochus and subduing the Galatians in defence of law and order in Asia Minor; the campaign was also profitable in booty. In 188 he settled Asia and returned through Thrace, suffering losses. His triumph in 187 was opposed by L. Furius Purpurio and Aemilius Paullus, probably as part of Scipionic criticism of his policy. Tradition made him introduce luxury to Rome, and certainly the effects of Eastern spoil became apparent with the close of the Syrian War.

Livy 38; 39. 6; Polyb. bk. 21; Appian, *Syr.* 39 ff.; Pliny, *HN* 34. 8; 37. 6. De Sanctis, *Stor. Rom.* iv. 1, 217; A. H. McDonald, *JRS* 1938, 161. A. H. McD.

MANLIUS (6), GAIUS, a centurion under Sulla, was financially ruined, and became a follower of Catiline. He collected troops for him in Etruria and in October 63 openly proclaimed his rebellion. In the battle of Pistoria he commanded the right wing of Catiline's army and was killed. A. M.

MANTINEA lay in a plain of south-east Arcadia, to the north of Tegea (q.v.). The two States were constantly at war over boundaries and the control of the swallows-holes which drained the plain (Thuc. 5. 65); their rivalry often prevented the Arcadians from uniting against Sparta. Mantinea was synoecized from five villages (Strabo, p. 337), probably c. 500 B.C., when its coinage began. It became a moderate democracy c. 450 B.C. (for date of synoecism and democracy, not necessarily related, see *PIV* xiv. 1318 ff.). Mantinea withdrew from the anti-Spartan movement after the Persian Wars (Hdt. 9. 35) and supported Sparta in the helot revolt (Xen. *Hell.* 5. 2. 3); but under the democracy it grew in power and joined Sparta's enemies in 420. It was the scene of a decisive Spartan victory in 418. After the peace of 371 the Spartans obliged the Mantineans to dismantle their walls and live in villages, but after the battle of Leuctra (371) the city was restored. In 362 Epaminondas won his last victory over the Spartans here. The city was

destroyed by the Achaean League in 223 and refounded under the name of Antigonea. Unlike most fortified Greek cities, Mantinea stood in the middle of a plain.

IG v. 2, 46 ff. G. Fougères, *Mantinée et l'Arcadie Orientale* (1898); Bötic, *PIW* xiv, 1295 ff.; W. J. Woodhouse, *King Agis of Sparta* (1933) (battle of 415 B.C.). T. J. D.

MANUBIAE (or *manibiae*, as in inscriptions. From *manus* and *habeo*, or rather perhaps from an old verb *manuo* = to grasp). The original meaning of this term has been variously defined, (1) (Mommsen) as the revenue raised from the public sale of booty (Gell. 13. 25. 28: 'pecunia per quaestorem populi Romani ex praeda uendita contracta'), or, (2), more probably (Karlowa), as the portion of the booty reserved for the victorious general, of which he could dispose at his discretion (Ps.-Asc. in Cic. *Per.* 2. 1. 54: 'manubiae . . . sunt praeda imperatoris pro portione de hostibus capta'). Although legally he could not be prosecuted for any use to which he put his share of the booty, the commander generally devoted it to works of public utility (temples, roads, forums, theatres, etc.), or, to avoid popular resentment, he shared it or the proceeds of its sale with his officers and men. Thus the distinction between *praeda* and *manubiae* was easily forgotten or ignored, especially when the emperors compelled their officials to contribute a certain amount of their *manubiae* to the emperor's privy purse.

Mommsen, *Röm. Forsch.* ii. 443 ff. (cf. J. Marquardt, *Röm. Staatsverw.* ii. 277 f. and F. Lammert in *PIW*, s.v.); O. Karlowa, *Röm. Rechtsgesch.* ii. 1, 5 ff. (cf. Ph. Fabia, *Dar.-Sag.* iii. 2, 1582 ff.). P. T.

MANUMISSIO, see SLAVERY, LAW OF.

MANUS signified the power of the husband over the wife in a marriage accompanied by *conventio in manum*. Such a marriage could be made either by *confarreatio*, the earliest form, a religious ceremony in the presence of ten witnesses (requiring the assistance of a pontiff and the utterance of *solemnia verba*, and obligatory for marriages of patricians), or by *coemptio* (sale of the wife through *mancipatio* (q.v.) to her husband). *Manus* was also acquired by *usus*, which took effect if in informal matrimony the partners lived together as man and wife in the husband's house uninterruptedly for a year. By a rule of the XII Tables if the woman was absent for three successive nights, the *usus* was interrupted.

In consequence of the *conventio in manum* the woman left her own agnatic family and entered that of her husband, in which she was *filiae loco*. The legal effects of *manus* were similar to those of *adoptio* and *capitis deminutio minima* (qq.v.).

Matrimony without *manus*, which even in the time of the Republic tended more and more to displace marriage with *manus*, did not have these effects: the woman remained in her agnatic family. See also MARRIAGE, LAW OF.

MANUSCRIPTS, see BOOKS, PALAEOGRAPHY.

MAPS (*χάρτες*). For measuring distances the Greeks and Romans counted the steps of a pedestrian or estimated the length of a sea-journey on a basis of 500 stades (c. 55 statute miles) by sea. Lacking the compass, they determined direction by the sun or stars. For latitude they used sticks that projected their shadow into a bowl (*scapha*, introduced from Babylon by Anaximander). For longitude they were reduced to guesswork, since their sand- or water-clocks were useless for synchronizing. In spite of this primitive equipment, the Greeks achieved considerable proficiency in cartography. Their first world-maps, constructed in the sixth century by Anaximander and Hecataeus (qq.v.), showed a plane land-mass of circular contour round the Mediterranean basin. Herodotus (esp. 4. 34-42) denied these 'compass-drawn'

maps and had a rudimentary idea of meridians. Local maps had become familiar in the fifth century (Ar. *Nub.* 200 ff.).

The foundations of scientific cartography were laid when Aristotle (*Cael.* 293^b ff., *Mete.* 362^a ff.) confirmed the sphericity of the earth (previously assumed by Pythagoras) and defined more closely the five zones of Parmenides. Parallels of latitude were established by Pytheas (q.v.), and Diacarchus (c. 310 B.C.) laid down a median line from Gibraltar to the Himalayas. Eratosthenes (c. 200) made a scientific and accurate computation of the earth's circumference, and drew two main axes of latitude and longitude intersecting at Rhodes, with corresponding parallels. His world-map was the first to achieve tolerable accuracy. Hipparchus (c. 140) divided Eratosthenes' main parallel of latitude into 360 degrees and drew 12 parallels of latitude (with details of longest days), dividing the land-mass into 'climata' or zones. Crates constructed a large globe (with three imaginary land-masses besides the known one).

The results of Greek cartography were combined with data from Roman road-makers by Artemidorus, and especially by Agrippa (Plin. *HN* 3. 17), who set up a large globe at Rome. Strabo discussed the principles of map-making on plane and sphere (3. 116-17, 120). Lastly, Ptolemy constructed a plane world-map, using a modified method of conical projection (with curved lines of latitude and longitude), and furnished delusively accurate calculations of latitude north of the Equator and of longitude east of the Canaries. Copies of his map survive in his manuscripts. Other extant maps are a street-plan of Rome (*Forma Urbis Romae*) c. A.D. 200; the Peutinger Table (q.v.); and various road-maps (see ITINERARIES). See also GEOGRAPHY.

E. H. Bunbury, *History of Ancient Geography* (1907), with maps; E. H. Warmington, *Greek Geography* (1934), 234 ff.; H. Berger, *Geschichte der wissenschaftlichen Erdkunde der Griechen* (1903); W. Kubitschek, *PIW*, s.v. 'Karten'. E. H. W.

MARATHON, a deme on the north-east Attic coast, lay in a fertile plain near a small, deep bay, at the end of the two major roads from Athens to the sea over Mt. Pentelieus and along the river Cephissus. It was the capital of an ancient religious confederacy (the Tetrapolis), and the base from which Pisistratus recovered Athens (c. 545 B.C.). Here the Greeks gained their first victory over Persia (490). It was the birthplace of Herodes Atticus (q.v.). It is perhaps to be identified with the village of Vrana or with the ruins on the east slope of Mt. Agrieliki.

Wrede, *PIW*, s.v.

P. T.

MARBLE. Under *μάρμαρος*, *marmor*, the ancients included granites, porphyries, and all stones capable of high polish. In Greece the island marbles were employed in the third millennium B.C. for Cycladic sculpture, and later the Minoans had a liking for coloured Laconian marbles, breccias, and other variegated stones. After the archaic period marble largely supplanted the softer limestones in monumental architecture, while in the late seventh century the coarse-grained island marbles, grey Naxian and white Parian, began to be used for statuary. Parian was the usual sculptural marble of Greece. Attic marbles were the fine-grained Pentelic, used in the Parthenon and other fifth-century buildings, and the inferior Hymettian.

Marble came slowly into use in Rome, and Augustus boasted that he found the city of brick and left it of marble. Owing to the cost of transport, Roman buildings were rarely built wholly of marble, which was usually applied as facing to brick. Under the Empire the provinces were ransacked to provide rare stones, and many quarries passed into imperial control under a special office, the *ratio marmorum*. The storehouses of the

foreign marbles have been discovered on the Tiber. The chief statuary marble was the white Luna (Carrara), first worked by the Etruscans and introduced into Rome in 48 B.C.

G. Lafaye, *Dar.-Sag.*, s.v. 'marmor'.

F. N. P.

MARCELLINUS (1) (probably 2nd c. A.D.), author of an extant work *Περὶ σφυγμῶν*, borrowed very largely from Hippocrates.

Ed. H. Schöne, *Festschrift zur 49. Versammlung deutscher Philologen und Schulmänner*, 1907. PIV xiv. 1488.

MARCELLINUS (2), biographer of Thucydides (best text, C. Hude's ed. of *Thuc.*, 1898-1901). His 'Life' contains three sections, of which A (ch. 1-45) is probably the 'Life of Thucydides' from [Proclus'] *Chrestomathia*, worked over by a schoolmaster, and B by a contemporary of Dion. Hal. (perhaps Caecilius), whose main interest was Thucydides' style. To these Zosimus (5th c. A.D.) added C to make the introduction to his edition of scholia on Isocrates, Demosthenes, and Thucydides. Marcellinus was probably the scholar who, shortly after Justinian, isolated the Thucydidean scholia and gave the composition his name. Its main value lies in the biographical parts, where the deductive method is employed to reach sound conclusions.

F. W. W.

MARCELLINUS, see also LENTULUS (6).

MARCELLUS (1), MARCUS CLAUDIUS, served in the First Punic War and was augur, aedile, and praetor. As consul (222 B.C.) he campaigned successfully against the Insubres, relieving Clastidium and winning the *spolia opima* (q.v.) by killing the Gallic chief Viridomarus in single combat. As praetor II he thwarted Hannibal's attack on Nola (216). He was either appointed *consul suffectus* for 216 or else, being consul designate for 215, withdrew when objection was raised to the election of two plebeian consuls. In 215 and as consul III in 214 he followed a Fabian strategy from his base at Castra Claudiana near Suessula, whence he parried two further thrusts by Hannibal on Nola; in 214 he stormed Casilinum. From the autumn until 211 he served in Sicily. He sacked Leontini, commenced the blockade of Syracuse by land and sea (213), stormed Epipolae (212), and finally took Syracuse despite the engineering skill of Archimedes (211). After routing a Carthaginian force near Himera he returned to Rome and celebrated an *ovatio*. As consul IV (210), proconsul (209), and consul V (208) he skirmished cautiously but successfully against Hannibal until he was killed while reconnoitring near Vcnusia. Named the Sword of Rome, he had shown an energy which set him above most of his contemporaries, while the exaggerations which embellish the annalistic accounts of his exploits against Hannibal are a tribute to his vigorous personality. His faith was exemplified in his dedication of temples to Honos and Virtus, his appreciation of Greek culture by the artistic treasures which he shipped from Syracuse to Rome. For his appearance see coin, *CAH*, Pl. IV, 57.

H. H. S.

MARCELLUS (2), MARCUS CLAUDIUS, eldest son of (1), tribune (204 B.C.), curule aedile (200), praetor in Sicily (198), became consul in 196, crushing the Insubrians near Comum; he was legate in Gaul (193). Censor in 189 with T. Flamininus, he restored census rights to the Campanians. He died in 177.

Livy 33. 25 and 36-7; 35. 4-8; 38. 28 and 36. De Sanctis, *Stor. Rom.* iv. 1, pp. 414, 587.

A. H. McD.

MARCELLUS (3), MARCUS CLAUDIUS, tribune in 171 B.C., was praetor in 169, when, after intervening in the Iovies, he commanded in Spain (169-168); he became consul in 166 in Liguria. He was consul again in 155 in Liguria, and for a third time in 152, within the ten years' interval, on account of the war in Spain. He subdued

the Celtiberians and negotiated a peace in the liberal tradition of Sempronius Gracchus (152-151); the Scipionic tradition (in Polybius) depreciates his achievement. He was drowned in 148 on an embassy to Africa.

Livy, bk. 43; *Per.* 46, 48, 50; Polyb. 35. 2-3; Appian, *Hisp.* 48-50. A. Schulten, *Numantia I* (1914), 345; De Sanctis, *Stor. Rom.* iv. 1, pp. 420, 471.

A. H. McD.

MARCELLUS (4), MARCUS CLAUDIUS, consul 51 B.C., proposed a motion, declared illegal by the Caesarians, probably to recall Caesar on 1 Mar. 50. Pompey resisted this, but in October Marcellus carried various resolutions which, though some were vetoed, ensured that the question be discussed on the ensuing 1 March. He also declared invalid the *Lex Vatinia* on Novum Comum, and flogged a citizen of Comum to prove that he was not a Roman. After Pharsalus Marcellus retired to Mytilene, but in Sept. 46 Caesar allowed his return; Cicero in gratitude delivered the *pro Marcello*. But in May 45 Marcellus was murdered at the Piraeus, and Caesar, unjustly according to Cicero, was suspected of complicity.

G. E. F. C.

MARCELLUS (5), GAIUS CLAUDIUS (d. 40 B.C.), owes his historical importance to his consulship in 50. Frustrated in his efforts to procure a decree of the Senate for Caesar's recall, he took the responsibility of commissioning Pompey to command the two legions stationed at Capua and to raise troops (2 Dec.). He remained in Italy, however, after the outbreak of war and obtained Caesar's pardon. His wife Octavia bore him a son (M. Marcellus) and two daughters.

G. W. R.

MARCELLUS (6), GAIUS CLAUDIUS, consul of 49 B.C., was brother of (4) and cousin of (5); he supported Pompey and held a naval command. He probably died before the battle of Pharsalus.

F. Münzer, *PW* iii. 2736.

MARCELLUS (7), MARCUS CLAUDIUS, son of (5) above and of Octavia, sister of Augustus, was born in 42 B.C. He was betrothed to a daughter of Sex. Pompeius, but in 25 he married Augustus' daughter Julia. In 25 he accompanied the emperor to Spain; in 23, as aedile, he gave magnificent games. As the supposed heir of Augustus he incurred the rivalry of Agrippa (q.v. 3). He died in 23 and was buried in the Mausoleum of Augustus. Octavia named a library after him and Augustus a theatre. He was celebrated by Virgil (*Aen.* 6. 860) and Propertius (3. 18).

Gaheis, *PW* iii. 2764; *PIR*³, C 925.

A. M.

MARCELLUS (8), MARCUS POMPONIUS (early 1st c. A.D.), grammarian, notorious for pedantic purism in diction. Nothing of his work remains.

Cf. Teuffel, § 282, 2; Schanz-Hosius, § 475 a.

MARCELLUS (9) of Side, physician and poet, lived under Hadrian (117-38) and Antoninus Pius (138-61) and wrote 42 books of *Ἱατρικά* in heroic metre (lost); *Περὶ λυκανθρώπου*; a poem *Περὶ ἰχθύων* (frs. preserved); *Epigrammata* written in 160 for Herodes Atticus' *Triopion*.

Ed. M. Schneider, *Commentationes philologiae quibus O. Ribbeckio ... congratulantur discipuli* (1888), 115. *PW* xiv. 1496; M. Wellmann, *Marcellus von Side als Arzt* (1934).

MARCELLUS (10), ULPIUS, a Roman jurist of the second half of the second century A.D. An acute, independent thinker and no mere compiler, he often argues

with success against the opinions of earlier jurists (even those of Julianus), and is cited with predilection by his successors. His main work was the *Digesta* (31 books), a partly casuistic, partly dogmatic treatise, which was extensively transcribed by later jurists (particularly by Ulpian in his commentary to the Edict), and was also discussed in special commentaries by Ulpian and Seaevola. Marcellus also wrote *notae* to the *Digesta* of Julian (very valuable) and to Pomponius' *Regulae*, and besides this a collection of *Responsa*, a commentary *Ad legem Iuliam et Papianam*, and five books *De officio consulis*.

A. B.

MARCELLUS, see also **EPRIUS**, **NONIUS**.

MARCIA, a freedwoman, was mistress of Quadratus and, after his execution, of Commodus (q.v.). Friend and helper of the Christians, she co-operated in the murder of Commodus. She later married Eclectus and was killed by Didius Julianus.

MARCIANUS, **AELIUS**, one of the last classical Roman jurists, was active in the period after Caracalla. He was the author of voluminous manuals (*Institutiones*, *Regulae*) and some monographs, chiefly in the domain of criminal procedure, and apparently addressed to the new citizens created by the *Constitutio Antoniniana* for the purpose of instructing them in Roman Law. His writings are not lacking in original thoughts which may quite well be authentic and must not be regarded as post-classical or Byzantine additions. We owe to him our knowledge of numerous imperial rescripts of the period A.D. 198–211. It is probable that he held office in the imperial chancery.

W. W. Buckland, *Studi Riccoboni* i (1932).

A. B.

MARCIVS (1) is the eponymous author of a number of miscellaneous oracular sayings current in Rome in early days. During the Punic Wars certain *carmina Marciana*, similar to the Sibylline oracles, succeeded in obtaining sufficient authority to give rise to the Ludi Apollinares celebrated in 212. This may have been due partly to war-time conditions, and partly to the collection of scattered oracular sayings and prophecies ordered to be made by the Senate in the previous year. There seem to have been two diverging views about their authorship. According to Cicero (*Div.* i. 115; 2. 113), whose view is supported by Servius in his commentary on *Aeneid* 6, there were *Marcii fratres*, men of noble birth, who wrote prophecies and oracular sayings. According to Livy, however, and several later writers, there was one only, *vates Marcivus*; and it seems impossible to determine the truth more exactly.

Of an ancient collection of *praecepta* under the name of Marcivus three Saturnian quotations survive, which may be dated at latest as of the second century B.C. It is uncertain whether they have any connexion with *Marcivus vates*.

See Morel *FPL* 63.

A. L. P.

MARCIVS (2), **ANCEUS**, traditionally the fourth king of Rome (642–617 B.C.), is probably an historical figure and not an annalistic reduplication of the portrait of Numa. To surmise, from the connexion of Marcivus' name with Mars, that he was a god, or that his acts are mere duplications of achievements by members of the gens Marcia, is quite gratuitous. He did not build the Aqua Marcia (cf. **MARCIVS** 5) or capture and colonize Ostia (q.v.), but indubitably he reaped from the Etruscans a territory near the salt-pits at the Tiber mouth, he enlarged Rome, and he built the Pons Sublicius.

J. Carcopino, *Vieilles et les origines d'Ostie* (1919), 16 ff.; H. Lott, *C.H.F.* vii. 377 ff.

MARCIVS (3) **RUTILIUS**, **GAIUS**, four times consul and the first plebeian dictator (356 B.C.) and censor (351). His repulse of an Etruscan invasion in 356, for

which despite patrician opposition Marcivus was granted a triumph, led to the foundation of the first Roman settlement at Ostia. By a natural confusion this settlement was subsequently attributed to King Ancus Marcivus (q.v. 2).

P. T.

MARCIVS (4) **PHILIPPUS**, **QUINTUS**, praetor in Sicily in 188 B.C., as consul in 186 suppressed the Bacchanalian 'conspiracy' and suffered defeat in Liguria in the *salus Marcivus*. In 183 he was envoy in the Peloponnese, checking the Achaean League. He influenced the preliminaries of the Third Macedonian War, persuading Perseus in 171 to accept a truce which allowed Rome more time for preparations. Consul in 169, he penetrated into Pieria, clearing the way for Aemilius Paullus' Pydna campaign. He was censor with Paullus in 164–163.

Livy bks. 39–40, 42–4; Polyb. bks. 24, 27–8. T. Frank, *CPhil.* 1910, 358; De Sanctis, *Stor. Rom.* iv. 1, pp. 274, 300, 419, 565, 613; F. W. Walbank, 'A Note on the Embassy of Q. Marcivus Philippus', *JRS*, 1941.

A. H. McD.

MARCIVS (5) **REX**, **QUINTUS**, praetor in 144 B.C., built a famous aqueduct (Aqua Marcia). His imperium was prolonged after a dispute in order that he might complete it.

MARCIVS (6) **PHILIPPUS**, **LUCIVS** (cos. 91 B.C.), was perhaps grandson of (4) above and father of (8), Augustus' stepfather. An influential politician, he succeeded in living at Rome, unmolested by either side, through the struggles of the Marian and Sullan period. He began as a democrat, proposing a land-law in 104 B.C. as tribune (asserting that there were not 2,000 men of property in the State). In 100 he followed Marius in turning against Saturninus and the extremists; in his consulship (91) his opposition perhaps turned the scale against Drusus' reforms, which he declared invalid. He was censor in 86, when he defended the young Pompey. After Sulla's death he resisted Lepidus' attempted revolution in 78, and advocated sending Pompey to check Sertorius in Spain, 'non pro consule sed pro consulibus'.

M. H.

MARCIVS (7) **REX**, **QUINTUS**, was consul (68 B.C.) with L. Caccilius Metellus. As his colleague died soon, and the suffect also, he was consul alone. After superseding his brother-in-law Lucullus in Cilicia and meeting King Philip II of Syria at Antioch (67), he was himself replaced by Pompey (66). He patrolled Etruria against the Catilinarian conspirators (63).

F. Münzer, *PhW* xiv. 1583; G. Downey, *CPhil.* 1937, 144.

A. M.

MARCIVS (8) **PHILIPPUS**, **LUCIVS**, son of the censor of 86 B.C., was praetor (62), governor of Syria (61–60), and consul (56). He married Atia, Caesar's niece and C. Octavius' widow, and thus became stepfather of Octavian. He took no prominent part in the Civil Wars and went as an emissary of the Senate to Antony (43). The *porticus Philippi* probably was built by his son (tribune in 49 and *cor. suff.* in 38).

F. Münzer, *PhW* xiv. 1568.

A. M.

MARCIVS, see also **CONIOLANUS**, **TURBO**.

MARCOMAN(N)I (Stat. *Silv.* 3. 3. 170 scans Marcomāni), a West-German (Suchic) tribe, the name meaning inhabitants of a border country, are first mentioned by Caesar. Stirred up by the Cimbri and Teutones, the Marcomanni left Saxony and Thuringia (c. 100 B.C.) and settled down on the upper and middle Main; they joined Ariovistus' expedition against Gaul. Attacked by the elder Drusus (9 B.C.), they emigrated to Bohemia (c. 8 B.C.). There Maroboduus (q.v.) established a powerful kingdom, which Augustus considered a danger and wanted to destroy, but was hindered by the Pannonian-Ilyrian revolt. Weakened by a war against Arminius,

Maroboduus was expelled by Catualda (A.D. 19), who in turn was overthrown by Vibilius (20), the following kings being more or less dependent on Rome. After wars under Domitian and Nerva peace prevailed till the great Marcomannic wars (166-72; 177-80) under M. Aurelius. The Marcomanni must have played their part in the subsequent wars on the middle Danube, though they are not very frequently mentioned. After 500 they left Bohemia and occupied Bavaria.

Franke, *PW*, s.v.; J. Klose, *Roms Klientel- und Randstaaten am Rhein und an der Donau* (1934); R. Heuberger, *Klio* 24 (1931), 89 ff.; L. Schmidt, *Geschichte der deutschen Stämme bis zum Ausgang der Völkerwanderung. Die Westgermanen* (1938). F. A. W. S.

MARDONIUS, Persian general, nephew of Darius, whose daughter he married c. 493 B.C., probably co-operated in crushing the Ionian revolt. He successfully commanded an expedition to Thasos, Thraee, and Maceдон (492), notwithstanding heavy losses in Thraee and in a storm off Mt. Athos. Though he was not the chief and the evil counsellor of Xerxes (as Aeschylus and Herodotus assert), he was probably the author of the plan of campaign in 480-479. His outstanding ability is revealed in the co-ordinated land and naval operations in 480. As commander of the forces kept in Greece after Salamis, Mardonius made two vain attempts to detach Athens from the Greek alliance by offers of peace. In 479 he was forced to withdraw from Attica by the Greek land forces and was routed by them at Plataea, where he fell fighting (479).

G. B. Grundy, *Great Persian War* (1901), 148 ff.; K. J. Beloch, *Griech. Gesch.* ii², 2, 83 ff.; E. Obst, *PW*, s.v. 'Mardonios'. P. T.

MARINUS (c. A.D. 130), anatomist, often mentioned by Galen, perhaps lived in Alexandria. Works: (1) *Ἀνατομικαὶ ἐγγεγραμμέναι*; (2) an Anatomy in 20 books; (3) a book on the roots of the nerves; (4) an Anatomy of the muscles; (5) a commentary on aphorisms.

PW xiv. 1796.

W. D. R.

MARIUS (1), **GAIUS** (157-86 B.C.), was born near Arpinum; as a country-side Italian he could scarcely hope for a rapid rise to office. He served with credit in the Numantine War. As tribune in 119 he opposed a popular proposal for cheap corn, but persisted, in spite of Optimate opposition, in a plan for improving election procedure; he thus showed political impartiality. He married Julia (daughter of the consul of 91, Sextus Caesar, and the aunt of Julius Caesar). After his praetorship (115) as proprator (114) he pacified Further Spain. In 109 he went to Africa as legate of Metellus. Aided by the *Equites*, many of whom had commercial interests in Africa, he won the consulship (107) and ousted Metellus, who had been his patron, from the command against Jugurtha, which was transferred to him by the interference of the People against the wishes of the Senate—a dangerous precedent. Marius broke with tradition when he raised volunteers for his African campaign from the *capite censi*, who previously were unqualified for legionary service. The war against Jugurtha (q.v.) was ended by Marius (107-105) with his greatly increased forces and with some luck (as at Cirta, where the weather robbed Jugurtha and Boecheus of almost certain victory). The reputation which Marius thus gained made him the indispensable leader against the Teutones and Cimbri who were now threatening northern Italy. Though a *novus homo* Marius was elected consul year after year (104-101); he trained his army and finally defeated the Teutones at Aquae Sextiae (102) and with Catulus (q.v. 2) the Cimbri on the Campi Raudii near Vercellae (101). These victories were largely due to the army reforms which Marius had introduced: these included, besides the new basis of recruitment, the arming of all ranks alike, the abolition of the old three lines (*hastati*, *principes*, and *triarii*), the supersession of the maniples by the cohort,

an improved *pilum*, and, as a result of the work of Rutilius (q.v.) Rufus, greater individual training in arms drill.

2. In the years of his repeated consulships there was a working agreement between Marius and the extremist democrats. The colonial laws of Saturninus (q.v. 1) in 103 and 100, giving land to Marius' veterans, were obviously necessary despite the Optimate opposition. Lacking political aptitude and needing land for his troops and a fresh military command for himself, Marius allied himself with Saturninus and Glaucia and entered on his sixth consulship (100); but when these extremists insisted on pressing their programme too far, Marius, with the *Equites*, abandoned them. With the death of his former allies Marius lost his popularity with the people and his influence with the Senate. He left Rome to travel in Asia, preparing himself for the command against Mithridates. Later he returned and served in the Social War, when he defeated the Marsi (90).

3. Meanwhile the alliance between the *Optimates* and *Equites*, established in 100, had broken up in the later nineties. The claims of Marius to command in the war against Mithridates were supported by the democrats against those of Sulla, whose exploits in the Social War had outshone those of Marius. In 88 Sulla's appointment to the Eastern command was challenged in Marius' interest by Sulpicius. When Sulla, refusing defeat, marched on Rome, Marius fled after many adventures to Africa. After Sulla's departure for the East, Marius landed in Etruria, collected a force, and marched on Rome to join hands with Cinna (87). Together they forced the capitulation of the consul Octavius (q.v. 3) and occupied the capital, where Marius massacred all his enemies in a reign of terror. Marius appointed himself to his seventh consulship (86), but died a few days later (13 Jan.). His ashes were later scattered in the Anio by Sulla.

4. Thus the mutual jealousy of Marius and Sulla, combined with the bitterness of party feeling, led to the first great Civil War at Rome. Marius' career, therefore, though he does not seem to have had any special policy, is significant of the extent to which purely personal questions came to dominate Roman politics: he is the precursor of the great *principes*, Pompey, Crassus, and Caesar, whose rivalries caused the downfall of the Republic. And the military changes associated with Marius, who saved his country from the Northern peril and created a semi-professional army which looked to its commander as well as to the State to protect its interests, were themselves of vital importance in determining the course of the Revolution. See also JUGURTHA; ARMIES, ROMAN; WAR, ART OF, ROMAN.

MARIUS (2), **GAIUS**, adopted son of the great Marius (1), was chosen consul in 82 B.C. at the age of 27, with Cn. Carbo. He was defeated at Sacriportus, on the borders of Latium, by Sulla (who had returned to Italy in 83). He withdrew into the fortress of Praeneste, where Ofella besieged him, and whence he sent orders to L. Brutus, at Rome, for the massacre of Sulla's supporters in the Senate. Sulla's victory at the Colline Gate, following the failure of various efforts to relieve Praeneste, drove him to suicide. M. H.

MARIUS (3) **GRATIDIANUS**, praetor 86 B.C. (?), won fame by anticipating a decision taken by his colleagues and devising an 'ars probandi denarios', to separate out the good from the bad money. He received

something like divine honours from the common people, but was brutally murdered by Catiline in the Sullan terror.

His 'ars' probably consisted in affixing to the *denarius* certain small stamps that would reveal any underlying base metal. After such a scrutiny (*spectatio*) bags of money would be labelled with one of those *tesserae nummulariae* that still survive.

H. M.

MARIUS (4), **SEXTUS**, was a very wealthy owner of mines in Spain. He was accused unsuccessfully in A.D. 25, but in 33 he was charged with incest and thrown from the Tarpeian rock. His mines were confiscated.

MARIUS (5) **MAXIMUS**, a biographer of the emperors from Nerva to Elagabalus inclusive, a 'continuator' and imitator of Suetonius. He was a main source of the 'Historia Augusta', but receives a very bad character—'homo omnium uerbosissimus qui et mythistoricis se uoluminibus implicauit'—from Vopiscus. His work was arranged, on the model of Suetonius, by subjects and not by dates; it seems to have drawn largely on the *acta urbis* and certainly included quotations from documents. Pretenders were handled under the reigns of the emperors against whom they rose.

What adds interest to the work is the very high probability that he was himself a man of affairs—the Marius Maximus who went through a long career of military and senatorial posts, governed Syria, Africa, and Asia, and was *praefectus urbi* in A.D. 217 (Dessau, *ILS* 2935 f.). He must have died soon afterwards. It is strange that such an experience left him so uncritical.

Miltner, *PhW*, s.v.

H. M.

MARMOR PARIUM, an inscribed marble stele, originally about 6 ft. 7 in. high, 2 ft. 3 in. broad, and 5 to 6 in. thick, set up at Paros. Two fragments survive, one of which, brought from Smyrna to London in 1627, is now preserved in the Ashmolean Museum, Oxford (save the upper part, which perished during the Civil War), while the other, discovered at Paros in 1897, is now in the Museum there. The compiler of the inscription, whose name is lost, claims to have 'written up the dates from the beginning, derived from all kinds of records and general histories, starting from Cecrops, the first king of Athens, down to the archonship of Astyanax (?) at Paros and Diognetus at Athens', i.e. 264/3 B.C. The text is written continuously, but comprises a number of items (50 on the first fragment, 27 on the second), each containing one or more events, dated by the number of years separating it from 264/3 and by the name of the Athenian king or archon then in office; the first fragment covers the period from 1581/80 to 355/4; the second that from 336/5 to 299/8. The events commemorated form a curious medley, drawn chiefly from political, military, religious, and literary history.

The best editions are those by F. Jacoby, *Das Marmor Parium* (1904), and *FGH II*, no. 239; and by F. Hiller von Gaertringen, *IG* 12 (5), 444; Cf. Jacoby, *Rh. Mus.* lix, 63 ff.; R. Laqueur, *PhW* xiv, 1885 ff.

M. N. T.

MARO, cognomen of Virgil (P. Vergilius Maro).

MAROBODUUS, a prince of the Marcomanni, persuaded his tribe to migrate from southern Germany to Bohemia (soon after 9 B.C.), where he built up a kingdom and extended his power over the Germans of Saxony and Silesia. His army was large and well trained. Confronting Roman armies of invasion from the west and from the south in A.D. 6, he was saved from destruction by the outbreak of a rebellion in Illyricum. He refused to help Arminius three years later. In A.D. 19, however, as the result of troubles fomented by the Romans, Maroboduus was expelled from his kingdom, sought refuge on Roman territory, and was interned at Ravenna, where he lived on for nineteen years.

R. S.

MARON, a legendary priest of Apollo, son of Euanthes, of Ismarus in Thrace, who gave Odysseus the wine with which he made Polyphemus drunk (see *CYCLOPES*), along with other presents, for sparing him and his family (*Od.* 9. 197 ff.). Later writers connect him with Dionysus, e.g. Euanthes is Dionysus' son (schol. *Od.* *ibid.*).

MARPESSA, see *IDAS*.

MARRIAGE, LAW OF. I. GREEK

1. Greek marriage was monogamous; indeed, monogamy was believed to be a distinguishing feature of Greek as opposed to barbarian usage (*Eur. Andr.* 172 ff.). The oldest form of contracting marriage was the purchase of the bride by the future husband from her father or guardian (*κύριος*); her consent was not necessary, for she was the object of the sale. On this occasion the bridegroom gave to the father a consideration (*ἐδρα*), which, after having been originally a real purchase-price, became later a fictitious one, since the father delivered it to the wife, or the husband gave it directly to her without intervention of the father. In classical Attic law the conclusion of a marriage was preceded by an informal agreement between the same persons as had been parties to the ancient marriage by purchase (*ἐγγύησις*). Its legal nature is very problematical, for it is not certain whether *engysis* was a betrothal only or a definitive marriage-contract. At any rate *engysis* as a preliminary act to a future marriage, for the validity of which no further ceremony or legal form was required, was followed (immediately or some time after) by the conveyance of the bride to the house of the husband (*ἐκδοσις*), an act similar to the Roman *in domum deductio* (see below). *Engysis* might include stipulations (also informal) about the dowry (*πολὺς*), which came into use by the fifth century B.C. But dowry was not necessary for the validity of a marriage, nor was there a legal duty on the wife's father or guardian to provide one.

2. Greek marriage being, like the Roman, a mere matter of fact, could easily be dissolved by divorce. Divorce at first was possible on the initiative of the husband only, who could expel his wife from the house; under the later law, the wife also was free to break off the marriage.

3. A peculiarity of Greek law was the right of the husband to dispose in his will of the future marriage of his wife, obliging her to marry a certain man in case of her widowhood.

II. ROMAN

4. According to the celebrated and more ethical than legal definition given by the jurist Modestinus (*Dig.* 23. 2. 1) Roman marriage was considered in the classical epoch as 'coniunctio maris et feminae, consortium omnis uitae, diuini et humani iuris communicatio'. Its main element was the living together of man and woman with intention of being husband and wife, of procreating children, and of forming a lasting union of life. This *affectio maritalis* is not a momentary *consensus* but a continuous state of mind, of which Justinian still says (*Nov.* 117. 3): 'ex solo affectu potest consistere matrimonium.' Roman marriage was strictly monogamous. Requirements of a valid marriage (*iustae nuptiae, iustum matrimonium; legitimum matrimonium* in Justinian's language)—the only one which created the father's *patria potestas* over his children (see *PATRIA POTESTAS*)—were the *ius cunctis*, the capacity of civil marriage, *iuris iure ducendarum facultas*. In early times the Roman citizens only had this right; later it was granted to Latins and *peregrini* by general or personal concession. A lex, called *Canulicia* (445 B.C.), allowed marriage between patricians and plebeians, formerly prohibited. Other reasons of exclusion from *conium* were of a relative character, such as near relationship (natural or adoptive), affinity

and moral or political considerations, and, finally (cf. Gai. i. 59-63), difference of social rank, religious natural capacity (limit of age: 14 years for males, 12 for girls). The marriage of soldiers seems to have been prohibited till the third century A.D. Special prohibitions were introduced in the Principate: the *Lex Iulia de maritandis ordinibus* prohibited persons of senatorial rank from marrying *libertinae* and actresses; but it admitted the marriage of freeborn with freed persons; an imperial constitution forbade marriage between a *tutor* and his *pupilla*. Augustus' legislation with its various prohibitions was the point of departure for a rapid development of the concubinate (*concubinatus*), a union of man and woman, similar to matrimony, but without *affectio maritalis* and *honor matrimonii*. The concubinate was tolerated by the earlier emperors; its legal recognition followed later, owing to the legislation of Christian emperors, especially of Justinian.

5. In the early law there was a clear distinction between a marriage accompanied by *in manum conventio* and that without *manus* (q.v.). Special legal forms were not required for the conclusion of marriage; the ceremonies and feasts on this occasion had no legal character; its validity depended only on life in common based on the *affectio maritalis*. Hence a *deductio in domum mariti* was a requisite part of the marriage ceremony. Externally matrimony was manifested by the participation of one consort in the rank and social dignity of the other (*honor matrimonii*).

6. Marriage was usually, but not necessarily, preceded by a betrothal, *sponsalia*. In the early law this reciprocal promise of marriage was made on behalf of the future consorts by their fathers in the solemn form of a *sponsio* (hence the nomenclature *sponsalia*, *sponsus*, *sponsa*); later it became informal and was not binding, and even a *stipulatio poenae* in case of breach was without effect. In course of time some legal effects of secondary importance, similar to those of marriage, were ascribed to the *sponsalia*. In the fourth century A.D. an institution of Oriental origin, the *arrha sponsalicia*, or earnest money in guarantee of the fulfilment of the promise of marriage, came into use. The betrothal could be broken off by mutual consent or even by simple declaration of one party (*repudium*).

7. The constitution of a dowry, *dos*, was known already in early times. It made no difference to the dowry whether a marriage was with *manus* or without, because the woman, when *alieni iuris*—and this was the rule—had no property of her own which could pass to the husband in consequence of the *manus*. Therefore the woman brought into her husband's household a *dos*, the purpose of which was *ad ferenda onera matrimonii*. The *dos* became originally—according to the prevalent doctrine—the property of the husband; but its purpose gave rise to considerable limitations on his power of disposal. On the dissolution of a marriage the *dos* had normally to be returned to the woman and could be reclaimed by her by means of an *actio rei uxoriae*. The ownership of the husband over the *dos* became more and more of a fiction, being reduced finally to a mere usufruct.

8. It was at Rome a moral duty, especially for the father, to endow a daughter with a dowry, for it was considered dishonourable to a *mulier* to enter into a marriage *indotata*. Justinian changed this moral obligation into a legal one. The *dos* could be constituted either by the actual delivery to the husband of the property of which it consisted (*dotis datio*) or by a promise. The earlier form of promise was *dotis dictio*, a unilateral declaration made in solemn words by the woman herself, her father, or her debtor, the later a simple *stipulatio (dotis promissio)*. After A.D. 428 no special form was required and *qualiacumque verba* sufficed. Particular agreements were admitted concerning the return of the *dos* in case of divorce or the husband's decease during the marriage,

pacta dotalia; written documents for the same end, *instrumenta dotalia*, were a later creation.

9. Apart from the will of the parties, a marriage was dissolved when one of them died or lost *conubium* (through loss of *libertas* or *civitas*); with their will it ceased to subsist when the *affectio maritalis* no longer existed in both or in one consort, because in default of this element there was no matrimony. The external sign of this state of things was the definitive interruption of common life as man and wife. Divorce (*divortium*), therefore, did not require any formality; a simple oral notification, or one *per litteras* or *per nuntium*, sufficed; a unilateral declaration for this purpose was called *repudium*, as in the case of *sponsalia*. But in the earlier period when an *in manum conventio* had intervened, a husband could not release his wife from *manus* except by an act contrary to that by which the marriage had been concluded: *diffarreatio* or *remancipatio*.

10. The Roman law of marriage was thoroughly reformed in the Later Empire, and finally by Justinian under the influence of Christianity and the law and customs of the Oriental provinces. See also ADULTERY, MANUS (where the legal forms of Roman marriage are set forth).

MARRIAGE, SACRED (ἱερὸς γάμος), the sexual union of two persons, both divine or one divine and the other human but in some way sacral. The supposed result would appear to be increase of fertility, animal or vegetable, or of prosperity in general. An interesting example is the union on the day of the Choes (see ANTHESTERIA) of Dionysus with the wife of the Basileus at Athens (cf. DIONYSUS). Here one partner only is divine, there being no sufficient reason to suppose that an Attic queen was regarded at any date as other than human. No doubt, however, while the monarchy lasted both she and her husband had some priestly functions. Both partners are divine at the Dacala (references under BOEOTIA, CULTS), viz. Zeus and Hera; for a main feature of it was the bringing of a wife for Zeus. She was represented by a wooden image and came on a carriage, like a Boeotian bride (cf. Plut. *Quaest. Rom.* 29), accompanied by a brideswoman (νυμφέστρια, Paus. 9. 3. 7).

H. J. R.

MARRIAGE CEREMONIES. The marriage ceremonies of the Greeks and Romans were in most respects similar, the only important difference being in connexion with betrothal (q.v.). There were, however, some minor points in which Greek usage varied. In Greece marriages usually took place in the winter, preferably in the month Gamelion; on the morning of the wedding-day sacrifices were made to Zeus and Hera, the tutelary gods of marriage; before the ceremony bride and bridegroom bathed in the water of some sacred fountain, at Athens Callirhoe

Enneakrounos. Otherwise an account of a Roman wedding will in most ways hold for Greece.

2. The proceedings began in the evening at the rising of the star Hesperus, when the bride was solemnly conducted from her father's to her husband's house (*deductio*). At Athens the bridegroom drove the bride home in a mule cart, but at Rome she was escorted by a torch-light procession of relatives and friends, among them the *pronubae*, matrons who had only been married once, who afterwards attended the bride in the nuptial chamber. Among the company were flute-players and singers, often a double choir of maidens and youths who chanted the marriage song 'Hymen, O Hymenae, Hymen'. The bride, who was often no more than fourteen to sixteen years old, laid aside her girl's dress and dedicated her toys to Artemis or the household Lar shortly before the wedding-day. She was dressed in a long white robe with a woollen girdle fastened in a Herculean knot. Her veil was of a bright saffron colour, her hair-net and shoes were of the same auspicious hue, and her hair was dressed in the fashion of the Vestal Virgins so as to show three curls hanging down on each side of her face. When the bridegroom's house was reached the bride anointed the door with oil and placed woollen fillets on the door-posts; and as she was carried over the threshold the onlookers cried 'Talassio', a word of unknown meaning but connected by the Romans with the rape of the Sabine women.

3. In the strictest form of marriage, *confarreatio*, a number of symbolical acts followed the bride's entrance, performed in the presence of ten witnesses under the direction of the Flamen Dialis. The auspices were taken, and the couple, sitting on two chairs placed side by side and covered with one sheepskin, ate bread together and clasped hands in sign of union. The marriage contract was then read and sealed by the witnesses, and the marriage feast began. At its conclusion nuts, sweetmeats, and sesame cakes were showered among the guests, in token of the plenty which would attend the happy pair; and then to avert the evil eye the company sang the Fescennine Songs, a mixture of raillery and abuse. And so at last the bride was led to the nuptial couch, *lectus genialis*, placed in the *atrium* opposite to the entrance door.

Caullus, *Carmin* 61; W. Erdmann, *Die Ehe im alten Griechenland* (1934). For other literature see WOMEN; F. A. W.

MARRIAGE SONG, see EPITHALAMUM.

MARS (Mavors, Mamers, Etr. Maris; reduplicated Marmar), next to Jupiter (q.v.) the chief Italian god. Months were named after him at Rome (Martius, mod. Engl. March), Alba Longa, Falerii, Aricia, Tusculum, Lavinium, and among the Hernici, Acquiculi, Paelignians, and Sabines (Ovid, *Fasti* 3. 89-95, presumably from Verrius Flaccus). At Rome his festivals came in March and October, with the exception of the first Equirria (27 Feb.). They were the *seriae Marti* on 1 Mar. (old New Year's Day), second Equirria (14 Mar.), *agonium Martiale* (17 Mar.), Quinquatrus (19 Mar.; afterwards extended to five days and supposed to be a festival of Minerva, q.v.), and Tubilustrium (23 Mar.). All these may be reasonably explained, so far as their ritual is known, as preparations for the campaigning season, with performance of rites to benefit the horses (Equirria), trumpets (Tubilustrium), and other necessities for the conduct of war. On 1, 9, and 23 Mar. also, the Salii, an ancient priesthood belonging to Jupiter, Mars, and Quirinus (Servius on *Aen.* 8. 663), danced a sort of war-dance in armour of the fashion of the Bronze Age and sang their traditional hymn, addressed apparently to all the gods, not to these three only. This is intelligible as further preparation for war. In October the *Equus* October came on the 15th (15th). A horse-race took

place in the Campus Martius; the off horse of the winning team was sacrificed and his head contended for by the inhabitants of the Sacra Via and the Suburra. On the 19th was the Armilustrium, presumably the purification of the soldiers' arms before putting them away for the winter. In this month again the Salii performed their dances ('arma ancilia mouent', the *ancilia* being archaic shields shaped like the figure 8). Before commencing a war the general shook the sacred spears of Mars in the Regia, saying 'Mars uigila'; it is most probable that these were the original embodiments of the god. His priest is the *flamen Martialis* (see FLAMINES) and his sacred animals the wolf and woodpecker (see Wissowa, *RK* pp. 141 ff., 555 ff.). It is therefore not remarkable that he is usually considered a war-god and was equated with Ares (q.v.). But it has been pointed out (summary in Bailey, *P. Ovidi Nasonis fastorum lib. iii*, pp. 33 ff., cf. Frazer, *Fasti of Ovid* iii. 1 ff.) that he has agricultural functions also (Cato, *Agr.* 141. 2 ff.; hymn of Arval Brethren, Henzen, *Acta Arvalium*, p. cciv), and that some at least of his feasts (see above) can be interpreted as agricultural from their date and the ceremonial. Three explanations seem possible. (a) He was originally a war-god, and therefore called upon to guard the fields of his worshippers from enemies physical and spiritual. (b) He was originally a chthonian deity, hence a god of death and hence of war (cf. ARES), though originally connected with the fertility of the soil. (c) He was the high god, little differentiated as to function, of a people often engaged in war and having agriculture for their staple industry and food-supply. All of these have been maintained by various scholars.

His mythology is almost entirely borrowed from Ares, the only exception being the comic tale of how he was deceived into marrying Anna Perenna (q.v.; Ovid, *ibid.* 675 ff.), probably a folk-tale applied (by Ovid?) to deities treated after the Alexandrian manner. Under Augustus he obtained an important new title, Ultor, in connexion with the recovery of the standards from the Parthians (Platner-Ashby, p. 329 f., q.v. for his other places of worship).

H. J. R.

MARSI inhabited mountains and strategic passes in central Italy near the Fucine Lake. Their chief town was Marruvium (Strabo 5. 241). They were probably Sabelli (q.v.), although their early latinization makes proof of this impossible. They were allied, ethnically and politically, with Marrucini, Vestini, and Paeligni, but from early times were friendly to Rome (cf. Appian, *BCiv.* 1. 46). In 340 B.C. they gave Roman troops passage through their territory and remained friendly in the Second Samnite War (Livy 8. 6, 29; 9. 13; Diod. 20. 44, 101. Records of Marsie hostility are suspect: K. J. Beloch, *Röm. Gesch.*, 403; Livy 9. 41, 45; 10. 3 probably confuses Marsi with Aequi). The Marsi were loyal against Hannibal (Livy 28. 45) but took the initiative in demanding Roman citizenship in the Social War (hence often called Marsie War: Vell. Pat. 2. 21). When this demand was granted, the separate nation of Marsi disappeared. Marsie magicians were famous for miraculous snake-bite cures; Antritia, a local deity of healing, was appropriately worshipped in their territory (Verg. *Aen.* 7. 750 f.).

R. S. Conway, *Italic Dialects* (1897) i. 259.

E. T. S.

MARSUS, see DOMITIUS (6), VIRIUS (1).

MARSYAS (1), a satyr or silenus, generally associated with the river of that name, a tributary of the Maeander, but also with other streams (Jensen in Roscher's *Lexikon* ii. 2439, q.v. for the legend and its representation in art). He was a musician and inventor of a form of flute or oboe, the *psappha* or *psappha*, Pausanias 10. 30. 6, which passage also shows that at Celaeae he was the

subject of local myths and regarded as a guardian deity. He is therefore pretty certainly a Phrygian or at all events Asianic figure. In the Greek handling of his story, the origins of which are obscure, he is associated with Athena and Apollo (qq.v.) as follows. Athena, having invented the oboe (*αὐλός*), threw it away because it distorted her face to play it. Marsyas picked it up and soon learned to play on it (*Frag. Trag. Adesp.* 381 Nauck; Melanippides and Telestes in *Ath.* 616 e ff.; and later authors). He now challenged Apollo to a contest in music; Apollo, having defeated him, took advantage of an agreement that the winner should do as he liked with the loser and flayed him alive (*Apollod.* 1. 24). The river sprang from his blood or the tears of his mourners.

H. J. R.

MARSYAS (2) of Pella, relative and afterwards admiral of Antigonos I, wrote on Alexander. See **ALEXANDER** (3), Bibliography, Ancient Sources.

MARTIAL (MARCUS VALERIUS MARTIALIS), born at Bilbilis in Spain c. A.D. 40 (1. 61. 12), died c. 104. His cognomen records his birth on 1 Mar. (9. 52; 10. 24 and 92. 10; 12. 60). H. Lucas (*CQ* xxxii. 1, 1938) argues against taking this literally; but references to other birthdays seem to mark actual anniversaries rather than adjacent kalends (e.g. 3. 6; 11. 65). Educated in Spain, he proceeded in 64 to Rome, where intimacy with his fellow Spaniards Seneca and Lucan was soon cut short by their fate in the Pisonian conspiracy. Celebrating at Rome his 57th birthday (10. 24. 4), he had spent 34 years there (10. 103. 7–10, i.e. in a poem probably of A.D. 98, but this depends on whether it belongs to the first or second edition of bk. 10). Before his *Spectacula* (80) we know little of his career. It was one mainly of poverty-stricken dependence on patrons not over-generous in return for complimentary verses. For a time he had to be content with a three-stair-high lodging in the sweltering city (1. 117. 7); acquisition of a small farm at Nomentum afforded a welcome relief. By degrees his social influence, but not his wealth, increased. He received an honorary military tribunate and, though he never married, the *ius trium liberorum* (q.v.) (3. 95. 5). Brought into contact with all classes from emperor and court downwards, he chronicled succinctly every sort and condition of men and women. With his chief literary contemporaries, except Statius, he had friendly relations. These included Frontinus, Juvenal, Silius Italicus, Quintilian, and the younger Pliny. His early works attracted notice, but his real fame rests on the amazing versatility which marks his epigrammatic depiction of life in the volumes issued from 86 (bks. 1, 2) to 98 (bk. 11). Then, under Nerva, he recognized that indecency and flattery were no longer acceptable. The younger Pliny paid for his return to his never entirely forgotten homeland, and he settled on a rural property presented by a patroness Marcella. Three years later his final book was complete and in a letter which can be dated c. 104 Pliny regrets his recent death.

2. **WORKS.** A.D. 80. *Liber Spectaculorum* commemorated the opening by Titus of the Flavian Amphitheatre ('Colosseum'). Its 33 surviving pieces record contests in the arena without as yet full mastery of style.

A.D. 84–5. (a) *Xenia* (now bk. 13), mottoes for 'guest-gifts', 127 pieces, all except three in elegiac couplets, and, with four exceptions, on eatables and drinkables—an extended list indicative of Roman dinners like the fuller *menus* in some of M.'s invitations (10. 48; 11. 52). (b) *Apophoreta* (now bk. 14), mottoes for 'gifts to take home', 223, all, except two, couplets, originally perhaps paired to suit the purse of rich and poor alternately, and forming an instructive catalogue of presents.

Of his twelve *Epigrammaton libri* most appeared at intervals of about a year from 86, when he issued a revised edition of bks. 1 and 2 together. Book 3 came out during

a temporary retreat to Cisalpine Gaul. From bks. 10 and 11 he made for Nerva an expurgated anthology. Book 12 occupied him for three years after he left Rome in 98. The division into books was his own (2. 93; 5. 2 and 15; 7. 17, etc.). Prose prefaces of literary significance are given to bks. 1, 2, 8, 12, and a few lines of prose introduce the poem prefixed to bk. 9.

3. Of his 1,561 poems the most by far, 1,235, are in elegiac metre, where Ovid's influence unites with that of Catullus; 238, hendecasyllabic; 77, choliambic; a few are in iambs and hexameters. His three chief metres are frequently, though not exclusively, used satirically; but he can employ limping iambs for telling description or personal grief (3. 58, a farm; 10. 30, beach at Formiae; 5. 37, lament for Erotion: cf. the beautiful one in elegiacs 5. 34); while hendecasyllables can be realistic, as in 4. 64 (a view), or semi-personal, 4. 55 (pride in Spain). M. regards as his Latin exemplars Catullus, Domitius Marsus, Peto Albinovanus, and Gaetulicus (2. 77; 5. 6). The last-named may be the *Γαυτυλικός* of the *Greek Anthology*, and recalls its influence, which Martial never mentions. But Greek epigrams contributed to his literary skill and some (e.g. those by Lucilius, q.v.) suggested subjects, though M.'s great repertory lay in the Roman world around and though his fame was largely won by the suspension of point or sting to the close of an epigram—a feature comparatively rare in Greek.

4. Martial's predominant interest centred in his fellow human beings: 'hominem pagina nostra sapit' (10. 4. 10). He denounces mythology as remote from life (4. 49); and in his pictures of Roman society, high and low, rich and poor, virtuous and vicious, he is a spectator writing with a sort of Spanish detachment. His *métier* was no deep system of thought, but extraordinarily keen observation and sharply condensed expression. Much of his work is therefore that realism in a nutshell which fits Coleridge's definition of an epigram as 'a dwarfish whole: its body brevity and wit its soul'. He often calls his poems *nugae* or *foei*, yet he maintains they are not mere flippancies. They reflect life as in a mirror (10. 4. 8). Conscious of contemporary fame (5. 15; 6. 60; 7. 88), he is sure that he will survive, and no century, medieval or modern, has failed to remember him.

5. Where M. most repels is in his undisguised mime-like obscenity, parallel to the naked licence of the *Floralia*, and in that grotesque adulation of Domitian which tempts him into artificial conceits foreign, as a rule, to his genius. The method in his satiric epigrams is one of concealed personalities, using invented names (2. 23), 'to spare the sinner but denounce the sin' (10. 33. 10). He thus regards his sportive attacks as harmless ('*Iudimus innoeui*', 7. 12), but recognizes that, to avoid insipidity, epigrams need a drop of gall (7. 25). His poems of friendship and of mourning over young lives cut short are a winning testimony to the warm affections of the most many-sided of all epigrammatists. Privations rather than any theoretical Stoicism taught him endurance as a health of soul. He has little sympathy for the theatrical exit from the world affected by some Stoics (1. 8. 5–6): 'contempt for life is easy in distress' (11. 56. 15). This is one of the brave traits in him. Without profound philosophy, he yet had the roots of his writings in his manifold experience of life and penetrating insight into humanity.

MARTIANUS CAPELLA or *Felix Capella*, of Carthage, after A.D. 410 (Alaric's sack of Rome) and before the Vandal conquest of north Africa (429), wrote what Fulgentius in 520 calls *Liber de nuptiis Mercurii et Philologiae*, but which he may himself have called *Disciplinae*. It is a *Satura* of mixed prose and verse influenced by Varro's *Menippeae*, in style largely based on Apuleius, and metrically so nearly correct that Dick, in his edition, favours a date a century earlier. The opening allegory covers the first two books. Mercury, desiring to marry, is introduced by Apollo to Philologia, who is raised to heaven while the Muses celebrate the marriage. The seven remaining books celebrate the seven bridesmaids, Grammar, Dialectic, Rhetoric (the later *Trivium*), Geometry, Arithmetic, Astronomy, Music (the later *Quadrivium*); but in these the myth disappears, and a handbook based on Varro is epitomized. The work had an amazing vogue for eight centuries. It was revised by Felix (c. 535), mentioned by Gregory of Tours (d. 595), expounded by Scotus Erigena (d. 875), commented on by Remi of Auxerre (900), translated into German by Notker (d. 1028). Not till the school of Chartres (Bernard of Chartres, William of Conches, and John of Salisbury) went back to the classical texts did the late Middle Ages get better *habulum* than this dry mixture of fancy and pedantry (see *ENCYCLOPAEDIC LEARNING and SCHOLARSHIP, LATIN*). Its style, perversely mannered in avoidance of plain expression, may be characterized by the author's own words (bk. 3 *ad init.*) 'paginam uenustans multo illitam colore'.

Manuscripts (mostly unexamined) are numerous: at one time no important monastic library lacked a copy.

Editions: princeps, Vicenza 1499. F. Eyssenhardt, (Teubner, 1866). The edition by A. Dick (Teubner, 1925) is criticized by Wesmer (Pfl.). G. C. R.

MARULLUS. At his rhetorical academy the elder Seneca and Porcius Latro were fellow-students (Sen. *Controv.* 1 *praef.* 22).

MARY THE JEWESS, see *ALCHEMY*, para. 4.

MARYANDYNOI, see *SERIS*.

MASCHALISMOS (μασχαλισμός), a practice adopted by man-slayers, literally to prevent the ghost from walking or otherwise manifesting itself. The hands and feet of the corpse were cut off and tied under the armpits (μασχάλαι). See Aesch. *Cho.* 439; Soph. *El.* 445, with schol. there, which, however, is confused; Jebb's note and appendix ad loc. quote the other authorities, all apparently going back to Aristophanes of Byzantium, and analyse them usefully. H. J. R.

MASINISSA (so Latin writers; Polybius gives *Μασσαίνισσα*) (c. 240-149 B.C.), son of Gaia king of the eastern Numidian Massyles, was brought up at Carthage and served with the Carthaginians against the Romans in Spain from 212 until 206, when he was won over by the diplomacy and friendship of Scipio. Dynastic troubles following Gaia's death forced Masinissa to flee from his kingdom, which was partially overrun by Syphax (q.v.). After many adventures Masinissa joined the Romans when they landed in Africa (204), and fought in the

night attack on the enemies' camps and at Campi Magni, after which he defeated Syphax and reoccupied Cirta, where he met Sophonisba (q.v.) in 203. His cavalry played a decisive part in Scipio's victory at Zama (202). Thereafter as Rome's faithful ally Masinissa was complete master of all Numidia, while Carthage was by treaty unable to resist when he gradually advanced his frontiers at her expense, fleehing the Emporia on the Syrtis and finally (c. 155) Tusca near Campi Magni. To Carthaginian complaints Rome merely replied by sending out boundary commissions which decided in Masinissa's favour or left the question unsettled (e.g. in 193, 182, 174, 172, 153). Finally, helped by a party within Carthage, Masinissa goaded the Carthaginians to break their treaty with Rome by attacking him; he defeated them (150). When the Roman army arrived he was treated somewhat coldly by the Romans, who feared his ambitions (see *PUNIC WARS*). He died soon afterwards (149), and his kingdom was divided between his sons.

Of great physical strength even in extreme old age, Masinissa was a brave soldier, a skilful diplomatist, and a creative statesman. He not only extended his empire until it embarrassed Rome, but he revolutionized its economic and social life, making 'nomads into farmers and welding them into a State' (Strabo 17. 833), and turning local dynasts into feudal barons owning large estates and loyal to the throne; Punic art, language, and culture penetrated inner Numidia, urban life was encouraged, and Masinissa, following the pattern of Hellenistic monarchy, became Numidia's greatest king. He created a nation and by widening the basis of Punic civilization enabled it to survive to influence the Africa of the Roman Empire. H. H. S.

MASSILIA (Μασσαλία), modern *Marseilles*, a colony of the Phocaeans founded c. 600 B.C. on Ligurian territory. The site was recommended by the remarkable harbour Laeydon (*Vieux-Port*). In spite of warfare with its neighbours, Ligurian and Gallic, Massilia gradually became a centre for the diffusion of Hellenism, and founded colonies along the coast from Antipolis (*Antibes*) to Emporia (*Ampurias*). Victories were won over Carthaginian fleets (6th c. and c. 400 B.C.); in the fourth century Pytheas (q.v.) visited Britain, while Euthymenes explored the Guinea coast. A treasury at Delphi maintained contact with distant Hellas, while friendly connexions were established early with Rome, and Massiliot seamen played an important part in the Second Punic War. Subsequently Rome's power overshadowed her ally's, which was much harassed by Celtic pressure. In answer to its appeal Rome intervened in Gaul (123), but by establishing the Provincia weakened Massiliot commercial power still further; and for its courage in standing a siege against Caesar (49) Massilia, while keeping the federate relation, lost almost all its territory. Under the Empire Massilia, though maintaining a reputation for Hellenism even to the fifth century, became barely distinguishable from an ordinary Roman municipality. Maximian, attempting to regain the purple, defended himself behind the walls (rebuilt under Nero by the successful physician, Crinias) against Constantine (A.D. 307). The town came under Visigothic control c. 476.

M. Clerc, *Marseille* (1929).

C. E. S.

MASTARNA, a legendary hero of Etruria, was identified with Servius Tullius by the Emperor Claudius or his informant (Dionysius, *ILS* 212; A.D. 45). According to another, purely Etruscan, version (attested by the famous wall-paintings from Vulci), Mastarna came to power at Rome after revealing his comrade Caelus Vibenna, and murdering a king Tarquinus. He must therefore be identified not with the Servius Tullius of the Roman tradition, but with the Servius Tullius of the Etruscan

version, or with Porsenna (q.v.), or with both. In any case, although he may be a purely mythical figure, Mastarna represents an Etruscan master of Rome.

MATERNUS, see CURIATIUS, FIRMICUS.

MATHEMATICS. The Greeks, acquiring their first mathematical ideas from Egypt, were the first to think of making mathematics a demonstrative science. *Thales* 'proved' certain elementary propositions in geometry and used the properties of similar triangles. *Pythagoras* and the Pythagoreans laid down definitions and first principles in geometry, studied numbers geometrically (figured numbers), established a theory of proportion and means (including the 'harmonic'). Pythagoras himself discovered the dependence of the musical intervals on arithmetical ratios, gave a formula for finding squares which are the sum of two squares, and proved the corresponding property of the right-angled triangle (Eucl. 1. 47). The Pythagoreans invented the method known as the 'application of areas' (equivalent to solving geometrically the general quadratic equation) and discovered the incommensurable (in the diagonal of a square); they found successive arithmetical approximations to the value of $\sqrt{2}$.

By the middle of the fifth century the Greeks had advanced beyond the Elements. *Democritus* wrote on Irrationals and touched on infinitesimals (volumes of cone and pyramid). *Hippocrates* of Chios reduced the duplication of the cube to the finding of two mean proportionals, and squared three sorts of 'lunes'; *Hippias* discovered a higher curve which served for trisecting any angle and squaring the circle (*τετραγωνίζουσα*, *quadratrix*). *Archytas* of Tarentum (fl. c. 400–365 B.C.), the friend of Plato, found the two mean proportionals by a construction in three dimensions, and wrote on mechanics. *Theodorus* of Cyrene and *Theaetetus* investigated more surds, $\sqrt{3}$, $\sqrt{5}$, $\sqrt{17}$; *Theaetetus* classified further irrationals, discovered the octahedron and icosahedron, and wrote on all five regular solids. *Plato* was intensely interested in mathematics, especially definitions (e.g. of line, straight line, circle, 'figure') and methods, analysis, synthesis, and—with *Leon*—the *διορισμός* (determination of conditions and limits of possibility of solutions of problems). Meantime *Leon* and *Theudius* wrote books of elements. *Eudoxus* (408–355 B.C.) discovered the general theory of proportion set out in Euclid 5–6 and the 'method of exhaustion', the classical method of dealing with the area and content of curvilinear plane and solid figures respectively. *Menaechmus*, a pupil of Eudoxus, discovered the conic sections, which later became the subject of *Aristaeus* 'Solid Loci' and Euclid's *Conics*. The geometry of the sphere (*Sphaeric*) now emerges in *Autolycus* (on the moving sphere) and Euclid's *Phaenomena*. *Euclid* (fl. 300 B.C.) wrote the immortal *Elements* and works on higher geometry, 'Porisms', 'Surface-Loci', etc.; he wrote too on Optics and the Elements of Music. *Archimedes* use of the 'method of exhaustion' brings geometry to its highest point, in measurements of the circle, parabola, sphere and cylinder, conoids and spheroids, anticipating the integral calculus. *Archimedes* wrote the first scientific work on statics, solved difficult problems of finding centres of gravity, and invented the whole science of hydrostatics (*On Floating Bodies* 1, 2); he also devised a system for expressing large numbers which substituted 100,000,000 as the base instead of 10. With *Apollonius* of Perga, the 'great geometer', author of the great treatise on Conics in eight books and other works the golden age of Greek geometry ends. His successors are mainly known for discovering special curves—*Diocles* (the cissoid), *Nicomedes* (the conchoid), *Persicus* (the 'spiral' curves). Trigonometry and spherical

trigonometry are developed by *Hipparchus*, *Menaechmus*, and *Ptolemy*, the elementary theory of numbers by *Nicomachus* and *Theon* of Smyrna, applied mathematics (mechanical powers, pneumatics, engines of war) by *Philon* of Byzantium and *Heron*. Algebra, with the first approach to an algebraic notation, appears in *Diophantus* 'Arithmetica', containing problems in semi-determinate analysis which inspired Fermat. There remain commentators, the greatest of whom is *Pappus* (3rd c. A.D.), to whose *συναγωγή* we are indebted for precious descriptions of lost works in higher geometry and some remarkable things of his own (area cut off by a spiral on a sphere, a theorem later known as 'Guldin's theorem', and 'Pappus' Problem', which inspired Descartes).

T. H.

MATIUS (1), GNAEUS, in Sulla's time translated the *Iliad* into Latin hexameters. Gellius admired his learning. He introduced scazons into Latin light verse from the *mimiambi* of Herodas.

Baehr. *FPR* 281; Morel, *FPL* 48.

MATIUS (2), GAIUS, Cicero's learned friend and Caesar's partisan, helped the former in his relations with the latter, especially in 49 and 48 B.C. He presided over the games which Octavian exhibited in honour of Caesar (44). Augustus' friend, C. Matius, who published three books about gastronomy, was probably his son.

A. M.

MATRALIA, see MATUTA.

MATRES, see DEAE MATRES.

MATRIMONIUM, see MARRIAGE, LAW OF.

MATRIS of Thebes (3rd c. B.C.?), rhetor, who wrote an *Ἑγκώμιον Ἑρακλέους* with Asianist characteristics.

MATRON of Pitane (late 4th c. B.C.), parodist, wrote a poem called *Δείπνον Ἀττικόν*, quoted by Athenaeus (4. 134–7), beginning *Δείπνά μοι ἐννεπε, Μοῦσα, πολυτροφα καὶ μάλα πολλὰ*.

P. Brandt, *Corpusc. poes. ep. graec. ludibundae* i. 53–95.

MATRONALIA, see JUNO.

MATUTA, **MATER**, a Roman goddess of growth (Varro ap. August. *De Civ. D.* 4. 8: '[prae]fecerunt frumentis' maturescentibus deam Matutam). *Lucretius* (5. 656), followed by many moderns, makes her a goddess of dawn, but this is hardly possible, since she is a figure of cult, not poetry or myth, which the dawn seems never to be. For her temple in the Forum Boarium see Platner–Ashby, p. 330 f. Her festival, the Matralia, 11 June, is included in the 'calendar of Numa'. The ritual was conducted by women, apparently *uniuirae* (Tertullian, *De Monog.* 17), and they prayed only for their sisters' children (Ovid, *Fasti* 6, 559; Plut. *Quaest. Rom.* 267 e, *De frat. amor.* 492 d, the ultimate source being probably Verrius Flaccus). This being both well attested and absurd, it seems probable that they prayed for *pueri sororii*, i.e. adolescent children; Rosc in *CQ* xxviii. 156 f.

H. J. R.

MAURETANIA, the land of the Moors, stretching from the Ampsaga to the Atlantic and embracing the western half of the Atlas range. Most of the country is high and rocky, supporting sheep and producing a little wine; corn and olives grew on the coast, in the Mulucha valley, and on the plains of Volubilis (q.v.) and Sala. The chief exports were ebony, precious woods, and purple dyes.

There seems to have been communication with Spain from early days, binding Europe and Africa by piracy

and colonization. The bulk of the population belonged to the Moorish branch of the Berber race; there was an admixture of negro blood in the south, and numerous Phoenician trading-stations were established on the Mediterranean and Atlantic coasts.

By the second century B.C. the small Moorish tribes had formed kingdoms; their rulers, Bocellus and Bogud, played important parts in the Jugurthine and Civil Wars. Roman law and Greek art spread during the reign of Juba II. The murder in Rome of Ptolemy, his son and successor (A.D. 23-40), led to disturbances. Mauretania was pacified by Suetonius Paulinus (41-2) and Hosidius Geta. Before 44 Claudius constituted two Mauretanian provinces, ruled by procurators with capitals at Tingi and Caesarea (q.v. 3). Moorish cavalry served in the Roman armies, and the Moor Lusius Quietus won distinction under Trajan. But large tracts of country remained under Moorish chieftains; there were serious rebellions. Mauretania Tingitana was attached to the diocese of Spain by Diocletian.

Carcopino, *Le Maroc antique* (1940). See also VOLUBILIS.

W. N. W.

MAUSOLEUM, the Tomb of Mausolus (q.v.), satrap of Caria, built of white marble by his widow, Artemisia c. 353 B.C. at Halicarnassus, the architect being Pythius (q.v.). An earthquake caused its collapse before the fifteenth century. In 1857 the site was excavated by Sir C. Newton, who brought many pieces to the British Museum, including some fine friezes and the colossal statues of Mausolus and Artemisia, nearly intact. The monument was described by Pliny and was regarded as one of the seven wonders of the ancient world. Many restorations have been attempted (most recently by A. W. Law, *JHS* 1939, 92 ff.). All agree in showing a rectangular arrangement of the Ionic order, with thirty-six columns, standing on a high base and carrying a stepped pyramid surmounted by a four-horsed chariot (*quadriga*); the total height being about 134 feet.

A. H. Smith, *Catalogue of Sculpture in the British Museum* ii (1909), 65; W. R. Lethaby, *Greek Buildings represented by Fragments in the British Museum* (1908), 37. T. F.

MAUSOLUS, satrap of Caria 377/6-353 B.C. in virtual independence of Persian control. His early relations with the Great King were cordial and in 365 he co-operated with Autophradates in suppressing Ariobarzanes. Subsequently, however, he embarked on an expansionist policy symbolized by the substitution of Halicarnassus for Mylasa as the seat of government, and in 362 he became involved in the Satraps' Revolt, though he diplomatically deserted the losing side at the right moment. Left in undisturbed possession of his satrapy, he resumed his advance at the expense of Lycia and Ionia. The conflict of his interests with those of Athens resulted in the Social War of 357, when Rhodes, Cos, Chios, and Byzantium revolted on a promise of support from Mausolus. Athens' attempts at reasserting her control proved unsuccessful, and Rhodes and Cos became appendages to his kingdom. His marriage to his sister Artemisia, the fortress-like palace with its private harbour at Halicarnassus, his philhellenic patronage of literature and the arts, and the monumental tomb (*see* *MAUSOLEUM*) which he planned but did not live to complete, foreshadowed the rule of the Ptolemies.

W. Judeich, *Kleinasiatische Studien* (1912), ch. 6. D. E. W. W.

MAVORTIUS (perhaps not the consul of A.D. 527) wrote two Virgilian centos, *Indidit Perilis* and *De Eodem* (Bacht. *PLM* iv. 198 f., 214 ff.; K. Schenkl, *Coel* xii, 1287).

MAXENTIUS, MARCUS AURELIUS VALERIUS, son of Maximian (q.v.) and Eutropia, was passed over in A.D. 305 and was living in retirement at Rome, when Constantius died and Constantine was proclaimed. The Praetorian guard and the city of Rome, both bitter over lost privileges, raised him to the throne, and called in Maximian from his retirement in Lucania to assist him. Severus marched against Rome, but was driven to surrender after retreating to Ravenna, while Maximian went to Gaul and won over Constantine. Galerius, invading Italy, was likewise forced to retire, but Maximian, perhaps vexed at the unjust execution of Severus, tried to depose his son and, failing, fled to Constantine. Declared a public enemy at Carnuntum (308), Maxentius yet maintained himself in Italy and soon recovered Africa when it revolted under Alexander (309-10). But trouble now arose with Constantine, who represented himself as a deliverer from tyranny, while Maxentius resented the execution of his father. Constantine invaded Italy with a small army of fine quality, won the north, and, pushing on to Rome, destroyed Maxentius at the battle of the Mulvian Bridge. Maxentius had failed to establish a dynasty, since his young son, Romulus, died in 310. Personally without ability or character, Maxentius only had significance as the champion of the old privileges and the old faith of the capital.

CAH xii. 344 ff.; Parker, *Roman World*, 242 ff.

H. M.

MAXIMIAN (MARCUS AURELIUS VALERIUS MAXIMIANUS), a comrade of Diocletian, called by him in A.D. 285 to assist him as his Caesar. Sent against the Bagaudae in Gaul, he soon dispersed their irregular bands and was promoted to be Augustus, early 286. Against Carausius, who revolted to escape punishment for neglect of his duties against the pirates, Maximian was less successful. A first expedition by sea failed and Carausius received peace and recognition (289).

Maximian, charged with Italy and the West, was heavily engaged on the lower Rhine and in Raetia, against the Chaibones, in 289. Though acting in close accord with Diocletian, he only met him once in three years, at Milan (winter of 289-90).

Constantius, appointed Caesar of the West in 293, took charge of a new attack on Carausius. He took Boulogne, and, after the death of Carausius, recovered Britain from his murderer Allectus in 296. Maximian came up in person to secure the Rhine frontier, and in 297 settled the Salian Franks in the 'insula Batavorum'. He then defeated the Quinquegentanei in Africa and visited Rome. He shared in the persecution of the Christians (303) and retired with Diocletian, 1 May 305, abdicating at Milan.

Maximian returned from retirement in Lucania to support the rising of his son, Maxentius, 306. He forced Severus to surrender at Ravenna and then won over Constantine's daughter, Fausta, in marriage. In 307 he fought against Constantine at the battle of the Milvian Bridge. Maxentius tried in vain to depose his son and fled to Gaul. Required to abdicate again at Carnuntum, 308, Maximian could not settle down to a life of honourable inactivity. He led a revolt against Constantine, but was captured at Massilia and died by his own hand (310). An able soldier, he lacked humanity and statesmanship.

CAH xii. 327 ff., 345 ff.; Parker, *Roman World*, 225 ff., 237 ff.

H. M.

MAXIMINUS (1), GAIUS JULIUS VERUS (Roman emperor A.D. 235-8), a Thracian peasant who had been promoted centurion by Septimius Severus because of his physical strength and powers of endurance, was the first Roman emperor who rose from the ranks. When saluted emperor at Mainz he was, like Macrinus, of equestrian rank but, unlike him, had held no civil appointments. A rough, uneducated man, he had no administrative talents, but as a soldier was fearless and untiring. After

quelling two mutinies he ravaged Germany and won a victory in a swamp in Württemberg (235). After two years' fighting on the Danube a rebellion in Africa, caused by the unscrupulousness of one of his procurators, led to the proclamation of Gordian I and his son (q.v.) as emperors, and the Senate declared Maximinus a public enemy (238). He immediately invaded Italy, but his progress was arrested by the stout resistance of Aquileia. His troops became enfeebled and disheartened, till the soldiers of II Parthica sought an end of civil war by murdering Maximinus and his son (see GORDIAN I-3; BALBINUS).

Herodian, bks. 7-8; S.H.A. G. M. Bersanetti, *Studi su Massimino il Trace* (1940); L. Homo, *Revue Historique* 1919, ii. 209 ff. and iii. 1 ff.; Parker, *Roman World*, 141-51; *CAH* xii, ch. 2, § 3.

H. M. D. P.

MAXIMINUS (2), GAIUS GALERIUS VALERIUS, surnamed *Daia* (or *Daza*), an uneducated lad, a kinsman of Galerius, was made Caesar of the East in A.D. 305. Entrusted with the government of Syria, Egypt, and the south of Asia Minor, Maximinus served Galerius faithfully but, in 308, refused the offered title of 'filius Augusti' and was 'compelled by his troops' to assume the rank of Augustus, already conferred on Licinius. When Galerius died in 310, Maximinus occupied Asia Minor up to the Hellespont, but made peace with Licinius, who contested the crossing to Europe. Maximinus now drew closer to Maxentius, to balance the alliance of Constantine and Licinius, but after the fall of Maxentius was unable to withstand Licinius' attack; he lost two battles and died, a fugitive, at Tarsus. He had tried in vain to win the hand of Valeria, widow of Galerius.

Maximinus was a noted persecutor—in some ways the most interesting of them all. Not content with repression of the Christians, he tried to revive and reform the paganism of his subjects. He encouraged cities to petition against the Christians, and strove to improve the organization and raise the morale of the pagan priesthood.

CAH xii. 342 ff.; Parker, *Roman World*, 239 ff., 253 ff. H. M.

MAXIMUS (1), PAULLUS FABIVS (c. 46 B.C.-A.D. 14), an intimate friend of Augustus, was consul in 11 B.C., governor of Asia, and *legatus Augusti* in northern Spain (3-2 B.C.). He was an orator and advocate and a friend of Horace and Ovid. The story that he accompanied Augustus on a visit to Agrippa Postumus and committed suicide because his wife Marcia revealed the secret to Livia is improbable.

OGI 458 (rescript to the *κοινὸν τῆς Ἀσίας*); Horace, *Carm.* 4. 1; Ovid, *Pont.* (e.g. 1. 2; 3. 3); Seneca, *Controv.* 2. 4; Quintilian, *Inst.* 6. 3. 52; Tac. *Ann.* 1. 5. For coin-portrait see M. Grant, *From Imperium to Auctoritas* (1946), 387. G. W. R.

MAXIMUS (2), SEXTUS QUINCTILIUS VALERIUS, born in Alexandria Troas, received the *latus clavus* from Nerva and served as *legatus Augusti ad ordinandum statum ciuitatum liberarum* in Achaea, probably not after A.D. 108-9. An Epicurean, he was a friend of Pliny the Younger (*Ep.* 8. 24).

M. N. Tod, in *Anatolian Studies presented to W. H. Buckler* (1939), 333; E. Groag, *Die röm. Reichsbeamten von Achaia* (1939), cols. 125 ff. A. M.

MAXIMUS (3) of Tyre (c. A.D. 125-85), sophist, the author of forty-one extant *Διαλέξεις* (lectures), lived the life of an itinerant lecturer; he is known to have lectured in Athens, and the extant lectures were delivered in Rome, apparently in the reign of Commodus (180-92). He was well read in Greek literature, but apparently not in Greek philosophy except in Plato, of whom he claimed to be a follower. His lectures show no philosophical originality, and are simply eloquent exhortations to virtue decked out with quotations, chiefly from Plato and Homer; he belongs to the same genus as the sophists, though his views have no affinity with theirs, being borrowed from Cynicism and Platonism.

Ed. H. Hobein (1910); *PIF* xiv. 2555.

W. D. R.

MAXIMUS (4) (probably 2nd c. A.D.), author of the extant astrological poem *Περὶ καταρχῶν*, part of which later passed under the name of Orpheus. Suidas calls the author an Epirote or Byzantine, but identifies him with Julian's teacher Maximus, who came from Ephesus; this, however, seems improbable, as the poem is quite unphilosophical.

Ed. A. Ludwich (1877); *PIF* xiv. 2573.

MAXIMUS, see also VALERIUS (17), VIBIUS (4), VICTORI-NUS.

MEALS. The times and the names of meals in Greece varied at different periods. In Homeric times breakfast (*ἀριστον*) was taken soon after sunrise, followed by a mid-day meal (*δεῖπνον*), with a supper (*δῶρον*) in the early evening. At Athens these three meals were reduced to two, a light lunch (*ἀριστον*) in the forenoon and a dinner (*δεῖπνον*) in the evening. The Hellenistic Greeks went back to three meals, a breakfast (*ἀκρατισμός*), a lunch (*ἀριστον*), and a dinner (*δεῖπνον*); and in this they were followed by the Romans of the Empire.

The Roman began his day early, and broke his fast with a very light meal (*ientaculum*). This usually consisted of a piece of bread and some fruit. Next came a slightly more substantial lunch (*prandium*, *merenda*), taken late in the forenoon, of fish, eggs, and vegetables, together with wine and water. This comparative frugality was atoned for at dinner (*cena*), which began normally in the late afternoon and was often continued well into the night. Dinner consisted of three parts:

(1) *Gustatio*, the hors d'œuvre, eggs, shell-fish, salad, washed down with *mulsum*, honeyed wine.

(2) *Fercula*, prepared dishes; generally in three, five, or seven courses, the chief item coming in the middle. A typical menu would be this: a dish of lampreys, a huge turbot, a roast boar served whole, a roast peacock, a joint of roast veal.

(3) *Mensae secundae*, pastry and sweetmeats of all kinds, fresh and dried fruits, and wine.

(See **FOODSTUFFS**.)

F. A. W.

MEALS, SACRED. To eat together is everywhere a sort of communion, varying in different cultures from a mere mark of friendliness to a close and binding connexion. If a god is present at the meal, it becomes sacred, and the human participants are his hosts or guests and so in association with him. Hence every meal in an ancient household which kept up the old customs was sacred, for the household gods were present (cf. CHILDREN, WORSHIP, HOUSEHOLD; 'sacrae adsistere mensae', Juvenal 6. 365. O. 4, is to be present at a family meal). This is true also of the normal Olympian sacrifice, where the god and the sacrificers both partake of the victim, and equally of such rites as the *lectisternium* (q.v.), at which the god is a guest. It is most of all true of those rites in which the god himself is devoured (see DIONYSUS). In the Hellenistic mystery-cults this idea seems to have been strongly developed, ritual feasts, at which apparently the bond between god and worshippers was renewed, being a regular feature of them. These also served to mark the tie uniting initiates of a common cult; see for examples Cumont, *Rel. or.* 4, pp. 37, 65, 192, with p. 219, note 43; dining-rooms formed a regular part of Syrian temples, p. 256, note 52. It is therefore natural that such feasts were imagined as the portion of the blessed hereafter (ibid. pp. 57, 61, 202 f.; 309, note 51). More examples will be found by consulting Cumont's index, s.vv. 'Banquet', 'Festin', 'Repas'. Noek in *Essays on the Trinity and the Incarnation* (1928), 124 ff., *Harv. Theol. Rev.* xxix (1936), 77 ff.; see also BIRTHDAY, EPULONES, THEOXENIA.

MEASURES. I. MEASURES OF LENGTH. 1. Measures of length were based primarily on parts of the human body. Homer is acquainted with the foot-standard, but the length of his foot is unknown. In historic Greece many standards are found. The Olympic, said to have been taken from the foot of Heracles, was of 320.5 mm. but may originally have been longer; it is surpassed by other standards, e.g. the Aeginetan of 333 mm., the Pergamene of 330 mm., while a Samian foot may have reached 350 mm. The Aeginetan and Pergamene standards correspond with the *pes Drusianus* of Gaul and Germany in the first century B.C. (330 mm.) and seem to be derived from a people of bigger build than the Athenians, whose foot is only 295.7 mm.; this is comparable with the Roman foot of 296 mm. and the English of 301 mm. Subdivisions of the foot are taken from the fingers: thus

2	finger-breadths, δάκτυλοι	= 1	κόινυλος, middle joint of finger
4	"	"	= 1 παλαστή (Homeric δῶρον), palm
8	"	"	= 1 διχάς or ἡμιπόδιον, half-foot
10	"	"	= 1 λιχάς, span of thumb and first finger
12	"	"	= 1 σπιθαμή, span of all fingers
16	"	"	= 1 πούς, foot.

2. Higher dimensions are taken from the arms; thus

18	δάκτυλοι	= 1	πυγμή, short cubit, elbow to start of fingers
20	"	= 1	πυγών, short cubit of Homer and Herodotus, elbow to end of knuckles of closed fist
24	"	= 1	πῆχυς, normal cubit, elbow to tips of fingers.

For longer distances:

2½	feet	= 1	βῆμα, pace
6	feet	= 1	ὄργεια, fathom, stretch of both arms
100	feet	= 1	πλέθρον, breadth of the γῆς, acre.

Beyond this Homer uses phrases such as the cast of a stone or quoit or spear. The later Greek unit, the στάδιον, originally the distance covered in a single draught by the plough, contained 600 feet, no matter what the length of the foot might be, and its exact length is therefore often doubtful. The παρασάγγης of 30stadia was adopted from Persia.

3. The Roman foot (*pes*) of 296 mm. was generally divided into 12 inches, corresponding to the division of the *libra* into 12 *unciae*; the names of the subdivisions are the same and are given under **WEIGHTS**. There was also a division into 16 *digiti*, similar to the Greek system and possibly derived from it.

For higher distances:

5	pedes	= 1	passus, pace
125	paces	= 1	stadium
1,000	"	= 1	mile, about 95 yards less than the English mile.

4. **II. MEASURES OF AREA.** Measures of area in both Greece and Rome were based on the amount ploughed in a day by a yoke of oxen. The Greek unit is the πλέθρον, measuring 100 × 100 = 10,000 feet. Another unit, the μέδιμος, found in Sicily and in Cyrenaica, represented the amount of land that could be sown by a *medimnus* of wheat. The Romans employed the *actus quadratus*, a square of 120 feet, two of which formed the *iugerum* of 28,800 square Roman feet = 5.5ths of an acre. Two *iugera* formed a *heredium*, 100 *heredia* a *centuria*.

5. **III. MEASURES OF CAPACITY.** Measures of capacity fall into two divisions, dry and wet (μέτρα ξηρά, μέτρα ὑγρὰ), corresponding to the primary products, corn and wine, of ancient agriculture. The lower units are

common to both divisions, the higher denominations diverge. In Greece there are numerous local systems, but most are based on the gourd, κύαθος = 0.04 litre or approximately 0.07 of an English pint. Then

1½	kyathoi	= 1	οξύβαφον
3	"	= 1	ἡμικοτύλιον
6	"	= 1	κοτύλη
12	"	= 1	ξέστης.

The systems now fall apart; for dry measures:

4	kotylai	= 1	χοῖνιξ, at Athens a day's corn ration for a man
4	choinices	= 1	ῥιμίκετον
8	"	= 1	ἐκρεὺς or μόδιος
6	modioi	= 1	μέδιμος, which in Attica contained 51.84 litres, in Sparta 71.16 to 77.88 litres.

For liquid measures the table continues:

6	kotylai	= 1	ῥιμίχους
12	"	= 1	χοῦς
12	choes	= 1	μετρητής.

The *metretres* is the measure of the large wine-amphora and contained 864 *kyathoi* = 38.88 litres.

6. The Roman system is similar to the Greek; the spoonful, *cochlear* or *ligula* (= 0.02 pint or 1.14 centilitres), is the lowest unit.

Then 4	cochlearia	= 1	cyathus
6	"	= 1	acetabulum
12	"	= 1	quartarius
24	"	= 1	hemina (= Gr. κοτύλη)
48	"	= 1	sextarius.

For dry measures the higher denominations are:

8	sextarii	= 1	semodius, nearly an English gallon
16	"	= 1	modius.

For liquid measures:

12	heminae	= 1	congius
8	congii	= 1	amphora
20	amphorae	= 1	culleus, tun of 120 gallons.

The *amphora*, or quadrantal, by which the burden of ships was determined, was the volume of a cubic Roman foot, 25.79 litres.

MECHANICS, see PHYSICS, para. 3.

MEDDIX *tuticus* or *summus*, assisted by a *meddix minor*, was the senior magistrate among the Oscan-speaking peoples. His authority differed from that of the Romano-Latin *praetura*, to which some communities, notably Bantia, tended to assimilate the office, in being non-collegiate and yet lacking the absolute character of *imperium* (q.v.), though supreme in jurisdiction and administration. The relation of *m. minor* to *m. tuticus* recalls that of *magister equitum* to *dictator* (q.v.).

A. Rosenberg, *Staat der alten Italier* (1913); J. Whitnour, *The Foundations of Roman Italy* (1937). A. N. S.-W.

MEDEA (Μήδεια), 'the cunning one', in mythology, daughter of Aeetes king of the Colchians and his wife Eidyia ('the knowing'), grand-daughter of Helios and niece of Circe (q.v.). She is universally said to have been a witch, but shows a certain tendency to pass into a goddess (ἀθανάτου στυγερὰς, Pindar, *Pyth.* 4. 11, meaning the mouth of Medea; cf. Athenaeus, *Leg. p. 10 Christ.* 14, a corrupt passage but sufficient to show that according to him she was worshipped somewhere). In the story of the Argonauts (q.v.) as we have it she plays a prominent part; when Aeetes sets Jason a seemingly impossible task, Medea, being in love with him, helps

him to perform it by magic. In other words, she is that common figure of folk-tale, the Ogre's Daughter (Stith Thompson, G 530. 2). But the Argonauts have in many cases highly specialized characteristics, as wonderful sight (Lyneus), extraordinary speed (Euphemus), power of flight (the Boreadae) (Ap. Rhod. 1. 153, 182, 219); hence it is clear that there was another form of the story, whether older or not, in which they and not Medea helped Jason (cf. Grimm, *Kinder- u. Hausmärchen*, no. 246). Her love is elaborately motivated by Apoll. Rhod. 3. 7 ff., but this would not be original, though it may belong to the earliest literary form of the story (cf. Pindar, *Pyth.* 4. 213 ff.). Having helped Jason, Medea escapes with him in all known variants, and is regularly pursued; either her brother Apsyrtus leads the pursuit and she contrives his murder (so Ap. Rhod. 4. 410 ff.), or he is a child whom she takes with her, kills, and scatters his limbs in the way of Aeetes, thus delaying him (Cicero, *Leg. Man.* 22, and elsewhere). Returning to Iolcus, she renewed the youth of Aeson, Jason's father, by boiling him with virtuous herbs (fullest description in Ovid, *Met.* 7. 162 ff., but earliest reference in *Nostoi*, fr. 6 Allen). This done, she persuaded the daughters of Pelias to attempt the like on their own father, but was careful to give them inefficacious herbs, thus rendering them guilty, technically, of his death. This story is as old as the fifth century (Pind. *Pyth.* 4. 250 calls Medea Pelias' slayer, cf. Pherecydes in the schol. there, and both Sophocles and Euripides wrote on it, respectively in the *Πυθόρου* and the *Peliades*), but doubtfully part of the oldest form of the legend, since Hesiod (*Theog.* 997 ff.), represents her and Jason as settled in Iolcus and her child Medeus as born there.

Her connexion with Corinth seems due to the Corinthian school of epic poets, who traded on the ambiguity of the name Ephrya (a town in Thesprotia where Jason and Medea lived, schol. *Od.* 1. 259, or Corinth). For her dealings with Creon see s.v. (1); after the murder of him, his daughter, and her children, she took refuge with Aegeus (q.v.) in Athens. After her banishment from that city, a late story (Hyginus, *Fab.* 27) represents her as bringing about the death of Perses, Aeetes' brother and enemy, with the help of her son by Aegeus, Medus; the country was thereafter called Media.

See also MAGIC, para. 4.

H. J. R.

MEDIA, the mountainous country south-west of the Caspian Sea which was for a century the centre of the Median Empire. The Medes, an Indo-European people ethnologically and linguistically akin to the Persians, appear as a group of tribes, some nomadic, some settled in fortified villages, against whom the Assyrians waged war. They were possibly in the neighbourhood of L. Urmia as early as the second millennium B.C.

Deioces, whom Herodotus (1. 96-100) accounts the founder of the Median Empire, appears in the Assyrian records only as a local chieftain. The real unifier of the Medes seems to have been Phraortes (Khshathrita, c. 675-653 B.C.). His son Cyaxares (Uvakhshatra, 625-585 B.C.) conquered neighbouring territories and, in alliance with Nabopolassar of Babylon, defeated the Assyrians; Nineveh fell in 612 B.C. His empire included most of Iran, the northern territory once subject to Urartu, and Cappadocia as far as the river Halys. Of its organization little is known. Astyages (Ishtumegu, 585-550 B.C.) extended his boundaries at the expense of Babylonia, but was defeated by his vassal Cyrus, and the Median Empire passed to the Persians.

M. S. D.

MEDICINA PLINII, an extant compilation made (probably A.D. 300-50) from Pliny's account, in bks.

20-32 of the *Naturalis Historia*, of the plants and animals used for medicinal purposes. Marcellus Empiricus describes it as being the work of a second Pliny. This work has to be distinguished from a work commonly but falsely ascribed to Plinius Valerianus, of which the first three books are a garbled version (6th or 7th c.) of the earlier work, while the last two books come from a different source.

W. D. R.

MEDICINE. I. NON-RATIONAL ELEMENTS. Historians of Greek Medicine rightly stress its scientific character. This goes far back, for there are traces of science in the medical practice of the Homeric poems and the very earliest scientific works are medical. Nevertheless throughout antiquity and in every part of the ancient world other and lower types of Medicine were prevalent. No cultural element is so transmissible as irrational beliefs and practices concerning disease. These are susceptible neither of logical arrangement nor of true historic treatment, nor can their sources be entirely separated from each other. Such material can only be discussed under artificial headings based on mere convenience.

(a) References to practices on a very low anthropological level are scattered through the literature of classical antiquity. Sympathetic, contagious, and imitative magic, the influence of rulers, priests, and the dead upon disease, and the various elements with which folklore deals are all represented. They were long ago collected and analysed by Sir J. G. Frazer in *The Golden Bough*.

(b) Peculiar rites and beliefs are associated with the gathering of herbs in both early and late literature. There are collections of them attached to the *Inquiry into Plants* of Theophrastus and embedded in the *Natural History* of Pliny. Some of these customs are comparable to those in the Sanskrit Vedas. A fair case can be made for the existence of a stream of Indo-Germanic Medicine associated specially with herb remedies. Some of these practices persist among European peasants. (See BOTANY, THEOPHRASTUS, PLINY THE ELDER.)

(c) The Medicine of the New Testament is mainly that of possession by evil spirits. There is only a trace of demonism in the Old Testament and it is not prominent in classical writings until Christian times. Its presence often indicates Persian contacts. It is well illustrated in the writings of Philostratus. Its main source is probably Mesopotamian. (See POSSESSION.)

(d) All deities, both Chthonic and Olympian, had healing powers. There was also, among the Greeks and later among the Romans, a tendency to the formation of cults ascribing such powers to deceased physicians. The most prominent of these cults was that of Asclepius. A whole family of supernatural healers became associated with him. His history has an extraordinarily close parallel in Egyptian civilization. (See ASCLEPIUS.)

(e) Essential to Aesclepiian rites was 'Incubation', the temple-sleep and its accompanying dream. This, however, neither originated with nor was peculiar to the cult. Throughout antiquity advice concerning disease and preservation of health was drawn from dreams which were held to be sometimes curative. The *Oneirocritica* of Artemidorus (2nd c. A.D.) is an exposition of this. (See INCUBATION.)

(f) Dedication of votive models of affected parts, especially in Aesclepiian shrines, was a common practice. The model may bear a representation of the disease or an invocation to the deity or an indication of the remedy desired. Similar votives are found in all civilizations. Modern votives are often indistinguishable from ancient. (See VOTIVE OFFERINGS.)

(g) Amulets and periapts, inscribed with prayers, invocations, charms, or signs of power, were suspended or tied to the person to ward off evil or effect cure. Specially common in the Western Empire was the ocular cachet—

an inscribed clay tablet to be applied to the diseased eye. Identical practices still persist. (See AMULET.)

(i) Magical incantations of syncretic origin were used against disease. Characteristic of these is the inclusion of foreign words of power, especially names of foreign divinities. Most records come from the later classical period. (See MAGIC.)

(j) A peculiarity in Roman practice, not easily paralleled, was the association of bodily parts and even sensations, symptoms, and diseases with their own specific deities. These tutelary beings needed propitiation according to the part or function affected.

(k) There is an important body of herb-lore that is irrational but unassociated with 'superstitious' practices. Such is the drug list of Dioscorides. Only a minute percentage of his hundreds of herbs have the activities he ascribes to them. Yet these drug lists remained in use for centuries and generated the ancient herbals and the medieval and modern pharmacopoeias. (See NOTANY, DIOSCORIDES 2.)

(l) Apart from superstitious practices, Medicine in classical antiquity retained throughout certain relations to the current higher religion. (See § II.)

2. II. RELATION TO RATIONAL RELIGION AND PHILOSOPHY. Celsus calls Hippocrates 'the first who separated medicine from philosophy'. In fact the works of the Hippocratic Collection that date from the fifth and fourth centuries B.C. have definite philosophical affinities. Moreover, religion entered largely into the practice of healing. Thus the references to these topics are of great significance.

3. Among the ancients there were those, such as Anaxagoras, who took the 'practical' scientific attitude towards phenomena, regarding them as devoid of any divine element. This was not the common view. Nearly all the ancients—and specifically the ancient physicians—considered that there were at least some bodies and forces, and specifically the heavenly bodies and the 'winds', that could not be treated on the merely phenomenal level. For this reason, among others, any translation into a modern language of the basic terminology of Greek Medicine is liable to be misleading. Thus, for example, the classic presentation of the 'naturalist' view, the *Sacred Disease* of the Hippocratic Collection, has the key-sentence: 'This disease has the same cause (*αἰτία*) as others that come and go from the body—cold, sun, and changing restlessness of winds (*πνεύματα*). These are divine (*θεῖα*). No need to put this disease in a special class as more divine than others; all are divine, and all human (*ἀνθρώπινα*). Each has its own nature (*φύσις*) and power (*δύναμις*). None of the italicized words adequately renders the original, but the general sense of the passage will indicate to the reader that it is not legitimate to interpret all terms descriptive of 'natural processes' as normally devoid of religious content. Notably two of these words, *pneuma* (= wind) and *physis* (= nature), are not only untranslatable but carry a highly complex religious content. These words recur again and again in Greek medical literature.

4. The general view of antiquity, including that of the physicians, is that 'nature' must be conceived as permeated in some way or other by God. We think to-day of the great forces of nature as comparable on a large scale to the operations in our test-tubes. Greek physicians, without the resources of experimental science, thought of the forces of nature as of a different order from the minor mechanics of their own more intimate world. In what degree, then, was man a mere machine—that is a product of these minor mechanics—in what degree were his visitations 'natural', in what degree divine?

5. Three types of answer were given. One regarded as divine only those events which seem 'spontaneous', that is without immediate discoverable exciting cause; all else

is 'natural', man being linked with nature and God treated as a separate entity. This is the method, for example, of *Decorum* in the Hippocratic Collection. A second type of answer identified God with nature as in the *Sacred Disease* quoted above. A third made three independent categories of events, those originating in nature, those human, and those divine. This is the method of *Prognostic and Diseases of Women* of the Hippocratic Collection. There are variations and degrees of these solutions.

6. There was thus no unity of outlook among the earlier physicians, no 'primitive Hippocratic doctrine', for which historians of Greek Medicine, following Galen, have vainly sought. From Hellenistic times, however, the philosophic differences that divided the medical world, though no more profound than before, are certainly more clearly visible. They are conventionally and somewhat artificially treated under four 'schools', known as the Dogmatists, Empirics, Methodists, and Pneumatists, corresponding roughly to the philosophic sects Stoics, Epicureans, Sceptics, and Eclectics respectively.

7. Galen (129-99), summator of ancient Medicine, borrowed ideas from all four medical schools and all four philosophic sects, inclining most to the Dogmatists and Stoics. Being not only a selective but also an extremely voluminous writer, it is not surprising that he was not always consistent. His inconsistency did not, however, lessen his influence and in his *Uses of the bodily parts of man* he reached conclusions that determined medical thought for nearly a millennium and a half. He claims in that work that the organs are so well constructed, and in such perfect relation to the functions to which they minister, that it is impossible to imagine anything better. Following Aristotle's dictum that 'nature makes naught in vain', he seeks to justify the form and structure of all the organs, and of every part of every organ, with reference to the functions for which he believes they are destined. Moreover, he considers that he can discover the end served by every part and requiring it to be constructed as it is.

8. Galen was the last active scientific intellect of antiquity. His teleological message, delivered in a world of Stoic determinism, carried the implication of the worthlessness of research. His doctrine demanded *a priori* solutions of all the problems of physiology. Galen himself was among the pioneers of this teleological view. It was a relatively novel presentation of the world that it was worth exploring only to verify the hypothesis. He explored it, but his theory removed the motive for further exploration (see ANATOMY AND PHYSIOLOGY). His view fitted well with the Christian attitude and works by Galen were studied and respected throughout the Dark and Middle Ages.

9. The writings of the ancient physicians before Galen had no association with the lower religious elements. This cannot be said for all the derivative works which appear after him. But there was one earlier cult which had a general relation to the practice, if not to the theory, of Medicine. It was by no accident that Asclepius became god of doctors as well as of patients. His worship, in its best presentation, stood for rational religion in opposition to demonic and magical rites and purifications. It contained, moreover, a psychological element that was of great value to rational practice. The physician's attitude to Asclepius and that of Asclepius to Medicine is indicated in the famous Hippocratic Oath. It is not misleading to say that the normal relation of Medicine to the best side of the Asclepian cult was fairly near what it is to the current practice of religion in a settled modern society.

10. III. MEDICAL STATUS AND ORGANIZATION. The status of the Greek physician was at first not much above that of the higher craftsman. He carried his skill from town to town, establishing in each a workshop or surgery

(*iatpeiov*). As nurses and assistants he had pupils bound by agreement, one form of which is the Hippocratic *Oath*. This was not a legal but a private contract; for there was no licenciation. Medical status was raised by the Alexandrian school, where for the first time there was systematic instruction. At Rome Medicine was originally the work of slaves or subordinates. In 46 B.C. Julius Caesar gave citizenship to all who practised there. Thus status rose further and way was made for such physicians as Galen, the friend of emperors.

IX. The earliest scientific teacher in Rome, who founded the first regular school there, was Asclepiades of Bithynia (c. 40 B.C.). But schools, at first mere personal followings, combined at the beginning of the Christian era in the use of a meeting-place on the Esquiline. State-paid professors with public *auditoria* were available at Rome from the time of Vespasian (70-9). Subsidiary teaching centres were founded in other Italian towns and later in such transalpine centres as Marseilles, Bordeaux, Arles, Nîmes, Lyons, and Saragossa.

12. State physicians existed in the time of Herodotus. We know little of their terms or duties. District physicians were early appointed in Italy and the custom spread to the provinces, beginning with the army and associated first with military *valetudinaria*. Inscriptions show that such men were held in respect. In the army itself, however, the medical staff had only status equivalent to that of higher non-commissioned officers.

13. From the military *valetudinarium* it was no great step to the construction of similar institutions for the numerous imperial officials and their families in the provinces. Motives of benevolence came in and public hospitals were founded in many localities. The idea passed to Christian times. The pious foundation of hospitals for the sick and outcast in the Middle Ages is to be traced back to the Roman *valetudinaria*. The first charitable institution of this kind concerning which we have clear information was established at Rome in the fourth century by a Christian lady of whom we learn from St. Jerome.

14. IV. CLINICAL THEORY. There are sufficient common features in the practice of antiquity to make possible a general sketch, despite differing individual doctrinal allegiances throughout, and changes in the different periods.

15. First of all, and without any theory, there comes to every physician the duty of observation. His first question must be 'How ill is this patient?' We see the ancient physician at this task of observation in his records of actual cases. The most remarkable of these are the forty-two in the Hippocratic Collection, evidently from a practitioner's day-to-day note-book. They are models of succinct record, and are without any attempt at diagnosis or prognosis. Among them the modern physician can discern clearly a case of diphtheria, and examples of the 'typhoid state', and of 'Cheyne-Stokes breathing'. All forty-two cases were gravely ill and the majority died.

16. An outstanding feature of ancient Medicine is stress on foreknowledge of the course of the sickness. 'It is most excellent for a physician to cultivate *pronoia*. Since he foreknows and foretells the past, present, and future . . . men would have confidence to entrust themselves to his care . . . By an early forecast in each case he can tend aright those who have a chance to survive and by foreseeing who will die . . . he will escape blame' (*Prognostic*). *Pronoia* is not quite our prognosis, which, however, it includes. It means knowing things about a patient without being told them. A great *pronoia* is the immortal description of the signs of death, known still as the *Hippocratic facies*:

'The physician should observe thus in acute diseases: First, the face of the patient, if it be like to those in health, and especially to itself, for this would be the best of all; but the more unlike to this, the worse; such would be these: sharp nose, hollow eyes, collapsed temples;

ears cold, contracted, and with their lobes turned out; skin about the forehead rough, distended, and parched; colour greenish or dusky. If it be so at the beginning and if this cannot be explained by other symptoms, inquiry should be made whether he has been sleepless; whether he be purged; whether he is suffering from hunger. If any of these be admitted the danger may be reckoned so far the less and it may be judged in a day and a night if the appearance proceed from these. But if none of these exist and the symptoms do not subside in that time, be it known for certain that death is nigh' (*Prognostic*).

17. After his *pronoia* the physician must consider the nature of the condition he is to treat. Most ancient medical works pass lightly over theories of disease. Nevertheless treatment to be rational must have some theoretical basis. The usual doctrine was simple. Just as matter was made of the four elements, so the human body was made of their surrogates, the four cardinal fluids or humours, Blood, Phlegm, Yellow Bile, and Black Bile (melancholy). Health meant that the humours were blended harmoniously; sickness that they were in disharmony. A determinant of health was the *innate heat*, which was greatest in youth, when most fuel is needed, and declined with age. Its abdication is death. The supporter of the innate heat is the *pneuma* (or *pncumata*) which circulates in the vessels. (See ANATOMY AND PHYSIOLOGY.)

18. Disease must be treated by rectifying any disharmony of the humours. Happily these have a natural tendency to equilibrium and, left to themselves, are likely to reach that state. This is the 'Hippocratic' doctrine of *Nature as the healer of diseases*, *νοῦσων φύσις ἰηρὸς*, the *Vis medicatrix naturae* of the later Latin writers and of the present day. It was ridiculed by the more active—and more dangerous—practitioners as a 'meditation on death'.

19. The actual process by which the humours come into harmony is *pepsis* (Latin *coctio*, later elaborated as a series of 'digestions'). The turning-point at which *pepsis* is complete is the *crisis*, a term which still bears some of its original medical meaning. The crisis was expected on certain days. The physician must bring his remedies to bear especially at the critical time.

20. V. TREATMENT. Disturbance in the balance of the humours was, however, only the immediate cause of disease. There were more remote factors which the physician needed to study. Injudicious modes of life, exposure to climatic changes, and the like could be directly corrected. For such disturbances as could not be healed on these preventive lines various therapeutic measures were available.

21. After rest and quiet the central factor in treatment is dietetics, concerning which there are exceedingly elaborate details. An entire book is devoted to the preparation and uses of barley-water! The general principles of dietetics, especially related to fevers, are substantially those of the present day. The physician also had at his disposal a variety of physical remedies—baths, inunctions, clysters, etc. He employed cupping and bleeding too frequently.

22. Until later times the ancient physician was no great user of drugs except, we may note, in the treatment of diseases of women; from works on these the greater part of the 300 constituents of the pharmacopoeia of the Hippocratic Collection are derived. At first drugs were given by themselves—they were 'simples'. From Alexandrian times onward prescriptions were liable to become very elaborate. The prescription of a Theriac by Andromachus, physician to Nero and the first to bear the title *Archiatr*, was one of the longest on record. About one-third of the herbs employed in a modern pharmacopoeia were known to the Greek physicians.

23. The general line of treatment—surgery excepted—was not very unlike that of an intelligent and rather

conservative English country practitioner of about a century and a half ago. (For surgical resources of the ancients see SURGERY.) The ancient physician was, perhaps, a little less confident than his eighteenth-century successor, a little more cautious, a little more conscious of his helplessness.

24. No medical work has had the influence of the great *Aphorisms*, a series of very brief generalizations by a highly experienced physician many of whose conclusions have been confirmed by later ages, some passing into medical commonplaces, others becoming popular proverbs. The work is included in the Hippocratic Collection but cannot be even approximately dated. The meaning of the first Aphorism is misrepresented by its usual truncated quotation. In depressing completeness it runs: 'Life is short and the Art long, the occasion urgent, experience deceptive, and decision difficult; yet not only must the physician be ready to do his duty but patient, attendants, and circumstances must co-operate if there is to be a cure.'

25. VI. MATERIAL AND LITERARY SOURCES. Of material remains the most impressive are Asclepian sites excavated at Epidaurus, Cos, Pergamus, Athens, Rome, and elsewhere. There is a doctor's house and nursing-home at Pompeii. Numerous instruments have been found at Pompeii and at many other places. Vase-paintings have yielded much information, especially for hygiene, bathing customs, athletics, etc. Sanitation is superbly represented by the aqueducts, water-supply, and drainage-systems of Rome. There are remains of military hospitals in the Empire, of which the best known are those at Novesium and Vetera (*Neuss* and *Xanten* on the Rhine frontier) in lower Germany and at Aquae Helveticae (*Baden* in Switzerland). In the latter numerous instruments were found. Many inscribed stone stamps used for impressing ointments, especially for diseases of the eyes, with name of maker and directions for use have been found in the western provinces.

26. The fund of Greek manuscripts is very large and is inadequately explored. Latin manuscripts containing versions and translations from Greek also yield information. The papyri are disappointing, but among them is a substantial fragment of the otherwise unknown historical work of Menon, pupil of Aristotle, giving views of some pre-Hippocratic. There are also papyri illuminating the herbal tradition. Information is accumulating of works lost in the original but surviving in versions in Arabic, Hebrew, and Syriac manuscripts.

27. Light is cast on practice by innumerable allusions in literary texts. Here we consider only technical literature, which is so extensive that no one would claim to have studied the whole closely; there are modern critical editions of only about a half. Best explored is the Hippocratic Collection, but it is complete in no edition after Littré's (1839-61) and for many of its members we still depend on this. Of Galen's writings and pseudepigrapha only a small percentage is critically edited, and we still depend substantially upon an inferior edition completed in 1833.

28. For the earliest stratum of rational Medicine we have only the fragments of the pre-Socratic philosophers, notably those of Pythagoras, Alcmaeon, Empedocles, Heraclitus, Democritus, and Anaxagoras. For the fifth century there are several works in the Hippocratic Collection and fragments of several other medical writers. For the fourth century there is the bulk of the Hippocratic Collection, one work in which can be ascribed to Polybus, son-in-law of Hippocrates. There are also many relevant passages in the works of Plato, Aristotle, and Theophrastus. Specially interesting are fragments of the physician Diocles, contemporary with or a little older than Aristotle.

29. Of the earlier Alexandrian period there are fragments of Herophilus and Erasistratus, the poems on drugs by

Nicander, and fragments of a number of herbalists others. The later Alexandrians are more happily represented by Celsus *On medical matters* (in Latin from Greek original), by finely illustrated texts of the *Herbarius* of Crateuas (c. 80 B.C.), of a commentary on the *locations* of the Hippocratic Collection (c. A.D. 50) Dioscorides *On materia medica* (c. A.D. 60), and of Soranus *On fractures and bandaging* and *On obstetrics* (c. A.D. 100). There are also fragments of the first Greek practitioner in Rome, the Methodist Aesclepiades of Bithynia, others.

30. Writers after Galen were numerous and many inferior. Important historically are the fourth-fifth-century Latin translations of Dioscorides and works both of the Hippocratic and of the Galenic collections. Interesting for the soundness of its physiology is Nestorius, Bishop of Emesa, *On the nature of man* (c. 400). Solid derivative source-books are those of Oribasius (325-403), Aëtius (c. 550), Paul of Aegina (625-90), Alexander of Tralles (525-605). The last still shows a spark of originality but much superstition.

31. Of Latin works that *On acute and chronic diseases* by Caelius Aurelianus, a Numidian of the fifth century, interesting both linguistically and as the only complete Methodist work. Among the more bizarre survivals are the medical verses of Quintus Serenus Sammonianus which introduce that word of power *Abracadabra*; popular, irrational but also non-superstitious herbals: 'Apuleius Platonius Madaurensis' known in score of early illustrated manuscripts; and the disgusting *Secreta* of Placitus Papyriensis *On drugs from animals*. On the lowest level is Marcellus Empiricus of Bordeaux (c. 400), whose semi-insane assembly of folly and superstition is a happy hunting-ground for folk-lore.

32. VII. MODERN CRITICISM. Nineteenth-century scholarship produced an account of the origin and evolution of ancient Medicine that accorded substantially with views of the ancient physicians from the third century onward as to the history of their art. The ancient tradition was modified but not fundamentally altered. Despite the difficulty in identifying the 'genuine' works of Hippocrates it was persistently held that from the elements in the Hippocratic Collection a fairly coherent doctrinal system could be deduced, which was traced under the (sometimes admittedly conventional) name 'Hippocrates'. The figure and part of the personal history of the 'Father of Medicine' were substantially retained.

33. Work of the last three decades calls for a fundamental change in this attitude. A middle way is impossible. The controversy turns primarily on the figure of Hippocrates (c. 400 B.C.) and upon the question of his share in the so-called 'Hippocratic Collection', which took its first form in the third century B.C. (See HIPPOCRATES).

34. The 'Hippocratic' works, even of the older stratum in that collection, contain differences in outlook as great as those between Socrates and Anaxagoras. Parts of the 'Collection' are separated from each other by centuries in time and were written under widely different social and geographical conditions. To attribute all or many of their doctrines, or of the works that contain them, to a conventionalized 'Hippocrates' conveys nothing but confusion. Moreover, archaeological, textual, and historical investigation combine to render untenable the traditional account of the life of the 'Father of Medicine' even in a greatly modified form.

35. It has been assumed in this article that ancient Medicine did not take shape first with Hippocrates; that it was not originally connected with Cos or with the cult of Asclepius either at Cos or elsewhere; that we know almost nothing of Hippocrates except the approximate period of his life, and that he was regarded by his immediate successors as one—but only one—of several distinguished physicians of his age; that we have

evidence of the existence of any work by Hippocrates, and that we have some evidence that no work by him exists. These are negative conclusions; the positive are incorporated in §§ III, IV, and V. This critical attitude affects neither the value of the Greek picture of the ideal physician, nor the view that such qualities were to be found among the ancients, nor the inspiration and beauty of the 'Hippocratic' mode of life.

BIBLIOGRAPHY

For the complete Hippocratic Collection and Galenic writings the reader must still rely on the editions of E. Littré (10 vols., 1831-62) and C. G. Kühn (20 vols., 1821-33). The collection of general information on Greek Medicine in F. Adams, *The Seven Books of Paul of Aegina* (3 vols., 1844-7), is still unexcelled. The best modern Hippocrates, by W. H. S. Jones and E. T. Withington (Loeb Library, 4 vols., 1922-31), is imperfect, as is H. Kühlwein and J. Ilberg, *Hippocratis Opera Omnia* (2 vols., 1894-1902). The *Corpus Medicorum Latinorum* contains several useful volumes. The progress of the *Corpus Medicorum Graecorum* is negligible. Works of other individual authors are given in the articles under their names.

General material in Charles Singer, *Greek Biology and Greek Medicine* (1922), and in *The Legacy of Rome* (1924); L. Edelstein in *Bulletin of the Institute of the History of Medicine* (U.S.A. 1937 and 1939); Werner Jaeger, *Diokles von Karystos* (1938); J. J. Walsh, *Galen's Writings and the Influences inspiring them*, *Annals of Medical History* (1934-9); E. Nachmanson *Érotianstudien* (1917).

§ II. L. Edelstein, 'Greek Medicine in Relation to Religion and Magic', *Bull. of the Inst. of Hist. of Med.* v (U.S.A. 1937), p. 201, and 'Hippocrates' in *PW*, Suppl. to Bd. vi a (1935), 1290; W. A. Hicdel, *The Heroic Age of Science* (U.S.A. 1933); M. Neuburger, *History of Medicine* (2 vols., 1910-25); O. Weinreich, *Antike Heilungswunder* (1909); A. Abt, *Die Apologie des Apuleius und die antike Zauberei* (1908); W. A. Jayne, *The Healing Gods* (1925); M. Hamilton, *Incubation* (1906). E. J. and L. Edelstein, *Asclepius* (2 vols., Baltimore, 1946). See also references in § iv and bibliography under HIPPOCRATES (2), etc.

§ III. W. Müri, *Arzt und Patient bei Hippokrates* (1936); W. H. S. Jones, *The Doctor's Oath* (1924); T. Meyer, *Geschichte der römischen Aerztestandes* (1907); H. E. Sigerist, 'Notes and Comments on Hippocrates', *Bull. of the Inst. of Hist. of Med.* ii (U.S.A. 1934), p. 190; F. H. Garrison, *Notes on the History of Military Medicine* (U.S.A. 1922); 'History of Drainage', *Bull. of New York Acad. of Med.* v (U.S.A. 1929), p. 887; T. Puschmann, *A History of Medical Education* (1891). Still useful are R. Briau, *L'Assistance médicale chez les Romains* (1869), and *L'Archiatre romaine ou la médecine officielle dans l'empire romain* (1877), and M. Albert, *Les Médécins grecs d Rome* (1894).

§ IV. Ch. Daremberg, *La Médecine, histoire et doctrine* (1863), is still the best book on the subject. T. Clifford Allbutt, *Greek Medicine in Rome* (1921); A. J. Brock, *Greek Medicine* (1929), and *Galen on the Natural Faculties* (Loeb, 1916); O. Temkin, *The Falling Sickness* (Baltimore, 1945); Charles Singer and C. Rabin, *A Prelude to Science* (1946).

§ V. J. H. Dierbach, *Die Arzneimittel des Hippokrates* (1924), is still useful; J. Berendes, *Des Pedanios Dioskurides Arzneimittellehre* (1902), and *Die Pharmacie bei den alten Culturvölkern* (2 vols., 1891); H. Schelenz, *Geschichte der Pharmazie* (1904); Theodor Meyer, *Theodor Priscianus und die römische Medizin* (1909); K. Sudhoff, *Aus dem antiken Badecesen* (2 vols., 1910); E. N. Gardiner, *Athletics of the Ancient World* (1930); G. F. Still, *History of Paediatrics* (1931); C. Tsintsiropoulos, *La Médecine grecque depuis Asclépiade jusqu'à Galien* (1892); P. Pansier, 'Repertorium oculariorum inter Graecos Romanosque', *Janus* x and xi (1905-6); I. Fischer, *Geschichte der Gynäkologie* in J. Halban and L. Seitz, *Biologie und Pathologie des Weibes* (1926).

§ VI. Eugen Holländer, *Plastik und Medizin* (1912), is the largest collection of minor material remains. The magnificent work of A. Defrasse and H. Lechat, *Epidauré*, contains many good restorations. For other Aselepias sites see ASCLEPIUS. For the legions and other hospitals see the *Bonner Jahrbücher* cxxxviii-cxxxix, 54 ff. and F. Stähelin, *Die Schweiz in römischer Zeit* (1931), and cf. *Proc. Soc. Ant. Scot.* lxxiii. 132. H. Diels, *Die Fragmente der Vorsokratiker* (3 vols., 1934-7) is indispensable in its field. The early references to medicine in general literature are usefully collected by M. Moller, *La Médecine chez les grecs avant Hippocrate* (1906); Ch. Daremberg, *La Médecine dans Homère* (1865), has not been displaced.

For Hippocratic and Galenic Collections see above. Important communications between 1911 and 1919 are listed by F. E. Kind in C. Bursian's *Jahresbericht über die Fortschritte der klassischen Altertumswissenschaft* for 1919, and after that in the bibliographies of *Jis* and the *Mitteilungen zur Gesch. der Med. und der Naturwissenschaften*.

The Greek MSS. are indexed in H. Diels, *Die Handschriften der antiken Aerzte* (2 vols., 1905-6).

Most of the medical illuminations that are of ancient origin are discussed or reproduced in J. Ilberg, *Die Ueberlieferung der Gynäkologie des Soranus von Ephesos* (1910), and *Sorani Gynaeciorum Libri IV, De signis fracturarum, De fasciis* (1927). E. Howald and H. E. Sigerist, *Antoni Musae de Herba Vellonica*, etc. (1927); Charles Singer, 'The Herbal in Antiquity', *JHS* 1927; H. Schöne, *Apollonius von Kitium, illustrierter Kommentar zu der hippokratischen*

Schrift IIEPI APΘPQN. Illustrations of Roman surgery are given by Charles Singer in *The Legacy of Rome* (1924). For Pompeian and other surgical instruments see J. S. Milne, *Surgical Instruments in Greek and Roman Times* (1907); T. Meyer-Steinig, *Chirurgische Instrumente des Altertums* (1912), and Cagnot and Chapot, *Manuel d'archéologie romaine* (1920) ii. 513 ff.

§ VII. Max Pohlenz, *Hippokrates und die Begründung der wissenschaftlichen Medizin* (1938). L. Edelstein, *IIEPI AEPQN und die Sammlung der hippokratischen Schriften* (1931), and article 'Hippocrates' in *PW*, Suppl. to Bd. vi a, 1290; H. E. Sigerist, 'Notes and Comments on Hippocrates', *Bull. of the Inst. of Hist. of Med.* ii (U.S.A. 1934), 190; O. Temkin, 'Geschichte des Hippokratismus' in *Kyklos* iv. 1, 19 and 'Doctrine of Epilepsy in the Hippocratic writings', *Bull. of the Inst. of Hist. of Med.*, i (U.S.A., 1933), 277; M. Wellmann, *Die hippokratische Schrift nepi ἑβδομάδων* (1933); H. Diller, *Die sogenannte 2te Fassung des 19 Hippokratesbriefes* (1933). C. S.

MEDIOLAN(I)UM, nowadays *Milan*, founded c. 396 B.C. on or near the site of Etruscan Melpum (Pliny, *HN* 3. 125) by the Insubres, came under Roman control temporarily in 222, permanently in 194 B.C. (Polyb. 2. 34; Livy 5. 34; 34. 46). It obtained Latin rights in 89, Roman citizenship in 49 B.C. Under the Empire, as *municipium* and later as *colonia*, it grew steadily. The principal north Italian road-centre, Mediolanum ultimately became the capital of the Western Empire. The frequent presence of the imperial court, especially in the fourth century, contributed to its prosperity; but, centrally situated in the fertile plain of Cisalpine Gaul, it was independently important. After 300 Mediolanum was the seat of the governor of Liguria, the praetorian prefect, and the vicar of Italy. Attila (452), Odoacer (476), Theodoric (493), Uraia who sacked it (539), and Alboin (569) successively captured Mediolanum. Its famed bishop Ambrose (374-7) established its ecclesiastical independence. The Emperors Didius Julianus and Geta were born there.

Strabo 5. 213; Eutrop. 9. 27; Aur. Vict. *Caes.* 39; Procop. *Goth.* 2. 8. A. Colombo, *Lombardia Romana* (1939). E. T. S.

MEDON (Μέδων), name of several mythological persons, the only one of importance being the herald in the *Odyssey*, who warns Penelope of the suitors' plot against Telemachus (4. 677 ff.) and is spared by Odysseus (22. 357 ff.).

MEDUSA, see GORGON.

MEFITIS, Italian goddess of sulphurous vapours arising from the ground (Verg. *Aen.* 7. 84 and Servius there); hence her temple at Cremona was outside the walls (Tacitus, *Hist.* 3. 33), though in Rome her grove was on the Esquiline (Varro, *Ling.* 5. 49). There are indications that her cult extended throughout Italy, but especially in the central (the most volcanic) regions.

See Wissowa, *RIK* 246.

MEGACLES, son of Alcmaeon, of the Alcmæonidae (q.v.) family at Athens. He was the successful suitor of Agariste, daughter of Cleisthenes, tyrant of Sicyon (c. 575 B.C.). He led the moderate party, his rivals being Lycurgus (a narrow oligarch) and Pisistratus. When the latter as democratic leader made himself tyrant, Megacles at first combined with Lycurgus against him, but later helped Pisistratus, who agreed to marry his daughter. The marriage, however, led to a further quarrel and Pisistratus was again driven out; but on his final return (c. 543) Megacles went into exile. Nothing later is recorded of him. A. W. G.

MEGALESIA, see CYBELE.

MEGALOPHANES, see DEMOPHANES.

MEGALOPOLIS (ἡ μεγάλη πόλις: the compound form is Latin) was founded by Epaminondas between 370 and 362 B.C. as the centre of the Arcadian League. Most of the Arcadians (excluding the NE. and E. Arcadian towns)

and the Scirites of the Laconian borderland became its citizens; forty villages were completely or partially abandoned (Paus. 8. 27. 3-4). It lay in a plain, through which the headwaters of the Alpheus and Eurotas flow, and was therefore a centre of communications. It was one of the largest cities of Peloponnesus, and many of its buildings have been excavated, including the Thersilion, where the Arcadian federal assembly met.

Megalopolis was often hard pressed by Sparta, and suffered from the lukewarmness or hostility of other Arcadian cities and the centrifugal tendencies of the mountaineers. It consistently took the Macedonian part in the fourth century. In 235 its tyrant Lydiadas (q.v.) abdicated and introduced Megalopolis into the Achaean League (Polyb. 2. 44. 5), in which it subsequently played a leading part under Philopoemen. The last great Megalopolitan was Polybius the historian. In Roman times Megalopolis became an ordinary provincial town (Strabo, p. 388).

Paus. 8. 27. 30-2; Diod. 15. 72. *Excavations at Megalopolis, 1890-1* (British School at Athens); E. Fiechter, *Das Theater in Megalopolis* (1931). T. J. D.

MEGARA was a town on the isthmus of Corinth, situated in a fertile but narrow plain between Mts. Geranea, Cithaeron, and Cerata, which separated it from Corinthia, Boeotia, and Attica respectively. Its communications with the Corinthian Gulf were difficult, but it had good harbours on the Saronic Gulf, and it was of some importance as a land of passage between Peloponnesus and central Greece.

Between 730 and 550 B.C. Megara displayed considerable colonizing activity. Its chief daughter-cities were Megara Hyblaea in Sicily, Chalcidion and Byzantium on the Bosphorus, and Heraclaea Pontica in Bithynia. To this period we may also assign the rise of its extensive woollen industry. But c. 600 B.C. it came under the rule of a tyrant (see THEAGENES), and it subsequently fell a prey to domestic strife. Consequently it lost its western region, the Peraea Chora, to Corinth, and Salamis to Athens. Shortly before 500 it joined the Peloponnesian League, and it played its full part in the Persian Wars. After 460 it became a bone of contention between Athens and Corinth, and an attempt by Pericles to starve it into surrender by the 'Megarian Decree', which laid an embargo upon its Aegean and Pontic trade (432), was an important contributory cause of the Peloponnesian War. In the fourth century it generally contrived, despite its position, to remain detached from the inter-city warfare of the period, and it recovered its early prosperity. It allied with Athens against Philip, but in the Hellenistic period it relapsed into obscurity. Megara was the temporary seat of the Socratic school of philosophers and is commonly believed to have been the home of the poet Theognis (q.v. 1).

E. L. Highberger, *The History and Civilisation of Ancient Megara* (U.S.A. 1927); Ernst Meyer, *FW*, s.v. M. C.

MEGARIAN SCHOOL, THE, founded at an uncertain date by Euclides (q.v. 1) of Megara, the companion of Socrates and a somewhat older contemporary of Plato's. It is not known what form the school took, but it seems probable that it was not a corporate body and it does not appear to have survived as a school for long after the immediate successors of Euclides. It adopted the doctrines of Parmenides and the Eleatics. Its members seem to have used this doctrine primarily as a basis for criticism of other schools. They developed a reputation for their skill in dialectical argument and were known for the invention of some ingenious sophisms. There are some indications also of contributions to ethical theory, but the exact nature of these is uncertain.

History of Ancient Philosophy, Zeller, II. 1st ed. 244-75; Gomperz (Engl. Transl. II. 170-204); Robin (Engl. Transl. 114-131); G. C. Field, *Plato and his Contemporaries* (1930), ch. 12. G. C. F.

MEGASTHENES (fl. 300 B.C.), an Ionian who wrote on the topography, religion, and customs of India (*Ἰνδικά*). Served on several embassies, 302-291, sent by Seleucus I to the court of the Indian king, Sandrocottus. His Greek background in philosophy and myth made him an unreliable observer, inventing parallels between two quite different cultures. The chief source of Arrian's *Ἰνδικά*.

FHG II. 397.

G. L. B.

MEGELLUS, see POSTUMIUS (2).

MEIDIAS, potter, in Athens, late fifth century B.C. The 'Meidias painter' who painted for him has a sweet, rich style, often used white for flesh, and added gold for ornaments.

J. D. Beazley, *A.V.* 459; W. Hahland, *Die Vasen um Midias* (1930).

MELICHAÏ (μελιχάι), see BOXING.

MELA, LUCTUS (?) ANNAEUS, youngest son of Seneca the Rhetorician, and father of Lucan, was *eques* and financier. Claiming Lucan's property after his death in the Pisonian conspiracy of A.D. 65, he was himself implicated and committed suicide.

E. P. B.

MELA, see also POMPONIUS (4).

MELAMPUS (Μελάμπος) (1), prophet, missionary of Dionysus (post-Homeric tradition), and ancestor of the prophetic clan of the Melanipodidae. Three principal stories are told of him. (a) Serpents licked his ears, and he became able to understand the speech of all creatures (schol. *Od.* 11. 290; Eustath. p. 1685, 25). (b) His brother Bias wished to marry Pero, whose father Neleus demanded as bride-price the cattle of Iphielus son of Phylacus, which had been taken by him from Neleus' mother Tyro. Melampus undertook to get them, was caught and imprisoned, but so impressed his jailer by foreseeing the fall of a roof, which he had heard of from the wood-worms, that Iphielus, hearing of it, promised him the cattle if Melampus could discover why he was childless. By questioning a vulture, Melampus discovered that Iphielus' father had unwittingly worked a charm of impotence against him. All was thus settled satisfactorily (*Od.* 11. 287 ff. and scholia). (c) He cured the daughters of Proetus (q.v.) of their madness.

See further Wolff in Roscher's *Lexikon*, s.v., Play in *PP*, s.v., and art. DIVINATION. H. J. R.

MELAMPUS (2), author of two extant works on divination, *Περὶ παλαιῶν μαντικῆς* (ed. H. Diels, *Abh. Berl. Akad.* 1907) and *Περὶ ἐλαίων τοῦ σώματος* (ed. J. G. F. Franz, *Scriptores Physiognomoniae Veteres*, 1780).

FW xv. 399.

MELANIPPIDES, dithyrambic poet, of Melos. Suidas distinguishes two poets of the name, but there was probably only one, who was active from c. 480 B.C. to his death at the court of Perdiccas of Macedonia (Suid. s.v. *Μελανίππιος*). His fame is attested by Xenophon (*Mem.* 1. 4. 3). He altered the structure of the Dithyramb by introducing *ἀναβολαί*, or lyric solos, instead of the antistrophe (Arist. *Rh.* 3. 9) and is mentioned by Pherecrates (fr. 145) as the first corrupter of the art of music (see MUSIC, § 10). His scanty remains are of a *Danaiades*, a *Maryas*, in which Athene flings away her flute in disgust because of its effect on her cheeks (fr. 3), and a *Persophone*. Melaezer included some poems of his in his *Garland* (*Anth. Pal.* 4. 1. 7) and calls them Hymns.

Text: E. Diels, *Anth. Lyr. Graec.* II. 153-4. Citations: A. W. Pindar-Cambridge, *Dithyramb, Tragedy, and Comedy* (1927), 55-8. C. M. B.

MELANIPPUS, in mythology, one of the Theban champions opposed to the Seven (cf. ANAXURUS; *Antich. Septem*, 414 and often). He was one of the Sparti (cf.

CADMUS) by descent (*ibid.*); in Aeschylus he defends the Gate of Proetus against Tydeus (q.v.). His father was Astaeus. He succeeded in wounding Tydeus mortally, but the latter with a final effort killed him and, in dying, asked for the head of his opponent. This was brought him by Amphiarus, who hated him, or Capaneus, and he gnawed it. Thereupon Athena, who had intended to make him immortal for his valour, turned away in horror and Tydeus died.

See Apollod. 3. 75-6; Statius, *Theb.* 8. 716 ff. For Melanippus' cult see Farnell, *Hero-Cults*, p. 335. H. J. R.

MELANTHIUS (1) (5th c. B.C.), a minor tragic poet of Athens, who wrote an elegiac poem in honour of Cimon. The comic poets attack his gluttony, effeminacy, and other defects (*Ath.* 8. 343 c). One of his plays was a *Medea*.

TGF 460.

A. W. P.-C.

MELANTHIUS (2) (4th c. B.C.), painter. Pupil of Pamphilus (q.v.), whom he probably succeeded as head of the Sicyonian school. The picture of Aristratus in his victorious chariot was painted by 'all those about Melanthius' including Apelles; no other work by him is mentioned. Apelles admitted his superiority in composition. He wrote on painting, and said that works of art, like characters, should show a certain stubbornness and harshness (in contrast to Apelles' boasted 'charm').

T. B. L. W.

MELANTHIUS (3) (4th c. B.C.), an attidographer who also wrote on the Eleusinian mysteries.

FHG iv. 444.

MELEAGER (*Μελέαγρος*) (1), in mythology, son of Oeneus (q.v.), or of Ares (*Hyginus, Fab.* 14. 16; 171. 1), and the former's wife Althaea. His story is told in two different forms, the Homeric and the non-Homeric; the former is typical epic, the latter typical folk-tale with the motif of a life-token (*Stith Thompson, E* 765. 1. 2). In the former he is a valiant warrior, whose aid is desperately needed when the Curetes (q.v.) attack Calydon. Being angry with his mother, who had cursed him 'for the slaying of her brother' (*Iliad* 9. 567; see the whole passage), he refused to defend the city, till at last he yielded to the entreaties of his wife Cleopatra, daughter of Idas (q.v.) and Marpessa. Homer also says (*ibid.* 533 ff.) that Oeneus forgot to sacrifice to Artemis, and she therefore sent a great wild boar to ravage the country; Meleager then gathered huntsmen and hounds from many cities and killed the boar. Elsewhere (*Il.* 2. 642) it is mentioned in passing that he was dead by the time of the Trojan War, but nothing is said of the manner of his death. In the *Ehoiai* (fr. 135, 12 Rzsch) Meleager is killed by Apollo in battle with the Curetes; the text is very fragmentary, but cf. Paus. 10. 31. 3. This, then, continues the Homeric or normal heroic tradition. The other story cannot be traced further back than Phrynichus the tragedian (q.v. 1; fr. 6 Nauck, from Paus. *ibid.* 4). As told by later writers (e.g. Apollod. 1. 65 ff.; ultimately from Euripides' *Meleager*?) it runs thus. When the boar-hunt began, Atalanta (q.v.) was the first to wound the beast. Meleager, who loved her, adjudged her the spoils when he himself killed the boar. His mother's brothers tried to take them from her and Meleager killed them. Althaea then had recourse to her power over his life. Shortly after his birth, the Moirai had come to the room and said that he should live until a brand then on the fire burned away; this is a theme which might be found in a modern Greek story, the belief in these spirits of birth being still prevalent. Althaea quenched the brand and put it in a chest; now, hearing of the death of her brothers, she took it out and burned it, and Meleager died.

Bacchylides (5. 93 ff.) combines the two versions; the Curetes and Aetolians fought over the boar's spoils (as in Homer, *op. cit.* 547 ff.); in the *mêlée* Meleager accidentally killed his uncles, but Althaea did not reflect that it was an accident, and so brought about his death by means of the brand.

Since the name of the guinea-fowl, *μελεαγρίς*, suggests that of Meleager, a story grew up (see Thompson, *Gloss. Gh. Birds*², p. 199) that his sisters turned into them.

MELEAGER (2) (c. 140-c. 70 B.C.), poet and philosopher, lived mainly in Tyre and Cos. His Menippean satires, Cynic sermons in prose mingled with verse, are lost. But he was also a master of the epigram and constructed the first large critical anthology of epigrams, calling it his *Garland*—see his charming introduction, likening each poet to an appropriate flower (*Anth. Pal.* 4. 1). In the *Anthology* there are some 130 of M.'s own epigrams, nearly all on love. Their ornate diction and complex style are akin to the flamboyant rhetoric of Asia Minor; they introduce every traditional erotic image and vary and interchange them with astonishing skill, yet not without true emotion. See ANTHOLOGY, EPIGRAM, § 1, para. 3, and CYNICS.

K. Radinger, *Meleagros v. Gadara* (1895); F. A. Wright, *Poems of M. translated* (1924). G. H.

MELETUS (1) (5th c. B.C.), an Athenian tragic poet, attacked by contemporary comic poets for his dullness (*Suidas, s.v.*, schol. *Ar. Ran.* 1302, etc.), his immorality, and his starveling appearance, composed a tetralogy on the Story of Oedipus (schol. Plato, p. 839 a 14, quoting the *Διδασκαλῆαι* of Aristotle); probably identified wrongly with the accuser of Socrates in 399 B.C. (see art. 'Meletus' in *PW* xv. 503).

A. W. P.-C.

MELETUS (2), probably son of (1) above; the titular accuser of Socrates in 399. But he was then quite young, and was probably the tool of Anytus, who was Socrates' real opponent. The story that he was later put to death by the Athenians is doubtful. He is apparently not identical with the Meletus who in 399 accused Andocides of impiety.

PW xv. 503.

W. D. R.

MELICERTES, see ATHAMAS, LEUCOTHEA.

MELINNO, authoress of a poem in five sapphic stanzas on the world-power of Rome, quoted by Stobaeus (3. 7), who calls her a Lesbian. Her dialect is Doric, and it is more likely that she came from some town of Magna Graecia which had been conquered by the Romans. Her date is much disputed. Some think that the similarity of her sentiments to those of Horace and the cult of 'Roma aeterna' point to the Imperial age, while others claim that the absence of any mention of a *princeps* points to Republican Rome, even so early as the Punic Wars. There is no need to assume that she was influenced by Latin poetry.

Text: E. Diehl, *Anth. Lyr. Graec.* ii. 315-16. Criticism: F. G. Welcker, *Kleine Schriften* (1845) ii. 160-8. C. M. B.

MELISSA (*Μέλισσα*, Bee). Like its Hebrew equivalent Deborah, this is occasionally found as a proper name, also as a title, especially of priestesses of Demeter (according to schol. Pind. *Pyth.* 4. 104); of Artemis (*Aesch.* fr. 87 Nauck); of Rhca (*Didymus* quoted below), besides the Asianic cult of the Ephesian Artemis, whose regular symbol is a bee; that, however, her priestesses were called *melissai* is not quite certain, see Ch. Picard, *Éphèse et Claros*, 183 f. One or two minor heroines of mythology are so named, the least unknown being the sister of Amalthea (q.v.); both were daughters of Melisseus king of Crete, who was the first to sacrifice to the gods. While her

sister fed the infant Zeus with milk, she provided honey for him, and was afterwards made the first priestess of the Great Mother, meaning presumably Rhea (Didymus in Lactant. *Divin. Inst.* 1. 22, from his commentary on Pindar, the source probably of the above scholion). Columella (*De Re Rust.* 9. 2. 3) mentions a 'very beautiful woman Melissa whom Iuppiter turned into a bee', generally taken to refer to the same story. See HONEY.

H. J. R.

MELISSUS (1) of Samos commanded the Samian troops against Athens in 442-440 B.C., and after defeating Pericles was himself defeated. He was the last member of the Eleatic school of philosophy, differing from Parmenides in maintaining the spatial infinity of the universe. The extant fragments of his work *Περὶ φύσεως ἢ περὶ τοῦ ὄντος* defend Eleaticism against Empedocles' doctrine of the four elements, against the Atomists' belief in a void, against Anaximenes' derivation of the world from its original matter by rarefaction and condensation, and against Anaxagoras' assumption of the reality of heat and cold. Testimonia and frs. in Diels, *Vorsokr.* 6. i. 258-76.

PIV xv. 530.

W. D. R.

MELISSUS (2), GAIUS, Maecenas' freedman, invented a form of light drama in the *fabula trabeata*, whose characters were equestrian. He compiled a book of jests (*ineptiae*, Suet. *Gram.* 21) and was possibly the Melissus quoted several times by Pliny on natural history.

MELISSUS (3), AELIUS, contemporary with Gellius, who cites his *De loquendi proprietate* (18. 6. 1).

MELITA, nowadays *Malta*, a strategically situated island between Sicily and Africa with interesting megalithic monuments and excellent harbours. Phoenicians colonized Melita shortly after 1000 B.C. Later (6th c. B.C.?) Carthage acquired it, only to lose it in 218, when Melita became a Roman ally administered by the governor of Sicily. Subsequently, although Phoenician was still spoken, Melita acquired Roman citizenship. Despite its barren and waterless condition Melita has always enjoyed industrial and commercial prosperity. Hannibal was possibly born and St. Paul was shipwrecked here.

Strabo 6. 277 (inaccurate); Pliny, *HN* 3. 92; Diod. 5. 12; Livy 21. 51; Cic. *Verr. passim*. A. Mayr, *Die Insel Malta im Altertum* (1909); T. Zammit, *Malta* (Malta, 1926); L. Viviani, *Storia di Malta* (2 vols., 1933-4); C. Seltman, *Num. Chron.* 1946, 81.

E. T. S.

MELOS, with Thera, the most southerly of the Sporades. The island was celebrated in neolithic times for its monopoly of obsidian, which was exported all over the Aegean area. There was a rich deposit at Phylakopi, where successive sites were occupied from the Early Minoan period; the examination of these sites has thrown most light on the early history of the Cyclades. When the demand for obsidian in the Bronze Age decreased the wealth of Melos declined. In the Dorian migration it was colonized from Laconia. In 480 the inhabitants sent a contingent of ships to Salamis. They were not, however, members of the Delian Confederacy, and remained neutral at the outbreak of the Peloponnesian War. Nicias attacked them in 426, and ten years later they were brutally enslaved by the Athenians, who established a cleruchy on the island.

Thuc. 5. 87-111. Bursian, ii. 426 ff.; C. Smith, etc., *Excavations at Phylakopi in Melos* (1904), *BSA* iv; cf. *ibid.* xvii. 1 ff. W. A. L.

MEMBRANA, in sense of parchment, see BOOKS, II, paras. 2 and 4.

MEMMIUS (1), GAIUS, a prominent democrat, who as tribune (111 B.C.) led the agitation against the Optimate leaders, many of whom (e.g. Bestia) had shared in Optimus' severities of 121. He carried a proposal to

send L. Cassius Longinus, then praetor, to Numidia to induce Jugurtha to visit Rome under a safe-conduct. He was praetor during the period of coalition of *Equites* and *Populares* (104), and as candidate for the consulship of 99 was a rival of the extremist Glaucia. Saturninus had him murdered, and thus precipitated the crisis that led to his own destruction.

M. H.

MEMMIUS (2), GAIUS, husband of Sulla's daughter Fausta Cornelia, opposed the demand of L. Lucullus for a triumph (66 B.C.). In 58 he was, as praetor, hostile to Caesar. In 57, as propractor in Bithynia, he took with him the poets C. Helvius Cinna and Catullus. To him the *De Rerum Natura* of Lucretius is dedicated. In 55 he divorced Fausta and supported Caesar, but was compromised in the electioneering scandal of 53 and was exiled. In 49 he returned to Italy.

A. M.

MEMMIUS (3) **REGULUS**, PUBLIUS (*cos.* A.D. 31), of undistinguished ancestry. He governed Moesia, Macedonia, and Achaia from 35 until the early years of Claudius' principate. In 38 he was compelled to divorce his wife, the wealthy Lollia Paulina, in order that Gaius might marry her. He was proconsul of Asia under Claudius and died in 61.

J. P. B.

MEMNON (1), a mythical king of Ethiopia, was the son of Eos and Tithonus. He went to Troy to the aid of his uncle Priam, killed Antiochus, and was himself slain by Achilles, after which Zeus rendered him immortal. The legend of Memnon was probably first set forth in the *Aethiopis*, one of the lost poems of the Trojan cycle. The myth is mentioned in the *Odyssey* and by Hesiod, Alcman, and Pindar. Several of the dramatists treated the legend in plays now lost, and other writers refer to it frequently. Aeschylus associates Memnon with Susa, as does Herodotus, while Diodorus (using Ctesias) relates that Memnon was sent by Teutamus king of Assyria with a force of Ethiopians and Susans to the aid of Priam. Strabo and Pausanias likewise, following Herodotus, regard Susa as the city of Memnon. On his march to Troy Memnon was said to have left several great *stelae* along his route, and Herodotus notes that this has caused him to be confused with Sesostris. In spite of reference to Susa and the 'Ethiopiins of Asia', there are unmistakable traces of Memnon's being localized in Egypt and Ethiopia. There was a Memnoneion in Thebes which gave its name to a part of the city, and another at Abydos, the latter really a temple built for Osiris by Seti I. During the Ptolemaic period incubation was practised in the Memnoneion at Abydos and *katochoi* attached to the worship of Isis and Sarapis resided there. In Roman times a peculiar cult and oracle of Bes had its location there. The colossi of Memnon whose stones, before the restoration of the statues, were said to sing at dawn, once stood before the temple of a king and are inscribed with the name of Amenhotep III. There have been many attempts to interpret the legend of Memnon. Several modern authorities believe him to have been a Hittite leader.

R. Holland, art. 'Memnon' in Roscher's *Lexikon*; P. Perdriset, G. Lefebvre, *Les Graffiti grecs du Memnoneion d'Abydos* (1919); A. Wiedemann, *Herodotus Zweites Buch* (1892).

T. A. B.

MEMNON (2), a Rhodian of the 4th c. B.C., began his career as a mercenary leader with his elder brother Mentor (q.v. 2). After the failure of Artabazus' revolt (353 B.C.) Memnon stayed with Mentor, and after his death he married his widow Barina (later Alexander's mistress) and succeeded him as Persian general in Asia Minor. In 336 he fought successfully against Philip's generals. In 334 his ingenious plan to retire before Alexander, to waste the country, and to fight on sea, was rejected by the satraps. He took part in the battle of Granicus and escaped. Appointed commander-in-chief

by Darius, he organized the maritime war and occupied several Greek islands, hoping to make the Greeks revolt (333). He died suddenly, a severe loss for Persia.

Arrian, *Anab.* bks. 1 and 2; Diod. bks. 16 and 17. H. W. Parke, *Greek Mercenary Soldiers* (1933); Berve ii, no. 497. V. E.

MEMNON (3) of Heraclea Pontica, after Caesar and probably before Hadrian, wrote the history of his city in at least sixteen books, perhaps following Nymphis; bks. 9–16 are substantially preserved by Photius. Book 13 had a long digression on the rise of Rome, and in general the wider issues in which the city was involved were treated. The remains allow study of the methods and style of Hellenistic local chronicle.

FHG iii. 525.

A. H. McD.

MEMOIRS, see BIOGRAPHY.

MEMOR, ?SCAEVA (?Scaev(ī)us), a writer of tragedies (lost), contemporary with Martial, who composed an elegiac distich on his statue. His brother Turnus was a well-known satirist (Mart. 11. 9 and 10).

MEMPHIS, the traditional centre of Lower Egypt, was naturally the scene of Alexander's installation; it continued populous till the Roman conquest, being ranked by Strabo second to Alexandria. The fortification of Babylon, across the river, as a legionary camp under Augustus probably started its decline, and it sank to a provincial metropolis. Its importance under the Ptolemies was due largely to the cult of the Serapeum, which the religious policy of Augustus would not favour. There are few remains of Graeco-Roman buildings; the walls of the camp of Babylon stand amongst the houses of Old Cairo.

U. Wilcken, 'Das Serapeum von Memphis', *UPZ* i. 7; A. J. Butler, *Babylon of Egypt* (1894). J. G. M.

MEN (Μῆν), a Phrygian god, worshipped throughout Anatolia (cf. Strabo 557, 577, 580). He frequently bears a crescent moon behind his shoulders, or the crescent alone may represent him. The native form of his name was Man(n)es, and his lunar associations, if not original, may be due to a confusion with the Greek μήν. In some respects he seems merely the counterpart of Attis. Both celestial (Οὐράνιος) and chthonic (Καταχθόνιος), he was invoked also as Lord (Τύραννος) and by numerous titles, such as *M. Ασκαρνός*, *M. Κάρον*, *M. Φαρνάκου*, *M. Τιάμου* (perhaps = *Καταχθόνιος*), found chiefly in restricted localities. He was a healing god, a protector of tombs, and a giver of oracles. Metics or slaves worshipped M. in Attica from the fourth or third century B.C., but elsewhere in Greece only isolated inscriptions of Rhodes, Delos, and Thasos attest his cult. At Rome and Ostia a series of inscriptions to Attis Menotyrannus have been found.

In addition to the general articles (s.v.) in Roscher, *Lex.* and *PW*, see the accounts of the shrine at Pisidian Antioch in *JHS* 1912 and *JRS* 1913 and 1918. F. R. W.

MENAECHMUS (fl. c. 350 B.C.), pupil of Eudoxus and friend of Plato, discovered the three conic sections and with the help of two of them solved the problem of doubling the cube. None of his works are extant.

PW xv. 700.

MENANDER (Μένανδρος) (1) (342/1–291/90 B.C.), of Athens, 'star' of the New Comedy. His parents were of distinguished class—Diopetides of Cephisia and Hegesistrates; he was trained in philosophy by association with Epicurus (his *συνέφηβος*) and initiated by Alexis (q.v.) into the art of comedy-writing. For some thirty years after his first play, *Ὀργή*, 321 B.C., Menander produced a series of over 100 comedies (few to be exactly dated—as *Ἰμβριον*, 301 B.C.), of which about 98 (including *Νέμεσις* and *Χρηστή*)—see Körte, *Men. Rel.* i. 150—are known by name. His comedies (like those of Philemon, q.v.) were

revived on the Athenian stage after his time (e.g. *Φάσμα* 167 B.C.) and held a place upon the Roman stage.

2. No complete comedy is extant, but on papyrus we have recovered several connected scenes of different plays, from which Menander's dramatic technique may be estimated. Of *Ἐπιτρέποντες*, *The Arbitration*—an example of Menander's mature art—we possess nearly two-thirds, and in spite of lacunae the essential features of plot and characterization are known. Of *Perikeiromene*, *The Rape of the Ringlets* (c. 313 B.C.), about two-fifths survive, and some details of the treatment remain uncertain. Of *Samia* (an early comedy) we have 341 verses from the second half of the play, which reveal much of the plot. Of *Hērōs* little more than one scene is known and the outline of the plot; and plots can be partially sketched of *Fabula Incerta*, *Γεωργός*, *Θεοφορουμένη* (*The Maiden Possessed*), *Κιθαριστής*, *Κόλαξ*, *Κωνειάζομεναι* (*Women Drinking Hemlock*), *Μισούμενος* (*The Hated Lover*), *Περυνθία*, *Φάσμα*, and another unnamed play, *PSI* ii. 126, 'the Florentine Comedy'. For discussion of these plots see Körte, *PW*, s.v. 'Menandros', and *Men. Rel.* i. *praef.*; G. Norwood, *Greek Comedy*; G. Murray, in *Aristophanes*.

3. In the Latin adaptations of Plautus (*Stichus*, *Bacchides*, *Cistellaria*; probably *Poemulus* and *Aulularia*) and especially of Terence (*Adelphoe*, *Andria*, *Heauton Timoroumenos*, *Eunuchus*) it is mainly Menander's technique that is seen, despite the Roman poets' interpolations and alterations.

4. The influence of Euripides is manifest in Menander's work: see COMEDY, NEW, and for direct quotations from Euripides see *Epit.* 765 f. Körte and *Com. Flor.* 82 f.

5. Unlike his contemporaries, Menander renounced the treatment of mythological subjects: his plays mirror the life of his own time (Manilius 5. 476, 'qui uitae ostendit uitam chartisque sacrauit'; and cf. Aul. Gell. 2. 23, of a passage in *Πλόκιον*, *The Necklace*, which Gellius ranked high above the imitation by Caecilius, 'illud Menandri de uita hominum media sumptum, simplex et uerum et delectabile'). Hence the diction must be that of contemporary Athens.

6. The love-plot is the only theme, but with endless variations, leading to one, two, or three marriages at the close. Ingenuity was shown in varying and elaborating the obstacles to the lovers' union (cf. the plot of *Φάσμα*, *The Apparition*), and desire for novelty led sometimes to extreme complication of plot (*Γεωργός*). Yet occasionally comedies were very similar (*Andria* and *Perinthia*; see Ter. *Andr. prol.*); and a play might appear in two recensions, α' and β' (*Ἰδελφοί*, *Ἐπικληρος*).

7. Menander's varied and delicate characterization raises him above his contemporaries: his dramatis personae develop as the action proceeds. In the *Epitrepontes* Charisius, Pamphila, Habrotonon are strikingly human in their behaviour, reacting to the situations in which they are placed. Menander vitalizes the traditional roles: his characters usually deviate in certain qualities from the ordinary types. Smicrines (*Epit.*) is more than the conventional miser: where money is not concerned he gives an honest judgement. Polemon (*Perik.*) differs widely from the merely swaggering soldier beloved in Comedy. Davus (*Heros*) is a slave in love, but with noble, self-sacrificing intentions.

8. Menander's easy, natural style (well displayed in fine passages among the old fragments, e.g. fr. 481) is rich in dramatic qualities: speech is adapted to each individual speaker (Plutarch, *Comp. Ar. et Men.* 2. 2). His humour depends either upon the situation as a whole or upon the speaker's character; he uses comic irony (Smicrines in *Epit.*) and farcical humour (e.g. in *Samia*), but of verbal humour there is little—rather the whimsical expression of ideas (frs. 85, 283).

9. Menander's humanity appears in many passages: Menandrian comedy is the fruit of an equable philosophy

and a large-hearted sympathy. In the narrow field of domestic tragi-comedy M. with admirable breadth of tolerance displayed the failings and foibles, as well as the nobility, of common men and women, and attained a universality which has influenced the literatures of Rome and of modern Europe.

MENANDER (2), general of Demetrius of Bactria, married his daughter Agathoclea after his death, successfully withstood Eueratides, and to his own death (c. 150-145 B.C.) ruled all Greek India, except the Paropamisadae, from Mathurā to Kathiawar. He carried on Demetrius' policy, and in Indian eyes was a Chakravartii, a supreme ruler. He was the only successor of Alexander, except Cleopatra VII, who acquired a legend: Buddhists transferred to him stories told of Buddha and Asoka, and the Miliindapañha made him a great Buddhist monarch. Certainly he stood close to Buddhism—a political necessity; but almost certainly he was not a Buddhist. See **DEMETRIUS** (7) of Bactria.
 W. W. T.

MENANDER (3) of Ephesus compiled from native records, which he translated into Greek, 'the actions which took place under each of the kings [of Phoenicia?] both among the Greeks and the barbarians'. His Tyrian history is cited by Josephus (*AJ* 8. 144-6, *Ap.* i. 116 ff.).

MENANDER (4) of Laodicea (3rd c. A.D.) wrote commentaries on Hermogenes and Minucianus, also the first of two treatises (*II. επιδεικτικῶν*) still extant (Spengel, *Rhet.* iii. 329-446) and associated with his name. He there treats of the kinds of epideictic discourse—hymns to the gods, eulogies of cities, etc.—while the second treatise is concerned with ceremonial addresses to the emperor and other officials. J. W. H. A.

MENARIA, see **BALEARES INSULAE**.

MENDES, a he-goat represented usually on monuments as a ram, and identified by Herodotus and other Greeks with Pan, was worshipped in the Egyptian city of Mendes. The cult attained national prominence in the Ptolemaic period. The great Mendes stele (*Zeitschrift für ägyptische Sprache und Altertumskunde* xiii (1875), 33-40) refers to Ptolemy II 'son of the great living goat of Mendes' as having visited the temple 'as the kings before him had done'. The deceased queen Arsinoë II is called 'Arsinoë Philadelphus beloved by the goat', and her deification throughout the land is described. The stele also notes that the province of Mendes paid no taxes to the king but used its revenues for the worship of the god. The completion of the temple and the attendant celebration, the discovery of a new sacred animal, and various feasts and processions are mentioned.
 T. A. B.

MENEKRATES (1) of Xanthus, a fourth-century writer of the history of Lycia (*Λυκικά*) in Ionic.

MENEKRATES (2) of Ephesus, probably born c. 340, wrote a didactic poem called *Erga* in imitation of Hesiod, and probably another poem on Apiculture (*Melinagica*).
 Texts: H. Diehl, *PPF* (1931), 171-2. Gabel, 'Menekrates (16)', in *PPW* xv. 300.

MENEDEMUS (1) of Eretria (c. 319-c. 265 B.C.; Beloch, *Griech. Gesch.* iv. 2². 461 f.), statesman and founder of the Eretrian philosophical school. He was a pupil of Stilpo, and later of Phaedon's followers in Elis (Diog. Laert. 2. 216). When he returned to Eretria he founded a school of his own and henceforward taught and took part in the administration of his city. At the age of 74 he is believed to have committed suicide from grief at his native town's loss of freedom. As a philosopher M. pursued the methods and doctrines of the Megarian School.

 K. O. B.

MENEDEMUS (2), Cynic philosopher of the third century B.C., from western Asia Minor, first a pupil of Colotes the Epicurean, later of Echeeclus the Cynic, both of Lampsacus. He is best known from Colotes' polemic against him.

PPW xv. 794.

MENELAUS (1) (*Μενέλαος*, *Μενέλαως*), younger brother of Agamemnon (q.v.) and husband of Helen (q.v.). In all literature, beginning with Homer, Paris' kidnapping of his wife causes the Trojan War. In the *Iliad* he appears prominently in 3. 21 ff. (Paris avoids him, 96 ff.; he agrees to settle the dispute by a duel with Paris, defeats him, but is prevented by Aphrodite from killing him). In 4. 86 ff. Athena instigates Pandarus (q.v.) to wound him, in order to prevent the war from ending; he is slightly hurt, but cured by Machaon (q.v.). In 17. 1 ff. he distinguishes himself in the fighting over the body of Patroclus; elsewhere he is usually rather in the background, being inferior to Agamemnon in prowess and deliberately holding back (10. 121 ff.) so as not to seem to thrust himself before his greater brother. In the *Odyssey* he is seen safe at home with Helen after a long series of adventures on his return (4. 1 ff.) and is promised Elysium (4. 561 ff.).

Post-Homeric accounts supply details of his life before and after the period covered by the Homeric poems. He had previously met Paris (q.v.) at Delphi, and the oracle had warned them, but they had not understood (schol. *Il.* 5. 64). He was in Crete when Helen was carried off, and was warned by Iris of what had happened, *Cypria* (Photius). For his reunion with Helen after Troy fell see the same source. In Euripides' *Helena*, which follows Stesichorus' version of the story, Menelaus comes with the phantom Helen to Egypt, is shipwrecked, and meets the real one outside the palace of Theoclymenus, son of Proteus, who has been humanized into a Pharaoh. She has taken refuge at Proteus' tomb to avoid being forced to marry Theoclymenus. After a half-comic scene in which Menelaus realizes the situation, they plot with Theonoë, Theoclymenus' sister, to escape. Helen tells the king Menelaus is drowned, and gets the use of a ship to perform funeral rites at sea. Menelaus' men overpower the crew and sail away with him and her, the Dioscuri forbidding Theoclymenus to pursue.

For his cult as hero and occasionally as god see Farnell, *Hero-Cults*, 322 f.
 H. J. R.

MENELAUS (2), sculptor, working in the first century A.D. Known from signature on group of *Orestes* and *Electra* in the Terme (Winter, *KB* 394. 4), for which he has adapted motives of the fourth century B.C., but *Orestes* wears his cloak Roman fashion. He called himself pupil of Stephanus, who signed a statue of a youth in the style of the early fifth century (Winter, *KB* 394. 3). Stephanus was the pupil of Pasiteles, a south Italian Greek sculptor who became a Roman citizen in 89 B.C. and wrote a book on notable works of art. M. has been identified with M. Cornutus Menelaus who signed a lost

statue. The Cossutii had a workshop of long standing in Paros, and another of their freedmen, M. Cossutius Cerdo, made the two Polyclitan Pans in the British Museum.

G. Lippold, *Kopien und Umbildungen* (1923), 40; O. Rubensohn, *JDAI* 1935, 56. T. B. L. W.

MENELAUS (3) of Alexandria, mathematician and astronomer, made an observation in Rome, A.D. 98, which is mentioned by Ptolemy (vol. ii, p. 30 Heib.). His *Sphaerica* in three books is extant in Arabic; it was translated by Gerhard of Cremona (1114-87), edited by Halley (1758), and is now adequately reproduced in Björnbo's *Studien über Menelaos' Sphärik*, (*Abh. z. Gesch. d. Math.* xiv, 1902). In it we find the first conception and definition of a 'spherical triangle' (τρίπλευρον), 'Menelaus' Theorem' for the sphere, and the solution of spherical triangles by means of it. Book 1 gives the main propositions about spherical triangles corresponding to Euclid's about plane triangles. Book 3 contains spherical trigonometry. Menelaus wrote also six books on Chords in a Circle.

T. L. Heath, *History of Greek Mathematics* ii. 260-73. T. H.

MENENIUS AGRIPPA reputedly appeased the plebeians and brought them back to Rome after the first secession by telling the parable of the Belly and the Limbs (494 B.C.). Menenius and the story are fictitious, but it is difficult to explain the origin and date of the legend, which is either a fable common to the peoples of Aryan stock or the adaptation of an allegorical tale elaborated by Greek sophists.

Ed. Meyer, *Kl. Schriften* i² (1924), 358 ff.; W. Nestle, *Klio* 1927, 350 ff.; E. Skard, *Avhandl. Akad. Oslo* 1931, no. 2, 88 ff. P. T.

MENESTOR, a Greek writer on botany much quoted by Theophrastus. He applied the Pythagorean theory of the opposition of the warm and the cold to plants, dividing these into those which by their warm nature can grow even in water or in the cold parts of the earth, and those which from their cold nature need a warm climate. It has been much discussed whether his explanation of evergreenness by the doctrine of 'warm plants' or that of Empedocles by means of pores is the older, but on the whole it seems that he can be dated between Empedocles and Theophrastus. He may fairly be called the first Greek who made an inductive study of plants.

Testimonia in Diels, *Vorsokr.* i. 375-6. *PIV* xv. 853. W. D. R.

MENEXENUS of Athens, pupil of Socrates, was one of those present at the conversation in prison related in Plato's *Phaedo*. He plays a considerable part in the *Lysis*, and a less prominent one in the dialogue called after him.

PIV xv. 858.

MENIPPE, name of a Nereid in Hesiod, *Theog.* 260, and of two or three insignificant heroines, as the mother of Eurystheus (schol. *Iliad* 19. 116, which also gives her several other names); the mother of Orpheus (q.v.), generally a Muse (Tzetzes, *Chil.* I. xii. 306).

MENIPPEAN SATIRE, distinguished by Quintilian (*Inst.* 10. 1. 95) as a separate sort of satire. Ultimately founded on Menippus (q.v. 1), it was characterized by its mixture of prose and verse. In Latin it is represented by Varro, Seneca, and Petronius, and descends to the pedantic fantasia by Martianus Capella (5th c.) and to the French *Satyre Ménippée*.

See J. Wight Duff, *Roman Satire* (1937), ch. 5. J. W. D.

MENIPPUS (1) of Gadara (first half of 3rd c. B.C.), a slave at Sinope, became pupil of the Cynic Metrocles, bought his freedom, and acquired the Theban franchise. Originator of the serio-comic style (σπουδογέλοιοι), in which humorous expression was given to philosophical

views. His works include *Nékvia* (in which he imitated Crates), *Διαθήκαι*, *Ἐπιστολαὶ κεκομψευμένα ἀπὸ τοῦ πᾶν θεῶν προσώπου*, *Διογένης πρᾶσις*, *Συμπόσιον*. His prose was interspersed with verses, whether quoted or original is uncertain. He influenced Meleager of Gadara and Lucian, and Varro's *Saturae Menippeae* are adapted from him. See *IAMBIC POETRY*, GREEK.

Diog. Laert. 6. 29, 95, 99-101; C. Wachsmuth, *Corp. poec. ep. graec. lud.* ii. 78-85; R. Helm, *Lucian und Menipp.* (1906).

J. D. D.

MENIPPUS (2) of Pergamum (fl. c. 20 B.C.), Greek author of *Περὶ πλοῦτος τῆς ἐν τῷ θαλάσσης* (Mediterranean), abridged, corrected, and augmented by Marcian. Bk. 1, Euxine, Sea of Marmora; 2, Mediterranean, north side; 3, south; Palestine, Asia Minor. It gave chiefly names and distances.

GGM 1. cxxxv ff., 563 ff.; *PIV* xv. 862, 888.

E. H. W.

MENO, pupil of Aristotle, author of a doxographical compendium of the older Greek medicine—*Ἱατρικὴ συναγωγή*. A selection from it is contained in a London papyrus; ed. H. Diels (1893).

PIV xv. 927.

MENODORUS (or **MENAS**) was a freedman of Pompey (less probably of Sextus Pompeius) and may previously have been a pirate. He captured Sardinia for Sextus in 40 B.C., but surrendered it to Octavian in 38, was rewarded with equestrian rank, and fought under Calvisius Sabinus in the battle off Cumae. In 36 he returned to Sextus, but being treated with suspicion again deserted. He was killed in the Illyrian campaign of 35.

Appian, *BCiv.* bk. 5; Dio Cassius, bks. 48 and 49. G. W. R.

MENODOTUS (1) of Perinthus, author of a history (*Ἑλληνικαὶ πραγματεῖαι*) probably beginning c. 217 B.C. as a continuation of the histories of Psaon of Plataea or Phylarchus.

FHG iii. 103. *FGrH* ii. 82.

MENODOTUS (2), Samian Greek (identical with M. of Perinthus, Diod. Sic. 26. 4), wrote (i) *Τῶν κατὰ τὴν Σάμον ἐνδόξων ἀναγραφὴ* and (ii) *Περὶ τῶν κατὰ τὸ ἱερὸν τῆς Σάμης ἥρας*.

FHG iii. 105; *FGrH* ii. A. 189.

MENODOTUS (3) of Nicomedia (fl. probably c. A.D. 120), follower of Pyrrhon, pupil of Antiochus of Ascalon, and leader of the empirical school of medicine. He was a voluminous author, and is often referred to by Galen.

PIV xv. 901.

MENOECEUS (*Μενοικεύς*), in mythology, (1) father of Creon (q.v. 3; Sophocles, *Ant.* 1098 and elsewhere). (2) Creon's son, whose story is best known from Eur. *Phoen.* 905 ff. Tiresias revealed that Thebes could not survive the assault of the Seven unless atonement were made for the killing of the dragon by Cadmus (q.v.); the victim must be one of the Sparti, and unmarried, and no other was available. Menoeceus, despite his father's attempts to save him, killed himself over the dragon's lair.

H. J. R.

MENOETIUS (*Μενεΐτιος*), father of Patroclus (q.v.; *Il.* 9. 202 and elsewhere). Of what country he was seems to have been uncertain even to Homer: see *Il.* 11. 765-6; 23. 85.

MENS, personified right thinking ('Mens Bona', Propertius 3. 24. 19 and elsewhere; it was her title at Paestum, Wissowa, *RSK* 314). She was vowed a temple, by advice of the Sibylline books, in 217 B.C. after Trasimene (Livy 22. 9. 10; 10. 10; cf. Platner-Ashby, p. 339); it was dedicated two years later (Livy 23. 32. 20).

H. J. R.

MENSA, *see* FURNITURE.

MENTHE (μένθη) or **MINTHE** (μίνθη), i.e. mint. According to Strabo 8, 3. 14, p. 344 (more authorities given by Peter in Roscher's *Lexikon*, s.v.) she was Hades' mistress (a Naiad, daughter of Peitho, Photius s.v.), and Persephone trampled her underfoot, whereat she became the plant named after her, which smells the sweeter when trodden upon.

H. J. R.

MENTOR (1), in mythology, an old Ithacan, friend of Odysseus, who left his household in his charge (*Odyssey* 2. 225 ff.). Athena takes his shape to help Telemachus (*ibid.* 401 and elsewhere; cf. 24. 548).

MENTOR (2), Rhodian mercenary leader, brother-in-law of the satrap Artabazus (q.v.), whose service he and his brother Memnon (q.v.) entered. He married his niece Barsine, Artabazus' daughter. Both brothers took part in the Satraps' Revolt (362-360 B.C.) and received some territory in Troas. In 353 they fled with Artabazus. Mentor went to Egypt, entered again the king's service, and was general at the conquest of Egypt (343). He rose high in Persian service and was ordered to quell the dynasts of Asia Minor. Among them was Hermeias (q.v.), whom he put to death (342). He had previously obtained the recall of Artabazus and Memnon. He probably died soon after.

Dem. 23. 150 ff.; Diod. 16. 42 ff.; H. W. Parke, *Greek Mercenary Soldiers* (1933).

V. E.

MERCATOIRES, *see* COMMERCE, paras. 7 and 11.

MERCENARIES (GREEK AND HELLENISTIC).

(1) *From the earliest times till the Peloponnesian War* (431 B.C.) mercenaries play a small part in Greek warfare, being few in number and not clearly distinguishable from voluntary helpers. They are most frequently mentioned as forming the bodyguards of tyrants. But the early tyrants were often content to enrol citizens and, except in Sicily, did not maintain large armies of professional soldiers. Before the Persian conquests Greek mercenaries were employed to some extent in Egypt and Mesopotamia; afterwards they were mainly used as bodyguards for the satraps of Asia Minor and were largely recruited from Arcadia.

(2) *Till the King's Peace* (386 B.C.). During the Peloponnesian War there grew a demand for auxiliary troops to supplement the ordinary hoplite. These were drawn especially from the backward parts of Greece and from Thracæ. The end of the war released many soldiers for professional service, from whom Cyrus raised an army of more than 10,000 hoplites for his attempt on the Persian throne. In the Corinthian War Iphicrates (q.v.), leading a force of peltasts (q.v.), achieved such success that this type of soldier was established as an independent unit. Meanwhile in Sicily Dionysius I was founding an outstandingly powerful tyranny on a large professional army.

(3) *Till Chæronia* (338 B.C.). The possibilities of using mercenaries were now fully exploited. The Persian satraps hired large armies to oppose the Great King, who replied by employing the same material. In Greece the city-states used mercenaries in their struggles with each other or remodelled their citizen-armies on a professional pattern. Many tyrants of a militaristic type arose, and in the Third Sacred War (356-346) Phocis showed how even a small State could be dominant so long as it had large financial resources. Philip II of Macedon, however, relied on mercenaries only as a supplement to the main body of his citizen army.

(4) *Till Ipsus* (301 B.C.). Alexander employed mercenaries mostly for garrison duty and settlement abroad, and on separate expeditions away from his main column. The Persians until Arbela formed the bulk of their heavy

infantry from Greeks. The Diadochi made the nucleus of their armies out of Macedonians, but the bulk of the troops were mercenaries, who were ready to change sides according to the fortunes of war.

(5) *Till Pydna* (168 B.C.). Warfare gradually depended less on foreign soldiers. In the Hellenistic kingdoms a small standing army of professional soldiers was maintained, but newly hired mercenaries were not used to form the main phalanx. In time of need they could reinforce it in other directions. Even barbarians were thus employed with their native equipment.

H. W. Parke, *Greek Mercenary Soldiers from the earliest times to the Battle of Ipsus* (1933); G. T. Griffith, *The Mercenaries of the Hellenistic World* (1935).

H. W. P.

MERCENARIES (ROMAN). Contact with foreign Powers such as Carthage and Macedon exposed Rome's weakness in cavalry and light-armed troops. This deficiency she remedied by obtaining contingents outside Italy which, in contrast with the Italian *Socii*, were called *Auxilia*. Some came from independent allies like Masinissa, others were raised by forced levies or paid as mercenaries. Gallic *Auxilia* served in the First Punic War, 600 Cretan archers fought at Lake Trasimene, Numidian cavalry turned the scale at Zama. During the next two centuries the number and variety of *Auxilia* increased. Spain was a favourite recruiting-ground because of the superiority of the native over the Roman weapons, while Caesar obtained his cavalry from Gaul and Germany, and his archers and slingers from Crete and the Balearic Islands. Under the Principate the *Auxilia* became part of the standing army. *See* AUXILIA.

W. Liebenam, *PW*, s.v. 'Exercitus'.

H. M. D. P.

MERCURIUS (Mercurius, Mircurios, Mircurios), the god of traders, Roman equivalent of Hermes; indeed, it is highly probable that he is Hermes (q.v.) introduced under a name, or title, suggestive of his commercial activities (cf. *merx*, *mercari*). He does not appear in the 'calendar of Numa', nor has he a flamen or any other indication of primitive Roman (or Italian) cult. On the other hand, his temple is *extra pomerium*, being on the Aventine overlooking the Circus Maximus (see Platner-Ashby, p. 339); he is worshipped there with a goddess who is in essence the Greek, not the Roman Maia (q.v.), and its dedication day, 15 May, became a festival of merchants (Festus, p. 135, 4 Lindsay). From all this it is generally supposed that his cult is an early example of Greek, or hellenizing, commercial influence, comparable to that of Ceres, Liber, and Libera (*see* CERES); the date of the temple is 495 B.C. Altheim, however, seeks by an ingenious combination to prove that he is an old Graeco-Etruscan deity comparable in functions to the Genius (q.v.; *Griechische Götter*, 39 ff.), and supposes the connexion of the name with *merces* to be a false etymology. It is generally agreed that his ultimate origin is Greek, by whatever route and under whatever circumstances his cult reached Rome; his connexion with trade is equally undoubted. Under the Empire he, like many gods, sometimes takes the title Augustus (see Steuding in Roscher's *Lexikon* ii. 2818; cf. also Nock, *JHS* 48 (1928), 33 f., 41 f.). His identifications with foreign gods (Steuding, 2826 ff.; *see* RELIGION, CELTIC) result from his equivalence with Hermes, also his mythology, save for one or two tales, probably Latin literary inventions.

H. J. R.

MERMINADAE, *see* LYDIA.

MEROBAUDES, FLAVIUS, a Spaniard, distinguished as soldier and poet. His works include thirty hexameters in praise of Christ, a panegyric on Aëtius, of which fragments contain a prose speech on his second consulship (A.D. 437), and a poem on his third (446). He imitated earlier Spanish writers and Statius' *Silvae*.

Ed. F. Vellmer (1905).

A. S.

MEROË, the 'island' between the junction of the Bahr-el-Abiad with the true Nile and that of the Atbara with the Nile. The city Meroë (*Bakara-wiga*), the southern and later the sole capital of the Kings of Napata, was known by hearsay to Herodotus. In the time of Ptolemy II the kingdom became partly hellenized. Despite further exploration of the Nile in Ptolemaic and Roman times (see NILE), even Ptolemy knew little beyond Meroë and falsely made the land a true island.

For excavations at Meroë see: E. Budge, *Egyptian Sudan* (1907) and *History of Ethiopia* (1928); J. Garstang, *Meroë* (1911); H. Kees, *PW*, s.v. E. H. W.

MEROPE (*Μερόπη*), in mythology, (1) a Pleiad, wife of Sisyphus (q.v.); she is the nearly invisible star of the group, for she hides her face for shame at having married a mortal, while all her sisters mated with gods (see Apollod. 1. 85; Hyg. *Fab.* 192. 5). (2) Wife of Cressphontes king of Messenia; see AEPYTUS. (3) Wife of Polybus of Corinth, Oedipus' foster-father (Soph. *OT.* 775); see OEDIPUS. (4) Daughter of Oenopion (see ORION; Apollod. 1. 25). For more Meropae see Stoll in Roscher's *Lexikon*, s.v. H. J. R.

MERULA, LUCIUS CORNELIUS, was appointed colleague by the consul Cn. Octavius after the deposition of Cinna (87 B.C.). On Marius' return he resigned the consulship and, anticipating his condemnation, committed suicide.

F. Münzer, *PW* iv. 1407.

MESOPOTAMIA, the country between the Tigris and the Euphrates. The name is generally used to include the whole alluvial country south of the mountains, and the deserts on either side, i.e. the ancient kingdoms of Assyria and Babylonia, modern 'Iraq. Classical writers usually regarded Mesopotamia as excluding Babylonia.

As an important political and commercial link between Syria and Babylonia, Mesopotamia was colonized extensively by the Seleucids. It was a frequent battle-ground of Roman and Parthian armies, and the prosperity of the Greek cities diminished under the Arsacids. Mesopotamia was conquered by Trajan and constituted a Roman province (114-17) but was promptly abandoned by Hadrian. It was again overrun by L. Verus (162-5) and Septimius Severus (197-9) but was not permanently occupied. See also OSROËNE.

V. Chapot, *La Frontière de l'Euphrate* (1907); Jones, *Eastern Cities*, ch. 9; H. Schachermeyr, *PW*, s.v. M. S. D.

MESSAL(L)INA (1), VALERIA, a woman of good family, married Claudius (at some time before his accession in A.D. 41) and bore him a daughter, Octavia, and a son, Britannicus. The influence which she exercised on Claudius' public policy has probably been exaggerated by ancient historians. Her profrigacy was notorious in Rome, but apparently unknown to Claudius until, in 48, she celebrated a formal marriage with her paramour, C. Silius. The marriage was no doubt part of a plot against Claudius. The conspiracy was detected by Narcissus (q.v. 2) and Messalina was put to death. J. P. B.

MESSAL(L)INA (2), STATILIA, third wife of Nero (A.D. 66), who put to death her fourth husband Atticus Vestinus, was perhaps daughter of T. Statilius Taurus (*cos.* 44). She received some divine honours. After Nero's death she maintained a brilliant position. Otho contemplated marriage with her. A. M.

MESSALLA, see VALERIUS (4), (14), (15), (16).

MESSALLINUS, see VALERIUS (16).

MESSANA (nowadays *Messina*), a Greek colony originally called Zanele, was founded c. 725 B.C. on Sicel territory in north-east Sicily with Chalcidian colonists

from Cumae, Naxos, and Euboea. Zanele allegedly founded Mylae (717?) and Himera (648); otherwise its early history is virtually unknown. C. 493 Samian refugees, backed by Anaxilas of Rhegium, seized Zanele, which was then renamed Messene (Anaxilas is said to have soon replaced these Samians with Messenians). After 461 Messana (the Doric form henceforth prevails), becoming independent of Rhegium, flourished greatly until destroyed by Carthage (396). Rebuilt by Dionysius, it became subject successively to Dion, Hippon, Timoleon, Agathocles. In 288 Agathocles' Campanian mercenaries, Mamertini, seized Messana (which consequently was often called Mamertina) and, when threatened by Hieron, sought aid desperately from Rome and Carthage. Both responded and the ensuing imbroglio provoked the First Punic War. When Rome annexed Sicily Messana became a privileged *civitas foederata* ('maxima et locupletissima' according to Cicero: *Verr. passim*). In Imperial times, although rarely mentioned, Messana was apparently a *municipium* (Pliny, *HN* 3. 88) and, owing to its strategic situation and fine harbour (Charybdis' whirlpool being fortunately outside the shipping lanes), was undoubtedly important. Messana was Euhemerus' birthplace.

Strabo 6. 268 f.; Hdt. 6. 22 f.; 7. 164; Thuc. bks. 4, 5, 6; Paus. 4. 23, 6; Diod. bks. 11-16, 19, 22, 23; Polyb. 1. 7 f. R. Giacomarzi, *Storia dei Mamertini* (1935); J. Bérard, *Bibliogr. topogr.* (1941), 67. E. T. S.

MESSAPIA = CALABRIA (q.v.).

MESSAPII immigrated into Calabria (q.v.) in the Early Iron Age. Probably they were Illyrians, not Cretans (despite M. Mayer in *PW* xv. 1175 f.). They undoubtedly spoke an Illyrian language: over 200 inscriptions, written c. 450-50 B.C. in a Tarentine-Ionic alphabet, survive (J. Whatmough, *Prae-Italic Dialects* ii. 258 f.). The civilized Messapii, strictly speaking neighbours of Tarentum, are scarcely distinguishable from the Calabri (who dwelt near Brundisium) and Sal(l)entini (who inhabited the 'heel' proper); the Apulian Peuceii (= Poedieuli) and Daunii, although they supported Tarentum against the Messapii (Strabo 6. 281), also spoke Messapic. These peoples were collectively called Iapyges (Polyb. 3. 88). In 473 B.C. the Messapii defeated Tarentum (Hdt. 7. 170) and in 413 under King Artas supported Athens against Syracuse (Thuc. 7. 33). In 338 they helped to defeat Tarentum's mercenary, Archidamus, but in the Pyrrhic War supported Tarentum and were consequently subjugated by Rome (266: *Acta Triumph.*). Although only casually mentioned thereafter, they were never completely assimilated. Chief towns: Uria, Rudiae, Caelia, Brundisium, Ugentum.

J. Whatmough, *Foundations of Roman Italy* (1937), 111 (with bibliography). E. T. S.

MESSAPUS, (1) eponym of Messapia in south Italy (Strabo 9. 2. 13). (2) Son of Neptune, an Etruscan, invulnerable to fire and steel, one of Turnus' allies (Verg. *Aen.* 7. 691 ff.; cf. 9. 523; 12. 128).

MESSENE was founded in 369 B.C. to be the capital of Messenia (q.v.). Situated on the western slopes of Mt. Ithome in the lower Messenian plain, its natural strength was reinforced by city-walls (largely preserved) which furnish the finest example of fourth-century fortification on the Greek mainland. Important traces of other public buildings can be seen near the modern village of Mavromati. Attacked unsuccessfully by Demetrius (q.v. 6) of Pharos (214 B.C.), by Philip V of Macedon, and by Nabis of Sparta, it was captured by the forces of the Achaean League under Lycortas (182 B.C.) in revenge for the Messenians' execution of Philopoemen (q.v.). It retained considerable importance under the Roman Empire. A. M. W.

MESSENIA, the south-west region of Peloponnesus, bounded on the north by Elis, along the lower course of the river Neda, and Arcadia, and on the east by Laconia, where the frontier follows at first the main ridge of Taygetus, but farther south runs to the west of it, and terminates at the river Choerius a few miles south of the head of the Messenian Gulf. (For the disputed territory of the Ager Dentheliatas in this region see **LACONIA**.) Whilst west Messenia is a bleak, mountainous region, dominated by Mt. Aegaleos, with its few settlements along the coast (Cyparissia, Coryphasion-Pylos, Morthone, Asine, Corone), the central and eastern region watered by the river Pamisus and its tributaries was more populous, and the lower plain, *Μακάρια*, was renowned for its fertility.

Recent finds, particularly of beehive tombs, indicate extensive occupation in Late Helladic (Mycenaean) times, on the west coast and in the valley north-west of the upper (Stenyclarus) plain, where a walled town of the same period has been explored. The great palace discovered near Pylos in 1939, with its huge hoard of inscribed clay tablets of Cretan type (*JHS* 1939, 195), may prove to be the house of Nestor, who appears in Homer as lord of west Messenia (the remainder being perhaps ruled by Menelaus).

After the Dorian conquest Messenia came under Cresphontes, whose youngest son Aegyptus evicted and slew the usurper Polyphontes and gave his name to the Messenian royal line. After the First and Second Messenian Wars in the eighth and seventh centuries, associated with the heroic but unavailing leadership of Aristodemus and Aristomenes respectively (q.v.), such inhabitants as had not left the country were, apart from a few communities of *periocci*, reduced to the status of helots, and their lands occupied by the Spartan nobility. The Third Messenian War, after the great earthquake of 464 B.C., terminated, like the first war, in the surrender of the stronghold of Ithome after a long siege. Granted a safe-conduct, many of the survivors (of the *periocci* only?) were settled by the Athenians at Naupactus (455). During the Peloponnesian War the Messenian helots were encouraged to sporadic revolts by the Athenian garrison established at Pylos after the victory at Sphaeteria (425), in which Messenians from Naupactus played a decisive part. In 369 Messenia recovered its independence with the help of the Theban general Epaminondas. Its subsequent history is bound up with that of its new capital Messene (q.v.).

C. A. Roebuck, *A History of Messenia from 369 to 145 B.C.* (U.S.A. 1941). A. M. W.

MESSENIA (CULTS AND MYTHS). Since the Messenians were in a condition of serfdom between the Third Messenian War and 369 B.C., their religious and mythical traditions were disturbed to a very considerable extent. In their capital the cults as seen by Pausanias suggest partly foreign influence, partly deliberate attempts at revival. He found (4. 31. 6 ff.) temples of Poseidon and Aphrodite, such as any Greek city might have; a cult of Artemis Laphria, imported from Naupactus; shrines of Eileithyia, the Curetes (to whom holocausts of all manner of victims were offered), Demeter, Asclepius, and the local eponymous heroine Messene; also of the national hero Aristomenes, while Zeus was worshipped on Mt. Ithome under the local title Ithomatas. Some of these cults had peculiar legends connecting them with the country and polemizing against myths which claimed them for other regions. Outside the capital the most famous cult, which, however, is of Hellenistic date, is the Mysteries of Andania (Kern, *Relig. der Griechen* iii. 188 ff., and refs.). For a list, with references, of other cults, see Reincke in *PW* xv. 1241 (also ATARGATIS for cult of Syrian goddess). Most of the legends of the country have come down

to us in an excerpt by Pausanias of Rhianus' (q.v.) epic on the Messenian Wars (Paus. 4. 6. 1), mingled with material from other authors, as Myron of Priene (*ibid.*) and inquiries of his own. It is thus impossible to say how much of what he tells us is really Messenian tradition and how much Rhianus' learned imagination or the conjectures of some antiquarian. The central figure is Aristomenes, and the historical kernel nearly undiscoverable. H. J. R.

MESSIUS, see **ARUSIANUS** and **DECIUS** (4).

METABUS, see **CAMILLA**.

METAGENES (fl. not earlier than 410-400 B.C.; *IG* ii². 2325), writer of Old Comedy. His *Φιλοθύτης* had a parabasis (fr. 14), which points to a comparatively early date. The *Ὀμηρος ἡ Ἀσκηταί* mentions (fr. 10) Lycon's betrayal of Naupactus to the Spartans in 400 (Diod. Sic. 14. 34. 2; Paus. 4. 26. 2; 10. 38. 10).

FCG ii. 751 ff.; CAF i. 704-10.

M. P.

METALLURGY. After extraction from the mine ore must be crushed. The use of grooved stone hammers was common in the west in early Roman times, though iron hammers replaced them slowly. The broken pieces of rock were roughly sorted, all poor and sterile material being rejected. If washing was practised, the ore had to be finely milled. From Egypt there are stone rollers operated on saddle-querns, and the latter occur in Wales and the Balkans; more common and of later date are rotary millstones. Sieves were used to reduce the particles to equal size. Ore, especially when markedly denser than the gangue, can be profitably enriched by washing. This applies especially to gold, whether from placers or veins, and to lead-ore, but was used for ochre and is feasible for pyrites. Washing was often carried out in wooden bowls or cradles. Gold may be caught on rough cloth or fleece, a method attested on the Rhine, and in Colehis, where it gave rise to the Golden Fleece legend. The washing-tables at Laurium were well built and cemented, with several tanks to catch the ore. The washing process would normally be repeated several times.

Sulphide and hydrated ores are best roasted before smelting. Direct evidence for roasting has seldom been found, but certain furnaces are too large for smelting and may have served this purpose. The most primitive smelting-furnaces were banked-up bonfires or holes in the ground. The blast was at first introduced over the rim, but in Gaul some bowl-furnaces have a hole near the base and their height was raised by courses of stones round the lip. This led to the shaft-furnace, a structure often partially sunk in the ground. Vase-paintings of Greek smithies show a high-built shaft whence the bloom was extracted at the base, while the blast was introduced at the back. The shaft-furnace spread fairly rapidly through the west; some in the Jura are thought to be pre-Roman. They probably did not reach England until after the Roman period. Most shaft-furnaces have only one hole at the base, for blast and tapping, though a few in central Europe have six. Whereas in a bowl-furnace only one charge can be smelted at a time, a shaft-furnace admits of continuous production. Fuel and ore can be added down the chimney, and the metal and slag can be tapped at the base. In fact, however, they were probably cooled and demolished frequently. Slag, unless fluxes are skilfully added, will clog the tapping-hole. Only those metals which were liquefied could be tapped. An iron-bloom could be extracted only by destroying the furnace, and the great number of furnaces at some sites shows that each was used only once. The fuel was charcoal, occasionally coal or peat.

After smelting, iron had to be purified by reheating and hammering. During this process it would become slightly steelled. Lead would be cupelled to extract

silver; the Romans knew bone-ash cupels, though the more primitive method of skimming the oxidized metal from the surface was used earlier. Copper would be purified and then alloyed and cast into the forms required.

Preuschen, *Das urzeitliche Bergbauegebiet von Mühlbach-Bischofs-hofen* (1932); H. Blümner, *Terminologie und Technologie* iv. 140, 222-7, 330; *Archaeologia* lvii (1900), 113. O. D.

METAMORPHOSIS. Though the word itself is not early, it describes a kind of tale quite common in Greek from Homer on, that of a magical or miraculous transformation into a new shape. The origin of such stories may perhaps be sought partly in real or fancied resemblances between inanimate and animate objects (e.g. the snake which in *Iliad* 2. 319 turns to stone may have as its origin a stone which looked like a snake, perhaps a fossil of some kind), partly in resemblances between the movements or cries of a bird or beast and those of human beings (the nightingale's song, for instance, see *AEDON*, *PHILO-MELA*). An aetiological story would then grow up around it. Magicians, moreover, are very commonly supposed to be able to change their own shapes and those of others, and for a like power to be ascribed to gods is quite natural. In some cases we can point to the actual object which started the legend; Pausanias (1. 21. 3) says he has seen the Niobe (q.v.) of Mt. Sipylon (apparently a rock-formation, but see Frazer ad loc.) mentioned in *Il.* 24. 614 ff.; cf. also Paus. 8. 2. 7. Collections of such legends seem to have become popular in Alexandrian times; we know, for instance, of the *Ἐτεροποιούμενα* of Nicander, several times quoted by later writers, and Ovid's surviving *Metamorphoses* draws almost entirely on Greek sources. Hence in the later versions of many legends (see, for instance, *AIAS* 1) a metamorphosis of some kind is added of which earlier accounts have no trace.

H. J. R.

METANIRA (*Μετάνειρα*), in mythology, wife of Celeus, king of Eleusis; she received Demeter hospitably, but spoiled her plan to make Metanira's child immortal by screaming when she saw him laid on the fire; see *DEMETER*. She had a cult in Eleusis (Paus. 1. 39. 2) near the well where Demeter sat; cf. Athenagoras, *Leg. pro Christ.* 14.

METAURUS, a river in Umbria flowing into the Adriatic Sea, famous as the site of a victory which was Rome's Crowning Mercy of the Hannibalic War (207 B.C.). In this valley Hasdrubal (q.v. 2), who had hoped to join his brother Hannibal, was forced to fight by the Romans, who rolled up his line.

Polybius 11. 1-3; Livy 22. 46-9. Kromayer-Veith, *Antike Schlachtfelder* iii. 424 ff.

H. H. S.

METELLUS (1), **LUCIUS CAECILIUS** (cos. 251 B.C.), thwarted a Carthaginian attack on Panormus, capturing the dracred enemy war-elephants (250). The elephant was commonly portrayed on coins struck by the Metelli. Metellus was *magister equitum* in Sicily (249), consul II (247), Pontifex Maximus (243-221); he was blinded when saving the Palladium from the burning Temple of Vesta (241) and died in 221.

H. H. S.

METELLUS (2), **QUINTUS CAECILIUS** (cos. 206 B.C.), an orator of note, pronounced a funeral eulogy on his father, Metellus (1) above (Pliny, *HN* 7. 139; Malcovati, *ORF* i. 151). He was an enemy of the poet Naevius (q.v.) and a supporter of Scipio Africanus.

METELLUS (3) **MACEDONICUS**, **QUINTUS CAECILIUS** (cos. 143 B.C.), son of (2) above, fought at Pydna (168 B.C.). Practor in 148, he crushed Andiscus and began operations against the Achaean League, defeating Critolaus. As consul he suppressed a slave revolt at Minturnae

and opened the Numantine War successfully against the Celtiberians and Vaccaean (143-142). In 138 he defended L. Aurelius Cotta against Scipio Aemilianus. He first supported Tiberius Gracchus' agrarian policy, but rejected his demagoguery. Censor in 131, he proposed compulsory marriage in a celebrated speech *de prole augenda*, quoted by Augustus (Livy, *Per.* 69). In 121 he followed Opimius against Gaius Gracchus. A fine soldier, great senator, and political rival of Scipio Aemilianus, his death in 115 was honoured by four distinguished sons, M. Metellus (cos. 115), Q. Balearicus, C. Caprarius (cos. 113), L. Diadmatius (cos. 117). He built the marble temples of Jupiter Stator and Juno Regina and the Porticus Metelli (147).

G. Colin, *Rome et la Grèce* (1905), 609; A. Schulten, *Numantia* i (1914), 353-5; F. Münzer, *Röm. Adelsparteien und Adelsfamilien* (1920), 247; H. Malcovati, *ORF* i (1930), 97, 220. A. H. McD.

METELLUS (4) **BALEARICUS**, **QUINTUS CAECILIUS** (cos. 123 B.C.), a son of (3) above, was censor in 120. He derived his surname from the conquest of the Balearic Isles in 123-121 (see *BAEARES INSULAE*).

METELLUS (5) **DELMATICUS**, **LUCIUS CAECILIUS** (cos. 119 B.C.), son of L. Metellus Calvus (cos. 142) and grandson of Metellus (2) above, was father of Caecilia, wife of Sulla. As consul Metellus provoked a war with the Illyrians, one of the few clear cases of 'triumph-hunting'. He vainly opposed the passage of Marius' ballot bill. He was censor (115) with Cn. Domitius Ahenobarbus. In 114, when the *Populares* launched their assault against the *Optimates* by accusing Vestals of unchastity, Metellus as Pontifex Maximus condemned Aemilia but acquitted Licinia and Marcia; whereupon the investigation was transferred to severer hands.

M. H.

METELLUS (6) **NUMIDICUS**, **QUINTUS CAECILIUS** (cos. 109 B.C.), brother of (5) above, was a distinguished commander and leading Optimate. As consul he took command against Jugurtha, after the failure of the brothers Albinus; in two years' campaigns he largely restored the prestige both of Rome and of the Optimate party. After the battle of the River Muthul (probably 109), Jugurtha took to the desert, though certain strongholds in Numidia remained in his officers' hands. Nevertheless, Metellus was replaced in command by his legate and protégé Marius (q.v. 1), probably early in 107. This, however, did not prevent Metellus' triumph from improving the Optimates' situation, and their candidate Caepio was elected consul for 106. As censor Metellus tried to exclude Glaucia and Saturninus from the Senate (102). In 100 Metellus went into exile rather than take the oath to maintain Saturninus' Agrarian Law; he was recalled in 99. He is probably the Metellus who is said to have been poisoned in 91 by the tribune Varius.

G. De Sanctis, *Problemi d. stor. antica*, 215 ff.

M. H.

METELLUS (7) **PIUS**, **QUINTUS CAECILIUS** (cos. 80 B.C.), who accompanied his father, Metellus (6), in Numidia and was surnamed Pius for his effort to recall him from exile, was praetor (89 B.C.) and legate in the Social War. Recalled to Rome to fight Marius, he refused to replace the consul Cn. Octavius when invited by the soldiers. Unable to resist Marius, he went to Africa and thence to Liguria. As Sulla's best general, he gained the decisive victory over the Marians at Faventia (82). He was consul with Sulla (80) and campaigned successfully against Sertorius (q.v.) in Spain (79-72), where his movement northwards can be traced in places named after him: Metellinum (*Medellin*), Castra Caecilia (near Cáceres), and Vicus Caecilius (north of the Tagus). He 'triumphed' (71), was Pontifex Maximus, and died c. 64.

F. Münzer, *PIV* iii. 1221.

A. M.

METELLUS (8) CRETICUS, QUINTUS CAECILIUS (cos. 69 B.C.), grandson of (3) above and son of C. Metellus Caprarius (cos. 113), was a supporter of C. Verres at his trial in 70. In 68–66 he effected the conquest of Crete, which had become an important pirate base. After a set battle near Cydonia he systematically besieged and captured the Cretan towns. His excessive severity to the Cretans provoked an appeal to Pompey (then engaged on his general drive against the Mediterranean pirates), who sent an officer to arrange their amicable surrender. Disregarding Pompey's lieutenant, and even using force against him, Metellus completed the reduction of the Cretan towns. On Pompey's return to Rome Metellus joined the opposition against him, thus driving him into the arms of Caesar.

Drumann–Groebe, *Geschichte Roms* ii (1902), 41–5. M. C.

METELLUS (9) CELER, QUINTUS CAECILIUS (cos. 60 B.C.), grandson of Metellus (4) above, son of Q. Metellus Nepos (cos. 98), and husband of the notorious Clodia. As praetor urbanus in 63 he played a prominent part in the trial of Rabirius (q.v. 1) and in the military operations against Catiline. After governing Cisalpine Gaul he was elected consul for 60, when he constantly obstructed the designs of Pompey and his agent the tribune Flavius (Dio 37. 50). Appointed governor of Transalpine Gaul, he died before he reached his province (59). For his relations with Cicero see Cic. *Fam.* 5. 1. 2. J. M. C.

METELLUS (10) NEPOS, QUINTUS CAECILIUS (cos. 57 B.C.), brother of (9), was a *legatus* of Pompey in the East, and came to Rome as his agent in 63. As tribune (62) he inaugurated a campaign against Cicero's 'unconstitutional' behaviour. Despite the veto of his fellow-tribune Cato, he pressed his proposal that Pompey be recalled from the East to restore order, and was only deterred by the passing of the *senatus consultum ultimum*. He was praetor in 60 and consul in 57, and then proceeded to Hither Spain. Continued unrest in his province provided an excuse for his supersession by Pompey in 55 (Dio 39. 54). J. M. C.

METELLUS (11) PIUS (SCPIO), QUINTUS CAECILIUS (cos. 52 B.C.), son of Nasica, adopted by Metellus Pius (cos. 80 B.C.), was candidate at the abortive consular elections for 52. Pompey, who then became sole consul and had recently married Scipio's daughter, rescued his father-in-law from a bribery charge and made him his colleague. Thenceforward Scipio led the attack on Caesar and proposed the decisive motion in Jan. 49. The Senate granted him Syria, whence in 48 he brought two legions to Thessaly; he commanded the centre at Pharsalus. He escaped to Africa and became supreme general in the Bellum Africum. Caesar tried to bribe Scipio before Pharsalus, but detested him, and wrote a brilliantly bitter passage on his activities in Syria (*BCiv.* 3. 31–3). Cicero despised him as a man ignorant of his family tradition (*Att.* 6. 1. 17). But his dying words in reply to the Caesarian soldiers who sought him out after Thapsus, 'Imperator se bene habet', passed into 'Republican' legend (cf. Livy, *Epit.* 114). G. E. F. C.

METEMPSYCHOSIS, see TRANSMIGRATION.

METEOROLOGY. Although nature and natural phenomena had already been considered at length by the pre-Socratic philosophers, and though the word *μετεωρολογία* occurs in Plato (*Phdr.* 230a), it was left to Aristotle to give an exact definition of what was comprised in the subject. In his four epoch-making books on meteorology he distinguished the respective spheres of meteorology and general natural science with great accuracy, confining the term meteorology to the study of the processes, conditions, and phenomena of the atmosphere. Aristotle's work was continued by Theophrastus and the Epicureans,

to whom Lucretius is greatly indebted for the meteorological sections of his poem. Lucretius also made extensive use of Posidonius, who, looking upon meteorology as the doctrine of the structure of the outer and upper world, had fitted it into a system of thought uniting harmoniously matter and spirit. It is still possible to reconstruct Posidonius' meteorological system, since his book was the main source of the two most important contributions to post-Aristotelian meteorology that have survived, namely the *Naturales quaestiones* of Seneca and the poem *Aetna*. After the first century A.D. students of meteorology confined themselves to summarizing and popularizing the discoveries of their forerunners, which, through the Graeco-Byzantine commentators on Aristotle, came to be known to, and to exercise a beneficent influence upon, the scientific achievements of the Arabs.

TEXTS: Aristotle, *Meteorologicorum Lib. IV*, ed. F. H. Fobes (1919); *Aetna*, ed. S. Sudhaus (1898); Alexander Aphrodisiensis' and Johannes Philoponus' commentaries on Aristotle, ed. M. Hayduck (1899, 1901). Useful selections are given in Sir T. L. Heath, *Greek Astronomy* (1932).

Meteorologie* (1935); G. Bergsträsser, *Neue meteor. Fragm. d. Theophrast* (Stiz. Heidelberg, ix (1918)). P. T.

METICS. In Greek States metics (*μέτοικοι*) were resident aliens who had acquired a definite status distinguishing them from other foreigners and giving them a recognized place in the community. There were commonly three groups of foreigners: temporary visitors, more permanent residents who had not attained the status of metics, and metics. Among the latter, in turn, some were distinguished by grants of special privileges. Metics were found in many States, but those of Athens are best known. There each metic must have a citizen as sponsor (*prostates*), must be registered in the deme in which he resided, and must pay an annual head tax (*metoikion*) amounting to twelve drachmas for a man and six for a woman not a member of the household of a husband or son. They could also be called on to assume liturgies—though not the trierarchy—and contributed to the *eisphorai*, probably more in proportion than citizens. Metics could not contract legal marriages with citizens and could not own houses or land unless they had received *enktesis* through a special grant. In return they had a share in the life of the community and received the protection of the courts, though the exact role of the *prostates* in court procedure remains a matter of dispute. Metics served in the army in separate divisions and were also used as oarsmen in the fleet. The privileges sometimes granted included *enktesis*, remission of financial burdens, equality with citizens in financial matters, and the right to serve alongside of citizens in the army. Metics were important chiefly in commerce and industry.

A. E. Zimmern, *The Greek Commonwealth* (1931), index; M. Clerc, *Les Métèques athéniens* (1893), and *De la condition des étrangers domiciliés dans les différentes cités grecques* (1895); Hommel, *PW*, s.v. 'Metoikoi'. J. A. O. L.

METIS (*Μῆτις*), counsel personified. She was the consort of Zeus (Hesiod, *Theog.* 886 ff.) and wisest of gods and men. By the advice of Earth and Heaven Zeus beguiled her into letting him swallow her when she was pregnant, since he knew she would first bear Athena and then another child, very mighty, who should become ruler of the universe. Having swallowed her, he had her always with him to advise him, and Athena (q.v.) was in due time born from his head (924 ff.). The story would seem to be an early and crude blend of myth and allegory. H. J. R.

METON (*Μέτων*) of Athens (fl. c. 433 B.C.), best known as having introduced, in place of former cycles of eight and of sixteen years, a cycle of nineteen years designed

to correlate the lunar month with the solar year by intercalating a 13th lunar month in the 3rd, 5th, 8th, 11th, 13th, 16th, and 19th years of the cycle, and making 110 of the months in the nineteen years 'hollow' months of 29 days, and 125 of them 'full' months of 30 days: $(110 \times 29) + (125 \times 30) = 6940 \text{ days} = 19 \times 365\frac{1}{5}$. The first of these cycles began with the summer solstice of 432 B.C. It is often stated that this calendar was at once generally adopted in Greece, and lasted down to the adoption of the Julian calendar in Imperial times; but its official adoption at Athens can be proved only for the period 338-290. Meton is caricatured in the *Birds* (414 B.C.) with reference to his scheme for geometrical town-planning.

PIV xv. 1458.

W. D. R.

METRAGYRTES (*Μητραγύρτης*), a mendicant servitor of Cybele. *Metragyrtai* travelled in bands, begging, dancing, and prophesying. They were known to fifth-century Athens, and Cicero (*Leg.* 2. 22 and 40; cf. Dion. Hal. *Ant. Rom.* 2. 19) implies that these *famuli* were tolerated at Rome. They were generally eunuchs (q.v.), the Galli. Similar *agyrtai* (cf. Plato, *Resp.* 364 b) existed in other cults, chiefly Oriental, and Apuleius (*Met.* bks. 8-9) gives a lively picture of those of the *dea Syria*. An inscription of Syria (*BCH* 1897, 59, no. 68) records the collections made on his travels by one such *δοῦλος* of Atargatis (cf. *SEG* vii. 358, 801). See ANATOLIAN DEITIES.

H. Graillet, *Le Culte de Cybèle* (1912), ch. 8; L. Ziehen, *Leges Graecorum Sacrae* ii (1906), 301-3, no. 116.

F. R. W.

METRE, GREEK

I. GENERAL PRINCIPLES

(1) The ancient metricians, of whom Hephaestion (q.v.) is the chief, do not help us greatly towards an understanding of Greek metric, and it is unlikely that they represent a tradition dating back to the classical period. We are thus mainly dependent on what we can ourselves discover from the poetry. A full appreciation of the Greek metres is rendered extremely difficult for us by the fact that we are accustomed in English verse to rhythms based on stress (which is solely determined by the sense), the differentiation between long and short syllables being virtually obliterated. Greek verse, on the other hand, whether it contained an element of stress or not (see below), is based principally upon a precise differentiation of time values, without the least relation to the sense of the words; and for this there are parallels in the verse of eastern nations. It is very doubtful if our ears, accustomed from childhood to stressed verse, are capable of being trained to a full appreciation of quantitative verse. Further, in two fundamental matters we are left in uncertainty. (a) Was there a verse stress (*ictus*) on the 'arses'?* (b) To what extent, if any, were the time values inherent in the syllables altered by the music in lyric (sung) verse?

(2) *Ictus*. The case for *ictus* is mainly based on (a) the alleged inconceivability of verse—particularly verse

* In Greek metric long elements, *longa* ('syllables' is an unsuitable term, since we are concerned with the parts of a verse-form, not with the parts of a word), usually alternate with short elements, *brevia*, or with pairs of *brevia* (sometimes, as in the dactylic hexameter and anapaestic dimeter, fused into single long elements, — for — or — or —), or with elements in which either a short or a long syllable is allowed, *ancipitia* (e.g. the first element of the iambic metron — or —). In the ionic (— or —) and dochmius (— or —) two *longa* are juxtaposed. In many cases a *longum* may be 'resolved' into two *brevia*, and substitution of — for — or — and — for — is sometimes allowed (e.g. — for — or — in iambs). The Lesbian poets, Sappho and Alcaeus, do not allow the resolution of *longa* or the fusion of *brevia* except in dactylic hexameters.

The term 'arsis', applied to the *longa*, originally (probably) signifies the lifting of the foot, 'thesis', applied to the elements (*brevia* or *ancipitia*) between the *longa*, its placing on the ground. Arsis should therefore mean the weak beat, thesis the strong beat—if such a distinction existed. I follow the modern terminology, which has inverted the meanings of the two terms. Wrong as it is, it has (at least in England) become canonical.

associated with dancing, marching, and other movements of the body—without *ictus*, (b) the alleged difficulty of differentiating between — or — dactyl and — or — anapaest and between long, or between short, elements in a series of longs or of shorts, without *ictus*, and (c) the fact that certain lengthenings of short syllables occur in Homer far more often in arsis than in thesis. The opponents of *ictus* answer that verse without *ictus* is found in certain Eastern nations, and that (b) may be disposed of by assuming slight variations in the values of long and of short elements. They also point out that there is no evidence in ancient theory for *ictus*, since this and other terms denoting striking (e.g. *percussio*) were used simply for the marking off of the parts of a verse by beating time, and they infer from this that *ictus* did not exist—an argument *ex silentio* which is hardly conclusive. Kalinka (Bursian, *Jahresh.* 250. 332-9) sums up the evidences. It is impossible to decide with any certainty between the contending views.

(3) In lyric iambs and trochaics a short element often seems to be omitted, — or — appearing alongside of — or — or — and — or — of — or — or —. E.g. Aesch. *Ag.* 385 βιάται δ' ἄ τάλαινα πεῖθώ; Eur. *Phoen.* 1025 χαλαῖσι τ' ὤμοισι. Sometimes this occurs in two consecutive feet, so that we have — instead of either — or — or —. E.g. Eur. *Phoen.* 1039 βροντᾷ δὲ στεναγμός (— | — or —). Similarly, by omission of the last long element, we find — among minor ionic (— or —). This dropping of an element ('syncopation') is particularly common at the close of a colon, where it is termed 'catalexis' (e.g. — or — | — and — or — | —), 'brachycatalexis' when two elements are omitted (e.g. — or — | — and — or — | —). Catalexis is common in spoken, as well as in sung, iambs and trochaics. Further, the anapaestic dimeter — or — | — or — has its catalectic form — or — | — or —, in which two short elements are omitted.

Was the time value of the suppressed short element, or elements, actually missing? Or was it supplied by the compensatory lengthening of the following, or preceding, long element? In general, to what extent, if any, did the music alter the time values? These questions cannot be answered with certainty. The remains of ancient Greek music (see MUSIC, §§ 11-13) almost all have metrical as well as pitch signs, but they are extremely scanty, and only one, the music to a few dochmiacs from Euripides' *Orestes*, may go back to the fifth century B.C. This records no musical alterations of the metrical values. On the other hand the Seikilos inscription (not earlier than 2nd c. B.C.) provides clear examples of long elements protracted after missing shorts both in catalexis and earlier in the colon, and the hymns attributable to Mesomedes (early 2nd c. A.D.?) give similar evidence as regards catalexis. (The Berlin paeon goes much farther in altering the metrical values of the elements.) Statements of ancient metrists about protraction after missing short elements are thus corroborated for the first century A.D. We have no proof, though the assumption is a reasonable one, that protraction was employed in the fifth century B.C. and earlier.

(4) *Line and colon*. Modern verse is built up of a succession of 'lines', the ending of a line being marked by the end of a word. Greek epic and elegiac verse and the spoken metres of tragedy and comedy are constructed on the same principle. The last element of the line is always a *longum*. For the pause at the end of the line makes the prosodic length of the final syllable indifferent, and thus a short syllable can fill a long element (*syllaba brevis in elemento longo*).

Greek lyric verse, though sometimes built on the

† It may be noted that protraction after a missing element is alien to our modern rhythmic instinct. We rhythmize 'A captain bold from Halifax, who dwelt in country quar-ar-ters', not 'quar-ter-ers'.

repetition of a line (*κατὰ στίχον* composition, see IV), far more often consists of a varied combination of shorter entities termed 'cola', which are nevertheless long enough (about eight elements) to possess a definite character as metrical entities. These cola sometimes consist of homogeneous parts (e.g. two iambic metra or four daetyls), sometimes of heterogeneous parts (e.g. the glyconic). In places they are divided off from each other by hiatus or *syllaba brevis in elemento longo*, which clearly mark a pause in the rhythmic flow. In other places they are linked together by 'enjambement', the run-over of a word from one colon into the next. In many places there is only diæresis,* which may or may not indicate a pause. If we are to use the word 'line' at all in such cases, we can only use it of the whole series of cola between one pause and the next; and modern texts of Pindar are in fact printed in such long 'lines'. In the lyrics of drama, where a metrical system is seldom repeated more than once, we have often not sufficient data on which to determine the pauses and to divide up the structure into its lines. (These pauses do not invariably coincide with the ends of sentences or clauses, which in fact often end in quite different places in strophe and antistrophe; and the view that the tolerance of hiatus is in any way dependent on punctuation is untenable.) See further under IV.

II. THE METRES OF EPIC, ELEGIAC, AND DRAMATIC DIALOGUE

The lines are divided at fixed places by word-endings, either caesura or diæresis.

(1) The daetylic hexameter, used by epic, didactic, and pastoral poets, consists of six feet,† the last of which must be a spondee. The first four are either daetyls or spondees, and the fifth, while almost always a daetyl, is occasionally a spondee. The line is divided by caesura somewhere near the middle. The commonest caesuras are (i) 'penthemimeral' (after 5½ feet), *μήνιν αἰεὶδε, θεά:* (ii) after the trochee of the third foot, *ἄνδρα μοι ἔννεπε, Μοῦσα.* (iii) The 'hepththemimeral' caesura (after 7½ feet), *ὅς κε θεοῖς ἐπιτελλοῖται*, is rarer. Diæresis after the fourth foot (which then must be a daetyl) is particularly characteristic of the pastoral poets, and is hence termed 'bucolic'. The ending of a word after the third foot without caesura in that foot is strictly avoided. After the trochee of the fourth foot it is rare in Homer and Hesiod and nearly excluded afterwards.

(2) The elegiac couplet consists of a daetylic hexameter followed by a daetylic pentameter (or rather $2 \times 2\frac{1}{2}$ metra, i.e. two *hemistiche*; see III. 5). The first half of the pentameter allows, the second does not allow, the substitution of spondees for daetyls. Diæresis is invariably observed between the two halves.

(3) The iambic trimeter is used by the iambographers and is the main metre of dramatic dialogue. It consists of 6 feet (3 metra). There is normally caesura either in the 3rd foot (Soph. *Ant.* 8) or in the 4th (*Ant.* 1). In tragedy spondees are allowed in the 1st, 3rd, and 5th feet, tribrachs (resolved iambs) in the first four and occasionally in the 5th, daetyls (resolved spondees) in the 1st and 3rd, and anapaests (sparingly) in the 1st. Resolved feet become increasingly common in Euripides' later plays. Where a word ends before - υ - at the end of the line the preceding syllable is always (or almost always) short (Porson's law), but, e.g., *αἰὲς μοι ἑσπέρων* (Eur. *Hcl.* 471) and *ἐκ Σκυρίων* (Eur. *Tro.* 495) are allowed, since in the former case the enclitic *μοι* looks back, in the latter the preposition looks forward. The comic

trimeter allows anapaests in all feet but the last, and is not bound by Porson's law. The *seazon* or *choliambus* ('Limper') is a form of iambic trimeter used by Hipponax and other iambographers, having a spondee in the last foot.

(4) Occasionally, especially in moments of excitement (e.g. Aesch. *Ag.* 1649-73), tragedy employs the trochaic tetrameter catalectic, $\bar{\cup} - \bar{\cup} - \bar{\cup} - \bar{\cup} -$, which, according to Arist. *Poet.* 1449^a 21, was the original metre of dialogue. It is also employed in comedy. Always in tragedy, usually in comedy, there is diæresis after the second metron.

The dialogue metres of comedy are more numerous, and looser, than those of tragedy. The following are peculiar to comedy.

(5) Iambic tetrameter catalectic, $\bar{\cup} - \bar{\cup} - \bar{\cup} - \bar{\cup} -$, usually with diæresis after the first dimeter. Closely connected with this is the *pnigos* ('Suffocator', a patter metre), of iambic metra, ending with a catalectic dimeter. E.g. Ar. *Ran.* 971-91, following catalectic tetrameters. There is often *enjambement* between dimeters (Ar. *Eg.* 911-40).

(6) The anapaestic tetrameter catalectic, $\bar{\cup} - \bar{\cup} - \bar{\cup} - \bar{\cup} -$, is a dignified metre. The Just Argument and Aeschylus use it (*Nub.* 961 ff., *Ran.* 1006 ff.), while the Unjust Argument and Euripides use the less noble iambic tetrameter catalectic (*Nub.* 1036 ff., *Ran.* 907 ff.). Spondees, and also daetyls, can take the place of anapaests; but anapaest following daetyl (producing $\bar{\cup} \bar{\cup} \bar{\cup}$) is avoided. Diæresis occurs after the second metron.

(7) The eupolidean consists of a 'polysemetrist' choriambic dimeter ($\bar{\cup} \bar{\cup} - \bar{\cup} - \bar{\cup} \bar{\cup}$, see III. 12. ii), followed by $\bar{\cup} \bar{\cup} - \bar{\cup} \bar{\cup}$. See White, *Verse of Greek Comedy* §§ 508, 528. E.g. Ar. *Nub.* 518-62. This appearance of polysemetrism in spoken verse is certainly remarkable.

(8) Anapaestic dimeter, $\bar{\cup} - \bar{\cup} - \bar{\cup} \bar{\cup} - \bar{\cup} \bar{\cup} -$. Spondee and daetyl may be substituted for anapaest, but only very rarely does an anapaest directly follow a daetyl, producing a series of four shorts. Diæresis separates the metra. At frequent intervals the series of acatalectic dimeters is broken by a catalectic one, $\bar{\cup} \bar{\cup} - \bar{\cup} \bar{\cup} - \bar{\cup} \bar{\cup} -$, called a 'paroemiae' because proverbial expressions (*παροιμιαί*) are often contained in cola of a similar type. Only after a paroemiae is 'pause' (see I. 4) allowed.

III. THE METRES OF LYRIC VERSE

Some Greek lyric metres are, like the metres discussed under II, formed by the regular repetition of a single measure, iambic, daetylic, etc.; others, e.g. the glyconic and choriambic dimeter, by the combination of diverse entities within the limits of the colon. In some, e.g. the archilochean dicolon and daetylo-epitrites, the basis of the rhythm is formed by two diverse cola.

The principal metres of Greek lyric poetry are as follows.

(1) *Iambics*. At times dimeters and trimeters are well defined. At others, the iambs run on continuously for a considerable stretch without obvious breaks (e.g. Aesch. *Ag.* 765-70). Resolutions are allowed, as in spoken iambic trimeters, producing tribrachs and daetyls. The anapaest is rare in lyric iambs, but should perhaps be recognized, e.g. at Soph. *Phil.* 141. Syncopation (see I. 3) is common in tragedy, e.g. Aesch. *Supp.* 135-40 $\bar{\cup} - \bar{\cup} - \bar{\cup} \bar{\cup} - \bar{\cup} \bar{\cup} - \bar{\cup} \bar{\cup} -$. Certain combinations of syncopation are frequent, e.g. the trimeter $\bar{\cup} - \bar{\cup} - \bar{\cup} \bar{\cup} - \bar{\cup} \bar{\cup} -$ (Aesch. *Ag.* 376, etc.). At *El.* 504-15 Sophocles produces a beautiful effect by combining resolutions and syncopations. Often a choriamb ($\bar{\cup} \bar{\cup} - \bar{\cup} \bar{\cup}$)

* Diæresis means division between words at the end of a foot or colon; caesura, division within a foot.

† In daetylic the *metron*, or unit of measurement, is the foot; in iambics, trocheics, and anapaests it is the dipody, consisting of two feet. The term foot is somewhat misleading when applied to these last three metres, implying as it does that there is a division after the second element; but its use is convenient for practical purposes.

is substituted for an iambic metron ('choriambic anaclassis'), e.g. Aesch. *Supp.* 783.

(2) *Trochaics* are frequent in the lyrics of comedy (e.g. Ar. *Ran.* 589-604), rare in tragedy. The catalectic dimeter goes back to Alcman's *Partheneion*, and is called 'lecythion' because identical (in its resolved form, $\bar{\cup}\bar{\cup}\bar{\cup}\bar{\cup}$) with $\lambda\eta\kappa\upsilon\theta\iota\omicron\nu\ \acute{\alpha}\pi\omega\lambda\epsilon\sigma\epsilon\nu$ (Ar. *Ran.* 1208 ff.): series of lecythia at Eur. *Phoen.* 239-245. The brachycatalectic dimeter (see I. 3) is termed *ithyphallic* ($\bar{\cup}\bar{\cup}\bar{\cup}\bar{\cup}$). Aesch. *Ag.* 160-6 and Eur. *Hel.* 348-59 illustrate resolution and syncope ($\bar{\cup}\bar{\cup}$ and $\bar{\cup}\bar{\cup}$ for trochaic metron). Cf. also Eur. *Cyc.* 608-23.

(3) *Cretics* are common in comedy (e.g. Ar. *Eq.* 304-10, with first paeon*), rare in tragedy. But Aeschylus turns the fourth paeon to magnificent account at *Eum.* 328-9, and for the first paeon cf. *Supp.* 418-22. Two hymns of the second century B.C. (Diehl, *Anth. Lyr. Graec.* ii. 303-9) are written in cretics and paeons.

(4) *Anapaests*. Lyric (or 'threnodic') anapaests, frequent in passages of a dirge-like character, differ from the normal anapaests of II. 8 in the frequency of paroemiacs (cf. the series in *Carmina popularia* 18, Diehl, *Anth. Lyr. Graec.* ii), the preponderance of long syllables, and the occasional neglect of diaeresis between metra. Ar. *Ran.* 372-7 (a slow march); Eur. *Ion.* 859-922 (a lament). Resolution of the long syllable (giving $\bar{\cup}\bar{\cup}\bar{\cup}$, 'proceleusmatic') is allowed.

The close combination of iambs with trochees (e.g. Pind. *Ol.* 2. 1 $\bar{\cup}\bar{\cup}\bar{\cup}\bar{\cup}$ | $\bar{\cup}\bar{\cup}$) and with anapaests (Eur. *El.* 586, 588, 590) is sometimes found. The swing from iambs to trochaics is capable of charming effects (Eur. *Hel.* 361-3) and humorous ones (Ar. *Ran.* 209-68).

(5) *Dactyls*. Continuous hexameters are occasionally found (e.g. Sappho's *Epithalamia*, frs. 115 ff., Soph. *Trach.* 1010-14, Ar. *Ran.* 1528-33). Cratinus and other comic poets often use them for burlesque. But the tetrameter is far commoner. (As in the hexameter, an admixture of spondees is allowed.) Alcman and Anacreon wrote 'whole strophae and songs' in tetrameters (Heph. cap. 7; cf. Alcman fr. 49), and Sophocles loves them, constantly mixing them with other metres with beautiful effect (*El.* 124-36). Pentameters and dimeters (called *adonets*, from the cry $\acute{\alpha}\ \tau\omicron\nu\nu\ \acute{\alpha}\delta\omega\nu\nu$) are found, also catalectic cola of varying lengths. For the trimeter see *hemiepes* below. Aeschylus frequently composes dactyls in a continuous stream, with no perceptible division into cola (e.g. *Pers.* 882-6, with ithyphallic clausula). Purely, or mainly, dactylic systems are Aesch. *Ag.* 104-21, Soph. *OT* 151-8, Eur. *Phoen.* 784-800. For the association of dactyls with iambs, cf. Archil. fr. 104, Eur. *Hipp.* 1120-30; with trochaics, Eur. *Cyc.* 608-23, Ar. *Lys.* 1279-90, and *Eccl.* 1168 ff. (the salad song).

'Aeolic', or 'Icsbian', dactyls (Sappho, Alcaeus) have a free first foot of two syllables and a cretic close: e.g. the 'fourteen-syllable sapphic' in which Sappho wrote her second book (Heph. cap. 7, p. 23), $\bar{\cup}\bar{\cup}\bar{\cup}\bar{\cup}\bar{\cup}\bar{\cup}\bar{\cup}\bar{\cup}\bar{\cup}\bar{\cup}\bar{\cup}\bar{\cup}\bar{\cup}$.

The 'ibycean', $\bar{\cup}\bar{\cup}\bar{\cup}\bar{\cup}\bar{\cup}\bar{\cup}$, is perhaps to be explained as a dactylo-trochaic tetrapody catalectic (Ibyc. fr. 6. 1-3, followed by normal dactylic tetrapodies). But in the lyrics of drama the same combination of elements is probably nothing else than a glyconic with dactylic opening.

The dactylic trimeter catalectic and acatalectic, $\bar{\cup}\bar{\cup}\bar{\cup}\bar{\cup}\bar{\cup}\bar{\cup}$ and $\bar{\cup}\bar{\cup}\bar{\cup}\bar{\cup}\bar{\cup}\bar{\cup}$, or *hemiepes* ($\tau\omicron\delta\ \eta\mu\epsilon\pi\acute{\epsilon}\varsigma$, Marius Victorinus and Sacerdos), often occurs in dactylic systems, and forms one of the two parts of the dactylo-epitrite (see below). It is sometimes repeated in a series, either one form being used throughout, or the

two in combination: Aesch. *Pers.* 584-90; Soph. *Trach.* 113-15; Eur. *Tro.* 1094-8.

(6) The placing of $\bar{\cup}$, $\bar{\cup}$, or $\bar{\cup}\bar{\cup}$ before the two types of hemiepes, as a spring-off, produces the *prosodiac*, $\bar{\cup}\bar{\cup}\bar{\cup}\bar{\cup}\bar{\cup}\bar{\cup}$, and *enoplon*, $\bar{\cup}\bar{\cup}\bar{\cup}\bar{\cup}\bar{\cup}\bar{\cup}$. For $\bar{\cup}\bar{\cup}$ in the first and second dactyls — and $\bar{\cup}$ are sometimes substituted. *Rhcs.* 895-8, two prosod. + ithyphallic + enopl.: *Med.* 435-7, enoplia, cf. 849-53.

(7) The *dochmius* ('slanter'), of which the basic form is $\bar{\cup}\bar{\cup}\bar{\cup}\bar{\cup}$, is rarely found before the tragedians, by whom it is much used in agitated lamentations (e.g. Aesch. *Sept.* 78-180). The first and fourth elements may be long (----- among spondaic anapaests, Eur. *Hec.* 182, 190, 193). Resolutions are frequent, but the rhythm is easily felt through all the multiplicity of the transformations. Dochmiacs are often associated with iambs, anapaests, and cretics (Aesch. *Ag.* 1156-66, *PV* 574-88, Eur. *Ion.* 1445-67). $\bar{\cup}\bar{\cup}\bar{\cup}\bar{\cup}$ (Eur. *Hcl.* 657, 680-1) is perhaps a synopated dochmius ($\bar{\cup}\bar{\cup}\bar{\cup}\bar{\cup}$).

The *hypodochmius*, or 'anaclastic' dochmius, inverts the first two elements, $\bar{\cup}\bar{\cup}\bar{\cup}\bar{\cup}$ (Soph. *OT* 1208-10, Eur. *Or.* 992-4).

(8) *Glyconics* are first found in Sappho, Alcaeus, and Anacreon. The metre is $\bar{\cup}\bar{\cup}\bar{\cup}\bar{\cup}\bar{\cup}\bar{\cup}$. The catalectic

form, *pherecratean*, $\bar{\cup}\bar{\cup}\bar{\cup}\bar{\cup}\bar{\cup}\bar{\cup}$, usually comes after

every few glyconics. (But at Ar. *Thesm.* 359-66 there is a long series of glyconics, at Aesch. *Sept.* 295-300 a series of pherecrateans.) The metre may perhaps be, in origin, a form of aeolic dactyls, manifesting the same freedom in the first foot. (Sapph. fr. 99 has an aeolic dact. pent. cat. among glyconics.) Pindar has many glyconics. In drama Aeschylus has few (apart from short stanzas at the end of a system, e.g. *Ag.* 381-4), Sophocles, Euripides, and Aristophanes have many (e.g. Soph. *OC* 1211-18, Eur. *Andr.* 501-14, Ar. *Eq.* 973-84). The penultimate syllable is occasionally long (e.g. Eur. *Hipp.* 141). A tribrach (resolved trochee) at the opening is rare in Sophocles, common in Euripides.

(9) The *telesilleion*, or 'acephalous' glyconic, is a glyconic docked of its first element† (Telesilla, fr. 1, Soph. *OG* 1044-6, Ar. *Av.* 1731-4). An acephalous pherecratean ($\bar{\cup}\bar{\cup}\bar{\cup}\bar{\cup}\bar{\cup}\bar{\cup}$) forms the metre of the Rhodian

Swallow Song, $\eta\lambda\theta\theta\ \eta\lambda\theta\epsilon\ \chi\epsilon\lambda\acute{\iota}\delta\omega\nu$ (*Carm. Pop.* 32), and is common in Pindar and drama. It is sometimes called a *reizianum* after the German scholar Reiz, and the same name is applied to the acephalous choriambic dimeter (see (12)) catalectic ($\bar{\cup}\bar{\cup}\bar{\cup}\bar{\cup}\bar{\cup}\bar{\cup}$). For the two forms cf. Eur. *Alc.* 908-10. The term *reizianum* has also been stretched to include the colon $\bar{\cup}\bar{\cup}\bar{\cup}\bar{\cup}$.

(10) The glyconic may be extended† to various lengths. The *hipponacteum* (Eur. *Bacch.* 902, 904, 906) has one extra element at its end. The *phalaecean hendecasyllable* adds $\bar{\cup}\bar{\cup}$ to the glyconic: e.g. the first two lines of the Harmodius scoliastic metre, $\bar{\epsilon}\nu\ \mu\acute{\upsilon}\rho\tau\omicron\nu\ \kappa\lambda\alpha\delta\iota\ \tau\omicron\ \xi\iota\phi\omicron\varsigma\ \phi\omicron\rho\eta\gamma\epsilon$ (*scol. anon.* 12) and Soph. *Aj.* 697, 700. This $\bar{\cup}\bar{\cup}$ is probably a synopated iambic metron: cf. Soph. *Ant.* 816 glyc. + spondee. Sometimes, again, a full iambic metron follows or precedes the glyc. (Alc. fr. 54, Soph. *Aj.* 600-1, 624-5).

(11) The minor asclepiad ($\bar{\cup}\bar{\cup}\bar{\cup}\bar{\cup}\bar{\cup}\bar{\cup}\bar{\cup}\bar{\cup}$, e.g. Alc. fr. 50. 1 $\eta\lambda\theta\epsilon\varsigma\ \acute{\epsilon}\kappa\ \pi\epsilon\rho\acute{\alpha}\tau\omega\nu\ \gamma\acute{\alpha}\varsigma\ \acute{\epsilon}\lambda\epsilon\phi\alpha\nu\tau\iota\nu\alpha\nu$) has sometimes been explained on the assumption that a glyconic = $\bar{\cup}\bar{\cup}\bar{\cup}\bar{\cup}\bar{\cup}\bar{\cup}$ + $\bar{\cup}\bar{\cup}\bar{\cup}\bar{\cup}\bar{\cup}\bar{\cup}$, and that therefore an

† This is a convenient way of putting the matter. It cannot, however, be assumed as by any means certain that the 'acephalous' cola described in this section actually came into existence through such a process of decapitation, or the longer cola by a process of extension.

* The paeon is a cretic with one long syllable resolved. The 'first' paeon is $\bar{\cup}\bar{\cup}\bar{\cup}\bar{\cup}$, the 'fourth', $\bar{\cup}\bar{\cup}\bar{\cup}\bar{\cup}$. The 'second' and 'third' exist in theory only.

extra choriamb can be inserted in the middle. A more natural method is to explain it as a fusion of two short cola which are often found, $\bar{\cup}\bar{\cup} - \cup\cup -$ and $-\cup\cup - \cup\cup -$. But some colour is lent to the first view by the existence of the major asclepiad, or 'sixteen-syllable sapphic' ($\bar{\cup}\bar{\cup} - \cup\cup - \cup\cup - \cup\cup - \cup\cup - \cup\cup -$, e.g. Alc. fr. 94, Soph.

Phil. 175-6), which is not easy to explain except on the assumption that two choriambic dimeters are inserted.

(12) The *choriambic dimeter* assumes, broadly speaking, two forms:

(i) A strict form, in which the first or the second half is a choriamb, the other an iambic metron (Soph. *Trach.* 116-21, Ar. *Eq.* 551-8; cf. Anaer. fr. 54).

(ii) A free form, styled 'polyschematist' ('of many shapes'), in which the first half usually consists of four elements ($\bar{\cup}\bar{\cup} - \cup$), sometimes increased to five or six

by resolutions of long elements, while the second half is a choriamb. This form of dimeter is probably to be explained as dactylo-trochaic, the first half being a trochaic metron $-\cup - \cup$, with free variations of quantity in the first two elements as in the glyconic and in aeolic dactyls. It is already found in Corinna, who makes much use of it, and in Pindar, also in Sophocles (*El.* 121-2, *Phil.* 204-8). Euripides has a great liking for it, combined with glyconics, and Aristophanes probably parodies this in the cento at *Ran.* 1309-22. Not infrequently the first half consists of only three elements. Systems consisting mainly of glyconics and polyschematist dimeters are found, e.g., at Eur. *Hel.* 1301-18, *Phoen.* 202-13.

The characteristic features of the metres described in paras. 8-12 are the juxtaposition of dactyl and trochee and (in most of them) free variation in the quantities of the first two elements. They are generally known as 'aeolic', owing to their prominence in the poetry of Aeolian Lesbos (Sappho and Alcaeus).

(13) The *minor ionic* (metron $\cup\cup - -$) is found in the lyric poets (Alcman, Sappho, and Alcaeus wrote whole songs in it, *Heph. cap.* 12, pp. 37-8, cf. *Alcm. fr.* 34, *Sapph. fr.* 86) and is particularly associated with certain dramas (Aesch. *Supp.* 1018 ff., and *Pers.* 65 ff.; Eur. *Supp.* 42 ff., and *Bacch.* 64 ff.; Ar. *Ran.* 324 ff.). The synepated form ($\cup\cup -$) is frequent, e.g. *Pers.* 100-1. The *anaercontic* ($\cup\cup - \cup\cup -$) is often combined with Ionics (e.g. *Anaer. fr.* 44) and is the metre of the late *Anaercontes*. The view (*Heph. cap.* 12, p. 39. 15) that the anaercontic is derived from the ionic dimeter by the interchange of the final long of the first metron with the opening short of the second ('anacalasis') does not account for cola of the form $\cup\cup - - | - \cup - -$ (e.g. Ar. *Ran.* 330). The alternation of iamb. dim. cat. and anaercontic in *Sapph. fr.* 114 suggests that the anaercontic may be in origin an iamb. dim. cat. with anapaestic opening.

The *major ionic* is $- - \cup\cup$. According to *Hephæstion* (*cap.* 11, p. 36. 15) one form of it, the *Αἰολικόν*, was much used by Sappho. He cites frs. 63-4 $\cup - \cup\cup | - - \cup\cup | - - \cup\cup | - - \cup\cup$ (where, as with minor ionics, we have the metron $\cup - \cup$). But here, as often in other places in lyric and tragedy where major ionics have been detected, choriambic scansion, with a jumping-off element ('anacrusis') at the start ($- | - \cup\cup -$, etc.), is possible. Major ionics are far less well attested than minor ionics.

(14) The *archilochian dicolon* consists of enopion and ithyphallic. Archilochus fr. 107 *Ἐρασιμένη Χαρίλαε, χερμαῖ τοι γέλοισιν*. It is not infrequent in tragedy. Sometimes (*Heph. cap.* 15, p. 47. 16) the division is $\cup - \cup\cup\cup\cup - || \cup - \cup - | \cup - -$ (prosodiac and iamb. dim. cat.).

(15) *Dactylo-epitrites* are formed of dactylic cola (hemipies, $-\cup\cup - \cup\cup -$ or $-\cup\cup - \cup\cup -$) and 'epitrites',

trochaic metra with long final element ($-\cup - -$, i.e. the ratio of 3:4, *λόγος ἐντρίπτος*, taking the length of a breve as the standard). Often a long element (very rarely a short one) precedes the dactylic colon or the epitrite, and the epitrite is often catalectic, becoming a cretic. There are many other occasional variations. The metre is first found in Stesichorus, and is very often used, in a strictly regularized form, by Pindar and Bacchylides. It occurs in tragedy, especially in certain plays (Aesch. *PV* 526 ff., 887 ff., Eur. *Med.* and *Andr.*), even in comedy (Ar. *Eq.* 1264 ff.). It is one of the easiest Greek metres to grasp.

Dicola of a similar type are the *iambelegus* ($\cup - \cup - - | - \cup - \cup - -$), the *encomiologium* ($-\cup\cup - \cup\cup - | \cup - \cup - -$), and perhaps the *praxilleion* ($-\cup\cup - \cup\cup - \cup\cup - \cup\cup -$). The *archebulean* is a praxilleion preceded by one or two short elements or one long one ($\cup\cup - \cup\cup - \cup\cup - \cup\cup -$).

IV. THE ARCHITECTURE OF GREEK LYRIC VERSE

The principal building materials have been described above. It remains to consider how these are combined into organized structures. In modern verse we are familiar with the stanza form of, say, four lines. Such stanzas play a relatively small part in Greek verse. The following deserve mention.

(1) *Sapphic stanza*, $-\cup - \cup - \cup\cup - \cup - -$ (possibly = polyschematist dimeter + $\cup - -$) thrice and $-\cup\cup - -$ (*adoneus*).

(2) *Alcaic stanza*, $\cup - \cup - \cup - \cup\cup - \cup - -$ (probably $\cup +$ trochaic metron + the colon $-\cup\cup - \cup -$, for which see III. 11) twice: $\cup - \cup - \cup - \cup - -$ ($\cup +$ troch. dim.): $-\cup\cup - \cup\cup - \cup - -$ ('Alcaic ten-syllable'), a colon often used, especially as a clausula, in the lyrics of tragedy).

(3) *Scolion metre* (e.g. the *Harmodius Song*, *Diehl, Anth. Lyr. Græc.* ii, 184-5), phalæcean hendecasyllable twice: an enigmatical colon, $\cup\cup - \cup - - \cup\cup -$ (perhaps a form of choriambic dimeter, with anapaest for iambus at the opening): $-\cup\cup - \cup -$ twice.

Sappho, Alcaeus, and Anacreon constructed their solo songs for the most part either (1) by the repetition of a single metrical unit, composition *κατὰ στίχον* (e.g. Sappho's second and third books were written in the '14-syllable' and '16-syllable sapphic' (see III. 5 and 11) respectively, and cf. Alc. frs. 54, 94; or (2) in stanzas, sapphic or alcaic, and cf. *Sapph. frs.* 96, 98, Alc. fr. 43, *Anacr. fr.* 5; *Anacr. fr.* 2 is a little more elaborate in structure, but equally simple in its constituents. There is, broadly speaking, no *enjambement* (contrast Anacreon's way of writing glyconics with Ar. *Eq.* 973-96), though Sappho runs the third line of her stanza into the closing Adoneus, and cf. fr. 98. The colon is usually a line, in the modern sense of the term, and a modern reader feels that he is treading familiar ground. In contrast, choral lyric is, from the first, more complicated. Alcman's *Parthenion* (fr. 1) is a highly organized, though readily intelligible, structure: *lee. + enopl.* four times, 2 troch. trim., 2 troch. dim., dact. tetr., alc. 10-syll. (answering dact. tetr. cat.). Hiatus and *syllaba brevis in elemento longo* occur frequently, while *enjambement* is eschewed.

Pindar's odes are extremely elaborate. The general character of the dactylo-epitrites is easily grasped, but the remainder, which are virtually all written in 'aeolic' metres (see III. 12, ad fin.), present numerous and formidable difficulties. The constituent cola, among which the shorter forms ($\bar{\cup}\bar{\cup} - \cup\cup -$ and reizianum) are

prominent, are interspersed with shorter entities (iambic monometers, cretics, etc.) and with non-aeolic cola. A colon is seldom repeated in juxtaposition. The whole structure has the elaborate intricacy of a tessellated pavement. The 'lines', marked by the presence of hiatus or *syllaba brevis in elemento longo*, occasionally consist of a single colon, but are normally longer, though seldom

more than some 25 elements. *Pyth.* 1 str. 6 (dactylo-epitrites) runs to 30 elements. The contrast between short and long lines is well illustrated by *Ol.* 1 str. 3-6, where three separated cola are followed by a long combination at 6. Cf. also *Nem.* 2 str. 1 and 4.

In tragedy we find long lines e.g. at Aesch. *Pers.* 882-5, Eur. *Heracl.* 615-17, *Hipp.* 771-5, *Bacch.* 383-6. The dramatists, unlike Pindar, tend to repeat the same colon many times in succession; and they do this in such a manner that the cola are in one place linked, in another separated. E.g. Aesch. *Supp.* 171-4, where 171-2 are linked, 173-4 separated; Soph. *OT* 1202-3, *OC* 1215-18; Ar. *Thesm.* 360-4. The division of a passage into its constituent cola (colometry, *κωλιsmós*) is often subject to doubt, particularly in aeolic systems. Where, as often, diaeresis coincides in strophe and in antistrophe, it is natural to take this as a guide. On this principle Soph. *OC* 668-80 = 681-93 would be regarded as constructed of a great variety of aeolic cola, while alternatively it can be analysed into more homogeneous elements if we assume frequent *enjambement* between cola.

On the whole, the lyrics of tragedy stand between the complexity of Pindar and the simplicity of Lesbian solo-song. Ionic and dochmiac systems are, it is true, very regular in character; and there are many homogeneous iambic systems (e.g. Aesch. *Ag.* 238-47, and often in the *Oresteia*; Soph. *Trach.* 132-40; Eur. *Tro.* 551-67). Other simple systems are Soph. *OT* 1186-96 (tel., glyce., pher., with reiz. clausula), *Trach.* 113-21 (herniep. and chor. dim.), Eur. *Heracl.* 608-17 (daetyls), *Andr.* 501-14 (glyce., pher.), *Supp.* 971-9, and *Phoen.* 226-38 (glyce., pher., and chor. dim.). Against these we may set the elaboration of some of the lyrics in the *Alcestis*, and the great difficulty of *Bacch.* 135-67 and 576-603. The metres of comedy are in general far simpler than those of tragedy: e.g. Ar. *Eq.* 1111-30 and *Pax* 1329-57 (tel. and reiz.), *Au.* 1553-64 (troch. dim. and lee.), *Ran.* 1251-60 (glyce. and pher.); though even in comedy complicated systems are to be found (e.g. Ar. *Lys.* 1247-70 and, naturally, many parodistic passages). The beginner will be well advised to start with Sappho, Alcaeus, Anacreon, and comedy, and feel his way through tragedy to the complexities of Pindar.

V. STROPHIC RESPONSION

Most Greek choral poetry is 'strophic'. That is to say, a metrical system is repeated, the first occurrence being termed 'strophe', the second 'antistrophe'. In tragedy there is only one repetition, in satyric drama and comedy sometimes more (Eur. *Cyc.* 495 ff., Ar. *Pax* 346 ff.). The oldest extant piece of Greek choral poetry, Aleman's *Partheneion*, repeats the system many times, as does Pindar in his more elaborate odes. Pindar adds an epode to strophe and antistrophe, and then repeats the whole 'triadic' structure. (Triadic structure is already clearly present in Ibyc. fr. 3. There is no good ground for assuming it in Aleman's *Partheneion*. Suidas, s.v. *τρία Τηρηχόρου*, ascribes its invention to Stesichorus.) Epodes are also often found in drama (e.g. Aesch. *Pers.* 897-906, Soph. *Ant.* 876-82). In the *κομμός* in the *Choephorae* (315-475) the structure is highly elaborate, and the antistrophes do not immediately follow the strophes: cf. Soph. *Trach.* 1004-42. Some passages are 'astrophic', the system not being repeated (e.g. Soph. *Trach.* 205-24, Eur. *Hel.* 515-27; particularly in the monodies and duets of Eur.'s later plays). In an *Ephymnion* (refrain) words, as well as metrical form, are repeated: e.g. Aesch. *Supp.* 117-75, *Ag.* 1455-1550.

Strophic responson is usually very close, and often undeviatingly precise, syllable by syllable, for long stretches. The main divergencies from strictness are the responson of - and ~ in many metres. A synepated iambic metron probably sometimes corresponds to a full metron (e.g. Eur. *El.* 1185=1201). A few surprising

responsons occur, notably that between polyscheronist dimeter and glyconic* (Corinna, fr. 5, passim, and several times in Euripides, e.g. *El.* 146 = 163). For loose responson in comedy see Wilamowitz, *Verskunst*, 470-86.

* The explanation seems to be that a monosyllabic thesis corresponds to a disyllabic one and vice versa: x x = ~ ~ = (x x standing for the two variable syllables at the opening).

METRE, LATIN. Except for the Saturnian metre (q.v.) and (possibly) the trochaic 'uersus quadratus' used in popular ditties (e.g. *rex erit qui recte faciet, qui non faciet non erit*) all Latin metres were deliberately borrowed from Greek. This borrowing was complicated by three important differences between the two languages: (1) the sequences of long and short syllables inherent in Latin words and terminations (cf. Cicero, *Orat.* 189) were not always readily adaptable to foreign metres, and the poet's choice of diction was consequently fettered (e.g. *Impérator* is impossible in daetylic verse); (2) it is virtually certain that stress, not pitch, predominated in the Latin accent, and therefore the relation between word-accent and rhythmical beat (*iectus*) created problems unknown apparently to Greek; (3) the phonetic tendency of 'breuis breuians' (q.v.) in popular Latin speech, though it might offer some prosodical freedom, introduced an element of caprice and really meant that many Latin syllables had no fixed quantity. As in Greek, attenuation ('elision'; synaloepha) of a final vowel before the initial vowel of a succeeding word was the common practice, and syllables ending in -m were similarly treated; but whereas Latin elides long final vowels more freely than Greek (yet not unrestrictedly), it rarely halves their quantity (e.g. an *qui amat*, Verg. *Ecl.* 8. 108). Hiatus is tolerated only at fixed places in certain metres, for special effects (e.g. *femineū ululatu*, *Aen.* 9. 477), or as a bold licence (e.g. *Neptunō Aegaeo*, *Aen.* 3. 74). Obsolete quantities are occasionally revived by later poets (e.g. *velit, labōr*); a few lengthenings are due to Greek models (e.g. *liminaquē laurique dei*, *Aen.* 3. 91). In Republican poets final -s after a short vowel may be neglected before a following consonant (e.g. *rationis potestas, Luer.*). In daetylic and lyric metres the Romans often subject themselves to stricter rules than did the Greeks. The development of accentual metres in late Latin falls outside the scope of this article.

I. Metres of Republican drama, introduced by Livius Andronicus, are fully represented in the comedies of Plautus and Terence; fragments of the tragedians are meagre. In general, these metres have three common features: (1) popular pronunciations based on 'breuis breuians' (e.g. *bōnīs* as ~ ~) or synizesis (e.g. *corum*) are freely admitted; (2) word-accent and *iectus* often coincide, and it is possible that the effects of enclisis (e.g. *patér-meus*) may have made such coincidences more frequent than appears from a printed text; (3) where two short syllables are used as the resolution of one long, the first short syllable is usually an accented one; this principle embraces and may be the basis of many minor 'rules'. (A) Dialogue metres: (i) The iambic *senarius* is the commonest (e.g. *nunc huc | ad Vēnē[ris] fa[rum] uēn[ti]o u[is]ere*, Plaut. *Rud.* 94). Unlike the Greek comic tri-

meter, which allowed spondees (and dactyls) for $\cup \cup$ only in the first, third, and fifth feet, the Latin line admitted $\times -$ ($= \cup \cup \cup$) in every foot except the last ($\cup -$); hence the line is felt to be not three *metra* but six feet (cf. Hor. *Ars P.* 251-62). There is caesura usually in the third foot, sometimes in the fourth; at the caesura hiatus is admitted (rarely in Terence). 'Porson's law' (cf. METRE, GREEK, II. 3) does not operate. As in other dialogue metres, resolutions of any long syllable are common (especially in comedy), but proelcumatic feet ($\cup \cup \cup \cup$) are restricted in use. (ii) The iambic septenarius (a catalectic tetrameter, sometimes called 'laughing metre') is confined to comedy (e.g. *nam quom | modo exhibat | foras || ad portum se ai|bat i|re*, Plaut. *Rud.* 307). The seventh foot is generally a pure iambus and must be so if a monosyllable follows. The fourth foot must be iambic if, as usually happens, diaeresis follows. All other feet are $\times -$. Hiatus is permitted at the diaeresis; failing diaeresis, there is caesura in the fifth foot. (iii) The iambic octonarius has a pure iambus as its last foot; its fourth foot is also pure if, as is usual, diaeresis follows. The other six feet are $\times -$. Hiatus is found at the diaeresis; failing diaeresis, there is caesura in the fifth foot. (iv) The trochaic septenarius (or catalectic tetrameter) is widely used (e.g. *exi e | fano | natum | quantum || hōmīnum | sc̄rile|gissu|mc*, Plaut. *Rud.* 706). It keeps only its seventh foot pure ($- \cup$) and so differs from the Greek metre, which kept the first, third, and fifth feet also pure. Diaeresis (with hiatus permitted, though not in Terence) is common after the fourth foot; failing diaeresis, there is caesura in the fourth foot. (B) The metres of cantica (i.e. lyrical monodies or ducts, rare in Terence) are mainly iambic, trochaic, anapaestic, bacchiac, and cretic dimeters and tetrameters (catalectic and acatalectic); choriambic, glyconic, and ionic metres are occasionally used; to these must be added the *colon reizianum* ($\times \cup \times \cup$), which, when preceded by an iambic dimeter, gives the *versus reizianus*. The relation between word-accent and ictus, the extent to which popular pronunciations, resolutions, and hiatus are used, and the admission of impure feet differ with the metre employed. For example: conflict of accent and ictus is usual in anapaests, though shortening by 'brevis breuians' is common; in bacchiacs and cretics popular pronunciations are avoided, but accent and ictus generally coincide; in bacchiacs the first part of the foot may be \cup , or $\cup \cup$, or $-$, but it is rare for both long syllables of a foot ($\times -$) to be resolved; yet cretics normally have the form $\cup \cup$, rarely $\cup \times \cup$. Some cantica are composed in a single metre. In others the metre changes with the emotions expressed or when a new topic is introduced; in such passages the division into cola is sometimes uncertain. In a number of cantica it is possible to discern a metrical structure of strophe and antistrophe, especially when a general theme is followed by a particular application (e.g. Plaut. *Amph.* 633-44).

II. Dactylic verse, introduced by Ennius. (i) The hexameter is used with considerable variety of treatment as the metre of epic, narrative, didactic, and satiric poetry, and forms the first line of the elegiac couplet. Its first four feet may be dactyls or spondees, its fifth is regularly a dactyl, its sixth a spondee or trochee. A spondaic fifth foot (an Alexandrian mannerism) is frequent only in Catullus (but cf. *cara de|um sub|les mag|num louis | incre|mentum*, Verg. *Ed.* 4. 49). Except for some cretic words in Ennius, no use is made of shortening by 'brevis breuians' and synizesis is rare. Ennius, Ovid, and Imperial poets are sparing with elisions; Lucilius, Lucretius, and Virgil (especially in *Aen.*) employ them more frequently. The commonest caesura is after the long syllable of the third foot (penthemimeral); it is often accompanied by another masculine caesura in the fourth foot (hepthemimeral) or in the second foot (trihemimeral), or by both; if there is not a masculine caesura

in the third foot, both hepthemimeral and trihemimeral are usual (e.g. *o pas|si graui|ora, dal|bit deus | his quoque | finem*, Verg. *Aen.* 1. 199). The comparative infrequency of a feminine caesura in the third foot is a striking contrast to the Greek hexameter. In the fifth foot, however, feminine caesuras are more frequent than masculine. Monosyllables are avoided where they would create diaeresis near a main caesura. After Ennius they are progressively less frequent at the end of a line (where a disyllabic or trisyllabic noun, verb, or adjective is preferred); in Virgil they are used only for special reasons (e.g. *restitu|is rem*, *Aen.* 6. 846, imitating Ennius); in Horace's *Satires* conversational tone is achieved by final monosyllabic adverbs and particles. Diaeresis with a clear break in the sense at the fourth foot (the so-called 'bucolic caesura') is a conspicuous but not common mannerism (e.g. *Pollio et | ipse fa|cit noua | carmina: || pascite | taurum*, Verg. *Ecl.* 3. 86). In general, there is conflict between word-accent and ictus in the first half of the hexameter, harmony in the second. Whether Latin poets sought this alternation and arranged their caesuras to ensure it, or whether it is the inevitable result of their preference for certain masculine caesuras, is a matter of controversy. It is also disputed whether the Romans read hexameters with normal prose accentuations, neglected them in favour of ictus, or in some way made both audible. By skilfully varying their caesuras, elisions, and sense pauses, and employing all the delicate resources of alliteration and assonance, the great Roman poets made the hexameter a sonorous but flexible instrument for the expression of all human emotions. (ii) The pentameter consists of two catalectic dactylic cola (*hemiepes*, $- \cup \cup - \cup \cup -$) separated by diaeresis. In the first colon spondees may be substituted for either dactyl, but not usually for both; no spondees are permitted in the second colon. A monosyllable before the diaeresis is avoided unless another monosyllable or a pyrrhic ($\cup \cup$) word precedes; the final syllable is usually long. Ovid and later writers normally end the line with a disyllable (though 'es' and 'est' are allowed), but earlier elegists admit polysyllables. Except in Catullus elision is restricted and is generally avoided at the diaeresis, in the second half of the line, and especially in the last dactyl. A symmetrical arrangement of words (e.g. *aspicio patriae tecta relicta meae*, Ovid) is a common feature of the best writers, and each couplet is normally complete in sense.

III. Lyric metres. Latin lyric verse is smaller in quantity and less complicated in form than Greek. The chief writers are Catullus, Horace, Martial, and Seneca (in his tragedies). Apart from iambic, trochaic, dactylic, and anapaestic lines of various lengths, the principal metres are glyconics, pherecrateans, asclepiads, phalaecean hendecasyllables, saezons (limping iambics), and the elements of the sapphic and alcaic stanzas (cf. METRE, GREEK); ionica (e.g. Hor. *Carm.* 3. 12) and the controversial galliambic (in Catull. 63) are rare. Popular pronunciations are virtually excluded and there is considerable strictness in matters of caesura, elision, and liaison (synaphea) between successive lines (for details see standard editions). The iambic and trochaic lines of lyric (excluding the 'trimeters' of Publilius Syrus and Phaedrus) are metrically purer than those of comedy, since they are based on dipodies of the forms $\cup - \cup -$ and $- \cup - \cup$; resolutions of long syllables also are comparatively fewer, though Seneca admits them in his iambics more freely than Horace. Some of the metres (e.g. iambic dimeters and trimeters, hendecasyllables, asclepiads) are used in continuous passages; but more frequently lines of different length or metre are combined into couplets (e.g. Hor. *Carm.* 1. 7; *Epod.* 16) or four-line stanzas. Horace is especially fond of the alcaic and sapphic stanzas and combinations of asclepiads, glyconics, and pherecrateans, in all of which he restricts himself by rules unknown to Greek (e.g. in sapphic and

alcaics he uses an epitrite (— — —) where Greek may have a ditrochee (— — —).

METRODORUS (1) of Chios, pupil of Democritus, lived in the 4th century B.C. His *Περὶ φύσεως* seems to have attempted to combine Atomism with the Eleatic denial of the reality of change; he occupied himself mainly with the explanation of meteorological and astronomical phenomena. He also wrote historical works—a *Τρωικά* and perhaps also an *Ἰωνικά*.

Testimonia and frs. in Diels, *Vorsokr.* ii. 231-4. *PW* xv. 1475. W. D. R.

METRODORUS (2) of Lampsacus (331/330-278/7 B.C.) was one of the four *καθηγεμόνες* of Epicureanism, and the most important after Epicurus; Epicurus dedicated to him his *Eurylochus* and his *Metrodorus*, besides writing letters to him and mentioning him often in his works. He reckoned him not among original thinkers, but as first among those who could reach the truth with the help of others, and ordered that Metrodorus' memory as well as his own should be celebrated on the 20th of every month. The list of Metrodorus' writings is a long one, and considerable fragments remain, largely occupied with polemic against other schools, and confirming Epicurus' judgement as to his lack of originality. See ALLEGORY, GREEK.

Ed. A. Körte, *Jahrbücher für Classische Philologie, Suppl.* 17, 529 (1890); *Papyrus Herculanensis* 831, ed. A. Körte, ib. 571 ff. *PW* xv. 1477. W. D. R.

METRODORUS (3) of Stratonicea, an adherent first of the Epicurean school, then of that of Carneades (Diog. Laert. 10. 9, Cic. *De Or.* i. 45).

PW xv. 1480.

METRONOMOI, overseers of weights and measures in Athens; five for the city, five for the Piraeus, elected by lot for one year. In other States their duties were carried out by the *Agoranomoí* (q.v.).

METROPOLIS, (a) the mother-city of a colony; (b) in Roman times an honorary title granted usually to the capitals of provincial *κονά*, sometimes to other important cities; (c) in Egypt the administrative capital of a *nomos* (q.v.). Under the Ptolemies the *metropoleis*, though they usually had many Greek residents, possessed no official communal organization. Augustus placed on a special register the hellenized residents of the *metropoleis* (οἱ ἀπὸ μητροπόλεως), and these henceforth formed a hereditary class, paying poll-tax at a lower rate. He also established in each metropolis a body of magistrates (*ἄρχοντες*), who managed the gymnasium and the ephcbic training, the market and corn supply, and the Greek temples. These were chosen—in theory probably by popular election from a hereditary class styled *ἡ ἀπὸ γυμνασίου*. Septimius Severus established in each metropolis a council (*βουλὴ*), which co-opted its members and nominated the magistrates and the principal officials of the *nomos* except the *στρατηγός* and *βασιλικὸς γραμματεὺς* (who were appointed by the prefect). The *metropoleis* officially became cities probably in A.D. 297, perhaps ten years later.

P. Jouquet, *La Vie municipale dans l'Égypte romaine* (1911); Jones, *Eastern Cities*, ch. 11. A. H. M. J.

METTIUS POMPUSIANUS, a victim of Domitian's tyranny, because he had made a volume of extracts of speeches by kings from Livy.

MEZENTIUS, king of Caere in Etruria, whose aid was invoked by Turnus against the invading Aeneas. According to the earlier story, told in Cato's *Origines*, Turnus and Aeneas alike fell in the subsequent conflict, and Mezentius was later killed or forced to submit in single combat with Ascanius. (Some authorities, e.g. Ovid, *Fasti* 4. 877-900, say he demanded payment to himself of the first-fruits of the vintage.) Virgil in *Aen.* bks. 7-10 develops him into a full-blooded, atheistical tyrant, killed by Aeneas after the death in his defence of his attractive son Lausus.

R. A. B. M.

MICIPSA, see NUMIDIA.

MICON (*Μίκων*) (5th c. B.C.), painter and sculptor, of Athens. He painted (1) in the Theseum (soon after 475): Theseus and Minos; probably also Amazonomachy and Centauromachy. (2) In the Stoa Poikile (soon after 460) Amazonomachy. The Amazonomachies and Centauromachy are reflected on vases; one Amazon is named Peisianassa after Peisianax, who built the Stoa; one Centauromachy is very like the centre of the west pediment at Olympia, on which Micon may have worked as sculptor. (3) In the Anakeion: Argonauts. He painted Butes (in the Amazonomachy?) so that only head and eye appeared above a hill; analogies can be found on contemporary vases. His painting was closely connected with Polygnotus, but Polygnotan *ῥῆθος* is never attributed to him. He made a statue in Olympia of Callias, victor in 472; the Mariemont warrior may reproduce an original by him.

MIDAS (1), a legendary Phrygian king, of whom several stories are told, the most famous being the following.

Midas had a garden which a Silenus or satyr used to visit. Midas had a curiosity to learn his wisdom, and so mixed wine with the water of a spring in the garden; the Silenus was thus made drunk and caught. What he told Midas seems to have been a subject for learned conjecture; according to Aristotle ap. [Plut.] *Cons. ad Apoll.* 115 b, he said that life was a penance and it was a misfortune to be born; Aelian (*VH* 3. 18) puts into his mouth a lecture on geography. The place of the garden also varies: see Herodotus 8. 138. 4 (somewhere in Macedonia), Xenophon, *An.* 1. 2. 13 (near Thymbrium in Cilicia), Bion in Athenaeus 45 c (name given as Inna, between Thrace and Paconia).

Having to judge a musical contest between Apollo and Pan (or Marsyas, q.v., Hyginus, *Fab.* 191. 1), Midas voted against Apollo, who therefore bestowed ass's ears on him. He managed to hide these from most people with his head-dress, but was obliged to tell his barber; the latter, bursting with the secret, found relief by whispering it into a hole in the ground; reeds grew over this when he refilled it, and whispered the tale whenever the wind blew through them (Ovid, *Met.* 11. 153 ff.).

Midas was very hospitable to a Silenus, whom his people had found wandering drunk and captured (a variant of the first story, probably). Dionysus therefore offered him anything he wished; he asked that all he touched might become gold. Soon after, he found that this applied to his food and prayed to lose the gift; by Dionysus' advice he bathed in Pactolus, which ever since has had golden sands (Ovid, *ibid.* 90 ff.).

Whether any facts of cult or history lie behind the story of Midas is doubtful.

Cf. S. Eitrem, *PW.* xv. 1526 ff.

II. J. R.

MIDAS (2), an historical king of Phrygia 738-696 B.C. (Eusebius). He was the first barbarian king to make presents to Delphi (Hdt. 1. 14); married the king of Cyme's daughter, who first struck coins in her native city (Heraclides, *PHG* ii. 216, Pollux 9. 83); and drank bull's blood when the Cimmerians overthrew his kingdom (Strabo 1. 61). In Assyrian records he appears as Mita, joins a confederacy against King Sargon (717), but becomes his vassal (707). His history anticipates that of the Lydian Gyges (q.v.). P. N. U.

MIDDLE PLATONISM. The period of Platonism beginning with Arcesilaus (q.v. 1) c. 265 B.C.; it lasted for about a century, and was terminated by Carneades (q.v.), the founder of the Third Academy. See ALBINUS, APULEIUS, PLUTARCH.

MILESTONES, though not an invention of the Romans, were used most frequently by them. The earliest surviving milestone (*ILS* 5801) dates from c. 250 B.C. Under the Republic they bear the names of consuls or other officials connected with the construction or repair of roads, but in the Principate the name and titles of the emperor invariably appear, though the names of provincial governors and others are sometimes added. The inscriptions frequently give important information as to the date and payment for the costs of construction of new roads (e.g. *ILS* 208, 5834). In Italy the distance from Rome is usually given; in the provinces the distances recorded are usually those from the nearest important town. In Gaul from the time of Trajan distances were reckoned by *leugae* (1,500 paces). Milestones were cylindrical pillars, generally about 6 feet high.

ILS 5800 ff.; Schneider, *PIW*, Suppl. vi, s.v. 'miliarium'. G. H. S.

MILETUS, southernmost of the great Ionian cities of Asia Minor, claimed partly Cretan origin (Paus. 7. 2. 5). In Homer it was occupied by 'barbarous-tongued' Carians who fought for Troy. Ionians from Athens under Neleus descendant of Nestor (probably c. 1100 B.C.) seized Miletus and married Carian wives. During the eighth, seventh, and sixth centuries Miletus founded many colonies on the Black Sea and its approaches (including Abydos, Cyzicus, Sinope, Trapezus, Dioscurias, Panticapaeum, Theodosia, Olbia, Borysthene, Istrus, Odessus), led the way in Greek penetration of Egypt (Milesians' Fort and Naucratis; Necho's offering to the temple at Didyma after Megiddo, 608 B.C.), and had close contacts with Sybaris till its destruction in 510.

2. Miletus' sea-power and colonies were partly cause, partly result of her long struggle with the kings of Lydia. Alyattes made terms with Miletus (then under a tyrant Thrasybulus, the friend of Periander), which apparently kept a privileged position when Croesus subdued Ionia (both Alyattes and Croesus sent offerings to the temple of the Branchidae at Didyma), and when Persia conquered Croesus' dominions in 546. In 499 Miletus, instigated by its ex-tyrants Histiaeus and Aristagoras (qq.v.), started the Ionian revolt. After the naval disaster at Lade the city was captured, the temple at Didyma was burnt, and the Milesians were sold into slavery (494).

3. Lade ended for Miletus a long period of great prosperity, interrupted by intervals of party struggles; to this period belong the Milesian philosophers Thales, Anaximander, and Anaximenes, the chronicler and map-maker Hecataeus, and the seated statues from Didyma (British Museum, *Catalogue of Sculpture*, i. 1, plates vi-xv). Whether the archaic pottery generally known as Rhodian was really Milesian remains uncertain. Milesian woollen goods were world-famous.

After the Persian defeat at Mycale (479) Miletus joined the Delian League, being assessed at 20 talents in 450, and at 5 in 443. In 412 Miletus revolted from

Athens, only to fall under Persia. In the fourth century it passed under the vassal kings of Caria, Hecatomnus and (377-353) Mausolus. Among Milesians of this later period were Aspasia of Periclean fame, Hippodamus, town-planner of the Piraeus, and the dithyrambic poet Timotheus (c. 447-357). Miletus was conquered and rebuilt by Alexander.

4. Hellenistic monarchs of the houses of Seleucus, Antigonos, Lysimachus, Ptolemy, and Attalus successively held Miletus and erected great buildings there. After becoming part of the Roman province of Asia (129 B.C.) Miletus lived on its past glories. St. Paul visited it; Apollo performed a miracle at Didyma when the Goths assaulted the city in A.D. 205; but its decline was assured by the silting up of its harbour.

MILK (γάλα, *lae*). A considerable use was made of milk in religious ceremonies of classical date, and there is reason to think that it was once much commoner, having been in many cases superseded by wine. It is a natural drink-offering from a people largely pastoral, and also an obvious sort of first-fruits. The Greeks often retained it in the conservative rustic cults, e.g. that of the Nymphs (Theoc. 5. 53) and the tendence of the dead (as Aesch. *Pers.* 611 ff.), though wine might be added (ibid. 614 f.; wine was, however, forbidden in the ritual of the Erinyes, Aesch. *Eum.* 107). Roman rituals provide more instances; see Varro, *Rust.* 2. 11. 5 (Rumina), Ovid, *Fasti* 4. 745-6 (Parilia); cf. *BONA DEA*, *JUPITER*.

Herzog-Hauser in *PIW*, s.v. 'Milch', and references. H. J. R.

MILLO, TITUS ANNIUS, of Lanuvium, tribune 57 B.C. Originally Pompey's man, he actively promoted Cicero's recall and organized gladiators against those of Clodius (q.v.). Their riots, which continued over five years, were varied by prosecutions for *vis*: in 57 Milo twice sued Clodius, who escaped by being elected aedile; in 56 a prosecution of Milo was also dropped, and he became praetor in 55. Late in 54 he inaugurated, with games costing 1,000,000 HS, a candidature for the consulate of 52 against Hypsaecus and Metellus Scipio; but disorder was still preventing the elections when Milo murdered Clodius near Bovillae 18 Jan. 52. Pompey then became sole consul and had Milo prosecuted before a court so heavily guarded that Cicero did not dare to defend him (though he subsequently published his speech *Pro Milone*). Milo retired to exile at Massilia, thanking Cicero that his reticence allowed him to enjoy the mullets there. But in 48 he answered Caelius' appeal to recreate disorder and was captured and executed at Cosa. (On the lawsuits of 57-56 cf. Ed. Meyer, *Caesars Monarchie*² (1919), 109, n. 3.) G. E. F. C.

MILON, an athlete from Croton of the later sixth century B.C.; six times victor in wrestling at the Olympian Games, six times at the Pythian. He is said to have carried a heifer down the course, killed it with one blow, and eaten it all in one day. Trying to rend a tree asunder he was caught in the cleft and eaten alive by wolves.

F. A. W.

MILTIADES (c. 550-489 B.C.) belonged to the noble Athenian family of the Philidae, and was sent c. 524 by Hippiax to continue the policy of Athenian hegemony in the Thracian Chersonese which Miltiades' namesake and paternal uncle had inaugurated under Peisistratus (c. 555) and probably at his prompting. Miltiades ruled as absolute king over the natives, but he encouraged Athenian settlers and, after freeing Lemnos from Persia (c. 500), he handed it over to Athens. He had previously been a vassal of Darius and accompanied him on the

Scythian expedition (c. 513), but his later claim to have proposed the breaking down of the Danube bridge is disproved by the fact that Darius left him unmolested. He married Hegesipyle, daughter of the wealthy Thracian king Olorus, who bore him Cimon. His other children (including the ill-famed Elpinice) were by a previous marriage with an Athenian lady. After a short exile caused by a Scythian invasion Miltiades was restored by the Thracians (496). At the end of the Ionian Revolt, in which he had participated, he fled from the Persians and returned to Athens (493). Here he survived an accusation of 'tyranny' in Thrace and became the most influential politician. As general in 490 he won the support of Callimachus (q.v. 1) and most of his colleagues for engaging the Persians at Marathon, where he won a decisive victory. Inaugurating a policy of naval expansion, he led an expedition to Paros (early spring 489), which he was unable to capture. On the accusation of Xanthippus (q.v. 1) Miltiades was fined 50 talents for having deceived the people, and soon afterwards succumbed to a wound sustained at Paros.

Berve, *Miltiades* (1937); V. Ehrenberg, *Ekonomia* 1 (1939), 13 ff., 28 ff.; H. Bengtson, *Sitz. der Bayrischen Akademie, philos.-historische Abt.*, 1939, Heft 1, P. T.

MIMNERMUS, elegiac poet and musician (Strabo 643) of Colophon (ibid.) and Smyrna (Paus. 9. 29. 4). His *floruit* is given as 632–629 B.C. by Suidas; this suits his interchange with Solon (fr. 6 and Sol. fr. 22). The eclipse of the sun to which he referred (Plut. *Mor.* 931 e) gives no help, as it may be either 648 or 585 B.C. His elegies were collected in two books (Porph. ad Hor. *Epist.* 2. 2. 101), one of which was called *Nanno* after the flute-girl he is said to have loved (Hermesianax ap. Ath. 597 f., Strabo 643). This seems to have been a collection of poems on very different themes, such as mythology about Tithonus (fr. 4), the Sun's magic bowl (fr. 10), and history about the foundation of Colophon (fr. 12, Strabo 633). The same book may have contained his account of the war between Smyrna and Gyges (fr. 13, Paus. 9. 29. 4). His other fragments are concerned largely with the pleasures of youth and the horrors of old age (frs. 1–3). But he tempers his hedonism with a respect for truth (fr. 8) and for warlike qualities (frs. 12–13). He seems to have written a *Smyrneis*, or historical poem on Smyrna, which may have been contained in the *Nanno*. He is remarkable for his musical use of the elegiac, his brilliant sustained images, the directness of his emotional appeal, and his love of pleasure.

MIMOS (μῖμος), an imitative performance or performer.

I. GREEK. In Greece, as elsewhere, the instinct for imitation found its expression in the mimetic dance. From early times solo performers, by play of gesture, voice, and feature, gave imitations of neighing horses, etc. (Plato *Resp.* 396 b), and small companies, called in Sparta *δεκεηλίκται* (? 'masked men'), elsewhere *αὐτοκαββαλοὶ* ('improvisers') or in Italiot towns *φλύακες*, presented short scenes from daily life (e.g. 'The Quack Doctor') or mythology, probably on a hastily erected stage in the market-place or in a private house; such performers belonged to the social class of acrobats, etc. Xenophon (*Symp.*) tells of a mime 'of Dionysus and Ariadne', danced at a private banquet by a boy and girl; we note the connexion with Syracuse, the musical accompaniment, the use of dialogue, and the fact that the girl is also a sword-dancer and the concubine of the Syracusan dancing-master. In the fifth century Sophron of Syracuse wrote 'men's' and 'women's' mimes in

Dorian rhythmic prose; the language was popular and included frequent proverbs; the surviving titles (e.g. 'The old fishermen', 'The women quacks', 'The women visitors to the Isthmia') indicate stock mime themes. Of the mimes of Sophron's son, Xenarchus, virtually nothing is known. In the third century the taste for realism brought the mime to the fore; Theocritus dressed traditional themes in his courtly hexameters (Idyll 2: the deserted heroine resorts to magic; 15: two Syracusan women visit the festival of Adonis in Alexandria; 21: two old fishermen converse; 14 is also dramatic in form); these pieces, like those of the more realistic Herodas (q.v.), were probably intended for semi-dramatic recitation. Meanwhile the popular mime invaded the theatre; it now took the form either of *παῖννα* (? slight, often vulgar, performances) or of *ὑποθέσεις*, 'plots' (Plut. *Quaest. conv.* 7. 4, p. 712 e), taken over from drama proper and presented in mimic fashion by the *μαγῶδοι* (Ath. 621 c) or *μυμολόγοι* (the meaning of the various terms for performers, whether they suggest spoken or musical delivery, is uncertain); cf. the third-century Athenian lamp with its representation of three maskless performers and the inscription 'Mimologi; hypothesis: Stepmother'. The 'Alexandrian erotic fragment' is perhaps a sung mime: theme, the deserted heroine. In *POxy.* 413 we have (a) a prose farce, based on the plot of *Iph. Taur.* (?): a Greek girl, named Charition, aided by her brother, escapes from an Indian king and his followers by making them drunk; the barbarians speak pseudo-Indian; there is a low clowning part; (b) a prose mime: theme, the jealous mistress (cf. Herodas v), who tries to poison her husband and make love to her slaves; there are six or seven short scenes and seven roles, all unimportant except that of the archimima; here, as always, the interest of the mime is in character and situation rather than in action. In the Marissa wall-inscription we have a song-dialogue between a hetaera and the *exclusus amator*. (See Herodas, ed. Crusius, 1914, for the text of all these pieces).

II. ROMAN (known also as *fabula riciniata*). Before the end of the third century B.C. the barefooted *planipes* appeared on the stage at Rome. The undatable epitaph of Vitalis (*Minor Latin Poets*, J. W. and A. M. Duff; Loeb, pp. 636–9) points to solo, maskless displays; Cicero refers to extempore troupe performances of improbable themes like 'The Beggar turns Millionaire' (*Phil.* 2. 65). A popular feature at the Floralia was the appearance of the *mimae* (alias *meretrices*) naked. Sulla patronized the mime; soon it rivalled the *Atellana* as an after-piece; Dionysia received 200,000 sesterces yearly, and we read of a company of 60 *mimi* under an *archimimus*. Associated with Julius Caesar were the mime-writers Laberius, Syrus, and Matius. Favoured by the emperors, beloved by the rabble, still topical, farcical, and indecent, the mime (with the pantomime) practically monopolized the stage; a typical *mimus* was the cloc-cropped fool, dressed in the patch-work *centunculus*. Domitian had a real crucifixion inserted in a mime; Heliogabalus ordered mimic adulteries to be performed realistically; in the person of Theodora a *mima* reached the throne. Unsubdued by their losing battle with the Church and even by the barbarian invasions, the strolling companies, it is claimed, have survived as the wandering *jongleurs* of the Middle Ages.

H. Reich, *Der Mimos* (1903); *PW* (1932), s.v. 'Mimos'; J. R. A. Nicoll, *Masks, Mimes and Miracles* (1931; well illustrated). W. B.

MINDARUS, Spartan admiral, 411/10 B.C. Mistrusting Tissaphernes (q.v.) and relying on support from Pharnabazus (q.v.), he transferred the main Peloponnesian fleet to the Hellespont. The Athenians defeated him off Cynossema and again off Abydos (autumn, 411), thereby safeguarding the passage of their corn-ships. Early in 410 Mindarus recaptured Cyzicus, but he was there

surprised by a superior fleet under Alcibiades and fell in a vain attempt to save his ships from capture. Though out-generalled by Alcibiades, he showed more enterprise and ability than his predecessors.

Thucydides 8. 99-107; Xenophon, *Hell.* 1. 1. 2-18; Diodorus 13. 38-51. H. D. W.

MINERALOGY. Although the Greeks and Romans had a practical knowledge of metals, precious stones, and building materials, and were always familiar with their use, they never made outstanding discoveries in the science of mineralogy. The passages in Homer and Hesiod which refer to mines and stones are of no scientific importance, and the same may be said of most of the incidental remarks made by geographers and historians, e.g. Strabo. Even so practically minded a man as the author of the treatise on Revenues generally attributed to Xenophon, although he deals at length with the exploitation of the Laurian silver mines, shows no appreciation of the truly technical problems of mineralogy. Plato's *Ion* is evidence that among his contemporaries the theory of the attractive power of the loadstone was widely known, but neither the philosopher himself nor his disciples were interested in this branch of science. Theophrastus' work *Περὶ λίθων* (On stones) gives only a brief survey of marbles, pointing out their peculiar qualities, and where they are to be found; but here too mineralogy is treated not as an independent field of research or as a study of scientific value, but as of merely practical utility. For instance, one looks in vain for any exposition of the chemical properties of stones and minerals. Nevertheless, Theophrastus' work had a deep influence on Roman writers, especially Lucretius, Vitruvius, and Pliny the Elder. The last gave even more attention to mineralogy than Theophrastus himself had done, but from an essentially geographical and architectural point of view, while a contemporary of Pliny, Dioscorides, approached it from the standpoint of the physician and physiologist. His five books *Περὶ ὕλης ἱατρικῆς* (On materia medica) exerted a wide influence upon Graeco-Byzantine science, and it was from Dioscorides that knowledge of ancient mineralogy, scanty as it was, passed through the channel of Arabian alchemy into medieval Europe.

Texts: A useful selection, with a German translation, is given by H. O. Lenz, *Mineralogie d. alten Griechen u. Römer* (1861). By Theophrastus' *Περὶ λίθων* (ed. Wimmer, Teubner) was translated into English by Sir J. Hill (1774). Dioscorides has been edited by M. Wellmann (Weidmann series, 1906-14), and there exists a German translation and commentary by J. Berendes (1902). General literature: E. v. Lippmann, *Abhandlungen u. Vorträge z. Gesch. d. Naturwissenschaften* (1906), 1 ff. P. T.

MINERVA (archaic *Menerva*), an Italian goddess of handicrafts, widely worshipped and regularly identified with Athena (q.v.). Altheim (*PW*, s.v.; cf. *Hist. Rom. Rel.*, p. 235 and note 34; *Griechische Götter*, p. 142, note 4) believes her actually to be Athena, borrowed early through Etruria; but most scholars think her native, and connect her name with the root of *memini*, etc. At all events there is no trace of her cult in Rome before the introduction of the Capitoline Triad, where she appears with Jupiter and Juno (qq.v.) in an Etruscan grouping. Apart from this she was worshipped in a shrine on Mons Caclius under the name of Minerva Capta, after the taking of Falerii in 241 B.C. (Ovid, *Fasti* 3. 835 ff., where see Frazer; cf. Platner-Ashby, p. 343 f.). A much more important cult lay *extra pomerium* on the Aventine (Platner-Ashby, p. 342), but its age is unknown; it was the headquarters of a guild of writers and actors during the Second Punic War (Festus, p. 446, 26 ff. Lindsay) and seems to have been generally the centre of organizations of skilled craftsmen. Minerva's worship spread at the expense of Mars (q.v.) himself, the Quinquatrus coming to be considered her festival, apparently because it was the *natalis* of her temple (Ov. *ibid.* 812); it was also

extended to five days, from a misunderstanding of the meaning ('fifth day after' a given date; see Frazer ad loc.) 13 June was called the *Quinquatrus minusculae* and was the peculiar feast-day of the professional flute-players (*tibicines*; cf. Ov. *Fasti* 6. 651 ff., and Frazer ad loc.).

H. J. R.

MINES. Though ore had been extracted (both open-cast and underground) at other places much earlier, systematic exploitation was first developed at Laurium. The simple geological strata there made it easy to learn to prospect where no indications appeared on the surface. This experience was utilized by the Romans, who were able to test dipping veins, though complex problems such as faulting defeated them.

2. Ancient shafts and galleries are normally small, as they were cut with hand-tools and it was desirable to obviate propping. Siliceous rocks were broken by fire-setting, a method known in the Bronze Age in Austria. Placer-mines were worked by panning, and for large-scale enterprises (in Spain and at Dolaucothly in Wales) water was brought by aqueducts for hushing (i.e. breaking down of softer beds by rush of water). Iron tools were normal in classical times, though stone hammers survived in many districts for crushing ore.

3. The miners were mainly slaves, both in the larger Greek mines and in the centralized workings of the Roman Empire. Overseers and engineers were also slaves; in the Empire legionaries were sometimes used. Later, criminals were employed at a few mines and quarries. The Romans sometimes kept their workmen permanently below ground. Some mines the Roman Government exploited directly; at others small concessions were leased, but both technically and socially the mining community was controlled by a procurator. Large lessees, individuals and companies, subject to little control, were common in the Republic but rare later, save at iron-mines. At Laurium concessions were leased to citizens; they were usually large enough to employ several slaves, but sometimes the lessee would himself work underground. In Egypt state-exploitation was the rule.

4. A developed mining-royalty never existed, though the State claimed dues from miners and authorized mining on other men's property. In earlier times the State *de facto* owned most mines. The idea of royalty was probably developed by the German kingdoms.

5. The chief difficulties of ancient miners were ventilation and drainage. The former was poor owing to narrow galleries and the use of naked lights, and the various artificial improvements were seldom successful. The best was to drive intercommunicating adits at different levels. The influx of water often caused mines to be abandoned. The Romans used various drainage-machines, such as the screw-pump and perhaps the chain-pump (1st c. A.D.), the water-wheel (2nd c.), and the suction-pump (late Empire); but these devices, being worked by human power, were expensive, and could be used only where the ore was profitable. Batteries of water-wheels superimposed to a depth of 75 metres have been found at Ruda. No machines were sufficiently powerful to reclaim a mine once abandoned. Where the ground-formation permitted, drainage was secured by adits, which were sometimes driven through a mile of sterile rock. The ore was hauled to the surface on trays or in sacks, often by boys, who could move quickly in narrow galleries.

Ancient sources: scattered references in Pliny, Strabo, etc. Technique: O. Davies, *Roman Mines in Europe* (1935); U. Thürlim, *Studien über den Bergbau der römischen Kaiserzeit* (1937); detailed studies in E. Anstett, *Les Mines du Laurum* (1897), von Zschacke and E. Preussner, *Der wirtschaftliche Bergbau des antiken Mittelalters* (1932). Legal position: *Les Mines Byzantines* (Desmou, ILS 659), and references in *Collex Theodorici*; E. Schenck, *Beiträge zur Geschichte des Bergbauwesens*.

Treptow, *Beiträge zur Geschichte der Technik und der Industrie* viii (1918), 155; R. E. Palmer, *Trans. Institution of Mining and Metallurgy* xxxvi (1927), 917, 917. Fire-setting: Holman, *T. Metallurgy* xxxvi (1926/7), 219.

MINOAN (derived from *Minos*, q.v.), a term used to denote the Bronze Age civilization of Crete; its successive stages are known as Early, Middle, and Late Minoan (E.M., M.M., L.M.). The archaeological evidence of the greatness of Cnossos (q.v.) is held to support the historical basis of the tradition. Minos' overlordship of Athens is reflected in Cretan influence on the Greek mainland during the first two phases of the Late Bronze Age (1600-1400 B.C.). The tradition of Minos the thalassocrat, and the frequent occurrence of Minoan as a place-name in the Aegean, are believed to be reflected in the Minoan pottery found in the islands, on the Syrian coast, in Cyprus, and in Egypt. Some think that Cretans under Minos conquered and colonized part of the Greek mainland and that Mycenae was a Minoan colony. Mycenae, however, has no legendary connexion with Crete, and Minoan influence on the mainland was no stronger than Greek influence in Etruria in historical times. Middle Minoan objects occur in the Cyclades (Melos, Thera), in Cyprus, at Byblus, and in Egypt, but in Late Minoan times in Melos, Cyprus, Syria, Palestine, and Egypt the mainland pottery is far more frequent than Cretan. The pottery in Sicily thought to be Cretan and to confirm the legend of Minos' death there is not Cretan, but comes from some centre of Mycenaean culture.

A. J. B. W.

MINORCA, *see* BALEARES INSULAE.

MINORS, *see* GUARDIANSHIP.

MINOS (*Mīnos*), a king of Crete; the traditions concerning him preserve faint reminiscences of the might of the civilization now called Minoan (q.v.), and 'Minos' may be a dynastic name or title. *See*, e.g., Thucydides i. 4 for a tradition of his sea-power. It is conceivable at least that the evil character given him in Attic legends, but not in the main stream of Greek tradition ([Plato], *Minos*, 318 d-e), has behind it a real contest between prehistoric Attica and Crete; cf. below.

He is consistently said to be son of Zeus and Europa (q.v.), and to have married Pasiphaë, daughter of Helios (Apollod. 3. 7, followed here unless the contrary is stated). Her name, 'all-shining', has been interpreted as that of a moon-goddess, which is unnecessary, as it fits a fully human child of the sun-god (cf. Phaëthon); but that both the kings and queens of Minoan Crete were regarded as partly or wholly divine is quite possible. To settle the question whether Minos or another should be king, Minos prayed to Poseidon to send a bull from the sea for him to sacrifice. Poseidon did so, thus confirming his right to rule, but the bull was so handsome that Minos would not kill it. Poseidon therefore caused Pasiphaë to fall in love with it.* By the help of Daedalus (q.v.) she was disguised as a cow and attained her end; consequently she bore a creature half-man, half-bull, 'Minos' bull', *Mīnos taūpos*, the 'Minotaur(us)' of Latin and English. Daedalus constructed a maze, the labyrinth,† to hide it in.

Minos made war on Megara and Athens. As regards the former, for the legend of Minos, Nisus, and Scylla,

* Minos' power is derived from Zeus in *Odyssey* 19. 178-9, an obscure passage; Aphrodite causes Pasiphaë's passion, e.g. in Hyginus, *Fab.* 40. 1, more appropriately.

† The word is pre-Hellenic, connected with *labyrinthos*, a double axe, the well-known Cretan religious symbol; a rite involving the use of a maze may underlie the story; *see* Knight, *Cumaean Gates*, ch. 8.

see NISUS. At Athens he was provoked by the murder of his son Androgeos, and so made peace only on terms of receiving a yearly tribute of youths and maidens, whom he shut up with the Minotaur (Plutarch, *Thes.* 15; *see* THESEUS).

Minos' death was due to treachery. Daedalus having escaped, he pursued him to Sicily, where he found him by a stratagem in the house of Cocalus, king of Camicus. He demanded his surrender, and Cocalus pretended to agree, received Minos with show of hospitality, and handed him over to his daughters to be bathed in the Homeric fashion. They killed him by pouring boiling water (or pitch instead of water) on him (Hdt. 7. 170. 1; Apollod. *Epit.* 1. 13-15).

Besides the larger dictionaries s.v., *see* Cook, *Zeus* ii, 939 ff. H. J. R.

MINOTAUR, *see* MINOS.

MINT (at Rome), *see* AERARIUM, COINAGE, MONETA.

MINTURNAE was a town of the Aurunci, situated midway between Formiae and Sinuessa on the Via Appia. The original town and the sixth-century shrine of the sea-goddess Marica lay on the north bank of the Liris and consisted of a small, rectangular fortification with pseudo-polygonal walls and angle-towers. To this was added, on the west, a Roman colony in 295 B.C. (Vell. 1. 14; Livy 8. 11), which was restored by Augustus (Pliny, *HN* 3. 59). The *capitolium* and *forum* of this colony have been excavated, and its houses lie buried below later Imperial buildings. When the Imperial *forum* was built the old one became a portico behind the Augustan theatre, while the *capitolium* was eclipsed by three new temples, one embodying manumission records of the Sullan period. The west town-gate (*IRS* xxiii. 155) embodies an aqueduct-castellum or distribution-chamber. The ancient *forma* of the field-system, figured by the Agrimensores (*Corpus Agrimens.* Rom. i. 1, fig. 81, p. 21), is discussed by A. Schulten (*Hermes* xxxiii. 537-40), though with erroneous assumptions about the earliest site and the Liris.

J. Johnson, *Excavations at Minturnae* (U.S.A. 1933), i. ii. I. A. R.

MINUCIANUS the Elder (2nd c. A.D.), rival of Hermogenes, wrote *Προγυμνάσματα*, a *résumé* (treating of *σφάδαι* theory), and a commentary on Demosthenes. The *Π. ἐπιχειρημάτων* (Spengel, *Rhet.* i. 417-24) is probably by a third-century namesake. In rhetorical theory Minucianus, influenced by Aristotle and Theodorus, stood for philosophic, as opposed to Sophistic, rhetoric; and he challenged without success the innovations of Hermogenes.

J. W. H. A.

MINUCIUS (1), LUCIUS, figures in two famous legends. He is said to have been rescued by Cincinnatus (q.v.) from defeat by the Acqui on Mount Algidus (458 B.C.), and to have been a member of the second decemvirate. In 439 he dealt with a famine and a revolutionary attempt by Sp. Maclius. Although the traditional account was much elaborated by annalists of the Gracchan period, who invented his *transitio ad plebem* and vested him with a chronologically impossible *praefectura annonae*, Minucius was probably an actual public benefactor during a fifth-century famine. He need not be explained away either as a god, corresponding to Hercules *μηνυρής*, or as the eponymous builder of the Porticus Minucia, which was not built before c. 106 or used for corn distributions until Claudius, while Cincius Alimentus shows that the story of Minucius was known already in his time.

A. Momigliano, *Studia et documenta historiae et iuris* ii (1936). P. T.

MINUCIUS (2) RUFUS, MARCUS (cos. 221 B.C.), helped to reduce the Istri. After the battle of Trasimene (217) he was appointed *magister equitum* to Fabius (q.v. 5) Cunctator by the Comitia, not by the dictator himself as was customary. Minucius disobeyed Fabius' orders and in his absence attacked Hannibal at Gerunium with considerable success. The People then appointed Minucius co-dictator with Fabius, an undermining of the nature of the office. The aristocratic tradition records that he was rescued from an attack by Hannibal only by the timely arrival of Fabius. He fell at Cannae (216).

H. H. S.

MINUCIUS (3) AUGURINUS, GAIUS, a tribune (c. 187 B.C.), who, after the attack of the Petilii (q.v.), accused L. Scipio of refusing to render an account of monies received from Antiochus; he imposed a fine and a demand for surety, but was prevented by his colleague Gracchus (q.v. 2) from enforcing his demands.

H. H. S.

MINUCIUS (4) RUFUS, QUINTUS or M. (cos. 110 B.C.), brother of M. Rufus who as tribune in 121 proposed the repeal of C. Gracchus' legislation, triumphed in 106 for victories as consul over the Scordisci and Triballi in Macedonia. He erected the Porticus Minucia, where corn was publicly distributed during the early Empire. M. H.

MINUCIUS (5) FELIX, probably a native of the Roman province Africa, who lived at some period between the middle of the second and the middle of the third century A.D. He has left one work, a dialogue called *Octavius* (from the name of one of the interlocutors), the scene of which is laid at Ostia. The work is of relatively high literary quality, and belongs to the class of 'apologetic' literature, being concerned with the defence of Christianity.

Ed. H. A. Holden (1853); J. P. Waltzing (Teubner, 1912); J. Martin (Bonn, 1930); A. D. Simpson (U.S.A., 1938). Transl. J. H. Freese (SPCK, 1918). J. P. Waltzing, *Lexicon Minucianum* (1909). A. S.

MINUCIUS PACATUS, see EIRENAEUS.

MINYANS (*Μινυαί*), a prehistoric tribe, whose chief branches inhabited the Boeotian Orchomenus (*Il.* 2. 511) and Iolcus in Thessaly (*ibid.* 712). To the latter belong the legends of Athamas and Jason (qq.v.). There were also families claiming Minyan descent in Laconia (the Aegeids), Thera, and Cyrene; a Minyan tribe round Lepreum, destroyed by the Eleans c. 475 B.C.; and legends of former Minyans in Lemnos, descended from the Argonauts (Pindar, *Pyth.* 4; *Hdt.* 4. 145-8, who combines all these facts and legends into one story).

The fine wheel-made pottery, of 'soapy' surface, known as 'Grey Minyan', was so called by Schliemann because first found at Orchomenus. It first appears c. 2000 B.C., and has no probable connexion with the Minyae of legend. See MINYAS. A. R. B.

MINYAS (*Μινυάς*). Founder of Orchomenus and eponym of the Minyae (Pindar, *Isthm.* 1. 56); his 'treasury', shown at Orchomenus in Pausanias' time (Paus. 9. 38. 2), was a Mycenaean beehive-tomb, as was proved by Schliemann's investigations. He is also in some sense ancestor of the Argonauts (q.v.), they being commonly called Minyans, as Pindar, *Pyth.* 4. 69; the reason given by Apoll. Rhod. 1. 230 ff., that most of them were descended from his daughters, does not agree with the surviving lists but may have with the primitive form of the story. His legend, if ever he had one (the lost epic *Minyas* may have had something to say of him), has vanished, and we know of him chiefly as a member of several genealogies, mutually inconsistent and connecting him with Orchomenus, Thessaly (Iolcus), and several

other regions. These are conveniently assembled by Fiehn in *PW* xv. 2015-8; see the whole article for ancient and modern literature.

H. J. R.

MIRACLES. Wonderful stories of the power of gods were common at all periods of antiquity, and many of them were attached to particular shrines. For instance, there is the very pretty tale of the ugly child miraculously made beautiful by Helen (*Hdt.* 6. 61; shrine at Therapnae); another local legend told how Poseidon miraculously smote an impious intruder into his temple at Mantinea (Paus. 8. 10. 3). In Rome tales of this sort perhaps clustered most thickly around Vesta. For example, there is the legend of the Vestal Aemilia, during whose service of the goddess the holy fire went out. It being by no fault of hers, she prayed to Vesta to prove her innocence, and flung a strip of her robe upon the altar, which at once blazed to confirm her innocence (Dion. Hal. *Ant. Rom.* 2. 68. 3). One of Martial's flatteries of Domitian is the story of how a man who violated his 'sacred' fishpond was blinded, a regular form of divine punishment (Mart. 4. 30. 8 ff.; cf. Sauter, *Kaiserkult bei Martial u. Statius*, 110 f.). The cult of Asclepius (q.v.), produced a vast quantity of miracles of healing, by no means all confined to his shrines (see, e.g., Suidas s.v. *Θεότροπος*). But miracles are more prominent in Hellenistic times, and especially in connexion with foreign gods, such as Isis and Sarapis. Among these international gods there was necessarily competition. Hence many stories of the manifestation of, e.g., Sarapis' power to convince the sceptical, prove his deity, and so on; examples in Nock, *Conversion*, index under 'Miracles'.

H. J. R.

MISE (*Μίσση*), an obscure goddess, first mentioned in Hero(n)das 1. 56, where the name of the festival, *κάθοδος*, suggests chthonian ritual. The forty-second Orphic hymn says she is bisexual and seems to identify her with both Dionysus and Demeter; she may well be Asianic.

H. J. R.

MISENUM, the northern headland of the Bay of Naples, with a similarly named town and harbour, reputedly the burial place of Aeneas' trumpeter Misenus (Verg. *Aen.* 6. 234). Cumae early used the harbour, but until Imperial times Misenum was merely a villa resort (Octavian, Antony, and Sextus Pompeius signed their Treaty of Misenum at Puteoli, 39 B.C.; *Rev. Arch.* xxii (1913), 253). Agrippa made the harbour Rome's chief naval station (31 B.C.), and the town subsequently became a *colonia* (Dessau, *ILS* 6335). The Elder Pliny was stationed here and perished when Vesuvius erupted, A.D. 79 (Pliny, *Ep.* 6. 16. 20). The harbour fell into disuse c. 400, and finally the Saracens destroyed Misenum. Remains exist of Marius' villa, later the property of Lucullus and the emperors.

K. Lehmann-Hartleben, *Die Antiken Hafenanlagen des Mittelmeeres* (1923), 176. E. T. S.

MISENUS, a follower of Aeneas, best known from Verg. *Aen.* 6. 162 ff.; he was a trumpeter, formerly a follower of Hector, and was drowned by an envious Triton. Cape Misenum (q.v.) was named from him.

MISERICORDIA. Hyginus, *praef. Fab.* 1, makes Misericordia one of the children of Night and Erebus, but the passage is too corrupt to draw any definite conclusions.

MITHRAS (*Μίθρας*, -ης), an ancient Aryan (Indo-Iranian) god; in Zoroastrianism (see RELIGION, PERSIAN; ZOROASTRIAN) one of the good powers, of the party of Ahura-Mazda and closely associated with light, hence easily understood as a sun-god, whatever his original character may have been. His cult was important in

Asia (cf. the common occurrence of the name Mithridates), and his existence known to Greeks at least as early as Herodotus (I. 131), who, however, imagines him to be a goddess. But in passing west from Iran his worship absorbed many foreign, especially Mesopotamian, elements, including a strong tincture of astrology. He is said (Plutarch, *Pomp.* 24) to have been introduced into the West by the Cilician pirates overthrown by Pompey the Great, but if so his worship remained obscure, perhaps confined to foreigners and the lowest of the native population, till much later. The first clear mention of him in surviving literature is late in the first century A.D. (Statius, *Theb.* I. 719-20), and Plutarch (*Mor.* 369e) gives a curious account of him as an intermediary between the good and evil powers, which is hardly consistent with what is otherwise known of him. The mysteries of Mithras become really important about the time of the Flavians and increase rapidly in influence during the following centuries (Cumont, op. cit. infra, I. 245 ff.). The main channel of their propagation in the Roman Empire (Greece did not welcome them) was the army; foreign, especially Asianic, merchants were also devotees. Hence the monuments of the cult are almost confined to the sites of garrisons and large sea-ports.

The ritual, being secret and confined to men, so far as is known, remains largely obscure, little light being thrown on it by texts, and the figured monuments from the shrines being often of doubtful interpretation. It appears, however, that Mithras' legend included a miraculous birth in primeval times from a rock (Jerome, *Adv. Iovinian.* I. 7; Cumont, I. 59 ff., and refs.). Adored, it would seem, by shepherds (one of several curious resemblances to Christianity, between which and Mithraism there are certainly influences, perhaps reciprocal), the god embarked on a series of adventures whereof two were of outstanding importance.

The first was some kind of trial of strength with the Sun-god, resulting in friendship and alliance between the two. This, while showing that Mithras is not himself the Sun, does not prevent the two from being often identified, not only in literature (as Statius, loc. cit.), but in dedications, which constantly call him *Sol invictus Mithras*. The second exploit was the capture of a mysterious bull, which after some minor episodes was sacrificed by Mithras. The sculptures representing this (Mithras Tauroctonus) are the most characteristic of Mithraic monuments; the expression on the god's face indicates strongly that it is a painful duty. Composition and technique are plainly Greek in origin. From the bull's body came all manner of useful plants and so forth.

The ritual of Mithras was carried out in artificial caves, *spelaea*, evidently meant to represent real ones; a characteristic sanctuary (e.g. that at Ostia) is oblong, like the nave of a church, having at one end a sort of altar-piece, with Mithras and the bull for the central figures and other sculptures around this. Along the sides of the structure run shallow benches fixed to the walls. The details are little known; we have evidence, however, that there was a kind of sacramental meal (Cumont, I. 146 f.); that the candidate for initiation went through certain ordeals, one of which seems to have been a pretended homicide (S.H.A., *Commodus* 9. 6); that there was a rite of baptism, a mark of some kind made on the forehead of initiates, and a ceremony in which the candidate, having had a garland put on his head, took it off, saying 'Mithras is my garland' (Tertullian, *De Bapt.* 5; *De praescr. haeret.* 40; *De Corona* 15). We also know that there were seven grades, doubtless having each its own ceremonial of initiation. These were: Corax (crow), Gryphus (Gryphus? Nymphus? see E. Wüst and O. Weinreich in *ARW* xxxii. 211 ff.), of uncertain meaning and reading, Miles (soldier), Leo (lion), Perses (Persian), Heliodromus (sun-runner, possibly messenger of the Sun-god), and finally Pater (father; this was no doubt the highest rank,

but we have no proof that the rest are listed in ascending order). See Jerome, *Ep.* 107. 2. 2. It is not accidental that the number is that of the traditional planets. There was other astrological symbolism (Origen, *c. Cels.* 6. 21) and doubtless an eschatology, but concerning this we have hardly more than conjectures based on what is known of Persian and other teachings.

Literature: chief work, Fr. Cumont, *Textes et monuments figurés relatifs aux mystères de Mithra* (2 vols., 1896 and 1899). See also same, *Les Mystères de Mithra* (1913; also English and German transl.); *Les religions orientales dans le paganisme romain* (1929); A. D. Nock in *JRS* xxvii. 108-113. H. J. R.

MITHRIDATES. The name of several kings of Pontus.

(1) MITHRIDATES I of Cios, a member of a Persian family which claimed descent from one of the six associates of Darius the Great, founded the Pontic dynasty in 337-336 B.C. (the coin era of the realm). He was put to death in 302 by Antigonos I, who had become suspicious of his loyalty.

(2) MITHRIDATES II, son or nephew of (1), escaped from Antigonos I and soon won Pontus, making Amaseia his capital. He took the royal title in 281, and joined Nicomedes of Bithynia in settling the Galatians in Phrygia. He died about 266, and was succeeded by Ariobarzanes, who died about 250 while engaged in a war with the Galatians.

(3) MITHRIDATES III terminated the Galatian war. He married Laodice, sister of Seleucus II, but his interest in weakening the Seleucid power led him to assist Antiochus Hierax in driving Seleucus beyond Mt. Taurus. He gave one daughter in marriage to Achaeus and another to Antiochus III (c. 223). He made gifts to Rhodes after the earthquake (227), but his attempt on Sinope in 220 was defeated with Rhodian help. He died about 185. (See PHARNACES I.)

(4) MITHRIDATES IV succeeded his brother Pharnaces I, with his sister Laodice as queen. He became a friend and ally of Rome and supported Attalus II of Pergamum against Prusias II of Bithynia in 156-154. He probably died c. 150 B.C.

(5) MITHRIDATES V, probably son of Pharnaces I, followed a philo-Roman and hellenizing policy while striving to enlarge his kingdom. He aided Rome against Carthage in 149-146 and against Aristonius in 132-129, and received Phrygia as a reward from Aquilius. He had already gained control of Galatia, was named the heir of Pylamenes of Inner Paphlagonia, and brought Cappadocia under his influence through the marriage of Ariarathes VI with his daughter Laodice. He was murdered at Sinope, his capital, in 120, and a suspiciously convenient wife named his wife Laodice and his two minor children, Eupator and Chrestus, as his successors.

(6) MITHRIDATES VI, EUPATOR DIONYSUS ('the Great'), son of Mithridates V, fled from his mother and led a fugitive existence for seven years, then suddenly captured Sinope, imprisoned his mother, killed his brother, married his sister Laodice (the first member of a large harem), and resumed his father's policy of expansion. He first acquired the north shore of the Euxine, from which he drew large revenues and many soldiers. He then occupied Lesser Armenia, eastern Pontus, and Colchis. Attempts (in alliance or rivalry with Bithynia) to secure control of Inner Paphlagonia and Cappadocia were foiled by Rome, and an attempt to expel Nicomedes IV from Bithynia was equally unsuccessful. Raids on Pontic territory in 88 by Nicomedes led to the First Mithridatic War. Mithridates occupied most of Asia Minor, where Roman exactions made him welcome as a deliverer, the islands of the Aegean except Rhodes, and (with Athenian help) much of Greece. Sulla's victories drove him out of Greece and led to a reaction against him in Asia, which he met by severe reprisals. He made peace at Dardanus in 84 on Sulla's terms, giving up all conquered territory. He easily repelled the raids of

Sulla's lieutenant Murena in 81 (the Second Mithridatic War), and used the next years to tighten his hold on the Pontic coast, to foster close relationships with the pirate leaders, and lay up stores of treasure and supplies. Rome's decision in 74 to annex Bithynia precipitated the Third Mithridatic War. Mithridates occupied Bithynia, but the resistance of Cyzicus enabled Lucullus to cut off his army from supplies and destroy it. He was expelled from Pontus by Lucullus (72), and although a mutiny of the Roman army allowed Mithridates to recover much of his territory (67), he had not enough strength left to stand against Lucullus' successor Pompey. Defeated at Nicopolis, he fled to Colchis, sending orders for the massacre of his harem, and made his way to the Crimea. Here the sacrifices which he demanded for a new fleet and army raised his subjects in revolt, led by his son Pharnaces. Driven to bay, he found that a diet of prophylactics had made him immune to poison, and died by the sword of a guard at the age of 68. In cunning, courage, and organizing ability Mithridates was Rome's stoutest Oriental antagonist, but he failed in the arts of a strategist, and could not keep the loyalty of his subordinates. His portraits show that he copied Alexander in personal appearance. He was a true representative neither of the Hellenism which he affected nor of the Iranians who formed the most important element among his people.

Appian, *Mithr.*; Plutarch, *Luc.* and *Pomp.* Th. Reinach, *Trois royaumes de l'Asie Mineure* (1888); *Mithridate Eupator* (1890); M. Rostovtzeff, *CAH* ix, ch. 5; H. A. Ormerod and M. Cary, *ibid.*, ch. 8. T. R. S. B.

MITYLENE, *see* MYTILENE.

MNASALCES (not 'Mnasalceas'), of the deme Plataeae in Sicyon, seems to have flourished c. 250 B.C. A satirical epitaph for him (perhaps composed while M. was alive) by Theodoridas (*Anth. Pal.* 13. 21) refers to him as δ ἐλεγεροποιός, which, however, may mean 'epigrammatist', and derides his plagiarisms and bombast. The first charge is to some extent supported by the extant epigrams; the second may refer to lyric compositions now lost. A few of M.'s epigrams, e.g. *Anth. Pal.* 6. 128, 264; 7. 242, justify Meleager's description (*Anth. Pal.* 4. 1. 16) of them as 'the sharp needles of Mnasalces' pine', but most are devoid of originality.

J. Geffcken, 'Mnasalces (2)', in *PW* xv. 2247-8. E. A. B.

MNASEAS (3rd c. B.C.), Greek traveller of Lyeia (*POxy.* xiii, no. 1611, pp. 127 ff.), published geographical and antiquarian details uncritically in (i) *Περὶ πλοῦς*, (a) *Εὐρώπης*; (b) *Ἀσίας*; (c) *Λιβύης*. (ii) *Δελφικῶν χρησμάτων συναγωγή*.

FHG iii. 149 ff.; iv. 659 ff. *PW*, s.v.

MNEMONES, *see* ARCHIVTS.

MNESICLES, a Greek architect of the fifth century B.C. and designer of the gate-porches called 'Propylaea' (q.v.) to the acropolis at Athens.

MNESIMACHUS, a Middle Comedy writer (*Ath.* 7. 329 d). Victorious c. 365-360 B.C. (*IG* iii. 2325). Wrote *Ἀλκμήων* and *Βούσιρις* (clearly mythological burlesques), *Ἰπποτρόφος*, *Ἰσθμοῦ ἰκῆς*, *Δύσκολος*, and *Φαρμακοπώλης* (comedies of everyday life), and *Φύλακτος* (a political play).

FCG iii. 567 ff.; *CAF* ii. 436-42. M. P.

MNEUIS, the sacred bull of the city of Heliopolis, who was worshipped there in the temple of Ra. His cult is similar in most respects to that of Apis at Memphis, although not so important in Greek and Roman religion. The cult of Mneuis was combined with that of Apis in the temple at Memphis.

A. Erman, *Religion d. Ägypter* (1934). T. A. B.

(316)

MODERATUS of Gades (c. A.D. 50-100), wrote *Πυθαγορικά σχολαί* in eleven books. He tried to derive the main principles of Plato's metaphysics from Pythagorean teaching, and treated the Pythagorean theory of number as a symbolic representation of metaphysical doctrine, the monad being the principle of rest and harmony, the dyad the principle of change and multiplicity. Ancient references show him to have played a great part in the formation of Neoplatonic doctrine.

PW xv. 2378.

W. D. R.

MODESTINUS (3rd c. A.D.) has left a short piece in hexameters on Cupid Asleep (J. W. and A. M. Duff, *Min. Lat. Poems*, 1935).

MODESTUS, *see* JULIUS (7).

MOERIS, an Atticist lexicographer, to be dated (probably) not long after Phrynichus, and author of the extant *Λέξεις Ἀττικῶν καὶ Ἑλλήνων κατὰ στοιχείον* (sometimes called *Ἀττικιστής*): κατὰ στοιχείον here means only that words beginning with the same letter are grouped together under that letter without further attempt at arrangement within the group. The work deals with sundry points of grammar (accidence and syntax) and, mainly, with diction—the choice of words and their correct, 'Attic', forms and proper meanings. It was based on Aelius Dionysius, Phrynichus, Philemon, and the *Synonyms* of Herennius Philon of Byblus. Moeris recognizes the distinction between Old and New Attic; as models he accepts Plato, Aristophanes, Thucydides, Xenophon, the orators, Herodotus, and Homer, but, unlike Phrynichus, none of the tragedians. In the nature, merits, and limitations of his work he resembles Phrynichus (q.v. 3).

Editions: Hudson, 1712; Pierson, 1759; Bekker, 1833.

P. B. R. F.

MOERIS, a lake in a basin on the west of the Nile valley, fed by the floods at high Nile. When Herodotus visited Egypt most of the basin was under water, though some land had been reclaimed in Pharaonic times; Ptolemy Philadelphus built dikes and canals to control the inflow, and so recovered about half the area of the lake. This created the Arsinoite nome, which was largely peopled by foreign settlers and flourished till the decay of the third century A.D. ruined the irrigation system. The lake is now known as the Birket el-Kurūn.

B. P. Grenfell and A. S. Hunt, *Fayūm Towns* (1900). J. G. M.

MOERO (or **MYRO**) of Byzantium (c. 300 B.C.), epic poetess; mother of the tragic poet Homerus; wrote poems of various kinds, including a *Curses* (*Ἰλπίς*), a genre subsequently used by Euphron and Valerius Cato.

F. Susemihl, *Gesch. griech. Litt. Alex.* (1891-2) i. 351.

MOESIA was in the first instance the country of the Moesi, a Thracian tribe situated on the lower Danube in present-day Serbia. Little is heard of the Moesi before 29 B.C., when they were defeated and subdued by M. Crassus. They were placed for the time being under a *praefectus* and loosely attached to the province of Macedonia or of Illyricum. The date at which Moesia was constituted a separate province is uncertain. It probably had on some occasions a governor of its own since A.D. 6, but its definite organization as a province seems to have been deferred until 44. Henceforth Moesia extended along the lower Danube from the river Drinus to the Black Sea; its southern frontier ran roughly along the main Balkan range. The governor of Moesia also had under his supervision the Black Sea coast to the Straits of Kerch, and from the time of Vespasian, if not before, a *Classis Moesia* patrolled its northern waters. Under Domitian Moesia was split into

two provinces, Superior and Inferior, with the river Ciabrus as the boundary, and the defences of the latter province were strengthened by an earthen wall across the Dobrudja. After the Dacian Wars of Trajan Moesia Superior was extended to comprise the plain between the Danube, the lower Theiss, and the Maros; Moesia Inferior was enlarged so as to overlap Dacia on the east bank of the Aluta.

Moesia always remained a military borderland. Apart from the old-established Greek cities on the Black Sea coast and from Naissus on the upper Morava, all its chief towns grew out of the Roman camps on the Danube—Singidunum (*Belgrade*), Viminacium, Ratiaria, Oeseus, Novae, Durostorum (*Silistria*), and Troesmis. Under Hadrian, or soon after, these places were constituted colonies or *municipia* of Italian pattern. Under the Roman peace the wheat and orchard lands of the lower Danube valley were well developed, and the Latin language obtained a firm hold among the native population, which had received repeated increments by transplantation of Dacians and kindred peoples across the Danube. During the invasions of the third century Moesia became a principal storm-centre, but its cities at any rate were held until the sixth or seventh century.

M. Fluss, in *PW*, s.v.; R. Syme, *JRS* 1934, 113-37; V. Parvan, *Dacia* (1928), passim; A. Stein, *Die Legaten von Moesia* (1940).

M. C.

MOGONTIACUM (*Mainz*) commanded several important routes into the heart of Germany, and under Augustus a fortress was built here to hold two legions and as a base for the invasion of Germany. The first earth and wood structure was destroyed in A.D. 69-70 and replaced by a stone fortress, which was reduced after the rebellion of Saturninus (89) to hold a single legion. The city which grew up between the fortress and the Rhine was large and important, being the capital of Upper Germany, but it never acquired the commercial pre-eminence of Cologne or Trèves. The fortress was given up after 260 and the town was fortified, the bridge being protected by a new fortified bridgehead on the site of an old auxiliary fort at Castel. Excavation has produced many fine Roman objects, including sculptures and numerous tombstones; some piers of the Roman aqueduct are still standing, and also the core of an imposing structure, probably the monument to Drusus mentioned by Eutropius (7. 13). The early Christian quarter (*Mainz* was a bishopric) seems to have lain round the port, north of the walls.

K. Schumacher, *Siedlungs- und Kulturgesch. der Rheinlande* ii. (1923).

O. B.

MOIRA, see *FATE*.

MOLIONES (*Μολίονες*), the twin sons of Molione (originally 'Siamese' twins, in the opinion of Schweitzer, *Heraclides* (1922), 19; see *contra* Farnell, *Hero-Cults*, 208, who makes this form of the legend Hesiodic and so comparatively late). Certainly in Homer (*Il.* 11. 750 ff.) they are normal and mortal, though sons of Poseidon; their names are Cteatus and Eurytus and they are married and have sons (2. 621). In the former passage they are enemies of the Pylians; elsewhere (Apollod. 2. 139-40) they attack Heracles' men and are afterwards ambushed and killed by him. They are often (as in Homer) called *Ἀκτορίωνες*, Actor being their mother's mortal husband.

H. J. R.

MOLOSSI, see *EPHROS*.

MOMOS (*Μῶμος*), fault-finding personified, a literary figure, hardly mythological (though he occurs in Hesiod, *Theog.* 214, among the children of Night) and quite divorced from cult. Callimachus makes use of him (*Dian.* 113 and fr. 70 Selmsider) as the mouthpiece of views

which he opposes, while in Lucian (as *Iupp. Trag.* 19 ff.) he amusingly voices the author's satires on the conventional (popular Stoic) theology, or otherwise makes fun of his fellow-gods. He is a figure in a fable, also cited by Lucian (*Nigr.* 32; cf. *Hermot.* 20, *Ver. Hist.* 2. 3).

H. J. R.

MONA (1) The Isle of Man (Caesar, *B.Gall.* 5. 13. 3).

(2) Anglesey. As a centre of Druidism it was attacked by Suetonius Paulinus (A.D. 61), who was baulked of success by Boudicca's revolt. It was presumably reduced c. 75. It shows scant traces of romanization, but copper-mining and the *pax Romana* increased the quality and quantity of its village life. A late Roman fort exists at Holyhead. Welsh tradition speaks of an Irish invasion (5th c.), repelled by Cunedda, whose descendants ruled here.

Royal Commission on Historical Monuments (Wales), *Anglesey*, lvii-xc.

C. E. S.

MONARCHY (*βασιλεία*). Greek monarchy includes several entirely separate institutions. The kingdom of 'heroic' times denotes the Mycenaean lordship as well as the Homeric and legendary kingdom. Its core was military leadership, but the Mycenaeans seem to have been rather autocratic monarchs 'by the grace of the Gods': Agamemnon was more than a simple 'war lord'. But in the period of renewed migrations the king was the military chief of the tribe again; the Spartan, and even more the Macedonian, kings were survivals of this type. It was a hereditary kingship, acknowledged by the assembly of the armed people, and its power was limited by other 'kings', i.e. the heads of the aristocracy, and their council. The second type was what the Greeks called tyranny (q.v.), an individual and democratic rulership arising from the aristocratic *polis*. The third species of Greek monarchy was more theoretical. Usually Greeks of the fifth century B.C. knew monarchy only as barbarian despotism. But the political philosophy of the Sophists and the Socratic Schools, fighting against democracy, established the ideal of the rule of the strongest or of the best man, of the ruler 'by nature' (*φύσει*). Some of the writers of the fourth century, especially Xenophon and Isocrates, became rather impressed by some real attempts to found monarchies, e.g. the younger tyranny in Syracuse, the rules of Jason of Phraea, of the kings of Cyprus, of Mausolus of Caria; and the conflict between the Greek city-states and Philip of Macedon found its reflection in the antithesis of democratic and monarchic ideas. The reigns of Alexander and his successors ended the theoretical controversies. Hellenistic monarchy combined the popular kingship of Macedon, the individual ambitions of Greek 'royal men', and Oriental traditions of theocratic despotism. Its characteristic features were: rule over a large territory, dynastic government and succession, cult of the dead and sometimes also of the living kings. This monarchy was supported by the philosophical idea of the rule of the truly wise man. It exercised a marked influence on Roman monarchy and imperial administration.

V. E.

MONETA, a title of Juno (q.v.). The name is probably connected with the root of *monere* ('mindful', 'reminder') and hence is used occasionally (Livius Andronicus, in Priscian, 2, p. 198 Keil; Hyginus, *praecl. Fab.* 3 and 27) to translate Mnemosyne. There is no indication, however, that any cult of a goddess so named, independent of Juno, ever existed. Her temple stood on the Arx (see Platner-Ashby, p. 289 f.), having been vowed in 345 B.C. and dedicated the next year (Livy 7. 4-6), apparently replacing an older shrine where the sacred geese had

been kept (Plut. *Cam.* 27). Cicero (*Div.* 1. 101) explains the title by a story that a warning voice was heard from it directing the proper sacrifice after an earthquake. It became the mint of the Roman State for some time (Livy 6. 20. 13; cf. Platner-Ashby, loc. cit. and p. 345 f.); hence *moneta* came to mean 'mint', and so passed into modern languages.

H. J. R.

MONEY. In Minoan Crete (as in all Ancient Oriental cultures) metal measured by weight seems to have been used as money. The usage persisted in non-Hellenic Italy until finally superseded by Roman coinage. Cattle was used as money in the early Iron Age (Homeric Greece and Italy). Tools also were passed as tokens, the form and not the weight or metal purity being of importance for exchange. In the time of Homer money chiefly took the form of axes, which occur in finds and (perhaps) in Minoan inscriptions. Written sources and finds point to the use in early Greece and prehistoric Europe of tripods, cauldrons, rings, anchors, metal 'cakes', and scales for weighing (the 'talent' of Homer, unless this was a bar of gold). *Oboloi* also (iron spits), which later gave the name to a small Greek coin, are well known, both by tradition and from finds and an early inscription. This primitive 'tool' money was connected with public sacrifices and religion.

2. The invention of coinage took its rise in Asia Minor, where East and West met, and was perfected in the Greek motherland, where small silver coins replaced local 'tool' money. It combined the principle that the exterior of any medium of exchange should be of conventional type and unalterable form, with the Ancient Oriental preference for bars of a given weight and metal content.

3. Changes in the price of bullion, of course, influenced the policy of Greek and Roman mints. The ratio of silver to gold was 1 : 13 or 13½ in the Lydian and Persian Empires of the sixth century; 1 : 14-17 in the later years of Persia; 1 : 10 in Athens during the Peloponnesian War; 1 : 11-12 in Greece and Persia in the early fourth century; 1 : 10 from the later years of Philip; 1 : 13½ c. 280 B.C.; 1 : 10 c. 180 B.C.; 1 : 12 under Augustus; 1 : 8-11 in the early third century A.D., and 1 : 10 in the early fourth century.

4. The ratio of bronze to silver was 1 : c. 110 in the fifth century; 1 : 50-70 from Alexander's time to the third century A.D. (Italy of the third and earlier second centuries B.C. was perhaps an exception to this decline in value of the more precious metal); 1 : 125 in A.D. 396 and 1 : 100 in A.D. 538. The decline in value of the precious metals during Alexander's campaigns, and their rise in consequence of the economic crisis in the third century A.D., can clearly be seen from these figures.

5. By a law of Constantine (A.D. 325) the Imperial treasury had to accept both minted and unminted gold at the same rate, and gold coins had to be valued according to their actual weight. The Greek preference for coined money was not to the same extent shared by the Late Roman world, which had seen the terrible inflation of the third century A.D. and reverted of necessity to a more primitive currency system. See COINAGE (GREEK, ROMAN).

Johnson, *Currency in Roman and Byzantine Times* (1944).

F. M. H.

MONOPOLIES. The earliest Greek State monopolies (for certain crafts in Sparta and Epidaurus) were political rather than economic. A later stage of progress in public administration is represented by the State currency control of the Attic Empire in the fifth century B.C. and of Olbia after 400; monopolies for the production of sulphur in Cyrene, of alum in Lipara, and of salt in Rome, as well as others for the import or export

of certain products in Athens, Clazomenae, Hieraclea, Lampsacus, and Selymbria; of banking in Byzantium; and of trade and craftsmanship in the camp of the Persian satrap Datames (early 4th c.).

Hellenistic monopolies—in striking contrast to the Classical period—were more concerned with the State's own citizens than with foreigners. We find ferry control in Delos and Miletus; salt control in the empire of Lysimachus; control of salt, oil, and perhaps parchment, perfumes, and public baths in parts of the Seleucid Empire. A complete monopoly system in the Ptolemaic Empire covered the production, sale, and import of oils, textiles, beer, leather, perfumes, papyrus, the output of mines and quarries, currency and banking, hunting, fishing, meat sales, goose-breeding, and the management of public baths. This system included gigantic commercial and industrial enterprises, for which schedules regulating production were issued annually, wholesale and retail prices were fixed, and prohibitive customs duties imposed, very few enterprises escaping notice.

The monopolies of the Roman Principate were nothing more than exclusive local concessions to private capitalists. We know of such in Roman Egypt, controlling salt, oil, perfumes, baths, dyeing, kiln-dried bricks, alum, the goldsmith's trade, the wool trade, ferries, some Indian imports from the Red Sea, and (perhaps) beer, papyrus, and painting. Other sources mention control of banks in Mylasa and Pergamum, ferries in Myra, bakeries in Ephesus; a salt-monopoly in Palmyra, a complete regional sales' control in Baetoeace (in Syria); a monopoly of balsam in Palestine, of purple in Tyre, of wood in the Lebanon. The *metallum Vipascense*, a mining district in Spain, had public monopolies which covered banking, auctioning, fulling, leather production, baths, and the barber's trade. Late Roman monopolies for salt, silk, purple, production of arms, and the various monopoly experiments of Justinian should also be mentioned. See AGRICULTURE, BANKS, COMMERCE, FINANCE, INDUSTRY.

F. M. H.

MONOTHEISM. Apart from the influence of developed Judaism and Christianity, no such thing as monotheism, i.e. the refusal to use the predicate 'God' of any but one Being, existed in classical antiquity; even theistic philosophers acknowledged the existence of subordinate deities besides the supreme one. But a tendency towards it may be detected at any rate in Greek popular religion as interpreted by non-philosophical authors. This takes the form of an increasing supremacy of Zeus. Even in Homer (*Il.* 8. 18-27) he is much stronger than all the other gods put together; later authors tend to use 'Zeus', 'the gods', 'God' indiscriminately, e.g. Hesiod, *Op.* 42 and 47, where the same act is ascribed, first to 'the gods', then to Zeus. To Aeschylus (*Ag.* 160 ff.) Zeus is the supreme moral governor of the universe, though even there the existence of other gods is clearly recognized (169 ff.). Hellenistic writers favour vague phrases like τὸ θεῖον, τὸ θεῖον.

H. J. R.

MONS SACER, a hill near Rome just beyond the Anio on the Via Nomentana. In 494 and 449 B.C. the plebeians left Rome, returning only when the patricians granted concessions guaranteed by a *lex sacrata*. The *Mons Sacer*, for obvious aetiological reasons, was represented as the destination of the seceding plebeians (Livy 2. 32; 3. 32; Festus, p. 422. 423 L.).

E. T. S.

MONTANUS, see **VOTIENUS**.

MONUMENTUM ANCYRANUM. The so-called Monumentum Ancyranum is one of the four documents written by Augustus which were deposited with the Vestal Virgins and were read in the Senate after his death. It was 'a record of his enterprises (*index rerum a se gestarum*), which he wished to be engraved on two bronze tablets placed outside his Mausoleum' (Suet. *Aug.* 101). The proper title is consequently *Index rerum gestarum*. Neither a manuscript copy nor the original inscription near the Mausoleum is preserved. But copies were set up in some, if not all, of the provinces. The greater part of the text has been recovered from a copy found in 1555 at Ancyra (q.v.) in Galatia, on the walls of a mosque which had been the temple of Rome and Augustus. It consists of the original Latin text and a Greek translation. Another copy, far more fragmentary, has been found at Apollonia in Pisidia. The Greek translation is here the same as in the text of Ancyra, which proves its official inspiration. A third fragmentary copy of the Latin text was found at Antioch in Pisidia in 1914 (so-called Monumentum Antiochenum). As Antioch was a Roman colony, it was probably considered unnecessary to add a Greek text.

2. The Monumentum Ancyranum contains four parts: (1) the *honores* received by Augustus (chs. 1-14); (2) a statement of the money spent on public objects from his private means (chs. 15-24); (3) the *res gestae* proper, an account of his victorious expeditions and conquests (25-33); (4) a concluding statement about his position in the Roman State. A short appendix, written after his death, follows.

3. The document represents itself as composed in Augustus' last year, apparently after 27 June A.D. 14 (cf. chs. 4 and 8), but since the *Res Gestae* were already mentioned in the testament of Augustus, which was written on 3 April A.D. 13, the text obviously has been retouched either by Augustus himself or by the editor. Further, possibly the document was written by Augustus many years before his death and then revised more than once. Yet no certain evidence of successive stages has been discovered.

4. The document has a clear internal unity. Part 1 demonstrates Augustus' exceptional position in the State and his fundamental respect for Roman liberty. In parts 2 and 3 Augustus justifies his position by what he achieved with his own private money and under his own military command. The concluding sentences state again that he restored the Republic and consequently obtained a superior authority and the qualification of *pater patriae*. The style is that of the Roman texts concerning triumphs. The content gives us a profound insight into the way in which Augustus wished to be appreciated.

Studi in occasione del bimillenario augusteo* (1938), 48.

A. M.

MOPSUS, a diviner, or two diviners of the same name, for the legend is quite irreconcilable with the mythological chronology. In one set of authorities (e.g. Pind. *Pyth.* 4. 191) he is the Argonauts' prophet and therefore is contemporary with the generation before the Trojan War; he is son of Ampyx or Ampycus (Ap. Rhod. i. 1083) and he dies on the journey (4. 1502 ff.), bitten by a serpent in Libya. In another (as Paus. 7. 3. 2) he is son of Manto, daughter of Tircsis (q.v.), by Rhacius

the Cretan; he is connected with the oracle at Claros, and there meets Calchas (q.v.) and causes his death by outdoing him in a contest of divination; this was after the Trojan War. Probably several stories gathered independently around one famous figure, or the name tended to be used of any prophet. See Kruse in *PW*, s.v.

H. J. R.

MORMO (Μορμώ; also Μορμολύκη, Μορμών), a figure like Empusa, Gello, and Lamia (qq.v.), and equated with the last two by schol. on Theoc. 15. 40; he says she was a queen of the Laestrygonians (q.v.) who lost her own children and so tries to kill those of others. Her name is sometimes a mere interjection (Theoc. loc. cit.; Ar. *Eq.* 693). See Tamborino in *PW*, s.v.

H. J. R.

MORPHEUS. Three of the sons of Sleep, Morpheus, Ikelos or Phobetor, and Phantasos, send respectively visions of human forms (μορφαί), beasts, and inanimate objects (Ovid, *Met.* 11. 633 ff.).

MORSIMUS, son of Philocles and grand-nephew of Aeschylus, oculist and tragic poet, a 'frigid' or uninspired writer, often ridiculed by comic poets of the fifth century (Suidas, s.v.; Ar. *Pax* 803 and schol.), though he may have had his admirers (Ar. *Ran.* 151).

MORYCHUS (Μόρυχος). Lexicographers and paroemiographers (q.v.) explain a saying 'sillier (μωρότερος) than Morychus, who neglects inside affairs and sits outside' as alluding to a statue of Dionysus in Sicily, surnamed Morychus, which was outside his temple; their authority is Polemon.

H. J. R.

MOSAIC. While examples of mosaic as architectural decoration occur at an early date in Mesopotamia, the Egyptians and Minoans apparently restricted its use to the minor arts. In Greece mosaic pavements of natural pebbles are known from 400 B.C.; the designs, in light silhouette on dark ground, include patterns and mythological subjects. In the Hellenistic period shaped stones replace pebbles and the use of mosaic becomes general.

There were several techniques. *Opus sectile* covered the surface of walls and pavements with thin slabs cut into patterns. Of Eastern origin, it was at first restricted to few colours and to geometric patterns, but under the Empire its range was enlarged. In *Opus tessellatum* the slabs of *sectile* were replaced by small cubes (*tessellae*) of uniform size; *tessellatum* was regarded as a cheaper form of *sectile* and at first obeyed the same conventions of colour and pattern. *Opus vermiculatum* similarly employed *tessellae*, but these were irregularly shaped and adapted to the field. Derived from the inlay of Egypt, this was a painter's technique, and its range of colour and material was unlimited. *Opus musivum* was wall-decoration in *tessellae* applied to vaults, domes, and curved surfaces (it is disputed whether flat walls were thus decorated before the Christian period). Lapis lazuli or blue glass representing the sky and, after A.D. 200, gold for the sun were the principal colours. *Lithostroton* is believed to have meant an irregularly paved, patternless floor. *Opus signinum* was used of a cement floor reinforced with tiles or pebbles.

Hellenistic pavements were distinguished by use of the *emblema*, a picture executed in *vermiculatum*, as a central feature to which the rest of the floor was subordinated. In the Augustan age the simpler colours and the all-over patterns of *sectile* and its derivative *tessellatum* came into favour. By the Antonine period the two traditions had blended; the distinction between *vermiculatum* and *tessellatum* disappeared and pavements combined the varied colouring of one with the all-over designs of the other. Figured pavements, very popular

in the late Empire, disappeared in the sixth century, when the wall or ceiling was considered more suitable for the sacred subjects then preferred.

P. Gauckler, *Dar.-Sag.*, s.v. 'musivum opus'; R. P. Hinks, Introduction to the *Catalogue of Paintings and Mosaics in the British Museum* (1933); E. Pernice, *Die hellenistische Kunst in Pompeii vi, 'Pavimente und figürliche Mosaiken'* (1938). F. N. P.

MOSCHION, tragic poet, probably of the fourth century B.C., wrote a *Telephus* and two historical plays, the *Themistocles* and the *Men of Pherae*, the theme of which was perhaps the death of Alexander of Pherae. A long fragment on the origins of civilization recalls in some points Aeschylus, *PV* 436 ff., and his style, though uneven, shows greater boldness than that of most of the late tragic poets.

TGF 812-16.

A. W. P.-C.

MOSCHUS of Syracuse, described by Suidas as a pupil of Aristarchus, must have flourished c. 150 B.C. This agrees with Suidas' further statement that the chronological order of the three Bucolic poets was Theocritus, Moschus, Bion. The same authority calls M. a grammarian, but no traces of such activity survive unless we identify M. with the Moschus mentioned by Athenaeus (II. 485 c) as author of a work on Rhodian Words.

WORKS. Three extracts (respectively thirteen, nine, and eight hexameters) are preserved by Stobaeus from M.'s *Bucolica*. The first contrasts the pleasures of the countryman with the hard lot of the fisher. The two others are erotic *paegnia*, having little or no connexion with Bucolic. The three extracts are probably complete, as it were epigrams in hexameters. Similar in kind are two other pieces, twenty-nine hexameters entitled 'The Runaway Love' and an epigram (*Anth. Plan.* 4. 200) on Eros as Ploughman. Finally several manuscripts of the Bucolic Corpus assign to M. an epyllion in 166 hexameters with the title *Europa*, in which the Rape of Europa by Zeus is gracefully narrated. The disproportionate space (25 lines) given to the description of Europa's basket is in the Alexandrian manner, as is also the introductory dream. M.'s style is sometimes too sugared, but he has the merit of using a fairly simple vocabulary. Metrically the fragments and the *Runaway Love* conform to Callimachus' rules, but the *Europa* is less strict, a fact which has led some to dispute M.'s authorship. M. is also credited in some sources with the *Lament for Bion* and the *Megara*. The former must be by some disciple of Bion (q.v.); the latter, a duet in hexameters between Heracles' mother and wife (who gives her name to the piece), in which they vie with each other in bewailing the anxieties caused by his long absence, may be a product of M.'s muse in a tearful mood, but may equally well belong to some other late Hellenistic poet.

Texts: U. von Wilamowitz-Moellendorf, *Bucolica Graecae* (1910), 97, 106, 120, 131, 138; P. Leconte, *Bucolica Graecae* (1927), 135-83. General literature: P. Marx, *Moschos* (1927), in *PW* xvi 355-6. E. A. B.

MOSCHUS, see also VOLCACIUS (2).

MOTORIA sc. *fabula* (contrast *stataria*), see *FABULA*.

MOTYA (nowadays *S. Pantaleo*), an islet which an artificial causeway joined to western Sicily. Originally a Phoenician trading-post among the Elymi, Motya subsequently became a Carthaginian city; its strategic position, indeed, made it one of the three great military and commercial strongholds of Carthaginian Sicily (Panormus and Soloeis being the other two). It remained Carthaginian until Dionysius of Syracuse sacked it after a memorable siege, 397 B.C. Motya was never subsequently resurrected, the Carthaginians preferring to colonize nearby Lilybaeum (q.v.).

Thuc. 6. 2; Diod. 11. 47 f. (inaccurately Panormus' elaborate description (5. 25, 53) confuses Motya with Motya). J. L. S. Whaley, *Motya* (1921). E. T. S.

MOUNTAIN CULTS. There is no classical Greek or Italian cult of a mountain as such, but several indications that such cult may once have existed. Mountains are fairly prominent in Greek myths; thus Atlas (q.v.), at once mountain and Titan, although classically placed in Africa (the Atlas range), probably was originally a mountain of Arcadia. Helicon and Cithaeron contend for a prize of song (Corinna, fr. 4 Diehl), and Helicon is represented by a wild-looking figure (*Bull. Corr. Hell.* xiv, plates ix, x; cf. Kern, *Rel. d. Griech.* i. 42). Earth brings forth the mountains in Hesiod (*Theog.* 129), though they are not said to be gods but haunts (*εἰσβολοί*) of the gods. This is in accordance with much that is told of various deities, Pan (*Hymn. Hom.* 19 Allen, 7), the Nymphs (*Eur. Bacch.* 951, and often; the next line mentions Pan also), Rhea (*Eur. Hel.* 1301 ff., where she is curiously identified with Demeter), and above all Zeus, among whose best-known titles are Olympius and Lycæus. It is quite possible (see Kern, *ibid.*; cf. p. 77) that Zeus, who as 'cloud-gatherer' may be seen at work on the tops of hills, absorbed or displaced many ancient cults of mountain gods: for his mountain-cults cf. A. B. Cook, *Zeus* ii. 868 ff., and art. *HYRSISTOS*. Of cults on mountains of gods other than Zeus who are certainly not themselves mountains personified there is abundant evidence, from the familiar Cretan representation (see Harrison, *Prolegomena*, p. 498, for one of many reproductions) of a goddess standing on top of a conventionalized hill onwards, as in the case of all the deities mentioned above. See *TMOLUS*.

For Italy, the clearest example of a mountain cult is perhaps Soranus (identified in historical times with Apollo or Dis Pater, Verg. *Aen.* 11. 785; Servius ad loc.), the god of Mt. Soracte; the legend, connected as it is with a cave on the mountain (Servius *ibid.*) suggests a divine power which actually lives in Soracte and does not simply choose to roam on the sides or summit. See Wissowa, *RK* 238.

H. J. R.

MUCIA TERTIA, daughter of Q. Mucius Scaevola (cos. 95 B.C.), was connected with the Metelli. She was wife of Pompey, by whom she had two sons (Gnaeus, Sextus) and a daughter (Pompeia), but was divorced for unfaithfulness (62). She next married M. Aemilius Scaurus. In 39 she tried to mediate between Sextus Pompeius and Octavian.

A. M.

MUCIANUS, GAIUS LICINIUS (cos. anno incerto, cos. II suff. A.D. 70, cos. III suff. 72), legate of Syria in 69. Reconciled with Vespasian after earlier disagreements, he encouraged his designs and secured the allegiance of Syria. Leading the Flavian army through Asia Minor and the Balkans, he was anticipated by Antonius Primus in the invasion of Italy and defeat of the Vitellians, but was able on the way to repel a Dacian incursion into Moesia. He arrived in Rome a few days after its capture, repressed the ambitions of Primus, and controlled the government for Vespasian, whose chief adviser he remained. He is said to have urged that emperor to banish the philosophers from Rome. Mucianus possessed various accomplishments (for a pointed sketch of his character, cf. Tacitus, *Hist.* 1. 10). He wrote a book of geographical *mirabilia*, largely used by Pliny the Elder.

R. S.

MUCIUS, see *SCAEVOLA*.

MULOMEDICINA is the Latin equivalent for *Hippiatrica*. The subject was dealt with by all agriculturalists (Cato, Varro, Columella, Celsus, Gargilius Martialis, Palladius), but also by poets who wrote on country life (Verg. *G.* 3. 295) and by naturalists (Pliny, *bn.* 13). The earliest special treatises preserved are those of Pelagonius and Vegetius (5th c. A.D.).

Latin writers, if physicians, accept terminology and

cures and reject magic, in accordance with their Greek sources. Yet Latin literature seems not only dependent but also original. 'The fact that Latin authors were translated into Greek (e.g. Pelagonius) indicates that 'the barbarians' held views of their own. They were interested in veterinary medicine from a business point of view (Varro, *Rust.* 2. 5. 11), cattle being the most valuable property (*pecunia*). The insistence on the segregation of sick animals from the healthy stock, first mentioned by Columella and demanded long before any such segregation of human beings was thought of, may well be Roman; in the time of Vegetius it was under State control. *See also* SURGERY, para. 10.

TEXTS: Pelagonius, M. Ihm (Teubner, 1892); Vegetius, E. Lommatsch (Teubner, 1903); Palladius, Book 14, J. Svennung (1926); cf. G. Björk, *Mnemos.* 1938.

LITERATURE: Cf. article HIPPIATRICI; also K. Hoppe, *PW* xvi A. 503 (interdependence of authors); J. Svennung, *Untersuchungen zu Palladius*, etc. (1935). L. E.

MUMMIUS ACHAICUS, LUCIUS (cos. 146 B.C.), commanded as praetor in Spain in 153 B.C. against the Lusitanians, whom after an unsuccessful opening he decisively checked, celebrating a triumph in 152. As consul he succeeded Metellus in command against the Achaean League, and after crushing Diaeus took Corinth, which he sacked and destroyed, and dissolved the League. He shipped the treasures of Corinth to Italy, apparently less appreciative of their artistic value than would have been expected from his association with the Scipionic circle. He was censor with Scipio Aemilianus in 142, modifying his severity against Ti. Claudius Asellus.

Livy, *Per.* 52; Polyb. bk. 39; Appian, *Hisp.* 56-7; Pausanias 7. 16; Cicero, *De Or.* 2. 66. 268; *Brut.* 25. 94; Vell. 1. 13. 4; G. Colin, *Rome et la Grèce* (1905), 628; De Sanctis, *Stor. Rom.* iv. 1. 467. A. H. McD.

MUNATIUS, *see* PLANCUS.

MUNDUS (etymology unknown), a ritual pit (*see* PITS, *CULT*). (1) The traditional site in the Comitium where Romulus in founding the city dug a pit, put in first-fruits, and earth from each country from which his followers came, afterwards filling it up and putting an altar upon it (Ovid, *Fasti* 4. 821 ff.; Plut. *Rom.* 11). (2) The *mundus Cereris*, a structure of unknown site, vaulted, divided into two parts, and with a cover which was removed on 24 Aug., 5 Oct., and 8 Nov., which days were *religiosi* and the way supposed open to the lower world (Festus pp. 144, 145 Lindsay, quoting Cato and Ateius Capito; Varro ap. Macrobi. *Sat.* 1. 16. 18). These have only the name in common.

Weinstock in *Röm. Mitt.* 45, pp. 111 ff.; Rose in *SMSR* 7, pp. 3ff.; Kroll in *PW*, s.v.

MUNICHIA (or **MUNYCHIA**) was the citadel of Piraeus, a steep hill on its east part (284 ft.) with a small well-fortified harbour below it on the east, and a larger, land-locked harbour to the south-west (Zea). Hippas began to fortify it in 510 B.C. (*Ath. Pol.* 19. 2). It was the scene of street-fighting in 403, when Thrasybulus took Piraeus, and the chief seat of the Macedonian garrison which controlled Athens, with interruptions, from 322 to 229. Its especial goddess was Artemis. *See also* PIRAEUS.

T. J. D.

MUNICHUS (*Μούνυχος*), (1) eponym of the Attic harbour Munichia, Photius s.v. *Μουνυχία* (an inferior spelling of the name), who says he was a king (of Attica). (2) A pious seer, son of Dryas, king of the Molossians. He and his family, attacked by robbers and in danger of being burned alive in their fortress, were changed by Zeus into birds (Anton. Lib. 14).

H. J. R.

MUNICIPIUM. *Municipium* originally meant an Italian community (*see* SOCII, CIVITAS) which accepted *civitas sine suffragio*. This denoted not an inferior

citizenship but a kind of alliance whereby the *municipium* and Rome exchanged social rights, *comitium* and *commercium* (q.v.). Such *municipes* retained full local autonomy, except in foreign policy, and provided Rome with troops (*see* MUNUS). They became Romans only by settling in Rome. *Municipium* thus resembled *ius Latii*. *Municipia* were liable to occasional, and eventually annual, visits of Roman judicial authorities—*praefecti*—and were sometimes called *praefecturae* (q.v.). The first *municipes*, from Campania and Volseium (c. 338 B.C.), were willing allies. Later this status was given to conquered peoples, notably the Sabines and Picenum, and was eventually regarded as a limited, inferior franchise, mediating the incorporation in the Roman State, by the grant of *ius suffragii*, of Italian peoples, which were then called *municipia civium Romanorum*. First the Sabines were thus incorporated (257 B.C.), others later (Arpinum, Fundi, Formiae in 188 B.C.), but some *municipes* remained *sine suffragio* till 90 B.C. Latin States incorporated by Rome, though properly known as *oppida civium Romanorum* before 90 B.C., were sometimes called *pro municipiis*. The magistrates of the early incorporated boroughs were known as aediles, dictators, praetors, or *octoviri*. After 89 B.C. all the communities of Latins and *socii Italici* except the Transpadanes became *municipia civium Romanorum*. A uniform system of *quattuorviri* was substituted for their diverse magistracies. Between 89 and 44 B.C. new and old *municipia* and *oppida civium Romanorum* were assimilated to one another (*see* OPPIDA). Lands once organized on a village system were divided up into artificial *municipia* (*see* CONCILIABULUM, PAGUS, VICUS). Henceforth *municipium* meant any self-governing Italian borough irrespective of origin, apart from colonies (q.v.). In the Principate citizen rights were extended to provincial communities, when sufficiently Italianized, in a similar fashion. Latin rights were usually given first (q.v.). Thereby a native *civitas* became a *municipium Latini iuris*, with a municipal charter of Roman type. Later it was granted full citizen rights, without further change of constitution. The whole population, both of town and country-side, was affected: a *municipium* was not a purely urban municipality, though life centred in the towns. *Municipia* spread thus throughout the Western Empire, rapidly in the Mediterranean regions—Narbonensis, the Spains, Africa, and Mauretania—slowly in the German and Balkan provinces (except Dacia), still more slowly in northern Gaul and Britain, where *municipia* were exceptional, their place being taken by the non-urban, pre-Roman cantons (*see* CIVITAS). In and after the second century municipal ambition, centred on the imitation of Rome, caused provincial municipalities to apply for colonial rights (*see* COLONIZATION, ROMAN; IUS ITALICUM). Local government rested with the councils (*see* DECURIONES) and the magistrates. The *quattuorviri* introduced in 89 B.C. developed into two *quattuorviri* or *duoviri iuri dicundo* and two *quattuorviri* or *duoviri aedilicia potestate*, or two aediles. The *duoviri* system was normal in the provinces. Quaestors sometimes existed for finance, and there were municipal priesthoods. Every five years the upper magistrates, as *duoviri quinquennales*, etc., held a general census for the central government. The municipal system declined in the third and fourth centuries with the general economic collapse of the Empire (*see* DECURIONES).

MUNUS meant originally the duty of a Roman citizen to the State. The chief *munus publicum* in the Republic was military service. With the abolition of compulsory service this fell into neglect, and the *munus* came to mean simply the obligations of an individual to his municipality, the *munera municipalia*. These were of diverse kinds, and concerned the maintenance of roads, waterworks, and buildings, and especially the payment of taxes. The municipal system worked smoothly as long as the local magistrates saw to it that the *municipes* performed their *munera*, according to their various degrees of liability, which were determined by wealth and position. In the late Empire the *munus publicum* reappeared, in effect, in the liability of the municipal councillors for the imperial taxes, with disastrous results for the municipal system; for the magistracies themselves came to be regarded as burdensome *munera* (see *DECEMPRIMI*, *DECURIONES*).

For bibliography see *MUNICIPIUM*.

A. N. S.-W.

MURENA, *LUCIUS LICINIUS*, served under his father, who as propractor of Asia in 84 B.C. had provoked the Second Mithridatic War. In the third war against Mithridates he served with distinction as *legatus* of Lucullus (74-c. 68). After holding the praetorship in 65 he governed Transalpine Gaul. After his election to a consulship in 63 he was charged with bribery by Cato and Sulpicius. His guilt was obvious, but it was not expedient that the consul-elect should be condemned during the Catilinarian crisis. Cicero therefore defended him, and secured his acquittal by cleverly ridiculing the pedantry of the accusers.

Cicero, *pro Murena* (edited by W. E. Heitland, 1874). J. M. C.

MURENA, see also *VARRO* (4).

MURRINA VASA, cups and bowls made from a mineral substance obtained in small quantities from Parthia (in particular from Carmania). They were introduced into Rome by Pompey and in Pliny's time were cherished articles of luxury, for which fabulous prices were paid. The material is described as scented, fragile, and prized for its colouring, which was purple, white, or flame-coloured, sometimes iridescent, sometimes opaque or knobbed. The identification of this *murre* is still disputed, though opinion inclines to some variety of fluorspar or jade. There were imitations in glass of the true murrine ware (see *GLASS*).

Pliny, *HN* 37. 2. 7 and 8.

F. N. P.

MUSAEUS (1), a mythical singer, closely related to Orpheus, by others connected with Eleusis. Aristophanes (*Ran.* 1032-3) make the distinction that Orpheus taught mysteries and abstinence from flesh, Musaeus taught cures of diseases and oracles. Oracles attributed to him were in circulation, and Onomaeritus was driven out by Hipparchus, the son of Pisistratus, for having added a forged oracle to his collection. Plato speaks of him together with Orpheus and calls both descendants of Selene and the Muses (*Resp.* 364 E). Musaeus is a 'descriptive' name; his personality is pale and thoroughly mythical.

M. P. Nilsson, *Hom. Theol. Rec.* xxxviii (1935), 102; O. Kern, *Orphicae fragmenta* (cf. index viii).

M. P. N.

MUSAEUS (2) of Ephesus (? Alexandria), epic poet; author of a *Perseid* and poems in honour of Eumenides and Attalus I of Pergamum.

MUSAEUS (3) **GRAMMATICUS** (? late 5th c. A.D.), epic poet, author of *Hero and Leander*, a Greek poem of some competence and romantic grace, which influenced Marlowe. See *EPIC POETRY*.

Text: A. Ludwich (1912).

MUSCULUS, see *SIEGECRAFT*, *ROMAN*.

MUSES, Greek deities of poetry, literature, music, and dance; later also of astronomy, philosophy, and all intellectual pursuits. Throughout antiquity the prevailing conception of Muses follows Hesiod (*Th.* 25 ff.). Muses approach the poet on Helicon and give him sceptre, voice, and knowledge. Hesiod is also responsible for the canonical number of nine and the traditional names of the Muses. In late Roman times the M. were differentiated according to their function (*Anth. Pal.* 9. 504, 505). Calliope is M. of the heroic epic, Clio of history, Euterpe of flutes, Terpsichore of lyric poetry (dance), Erato of lyric poetry or hymns, Melpomene of tragedy, Thalia of comedy, Polyhymnia of the mimic art, and Urania of astronomy. These functions and names vary considerably and names of other Muses are known.

Daughters of Zeus and Mnemosyne, the M. sing and dance at the festivities of Olympians and heroes, often led by Apollo. They have few myths of their own. The Thracian poet Thamyris, who competed against the M., lost his sight and song (*Il.* 2. 594). They were judges in the contest of Apollo and Marsyas (q.v.). The Sirens tried once to compete with the Muses; defeated, they lost their wings and jumped into the sea (Steph. Byz. s.v. Ἀπτερά).

The most ancient cults of the M. were in Picria and Ascara, but smaller cults existed throughout Greece. Pythagoreans, Plato, and Aristotle organized their schools as associations for the cult of Muses (*thiasoi*). Thus Museum (Alexandria) came to mean a place of education and research. An interesting private cult of Muses was established by Epicteta in Thera (*IG* xii. iii. 330).

The M. are among the most lovable and most influential creations; personifications of the highest intellectual and artistic aspirations, they yet retained a personal character. Poets, scientists, and philosophers from Homer (*Od.* 8. 488) to Ausonius (*Auson.* 20) and from Heraclitus to Proclus celebrate the M. as bringing to humanity the purifying power of music, the inspiration of poetry, and divine wisdom.

P. Boyancé, *Le Culte des Muses chez les philosophes grecs* (1937). O. Bie in Roscher, *Lex.*, s.v. 'Muren'. G. M. A. H.

MUSEUM (Μουσείον), originally a place connected with the Muses (q.v.) or the arts inspired by them. Euripides speaks of the *μουσαία* of birds, the place where they sing. When a religious meaning was attached an altar or a temple was built to mark the spot. But the predominant significance of the word was literary and educational. Thus Mount Helicon had a Museum containing the manuscripts of Hesiod and names of those who had upheld the arts (*Ath.* 14. 620 a). Almost any school could be called 'the place of the Muses' (Libanius). There was a Museum in Plato's Academy and in Aristotle's Lyceum.

By far the most famous Museum was that of Alexandria, founded by Ptolemy Soter c. 280 B.C. on the advice of Aristotle's pupil, Demetrius of Phalerum, to counter-balance the anti-monarchical Athenian schools and the socialist movements that arose in opposition to the capitalist bourgeoisie of the Hellenistic world. It was distinct from the Library. Both were near the palace, but the exact site of neither is clearly identifiable. The Museum housed a band of about 100 research scholars, drawn from all parts of the Mediterranean. They were supported by a generous salary granted by the Ptolemies and later by the Caesars, who appointed a President

(ἐπιστάτης) or Priest (ιερεὺς) as head of the institution. Lectures were secondary to research, but there were many discussions in which the kings joined. Dinners or symposia, illuminated by witticisms, epigrams, and the solution of problems, were frequent and characteristic. The philosophy of the Museum seems to have been mainly Aristotelian. Learning was held in repute and many literary prizes were given. The papyri show how great was the influence of the Museum on the smaller towns. The buildings, splendidly furnished by the Ptolemies, included a communal dining-hall, an *exedra* for discussions and lectures, a *peripatos* planted with trees.

Circa 146 B.C. political upheavals caused learned men, including the great Aristarchus, to flee from Alexandria, which was henceforth rivalled by Pergamum as well as by Athens, Rhodes, Antioch, Berytus, and Rome. The Museum suffered in reputation, but Cleopatra, the last of the Ptolemies, still took part in its discussions. According to a doubtful tradition Mark Antony gave the Pergamene library to Alexandria to make up for loss by fire during Caesar's siege, 47 B.C. Renewed prosperity came under the Pax Augusta. The early emperors visited the Museum and extended its buildings, and Hadrian bestowed special care on it. The Museum was visited by famous litterati like Plutarch, Dio Chrysostom, Lucian, and Galen. In A.D. 216 it suffered under the tyranny of Caracalla. It was destroyed, probably by Zenobia, in 270, but seems to have resumed its activities. It suffered by the foundation of a library at Constantinople, whither many scholars fled to avoid the theological controversies of Alexandria. Suidas gives the last member of the Museum as Theon, the father of Hypatia (c. A.D. 400). In the first century the Museum was famous for philology and history; in the second century for the New Rhetoric; in the third century for Neoplatonism. In the fourth century Ammianus (22. 16) reports scientific activity, but admits a decline.

MUSIC. I. IN GREEK LIFE. When the embassy from Agamemnon visited Achilles in his tent and found him playing on a lyre and singing lays about heroes (Hom. *Il.* 9. 186-9), they expressed no astonishment that a hardy warrior should seek relaxation in music of his own making. That is symbolic of the Greek attitude to an art which was woven into the very texture of their lives. It was an important feature of many public religious observances, of marriage and funeral rites, and of harvest and vintage festivals; banquets and convivial gatherings were not complete without it. At the Pythian Games, attended by crowds of competitors and spectators from every Greek State, musical contests had been instituted alongside of the athletic ones from the very beginning; and though such contests were not established at the Nemean and Isthmian Games until comparatively late (and apparently never at the Olympic Games), there were many other festivals, such as the Panathenaea at Athens and the Carneia at Sparta, where prizes were offered for singing to the accompaniment of cithara or aulos (κιθάρωδια, αὐλωδία) or for instrumental solos (ψαλὴ κιθάραις, ψαλὴ αὐλοῖς). The victors in these contests were honoured no less than the athletes (cf. Pindar, *Pyth.* 12).

It is particularly important to recall that Greek poetry was much more frequently associated with music than is our own. Even the poems of Homer were sometimes chanted or recited by rhapsodes to the accompaniment of a lyre or cithara. In the compositions of the lyric poets the tune was scarcely less essential than the words; the personal monodies of Sappho and Alcaeus, no less than the choral odes of Pindar, Bacchylides, and the tragic poets, were inspired by a Muse who held sway over the sister arts of music and poetry.

This wealth of music was far from being the preserve of professional performers. The more elaborate kinds, especially of instrumental music, were, indeed, left to professional musicians; but in classical times instruction in singing and lyre-playing was a regular part of the education of the freeborn citizen. There thus existed a musically educated public which could not only judge between good and bad performances but could itself take its part in singing hymns, paeans, dithyrambs, and dramatic choruses.

2. **MUSIC AND THE PHILOSOPHERS.** A philosophic sanction was first given to the study of music by the Pythagoreans. The founder of the school is said to have discovered that the chief concordant intervals (*συμφωνίαι*) could be represented by simple numerical ratios; the Octave (τὸ διὰ πασῶν, sc. χορδῶν) by the ratio 2 : 1, the Fifth (τὸ διὰ πέντε) by 3 : 2, and the Fourth (τὸ διὰ τεσσάρων) by 4 : 3. If a lyre string were stopped midway by a movable bridge, either half would give a note an octave higher than the note of the whole string; if the string were stopped at a point a third of the distance from one end, the remaining two-thirds would give a note a fifth higher than the whole string. It was thus demonstrated that music, more directly than the other arts, brought men into contact with Number, which for the Pythagoreans was the ultimate reality; music, or at least the study of music, was thereby justified in the eyes of serious men.

Plato's attitude to music is that the art is capable not merely of affecting the emotions temporarily but of permanently influencing the character. This point of view is clearly seen in his discussion of the musical education which would be suitable for the virtuous citizens of his ideal State (*Resp.* 398 c-399 d). He rejects types of music (*ἁρμονίαι*, scales) which are plaintive (Mixolydian and Syntonydian) or effeminate (Ionian and Lydian), and leaves only the Dorian and Phrygian, which represent (*μιμοῦνται*) courage and sobriety. In his later work, the *Laws* (653 d-673 a; 795 a-812 e), his opinion is still unchanged that the training of the young in good and carefully selected music will contribute to the attainment of virtue.

Aristotle also regards music as important and discusses its uses in his *Politics* (8. 1339^a-1342^b). Less puritanical than Plato, he would allow all types of music for purposes of relaxation; but he holds that rhythms and melodies are representations (*μιμήματα*) of moral qualities and as such have an effect on the soul. For educational purposes, therefore, only the 'most ethical' types of music (*ἁρμονίαι ἠθικώταται*) should be used. At the same time he criticizes Plato for including the Phrygian, and would himself apparently confine instruction to the Dorian, which for him is the golden mean in music.

It is impossible to pass these opinions over as idle fancies when they are not only attested by two such different minds as Plato's and Aristotle's, but are implicit in many of the references to music in other writers (c.g. Aristophanes). The direct ethical effect of music may, indeed, have been exaggerated, as Aristoxenus hinted (*Harm.* p. 31) and as the Epicureans seem to have contended (cf. the *De musica* of Philodemus, 1st c. B.C.). Quite probably conventions and associations with poetic texts had much to do with the attribution of *ἦθος* to the modes; but at least it is evident that the Greeks associated their various *ἁρμονίαι* with distinctive feelings and emotions; and the keenness with which they felt the differences between the modes is well illustrated by the story of Philoxenus (Arist. *Pol.* 8. 1342^b), who tried to compose his dithyramb 'The Mysians' in the Dorian but had to return to the appropriate *ἁρμονία*, which was the Phrygian. Furthermore, this attitude of respect for the power of music found expression in an artistic conservatism. In Argos, for instance, the purity of music

was regulated by law; and at Sparta venturesome innovators had their instruments destroyed.

3. THE ROMAN ATTITUDE. If any music different in kind from that of Greece was indigenous in the Italian peninsula, all trace of it has disappeared; in musical matters Rome was the unenterprising pupil of Greece. The Romans were content to leave the cultivation of music largely in the hands of professional musicians. Cato voiced the feeling of his age when he adduced as a final proof of the worthlessness of an opponent the fact that he sang ('praeterea cantat'); and too great a proficiency in lyre-playing is mentioned as a fault in Sempornia, one of Catiline's associates. Music was not an essential part of a boy's education during the Republic, and even when it was included in a semi-Greek curriculum it seems to have consisted of little more than a simple theoretical outline. Cicero, for example, speaks with surprise of those who can recognize a theatre melody after the first few notes have been played (*Acad.* 2. 20). Furthermore, the forms of poetry which were most favoured by the Romans were just those which could most easily dispense with music; and Horace's *Carmen Saeculare* is the only extant lyric poem in Latin which we know to have been sung.

In the whole range of Latin literature we find only the most common-place and conventional references to music, and though gifted amateurs (including Nero) were more frequent in Imperial times; nowhere is there any indication that the Romans regarded music as anything more than a tolerable adjunct of civilized life. Unlike Achilles, Aeneas did not find his solace in music, and the nation he founded never acquired a passion for it.

4. EVIDENCE FOR GREEK MUSIC. For knowledge of Greek music we may turn to: (i) actual fragments of musical scores; (ii) remains of musical instruments; (iii) later types of music supposed to be descended from the Greek; (iv) ancient treatises. (i) The musical scores are few in number and very fragmentary; only one is claimed to be classical; and all depend for their interpretation upon a knowledge of the ancient musical notations (see § 11). (ii) Even if any *etharas* remained, they would be useless without their strings at the original tension; the few surviving *auloi* have lost their mouth-pieces and very specialized knowledge and expert skill in playing are required before they can begin to yield up their secrets. The most recent attempt to utilize this type of evidence is in K. Schlesinger's *The Greek Aulos*. (iii) It is reasonable to suppose that Greek folk-song and Byzantine music retain some elements which are derived from the ancient art and there is a tradition that the music of the Roman liturgy owes a debt to Greece. But all these types of music have been subjected through the centuries to so many influences that it would be extremely hazardous to attempt to define those features which may be due to Greek inheritance. (iv) The easiest and most definite line of approach is provided by the treatises on music.

Of these theoretical books the earliest is the *Harmonics* (*Ἀρμονικὰ* and *Στοιχεῖα*) of Aristoxenus (q.v.), which is of fundamental importance. Part of bk. 11 and the whole of bk. 19 of the ps.-Aristotelian *Problems* (*Προβλήματα*) are concerned with music, and Euclid's *Division of the Monochord* (*Κατάομις μονόχορδος*) contains a series of mathematically formulated propositions about musical intervals. Next in date comes the work *On Music* (*Περὶ μουσικῆς*), attributed by the manuscripts to Plutarch (1st c. A.D.), which contains much historical material, derived partly from Aristoxenus. To the second century A.D. belong the *Introduction to Harmonics* (*Εἰσαγωγή ἁρμονικῆς*) of Cleonides (formerly attributed to Euclid), which gives a valuable outline of Aristoxenian theory; Theon of Smyrna's *Mathematical useful for reading Plato* (*Τὰ κατὰ τὸ μαθηματικὸν χρήσιμα*), which includes excerpts from Archytas and other reputable authorities; Claudius Ptolemy's *Harmonica* (*Ἀρμονικά*),

in three books, which is indispensable; the *Handbook of Harmonics* (*Ἀρμονικὸν ἐγχειρίδιον*) of Nicomachus of Gerasa; and the *Introduction to Harmonics* (*Ἀρμονικὴ εἰσαγωγή*) of Gaudentius. To the third century A.D. probably belong the three books *On Music* (*Περὶ μουσικῆς*) of Arstides Quintilianus and the *Introduction to Music* (*Εἰσαγωγή μουσικῆς*) of a certain Alypius, which is our chief source of information for the musical notations. To the fourth century A.D. belongs the *Introduction to the Art of Music* (*Εἰσαγωγή τέχνης μουσικῆς*) by an otherwise unknown Baecchius (*Βακχείος*). In Latin the chief works are the *De musica* of Boethius and the ninth book of the *De nuptiis Philologiae* of Martianus Capella.

It is obvious that most of these treatises are far removed in date from classical Greek music; and though much of their doctrine is traditional, we cannot always be sure that the writers are relying upon older authorities. Unfortunately their testimony is not unanimous in a number of important matters and they are silent about some topics on which information is desirable.

5. ANCIENT AND MODERN MUSIC. (i) The most striking difference between the music of the Greeks and that to which western Europeans are accustomed is that the ancient art made use of a large number of scales or modes, which differed from each other in the sequence of the intervals composing them and in tonality. It was to these modes that the Greeks attributed the varying ethical effects of music. Our Major and Minor scales are often called modes, but they give only a poor idea of modal music; for though the sequence of intervals is different and the Minor is distinguished from the Major by the flattening of its third and sixth notes, both scales have a common tonic or key note (actually the lowest note of the scale), in relation to which the importance and function of the other notes is determined. A better, though still imperfect, idea of the ancient modes may be obtained from Gregorian music, in which the tonal centre does not occupy the same relative position in every scale.

(ii) The second difference lies in the size of the intervals used in the modes. Our scales consist only of tones and semitones; the semitones (on the pianoforte at least) are made as nearly equal as possible, and twelve of them complete an octave. In Greek music tones and semitones were not all equal and the enharmonic *dieeis* (*δίσκαις*, sometimes translated as 'quarter-tone') was smaller than any interval with which we are familiar. Neither modern nor Gregorian music can afford us any example of this wide variety of intervals; we must listen to Indian, Arabian, or Chinese music if we wish to gain some impression of intervals different from our 'tempered' tone and semitone. Indeed, it is very probable that if we could hear a piece of ancient Greek music accurately performed, we should regard it as bizarre, uncouth, and possibly barbaric.

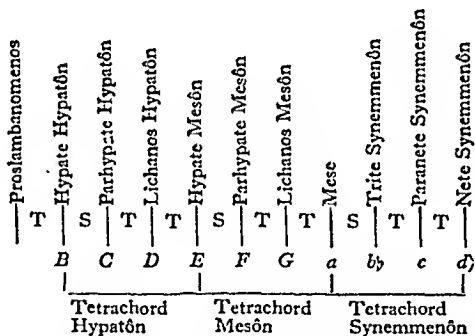

(iii) The third great difference is of a less technical nature: Greek music was predominantly melodic. Choruses sang in unison (or in octaves if men and boys were performing together); to this practice there seems to have been no exception (cf. [Arist.] *Pr.* 19. 15). There is evidence (Plut. *De mus.* 1137 b) that an instrumental accompaniment played by a professional musician did not always follow the melodic line of the vocal part and sometimes included notes which made dissonances with the voice. How wide a liberty was permissible in such an accompaniment (*στροφωδία*, cf. Plato, *Latr.* *Sr2 d*) is unknown; but there is no reason to suppose that the instrument provided more than an embellishment. It is indisputable that neither in vocal nor in instrumental music was there anything like a counterpoint of mutually independent but congruous parts, and no harmonic structure in the sense in which we understand the term. The Greeks did not evolve the prototype of an eight-part mass or of an orchestral symphony.

6. THE ARISTOXENIAN THEORY. (a) *Tetrachords and systems.* The simplest approach to an understanding of

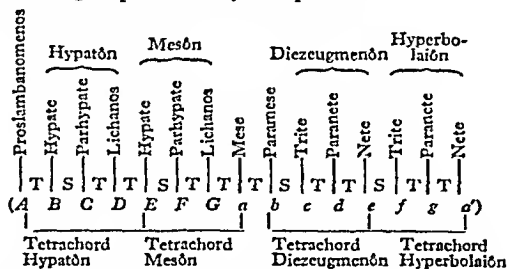

the details of Greek music is from the theoretical expositions of Aristoxenus and his followers (especially Cleonides). As a starting-point we shall take the diatonic tetrachord such as may be found between the notes *E* and *A* on a pianoforte. In ascending order—if we may neglect the downward progression which is generally favoured by the Greek theorists—its intervals are: semitone, tone, tone (S, T, T, or $\frac{1}{2}$, 1, 1). Two such tetrachords could be combined to form a scale or *system* (*σύστημα*) either (i) by conjunction (*συναφή*), when the top note of one tetrachord was identical with the bottom note of the other; or (ii) by disjunction (*διάζευξις*), when an interval of a tone (*τόνος διαζευκτικός*) was inserted between the two:

Conjunct system: E F G A B \flat C D or S T T S T T
 Disjunct system: E F G A B C D E or S T T T S T T

There are three particularly important *systems* thus constructed from tetrachords: (i) the Lesser Perfect System (*σύστημα τέλειον ἑλασσόν*), which consisted of three conjunct tetrachords with an added note called *proslambanomenos* (*προσλαμβανόμενος*, sc. *φθόγγος*) at the bottom. This *system*, with the technical names of its notes (originally derived from their position on a simple lyre, see § 9 (i)) and of its tetrachords, may be represented as follows (though it should be clearly understood that a pianoforte will give a very imperfect idea of the intervals even of a diatonic scale):

(ii) The Greater Perfect System (*σύστημα τέλειον μείζον*) consisted of the Proslambanomenos and four tetrachords grouped in conjunct pairs:

(iii) The combination of the Lesser and Greater Perfect Systems gave the Immutable System (*σύστημα ἀμετάβολον*) which can be regarded as the Greater Perfect System with the addition of the tetrachord Synemmenōn from the Lesser Perfect System.

(b) *Octave species*. Within the Greater Perfect System there were seven different types or *species* of octave (*εἶδη τοῦ διὰ πασῶν*) which could be distinguished by their different interval sequences. Each had its own distinctive name:

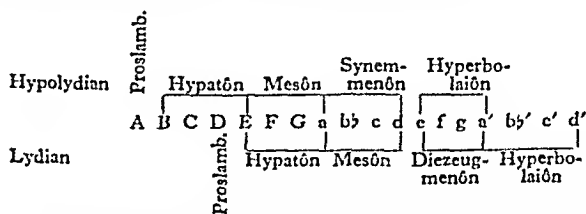

Mixolydian: Hypate Hypatōn—Paramesc (B-b)
 Lydian: Parhypate Hypatōn—Trite Diezeugmenōn (C-c)

Phrygian: Lichanos Hypatōn—Parancte Diezeugmenōn (D-d)
 Dorian: Hypate Mesōn—Nete Diezeugmenōn (E-e)
 Hypolydian: Parhypate Mesōn—Trite Hyperbolaion (F-f)
 Hypophrygian: Lichanos Mesōn—Parancte Hyperbolaion (G-g)
 Hypodorian: Proslambanomenos—Mese (A-a) or Mese—Nete Hyperbolaion (a-a')

(c) *Transposition scales, Keys, or Tonoi*. The Perfect Immutable System could as a whole be played at various pitches without any alteration of the internal interval sequence, just as our modern Major or Minor scale can be taken at various pitches. When associated with a given pitch the Perfect Immutable System had a distinctive name and was called a *tonos* (*τόνος*). According to Aristoxenus himself there were thirteen such *tonoi*, to which later theorists added two more (the Hyperaeolian and the Hyperlydian). On the commonly accepted equation of Greek and modern pitch the fifteen *tonoi* in ascending order were:

	commencing on F
Hypodorian	" F \sharp
Hypoeolian	" G
Hypolydian	" G \sharp
Dorian	" A
Ionian	" B \flat
Phrygian	" B
Aeolian	" C
Lydian	" C \sharp
Hyperdorian or Mixolydian	" D
Hyperionian	" D \flat
Hyperphrygian	" E
Hyperaeolian	" E \flat
Hyperlydian	" F
	" F \sharp
	" G

It will be noted that the names of the lowest five include the prefix Hypo- (*ὑπο-*) and the names of the highest five have the prefix Hyper- (*ὑπερ-*); the middle five have simple ethnic designations. The range from the lowest note of the Hypodorian to the highest of the Hyperlydian was rather more than three octaves, and so corresponded to the combined capabilities of normal male and female voices. Though Aristoxenus is silent on the point, it is reasonable to suppose that the original purpose of the *tonoi* was to bring the various octave *species* within the same vocal range. That is why the pitch order of the *tonoi* is the reverse of the pitch order of the *species* of the same names; the higher is the pitch of a *species* in the Greater Perfect System, the lower is the homonymous *tonos*. Claudius Ptolemy (*Harm.* 2. 9) points out quite legitimately that since there are only seven *species* of the octave, only seven *tonoi* were really necessary. It is also worth noting that the use of the tetrachord Synemmenōn in the Immutable System provided a means of modulation from one *tonos* to another *tonos* a fourth higher; for the conjunction between the tetrachords Mesōn and Synemmenōn could be treated as if it were the conjunction between the tetrachords Hypatōn and Mesōn of another *tonos*: thus:

(d) *Genera and 'colours'*. So far we have been concerned only with tetrachords containing no other interval than

a tone or semitone. The structure of the tetrachords themselves, however, admitted a number of variations known as *genera* (γένη) and 'colours' (χρόαι). The two extreme notes of a tetrachord were regarded as fixed (φθόγγοι ἐστῶτες), while the position of the two inner notes (φθόγγοι κινούμενοι) was variable; and the two lowest intervals of the tetrachord were together called a *pycnum* (πυκνόν) if their sum was less than the remaining interval of the tetrachord. The *genera* were three in number: the diatonic (γένος διατονικόν), the chromatic (γ. χρωματικόν), and the enharmonic (γ. ἐναρμόνιον). The diatonic itself was subdivided in the Aristoxenian theory into two 'colours', the High (σύντονον) and the Soft (μαλακόν); and the chromatic into three 'colours', the Tonic (τονιαῖον), the Hemiolie (ἡμιόλιον), and the Soft (μαλακόν). If we take the tone as a unit, the intervals constituting the various kinds of tetrachords can be set out as follows:

High (σύντονον) diatonic	$\frac{1}{2}$	$\frac{1}{3}$	$\frac{1}{4}$
Soft (μαλακόν) „	$\frac{1}{2}$	$\frac{1}{3}$	$\frac{1}{4}$
Tonic (τονιαῖον) chromatic	$\frac{1}{2}$	$\frac{1}{3}$	$\frac{1}{4}$
Hemiolie (ἡμιόλιον) „	$\frac{1}{2}$	$\frac{1}{3}$	$\frac{1}{4}$
Soft (μαλακόν) „	$\frac{1}{2}$	$\frac{1}{3}$	$\frac{1}{4}$
Enharmonic	$\frac{1}{2}$	$\frac{1}{3}$	$\frac{1}{4}$

When we make allowances for the fact that this doctrine of *genera* is only a theoretical systematization of the actual practice of musicians, it becomes obvious that a Greek composer had a great wealth of subtle intonations at his disposal, and that Greek melodies must have had a delicacy and fineness of outline to which the melodies of modern music can offer no parallel.

7. THEORY AND PRACTICE. The predecessors of Aristoxenus in musical theory were the Pythagoreans and the Harmonists (ἀρμονικοί). The Pythagoreans, however, were more interested in tracing numerical relationships in concordant intervals than in establishing a comprehensive theory; and it is significant that the dying Pythagoras was reputed to have adjured his followers to study the monochord, which was a piece of scientific apparatus and not a musical instrument at all. As a whole, the school devoted its attention to the Dorian scale; and intervals whose ratios they evaluated were considered satisfactory only if they conformed to one or other of the favourite Pythagorean formulae, such as $x: nx$ or $x: x+1$. The Harmonists, on the other hand, were much more interested in the practical art; but it is evident from what Aristoxenus himself tells us about their work (*Harm.* pp. 2, 6, 36, 37, 40) that they were not capable of organizing their knowledge into a really homogeneous system of theory. They did not analyse all the scales, but restricted their study to the enharmonic ones whose compass was an octave; they interested themselves in the search for a small unit of measurement (cf. Plato, *Resp.* 531 a), the *diēsis*, which they used in the construction of diagrams of close-packed intervals (καταπύκνωσις), without any regard for melodic or unmelodic sequences; and they were at variance with one another in their pronouncements about the order of the *tonoi* and the intervals which separated them.

The homogeneity of the system of Aristoxenus cannot be denied. It seems to provide a means whereby any melody, when reduced to its elements, might be related to a scale whose 'colour', *genus*, *species*, and *tonos* could be defined. But apart from the fact that no theory can profess to give more than the osteology of an art, the Aristoxenian theory, as it has come down to us, is unsatisfying.

(i) Underlying it all is the idea that sound can be regarded as a line, at any point of which the voice could rest (though not at all in succession); and that an interval, since it may be thought of as a linear distance between two such points, can be subdivided exactly into any given number of equal parts. But the Pythagoreans had

already laid the foundations of a true acoustic science when they demonstrated that the size of an interval can properly be expressed only by a numerical ratio. There is, in fact, no such interval as a semitone, if by that term we mean an interval which taken twice will produce a 9:8 tone, for the ratio involved ($3:2\sqrt{2}$) is irrational. The intervals 18:17 and 17:16 can be called semitones, and 36:35, or 35:34, or 34:33, or 33:32 may be called 'quarter-tones'; but when Aristoxenus speaks of a *ἡμιτόνιον* or a *διέσις*, his vague description does not give us sufficiently precise information about Greek intonations.

(ii) In Plato and Aristotle and other writers we read of *ἀρμονίαι* most of which had ethnic names: Ionian, Lydian, Dorian, Phrygian. The word itself, when used in this musical sense, is most easily explained by the assumption that each *ἀρμονία* involved a new tuning of the lyre. Though Aristoxenus (*Harm.* p. 36) refers to those 'who confined their attention to the seven octave scales (ἐπτὰ ὀκταχόρδων Westphal; ἐπταχόρδων MSS.) which they called *ἀρμονίαι*', he himself does not use the plural *ἀρμονίαι* in a technical sense. His octave scales are called *species* (εἶδη τοῦ διὰ πασῶν), and their names are not identical with those used for the *ἀρμονίαι*. There is amongst them no Ionian or Syntonolydian; and the names of three of them include the prefix *Hypo-* (ὑπο-) which is not found in earlier writers. Even if we identify the *species* with the *ἀρμονίαι* and equate, for instance, the Syntonolydian and Lydian of Plato with the Aristoxenian Lydian and Hypolydian respectively, it is quite impossible to believe that the *ἀρμονίαι* had their origin as *species* within a two-octave scale which itself evidently belongs to a comparatively advanced stage of musical development. It would be worth much to know what modifications, if any, had to take place before the *ἀρμονίαι* could be theoretically treated as octave *species*.

(iii) A further obscurity, and one of considerable importance, concerns the form of the *species* in the chromatic and enharmonic *genera*. The problem is simple in the case of the Dorian *species* which is bounded by fixed notes (φθόγγοι ἐστῶτες) of the Greater Perfect System; for its enharmonic form would be $\frac{1}{2} \frac{1}{3} 2 1 \frac{1}{4} \frac{1}{2}$. The enharmonic form of the Lydian, however, which is bounded by movable notes (φθόγγοι κινούμενοι) would appear to be $\frac{1}{2} 2 \frac{1}{3} \frac{1}{4} 2 1 \frac{1}{2}$; and it is scarcely credible that such a sequence was ever a musical possibility.

(iv) Nothing is said by Aristoxenus about the tonality either of the Greater Perfect System or of the individual octave *species*. Yet if these *species* were virtually the old *ἀρμονίαι* or a developed form of them, we cannot understand them fully until we know what note had the function of a tonal centre in each. One of the pre-Aristotelian Problems (19. 20) states that all the best melodies make a frequent use of Mese, and we may conjecture that this note was in fact a tonic. But unfortunately it is not clear whether the writer meant the Mese of the Greater Perfect System (i.e. a Mese κατὰ δύναμιν) or the fourth note ascending (i.e. a Mese κατὰ θέαν) of any octave *species*.

So far we have mentioned only those deficiencies of the Aristoxenian theory which are evident from an examination of the system itself. Further problems arise when we try to relate it to other evidence. (i) Aristides Quintilianus (pp. 21-2) gives an account (possibly derived from some work of Aristoxenus himself) of the six *ἀρμονίαι* mentioned by Plato in the *Republic*. Of the scales which Aristides describes, only one (the Lydian) is identical with an Aristoxenian *species* (the Hypolydian); the Phrygian and Mixolydian have an internal structure somewhat different from the corresponding Aristoxenian εἶδη; the Dorian has an additional tone at the bottom; and the Ionian and Syntonolydian are less than an octave in compass. Several of them seem to involve a mixture

of *genera*. There is no reason to reject in its entirety the evidence of Aristides, which, so far as concerns the Mixolydian, is confirmed by a passage of Plutarch (*De mus.* 1136 d); and the truth would appear to be that the old *ἀρμονίαι* were not parts of a homogeneous musical system. (ii) There is other evidence also for defective and anomalous scales used by Olympus and Terpander and analysed by Philolaus (Plut. *De mus.* 1134 f–1135 b, 1137 b–d; [Arist.] *Pr.* 19. 32; Nicom. p. 253 Jan.). (iii) In connexion with the older types of music, prominent mention is made (Plut. *De mus.* 1134 f, 1141 b; Aristid. Quint. p. 28) of intervals called *σπονδειαί* (a rise of three *dieses*), *ἐκλυσίς* (a fall of three *dieses*), and *κεβολή* (a rise of five *dieses*). Intervals of these magnitudes have a very unimportant place in the system of Aristoxenus (cf. his *μαλακόν* diatonic, § 6). (iv) Claudius Ptolemy (*Harm.* 2. 14) has preserved the evaluations for the *genera* made by his predecessors and has added some of his own. The size of the tone is given as 11:10, 10:9, 9:8, and 8:7. The smaller intervals of the enharmonic vary from 46:45, which is less than a quarter-tone, to 24:23, which is larger than a third of a tone; the chromatic intervals vary between 28:27 and 12:11. Though the enharmonic usually has an interval of ratio 5:4 (a major third) at the top, and the chromatic an interval of 6:5 or 7:6 (a minor third) at that place, in both *genera* the two lower intervals are of varying sizes; and it seems that the distinction between the *genera* is not as clear or as definite as the Aristoxenian theory postulates. (v) The Greek musical notations seem on analysis to conflict with the theory of the *tonoi* and their tetrachordal structure. Where we should expect an identity of notation there is divergence, and variety where we should expect identity (see K. Schlesinger, *The Greek Aulos*, 527–30). (vi) Though the widely varying dates (see § 12) of the fragments of Greek music warn us not to press their evidence too far, it is noteworthy that they exhibit a number of melodic progressions which violate the doctrines of Aristoxenus.

8. THE LIMITS OF DOUBT. Despite the defects of the Aristoxenian system which have just been mentioned and the conflicting evidence from other sources, it would be generally accepted that, in the earlier stages, Greek music made use of a number of modal scales which, because they involved separate tunings of the lyre, were called *ἀρμονίαι*. As the compass of the lyre and cithara was extended, the relations between the *ἀρμονίαι* were more clearly apprehended and, at the expense perhaps of the elimination of some apparent anomalies, they came to be regarded as segments of a single two-octave scale based upon homogeneous tetrachords. On the other hand, we know nothing, apart from the evidence of Aristides Quintilianus and Plutarch, about the original structure of the *ἀρμονίαι*. We cannot say whether each of them had a diatonic, chromatic, and enharmonic form or whether the various *genera* and 'colours' were in practice associated with particular *ἀρμονίαι*. Nor can we make any positive assertion about the tonality of the *ἀρμονίαι* or of the octave *species*; the theoretical treatises are almost silent on the point and the musical fragments are not decisive.

9. INSTRUMENTS. Musical instruments (*ὄργανα*) of many types were known to the Greeks; it was therefore by definite preference that only the lyre and cithara among strings and the aulos among wind-instruments ever attained artistic importance. The lyre or cithara predominated in lyric poetry, though the aulos shared in the accompaniment of Pindar's odes and monopolized the dithyramb and the dramatic choruses; the lyre prevailed in education, the aulos had its place in social and military life; both were prominent in cult.

(i) *Strings* (*ἐντάτα*). The lyre (*λύρα*, *κιθάρις*, *φόρμιγγς*) and the cithara (*κιθάρα*) were characterized by strings of equal length, vertically strung and sounded by plucking.

They thus differed from: (a) bowed types, which were unknown to Greece; (b) harps, with strings of unequal length, known but not employed in serious music (e.g. *ψαλτήριον*, *τρίγωνον*, *σαμβύκη*). Pitch was regulated by the tension (and perhaps the thickness) of the strings. In the absence of a fret-board, each string would normally provide one note only; but we cannot rule out the possibility of (a) obtaining the octave-harmonic by stopping the string at its middle point (*διόληψις*), or (b) of shortening the string by finger-pressure near the top to raise its tone by a small interval.

The cithara, which came into use for public performance about the time of Terpander (c. 675 B.C.), was an elaborated form of the lyre, from which it differed mainly in size and sonority. The sound-box of the lyre was formed of the carapace of a tortoise (or a wooden structure of similar shape) with ox-hide stretched over its concavity (cf. *Hom. Hymn. Merc.* 41 ff.); from it rose two slender curved side-pieces (*πήγεις*, *κέρατα*) of wood or horn. The body of the cithara was of wood and more solidly and squarely built, the arms forming a substantial prolongation of the sound-box. In both instruments the strings (*χορδαί*, *νευραί*), of gut or sinew, were stretched from a holder (*χορδοτόνον*) fixed to the body over a bridge to the cross-bar (*ζυγόν*) which joined the two side-pieces. Here there was an apparatus of thongs or pegs (*κόλλοπες*) by which the strings could be tuned; but how the tuning was done is not clear.

The traditional number of strings for the lyre was seven, and it is doubtful if the cithara had more than eight till the fifth century, when strings were added by e.g. Phrynis and Timotheus (see § 10); but the evidence for details is confused. Timotheus himself refers (*Persae* 242) to the eleven strings of his cithara; he is said to have added a twelfth also (Pherecrates ap. Plut. *Demus.* 1141 f). It is unlikely that the number was ever increased to fifteen or eighteen (as late theorists imply) and uncertain how many strings the lyre ultimately had. The strings were plucked by the left hand directly, following the vocal melody (*ψάλλειν*, *intus canere*), or by the right hand with the aid of a plectrum (*πλήκτρον*), to provide such independent accompaniment, preludes, interludes, etc., as there may have been (*πλήσσειν*, *κρούειν*, *foris canere*; cf. Apul. *Flor.* 2. 15, Ascon. in Cic. *Verr.* 2. 1. 53). The cithara rested against the body of the performer and was supported in position by a belt (*τελαμών*), the strings of lowest pitch being farthest from him (cf. the nomenclature of notes: *ὑπάτη*, *νῆτη*).

The *barbitos* (*βάρβιτος*, -ον), the instrument of Sappho and Alcacus, seems to have differed little from the lyre, except that its strings, being longer, gave notes of lower pitch. As to the *πηκτίς* and *μαγαδής*, it is uncertain whether they were distinct from one another and whether they belonged to the class of harp or lyre. They had many strings, and so made playing in octaves possible; hence came the term *μαγαδιζειν*, for doubling a vocal part at the octave.

(ii) *Wind* (*ἐμπνευστά*). The *αὔλος*, commonly mis-translated 'flute', was akin rather to the clarinet or oboe. The exact nature of the vibrator is, despite a passage of Theophrastus (*Hist. Pl.* 4. 11. 4), a matter of uncertain inference, since the instruments preserved lack mouth-pieces; but it was probably a double-reed (*ζεῦγος*, *γλῶττα*, *γλωττίς*). This was inserted into a cylindrical pipe, and the extrusion of the reed was partially hidden by one or more bulbs (*ὄλμοι*). K. Schlesinger, however, in *The Greek Aulos* (a mine of information about the behaviour of reed pipes) maintains that the double-reed gave place at a certain stage to a single-reed. The pipe, of reed, wood, bone, or ivory, was open at the lower end and pierced with lateral holes. Of these the early aulos had probably no more than three or four, which, in conjunction with the *βόμβυξ* or note of the whole pipe,

would seem to provide a very limited range. The question is complicated, however, by the fact that auloi were generally played in pairs (contrast *μόναυλος*, a single pipe, and cf. the Latin *tibiae*). The suggestion that one of them provided a drone is supported by no evidence; and the commonly accepted view that the right-hand pipe played the melody, the left-hand pipe the accompaniment (*κροῦσις*), suggests a hardly credible degree of polyphony, if both pipes spoke together. If, however, there was some device (of which we know nothing) to allow the pipes to speak separately, the two instruments may have combined to produce a more extended scale. The pipes were not always of the same length. In the Phrygian auloi they were of exceptionally small bore, and the left was longer and consequently deeper in tone. Of such a type, probably, were the *tibiae impares* of the Roman *palliata*.

In the early period a separate pipe (or pair of pipes) was required for each mode (*ἄρμονία*). Later the potentialities of the instrument were greatly enlarged, particularly by Pronomus and the Theban school of the fifth century. Length and the number of holes were increased (the longest of surviving auloi has 15 or 16, the shortest 6), and a device was introduced by which the holes not required for a particular scale could be closed by a perforated metal ring operated by a small projection (*κέρας*). In this way it was possible to play a number of different modes on one pair of auloi; and instruments were no longer classified according to mode, but by general range of pitch. Aristoxenus (ap. Ath. 634 e) distinguishes five types (in descending order of pitch): *παρθένιοι*, *παιδικοί*, *κιθαριστήριοι*, *τέλειοι*, *ὑπερτέλειοι*; and he states (*Harm.* 20) that between them they embraced a range of more than three octaves. Furthermore, a practitioner of the highly individualistic art of aulos-playing had at his disposal many professional tricks such as overblowing, cross-fingering, partial obturation of holes, regulation of the reed and of his own breath, whereby he could extend the capabilities of his instrument.

The transverse flute finds no parallel in Greece (for the *πλαγίαυλος* was an aulos in which the reed was introduced obliquely by a lateral tube). But an instrument of the flute type was the *syrinx* (*σύριγξ*). Blown directly at the upper end, like a flageolet, it might consist of a single pipe (*σ. μοινοκάλαμος*) or of a structure of pipes of graded length bound side by side (*σ. πολυκάλαμος*). The latter, the high-pitched Pan's Pipes, beloved of shepherds, was part-ancestor of the water-organ (*ὕδρανυλός*: invented by Ctesibius of Alexandria in the 3rd c. B.C.), in which rows of graduated auloi were supplied with air hydraulically.

Brass instruments (with bone mouthpieces) were primarily employed for military purposes. Both the straight (*σάλπιγξ*, *tuba*) and curved (*κέρας*, *cornu*) varieties of trumpet were known. In the Roman *lituus* the curvature was probably confined to the extremity.

(iii) *Percussion*. Tambourines (*τύμπανα*) and cymbals (*κύμβαλα*) belonged rather to the cults of, e.g., Dionysus and Cybele than to serious music.

10. *HISTORY*. The history of Greek music overlaps the history of Greek poetry, for the main function of music was to accompany poetic texts. Thus the principal types of musical composition correspond largely to the types of poetry, and our scanty sources mention as leading composers many who are better known to us as poets: Archilochus (evidently an important influence), Sappho, Pindar, Sophocles; unfortunately, no detailed account of the musical side of their work can be given. There are others, however, known primarily as musicians; and we know of types of performance that were primarily musical.

Musical history really begins in the seventh century with Terpander and Archilochus. In the background

are folk-song, work-song, song (personal or choral), occasional to the principal events of human life, and above all cult-song. In the background is the epic tradition: a Phemius or Demodocus singing epic verse to the lyre. In the background is also an elusive foreign influence; for Greek music was not racially pure. Recent research into Egyptian, Babylonian, and Palestinian music has shown possible points of similarity; indeed, the Greek tradition itself avowed an influence from the Orient, not only in the names of certain modes, but in the legendary figure of Olympus the Mysian. But the contrast is not a simple one, and Olympus himself is a composite figure, representing a fusion of the Hellenic and the Oriental. Nor was the instrument with which he is chiefly connected, the aulos, new to Greece, for it was already associated with traditional cults; and the antithesis of Hellenic lyre and Asiatic aulos needs to be used with great caution. Probably new styles and techniques were introduced from the East in the eighth century, but we are not in a position to separate the new from the old.

Terpander (fl. c. 675) came from Antissa in Lesbos, but his activity is associated with Sparta. His chief claim to fame is that he first impressed his individuality upon the traditional *νόμοι κιθαρωδικοί* so that they were handed down as his personal compositions. Styles rather than definite melodies, in origin (see Sachs *Musik d. Altertums*, p. 64), these *νόμοι*, which were vocal solos accompanied by the cithara, became the subjects of competition. The texts were for the most part epic, with a prelude written by the composer or executant; the melody was severe and eschewed modulation. About the same time the obscure *Clonias* (of Tegea?) performed the same service for the analogous *νόμοι αὐλωδικοί*. But more famous names connected with the aulos are those of *Polymnestus* of Colophon and *Sacadas* of Argos. The former's fame was recognized by Pindar (fr. 188), and Plutarch speaks of him as an innovator who, nevertheless, did not depart from the severe style. *Sacadas* was the most famous executant of the sixth century. For not only was he singer-composer of *νόμοι αὐλωδικοί*, but player-composer of the famous *αὐλητικός νόμος Πυθικός* (a purely instrumental piece, dealing with Apollo's victory over the Python) in which he won in 586 the first of three successive victories at the Pythian Games. The accounts that late authorities give of the structure of this piece reveal an element of 'programme-music'. It is interesting too that purely instrumental music (*ψαλλὴ αὐληαῖς*) should have won and kept an important place in a Greek festival at all; even solo cithara-playing (*ψαλλὴ κιθάραις*), which would seem a bleak entertainment, found its way into the Pythian and other festivals.

Doubtless the main triumphs of Greek music in this period were in choral lyric, an indissoluble complex of poetry, melody, and dance, which culminated with Pindar, Simonides, and the early tragedians. To later—and moralizing—theorists this was the epoch of the 'educative' style, in contrast to the 'theatrical' or 'popular' style that developed in the fifth century. The process of transition cannot be traced in detail. An important factor may have been the evolution of the aulos (see § 9), which increased the available range of melody and facilitated modulation. String-players, too, envious of the freedom of their fellows, added strings to the cithara (see § 9). Furthermore, the balance of importance between choir and instrumentalist began to change. The chief factor, however, was mental rather than technical. Individualism was in the air and convention suspect; and the interpreter of a tradition intimately associated with religion became a virtuoso bent upon giving pleasure to an audience. Thus variety (*ποικιλία*) took the place of simplicity; the melodic range was extended, modulation (and perhaps vocal and

instrumental embellishments) cultivated; rhythmical structure became freer; the poetry mattered less in comparison with the melody.

The types of music especially affected were the dithyramb and the *vómos* *κιθαρωδικός*. The latter was revolutionized by *Phrynis* of Mytilene (fl. c. 450). The former, under *Melanippides* and *Cinesias*, broke away from strophic structure into free verse (cf. A. W. Pickard-Cambridge, *Dithyramb, Tragedy, and Comedy*, 53 ff.). *Timotheus* of Miletus (c. 450–360) was a master of both forms; and, indeed, the distinction between them was blurred, for while *Timotheus* seems to have introduced a choral element into the *vómos*, *Philoxenus* (his contemporary) introduced *solí* into dithyramb. The impure poetic style favoured by composers of *vómoi* and dithyramb alike can be judged from the *Persae* of *Timotheus*, a *vómos*, which has in great part survived. The rhythms are varied but uninteresting; the diction is turgid, obscure, and undistinguished. But the work is a libretto rather than a poem; and we should not condemn the music unheard, though we may suspect that lack of taste was not confined to the poetic text. How far the new style affected other types of music it is hard to say. Certainly it was not unchallenged in the fourth century; and, when we come to the earliest of our substantial fragments, the Delphic Paean, we find a strong archaizing tendency.

II. THE NOTATIONS. (i) *Melodic*. To note their melodies the Greeks used alphabetic forms, written, in the case of poetic texts, above the syllables. Two systems of notation for the fifteen *tonoi* are recorded in ancient authorities (notably *Alypius*), who also assert that one was used for vocal, the other for instrumental melody (*σήματα τῆς λέξεως, τῆς κρούσεως*). This is confirmed by the Berlin papyrus, where both notations are so employed. It should be observed, however, that (a) we have no certain case of the employment of both together; (b) the second Delphic Hymn is noted in the instrumental notation, which suggests that, where vocal and instrumental melody were identical, the notations might be employed indifferently.

The history of the notations is obscure and their interpretation controversial. It is unlikely that *Pindar* and *Aeschylus* had no means of writing down their melodies; but the vocal notation can hardly have preceded the general adoption, towards the end of the fifth century, of the Ionic alphabet on which it is based; the instrumental notation, the origin of whose forms is uncertain, may well be earlier, but, being designed for a system of *tonoi*, it implies a developed theory. That system was not, however, the fifteen *tonoi* of *Alypius*. For instance, in both notations the signs above Dorian *nete hyperbolaion* repeat those an octave below with the addition of an acute accent and probably did not belong to the original scheme; at the lower end the instrumental notation has adapted the forms below Hypolydian *proslambanomenos* from the vocal notation. It would seem, then, that the original scope of the instrumental notation was two octaves and a tone, and that it was designed for five (or six) *tonoi*, having a range of a twelfth (or eleventh) only.

The instrumental notation is characterized by triads, in which the same form appears in three positions (e.g. F u 7), representing the three notes of an enharmonic *pycnon* (see § 6 d). Thus the highest note is a semitone above the lowest, and the highest and lowest notes of the various triads combine to form a semitonal series of fixed pitch. But this notation as applied to the chromatic and diatonic shows some peculiarities: all three *genera* have a common sign for *parhypate*, despite its varying pitch; and, while the sign for diatonic *lichanos* correctly implies an interval of $1\frac{1}{2}$ tones from *hypate*, chromatic *lichanos* is distinguished from the enharmonic only by a diacritical mark. There were thus two conflicting

principles at work, those of absolute pitch and relative function; and it is to this conflict, and to the adaptation of the original scheme to additional *tonoi*, that many of the much-canvassed anomalies are due: namely, the employment of the same sign with different values, of different signs with the same value. (Sachs, in *Zeitschrift f. Musikwissenschaft* vi, proposing a radically new interpretation, relates the instrumental notation to a pentatonic tuning of the lyre.) The vocal notation corresponds to the instrumental note for note, but replaces the triads by a continuous alphabetic series. Most of the letters of the alphabet are employed (in descending order) within the range of the central octave of the Dorian *tonos*, which was the kernel of the whole system; above and below are altered forms of the same series.

(ii) *Rhythmical*. Symbols were used, when necessary (see § 13), to elucidate the rhythm. (a) The signs —, —, —, — placed over a note indicated that its length was that of two, three, four, and five time-units (or *chronoi* *πρώτοι*) respectively. (b) A rest (*chronos kenos*), or a protraction of the preceding note, was indicated by Λ or ∩, which might be used in conjunction with the signs of quantity: e.g. π. (c) Dots (*στιγμαί*) might be used to distinguish the structure of the metrical foot, and ancient authority states that the function was to mark the *arsis* (*ἀρσις*). On the whole our fragments confirm this, but the evidence is complicated (see Powell and Barber, *New Chapters* ii. 160 ff.). (d) A subscript curved hyphen might be used to bind together notes sung to the same syllable.

12. THE FRAGMENTS. The following constitute the corpus of surviving Greek melody.

A. *In papyri*. (i) A musical setting of Euripides' *Orestes* 338–44, found among the Rainer papyri, may be Euripidean, since the poet's own score was extant in the time of Dionysius of Halicarnassus. (ii) A Zenon papyrus of c. 250 B.C. contains a brief fragment, possibly from a tragedy, though the date of composition is unknown. (iii–vii) These five fragments from a Berlin papyrus were written down later than A.D. 156, but may have been composed earlier: (iii) twelve lines of a Paean in a Hellenistic manner; (iv) three lines of melody for instrument only; (v) four lines of an address to the suicide Ajax, possibly excerpted from a tragedy; (vi) three lines of melody for instrument; and (vii) half a line of lyric. The instrumental pieces iv and vi have no discernible connexion with the vocal fragments they follow; all five make elaborate use of rhythmical notation. (viii) The setting of a Christian hymn, found in an Oxyrhynchus papyrus of the third century A.D., is in Greek notation, but it is doubtful whether it affords evidence of the adaptation of Greek melody to the new worship (cf. E. Wellesz, *CQ* 1945).

B. *On stone*. (ix–x) The most extensive fragments of Greek music that survive are two paeans, both seriously incomplete, found in 1893 during French excavations at Delphi. The second can be dated 128–127 B.C. and ascribed to a certain Limenius; the first may well have the same date and authorship. Both are written in paeonic or cretic metre, which, in the absence of rhythmical notation, suggests 5/8 time. The second paean is followed by a brief prosodion in an Aeolic metre. Melodically, these two paeans strikingly illustrate the Aristoxenian scale-system, tetrachordal structure being clearly marked and the 'standing-notes' emphasized (see § 6 d). (xi) An inscription of the second century B.C. or later, found at Aidin near Tralles, presents us with a brief but intact and attractive melody, commonly known as the 'Epitaph of Scikilos'. The words are a kind of skolion in free iambs, the rhythm being elucidated by notation.

C. *In manuscript*. (xii–xv) Four melodies have come down among the manuscripts of the ancient treatises. (xii–xiii) The Hymn to the Muse should in fact be

regarded as two separate pieces, both of uncertain date. (xiv) The Hymn to Nemesis is attributable to Mesomedes, a contemporary of Hadrian. (xv) Similarity of style suggests the same authorship for the Hymn to the Sun. (xvi) Short snatches of melody occur in Bellermann's *Anonymus* (§§ 97-101, 104). Their apparent purpose is to illustrate types of rhythm.

Musical analyses of these fragments are given in Powell and Barber, *New Chapters* ii. 167-78 and R. P. Winnington-Ingram, *Mode in Ancient Greek Music*, 30-47. The melody to the opening lines of Pindar's first Pythian ode, published by A. Kircher in his *Musurgia Universalis* (1650), is under such grave suspicion of being a forgery that its evidential value is negligible (see *CPhil.* xxxi. 120 ff.).

13. MELODY, RHYTHM, AND THE GREEK LANGUAGE. Two important principles of composition emerge from a consideration of the fragments. Both in melody and in rhythm, a Greek composer had less apparent freedom in setting words than his modern successors. This is explicable from the nature of the Greek language: (a) by virtue of its pitch-accent, it possessed, even when spoken, an inherent melody—in the phrase of Aristoxenus, *λογῶδες τι μέλος*; (b) it possessed clearly marked long and short vowels, which formed the basis of quantitative metres.

(a) In the majority of extant compositions this word or sentence melody is respected: an accented syllable is set to a note which is not lower and is frequently higher than other syllables of the same word (for details see Powell and Barber, *New Chapters* ii. 165). Yet this principle is not observed by all the vocal fragments or by all equally. They fall into three groups: (1) in iii, ix, x, xi, xii, xiii exceptions are absent or negligible; (2) in i and vi the accent seems to be altogether disregarded; (3) viii, xiv, xv show the influence of the accent, but with more frequent exceptions. The phenomena of (3) may reflect the gradual break-down of the pitch-accent which was taking place during the period of their composition. This explanation will not, however, account for (2), which includes the *Orestes* fragment; but it should be observed that i is strophic, v may well be; and, if (as is probable) strophe and antistrophe were sung to the same melody, the accent was then bound to be disregarded.

(b) The rhythms of Greek music were practically identical with the metres of Greek poetry; and, where the natural quantities of the syllables are distorted, such a distortion is also a concern of the metrist. Some of our fragments (e.g. ix, x, xii-xv) are without rhythmical notation, presumably because the natural lengths of syllables were a sufficient guide; only in the Berlin Paean (where — — — is rhythimized as, e.g., ♩ ♩ ♩) is there a considerable divergence between rhythm and metre. In judging this apparent restriction of the musician's freedom, however, it must be remembered that the Greek lyric metres themselves were elaborate partly because they were musical and choreographic as well as poetic rhythms.

BIBLIOGRAPHY

ANCIENT SOURCES: (a) *Theoretical works*. (i) *Collections*: M. Meibomius, *Antiquae Musicae Auctores Septem* (2 vols., Amsterdam, 1652); containing: Aristoxenus, Euclid with Cleonides, Nicomachus, Alypius, Gaudentius, Bacchius, Aristides Quintilianus, Martianus Capella. C. von Jan, *Musici Scriptores Graeci* (1895); containing: Aristoxenus loci, ps.-Arist. Problems, Euclid, Cleonides, Nicomachus, Bacchius, Gaudentius, Alypius. (ii) *Separate authors*: Aristoxenus, ed. P. Maquard (1868), R. Westphal (1893). H. Macran (1902); ps.-Aristotle Problems, ed. F. A. Gevaert and J. C. Vellera (1903); Plutarch, *De rebus*, ed. R. Vollmann (1856), J. C. Vellera (1903); H. Weil and Th. Reinach (1902); Theon of Smyrna, ed. E. Hiller (1878); Ptolemy, ed. J. Wallis (1682 and, with Smyrna, ed. E. Hiller (1878); Porphyry, ed. I. Düring (Göteborg, 1921); (Göteborg, 1921); Porphyry, ed. I. Düring (Göteborg, 1921); Aristides Quintilianus, ed. A. Jahn (1851); Ptolemy, *De mus.*, ed. J. Kempt (1884). Add also F. Bellermann's *Anonymus de musica* (1841) and H. A. J. Vincent's *Notice sur les MSS grecs de la 1^{re} et 2^e de Notation et Extraits des MSS de l'Est*, 1847.

(b) *Fragments of music*. Incomplete collection in C. von Jan's *Musici Scriptores Graeci, Supplementum* (1899). For Delphic Hymns add J. U. Powell's *Collectanea Alexandrina* (1925); for Christian Hymn add POxy. xv, No. 1786, Th. Reinach in *Revue Musicale* (1922), and R. Wagner in *Philologus* (1923); for Berlin fragments add W. Schubart in *Sitzb. Preuss. Akad. Berl.* (1918) and R. Wagner in *Philol.* (1921); for Cairo fragment add J. F. Mountford in *JHS* (1931).

J. F. M. & R. P. W.-I.

MUSIC IN WORSHIP. Both in Greece and Italy music, vocal and instrumental, formed an important part of worship at all periods. To begin with Homer, the embassy sent to Chryse in *Iliad* i. 472-4 spend the whole day after their arrival singing a hymn (*παῖνον*) to Apollo, who is pleased with it. This paean remained typical of his worship, and the quintuple rhythm characteristic of it was named after it. In like manner the dithyramb was appropriated to Dionysus (q.v.). Neither of these, however, was exclusively the property of Apollo or Dionysus; e.g. paeans were composed to Asclepius (see Powell, *Coll. Alex.* 133 ff.). The singing of some kind of hymn (q.v.) appears regularly to have accompanied any formal act of worship, and instrumental music (strings and wind) also is commonly mentioned: cf. SACHIFICE.

Much the same is true for Italy. Hymns are continually met with, some traditional, as those of the Salii (see MARS) and Arval Brothers (Henzen, *Acta Arualium*, p. cciv). Instrumental music was so regular and necessary an accompaniment of ritual (e.g. Cicero, *Nat. Resp.* 23, the proceedings are visited 'si . . . tibicen repente contineat') that the *collegium tibicinum et fidicinum qui sacris publicis praesto sunt* formed an ancient and important guild with a holiday of its own, cf. MINERVA. One reason for this was doubtless to drown any slight noises which might be of ill omen.

Very little is known of the style of this music, but it is fairly certain that there was no prohibition of the introduction of new forms.

H. J. R.

MUSONIUS RUFUS, GAIUS, of Volturni, Stoic, seems to have been born before A.D. 30 and to have died before 101/2. About A.D. 60 Rubellius Plautus was banished by Nero to Asia Minor, and Musonius followed him. After Rubellius' death he returned to Rome, but in 65-6, on the discovery of the Pisonian conspiracy, he was banished to Gyaros. He returned to Rome, probably under Galba. He was again banished by Vespasian, but returned again in the reign of Titus. We do not know of his having written books, but many of his speeches and discourses have been preserved. Among his pupils were many philosophers (notably Epictetus) and many leading Roman citizens.

Ed. O. Heine (1901); see letters in R. Heimbach, *Epist. Musonii Gaii*, 421-4. *PW* 101, 895.

W. D. R.

MUTILUS, see PAPIRUS.

MUTINA, a prosperous wool-trading town in Cisalpine Gaul, controlling important roads and passes (Strabo 5. 218); nowadays *Modena*. Although Boian and possibly Etruscan settlements existed here from early times, Mutina is first mentioned in 218 B.C. when already a Roman stronghold (Polyb. 3. 40—inexact; Livy 21. 25). Rome apparently held Mutina uninterruptedly, making it a citizen colony in 183 which Ligurians sacked in 177; the Romans immediately restored it (Livy 39. 55; 41. 16). Mutina is famous for its successful resistance to Pompey in 78 and to Antony in 43 (the *bellum Mutinense*) (Plut. *Pomp.* 16; App. *BCiv.* 3. 49 f. etc.). Subsequently it is rarely mentioned. E. T. S.

MYCENAE (Μυκῆναι, Μυκῆνη), lies in the north-east corner of the Argive plain, 6 miles from Argos and 9 from the sea, among the foothills guarding the road to Corinth. The name Mykene is not Greek. The city was first inhabited at the opening of the Bronze Age (3000–2800 B.C.) by people akin to the pre-hellenic population of the Islands and Crete, and possibly that called 'Carian' by the Greeks. Its power increased during the Middle Bronze Age (c. 2100–1600), when it was occupied by people who probably belonged to the first wave of Greek-speaking folk in Greece, for tombs and pottery of this period are common on the site. In the transition from the Middle to the Late Bronze Age Mycenae rose to greatness under a dynasty of kings whose remains and treasures were found by Schliemann in the Shaft Graves in the Grave Circle within the Lion Gate. These royal graves were succeeded in the second and third phases of the Late Bronze Age by the nine beehive tombs. During the first two phases (c. 1600–1400) of the Late Bronze Age the citadel was fortified and contained a palace, but reconstruction at the opening of the third phase destroyed all but a few traces. This third phase (1400–1150) was the great age of Mycenae. Then were built the citadel walls with the Lion and Postern Gates, the palace, and the greatest beehive tomb, the Treasury of Atreus, probably that of the king responsible for this great architectural activity. To a later stage belong the extension of the citadel to the north-east with a sally-port and the secret approach to the subterranean cistern and the last of the beehive tombs, that of Clytemnestra. At the close of this age Mycenae was destroyed by fire. It was reoccupied in the Early Iron Age, and in the archaic period a temple associated with early sculptured reliefs was built over the ruins of the palace. In the Persian Wars it sent a contingent to Plataea, but c. 470 B.C. it was captured and dismantled by Argos. In Hellenistic days Mycenae revived as a dependency of Argos. The acropolis was repaired, the temple rebuilt, and a wall erected round a lower town to the west including a theatre. This town gradually decayed and by the time of Pausanias was deserted.

The citadel of Mycenae was a fortified royal residence with quarters for the court, the officials, and the necessary guards and servants. The civilian population lived in open townships around. The extent of the cemeteries of the Late Bronze Age shows that it was well populated and prosperous. The theory that the contents of the Shaft Graves were originally in the beehive tombs and later moved within the citadel for safety is open to serious objections. It assumes that the finest beehive tombs, the Treasury of Atreus and the Tomb of Clytemnestra, date from the close of the Middle Bronze Age. This is contrary to the archaeological evidence as well as to the logical idea that the construction of such tombs evolved parallel with other arts, and separates the most developed beehive tombs from the great age of Mycenae in art and architecture in the third phase of the Late Bronze Age.

(1922, 1925), *Chamber Tombs at Mycenae* (1933), *JHS* 1939; *Illustrated London News*, 16 and 23 Dec., 1939. A. J. Evans, *Shaft Graves and Beehive Tombs* (1929); G. Karo, *Schachtgräber v. Mykenai* (1930). A. J. B. W.

MYGDON (Μυγδών). In *Iliad* 3. 184 ff. Priam relates that he went as an ally to a Phrygian army gathered under Mygdon and Otreus to fight the Amazons on the Sangarius. The Coroebus of Verg. *Aen.* 2. 407 was Mygdon's son, [Eur.] *Rhes.* 539. Mygdon is apparently the eponym of the Thracian or Phrygian Mygdones. H. J. R.

MYIA, said to have been daughter of Pythagoras, is mentioned in Clem. *Strom.* 4. 19. 121, p. 224 as a Pythagorean philosopher. A letter purporting to be by her is printed in R. Hercher, *Epistologr. Gr.* 608.

PIV xvi. 1002.

MYLITTA, a goddess, certainly akin to Ishtar and perhaps specially concerned with childbirth, worshipped at Babylon, and identified by Herodotus (1. 131) with Aphrodite. In honour of M. every Babylonian woman, once in her lifetime, had to prostitute herself to a stranger: she sat in the temple arca, and remained there till accosted by a stranger in the name of the goddess. The fee offered might be of any amount, and was dedicated to M. (Hdt. 1. 199; cf. LXX, *Epist. Jerem.* 42–3 perhaps [c. 300 B.C.]). See PROSTITUTION, SACRED. F. R. W.

MYLLUS. Suidas and Zonobius (5. 14) mention him as a writer of Old Comedy. But he may be merely one of the typical figures of farce = 'The Squinter': cf. Cratinus, fr. 89.

MYOS HORMOS, 'Mussel-Harbour', *Abu Scha'ar* on the Egyptian coast of the Red Sea, was founded by Ptolemy II (274 B.C.) and connected with Kenah on the Nile by a well-equipped desert-trade. Very important for Oriental trade, it was later surpassed by Bercnice.

Warmington, *Indian Commerce*, 6 ff.; Kees, *PIV*, s.v. E. H. W.

MYRO, see MOERO.

MYRON (fl. c. 480–445 B.C.), Greek sculptor, a native of Eleutherae and reputed pupil of the Argive artist Ageladas. Primarily a worker in bronze, his main contribution to the art of sculpture was to create entirely new compositions and attitudes which the relatively new process of bronze-casting made possible. He emancipated the artist from the conventions of composition of the preceding generation. Two of his major works survive to us in copies—the Discobolus, of which the 'Lancelotti' copy is the best of many, and the 'Athena and Marsyas'. The latter is illustrated by coin-designs for the general attitude and by Roman copies for the figures in detail. The Athena is best represented by a copy at Frankfurt, the Marsyas by a copy in the Lateran gallery. The group as a whole appears on a relief on a marble vase at Athens. Two small-scale Roman copies (in the Boston Fine Arts Museum and in the Ashmolean Museum, Oxford) representing a Hercules at rest are generally considered to derive from a statue by Myron, on grounds of style. As a stylist Myron seems to have been extremely individual. His facial type is of great distinction and beauty. S. C.

MYRONIDES, Athenian general in 458/7 and 457/6 B.C., known by his victory at Oenophyta. He is probably not identical with the ambassador Myronides, sent with Cimon and Xanthippus to Sparta in 480, and one of the Athenian generals at Plataea. Comic poets praised Myronides as a representative of the 'good old times'. Eupolis in his *Demoi* puts him on the stage; he seems to have died shortly before the performance of this comedy (412).

Ehrenberg, *PIV*, s.v., Suppl. vii (superseding vol. xvi); J. M. Edmonds, *Memor.* 1939. V. E.

MYRRHA, *see* ZMYRNA.

MYRSILUS of Methymna (fl. c. 250 B.C.), author of a history of Lesbos (Λεσβικά) who was interested in early folk movements.

FIG iv. 455.

MYRTILUS, poet of Old Comedy, son of Lysis and brother of the comic poet Hermippus (Suid.), victorious in 427 B.C. (IG. ii². 2325). Suidas mentions Τίτανόπαιες (probably an attack on paederasty) and Ἐρωτες (perhaps merely another name for Τίτανόπαιες).

FCG ii. 418 ff.; CAF i. 253-4.

M. P.

MYRTIS, Boeotian poetess, said to have been the teacher of Corinna (Suidas s.v. Κόριννα) and of Pindar (id. s.v. Πινδαρος). Corinna (fr. 15) blames her for competing with Pindar. No fragment of her work survives, but Plutarch (Quaest. Graec. 40) gives an abstract of her poem on the Boeotian hero Eunostus.

J. M. Edmonds, *Lyra Graeca* iii, pp. 2-5.

C. M. B.

MYRTOAN SEA, *see* AEGEAN SEA.

MYSTERIES were secret cults which generally include mystic ideas. Their characteristic is that certain initiations were needed for admission. It has been suggested that this is due to the fact that the old mysteries of Greece, at least for a part, go back to an emotional pre-Greek religion which survived in secret societies. In regard to certain mysteries, e.g. those of Eleusis and Phlya, it is also to be taken into consideration that they were family cults to which the head of the family admitted whom he pleased.

2. The gods with whom the old Greek mysteries are connected were Demeter and Dionysus and the Eleusinian Mysteries are the most famous of all. In origin they were an agrarian cult, akin to the Thesmophoria and celebrated in Boedromion (Sept./Oct.) on the occasion of the sowing. After the union of Eleusis with Athens, some time before 600 B.C., the Athenian State took charge of the mysteries. The *mystai* gathered at Athens where an announcement was made excluding murderers and those who spoke a foreign language. The *mystai* bathed in the sea, and the sacred things which previously had been brought to Athens were brought back to Eleusis in the great Iakchos procession (Iakchos is a personification of this procession, and was assimilated to Dionysus). In the evening the mystery rites began in the mystery hall at Eleusis which was illuminated by many torches. In spite of many ingenious hypotheses the chief rites are unknown. We hear of *λερόμενα*, *δεικνύμενα*, *δρώμενα*, (1) things recited, from which the Eumolpidae, 'those who sing beautifully', have their name; (2) things shown, from which the chief priest, the *ἐποφάντης* (*see* HIEROPHANTES), has his name; (3) things performed, whether by the priests or the *mystai* we do not know. There were three stages, *μῦσις*, initiation, *τελετή*, the preliminary, and *ἐπονεία*, the highest rite, to which the *mystai* were admitted the year after; the name indicates that the *epoptai saw* something. The Homeric hymn to Demeter, composed before Eleusis was united with Athens, gives some information concerning the preliminary rites, the fast, the sitting on a chair decked with a ram's skin, the drinking of the *kykeon*. The information concerning the highest rites which is found only in ecclesiastical authors, in particular what relates to sexual symbols by which the *myster* became a son of the goddess, a matter of which modern scholars have made much, is to be regarded with caution; the statement that the highest mystery shown was a corn-eat is perhaps more trustworthy.

3. We shall do better to turn to the deities and the myths. The rape of Kore-Persephone by Pluto is the

central subject of the hymn, and it has been suggested that in the mysteries this rape and the bringing back of Kore to Demeter were dramatically represented. There were two pairs of deities: the Mother and the Maid and Pluto and Persephone, who is identical with Kore. To the former pair Triptolemus, the hero of agriculture, was added and to the latter Eubuleus (q.v.: *see also* THESMOPHORIA). The myth that during four months of the year Kore was absent, dwelling with Pluto, and then was reunited with her mother and dwelt eight months in the upper world is to be referred to the seed-corn which, from the harvest in June to the sowing in October, was stored in subterranean silos and was brought forth at the festival of the sowing: the Corn-maiden was reunited with the Corn-mother. She was also wife of Pluto, the god of the wealth, i.e. the corn store, and Lord of the Underworld. The hymn ends by promising, to those initiated, wealth and a happy life in the Underworld, of which other authors speak confidently: the *Frogs* of Aristophanes proves that this happiness consisted in the continued celebration of the mysteries in the Underworld. Moral notions came to be associated with the mysteries, and righteousness and gentleness were added to ritual purity. At the end of the sixth century B.C. the conception of agriculture as the foundation of a civilized and peaceful life arose; Triptolemus was its hero. Since the end of the fifth century B.C. individual edification came more to the front. The Eleusinian Mysteries had no fixed doctrine; they consisted in rites which might be interpreted variously and thus were able to conform to the religious needs of every age. They were so impressive that to the end of paganism they were the most venerated part of Greek religion.

4. There were other mysteries of Demeter, the mysteries at Agrae near Athens which were joined to the Eleusinian, the mysteries at Phlya in Attica, which were old but remodelled according to the ideas of a later age, the mysteries at Andania in Messenia which were revived (or instituted) after the liberation of Messenia. The orgia of Dionysus (*see* DIONYSUS) which were celebrated only by women were mysteries in a certain sense. Dionysiac religion lent itself readily to mystical ideas, but the Dionysiac mysteries mentioned in Greece, e.g. those of Lerna and the Herois at Delphi, seem to be late creations. In the Hellenistic age Dionysiac mysteries developed and flourished; Ptolemy IV regulated them by an edict and the repression of the Bacchanalia (q.v.) by the Roman Senate is well known. Many Dionysiac mystic cults are recorded from the Roman age. The Orphic Mysteries (*see* ORPHISM) are an offshoot of the Dionysiac religion, at least in a certain sense. The mysteries of the Phrygian god Sabazius, who was akin to Dionysus, are found at Athens at the time of Aristophanes and at that of Demosthenes, a sign of the growing propensity for foreign and mystic cults: another is the popularity of the mysteries of the Cabiri at Samothrace. The Cabiri were especially venerated as the protectors of seafarers, but we know very little of the cult; in the Cabirion near Thebes it seems to have been influenced by Orphic ideas. The propensity for mystic cults grew in the Hellenistic age and still more in Roman times and was satisfied by cults introduced from the Orient, those of the Great Mother and Attis, Isis and Osiris, Mithras. We cannot here discuss details (*see* the respective articles), but may note certain general features. These mysteries were in a certain measure bound up with syncretism; the supporters of paganism in its last days were often initiated into various mysteries. Religion was detached from the old ties, the family and the State, and was individualized; man was able to choose his gods. The adherents of a certain cult (especially foreign) formed associations, sometimes headed by professional priests, an Oriental feature. The religious precepts were

more detailed and binding than before. There were sacred symbols and rites with magical efficacy, purifications, asceticism, baptisms, sacraments. The adherents were sometimes divided into two classes; sometimes there were several grades of these. The highest promise of the mysteries was a happy after-life. The rise of dualism which considered the corporeal world as evil stressed the need of salvation which was conferred by participation in the mysteries: they promised even the deification of man. The myth was a symbolic expression of the doctrine and the god was the prototype of man, suffering, dying, and rising to a new life. See also AFTER-LIFE.

The literature is copious. References may be found in R. Pettazoni, *I misteri*; O. Kern, *Die griech. Mysterien der klassischen Zeit*; P. Foucart, *Les Mystères d'Éleusis*; M. P. Nilsson, *Gesch. d. griech. Religion* i. 440 ff., 619 ff. M. P. N.

MYTHOGRAPHERS. Since mythology was much studied in antiquity, at least to the extent of collecting and systematizing the traditional stories, and commenting on them in the light of rather crude and shallow theories (as that the myths were philosophical allegories, or had arisen from misunderstandings of ambiguous phraseology, tendencies exemplified by Heraclitus and Palaephatus respectively, see below), we hear of a number of writers on the subject and the works of a few survive fairly complete. The movement may be said to start with the school of Hesiod (q.v.; *Theogony* and *Ehoiai*). It certainly may properly be taken to include sundry of the early logographers, such as the two or three writers called Pherecydes, Acusilaus of Argos, Hellanicus, and Herodorus (see Rose, *Handb. Gk. Lit.* 296 ff.), for although their aim was generally to write history, they used of necessity for the earlier periods the only material available, namely myths. Later, the voluminous writings of Callimachus (b. c. 310 B.C.) and other Alexandrian scholars included many treatises more or less purely mythological in content; foreign mythologies also were discussed by Berosus and Philon of Byblos (Rose, op. cit. 367).

The composition, however, of compendia of mythology is relatively late, although some semi-philosophical works, such as the absurd treatise of Euhemerus (q.v.) and the rationalizing essay of Palaephatus (Rose, p. 369), might be considered a sort of annotated handbooks of the subject; they are related in their way to Heraclitus' little book on Homeric allegories and Cornutus' Stoic treatise on the inner meaning of myths (ibid. 355, 411). All the surviving works fall not earlier than the time of Augustus, and most are later. One, the *Bibliotheca* of the so-called Apollodorus, of whose personality nothing is known, is valuable from the good information possessed by the author and his not infrequent citations of his sources, direct or indirect. It consists of three books; the rest is lost, though something is preserved in an epitome surviving in two forms. This work was an attempt at a complete mythical history of Greece; the other surviving treatises specialize. Parthenius, the earliest (contemporary and friend of Cornelius Gallus), collects love-stories, primarily as poetic material for Gallus to work up. The pseudo-Eratosthenes, epitomizing, it would seem, a treatise of the real one (b. c. 275 B.C.), is himself much later; his subject is catastrophisms, i.e. the metamorphoses of terrestrial persons and objects into constellations. Antoninus Liberalis, whose name shows him not earlier than the second century A.D., collects metamorphoses, but not those into stars. The trashy author of the *Parallels* which have come down under the name of Plutarch finds, or more commonly invents, Roman stories which are parallel to Greek ones. He is earlier than Clement of Alexandria, and therefore about second century also.

Latin has not left us many such works, though not a few were written, e.g., by C. Julius Hyginus, Augustus'

librarian (Rose, *Handb. Lat. Lit.* 446). The author known as Hyginus who wrote the *Fabulae* (more properly *Genealogiae*) whereof we have a late and bad series of extracts may have been contemporary with the Antonines (ibid.); his so-called *Poetica Astronomica*, if it is his, largely depends on the genuine Eratosthenes, probably not directly. The *Mitologiae* of Fulgentius (three books) may be of about the end of the fifth century; the three miscellaneous collections known as the *Mythographi Vaticani* (ed. Bode, 1834) are medieval, but contain, amid many blunders, some scraps of material not found elsewhere.

H. J. R.

MYTHOLOGY. Although etymologically the word means no more than the telling of tales, it is used in modern languages to signify a systematic examination of the traditional narratives of any people, or all peoples, with the object of understanding how they came to be told and to what extent they were or are believed, also of solving various other problems connected with them, such as their connexion with religion, their origin (popular or literary), the relations, if any, to similar stories told elsewhere, and their chronology, relative or absolute. The examination of folk-tales (*Märchenforschung*) is really a branch of mythology, but has grown to such proportions, owing to the abundance of material, that it may be regarded as a separate discipline and will receive only brief mention here.

2. The most characteristic object of mythological study is the myth proper. This may be defined as a pre-scientific and imaginative attempt to explain some phenomenon, real or supposed, which excites the curiosity of the myth-maker, or perhaps more accurately as an effort to reach a feeling of satisfaction in place of uneasy bewilderment concerning such phenomena. It often appeals to the emotions rather than the reason and, indeed, in its most typical forms seems to date from an age when rational explanations were not generally called for. For example, it was commonly said (Hdt. 7. 129. 5) that the gorge of the Peneus had been created by Poseidon (q.v.) cleaving the mountain-chain which formerly closed in Thessaly on that side. To Herodotus himself, this was merely a picturesque way of saying that the gorge had been formed by an earthquake, a solution very like the 'cataclysmic' school of geological theory once popular in modern Europe. But it seems far more probable that the originator of the story had a vivid mental picture of the gorge, which to his eye suggested a great cut, being hewn out by a gigantic and powerful being, and that, finding the picture satisfactory to his imagination, he was not troubled with any question as to its probability. This is not to say that no myth contains intellectual features, for many of them do; to take a crude example, the originator of the quaint tale of the deceiving of Zeus by Prometheus (Hesiod, *Theog.* 535 ff.) must have asked himself why those parts of a victim which were burned on the altars of the celestial gods were the least valuable. Late myths often show signs of elaborate speculation, e.g., the identification of Virbius (see DIANA) with Hippolytus (q.v.) in Verg. *Aen.* 7. 761 ff. clearly arises from a sophisticated and learned explanation of the facts that Diana was worshipped at Aricia along with a male being and that horses were not allowed in her grove. The only male associated with and subordinate to Artemis, with whom Diana had long been identified, was Hippolytus; now he had been brought to life by Asclepius after being killed by his own team; he must therefore be Diana's attendant and the taboo on horses must arise from his, and her, reluctance to have anything more to do with such dangerous creatures.

3. Myths therefore deal principally with the doings of gods, their ritual and their relationships to one another, or else with natural phenomena in some way striking, and they are characteristically aetiological, having for

their aim to furnish an explanation of something. If the main characters of the story are human, or supposedly so, and the tale concerns their doings in battles or other adventures, it is usual to speak, not of myth but of saga or legend. Here the mental process giving rise to the story seems to be different. A real event of some kind, such as a raid or a great and dangerous hunt, impresses those who take part in it and also their contemporaries; it continues to be told from generation to generation, often getting into the hands of a professional maker (finally a professional writer) of such narratives, and so acquiring all manner of additions, modifications, and re-handlings intended to make it a better story. Nevertheless, it regularly has behind it the original fact, which may obtrude itself in curious ways (e.g. in the ballad of Chevy Chase, which springs from the historical Battle of Otterbourne, the Scots are divided into three parts and attack from higher ground, though the rest of the fighting has been changed almost past recognition). Even if the story is pure fiction, it will be modelled upon real semi-historical narratives, and may then be conveniently called pseudo-saga.

4. The *Märchen* (see FOLK-TALES; neither that nor 'fairy-tale' is a wholly satisfactory equivalent) seems always to have been told for pure amusement, with no basis in speculation or fact.

5. Finally, it must be realized that any two, or all three, of the above forms may be almost inextricably blended in any given story; thus the tale of the Argonauts (q.v.) has manifest elements of *Märchen*, and the adventures of Heracles (q.v.) have also laid myths under contribution.

6. In order to reach such conclusions as the above, it is necessary to have a sufficient body of material, carefully examined to show its age and origin; else the investigator will perpetually be misled into taking a late or foreign story for the genuine product of the people he is studying, e.g. such a narrative as that in Ovid, *Fasti*, 2. 305 ff., either for a genuine part of the Greek tradition concerning Heracles or a native Italian story throwing light on the nature of Faunus, instead of what it is, a typical Alexandrian humorous aetiology, perhaps Ovid's own invention. We may therefore look upon K. O. Müller (1797-1840) as in some sense the father of modern mythology, owing to his consistent emphasis on the historical origins of Greek traditions, i.e. the time and

place, so far as they could be discovered, when the earliest form of each tale appeared. With him may be bracketed a slightly earlier investigator, C. A. Lobeck (1781-1860).

7. Hardly less important for the researcher in any given branch of mythology, e.g. that of Greece, is a knowledge of similar stories told elsewhere, especially among peoples likely to have influenced those he is studying. Here a great service was performed by Max Müller, whose use of Sanskrit material led investigators in the late nineteenth century to examine Greek (and other) material against a comparative background, thus getting a perspective such as earlier researchers had not had. It needed only to widen the scope of comparison, and this was done chiefly by Andrew Lang.

Some account of the progress of the subject is given in any good modern manual of classical mythology. For some methodological considerations see Rose, *Modern Methods in Classical Mythology* (1930). For light thrown on Greek myths by art see especially C. Robert, *Bild und Lied* (1881). H. J. R.

MYTILENE (or **MITYLENE**; the former was the official form), the chief city of Lesbos, situated in the south-east of the island, with a fine double harbour, and facing the Anatolian mainland. The population was predominantly Aeolian—both Sappho and Alcaeus resided in Mytilene. In the sixth century B.C. overseas expansion led directly to war with Athens, indirectly to *stasis*, only relieved by the mediation of Pittacus. Under Persian control Mytilene participated in the forlorn hope of the Ionian Revolt. Its two secessions from the Delian Confederacy (428 and 412) resulted in the loss of its fleet, its fortifications, and much of its land, and brought it to the verge of destruction. During most of the fourth century, however, it was a faithful ally of Athens. In 333 it fell to Memnon, but was soon retaken by the Macedonian fleet. After Alexander's death Mytilene passed successively under Antigonos', Lysimachus', and the Ptolemies' rule. Through tactful diplomacy it kept on good terms with Rome, becoming a favourite holiday resort. Its revolt against excessive taxation following the Mithridatic War led to the storming of the city by Minucius Thermus (80), but Pompeius restored its freedom, and this privilege, though suspended by Vespasian, was confirmed by Hadrian.

R. Herbst, *PIW*, s.v. 'Mytilene'.

N

NABATAEANS were a people of northern Arabia (though their inscriptions are Aramaic). They were in occupation of Petra (q.v.) by 312 B.C., when Demetrius, son of Antigonos, unsuccessfully attacked them. A commercial people, they expanded along the caravan routes radiating from Petra. Northwards their first known king, Aretas I (169), already held Moabitis, and despite defeats by Alexander Jannaeus they pushed on till Aretas III in 85 occupied Damascus for a brief while. Westwards Aretas II nearly took Gaza in 96, but was prevented by Alexander; the Nabataean power, however, extended over all the Sinai peninsula, save the northern coast, to Pelusium. Southwards they occupied the once Ptolemaic port of Aela and in the late first century B.C. held the east coast of the Red Sea to Egra. Unsuccessfully attacked by Scorus in 62 the Nabataeans were admitted to the alliance of the Roman People and henceforth ranked as a client kingdom, regularly sending troops to assist the Roman armies. The kingdom was divided into a large number of districts, ruled by hereditary

strategi. It was annexed by Trajan in A.D. 105, becoming the province of Arabia.

NABIS, son of Demaratus, probably descended from the Spartan king of the latter name (q.v.), followed Machanidas in 207 B.C. as guardian of the young Spartan king, Pelops, and on Pelops' death (of which he was accused) seized the crown. Forming a mercenary guard, he drastically restored the revolutionary programme of Cleomenes (q.v. 2) in alliance with the Cretan pirates. In 202-3 he raided Megalopolis, but was in 201 repelled from Messene and in 200 defeated by Philopoemen. In the Second Macedonian War he gained Argos, betrayed to him by Philip V, but went over to Flamininus, only to find himself in 195 charged with tyranny and forced to give up Argos and the Laconian ports. In 193, attempting to regain the ports, he was subdued by Philopoemen and Flamininus. He was assassinated in

192 in an Aetolian *coup d'état* in Sparta. A revolutionary type, his career and policy have suffered unduly in the Megalopolitan tradition of Polybius.

NAENIA, see **NENIA**.

NAEVIUS, **GNAEUS**, plebeian (?) Latin poet, born (in Rome?) c. 270 B.C., having served in the First Punic War (264-241), began writing plays in Rome 235 B.C., especially *comediae palliatae* but also *togatae*. After 222 he invented the *fabula praetexta*(ta) or historical Roman play. In *togatae*, possibly also in *palliatae*, he attacked Roman statesmen, even Scipio Africanus, but especially the Caecilii Metelli, so that, after threats from Q. Metellus, 206 B.C., he was put in prison. There he wrote plays (*Ariolus*, *Leo*) in which he apologized. He was freed, then exiled from Italy. He went to Utica in north Africa, where he died c. 201. He was a truly Latin poet, an outspoken Roman citizen, and imbued with national spirit, writing probably independently of any profession. While his *palliatae* were famous, it was probably his *Punic War* (see below) which impressed Romans most, though its defects were not missed.

Fragments survive: (i) About 130 lines from *palliatae* on Greek models: *Acontizomenos*, *Agitatoria*, *Agrypnuntes*, *Apella*, *Carbonaria*=*Clamidaria*, *Colax* (adapted from Menander), *Corollaria*, *Dementes*, *Demetrius*, *Dolus*, *Figulus*, *Glaucoma*, *Gymnasticus*, *Lampadio*, *Leo*, *Pellex*, *Personata*, *Proiectus*, *Quadrigeniini*, *Stalagmus*, *Stigmatias*, *Tarentilla*, *Technicus*, *Testicularia*, *Triphallus*, *Tunicularia*; also five lines from *Ariolus*, a *togata*. (ii) About sixty lines from tragedies on Greek models: *Andromacha*, *Danae*, *Equos Troianus*, *Hector Proficiscens*, *Hesione*, *Iphigenia* (from Euripides) 'I. ἐν Ταυποῖς', *Lycurgus* (c. 35 lines). (iii) Lines from two *praetextae*: *Clastidium* (dramatizing the campaign of 222 B.C. in Cisalpine Gaul by Marcellus and Scipio) and *Romulus*. (iv) About forty-five lines from unknown plays. (v) A line from *Satura*; a line against the Metelli; and N.'s own epitaph. (vi) About sixty-five lines from *Bellum Poenicum*, in saturnians, on the First Punic War, with an account of the origins and growth of Rome (and Carthage?). This work was a national epic in a national metre, but was prosy and wooden. Yet it greatly influenced Ennius and Virgil. See also **DRAMA**, **ROMAN**, para. 2.

Teubner, 1843); E. Klusmann, *Cn. Naevii . . . reliquias collegit* (1843). Cf. Thelma de Graff, *Naevian Studies*. E. H. W.

NAISSUS (to-day *Nisch*) in Moesia (after Diocletian in Dardania), first visited by Roman troops in 75/72 B.C., was probably the earliest permanent military camp in Moesia. Though of great strategic importance, little is known of its history: it became a *municipium* under M. Aurélius or later. Here Claudius II decisively defeated the Goths in A.D. 269. Frequently visited by Roman emperors, especially by Constantine the Great, who was born at Naissus, it was destroyed by the Huns in 441, but was partially restored. Under Justinian Naissus flourished anew, but was seriously threatened by the Slavs. It was destroyed or at least sacked by the Avars in 596, but continued to exist as a Slav town.

Fluss, *PIW*, s.v.

F. A. W. S.

NAMATIANUS, **RUTILIUS CLAUDIUS**, author of the *De Reditu Svo*, the most elaborate itinerary in Latin literature, was the last Roman poet. Of Gallo-Roman

extraction, hailing probably from Toulouse, this arch-pagan held in Christian but tolerant Rome the offices of *magister officiorum* (A.D. 412) and *praefectus urbi* (414) under Honorius. Biographical and self-revealing, his poem comes to us in two books, the first of which begins abruptly, while the second is a fragment (68 lines). In September 416, much against his will, he left Rome to look after his estates in Gaul, which, like Italy, suffered terribly from barbarian invasions. In two months, by the safer sea route, he reached Luna and here the poem breaks off. He probably reached Gaul, as the poem could not have been composed in its present form during the journey. Besides presenting lively topographical observations on the coastal scenery of Etruria, the poem mirrors both contemporary events and the author's soul—as well as the minds of the pagan nobility whose solitary spokesman he is and with whom he shared the belief in Dea Roma and Rome's glorious mission. That he would resent opposition to paganism is clear. Hence his invectives against Judaism, monasticism, and Stilicho, the barbarian general (then dead) who burned the Sibylline books; for to N. and his class antipaganism and the barbarians were the forces that tended to undermine ancient institutions and disintegrate the Empire. Far from being a cold declaimer (Gibbon), he writes with charm and feeling. His lucid, though rhetorical, Latinity and his graceful elegiacs reveal him a keen student of the best models in Latin literature.

NAMES. The Greeks distinguished two types of proper names: (1) *θεοφόρα ὀνόματα*, names etymologically connected with the name of a god, e.g. Apollonius (see the following article); (2) *ἄλφα*, names etymologically connected with magisterial or professional titles, with virtues, qualities moral or physical, omens, etc., and with names of places (e.g. *Λακεδαιμόνιος*). Since it was customary to give a child one name only (the first-born son bore the name of his paternal or, less frequently, maternal grandfather), men's names at Athens were generally followed by that of their father (in the genitive), and of their deme (q.v.). Romans of the regal and early Republican period probably bore two names, as can be seen from the list of kings and other evidence. But by c. 300 B.C. the custom prevailed in the highest order of society of bearing three names, the *praenomen*, *nomen* or name of the *gens*, and *cognomen* or family name (e.g. 'Marcus Tullius Cicero'). In the late Imperial age the use of the nickname (*signum*) in the form of *sive* or *qui* et led to a rapid decay of the traditional custom. Greek and Roman women and slaves regularly bore but one name, followed, if necessary, by that of the person (father, husband, master, etc.) on whom they legally depended. Freedmen generally kept their original, mostly Graeco-Oriental, names as a *cognomen*, adopting that of their master as a *nomen*. After the age of Sulla a similar process was followed in the case of adopted children, who had previously retained their family name transformed into an adjective (e.g. Scipio Aemilianus).

NAMES, THEOPHORIC PERSONAL (GREEK).

Theophoric personal names reflect the cult interests of the parents, interests which in some clear instances were carried on by the offspring; but among the names of 1,324 persons interested in Egyptian deities, the names of only 28 derive from the Egyptian deities. Names of ill omen, e.g. Anubis, were generally avoided. No feeling against naming a boy after a goddess or a girl after a god is discernible. Locality mattered: in Phrygia, among 1,500 theophoric names, 233 are from Men, none is from the (foreign) deity Isis. Theophoric names provide an index rather of a given deity's true popularity (plus suitability for being a name-god) than of his formal prestige in cult or myth: names e.g. from Poseidon are few and late. Caution is needed: nothing prevented the name Demetrios, despite underworld associations, from being popular, but an unknowable degree of the popularity was due to the fame of Poliorcetes.

Before the middle of the second century B.C. the pressure to use names traditional in the family was felt so strongly that (theophoric names being uncommon to start with) only some 6 to 15 per cent. of all names are theophoric in Athens; Sparta appears to have had fewer still. Hence an Isigenes of Rhamnus, born c. 400, and an Isidorus, cphor of Sparta in 410/409, are significant. For Asklepios no known Athenian was named until a generation after the adoption of his cult in 420, and only six in the fourth century, six again in the third century; but fifty-five in the second or early first, and 202 under the Empire. No foreign deity adopted by Athens *ante* 150 B.C. provided more names in that period.

After about 150 B.C. the general relaxation of traditions, the spread of the foreign cults, and the ever-present tendency to find novel names, raised the proportion of theophoric names to 30 per cent. of all names in Athens (at Alexandria it is apparently even higher). Hence not much more than whim may account for a name such as Παδάμανθους Ἀττιωῦ. The naming a child Isigenes is less significant c. 100 B.C. than c. 400 B.C.: by 100 B.C. the name may be a mere heritage. But the total figures for Athens are impressive: under the Empire 301 names recorded in Athens are from Isis; 48 from Sarapis (less popular now, as earlier); only one each for Adonis, Attis, Bendis; four for Mithras (only one known earlier); 45 for Helios, 116 for Men, 63 for Meter, 40 for Eros. Clearly there was discrimination, and there were real influences. Isis alone threatened the supremacy of the older gods: Apollo 334, Zeus 258 (a marked decrease), Dionysos 514 (a marked increase), all of whom have large figures earlier; and Aphrodite 383 (Ἐραφρόδιτος, which could mean *felix*, accounts for 108 of these), though *ante* 30 B.C. her total was 19. Their status relatively to each other had changed, but the Olympians were by no means dead.

Founded by Letronne over a century ago, this subject has been studied only sporadically: full account in pp. 1-10 of the important study by E. Sittig, *De Graecorum nominibus theophoricis* (Diss. Philol. Halenses, vol. xx, pars 1, 1911). Add for names in -εω- and -εω-: W. Froehner, *ARL* xv (1912), 380-7; for Thasos, H. Seyritz, *BCH* li (1927), 229; for Thera, I. Braun, *Theräische Kulte*, 64; for Alexandria, C. E. Vivier, *Götter und Kulte in alexandrischen Alexandria*, 1935, reprinted in *Alford Pearson Studies*, No. V, 1935, pp. 45-7 and ref.; for Athens, S. Dow, *Harv. Theol. Rev.* xxx (1937), 216-24.

NAOS, see TEMPLE

NARBO, modern Narbonne. The name, which originally denoted the hill-fort of Montlaurès, appears in Hecataeus (c. 500 B.C., *FGH* 54). It became the centre of a Celto-Iberian kingdom (coins NERONC) which was absorbed by the Volcae. In 118 the *colonia Narbo Martius* was founded in the plain, and Montlaurès was dismantled c. 71. Caesar's tenth legion was settled in the new town, which became the capital of Narbonensis,

the seat of the imperial cult and an important trading-centre. Enlarged by Claudius, its full title was *Colonia Julia paterna Claudia Narbo Martius decumanorum*. Damaged by fire in the second century, it declined in prosperity, and apparently lost its position as capital to Nemausus. In 462 it fell finally to the Visigoths.

C. H. Benedict, *A History of Narbo* (U.S.A. 1941); P. Hélena, *Origines de Narbonne* (1937); G. F. Hill, *Coins of Narbonensis* (1930); *CIL* xii. 521; Grenier, *Manuel* ii. 483-92.

NARCISSUS (1), in mythology, a beautiful youth, son of Cepheus (the Bocotian river) and Liriope, a nymph. He loved no one till he saw his own reflection in water and fell in love with that; finally he pined away, died, and was turned into the flower of like name. The story may arise from the magical danger of seeing one's own image in a mirror (see Frazer, *GB* iii. 94), but Ovid gives an explanation (his own?) of it; Narcissus was punished for his cruelty to Echo (q.v.). Hera had deprived her of normal speech because her chatter prevented the goddess catching Zeus at his amours with the other nymphs; she could only repeat what others said. She tried to make love to Narcissus with fragments of his own speech, but he repulsed her and she so wasted away with grief that there was nothing left of her but her voice (Ovid, *Met.* 3. 342 ff.). Other explanations, Paus. 9. 31. 7-8; Canon, 24.

NARCISSUS (2). As private secretary (*ab epistulis*) to Claudius, this freedman acquired prodigious wealth (400 million sesterces, it was said) and exercised large political influence. He was even sent to the north of Gaul in A.D. 43 to expedite the embarkation of the expeditionary force to Britain and received *quaestoria ornamenta* in 48 as a reward for the exposure of Messalina's plotting. His power was afterwards eclipsed by that of Pallas and Agrippina, whose marriage with Claudius he had not favoured, and he was unsuccessful in seeking to promote the interests of Britannicus. After the murder of Claudius in 54 he was immediately arrested and driven to suicide.

NARRATIO, rhetorical statement of a case (following the *exordium*), a feature stressed as vitally important by Apollodoreans (q.v.) and by Quintilian (*Inst.* 4. 2).

For three genera of narrations, *Rhet. Her.* 1. 8. 12; for requisite brevity, perspicuity, plausibility, *Cic. De Or.* 2. 326 ff., *Orat.* 124.

NASICA, see **SCRIPPIO** (6), (10), and (12).

NAUARCHOS (ναύαρχος), admiral. The geographical conditions of Greek warfare, with its demand for 'amphibious' operations, discouraged the separation of naval from military commands: thus, Athenian fleets were always commanded by *strategi* (q.v.). *Nauarchos* was a general term for the commander of a navy, of a squadron however small, even of a single ship. As an official title it appears comparatively late, the outcome of a greater specialization in certain States, mostly such as lacked an established naval tradition. The most important were Sparta (c. 430-360 B.C.), Syracuse under Dionysius I and II, Ptolemaic Egypt (and probably Macedonia, Pergamum, and the Seleucid kingdom), the Achaean League, and Rhodes. Everywhere (except perhaps at Pergamum) the *nauarchos* was admiral-of-the-fleet, with no colleague, his tenure varying from the single year (usually) of Greek republican admirals to the long commands of admirals (e.g. in Syracuse and Egypt) who served a monarch.

Sack, *PH*, iv. 'Nauarchos'. G. T. G.

NAUCRATIS, on the Canopic branch of the Nile, was a Greek 'treaty port' which under Saite Pharaohs became the chief centre of cultural relations between Greece and Egypt. According to Herodotus it was the sole

emporium for Greek traders, who received concessions (τέμενη) from Amasis. The chief of these, established jointly by the Ionian cities of Chios, Teos, Phocaea, Clazomenae, the Dorian Rhodes, Cnidos, Halicarnassus, Phaselis, and Aeolian Mytilene, was called the Hellenium and appointed magistrates of the mart; Aegina, Samos, and Miletus had separate concessions. Excavations by Petrie and Gardner (1884-6) and Hogarth (1899, 1903) have produced abundant potsherds (many with dedications to 'the gods of the Greeks', Hera, Apollo, and also Aphrodite and the Dioscuri) dating from the latter years of the seventh century onwards, and show that the history of Greek Naucratis did not begin with Amasis' charter. According to Strabo Naucratis was founded by Milesians who, in the reign of Psammetichus, had founded the 'Milesians' Fort' near the Bolbitine mouth of the Nile. Sappho's brother Charaxus travelled to Naucratis on business. The city continued to flourish through the classical period.

After Alexander's conquest of Egypt, the trade of Naucratis passed to Alexandria; some references in the correspondence of Zenon suggest that there was still some business done there in the middle of the third century, and inscriptions show that buildings were erected under the earlier Ptolemies; also, about the time of the conquest it struck the only civic silver and bronze coins known in Egypt. It was allowed to retain its Greek constitution by the Romans, and this served as a model for the constitution of Antinopolis in the reign of Hadrian. But there is no record of any active life there.

Herodotus, bk. 2; Strabo, bk. 17; Sappho (ed. Lobel), pp. 2, 3. W. M. Flinders Petrie and E. A. Gardner, *Naucratis* i, ii (1886-8). *BSA* v. 26 f.; D. G. Hogarth, *JHS* 1905, 105 ff.; E. R. Price, *ibid.* 1924, 180 ff.; R. M. Cook, *ibid.* 1937, 227 ff. (with references to earlier literature). P. N. U. & J. G. M.

NAUKLEROS, see **COMMERCE**, para. 2.

NAUKRARIAI (from ναυκράρος, shipmaster) were local divisions of Attica, twelve to each of the pre-Cleisthenic *phylae*. Originally it seems that each naukraria had to finance one warship and its crew; subsequently it took on other financial duties. Cleisthenes raised their number to fifty (five to each *phyle*) and made them responsible for ship-building, like the later symmories (q.v.). But according to Aristotle their administrative duties were transferred to the *demoi*, and in 483 B.C., when the State took over the building of warships, the *naukrariai* disappeared. (See also **TRIERARCHIA**.)

Herodotus (5. 71. 2) says that at the time of Cylon (q.v.) the presidents of the *naukraroi* administered the State; an exaggeration, but they were doubtless powerful.

A. W. G.

NAUMACHIA. The word is used both of a sham fight in the water, such as was given first by Julius Caesar at Rome in 46 B.C., and also in a local sense for any flooded arena, especially for the huge circus excavated by Augustus under the Janiculum. For it water was brought from Lake Alsietinus about twenty miles from Rome by a new aqueduct, the Alsietina, and one of the first spectacles given in it was apparently a representation of the Battle of Salamis. The most famous *naumachia* was exhibited by Claudius in A.D. 52 on the Fucine Lake; 19,000 men took part. The combatants were usually prisoners and condemned criminals. *Naumachiae* were apparently held in provincial towns, since arrangements to flood the amphitheatres at Capua and Nîmes can be traced.

Friedländer, ii. 74 ff.

F. A. W.

NAUMACHIUS (perhaps as early as the 2nd c. A.D.), author of a poem on wifely dutifulness, of which Stobaeus (68. 5, 74. 7, 93. 23) cites portions.

NAUPACTUS, in western (Ozolian) Locris, with an excellent harbour and small coastal plain cut off from the interior by mountains, commands the narrowest entrance of the Corinthian Gulf; its least difficult land-contacts are with Amphissa and eastern Greece. A legend, probably derived from the name of Naupactus ('ship-construction'), records that the Dorians crossed into the Peloponnese from Naupactus. Its value as a naval base was appreciated by the Athenians, who seized it and peopled it with exiled Messenians (456 B.C.). During the Peloponnesian War it was the main Athenian station in the west. After Sparta had expelled the Messenians (399), Achaea colonized and held it, until Philip captured it and gave it to Aetolia (338). With the collapse of the Aetolian League, Naupactus lost its importance.

W. J. Woodhouse, *Aetolia* (1897), 311 f.

N. G. L. H.

NAUPLIUS, (1) eponym of Nauplia; son of Poseidon and Amymon (q.v.). (2) His descendant (Nauplius I-Proetus (q.v.)-Lernus-Nautilus-Clytoneus-Nauplius II, Ap. Rhod. i. 134-8), father of Palamedes (q.v.) and Oeax. He was an Argonaut (Ap. Rhod. loc. cit.) and plays a part in two other well-known stories. Auge (see **TELEPHUS**) was entrusted to him after her delivery to sell overseas; he gave her to Teuthras, king of Teuthrania, who married her (Apollod. 2. 147). He was instrumental in wrecking the Greek fleet on its return from Troy (his namesake had been a wrecker also, Apollod. 2. 23; indeed, the two are identical, *Nostoi*, quoted there), for to avenge the death of Palamedes he lit false lights at Caphareus in Euboea (Eur. *Hel.* 767 ff., 1126 ff., and many later authors).

Wagner in Roscher's *Lexikon*, s.v.

H. J. R.

NAUSICAA, daughter of Aleinous (q.v.; *Od.* 6. 15 ff.). The night of Odysseus' landing in Scheria (see **ODYSSEUS**), she was moved in a dream by Athena to go down to the washing-place at the river-mouth and wash the family linen with her handmaids. Having done so the next morning, she and her maids played ball, and a cry from one of them woke Odysseus. He improvised a loin-cloth from a branch, came out of the hollow under trees where he had spent the night, and appeared before the girls. The maids ran away, but Nausicaa, given courage by Athena, stood her ground. He then made known his wants to her and she gave him food, drink, and clothing and showed him the way to the city, modestly directing him to walk the last part of the distance alone, lest the gossips should see them together and accuse her of husband-hunting. This very charming episode was handled in the lost *Nausicaa* of Sophocles and a few other post-Homeric works; Hellanicus, in Eustathius on Homer, p. 1796, 42 ff., says she married Telemachus and had by him a son Persepolis, an obvious next-best to marrying Odysseus, as Aleinous wished on their first meeting (*Od.* 7. 311 ff.).

H. J. R.

NAUSIPHANES of Teos (b. c. 360 B.C.), Atomist, studied under Pyrrhon of Elis, probably while they were fellow soldiers in Alexander's campaigns, and before the end of these campaigns established himself as a teacher at Teos, where Epicurus studied under him c. 324. He was essentially a follower of Democritus, and was the channel through which Democritus' physics and theory of knowledge passed to Epicurus. He departed from Democritus' ethical views by insisting that the philosopher should take part in public life, and devoted himself largely to the exposition of a theory of rhetoric, which was later bitterly attacked by Philodemus.

Testimonia and frs. in Diels, *Vorsokr.* 2. 246-50. *PW* xvi. 2021. W. D. R.

NAUTIKOS TOKOS (ναυτικός τόκος), see **BOTTOMRY LOANS**.

NAUTODIKAI were Athenian officials who presided at the trial of commercial suits (*δικαι εμπορικά*) between merchants native and foreign. They were probably instituted when Athens became an important commercial centre after the Persian wars. They presided also in citizenship suits involving foreigners who filed suits as citizens. In the time of Demosthenes both types of suit came before the *thesmothetai* (J. H. Lipsius, *Das Attische Recht*, 86).

R. J. B.

NAVICULARII, see *COMMERCE*, para. 7.

NAVIES (Greek and Roman). Apart from the Homeric fleets, which served only for transport, the construction of navies followed closely upon the expansion of Greek commerce in the age of colonization. The first recorded sea-battle took place between Corinth and Corcyra in 664 B.C. (Thuc. i. 13. 4). The new commercial States found warships especially necessary to guard their coasts, to check piracy, and later to assure the free flow of grain and other vital products; also, their growing prosperity permitted maintenance of a fleet more easily. The expense, however, remained an impediment to large-scale, protracted naval operations throughout the Greek and Hellenistic periods, especially when mercenaries replaced citizen rowers (after 400 B.C.). Until the Roman Empire, the peace-time navy of a State consisted usually of a number of hulls, with rigging and oars, laid up in the docks of the harbour (q.v.), from which the galleys were launched only in need. Sporadic piracy in consequence flourished; great expeditions in war-time required extra construction and levies of sailors.

2. The peculiarities of the ancient war galley (see *NAVIGATION*) also influenced the character of naval power. It was impossible to keep up successfully a lengthy blockade, inasmuch as the galleys suffered in storms and furnished but cramped quarters to their crews. Thus, even the most heroic attempt, that of Bibulus to keep Caesar's reinforcements from crossing the Adriatic in the winter of 48 B.C. (Caesar, *BCiv.* 3 passim), eventually failed. The simple construction of the warship made it much easier for the so-called naval powers suddenly to be challenged by a State previously without a fleet, as by Sparta at various times in the Peloponnesian War (e.g. Thuc. 3. 26 ff.) and by Thebes under Epaminondas in 364 B.C. (Diod. 15. 78-9). The general object of naval strategy was to protect one's own coast and commerce, to destroy the opponent's fleet and commerce, and to assist land invasions by feints, transport of troops, and acquisition of bases.

3. Early navies were composed chiefly of *pentekontors* in small numbers, the forty triremes of Polycrates of Samos (Hdt. 3. 44) forming one of the largest squadrons before the fifth century. The Persian Wars brought great changes. Fleets grew in size; the trireme (q.v.) became the standard galley; naval tactics improved greatly. Athens benefited chiefly, under the leadership of Themistocles, who secured the construction of 200 triremes at Athens before 480 (see *TRIEMARCHY*); thereafter, apart from a short period after the Peloponnesian War, it remained the pre-eminent naval power in Greece until 322, when its fleet of 170 galleys was destroyed at Amorgos by a Macedonian fleet of 240 ships.

4. Although navies in the Hellenistic age did not surpass the size of these two fleets, they entailed an immensely greater expense, which lay beyond the resources of the small States. The standard vessel was now the quinquereme (q.v.), with a crew twice as large as that of the trireme, and after the time of Alexander even larger vessels were built. Throughout this period Macedonia generally held the Aegean and Egypt the rest of the eastern Mediterranean, but the balance of naval power shifted frequently. By 188 B.C. all had yielded to Rome. Although Rome had possessed some previous

naval organization (see *DUOVIRI NAVALIS*), its first great naval effort came in the First Punic War, during most of which the Romans maintained a fleet of over 200 quinqueremes. Unskilled in naval warfare, they relied upon their soldiery and used boarding tactics exclusively. Ships were built in heavy fashion, the number of marines small on Greek vessels, was increased, and the *corvus*, a grapple, was extensively used (Polyb. i. 20 ff.). The classical tactics of manoeuvre, with the *diechplus* (q.v.) steadily gave way as the Romans overcame first Carthage, the chief naval power in the western Mediterranean, and then the Hellenistic States.

5. After 167 B.C. Rome permitted her fleets to decay and, in emergencies, conscripted ships and crews from her Greek allies. In the civil wars the contestants again built up huge squadrons, which were merged at last into the fleets of Antony and Octavian. To the campaign of Actium the former brought 500 warships and the latter 400. After his victory Octavian organized part of these into the first permanent fleet the Mediterranean had known (Tac. *Ann.* 4. 5). Based on Misenum and Ravenna, with auxiliary squadrons off Syria, Egypt, and Mauritania, and on the Black Sea, Rhine, Danube, and English Channel, the Roman imperial navy eradicated Mediterranean piracy for the first and last time previous to the nineteenth century. During the third and fourth centuries this navy vanished, but the Byzantine navy in part perpetuated the Graeco-Roman naval tradition.

Ancient Sources: Thucydides (i. 13 ff.) and Herodotus (bks. 6 ff.) reveal most clearly the nature of ancient navies. Modern literature: Camille de la Bèze, 'Étude sur l'organisation des flottes romaines', *Bulletin épigraphique* vi (1886); F. W. Clark, *The Influence of Sea-power on the History of the Roman Republic* (U.S.A. 1915); J. Kromayer and G. Veith, *Heerwesen und Kriegsführung der Griechen und Römer* (1928); F. Millner, *PLW*, s.v. 'Seekrieg'; H. A. Ormerod, *Piracy in the Ancient World* (1924); C. G. Starr, *The Roman Imperial Navy* (U.S.A. 1941); W. W. Tarn, *Hellenistic Military and Naval Developments* (1930); J. H. Thiel, *Studies on the History of Roman Sea-power in Republican Times* (Amsterdam, 1946).

C. G. S.

NAVIGATION. The Mediterranean, tideless, broken by numerous peninsulas and islands, calm in summer, has always furnished encouragement to the seafarer, and to none more than the Greeks, whose experience became the basis of Graeco-Roman naval knowledge. The progress of navigation, however, was impeded by the lack of instruments for determining direction and distance, such as the compass, sextant, and log. Ships, also, were generally small, and, although they could sail within a few points of the wind, their sails, tackling, and steering apparatus were deficient.

2. The season of sailing was accordingly limited to the months when visibility was good and the sea mild; when storm clouds veiled the stars, the sailor sought the shore or some harbour. Hesiod (*Op.* 663 ff.) would restrict navigation to fifty days in midsummer, and usual practice placed its limits at March and October. As confidence and experience grew, and ships (q.v.) increased in size and stability, the period of sailing could be extended. Martial (6. 80) mentions Egyptian roses at Rome in winter, and other evidence from the Roman Empire (e.g. Tac. *Ann.* 12. 43) indicates some seafaring in winter by the more hardy travellers.

3. Although the Romans themselves were not seafarers, the Roman Empire marked the height of ancient navigation. The scourge of piracy was eliminated; traffic by sea increased enormously. Ships, moreover, tended to stand farther out from land. As late as 450 B.C. the route from Greece to the west lay by Corcyra and thence to Italy; in like manner, the importance of Rhodes in the Hellenistic period was partly the result of its key situation on the route from Egypt and Syria to the Aegean via Cyprus and Caria. Under the Empire, travellers to the east usually went straight to Alexandria from Puteoli, rather than cross Macedonia as under the

Republic (Philo, *In Flacc.* 5. 26-7).¹ Alexandrian merchants at this time, after the discovery of the monsoon winds, voyaged directly to India, but Mediterranean craft never sailed regularly about Spain to Gaul and Britain.

4. The speed of vessels did not rise greatly in the ancient world. The average speed for cargo ships was approximately three to four knots; voyages of eight days from Puteoli to Alexandria and of six days from Gades to Ostia were records (Pliny, *HN* 19. 3-4). Seasonal winds were often employed, as by the Alexandrian grain fleet under the Empire, which sailed to Puteoli in June and caught the etesian winds back to Alexandria in August. Systematic descriptions of coasts (*Periplus*) appeared in the Hellenistic Age, a period in which physical aids to navigation such as harbours (q.v.) and lighthouses (q.v.) were constructed. This work continued under the Roman Empire.

NAXOS (1), the largest and most fertile of the Cyclades (q.v.), famous for its wine and worship of Dionysus. Tradition represents Carians, Thracians, and Cretans as its early inhabitants. Naxos was mistress of the Cyclades in the late sixth century. For its concern with the Ionian revolt the city was sacked by the Persians in 490 B.C. After the Persian wars Naxos joined the Delian Confederacy, revolted and became tributary to Athens, and a cleruchy was established about 450. As a member of the second Athenian Confederacy, the island again revolted without success. In the third century Naxos was a member of the Islanders' League; subsequently it was of little importance.

Bursian, ii. 489 ff.

W. A. L.

NAXOS (2), nowadays *Capo Schiso*, Sicily's earliest Greek colony, was founded by Chalcis in Sicel territory on the east coast (735 B.C.). Naxos quickly colonized Leontini, Catana (729), and allegedly Zancle (= Messina), but never became really powerful. Its traditional enemy, as of the other Chalcidian States, was Syracuse: Hieron even attempted to doricize Naxos (476). After 461, however, Naxos prospered and supported the anti-Syracusan movements of Leontini (427) and Athens (415), until finally (403) Dionysius of Syracuse razed it and gave its site to Siculi who then founded Tauromenium near by. Naxos was never recolonized (reject Pliny, *HN* 3. 91), its refugees ultimately settling at Tauromenium (q.v.).

Strabo 6. 267 f.; Thuc. bks. 3, 6, 7; Hdt. 7. 154; App. *BCiv.* 5. 109; Diod. bks. 11-14. P. Rizzo, *Naxos Siceliota* (1904); J. Bérard, *Bibliogr. topogr.* (1941), p. 77; H. A. Cahn, *Die Münzen Naxos* (1944). E. T. S.

NAZARIUS (*fl.* A.D. 320), see PANEGYRIC.

NEANTHES of Cyzicus (3rd c. B.C.), historian, pupil of Philiscus of Miletus. His extensive writings included an *Hellenica* ('Ελληνικά), annals of Cyzicus (Κυζικηνών), and a series of biographies (Περὶ ἐνδόξων ἀνδρῶν) notable for the first recorded literary treatment of the life of Timon the misanthrope. His reliability for accurate knowledge is small. The history of Attalus I of Pergamum, 241-197 B.C. (Τὰ περὶ Ἀττάλου), usually ascribed to him, is by a younger Neanthes.

FGH iii. 2; FGH ii. 84 and 171.

G. L. B.

NEAPOLIS, nowadays *Naples*, was founded in fertile territory by Cumae c. 600 B.C. Its early history being unknown, ancient authors invented the tale that its original name was Parthenope. Neapolis became the chief Greek centre of Campania (c. 425) and received refugees from Cumae (q.v.) into its suburb Palaeopolis. In 327 the anti-Roman policies of these Palaeopolitans

constrained Rome to capture Neapolis. Palaeopolis disappeared; Neapolis became a favoured allied State that furnished Rome naval help and repulsed Pyrrhus and Hannibal. In Republican times Puteoli outstripped Neapolis, but by Cicero's day, despite a treacherous massacre of its inhabitants in 82 (App. *BCiv.* 1. 89), Neapolis was a flourishing *municipium* where Virgil and others, seeking beauty or Hellenic culture, sojourned. Subsequently Neapolis became a *colonia* but retained its Greek institutions and language until the late Empire. In the Gothic Wars it suffered severely (Procop. *Goth.* 1 and 3), but was always important. Here Statius was born and Romulus Augustulus, last Western emperor, virtually imprisoned.

Strabo 5. 246; Livy 8. 22 f.; 35. 16. A. Sambon, *Monnaies antiques de l'Italie* i (1903), 171, 283; F. E. Adcock, *CAH* vii. 595; J. Bérard, *Bibliogr. topogr.* (1941), 71. E. T. S.

NEARCHUS (1), potter and vase-painter, in Athens. Known from four signatures on small black-figure vases of about 550 B.C. and dedication of Antenor Kore (about 530). His sons Tleson and Ergoteles signed 'little master' cups.

G. M. A. Richter, *AJArch.* 1932, 272; A. Rumpf, *Sakontides* (1937), 19. T. B. L. W.

NEARCHUS (2) of Crete, Alexander's friend, commanded the fleet which circumnavigated the coast from the Indus to the Tigris. His honest and trustworthy chronicle, written before 312 B.C., was not a history of Alexander, but gave an account of India, which Strabo and Arrian used, and of his voyage, which is reproduced in Arrian's *Indike*. After the death of Alexander Nearchus played a subordinate part under Antigonos I and Demetrius I. He was probably killed at the battle of Gaza (312 B.C.). See ALEXANDER (3), Bibliography, Ancient Sources. W. W. T.

NECESSITAS, see FATE.

NECHEPSO, titular author with Pctosiris of a comprehensive astrological work, the basis of the later astrology. He probably invented the astrological significance of the signs of the zodiac, as well as making many other innovations. 'Nechepso and Pctosiris' may have been the pseudonym of a single author, and his date may be placed c. 150-125 B.C.

Ed. E. Riess, *Philol.* 6 Suppl. (1891-3), 325-94. *PIV* xvi. 2160. W. D. R.

NECROMANCY, see MAGIC, III.

NECTAR, see AMBROSIA.

NECYOMANTEA, see MAGIC, II and III, ORACLES.

NEGOTIATORES, see COMMERCE, paras. 7 and 11.

NELEUS (Νηλεύς) and **PELIAS** (Πηλίας) in mythology, sons of Tyro, daughter of Salmoneus (q.v.) by Poseidon; he approached her in the shape of the river-god Enipeus, whom she loved (*Od.* 11. 235 ff.). Here (237) she is apparently already married to Cretheus (for the relationships see AEOLUS); later, as in Apollodorus (1. 90), he is her guardian. Apollodorus also says that she exposed the children, who were picked up by a horse-herder. Tyro was ill-used by Sidero, her step-mother, till her sons grew up, recognized her, and pursued Sidero into a temple of Hera, where Pelias killed her at the altar. For the rest of his story see JASON, MEDEA. Neleus married Chloris, daughter of Amphion of Orchomenus (*Od.* 11. 281 ff.), who bore Nestor and other sons, also Pero, cf. MELAMPUS. But Heracles attacked Pylos, Neleus' kingdom, because Neleus would not purify him from the blood-guilt of Iphitus (*Iliad* 11. 690 ff., Hesiod, *fr.* 14 ff. Rzsch; schol. *Il.* 2. 336), and killed all his sons save Nestor (q.v.). His own death is variously told, see Weizsäcker in Roscher's *Lexikon* iii. 110. H. J. R.

NEMAUSUS, town in Gallia Narbonensis (modern *Nîmes*), originally a La Tène stronghold, capital of the Volcae Arecomici. In 16 B.C. it was laid out with walls enclosing c. 550 acres and given the title of *Colonia* with Latin rights and an extensive *territorium*. A crocodile on its coins suggests a partly oriental population (? Antony's veterans). Very important remains of public buildings exist: amphitheatre, precinct of *Deus Nemausus*, and a temple erected by Agrippa (16 B.C.) and rededicated to C. and L. Caesar (the 'Maison Carrée'). The Pont-du-Gard forms part of its aqueduct. Perhaps in the second century it became the capital of Narbonensis.

F. Heichelheim and E. Linckeheld, *PIW* xvi. 2286-310; R. Neumann, *Quellbezirk von Nîmes* (1937). C. E. S.

NEMEA was an open valley on the north borders of the Argolid, in the territory of Cleonae. It was the scene of Heracles' encounter with the lion, and of the Nemean Games (q.v.). The fourth-century temple of Zeus, the great altar, palaestra, and gymnasium have been excavated. Nemea is also the name of the river flowing north and forming the boundary of Corinth and Sicyon, the scene of the first battle of the Corinthian War (394; Xen. *Hell.* 4. 2. 13 ff.).

C. W. Blegen, 'Excavations at Nemea', *Art and Archaeology* xix (1925), 175 ff.; *AJArch.* 1927, 421 ff.; N. Clemmensen and R. Vallois, *Le Temple de Zeus à Némée*, *BCH* 1925, 1 ff. T. J. D.

NEMEAN GAMES, THE, according to one legend were founded by Adrastus of Argos, when he led the Seven against Thebes; according to another by Heracles after he had slain the Nemean lion: but we know little of them until 573 B.C., when they became a Panhellenic festival. They were held in the sanctuary of Nemean Zeus (see *NEMEA*), and were at first managed by the people of Cleonae, afterwards by Argos. The games were conducted on the same lines as those at Olympia, the prize was a crown of wild celery, and they took place every second and fourth year in each Olympiad. F. A. W.

NEMESIANUS, MARCUS AURELIUS OLYMPIUS, from Carthage, late in the third century A.D. composed four pastorals (long ascribed to Calpurnius, q.v.), and an incomplete didactic poem in 325 verses on the chase. But he also distinguished himself in poetic contests and meditated an epic on the deeds of the imperial brothers Numerianus and Carinus (Vopiscus, *Carus, Numer. et Carinus*, 11; *Cyn.* 63-78). His *Cynegetica* is best dated between the death of the emperor Carus, 283, and that of Numerianus, 284. It seems to refer to his pastorals as lighter productions which had preceded (58-62).

WORKS (1) *Eclogae*: these four short poems, 319 lines in all, show the influence of Virgil and Calpurnius. In I the shepherd 'Timetas' threnody on Meliboeus recalls the praises of Daphnis in Verg. *Ecl.* 5; in III the song demanded from Pan is a parallel to that of Silenus in Verg. *Ecl.* 6. IV (62-72) borrows magical ideas which Virgil in *Ecl.* 8 drew from Theocritus: here too Nemesianus restores the pleasant music of the refrain which was part of the Theocritean tradition in Virgil. His diction and metre gain by his Virgilian imitations, though his period accounts for shortenings like *laudandō*, *devotid*, *exercetō* (*Ecl.* 2. 80, *Cyn.* 83, 187). From Calpurnius he borrows freely, especially in eclogue III.

(2) *Cynegetica*: 102 lines are introductory; then, departing from the order in Grattius (whom he probably had read), he devotes 223 lines to indispensable preliminaries for hunting—dogs (rearing, training, diseases, breeds), horses, nets, and traps. The poem breaks off on the verge of the chase—'venimus dum mane novum'.

(3) *De Aucupio*. Two fragments on birdcatching (28 hexameters) are ascribed to N.

His style, though unoriginal, is agreeable. He at least declares his independence of mythology (*Cyn.* 15-47) and certain notes of enthusiasm in him lend colour to the

almost conventional claim to be breaking new ground (8-14) in his didactic poem; while in his feeling for pastoral environment there are suggestions of the open air in spite of his book-borrowings. He is rather less inclined to lose himself in details of the essentials for the chase than Grattius is. See DIDACTIC POETRY, LATIN; PASTORAL POETRY, LATIN, para. 5.

NEMESIS (1). One of the most puzzling of Greek goddesses, owing to the wide divergence between her mythology and her position in cult and morals. Her best-known shrine was at Rhamnus in Attica, where she appears to have been a deity of the type of Artemis (q.v.; see Farnell, *Cults* ii. 488 ff.). Zeus pursued her amorously, and to avoid him she took all manner of non-human forms, especially those of fish (*Cypria*, frs. 6 and 7 Allen). Finally (Apollod. 3. 127, continuing what seems to be the same story) she changed into a goose, he into a swan, and so she laid the egg which a shepherd found and gave to Leda (q.v.). This is the sort of story which might be told of almost any minor goddess or nymph. The fact that in Smyrna (Paus. 9. 35. 6) there were statues of the Charites in her temple, of old workmanship ascribed to Bupalus, would suggest that there at least she had something to do with the fertility of the soil.

But in the vast majority of cases she is nothing but retribution or righteous indignation, particularly that of the gods at human presumption, personified. This identification extends to her Attic cult, cf. Catullus 66. 71 (64. 395 seems to make her a war-goddess, but he may mean that she appeared to rouse men fighting in a good cause); and a local worship in Boeotia, apparently of Nemesis Adrasteia, was said to have been founded by Adrastus (q.v.), because of the resentment he felt against the Thebans (Antimachus, fr. 53 Wyss). Adrasteia is certainly the 'unescapable' power before which all must bow (*προσκυεῖν τῇ Ἀδράστειᾳ*, Aesch. *PV* 936, Plato, *Resp.* 451 a). But she in turn is, or is identified with, a goddess of the Phrygian Ida, associated with the Dactyli q.v. (*Phorotis* in schol. Ap. Rhod. 1. 1129). Possibly in this case some accidental resemblance of a foreign to a Greek word has come into play; Nemesis of Rhamnus may have been originally the goddess who deals or distributes, *μετρί*, appropriate gifts to her worshippers, and afterwards made abstract, a process like that which Fors Fortuna (q.v.) seems to have undergone. It does not appear that her statue, for which see Rosbach in Roscher's *Lexikon* iii. 153-4 (see the whole art. for good discussion and literature and cf. Herter in *PIW*, s.v.), had the characteristic pose of later representations of her (see Volkmann in *ARW.* 26. pp. 266 ff., 31. pp. 57 ff. for this and other points), which are shown spitting into the breast-fold of her robe (cf. Theocr. 6. 39). For her later developments in cult and literature, which last to the days of Theodosius, see Rosbach.

II. J. R.

NEMESIS (2) succeeded 'Dolia' in the affections of Tibullus (2. 3. 51; 5. 111; Ov. *Am.* 3. 9. 31; Mart. 8. 73. 7).

NENIA (not approved, *nenia*), our knowledge here is limited by the sometimes contradictory evidence of antiquity. The word may derive from *νηπιον* (*Cypria*)

(Pollux 4. 79 [80]), but, as *nenia* goes back to times preceding foreign influence, it is more likely a Latin onomatopoeia. Usually *nenia* means a dirge containing lamentation and praise of a deceased person (Diomedes, Keil, *Gramm. Lat.*, i. 485: 'cum lamentatione'; Festus, 158 Lindsay: 'carmen quod in funere laudandi gratia cantatur ad tibiam'). It was sung to a flute accompaniment by a hired mourner (*praefica*), whose assistants made responses (Serv. *ad Aen.* 6. 216) before the house of mourning, during the funeral procession, and beside the pyre. It never became a literary genre. No example has reached us: we have only an anapaestic parody (Sen. *Apocol.* 12). *Nenia* is also the goddess of the dying; she had a temple at Rome.

Because of its primitive character, *nenia* soon fell into discredit (Plautus, *Asin.* 808). This explains why it may be a synonym for children's songs (Hor. *Epist.* 1. 1. 63), a magical litaney, a senseless rigmorole (*nugae*). In Ausonius it signifies *epicedium* (q.v.); in Sidonius Apollinaris, a metrical epitaph.

H. de la Ville de Mirmont, *Revue de philologie* xxvi (1902), 263 and 335; W. Kroll, *PF*, s.v. C. F. (Transl. J. W. D.)

NEODAMODEIS, see HELOTS.

NEOKOROI, see TEMPLE OFFICIALS.

NEOPHRON, of Sicyon, was said by Dicaearchus and in the pseudo-Aristotelian *ὑπομνήματα* to have written a *Medea* which was adapted by Euripides in his play of that name (Argum. Eur. *Med.*), but the truth of this is very doubtful and the three extant fragments are almost certainly later than Euripides (see D. L. Page, Euripides, *Medea*, pp. xxx ff.). Suidas says that he wrote 120 tragedies and was the first to introduce into his plays 'paedagogi and the torture of slaves'—perhaps an inference based on his supposed priority to Euripides; such priority is inconsistent with Suidas' further statement that he associated with Alexander the Great, who put him to death with Callisthenes (Suidas elsewhere calls Alexander's victim Nearchus).

A. W. P.-C.

NEOPLATONISM, the revived Platonism—really a new synthesis of Platonic, Pythagorean, Aristotelian, and Stoic elements—which was the dominant philosophy of the pagan world from the middle of the third century A.D. down to the closing of the pagan schools by Justinian in 529, and strongly influenced medieval and Renaissance thought. The following phases may be distinguished in its history. (1) A long period of preparation, extending from the time of Antiochus (d. c. 68 B.C.) and Posidonius (d. c. 50 B.C.) down to that of Plotinus, during which we can trace the movement towards a comprehensive synthesis. In the work of such second-century writers as the Neopythagorean Numenius and the Middle Platonist Albinus (q.v.) there is much that foreshadows Plotinian Neoplatonism. (2) The oral teaching of Ammonius Saccas at Alexandria (early 3rd c.), of Plotinus at Rome (244/5-269/70), and of Plotinus' immediate pupils Porphyry and Amelios. Plotinus' *Enneads* (published posthumously, c. 300-5) gave Neoplatonism its abiding shape, and are incomparably its most important philosophical product. See PLOTINUS, PORPHYRY. (3) The period of diffusion in the fourth century when Neoplatonism becomes the fashionable creed of the pagan reaction, with its chief teaching centres in Syria and later at Pergamum, while it also begins to influence Christian thought through Augustine. To this period belong Iamblichus (q.v.); Iamblichus, author of the *De diis et mundo*, a curious popular handbook of Neoplatonic religion (ed. and transl. A. D. Nock, 1926); Eunapius, who made out of the lives of his Neoplatonic teachers a pagan hagiology (*Vitae Sophistarum*, ed. and transl. W. C. Wright, Loeb,

1922); and the Latin Neoplatonists Chalcidius (Commentary on Plato's *Timaeus*, ed. Wrobel, 1876), Marius Victorinus, and Macrobius (ed. Eyssenhardt², 1893). (4) The Athenian School (Syrianus, Proclus, Simplicius, etc.) and the Alexandrian (Hypatia, Synesius, Olympiodorus, etc.), belonging mainly to the fifth and sixth centuries, fall outside the limits of date of this dictionary; as does the survival of Neoplatonism in writers like 'Dionysius the Areopagite' and John the Scot, and its revival by Psellus at Byzantium in the eleventh century and by Pico and others at the Renaissance.

NEOPTOLEMUS (1), in mythology, son of Achilles and Deidameia; see ACHILLES. After his father's death he was sent for to Troy by the Greeks, because his presence was one of the necessary conditions for taking the city (Soph. *Phil.* 114 f., 345 ff.). Odysseus acting as messenger (*Od.* 11. 508-9; Soph. *ibid.* 344 adds Phoenix). Arrived there, he showed himself a notable warrior and wise counsellor (*Od.* *ibid.*), killing among others Eurypylos, son of Telephus. He was one of the chosen party who manned the Wooden Horse, and came through that and the other dangers of the war unharmed. So far Homer (Sophocles' details presumably are from some cyclic epic, however); later authors do little more than enlarge and embroider. After the war, Homer says no more of him than that he returned safely and Menelaus sent Hermione to be married to him (*Od.* 3. 188-9; 4. 5 ff.). For the sequel of this marriage see HERMIONE. There is, however, a curious double version of the story of his visit to Delphi, which has left its mark on Pindar. In the sixth Paean it is said (100 ff.) that Neoptolemus, having been fetched from Scyros and taken Troy, incurred the wrath of Apollo by killing Priam at the altar of Zeus Herceus (cf. Verg. *Aen.* 2. 513 ff.); the god therefore swore that he should never reach home. Consequently, he was killed at Delphi in a dispute with 'the servants', presumably of the shrine. This seems to have given much offence in Aegina; therefore in *Nem.* 7. 33 ff. Pindar retold the tale with a different emphasis. Neoptolemus did go to Delphi and was killed there in a quarrel; but he went with the best of intentions (for details see Farnell's commentary), and the ultimate reason of his death was that one of the Aeacidæ must needs enjoy heroic honours at that spot. He never returned to Scyros or Phthia, but, being driven by winds off his course, made his way to the Molossian territory, the kings of which country claimed descent from him through his son by Andromache (q.v.), Molossus; hence the name Pyrrhus borne by the most famous of them, that being the alternative name of Neoptolemus (c.g. *Cypria*, fr. 14 Allen, which says Pyrrhus was his original name; Neoptolemus means 'young warrior'). His cult at Delphi is a historical fact, but it practically dates from the Gaulish invasion, according to Pausanias (1. 4. 4); earlier than that his tomb had been held in no honour, but it was thought that he had been seen fighting alongside the Hyperborean heroes against the attackers.

See the larger dictionaries s.v.; Farnell, *Hero-Cult*, 311 ff.

H. J. R.

NEOPTOLEMUS (2) of Parium (3rd c. B.C.; earlier than Aristophanes of Byzantium, probably later than Eratosthenes), Greek writer. His works included poems (*Διονυσιαί, Τριχθονία*), literary criticism (*Π. ἐπιγραμμάτων*,

Π. ἀστέισμων, and a *Poetic*), and a treatise Π. γλωσσῶν Ὀμήρου, on the strength of which he was dubbed γλωσσογράφος. In the *Poetic*, largely drawn upon, according to Porphyry, by Horace for his *Ars Poetica*, N. defined the aim of poetry as *τέρπειν τε καὶ ὠφελεῖν*. He seems to have followed the tradition of the earlier Peripatos, without being exactly a Peripatetic. See also GLOSS, GREEK; LITERARY CRITICISM, GREEK, para. 4.

A. Rostagni, *Arte poetica di Orazio* (1930); *PH* xvi. 2. 2465-70. J. D. D.

NEOPYTHAGOREANISM, the revived Pythagorean school, or rather direction of thought, which appeared at Rome and Alexandria in the first century B.C. and persisted until it was merged in Neoplatonism. It combined in varying proportions a small amount of early Pythagorean tradition with elements derived from Platonic, Peripatetic, and Stoic sources, the whole being accommodated to contemporary religious tendencies. Neopythagorean writers appear to have been interested mainly in theological speculation, in the symbolism of numbers, and in glorifying Pythagoras as the founder of a way of life and author of a religious revelation. There is little trace of a systematic body of philosophical doctrine held in common by them: some of them were Stoicizing monists, others Platonizing dualists. The historical importance of Neopythagoreanism lies chiefly in the influence which it exercised (a) on Neoplatonism, especially in the post-Plotinian period; (b) on Jewish thought through Philo and Christian thought through Clement of Alexandria. For individual Neopythagoreans see NIGIDIUS FIGULUS, APOLLONIUS (14) OF TYANA, NUMENIUS.

(a) Ancient sources: Alexander Polyhistor (c. 80 B.C.) ap. Diog. Laert. 8. 24 ff. (cf. M. Wellmann, *Hermes* 1919); two accounts in Sext. Emp. 10. 261 ff. (Platonizing), 281 ff. (Stoicizing); Pholius cod. 249 (cf. O. Immisch, *Sitz. Heid. Ak.* 1919); 'Ocellus Lucanus', ed. R. Harder with Germ. comm. (1926); frags. of Nigidius, A. Swoboda (1889); of Numenius, E. A. Leemans (1937); of other Neopythagoreans, Mullach, *Fragm. Phil. Graec.* (b) Modern discussion: Zeller iii. 21; A. Schmeling, *Philosophie der mittleren Stoa* (1892), 403 ff.; A. Delatte, *Études sur la littérature pythagoricienne* (1915); F. Cumont, *Recherches sur le symbolisme funéraire des Romains* (1942). E. R. D.

NEOTERICI, οἱ νεώτεροι (Cic. *Att.* 7. 2. 1), 'poetae noui' (Cic. *Orat.* 161), 'cantores Euphorionis' (Cic. *Tusc.* 3. 19. 45), a coterie of younger poets, who, eschewing Ennius, turned to Alexandria, especially to Euphorion of Chalcis, for their models of *epyllia* and amatory or satirical epigrams and elegies. Catullus to some extent (64; 66) followed the movement; thus his *Peleus* and *Thetis* has an immoderate use of the *σπορδαίοντες* which Cicero (*Att.* 7. 2. 1, Nov. 50 B.C.) parodies in his 'flaut ab Epiro lenissimus Onchesmites'. 'Cantores E.' is not well rendered by 'warblers of Euphorion': it suggests tiresome reiteration of Alexandrian characteristics. The 'summus grammaticus', Valerius Cato, led the coterie. Other members were Cinna, who accompanied Catullus to Bithynia and took nine years for his *epyllion Zmyrna*, Calvus, Catullus' close friend, better known as an orator, Furius Bibaculus, like Catullus anti-Caesarian, and Tigidas, a Caesarian, as was Cinna, if identical with the tribune who met a tragic end in 44 B.C. Cornelius Gallus (q.v. 3) also belongs to the group. In Ovid's list (*Tr.* 2. 427-38) other names occur too shadowy to mention. By Ovid's time the fame of Virgil and Horace had almost consigned the Neoterics to oblivion, and Horace expresses contempt for them (*Sat.* 2. 5. 41; cf. *Mart.* 10. 21. 4). In youth, Asinius Pollio had relations with them: Cinna wrote him a *Proper-tianum*.

There were later 'neoterici' in Hadrian's age. See ALEXANDRIANISM, LATIN. G. C. R.

NEPOS, see CORNELIUS (2), METELLUS (10), PLATORIUS.

NEPTUNUS, Italian god of water (not of the sea, though his identification with Poseidon, q.v., extended his cult in this direction; it was then purely Greek in form, the *exta* being thrown raw into the sea, *Livy* 29. 27. 5; it is in virtue of this capacity that the absurd identification of Consus with 'Neptunus Equester', i.e. Poseidon Hippios, takes place, *Livy* 1. 9. 6). The etymology of his name is quite uncertain; in Etruscan it is Neθun(u)s. His festival is of the oldest series (Neptunalia, 23 July); we know concerning its ritual only that arbours, *umbrae*, of boughs were commonly erected (*Festus*, p. 519, 1 Lindsay), but it may be conjectured that its object was to obtain sufficient water at this hot and dry time of year. His cult-partner is Salacia (*Gellius* 13. 23. 2); she may be the goddess of 'leaping', i.e., springing water (*salire*), but was identified with Amphitrite as he was with Poseidon.

For his temples see Platner-Ashby, p. 360 f. Cf. Wissowa, *RK* 225 ff.; L. Delatte in *Ant. Class.* iv (1935), 45 ff. H. J. R.

NERATIUS PRISCUS, Lucius, a considerable Roman jurist of the age of Trajan and Hadrian; born at Saepinum in Samnium. He was *praefectus aerarii Saturni*, suffect consul (under Domitian), *legatus Augusti pro praetore* of Pannonia. Trajan estimated him highly and even wished to make him his successor (but see under HADRIAN). Neratius was together with Celsus the last head of the School of Proculians. He is the author of some important publications freely excerpted by his successors: *Membranae* (which illustrate well his penetration as a jurist); *Regulae*; *Epistulae*; and a dissertation *De nuptiis*.

PIR, N 46.

A. B. & C. H. V. S

NEREUS, an old sea god, son of Pontus and father by the Oceanid Doris of the Nereids. He lives with the Nereids in the depths of the sea (*Il.* 1. 358; *Hes. Th.* 233 ff.), particularly in the Aegean Sea (*Ap. Rhod.* 4. 771 f.). Hesiod and Pindar extol his righteousness. To give fair praise to an enemy's achievement is quoted as an advice of a sea god, presumably N., by Pindar (*Pyth.* 9. 94). Like other 'Old Men of the Sea' N. has great wisdom and even the gift of prophecy (*Hor. Carm.* 1. 15). These abilities bring him into a strenuous contest with Heracles. Bacchylides and Pherecydes relate that Heracles had to catch Nereus unawares in order to learn the whereabouts of the Golden Apples. Panyassis (*Ath.* 11. 469 d) makes N. give the cup of the Sun to Heracles. When Peleus wrestles with Thetis, N., his future father-in-law, looks on. Later N. attends the wedding of Peleus (François Vase) and brings presents. In his contest with Heracles N. transforms himself into fire, water, and many other shapes (*Apollod.* 2. 5. 11). In addition to his fifty or hundred daughters, the Nereids, he is said by Lucian (*Trag.* 87) to have educated Aphrodite. It is uncertain whether a small cult in Gythium belonged to N. or to some other sea god (*Paus.* 3. 21. 9). The earliest representations of N. in art go back to the early sixth century B.C. In an Athenian pediment and on vases he watched Heracles fight Triton. As a dignified spectator N. is a great favourite with vase-painters, but sometimes he is also shown wrestling with Heracles. Only the inscription referring to N. survives on the famous Hellenistic frieze of Pergamum.

Pindar, *Pyth.* 9; *FGH* 1. 65 (Pherecydes); L. Bloch in *Recherch. Lex.* s.v.; E. Buschor, *Ath. Mitt.* 1921/2, 56. G. M. A. H.

NERIO, see BELLONA.

NERO (1) (NERO CLAUDIUS CAESAR), Roman emperor A.D. 54-68, was born in 37 of Cn. Domitius Ahenobarbus (cos. A.D. 32) and the younger Agrippina (q.v.). For the circumstances of his accession see CLAUDIUS (1).

2. To strengthen his doubtful claim stories were spread of his miraculous childhood (*Suet. Nero*, 6; *Tac. Ann.* 11. 11), and stress laid on his descent from the divine Augustus. In his inaugural speech he promised

to rule 'ex praescripto Augusti' (Tac. *Ann.* 13. 4). He showed modesty by declining an honour with the phrase 'cum meruero', *pietas* by consecrating Claudius and by gratitude to Agrippina ('optima mater'), and clemency by his unwillingness to sign a death-warrant—'quam uellem nescire litteras'. His enthusiasm for art made flatterers hail him as Apollo.

3. Between artistic son and imperious mother trouble was likely: Otho (q.v.) encouraged Nero to free himself. Agrippina retorted by sympathy for the dispossessed Britannicus (q.v.): Britannicus was poisoned (55), and Agrippina went into retirement. Poppaea (q.v.), Otho's ambitious wife, wishing to marry Nero, planned to eliminate both Agrippina and Nero's wife Octavia. Though Nero preferred literary pursuits or amusement, there was some good legislation (Tac. *Ann.* 13. 51) and able governors—Galba, Suetonius Paulinus, Vespasian, and Corbulo—were sent to the provinces: here the credit should probably be ascribed to Seneca and Burrus (q.v.), the Prefect of the Praetorians, who apparently controlled serious policy.

4. But Nero soon became his own master. In 59 he had Agrippina murdered, while the death of Burrus (who was replaced by two Prefects, Tigellinus and Faenius Rufus) and the retirement of Seneca (62) left him uncontrolled. Octavia was divorced and murdered. Now Poppaea could marry Nero: in 63 she bore him a daughter who lived three months.

5. Nero's emancipation meant free rein for his artistic passions. His enthusiasm for art and horsemanship seem genuine enough; he wanted to lead Rome from gladiatorial shows to humaner things. He founded games: the *Juvenalia* (59), where nobles were encouraged to compete, and the *Neronia* (61); he opened a *gymnasium*, and distributed free oil to competitors 'Graeca facilitate'. He eagerly displayed his own powers in public, to the scandal of traditionalists. His voice, 'exigua et fusca' (Suet. *Nero*, 20), hailed by his admirers as divine, may have been passable; his poetry, modernistic and laborious, was probably his own, for Suetonius had seen his note-books with their erasures (ibid. 52). At Naples his *première* brought thunderous applause from trained Greek bands; Greeks alone deserved to hear him, and he resolved on a Greek tour.

6. Meanwhile his extravagance, vanity, and fear, coupled with sense of power—'negavit quemquam principum scisse quid sibi liceret' (ibid. 37), made him unpopular. His helpers and associates were low-born, or Greek and Oriental freedmen, avaricious and arrogant. The expense of wars in Britain and Armenia compelled him to depreciate the coinage and rob the rich. The law of *maiestas* (q.v.) was revived (62); wealthy nobles, Faustus Sulla, Rubellius Plautus, and Torquatus Silanus, were executed on suspicion. A fire that ruined one-half of Rome (64) increased his unpopularity, as he seized the opportunity to build himself the colossal *Domus Aurea* (q.v.); rumours circulated that he had instigated the fire, and recited his own poems over the burning city, and Nero tried to make the Christians scapegoats (see PERSECUTIONS). By the end of 64 all classes had good reason to hate or fear him.

7. Hence a conspiracy to assassinate Nero and make C. Calpurnius Piso (q.v. 9) emperor. The scheme was betrayed (65); Piso and his accomplices, Faenius Rufus, Seneca, Lucan, knights, tribunes, and soldiers were executed. But Nero now suspected all, and after Poppaea's death (66) more judicial murders followed, including Ostorius Scapula, C. Petronius, *arbitrarius elegantiae*, and the Stoics Paetus Thrasca and Barea Soranus. In 66 Tiridates, kneeling, received the diadem of Armenia from him, but a Jewish revolt forced him to send Mucianus to govern Syria and Vespasian to pacify Judaea. During 67 he actually left a freedman, Helius, to govern Rome, while he competed in the great Greek games, invincibly; in

gratitude he proclaimed 'Freedom for Greece' at Corinth: 'Other emperors have freed cities, Nero alone a whole province' (SIG iii. 814). Yet amid this buffoonery he ordered the successful general Corbulo and two popular governors of Germany, the 'fratres Scribonii', to commit suicide (Dio 63. 17).

8. It was the last straw: in spring 68 C. Julius Vindex (q.v.), governor of Lugdunensis, rose against Nero; Galba in Spain declared himself 'legatus S.P.Q.R.', and in Africa Clodius Macer revolted. The situation might have been saved by military action, but Nero could only conceive fantastic schemes of revenge or of reducing his enemies to penitent tears by his art (Suet. *Nero* 43). The Praetorians, bribed to acclaim Galba, deserted Nero, who fled from Rome and on 9 June 68 committed suicide.

9. A vicious ancestry and repressed childhood, followed by absolute power, made Nero vain, egotistic, and assertive. Yet his devotion to art was real. Some good he achieved, yet mainly where (as in the solution of the Armenian problem, or the rebuilding of Rome with wider streets) it was grandiose and involved glorification of himself. Jealous fear of all eminence—noble, military, or literary—forced him to persecution and murder; his crimes alienated all, nobles, people, and soldiery, while his phil-Hellenic outlook and theatrical performances shocked Roman sentiment. Greek longing for him is reflected in the mysterious belief that he would 'return'; for the rest the tribune's verdict holds good—'odisse coepi, postquam parrieda matris et uxoris, auriga et histrio et incendiarius extitisti' (Ann. 15. 67).

BIBLIOGRAPHY

ANCIENT SOURCES: Tacitus, *Ann.* 13-16, supplemented by Suetonius, *Nero*, and Dio Cassius 61-3. Three speeches and letters of Nero are published in M. P. Charlesworth, *Documents illustrating the reigns of Claudius and Nero* (1939).

MODERN LITERATURE: Analysis of sources: E. Ciaceri, 'Claudio e Nerone nelle storie di Plinio', in *Processi Politici* (Rome, 1918), and A. Momigliano, 'Osservazioni sulle fonti per la storia di Caligola, Claudio, Nerone', *Rend. Linc.* 1932, 293. Works on Nero: *CAH* x. 702-42; B. W. Henderson, *The Life and Principate of the Emperor Nero* (1903); A. Boethius, 'The Neronian "nova urbs"', in *Corolla Archeologica* 1932; Ph. Fabis, *Néron acteur* (1906); C. NERO (2), GAIUS CLAUDIUS (cos. 207 B.C.), after serving under Marcellus in 214 B.C., took part in the siege of Capua as praetor (212) and proprætor (211). After the defeat of the elder Scipios he was sent to Spain, where he secured the land north of the Ebro (210). He again served under Marcellus in Italy (209). As consul in 207 with his former enemy M. Livius Salinator (q.v.) he took up his command against Hannibal in south Italy. When Hasdrubal's dispatches to Hannibal were intercepted, Nero boldly led part of his army by forced marches (traditionally 240 miles in six days) to join Livius. At the battle of Metaurus the two consuls defeated Hasdrubal, Nero turning the tide of battle by a skilful tactical movement. Nero reported his victory to Hannibal by flinging Hasdrubal's head into his camp. When Nero held the censorship with Livius in 204 the old enmity was renewed. He probably served on the embassy which delivered the Senate's ultimatum to Philip in 200. H. H. S.

NERO (3), TIBERIUS CLAUDIUS, father of Tiberius and Drusus (q.v. 3), commanded Caesar's fleet as quaestor in the Alexandrine War, conducted colonies to Gallia Narbonensis, and was praetor in 42 or 41 B.C. He supported L. Antonius in the Perusine War, attempted to foment an insurrection in Campania, and escaped with his wife Livia and infant son. Reinstated by the Treaty of Misenum, he divorced Livia to enable Octavian to marry her. He died c. 33 B.C.

BAlex. 25; Velleius 2. 75-9; Suetonius, *Tib.* 4-6; Dio Cassius 44. 40; 48. 15 and 44. G. W. R.

NERO (4), JULIUS CAESAR, the eldest of the three surviving sons of Germanicus and Agrippina, was, after the death of Tiberius' son Drusus in A.D. 23, at the age of seventeen, next in succession to the Principate. Twice commended to the Senate by Tiberius, he held the quaestorship, probably in 26, but in 29 Tiberius, believing the accusations of Sejanus against him and his mother, denounced him in a dispatch to the Senate. He was deported to Pontia and put to death there in 31.

J. P. B.

NERVA (1) (MARCUS COCCEIUS NERVA), Roman emperor (A.D. 96-8), grandson of M. Cocceius Nerva (q.v. 3), was born at Narnia, probably A.D. 30, on 8 November. He was praetor designate in 65, receiving *ornamenta triumphalia* on the suppression of the Pisonian conspiracy. Not discredited by his friendship with Nero (who admired his verses), he was *consul ordinarius* in 71 (with Vespasian), and again (being by now a lawyer of distinction) in 90, with Domitian. The report of his temporary exile in Domitian's last years may be doubted.

On Domitian's death (16 Sept. 96) he was proclaimed emperor (and *Pater Patriae*) by a Senate which regarded him as the pattern of its ideals—nobly born, eloquent, peaceful, just, a guardian of the constitution. But Nerva lacked administrative experience and capacity to command, particularly in face of a soldiery angered at Domitian's murder. General opinion, however, reacted violently: Domitian's memory was damned, his *acta* were annulled, his statues destroyed; and informers were attacked. Nerva failed to check the spirit of vendetta, itself encouraged by his own 'reformist' programme, which abolished treason-charges and was reflected in such coin-legends as *Libertas Publica*, *Salus*, *Aequitas*, *Iustitia*. Above all, he lacked military support (hence the wishful *Concordia Exercituum* coins); unrest in the frontier armies was disturbing (cf. Plin. *Ep.* 9. 13. 11; Philostratus, *VS* 1. 7. 1) and the opposition of the Praetorians dangerous. The latter in 97 disregarded Nerva's refusal to surrender Domitian's assassins. His prestige ruined, himself childless and infirm, he formally adopted Trajan (q.v.), giving him full powers (autumn 97). On 25 Jan. 98 he died, after 16 months of morally blameless rule; he was consecrated, and his ashes were placed in Augustus' Mausoleum.

Nerva's administration, if hampered by financial difficulties, was enlightened and progressive, though it chiefly favoured Rome and Italy. Most important was the 60 million sesterces spent on land-allotments for poor citizens and the system of poor relief (see *ALIMENTA*). The cost of postal services in Italy was taken over by the government. In Rome granaries were built; the system of corn-distribution and the aqueducts (q.v.) received attention. Legislation was just and humanitarian. Foreign policy was uneventful, being disturbed only by a brief Suebic war (Plin. *Pan.* 8; cf. *ILS* 2720).

With the pendulum swinging sharply back from autocracy to constitutionalism, *libertas* and *principatus* ('res olim dissociabiles') were reconciled, and Rome could recapture the ideals of government, vindicate the right of free speech, and recognize the principle of dynastic adoption. Nerva's short reign, narrow though its imperialism was, was in many ways wise and beneficial. But without military support Nerva could not uphold the complex burden of power—'imperium ruens super imperatorem'. 'Providentia Senatus' required 'Concordia Exercituum' for its fulfilment.

NERVA (2), LUCIUS COCCEIUS, was sent by Octavian to Antony (in Syria) in 41 B.C., returned with him in 40, and helped to negotiate the treaty of Brundisium. In 38 (or 37) he accompanied Maecenas on another diplomatic mission to Antony.

Horace, *Sat.* 1. 5; Appian, *BCiv.* 5. 60-4.

G. W. R.

NERVA (3), MARCUS COCCEIUS, lawyer, grandfather of the Emperor Nerva and friend of Tiberius, was *consul suff.*, *curator aquarum* (A.D. 24), and committed suicide at Capri (33). As Labeo's pupil he greatly contributed to the formation of the Proculian school (see *SABINUS* 2).

O. Lenel, *Palingenesis Juris Civilis* i (1889), 787; C. Arno, *Tijdschrift v. Rechtsgesch.* iv (1922), 210. A. M.

NERVII, a mixed Celto-German tribe, occupying parts of Hainault and Flanders. They were defeated by Caesar after a desperate struggle (57 B.C.). Under the Empire the capital (Bagacum, mod. *Bayay*) became an important centre, and Nervian merchants traded in the Rhineland. Pottery works and numerous villas attest prosperity. The Nervii contributed six auxiliary cohorts to the army.

NESIOTES, see *CRITIUS*.

NESSUS, see *CENTAURS*.

NESTOR (1) (*Νέστωρ*), in mythology, surviving son of Neleus (q.v.), who lived to a great age (he is more than two generations old in *Iliad* 1. 250 ff., i.e. over sixty, schol. ad loc., not two hundred odd years, as Ovid, *Met.* 12. 187 f., makes him), retaining some mental vigour and bodily strength long after his youth was passed. The *Iliad* gives a humorous, kindly portrait of an old and respected but rather ineffective man, full of advice generally either platitudinous or unsuccessful, the really useful counsellors being Odysseus and at times Diomedes (qq.v.). His tactics are archaic (*Il.* 4. 301 ff., cf. Lang, *World of Homer*, p. 58); he leads the embassy to Achilles with suggestions (9. 179), and when it fails has nothing more to say, except 10. 204 ff., where he advises sending a scout to discover what the Trojans are doing. He is very fond of long narratives of his early successes in war (as 11. 670 ff.) or sport (23. 626 ff.); a particularly delightful touch is his long speech of advice to his son Antilochus (23. 306 ff.), which he himself admits the younger man does not need. In the *Odyssey* he is safe at home in Pylos (3. 4 ff.), and there entertains Telemachus (q.v.). For the death of his son see *ANTILOCHEUS*. His return was due to his realization that things were being ill-conducted after the fall of Troy and disaster impended (*Od.* 3. 165 ff.); at Achilles' funeral he stops the panic of the Greeks at the wailing of Thetis and her attendants (24. 50 ff.). Later works do no more than add details; it is he who settles the dispute over the arms of Achilles by suggesting that Trojan prisoners should be asked whether Aias or Odysseus was more to be dreaded (Quint. Smyrn. 5. 157, cf. 318; cf. schol. *Od.* 11. 547). So far as we know, there was no tradition of when or how he died; his grave was shown in Parosia's day (Paus. 5. 36. 2).

H. J. R.

NESTOR (2) of Laranda, lived in the reign of Septimius Severus (A.D. 193-211), and wrote, among other works, an *Ἰλιάς λεπτογράμματος*, in each of the twenty-four books of which one letter of the alphabet did not appear, and *Μεταμορφώσεις* (*Anth. Pal.* 9. 129, 364). His son was the epic poet Peisander (q.v. 3) of Laranda.

PW xvii. 125-6.

J. D. D.

NEXUM, a transaction of the oldest Roman law, was presumably a form of loan, contracted solemnly with copper and scales (*per aes et libram*), in presence of five witnesses and *libripens* carrying the scales. Because of the ambiguity of our literary sources (Varro, Livy), the nature and effects of this institution are obscure. It remains doubtful whether *nexum* resulted in immediate execution (without judgement) against the debtor, if he did not repay at the appointed term, or whether it was a kind of self-sale (*mancipatio*) or self-pledge by which the debtor enslaved himself to the creditor to guarantee him the payment of the debt. *Nexum* is mentioned in the XII Tables, but it fell out of use when *Lex Poetelia Papiria* (c. 326 B.C.) prohibited bondage and enchainment for private debts.

F. de Zulueta, *Lavo Quarterly Review* xxix (1913); H. Lévy-Bruhl, *Quelques problèmes du très ancien droit romain* (1934); R. Düll, *PW*, s.v. 'Nexum'; A. Berger, *ibid.* (Suppl. vol. vii), s.v. 'Lex Poetelia Papiria'.

A. B.

NICAENETUS (probably second half of 3rd c. B.C.), of Samos or Abdera (perhaps born at Abdera but migrated early in life to Samos). Athenaeus in quoting from N.'s *Epigrams* calls him 'the Epic Poet' and refers to his treatment in various works of Samian history. N. also wrote a *Catalogue of Women* (*Ath.* 13. 590 b), and an epyllion called *Lyrkus* (*Parth.* 1), describing the adventures of that hero. The most attractive of the epigrams is that preserved by Athenaeus (15. 673 b), an invitation to a picnic at Hera's temple in Samos. *Anth. Pal.* 6. 225 is probably a literary reminiscence of Callimachus (fr. 126) and Apollonius Rhodius (*Argon.* 4. 1309, 1323, 1358).

Texts: J. U. Powell, *Coll. Alex.* (1925), 1-4. General literature: E. Diehl, 'Nikainetos (2)', in *PW* xvii. 245-6.

E. A. B.

NICANDER, of Colophon. N. describes himself as 'reared by the snowy burg of Clarus' (*Ther.* 958), and as 'seated by the Clarian tripods of the Far-Shooter' (*Alex.* 11), and was apparently hereditary priest of Apollo of Clarus (*Vita*, citing Dionysius of Phaselis). His date is variously given. The confusion may be due in part to the existence of another Nicander, son of Anaxagoras, mentioned as an epic poet in an inscription of Delphi (*SIG* 452), which is best assigned to 258. The internal evidence of the two extant poems favours a date in the second century.

2. **WORKS.** Two didactic poems in hexameters, the *Theriaca* and *Alexipharmaca*, survive complete. The first is an account of various snakes and other poisonous creatures and the best remedies for their bites. The second enumerates vegetable, mineral, and animal poisons and their antidotes. The matter of both poems is taken from the prose-treatise of Apollodorus the Iologus (early 3rd c.). *Thebaica*, *Oetaica*, *Eurobia* (?), *Sicelia*, *Cimmerii* were all apparently Epics. Better known is the *Heteroionumena* (*Metamorphoses*), since it was used by Antoninus Liberalis and Ovid. The *Georgica*, on which Cicero (*De Or.* 1. 69) cites a flattering opinion of the *docti*, had some influence on Virgil. So perhaps had his *Medisurgica* (*On Apiculture*). More in the vein of the two extant poems were the *Prognostica* and *Collection of Cures*. The former was a versification of the (pseudo-) Hippocratic treatise on this subject (Suidas). All the above seem to have been in hexameters, but the *Ophiaca* (schol. *Ther.* 377), which recounted legends connected with snakes, was probably in elegiacs, cf. frs. 31-2, as also was perhaps a poem on Hunting (frs. 97-100). Of

three other works, *Aetolica*, *Colophoniaca*, and *About Poets* or *About Poets from Colophon*, it is not established whether they were in prose or verse. A collection of Glosses and a treatise on Temple Utensils were certainly in prose.

3. Suidas describes N. as 'grammarian, poet, and doctor'. The last is probably a false inference from the nature of many of his writings, but the order of the first two is significant. As Suidas later puts it, N. was a *metaphrastes*, i.e. converter into verse, of any topic that came to hand, whether a medical dissertation or a collection of *paradoxa*. To judge by the *Theriaca* and *Alexipharmaca*, N. had little gift and, indeed, little inclination for enlivening his arid themes with flights into real poetry. Digressions are few and similes almost non-existent. But neither was N. a scientist. He took over from his sources the bad with the good and thus we find in his poems absurd errors due to popular superstition alongside exact descriptions of plants and medical prescriptions so detailed and precise that the remedy could be made up to-day. But a grammarian of a sort N. undoubtedly was. He describes himself (*Ther.* 957) as *Homereus* and he can at least claim the title as being one of the most diligent seekers after Homeric glosses among the Alexandrians. Like Euphorion and the author of the *Alexandra* he has no scruples about altering the meanings of words nor about playing fast and loose with normal grammar. In metre his handling of the hexameter conforms in general to the rules laid down by Callimachus.

4. N. was read and cited by a certain number of later writers on the subjects with which he had dealt, but he received more attention from professional scholars drawn to him by the obscurity of his language and style. Theon wrote a *hypomnema* on him, as did Plutarch, and the names of other students are mentioned in the Scholia. The result is that the latter, especially those on the *Theriaca*, often contain valuable material.

Texts: O. Schneider, *Nicandrea* (1856). General literature: W. Kroll, 'Nikandros' (10) and (11) in *PW* xvii. 250-65.

E. A. B.

NICANOR (1) of Stagirus (c. 360 (?) - 317 B.C.), perhaps shared with Alexander the tuition of Aristotle, whose daughter he married. He may have commanded Alexander's Greek fleet, but he is first identified for certain in 324, when he brought to Greece several rescripts of Alexander, including the decree for the return of exiles. In 319 he commanded Cassander's garrison at Munychia, and from this position he soon scoured the Piraeus also. He next commanded Cassander's fleet and defeated Cleitus (q.v. 2) near the Bosphorus (318); but he quarrelled with Cassander, who had him condemned to death for treason by the Macedonian army-assembly.

G. T. G.

NICANOR (2) of Alexandria (2nd c. A.D.), wrote on the punctuation of the *Iliad*, of the *Odyssey*, and of Callimachus; also a general work *Περὶ στυμῆς*. He recognized three kinds of full stop, three of the comma, and two of the colon. In punctuation he dominates the Homeric scholia as Herodian does in accentuation, Aristonius in Aristarchan textual criticism, and Didymus in erudition.

Fragments: *Ἠ. στυμῆς*, Friedlaender (1850); *Π. Ὁδ. στ.*, Carnuth (1875).

P. B. R. F.

NICANOR, see also **SAEVIVS**.

NICARCHUS, one of the sourest of Greek epigrammatists, lived at Alexandria; to judge from close resemblances in tone and themes, he was nearly contemporary with the epigrammatist Lucillius (fl. A.D. 55-85). The *Anthology* contains some forty of his jesting epigrams: the edge of their humour is blunted by roughness and dirt.

P. Sakolowski, *de Anth. Pal. quaestiones* (1893); F. Brecht, *Philol. suppl.* xxii (1930).

G. II.

NICETA OF REMESIANA (*Bela Palanka*, Old Serbia), c. A.D. 400, missionary bishop to the Goths and friend of Paulinus (q.v.) of Nola, wrote *De Psalmodye Bono*, *De Vigiliis*, and other works, above all the great Church hymn, *Te Deum laudamus*.

A. E. Burn, *Niceta of R. Life and Works* (1905). Authorship of *Te Deum*: cf. G. Morin, *Revue Benedictine* 1894, 49 ff. A. S.

NICIAS (1) (c. 470-413 B.C.), Athenian politician and general. Though very wealthy, he was not an oligarch, but led a moderate democratic party which, composed of landowners and peasants, aimed at peace with Sparta on favourable terms and abhorred the aggression of Cleon and the war-party. He frequently held the *strategia* and conducted expeditions competently, if with little enterprise. He was largely responsible for the armistice concluded in 423, and the Peace of 421 appropriately bears his name.

His schemes for cautious retrenchment were shattered by Alcibiades (q.v.), who involved Athens in the Peloponnesian movement against Sparta in 420-418 and later advocated an expedition to Sicily. Despite his disapproval Nicias was appointed with Alcibiades and Lamachus (q.v.) to conduct this enterprise. Alcibiades was soon recalled, and little was accomplished in 415, but in 414 Syracuse was invested and almost reduced to capitulation. The death of Lamachus, the arrival of the Spartan Gylippus, and the inactivity of Nicias, now seriously ill, transformed the situation, and in spite of the efforts of Demosthenes (q.v. 1), who brought reinforcements in 413, the Athenians were themselves blockaded. Nicias, who refused to withdraw by sea until too late, led the vanguard in a desperate attempt to escape by land. His troops were overwhelmed at the river Assinarus, and he was subsequently executed.

Thucydides, bks. 3-7; Plutarch, *Nicias*. A. B. West, *CPhil.* 1924, 124-46 and 201-28; R. Cohen, *Mélanges Glotz* (1932), 227-329; G. Reineke *PIW*, s.v. 'Nicias'. H. D. W.

NICIAS (2), painter, pupil of Antidotus (pupil of Euphranor), Athenian. Pliny dates 332 B.C. He painted statues for Praxiteles (about 340) and refused to sell a picture to Ptolemy (after 306). His works included Nemea (signed as encaustic), Necyomantea (after *Iliad* bk. 11), Alexander, Io, Andromeda. The Io and Andromeda are reflected in versions in Pompeii and Rome (Pfuhl, 646-7) which have a similar colour scheme to the fourth-century Alexander sarcophagus (Winter, *KB* 336-7). He advised the choice of large subjects such as cavalry and sea battles (contrast Pausias, q.v.). His treatment of light and shade made his figures stand out. According to Rumpf, 'diligentissime mulieres pinxit' means that he was the first to represent women plastically; monumental evidence supports this.

Overbeck, 1109, 1726, 1810-26; Pfuhl, 821; A. Rumpf, *JDAI* 1934, 6. T. B. L. W.

NICIAS (3) of Nicaea, author of philosophic *διαδοχαί* ('successions' of philosophers), which have been thought to be the basis of Diogenes Laertius' work.

NICOCHARES, one of the later Old Comedy writers; an Athenian, son of the comic poet Philonides. Most of his plays may with confidence be attributed to the fourth century. Suidas mentions ten plays. Of these all except *Αἰσώρες* and *Κρήτες* seem to have been mythological burlesques.

FGGii.842 ff.; CAGI.700-4; Demiakczuk, *Supp. Com.*, 64-6. M. P.

NICOLAUS OF DAMASCUS, born of distinguished Greek family about 64 B.C. and liberally educated, became the adviser and court historian of Herod the Great, perhaps before 20 B.C., certainly from 14 to 4 B.C., accompanying him twice to Rome. Returning to private life after Herod's death, he re-emerged to represent Herod Archelaus in Rome, but did not resume court life.

Besides dramatic composition (tragedies and comedies) and writings on philosophy and natural science of a Peripatetic character, he published an autobiography, a panegyric biography of Augustus' youth, and a Universal History in 144 books from the earliest times to the death of Herod the Great. It reached the Persian Empire in seven books (preserved in excerpts), treated the Mithridatic Wars in bks. 96-110, and with bks. 123-24, preserved in Josephus' *Jewish Antiquities* 14-17, came to Herod and described in full contemporary events to 4 B.C.; the introduction to Josephus' *Jewish War* is also based upon this work. The early narrative reproduced ultimately, among others, the tradition of Xanthus, Ctesias, perhaps Dinon and Hellanicus, Ephorus, Posidonius, Caesar; the whole work, the greatest World History since Ephorus, followed the rationalistic, rhetorical Ionic historiography of Ctesias, using also, especially in the dramatic treatment of Herod's family circumstances, the Peripatetic technique which marked his biographical writing.

FGFII ii, A, p. 324; C, p. 229; W. Wine, *De Nicolai Dam. frag. Rom. fontibus* (1900). A. H. McI.

NICOMACHUS (1), son of Aristotle; to him, according to an ancient account, Aristotle dedicated the *Nicomachean Ethics*; but possibly the name is due to his having edited the work, as Eudemus may have edited the *Eudemian Ethics*.

PIW xvii, 462.

NICOMACHUS (2), New Comedy poet, whom Suidas confuses with a tragedian of the same name. Fr. 1 describes a cook magnifying his art.

FGG iv. 583 ff.; CAG iii. 386 ff.

NICOMACHUS (3) of Gerasa (c. A.D. 100), arithmetician, wrote: (1) *Introductio arithmetica*, giving the Pythagorean theory of numbers (classification of numbers, odd, even, prime, etc., 'perfect' and 'friendly' numbers, 'polygonal' and 'pyramidal' numbers, arithmetical and geometrical progressions, means, etc., sum of the series of cube numbers); (2) *Ἐγγυρίδιον ἀριθμητικῆς*, edited by Meibom, 1652; (3) *Θεολογούμενα ἀριθμητικῆς*, on mystical properties of numbers. The work under the latter title edited by Ast with the *Introductio* in 1817 is not the original, but contains extracts from it, with others from Speusippus and Anatolius. (2) and (3) can be read in C. Jan, *Musici Scriptores Graeci* (1895). For the *Introductio arithmetica* see Hoche's edition (Leubner, 1866) and the English translation by M. L. D'Ooge with essays by Robbins and Karpinski (New York, MacMillan, 1926).

PIW xvii, 500.

T. H.

NICOMEDES, the name of several kings of Bithynia.

(1) **NICOMEDES I**, son of Zipoetes, succeeded to the kingdom and to his father's war with Antiochus I c. 279 B.C. He purchased the help of Heracles by ceding some Paphlagonian land, and engaged by treaty the Galatian hordes then in Thrace to fight his battles against the Seleucids, assisting them to settle in Phrygia. He founded the city of Nicomedia in 264-262.

(2) **NICOMEDES II** went on an embassy to Rome, to secure the release of his father Prusias II from war indemnities. Learning that death would be the penalty of failure, he revolted with the aid of Pergamum, drove his father to sanctuary, and ordered his death (149 B.C.). He assisted Rome against Aristonicus in 133-129, but his request for Phrygian territory was refused in favour of Mithridates V of Pontus. He died c. 128.

(3) **NICOMEDES III EURYCRATES**, son of the above. His answer to Marius' request for military aid against the Cimbri, that most of his men had been seized by Roman tax-farmers and sold into slavery, led to a senatorial decree to secure their freedom. His attempt to share

Paphlagonia with Mithridates and win Cappadocia by a matrimonial alliance was foiled by Roman intervention. He died in 94. He is sometimes confused with his son of like name, though Appian (*Mithr.*) distinguishes three successive kings named Nicomedes.

(4) NICOMEDES IV was ousted from his kingdom by Mithridates in favour of his brother Socrates, but was restored by Rome in 92. Under pressure from his Roman creditors he raided Pontic territory, thus bringing on the First Mithridatic War (88). Restored once more by the Romans in 84, he ruled thereafter in such peace as Roman officials and business men allowed him. He received a visit from young Julius Caesar in 80-79. At his death in 74 he bequeathed his kingdom to Rome.

App. *Mithr.*; references in Diodorus and Memnon, *OGI* 340-6; Wilhelm, *JOAI* xi (1908), 75 ff.; Th. Reinach, *Trois royaumes de l'Asie Mineure* (1888); *Mithridate Eupator* (1890); M. Rostovtzeff, *CAH* ix, ch. 5; H. A. Ormerod, *ibid.*, ch. 8. T. R. S. B.

NICOMEDES (5), mathematician, probably lived at Pergamum, in the second century B.C.; he was the discoverer of the cochloidal or conchoidal curves, by means of which he solved the problem of trisecting the angle and that of doubling the cube.

PW xvii. 500.

NICOMEDIA (*Νικομήδεια*) was founded by Nicomedes I c. 264 B.C. to replace Astacus (on a more northerly site). It became the capital of the kingdom and of the Roman province of Bithynia. In 29 B.C. Augustus authorized a provincial temple to himself at Nicomedia which became the meeting-place of the provincial assembly. It accumulated titles of honour, and in the third century A.D. was styled 'greatest metropolis, leading city of Bithynia and Pontus, Hadrianic Severianic Nicomedia, twice *neocorus*, sacred asylum, friend and ally of the Roman people'. It suffered from frequent earthquakes, and in 258 was sacked by the Goths; but it received favours from several Roman emperors and became the eastern capital of Diocletian. Its prosperity depended on an extensive and fertile territory, a good harbour, and its location on the trunk road from the Danube provinces to the eastern frontier. Nicomedians appear in almost every province of the Empire. In spite of these advantages Pliny's letters yield evidence of disordered finances and social discontent.

P. Ruge, *PW*, s.v. 'Nikomedeia'; C. Bosch, *Die kleinasiatischen Münzen der römischen Kaiserzeit*, teil II, band I, *Bithynien*.

T. R. S. B.

NICOPHON, Athenian comic poet; much younger than Aristophanes, but won victories in the last decade of fifth century B.C. (*IG* ii². 2325). Suidas mentions 'Ἐξ Αἰδου ἀνιών, Ἀφροδίτης γοναί, Πανδύρα, Ἐγχερογαστορες (ῥ Χειρογαστορες; possibly = 'The Workmen', possibly the Cyclopes), Σειρῆνες (depicting, like many Middle Comedies, the Golden Age).

FCG ii. 848 ff.; *CAF* i. 775-80.

M. P.

NICOPOLIS was the name of several towns with a Greek-speaking population, built to commemorate Roman victories. (1) *Nicopolis of Pontus*, see following article. (2) *Nicopolis ad Istrum*, on the main axial road through Thrace from Philippopolis to the Danube, founded by Trajan after the Dacian Wars. (3) *Nicopolis in Epirus*, on the isthmus of the Bay of Actium. Augustus created this town by sweeping into it the population of the neighbouring Greek communities. It secured much of the former trade of Ambracia and was the scene of the 'ludi Actiaci', a quadrennial festival of equal rank with the Olympian Games, under Spartan stewardship. Its theatre is well preserved.

Strabo 10. 325.

M. C.

NICOPOLIS of Pontus, the site of Pompey's victory in 66 B.C. over Mithridates, where he settled a mixed colony of veterans, wounded, and natives; the scene also

of Pharnaces' victory over Caesar's lieutenant Domitius in 47. Being a strategic point in the system of frontier roads it grew in importance under the Empire, received *ius Italicum*, and finally became the metropolis of Lesser Armenia.

F. Cumont, *Studia Pontica*, ii. 302-30 (1906); H. Grégoire, *BCH*, xxxiii (1909), 31-9; Jones, *Eastern Cities*, pp. 152, 172.

T. R. S. B.

NICOSTRATUS (1), Middle Comedy poet, said to be the son of Aristophanes. Some of the titles known may be of comedies by N. (2). N. (1) mentions the parasite Chaerephon (fr. 25) and the impostor (πλάγος) Cephisorus (fr. 24): he (or N. (2)) quotes Euripides (fr. 28), but his chief topics are victuals and meals.

FCG iii. 278 ff.; *CAF* ii. 219 ff.; iii. 739; Demianczuk, *Suppl. Com.*, p. 66.

W. G. W.

NICOSTRATUS (2), New Comedy poet, mentioned in a list of Lenaeon victors after Menander, Diphilus, and Philpides, and probably as winner of the second prize in 311 B.C. He is named with Philemon and Ameinias as a comic poet of 280 B.C.

See reference under NICOSTRATUS (1).

W. G. W.

NIGER, see VALERIUS (14).

NIGHT, see NYX.

NIGIDIUS FIGULUS, PUBLIUS (praetor 58 B.C.), a learned man who wrote comprehensive works on grammar, theology, and various branches of natural science. His love for the abstruse and the exceptional worked against his influence, and he was quite superseded by his contemporary Varro. In politics he was a thorough conservative and an active supporter of Pompey, in philosophy a Pythagorean. A considerable number of fragments of his works have been recovered from later writers, such as Gellius and Servius. Some of these have been collected by A. Riccobonus (Basle, 1579) and others, the latest edition being by A. Swoboda, *P. Nigidii Figuli operum reliquiae* (1889). See also SCHOLARSHIP, LATIN.

See Kroll, *PW*, s.v.

A. S.

NIGRINUS, see AVIDIUS.

NIKE, the goddess of Victory in Greek religion. N. is first mentioned by Hesiod (*Th.* 383) as daughter of the Titan Pallas and of Styx, and as sister of Zelos, Kratos, and Bia (Rivalry, Strength, and Force). With these she was honoured by Zeus because she fought on the side of the gods against the Titans (q.v.). She is here an abstraction or symbol of decisive victory for the gods. The poets of athletic contests see N. in vivid terms. Bacchylides (11. 1 Kenyon) depicts her standing next to Zeus in Olympus and adjudging the award for 'areta' to gods and men. The victorious athlete sinks into the arms of N. (Pind. *Nem.* 5. 42). Here N. is already victory of an athletic, not only a military, contest. She rules over all contests. She is invoked by the chorus of Aristophanes (*Eg.* 581) and on vases she crowns women of victorious beauty or craftsmen of extraordinary skill.

Statues of Nike begin in the archaic period with the famous N. from Delos. Some scholars have connected this statue with the base inscribed by Archermus, the sculptor who is said to have first represented N. as winged (schol. *Ar. Av.* 374). The Persian Wars resulted in a great popularity of N. The Athenians dedicated her statue in Delphi after the battle of Salamis (Hdt. 8. 121) and she becomes very frequent on vases. She decorates a trophy, writes on the helmet, aids in preparations for the fight, the battle, or the athletic or musical contest, and brings the sacrifice after the victory. She stands on or flies over the chariot of the victorious mortal charioteer (Bacchyl. 3. 5) or serves as charioteer for Heracles on his way to Olympus. The invention of this type of small

flying Nike enabled the artists to use her as an attribute. Thus she appeared in Phidias' images of Athena Parthenos and of Zeus of Olympia. These masterpieces are lost as well as the later paintings of Nicomachus and Apelles (Pliny, *HN* 35. 108. 93), but the famous N. by Paconius found in Olympia, the balustrade of the temple of Athena Nike in Athens (R. Carpenter, *The Sculpture of the Nike Temple Parapet*, U.S.A. 1929), and the Hellenistic N. of Samothrace show the fire and enthusiasm with which Greek artists conceived the goddess.

As befits a race fond of competition the Greeks invoked N. in most flattering terms and she had cults in Olympia (Paus. 5. 14. 8), Ilion, Tralles, and elsewhere. She enjoyed favour with Hellenistic rulers and as Victoria was worshipped by the Romans. As symbol of Victory over death N. was a favourite motif of Roman allegorical art.

Baudrillart, *Les Divinités de la Victoire* (1894); H. Bulle in Roscher, *Lex.*, s.v. G. M. A. H.

NILE, Egypt's river (explored by ancient Egyptians to the Upper Blue Nile and the confluence of the Bahr-el-Gazal with the White Nile), was known to Homer as 'Aegyptos river', to Hesiod first as Νεῖλος. It was opened to westerners after 665 B.C. Cambyses the Persian (c. 525 B.C.) reached the desert south of Korosko, but Herodotus knew little beyond Meroë. None knew the cause of summer-time flooding; Aristagoras' conclusion (melting snows) was good guess-work. Ignorant folk believed that the Nile was joined to the Indus, until Alexander's explorations disproved this. False ideas about the flooding continued, though Aristotle guessed correctly. The foundation of Alexandria and Ptolemaic trading up the river and through the Red Sea changed matters. The *White Nile* (Astapous), the Blue Nile, and the sources of the Astaboras (*Atbara*) became known, and flooding by waters from Abyssinian heights was confirmed. According to Juba, the Nile rose in Mt. Atlas and emerged in east Sudan after two journeys underground. Explorers sent by Nero passed the confluence of the *Sobat* with the White Nile, but were blocked by sudd (masses of decayed plants). Later, the Blue Nile was further explored. Lastly, c. A.D. 100 a traveller named Diogenes (Ptol. *Geog.* 1. 9. 3-4, etc.) reported from the E. African coast that inland 'Mountains of the Moon', snow-capped, supplied two lakes; from each flowed a stream uniting into the Nile. This vaguely indicates Lakes Victoria and Albert, the Ruwenzori Range, and Mts. Kenya and Kilimanjaro.

Cary-Warmington, *Explorers*, 165 ff.; E. H. Warmington, *Greek Geography* (1934), index. E. H. W.

NIMBUS, a circular cloud of light which surrounds the heads of gods, emperors (Serv. *Aen.* 2. 616; 3. 587), and heroes. The belief that light radiates from a sacred or divine person is a common one and the nimbus only a special form which was developed in classical religion and art. Assyrian art, for instance, represents some gods with rays around their shoulders (Th. Dombart, *Journ. Soc. Oriental Research Toronto* 1932, 38) and Greek art shows deities of light, such as Helios, with a radiate crown. Greek vases and Etruscan mirrors of the fifth century afford the earliest examples of nimbus, often combined with the crown of rays; under the Roman Empire the nimbus becomes very common. The temple of the Palmyrene gods in Palmyra has an early dated example (A.D. 32). Almost all pagan gods of any importance are occasionally represented with a nimbus in Pompeian wall paintings, African mosaics, and the painting and reliefs of Palmyra and Dura. In late ancient art emperors, consuls, and other dignitaries, and sometimes even portraits of dead commoners have the nimbus. In Christian art only Christ was represented with nimbus at first, but it was soon extended to the Virgin, the major saints, and angels.

G. M. A. H.

NINNIUS CRASSUS (? early 1st c. B.C.), author of a translation of the *Iliad*.

Bachr. *FPR* 283; Morel, *FPL* 51.

NIOBE (Νιόβη), in mythology, daughter of Tantalus and wife of Amphinon (qq.v.). They had a large family, six sons and six daughters (Homer, *Il.* 24. 604, the oldest mention of her, which seems to imply that the story was already well known and she a stock type of bereavement), or seven of either sex (Ovid, *Met.* 6. 182-3); the number varies in different accounts (see for this and other details Apollod. 3. 45 ff. and Sauer in Roscher's *Lex.*, s.v.). She boasted that she was at least equal to Leto (q.v.), who had borne but two children, Apollo and Artemis. Thereupon the two children of Leto killed all the children of Niobe. According to Homer, Zeus also turned all the people into stone; Niobe lived long enough to eat at least one meal when 'wearied with tear-shedding', and then became a stone which is still on Mt. Sipylon. The gods buried the children on the tenth day. These details, except Niobe's own metamorphosis, do not appear in later accounts. The stone, according to Pausanias (1. 21. 3), was a natural formation looking somewhat like a woman; cf., however, modern opinions in Frazer ad loc. See **METAMORPHOSIS**.

It is fairly evident that the story, the kernel of which must be very old, has been modified in the interests of genealogy. It can hardly be that the daughter of Tantalus of Sipylon was originally married to Amphinon of Thebes, of whom Telesilla (ap. Apollod. loc. cit. 47) gets rid again by making him perish with the children. Again for genealogical reasons the pathos is modified by making a son and a daughter survive (ibid. 46 f.).

In art the deaths of the children and the grief of their mother at the sight are a common and favourite subject.

See Roscher's *Lex.*, s.v.

H. J. R.

NIPSUS, see **JUNIS** (3).

NIREUS (Νιρεός), in mythology, the commander of a small party (three ships) from Syme (*Iliad* 2. 671 ff.); he was the son of Charops and Aglaia and the handsomest man in the Greek army except Achilles, but a weakling. He was killed by Eurypylus, son of Telephus (Quint. Smyrn. 6. 368 ff.).

H. J. R.

NISUS. (1) Legendary king of Megara, whose life together with the fate of the city depended on a lock of red hair on his head. His daughter Scylla cut this off and betrayed the city to Minos king of Crete who was besieging it, either for a bribe (Aesch. *Cho.* 613-22) or for love of him (Ov. *Met.* 8. 1-151). Nisus was turned into a sea-eagle, Scylla into a bird *ciris** pursued by him. The story is told at length in the pseudo-Vergilian poem *Ciris*. See also Ov. *Met.* 8. 6 ff., Strabo 8. 6. 13, Stith Thompson, K 976. Cf. **AMPHITRYON**.

(2) Son of Hyrtacus, hero of a famous episode in Verg. *Aen.* 9. 176-502; also prominent in the foot-race in 5. 286-361.

(3) Roman grammarian of the second half of the first century, used by Suetonius and Velius Longus; his works are now lost.

*See D'A. W. Thompson, *Gloss. of Gl. Birds*, s.v.; Hesych. *Frb.* 193. 4, calls it a fish. R. A. B. M.

NOMEN LATINUM, see **LATINI** and **IUS LATI**.

NOMENCLATOR, see **CANDIDATUS**.

NOMOPHYLAKES (νομοφύλακες). We are told that this magistracy existed in Athens by 462 B.C., but we hear nothing of its activity—they were possibly archivists. They reappear c. 326-323, seven in number, and were of some importance under Demetrius (q.v. 2) Phalereus, a

supervisors of magistrates and to some extent controlling meetings of the Boule and Ecclesia, at which they had the right of sitting with the presidents. They disappear with Demetrius.

They are found in many Greek States, including Sparta, in the third and second centuries, but we can say little of their importance. A. W. G.

NOMOS (1) (*νόμος*) was the Greek name for the ancient administrative districts of Egypt; under the Seleucids the term is also found in Palestine, where it was probably introduced by the Ptolemies. The Egyptian *nomoi* probably numbered thirty-six in the third century B.C., but by the third century A.D. had increased to nearly sixty. They were subdivided into toparchies, and these into villages. Each was governed by a *στρατηγός*, who completely over-shadowed the old native governor (*νόμαρχος*). He was assisted by many departmental officials. Of these only the royal scribe (*βασιλικὸς γραμματεὺς*) retained any importance under Roman rule. The *nomoi* were abolished c. A.D. 300, becoming the territories of the *metropoleis* (q.v.).

H. Gauthier, *Les Nomes d'Égypte depuis Hérodote jusqu'à la conquête arabe* (1935). A. H. M. J.

NOMOS (2). The word *νόμος*, applied originally to a tune, was applied especially to a type of melody invented by Terpander as a setting for texts taken from the epic (Procl. ap. Phot. *Bibl.* 320 a, 32 ff.). Such *νόμοι* could be used for the flute or for the lyre. Later the word was used for a choral composition constructed astrophically like Timotheus' *Persae*.

Cf. U. von Wilamowitz-Moellendorf, *Timotheos: Die Perser*, 89 ff. C. M. B.

NOMOTHETAI (*νομοθέται*). This word had a special use in legislative procedure in Athens in the fourth century. In 403/402 B.C. 500 *nomothetai* were appointed to revise and publish, with the Boule, the fundamental laws of the democracy; and thereafter they played a regular part. Whenever the Ecclesia decided that changes in the law were desirable, the proposed additions or amendments (which any citizen might put forward) were referred to a body of 501 or 1,001 *nomothetai* selected from the dicasts. The procedure of this court, which acted under a time limit, resembled that of a trial in a dicastery. The decision of the majority was final, unless the new law was attacked under the *graphe paranomon* (q.v.), in which case the verdict of the dicastery which tried the case was conclusive.

Nomothetai also pronounced on inconsistencies and irregularities in the law-code submitted to them by the *thesmothetai* (q.v.). A. W. G.

NONIANUS, see **SERVILIUS** (4).

NONIUS MARCELLUS (early 4th c. A.D.), lexicographer and grammarian. The first twelve books of his *De compendiosa doctrina* (ed. W. M. Lindsay, 3 vols., 1903) deal with points of grammar (e.g. *de numeris et casibus*), bks. 13 to 20 (but bk. 16 is lost) with miscellaneous information (e.g. *de genere nauigiorum*). The material is arranged with more or less strictness in alphabetical order and each topic is illustrated by quotations. The foundation of the work seems to have been Nonius' own excerpting from a range of authors which included many Republican poets. These authors he used in a stereotyped order of his own. In addition he had access to some work like that of Flavius Capr from which he took other citations. For many fragments of early writers, and especially of Varro's poetry, N. is our chief authority.

Cf. Teuffel, § 404a; Schanz-Hosius, § 826; W. M. Lindsay in *CR* xx. 440; and for N.'s sources and methods of citation, F. della Corte, *La Poesia di Varrone ricostruita* (1928). J. F. M.

NONNUS of Panopolis in Egypt (5th c. A.D.), epic poet, author of a *Paraphrase of St. John's Gospel* and a *Dionysiaca*, describing the god's triumphal progress to India, which is valuable for mythological learning, but as poetry very variously judged. His versification, in contrast with the carelessness of some of his predecessors, is accurate, and has been called pedantically precise. It is sometimes influenced by the stress accent of Greek as pronounced in his day, and sometimes it makes forceful use of assonance. See **EPIC POETRY**, **GREEK**, para. 9.

Texts: A. Scheindler (1881); A. Ludwich (1909, 1911). Text and translation: W. H. D. Rouse, 1940 (Loeb). Criticism: P. Friedländer, *Hermes* xl (1912), 43-59. W. F. J. K.

NORBANUS (1), **GAIUS**, *tribunus plebis* in 104 B.C., successfully prosecuted Q. Servilius Caepio (q.v. 1). He himself was charged *ob maiestatem minutam* by P. Sulpicius Rufus (prob. c. 98), but was defended by M. Antonius and acquitted (Cic. *De Or.* 2. 48, 199-50, 203). He was praetor in Sicily and defeated the remaining Italian rebels in south Italy near Rhegium (88 or 87). A partisan of Marius and consul in 83, he opposed Sulla's return, but was routed by him near Casilinum and blockaded in Capua. In 82 he took command in north Italy, but was defeated by Metellus Pius at Faventia. He fled to Rhodes, where he committed suicide. H. H. S.

NORBANUS (2), **A. LAPPUS MAXIMUS**, defeated L. Antonius Saturninus, legate of Upper Germany, who was attempting to raise a rebellion, supported by Germans, against Domitian (A.D. 89). Norbanus was probably legate of Lower Germany. The most probable conjecture would place the battle near Andernach, between Coblenz and Bonn. The four legions of Lower Germany were honoured with the title *Pia Fidelis Domitiana*, but this may have been merely a reward for rejecting the overtures of Saturninus. Norbanus won great fame for destroying the private papers of Saturninus before Domitian's arrival, thus shielding others who were in the plot from the Emperor's vengeance. Our only other information about Norbanus is that he was twice consul.

CAH xi. 172 ff.

R. L. J.

NORICUM, a Roman province in the Alps, south of the Danube, between Raetia and Pannonia. The root of the word is Illyrian, as are pre-Roman finds in the interior and the east. This Illyrian element, however, was Celticized from the south (3rd/2nd c. B.C.) and from the Danube (2nd/1st c. B.C.). Though the Celtic Taurisci were the chief tribe, Noricum (apparently derived from the Celtic *Norici* dwelling round *Noria*, the ancient capital) became in the first part of the second century B.C. the name of the Celtic federal State, which had its own coinage. It was of considerable importance in Caesar's time, as shown by the fact that Caesar accepted aid from Noricum in 49 B.C., and that Ariovistus' second wife was the daughter of the king of Noricum. To secure the northern frontier of Italy, the Taurisci north of the Ocra were made tributary (35 B.C.), and then the kingdom of Noricum was peaceably incorporated into the Roman Empire by P. Silius Nerva, governor of Illyricum (16 B.C. or later). Perhaps for some time under a *praefectus civitatum*, Noricum was put under an equestrian governor who resided at Virunum and commanded the *auxilia* and the *inventus Noricorum*. The first known governor is A. Trebonius (*CIL* iii. 4810; cf. *JÖAI* xxix (1935), Bbl. 261). Owing to the Marcomannic wars the newly raised Legio II Italica was quartered in Noricum (first at Albing, before 191 at Lauriacum), and its commander became the governor of Noricum as a *legatus Augusti pro praetore*, residing at Ovilava; the financial *procurator* remained at Virunum. After Gallienus had eliminated senators from military command, Noricum

was put again under equestrian administration (cf. the governor *Aellius Restutus* *(ir) p(er)fectissimus a(gens) v(ices) p(raesidis)*, *RLÖ* xi (1910), 151 f. no. 42). Under Diocletian Noricum was divided into two parts under *praesides*: *N. Ripense* on the Danube and *N. Mediterraneum* in the south, the former also having a *dux* as military commander. In the fifth century Noricum was overrun by German tribes and was occupied after 493 by Goths, by Franks (c. 536), by Langobards (568), and shortly before 600 by Slavs and Avars.

Inscriptions: *CIL* iii (1873-1902) and V. Hoffiller and B. Saria, *Antike Inschriften aus Jugoslawien*, Heft I, *Noricum und Pannonia Superior* (1939); E. Polaschek, *PW*, s.v.; U. Täckholm, *Studien über den Bergbau der römischen Kaiserzeit* (Uppsala 1937), 108 ff. On the site of Norcia, see E. Polaschek, *PW*, s.v. F. A. W. S.

NORTIA, an Etruscan goddess, the native form of whose name is uncertain. Her chief place of worship was Volsinii (Livy 7. 3. 7, cf. Wissowa, *RK* 288, for archaeological evidence). The most remarkable rite was the periodical driving of a nail into the wall of the temple, Livy loc. cit., certainly not, as he there supposes, merely to serve as a record of time, one nail being driven each year, but rather (cf. *ibid.* 3-4; Warde Fowler, *Roman Fest.* 234 f.) to nail down evil and make it harmless (here an epidemic; perhaps at Volsinii all the ill of the past year). Another ancient interpretation was that it signified the unchanging fixedness of destiny; hence Nortia was identified with Fortuna (schol. on Juvenal 10. 74), and by implication with Necessitas (Horace, *Carm.* 1. 35. 17 ff.). H. J. R.

NOSSIS, Greek poetess, lived in south Italian Locri about 290 B.C. A dozen of her Doric epigrams, mostly inscriptional, are in the Anthology. Nearly all relate to a cult of Aphrodite in which she was official poetess. She compares herself therefore with Sappho (*Anth. Pal.* 7. 718), but her extant poetry is far cooler and shallower.

NOSTOI, see EPIC CYCLE.

NOTAE TIRONIANAE, see TACHYGRAPHY.

NOTITIA DIGNITATUM. The document that has come down to us in two sections, 'Notitia dignitatum omnium, tam civilium quam militarium, in partibus Orientis, in partibus Occidentis', is famous as the one survivor of its kind; but in ancient times similar official lists of the chief functionaries of the Empire must have been regularly turned out from the offices of the *primicerii notariorum*. The arrangement is simple and uniform. First comes a summary list of high officials, then each high official with his staff; under the military, the various corps are detailed, each at its station. The whole work is illustrated with the insignia of the various officers, the badges of the military units and figures of provinces, though part of this illustration is thought to have been added later. Included are the praetorian prefects, the prefects of Rome and Constantinople, the *vicarii*, the chief governors and *duces*, the *magistri militum* and *peditum*, and such central officers as the quaestors of the palace, the *magistri officiorum*, and the *comites largitionum* and *priuatorum*.

The *Notitia* is valuable to-day for several different reasons. It adds precision to our general knowledge of the chief imperial functionaries, it preserves information, otherwise not available, about their insignia, and gives the names and stations of many military units otherwise unknown. It would be interesting if it could be determined with certainty whether our document comes from an Eastern or a Western source, but both views have been maintained and no final decision can yet be given. Even

more important is the question of date; for if that can be determined, we have invaluable evidence for the exact conditions of the Empire at a precise moment of history. It is generally held that the conditions represented are in the main those of the end of the reign of Theodosius I (c. A.D. 395), but that certain entries must be assigned to dates as late as 425 or even 433. A very interesting problem now arises, especially in reference to the Danube countries and Britain. In both cases the *Notitia* preserves details of an organization in detail, which on general grounds of history and archaeology is thought to have been obsolete before those final dates. In Britain, for example, units are still found strung across the line of the wall. J. B. Bury has claimed the *Notitia* as evidence that Britain, in the official view, had not been abandoned in 425, and that any withdrawals yet made were treated as provisional only. Others consider that the *Notitia* had only been very imperfectly revised after 395 and that its evidence, therefore, must not be overstressed.

Edited by O. Seeck, *Notitia Dignitatum* (1876); E. Polaschek, *PW*, s.v.; J. B. Bury, *JRS* 1920; F. S. Salisbury, *JRS* 1929 and 1933; F. Lot, *Rev. Ét. Anc.* 1936. H. M.

NOVAESIVM (Neuss), at a point where important roads from Gallia Belgica reached the Rhine, appears to have been selected during the Augustan wars for a military post, and by A.D. 40 the twentieth legion from Cologne was stationed there. Its fortress was destroyed in 70 and rebuilt, but the legion was withdrawn before 107. Gallienus installed an *ala* at Novaesium which, however, remained there only until 270; but the civil settlement persisted and was provided with walls which were repaired by Julian. The legionary fortress was fully excavated by C. Koenen (*Bonner Jahrbücher* cxi-cxii, 1904). O. B.

NOVATIAN(US), Roman presbyter, anti-pope (A.D. 251), and founder of the *Novatiani* (or *καθαρτοι*), a dissident sect which, persisting for about three centuries, held intransigent views concerning ecclesiastical purity. He apparently suffered martyrdom under Valerian. The first Roman Christian to write exclusively in Latin, he composed several works, few of which survive, viz. *De Trinitate* (ed. W. Y. Fausset, 1909), two letters to Cyprian (*Ep.* 30 and 36 in the Cyprian collection), *De Gibis Iudaicis* (ed. G. Landgraf and C. Weyman, *Archiv f. lat. Lex.* 11, 1900, p. 226), and perhaps [Cyprian] *De Spectaculis* and *De Bono Pudicitiae*. N. possessed eloquence, philosophic knowledge, and an exceptional sense of style. A. H.-W.

NOVEL, GREEK, a romantic composition in rhetorical prose. Five complete examples, two summaries, and some fragments are extant. Of the authors of the complete novels (ACHILLES TATIUS, CHARITON, HELIODOROS, LONGUS, XENOPHON OF EPHESUS) none is likely to have written before the second century A.D.; but the theory that the literary form was a creation of this period has been disproved by the fragments, preserved on papyrus, some of which must and others may represent work of an earlier age. Most important are the fragments of the *Ninus Romance*, which perhaps belongs to the first century B.C. These and others which include the names of historical or legendary characters suggest, in view of the tendency of the later novelists to set their fiction against an historical background, that the romantic novel was developed from the semi-historical, semi-mythical accounts of legendary heroes and famous men which were popular in the Alexandrian age. Alexander the Great probably received such treatment not long after his death, though the extant *Alexander Romance* (Pseudo-CALLISTHENES) is mostly of a much later date. Among classical authors there is nothing strictly comparable; there is a romantic element in Xenophon's *Cyropaedia*, but the

scope and treatment are very different. To judge from meagre fragments, the same seems to be true of several Alexandrian historians, e.g. Hegesippus of Mccyberna, Andriscus, etc. (see PARTHENIUS).

The extant novels, even the *Daphnis and Chloë* of Longus, of which the pastoral setting is exceptional, show similarities of matter and style which, with the supporting evidence of the summaries and fragments, may be called characteristic. Psychological subtlety is absent, though a wealth of rhetoric does something to conceal the poverty of thought; but there is positive merit in the plots, which, however stereotyped their general lines, are often ingeniously developed and include a variety of incident which, with an appeal to the eye rather than to the mind, would be suitable material for film scenarios. The central figures are a young man and his betrothed or bride whose moral rectitude and physical courage are tested by a prolonged series of adventures which ultimately lead them to the bliss for which they crave. During their wanderings, which cover wide areas, they meet friends and enemies who tend to have little individuality and are sometimes reminiscent of the stock types which people New Comedy, but whose experiences permit the inclusion of shorter stories within the wider framework. Such stories perhaps belong to the more ancient and more durable tradition exemplified by the Milesian Tales as well as by Petronius and Apuleius. The erotic element leads to tedious sentimentality but rarely to pornography, and though Love (*Ἔρως*) supplies the motive power, the greater part of every novel is devoted to adventure. The authors delight in elaborate descriptions of battles, storms, and other exciting events; some are also eager to parade a pseudo-scientific outlook which is responsible for the grossest irrelevances.

The absence of contemporary references to Greek novels and the character of their material suggest that they were not esteemed by the educated classes; but the language is more literary and the style more elaborate than would seem suitable for popular fiction. Haekneyed quotations from Homer and other classical writers may have been as commonplace and as popular as our own biblical or Shakespearian quotations, but there are at times more obscure literary allusions which argue some crudition not only in the authors but also in their readers. The Byzantines admired the Greek novelists; Photius, who is loud in his praises, summarized Heliodorus and Achilles Tatius as well as the works, now lost, of IAMBlichus and ANTONIUS DIOGENES; and others imitated them. Some of the novels, when translated in the sixteenth century into modern European languages, earned a temporary fame and importance. Though essentially artificial, they seemed natural and realistic to a public which was at length tiring of the Romance of Chivalry, and they were read, esteemed, and even imitated by writers of greatly superior talents.

NOVEL, LATIN. In spite of two great names, there is no continuous tradition of prose fiction among the Romans as there was with the Greeks. The Atellan farces, closely connected with mimes, seem to have been in verse, and we hardly reach fiction, and then only in the form of short stories, before L. Cornelius Sisenna (119–67 B.C.), otherwise known as an historian, translated into Latin the *Μιλησιακά* of Aristides (2nd c. B.C.). These were 'broad' (Plutarch, *Crassus* 32; [Lucian], *Amores* 1) and Sisenna when translating them heightened their obscenity (Ovid, *Tr.* 2. 443).

In a different line of descent are the adaptations by M. Terentius Varro (116–27 B.C.) of the satires of Menippus of Gadara (2nd c. B.C.), a Syrian writing in Greek, in mixed prose and verse: they are of the nature of 'character-sketches', and are under the influence of the Epicurean (and Cynical) tendency of their Greek originals. We have plentiful but fragmentary remains, which hardly seem to us very amusing, though some titles are ingenious and funny. This literary form was employed before A.D. 66 by Petronius (q.v.), whose long and amusing novel was in a mixture of prose and verse; but it consisted of a continuous narrative, not of short sketches. Petronius introduced at least two *Μιλησιακά*—the stories of the Widow of Ephesus and of the Quaestor's Son at Pergamum.

Far more use of them was, however, made by Apuleius (q.v.) about the middle of the second century, whose *Metamorphoses* began 'At ego tibi sermonem isto Milesio varias fabulas conscrum'; and his romance is, indeed, a series of them strung on the thread of a plot—the change of Lucius into an ass and his adventures in animal form—which is sometimes lost sight of for long periods. We know from Capitolinus (11. 7; 12. 12) on Clodius Albinus (d. A.D. 197, the rival of Septimius Severus for the imperial power) that he too tried his hand at this form.

At the very end of the classical period we have the anonymous *History of Apollonius, King of Tyre*, perhaps written in Greek in the third century and translated into Latin, christianized, and adapted in other ways about the sixth century; it belongs rather to the tradition of Greek than of Latin fiction, and is chiefly interesting to us as the ultimate source of Shakespeare's *Pericles, Prince of Tyre*.

Fragments of Sisenna and of Varro's *Menippean Satires* in Bücheler's *Petronius* ed. min. There are no very satisfactory editions of *Apollonius of Tyre*: best by Riese (1871 and 1893); by M. Ring (1888). Students should consult Klebs's careful study, *Die Erzählung von A. v. T.* (1899). S. G.

NOVELLAE, see CODEX.

NOVENSIDES, a group of Roman deities of totally unknown function. According to the second explanation of the Indigetes (q.v., and see references there), they are to be etymologized as *nou-en-sides*, the 'newly settled in' gods, i.e. comparatively recent borrowings from non-Roman sources, such as Minerva and Apollo; but this view stands or falls with the etymology of *indiges* (s.v. INDIGETES). The *novensides* seem to be the more important class, to judge from their being mentioned before the *indigetes* in the formula of *devotio* (Livy 8. 9. 6), where the name is written 'Nouensiles', a characteristic Italian variation of *d* and *l*. Wagenvoort (*Dynamism*, p. 83) would connect the first syllable with *nuere* and for the suffix compares *ut-ensilis*: hence 'mobile, active' deities. The ancients generally connected the name with *novem*, occasionally with *nouis*, see Arnobius, *Adv. Gent.* 3. 38–9 (p. 136, 19 ff. Rcisfsechid). H. J. R.

NOVIOMAGUS, a Batavian settlement near Nymwegen (perhaps the *oppidum Batavorum* of Tac. *Hist.* 5. 19). It was destroyed in A.D. 70, and the Romans established a legionary fortress (garrisoned until c. 100) near by. The civil population settled on lower ground to the west,

where an important commercial town developed, which traded extensively with Britain and the north and was raised to colonial status by Trajan. It suffered badly in the invasions of the third century and was practically deserted after 260. Pottery finds persist beyond the fourth century, but by then a new fortified settlement was growing up farther east which survived the Dark Ages.

O. B.

NOVIUS (*fl.* c. 95–80 B.C.), Latin composer of *fabulae Atellanae*, which he and his older contemporary Pomponius (q.v.) made literary. Forty-three titles show the four stock Atellan characters (fool, boaster, old driveller, old sly-boots), country-bumpkins, rustic and other occupations, literary allusions and parodies; in popular language with broad jokes.

Fragments: O. Ribbeck, *CRF*² 254 (3rd ed. Teubner 1897).

E. H. W.

NOVUS HOMO, the term applied to one attaining curule office without being *nobilis*, i.e. without *commendatio maiorum* but *per se cognitus*, had a double usage. The strict use, seen in the charge of *novitas generis* against Murena, whose family for three generations had contained praetors, in references to Cn. Octavius (*cos.* 165 B.C.) and Mummius (*cos.* 146) as *novi homines*, although their fathers had been praetors, and in the mention of *novi homines praetorii* (Q. Cicero, *Comment. pet.* 13), based *nobilitas* on the attainment of consular rank; these *nobiles* formed the inner circle of the Senate. The popular and literary use, with a looser conception of the senatorial order, based *nobilitas* on the attainment simply of curule office; thus Cicero might claim to be the first *novus homo* since C. Coelius Caldus (*cos.* 94).

The distinction, based on political *honos*, grew up with the patrician-plebeian nobility. *Novi homines* were usually from the equestrian order, rising through the patronage of a noble house; the outstanding figures were Cato, Marius, and Cicero.

M. Gelzer, *Nobilität der röm. Republik* (1912); J. Vogt, *Homo Novus* (1926); W. Schur, *Bonner Jahrb.* 1930; H. Strasburger, *PIV* xvii, s.v. 'nobiles', col. 785; 'novus homo', col. 1223; A. Alföldi, *Classica et Mediaevalia*, 1938, 40 ff.; 1945, 150 ff. A. H. McD.

NOXA, see PATRIA POTESTAS.

NUMANTIA, a strategical site on the upper Durius (*Douro*) in Spain, occupied in the Bronze age, in the Hallstatt period, and by the Celts. Built anew by the Celtiberians c. 300 B.C., Numantia played an heroic role in the Celtiberian resistance to Rome, repelling attacks by Cato (195), Q. Fulvius Nobilior (153), Marcellus (152), Q. Pompeius (141), and Popillius Laenas (139–8); the capitulation of Hostilius (q.v.) Mancinus (137) crowned a series of shameful incidents. Finally, after an eight-month blockade Numantia's 4,000 citizens capitulated to the overwhelming forces of Scipio Aemilianus in 133 B.C., a date which marks the end of organized resistance to Rome in Spain. Marius, Jugurtha, and Polybius witnessed Numantia's destruction. Thorough excavations have uncovered the city, Scipio's works of circumvallation, and thirteen Roman camps at Numantia or in the neighbourhood (one each of Marcellus and Pompeius, two of Cato and Nobilior, and seven of Scipio). Although rebuilt by Augustus, Numantia gradually sank to the level of a way-station on the Asturica-Caesaraugusta highway.

A. Schulten, *Numantia* (4 vols. and atlas, 1914–31), and a shorter sketch, *Geschichte von Numantia* (1933). J. J. Van N.

NUMA POMPILIUS, the second king of Rome (traditionally 715–673 B.C.), is probably an historical figure, although most of the reforms ascribed to him were the result of a very long process of religious and cultural development. His name, which has often been wrongly connected with Etruria, suggests a Sabine

origin. Numa is not the personification of the river Numicus or any other Latin deity. There is no means of deciding whether Numa really organized the priestly colleges and reformed the calendar by fixing the dates of the festivals and adding two months to a primitive ten-month year, or whether he built the Regia (q.v.), which was traditionally assigned to the regal period. Later legends recount that he received counsel from the nymph Egeria and, in defiance of chronology, make him a disciple of Pythagoras (q.v.) to account for similarities between early Roman religion and Greek cults in southern Italy.

H. Last, *CAH* vii. 374 ff.

P. T.

NUMBERS. I. GREEK NUMERICAL NOTATION.

There were two systems:

(1) The 'Attic' or 'Herodianic' (from Herodian, a grammarian of the 2nd c. A.D.), represented by Attic inscriptions from 454 to 95 B.C. but used outside Attica also. Apart from *I*, the unit, the signs were initial letters, Γ (πέντε), Δ (δέκα), Η for ἑκατον, Χ (χίλιοι), Μ (μύριοι), repeated where necessary, and combined with Γ for intermediate numbers, e.g. Π = 50, ΠΓ = 5,000.

(2) The alphabetical system originating in Ionia and using the ordinary Greek letters together with Ϝ or Ϛ = 6, Ϙ = 90, Ϟ or ϟ = 900; first found in a Hali-carnassus inscription of about 450 B.C. but may have started earlier in Miletus or Caria; not used officially in Greece proper before the 3rd c. B.C.

The two systems went on side by side till about 50 B.C. See Friedlein, *Die Zahlzeichen und das elementare Rechnen der Griechen* (1869); Larfeld, *Handbuch der griechischen Epigraphie* i (1907); Keil in *Hermes* 29 (1894). M. N. Tod, 'Three Greek Numerical Systems' in *JHS* 1913, 27–34, cites from inscriptions some variations in the signs used on the 'Herodianic' system.

Archimedes, in his lost *Ἀρχαὶ* and in the *Sand-reckoner* (*Psammites*), sketched a system for expressing very large numbers going by powers of a myriad myriads (100,000,000 or 10⁸). The first *order* consists of numbers from 1 to 10⁸, the second *order* those from 10⁸ to 10¹⁶, and so on, up to the 10⁸ *order* concluding the first *period*. Other *periods* follow *ad lib.* This system amounts to taking 100,000,000 in place of 10 as the base of a scale of notation. Apollonius of Perga formulated a 'position-value' system going by powers of 10,000, i.e. with 10,000 substituted for 10 as the base (see Pappus I, 8 f.).

Fractions. At first the Greeks, following the Egyptians, preferred to express fractions as submultiples and the sums of such, using for the submultiple the sign for the number with an accent (γ' = $\frac{1}{2}$), with special signs λ' for $\frac{1}{4}$ and ω' for $\frac{1}{3}$. Proper fractions could be expressed by the word (or the sign) for the numerator and the accented letters for the denominator, e.g. δύο με' = $\frac{2}{3}$ (Aristarchus of Samos), θ ια' = $\frac{10}{11}$ (Archimedes), or (better) expressions like δα'δ = $\frac{4}{5}$, ι κγ' = $\frac{11}{12}$ (Diophantus). Most convenient of all was the practice, regular in Diophantus, and occasional in Heron, of placing the denominator *above* the numerator, e.g. $\frac{4}{5}$ = $\frac{4}{5}$ (Diophantus).

II. THEORY OF NUMBERS. This began with the Pythagoreans. Plato is held by some to have extended the notion of number to include incommensurables and irrationals; there is, however, no sign of such an idea in Euclid's bk. 10, though that book owed much to Theaetetus; the irrationals in the book are all *straight lines* or *areas*. Euclid's bks. 7–9 contain the elementary theory of numbers; bk. 8, 11–21 include the 'Platonic' theorem that there is one mean between squares and two (in continued proportion) between cubes. Besides Nicomachus and Iamblichus, Theon of Smyrna has some propositions in the theory of numbers; but it is Diophantus who gives the most, some purporting to be contained in his 'Porisms' (lost), e.g. *Arithm.* 5, 16, 'the difference of two cubes is also the sum of two cubes'. T. H.

NUMBERS, SACRED. Most nations have sacred or magical numbers. Some of these are explicable (e.g. seven is the traditional number of the planets), and of others it may be conjectured that they are the last term of some very old and primitive system of counting, or an important term in such a system (e.g., five perhaps because it is the number of the fingers of one hand); others are entirely obscure. For Greece the following may be noted, apart from Pythagorean mysticism and the divinatory calculations given below. Three is very common in all ritual, especially magical; the dead are invoked thrice (Ar. *Ran.* 1175-6); gods are frequently invoked in threes, as Zeus, Athena, and Apollo often in Homer, or grouped in threes, as the Charites (generally); charms are commonly repeated thrice, Theocritus 2. 43; other magical actions, Theocritus 6. 39. Hence nine is of importance (nine Muses usually, sometimes nine Corymbantes and nine Curetes), being 3×3 . Four is Hermes' number, being his birthday (*Hymn. Hom. Merc.* 19), perhaps explaining why it is a holy day (Hesiod, *Op.* 770). Seven is Apollo's number (see Rose, *Handb. Gk. Myth.* p. 135, cf. Hesiod, *ibid.* 771). This is without doubt oriental; twelve, though traditionally the number of the signs of the Zodiac, need not be Eastern (twelve gods, see Weinreich in Roscher's *Lexikon*, art. 'Zwölfgötter'; twelve labours of Heracles, q.v.). Finally there is a tendency to round larger numbers off to fifty (see W. H. Roscher, 'Die Zahl 50 in Mythos', etc., *Abh. Sachs. Ges. Wiss.*, 1917). The numerical values of letters of the alphabet are the basis of an elaborate system of divination, see Bouché-Leclercq, *Hist. de la divin.* i. 261 ff.; for an attempt to find a like system in early times see Eisler, *Orpheus the Fisher and Weltenmantel und Himmelszelt*. Numbers which exceed a familiar 'round' number by one, e.g. 13 ($12+1$), are occasionally of importance, see O. Weinreich, *Triskaidekadische Studien* 1916 (RGV vi. 1).

In Italy triads of gods are common, not only under Etruscan influence (as the Capitoline triad), but outside it (Jupiter, Mars, and Quirinus are native Roman). Four is of significance (a prayer said four times, Ovid, *Fasti* 4. 778); five appears to have had some sacral connotation, see Wissowa, *Gesammelte Abhandl.* 166, cf. Plutarch, *Quaest. Rom.* 1 and Rose ad loc. Other numbers seem to be Greek.

The references in the text may be supplemented by Keith in Hastings, *ERE* ix. 407 ff., and bibliography, p. 413. H. J. R.

NUMENIUS of Apamea (c. A.D. 150-200), Platonist or Pythagorean, is the immediate precursor of Neoplatonism. He combined his philosophy with a great interest in Eastern religions, and especially in Judaism; he described Plato as *Μωυσῆς ἀπὸ τῆς ἑλλάδος*. He treated the philosophies of Pythagoras and Plato as at bottom identical; his own originality lies chiefly in his maintaining that there are three Gods—the Father, the Creator, and the Created World.

Ed. and tr. K. S. Guthrie (U.S.A. 1929).

W. D. R.

NUMERI was the title given to units of cavalry and infantry recruited from provinces recently conquered or little romanized. Owing to their character they were normally employed in areas distant from those in which they had been raised (e.g. *numeri Brittonum* in Germany). They are found in existence between the time of Trajan and Constantine; they were probably organized in cohorts and commanded by *praefecti*.

In the Constantinian army *numerus* was the generic title of a unit of the Field Army (e.g. *vexillatio* or *legio*).

A. von Domaszewski, *Die Rangordnung des römischen Heeres* (1908). H. M. D. P.

NUMERIANUS, MARCUS AURELIUS, younger son of Carus, was appointed Caesar in A.D. 282 and shared in the campaign against Persia. After the death of Carus,

July 283, Numerian had no thought but to bring his army back from Ctesiphon. Marching slowly, the army did not reach Nicomedia till the autumn of 284. There the alarming discovery was made that the young prince, who had travelled in a closed litter to spare his sore eyes, was a putrefying corpse. The army chose Diocles (later Diocletian), commander of the guard, to avenge the murder, and he struck down the guilty Aper, praetorian prefect and father-in-law of Numerian. Famed as orator and poet, Numerian showed no capacity for command.

H. M.

NUMIDIA, originally the country of the Numidae or African Nomads, lying west and south of Carthaginian territory. Later the title was given to a Roman province, covering a triangle broadening out from its apex on the Mediterranean coast north of Cirta across the High Plateaux (Atlas Mountains) down to the Saharan *limes*. This Numidia was bounded by Mauretania Caesariensis on the west and the province of Africa on the east. Though not as fertile as the latter, Numidia produced corn, wine, and olives on the plains, and bred horses, cattle, and sheep on the uplands.

The original Berber inhabitants were nomad herdsmen, who sometimes practised a primitive agriculture. Those on the coast came under the influence of Utica, Carthage, and the other Phoenician colonies, and there is some evidence of Jewish settlement. By the time of the Second Punic War their small clans had coalesced into the tribal confederacies of the Masaesyli under Syphax and the Massyli under Masinissa (q.v.). Their cavalry were formidable, but their national custom of Sof or civil disunion made them difficult allies politically. Under Masinissa nomadism was abandoned for agriculture, and town life developed. Masinissa was followed by Micipsa (148-118 B.C.), Adherbal (118-112), Jugurtha (q.v., 118-106), Hiempsal (106-60), and Juba I (60-46). As Numidia supported Pompey (47-46), the native dynasty was overthrown. It was established as the province of Africa Nova (46), then (30-25) made a client kingdom under Juba II (q.v.), and later united with the old province of Africa until separated by Septimius Severus.

When the frontiers of Africa Proconsularis were placed on the river Ampsaga (*Rummel*), the Third Augustan legion moved into Numidia under its legate, and was stationed successively at Theveste and Lambaesis (qq.v.). Military colonies were founded at Thamugadi, Madauros (qq.v.), and elsewhere; cereals and olives were cultivated largely; the slave-trade with the Sahara increased. Traffic moved along the great roads which radiated from Theveste to be shipped from Carthage, Hadrumetum, Taparura, and the Syrtic ports. The richest parts of Numidia were in the Tell (see ATLAS MOUNTAINS) and round Cirta (q.v.).

On its southern frontier Numidia was protected by the forts of the *limes*, which ran from the Tunisian shores or salt lakes westward and north-west to Aumale. Between the military roads were districts ruled by native chieftains, who occasionally rebelled. The frontier held till the end of the fourth century A.D., when Saharan raiders took advantage of the quarrels of Donatists, Catholics, and Circumcellions to burn Vescera (*Biskra*), Caleus Herculis (*El Kantara*), and Thamugadi.

W. N. W.

NUMITOR, see ROMULUS.

NUMMULARII, quoted in inscriptions as subordinate officers at the mint, but probably not technical workmen, who are properly called *offinatores*. The *nummularius* of Martial (12. 57. 7) disturbs sleep by thumping the heavy *sestertii* of Nero on his dirty table, in the intervals of business ('otiosus'). He is a money-changer. So was the *nummularius*, whose hands Galba cut off, 'non ex fide versanti pecunias' (Suetonius, *Galba* 9); he had

cheated over the exchange. This passage shows that the *nummularii* were under official control; they may even have been directly employed by the mint to put on the market the new coin as it was struck.

The passage in Petronius, *Satyricon* 56, where Trimalchio asks 'quod autem putamus secundum litteras difficillimum esse artificium? ego puto medicum et nummularium', does not necessarily imply the meaning of 'moneyer'.

NUPTIAE, *see* MARRIAGE.

NUX ELEGIA, 'The Nut-tree's Complaint', *see* OVID.

NYMPHIDIUS SABINUS, GAIUS, son of a court freedwoman, claimed to be the son of Caligula. We know nothing of his early career, though he may have served in Pannonia (Dessau, *ILS* 1322). In 65 he was given the *consularia ornamenta* by Nero and made *praefectus praetorio* with Tigellinus. In 68 he swore allegiance to Galba, but had designs upon the principate himself. He forced his colleague Tigellinus to resign, and intended to demand from Galba the praefecture for life without colleague. But he met with unexpected opposition from the Praetorians, and was slain by them.

*PIR*², N 200.

R. L. J.

NYMPHIS of Heraclea in Bithynia, statesman and historian. Enough remains of his history of Heraclea (in Memnon's epitome) to show how good it was; this and his character as a politician suggest that his lost history of Alexander and his successors (after 247 B.C.) may be a real loss. *See* ALEXANDER (3), Bibliography, Ancient Sources.

W. W. T.

NYMPHODORUS (*fl.* c. 335 B.C.), Syracusan Greek, wrote (i) *Ἀσίας περιήλους*, (ii) *Περὶ τῶν ἐν Σικελίᾳ θαυμαζομένων*, and possibly (iii) *On strange things in Sardinia* (Ath. 6. 265 c; 13. 588 f., 609 c; Ael. *NA* 16. 34).

FHG ii. 378; *PW* xvii. 1625-7.

NYMPHS, female spirits of nature representing the divine powers of mountains, waters, woods, and trees, and also of places, regions, cities, and States. As the word *νύμφη*, young unmarried woman, implies, nymphs were thought of as young and fair. They like dancing and music and can inspire mortals with poetry and prophetic power. In contrast to gods nymphs are mortal (Ovid, *Met.* 8. 771), although Hesiod endows them with extreme longevity. They are daughters of Zeus.

Since nymphs are called after that part of nature in which they dwell, or after their functions, or after the specific geographic locality where they reside, there is an infinite variety of nymphs known. Alseides, Napaeeae, and Dryades are nymphs of forests and groves (the last were originally nymphs of the oak but came to stand for nymphs of the woods in general). Hamadryades, the tree nymphs proper, were believed to die when their tree decays (Serv. on Verg. *Ecl.* 10. 62), for the nymph is the life spirit of the tree. Oræsiads are the nymphs of the mountains, Leimoniads those of the meadows. All kinds of waters are inhabited by nymphs, such as the Naiads, the Potameids, the Creneids, and the Hydriads. The difference between these broader classifications of nymphs and the nymphs representing a locality was recognized by the ancients (*Myth. Lat.* 2. 50). Examples of local nymphs are the Acheloids, named after the river Achelous, or the Nysiads, named after the mountain

Nysa where Dionysus was born. Many local goddesses are brought under this category of nymphs and married to founders of the cities.

Most of the nymphs are benevolent to mankind. They bring flowers to gardens and meadows, watch with Apollo and Hermes over the flocks, and frequently, as patronesses of healthful springs, aid the sick. Such nymphs are often associated with Asclepius. As goddesses of woods and mountains they give success to hunters. Yet nymphs also partake of the wilder aspects of nature. They are akin to Satyrs (q.v.) and Sileni, and associate with Pan. They range with Artemis over the mountains and take part in the Dionysiac *thiasos*. Folk-lore tales, similar to those attaching to fairies and mermaids, are told about some of the nymphs. Those of the woods scare travellers. A man who sees nymphs becomes 'possessed by nymphs'. They take mortals whom they love with them as they did Hylas and Bormus (Theocr. 13. 44 and schol., Athen. 14. 619 f). The drowning of a girl in the Nile was associated with them (*SEG* viii. 473). They punish unresponsive lovers as did the nymphs who blinded Daphnis (Diod. 4. 84).

The cult of nymphs was widely spread through Greece from Homeric times on (*Od.* 13. 356; 17. 205), and extended over the Roman provinces under the Empire. Nymphs were often worshipped in caves; an interesting example is the cave in Vari which was transformed into a sanctuary of the nymphs by their faithful devotee Archedemus (*AJArch.* 1903, 263). In art nymphs are represented on a vase of Sophilos and on the François vase as undistinctive draped females. A special type of votive relief for the nymphs was developed in Attica in the late fifth and the fourth centuries B.C. The dancing nymphs are led by Hermes, while Pan and Achelous look on (R. Feubel, *Die attischen Nymphenreliefs* (1935)); sometimes a cave and an altar indicate the rustic sanctuary. Shepherds often dedicated these humble votives.

L. Bloch in Roscher, *Lex.*, s.v. 'Nymphen'; J. E. Harrison, *Prolegomena to the Study of Greek Rel.*, 288. G. M. A. H.

NYX. Naturally enough, Night is frequently personified by the Greek poets as by those of other peoples. But the significance of Nyx in Greek mythology goes far beyond this. She was a great power, feared and respected even by Zeus (Hom. *Il.* 14. 259). In Hesiod she is born of Chaos and mother of Aether, Hemera, and lesser powers. Frequent touches in the description recall her nocturnal aspect, but this is scarcely seen in the Orphic theogonies, where her influence over creation is immense (cf. ORPHIC LITERATURE, ORPHISM). In the Rhapsodies she is born of Phanes and succeeds to his power. When in turn she hands the sceptre to her son Uranus she continues to advise the younger generations, Uranus, Kronos, and especially Zeus, in the task of world-making. Her influence is due to her oracular powers, exercised from a cave. There are signs that in an earlier Orphic version Phanes was absent and Nyx the primal power. The theogony of the Birds (Ar. *Av.* 693 ff.) makes her prior to Eros (= Phanes), and this supposition suits the awful dignity of Nyx which Homer and 'Orpheus' alike emphasize, and the vague reference of Aristotle (*Metaph.* 1071^b27) to *thelesai* who derive everything from Night. Nyx was primarily a mythographer's goddess, with little cult, but one may mention her connexion with oracles (not confined to Orphic literature, *see* Plut. *De sera* 22; schol. Pind. *Pyth. Argum.*) and a dedication to her in the temple of Demeter in Graeco-Roman Pergamum (*SIG* 1145 n. 2).

W. H. C. G.

OASIS, the name by which the Greeks called any watered and habitable land in deserts, particularly in north Africa. Though really depressions, they were regarded as elevations. They were of some importance as trading-stations and sources of alum, and several of them were garrisoned by the Ptolemies, and later by the Romans. The oases of the Sahara were described by Herodotus (4. 181-5) as a chain extending from east to west, about ten days' journey apart. The most renowned of them, near Egypt, were (i) the 'Ammonium' (*El Siwah*), 6 mls. \times 3, 20 days from Thebes and 12 from Memphis, famed for springs, salt, old Egyptian temples, and the oracle of Ammon (q.v.); (ii) 'Oasis Magna' (*El Khargah*), 80 mls. \times 8-10, 7 days from Thebes, with a Greek and Roman population. (iii) 'Oasis Minor' (*El Dakkel*), south-east of the Ammonium, a source of wheat under the Roman Empire. (iv) 'Oasis Trinythos' (*El Bahariyah*), north of Oasis Magna, with artesian wells and alum deposits.

For the oasis of Palmyra see PALMYRA. E. H. W.

OBELUS, see SCHOLARSHIP, GREER, IN ANTIQUITY.

OBNUNTIATIO, see CONTIO.

OBSEQUENS, see JULIUS (8).

OCEANUS (mythological), son of Uranus (Sky) and Ge (Earth), husband of Tethys, and father of the Oceanids and River gods (Hes. *Th.* 133. 364). In Homer O. is the river encircling the whole world and accordingly is represented as a river by Hephaestus on the rim of the shields of Achilles (*Il.* 18. 607) and Heracles ([Hes.] *Sc.* 314). From O. through subterranean connexions issue all other rivers. Styx, the river of Hades, is part of O. (Hes. *Th.* 786). O. begins at the columns of Heracles, borders on the Elysian fields and Hades, and has its sources in the west where the sun sets. Monsters such as Gorgons, Hecatonchires, Hesperides, Geryoneus, and Eurytion, and outlandish tribes such as Cimmerians, Aethiopians, and pygmies, live by the waters of Oceanus (*Od.* 1. 22; 11. 13; *Il.* 3. 3). Those regions of O. are the land where reality ends and everything is fabulous.

In Greek theories of the world O. is conceived as the great cosmic power, *θεὸν γένεως* (*Il.* 14. 201, 246, 302; W. Jäger, *Paideia* 1 (1934), 207), the water, through which all life grows, and in Greek mythology as a benign old god. Sometimes the elemental, sometimes the personal, aspect is more emphasized. The belief that sun and stars rise and set in the ocean is expressed mythologically in the statement that stars bathe in O. (*Il.* 18. 489), and the Sun traverses O. in a golden bowl by night to get back to the East (Mimnermus in *Ath.* 11. 470 a-b). The rise of rational geographical investigation in Herodotus, Eratosthenes, and others narrowed the significance of O. down to the geographical term of 'Ocean'.

Oceanus never became quite personal enough to accumulate many myths. Pherecydes supplied a humorous sequel to the myth of Sun in the golden bowl: when Heracles set out across the Ocean in the same golden bowl in which the sun used to cross, O. began to rock. Heracles threatened him with his arrows and O. was frightened (*Ath.* 11. 470 c).

In art O. appears early (François vase), is represented on the famous Gigantomachy of Pergamum, and becomes really common in Roman times, especially on sarcophagi, with Earth as a counterpart.

P. Weizsäcker, s.v. in Roscher, *Lex.* iii.

G. M. A. H.

OCEANUS (geographical). Expeditions outside the Straits of Gibraltar by Phoenicians and (after c. 630 B.C.) by Greeks, and exploration of the Red Sea and Persian Gulf under Darius I, showed that the Oceanus of mythology (see preceding article) was a salt-water 'ocean' indented with seas (so Herodotus). But erroneous notions persisted. Poets tried to relegate the river Oceanus beyond the newly found Outer Sea. Hecataeus believed that Oceanus flowed from east to west (*Hdt.* 4. 8), and the Caspian Sea (q.v.) was commonly regarded as one of its inlets. After the voyage of Pytheas (q.v.) in the Atlantic the action of the Ocean tides came to be understood, though the early Roman navigators in Atlantic waters were puzzled by them. As the sphericity of the earth became known (since c. 350 B.C.), geographers imagined that eastern Asia might be reached by sailing westward from Europe, and c. 120 B.C. Eudoxus (q.v. 3) of Cyzicus attempted the circumnavigation of Africa. But the belief that the Ocean extended all round the inhabited earth was never proved. Some geographers conjectured that the southern Ocean contained another continent, or that it was a vast land-locked sea (so Ptolemy); the northern Ocean was supposed to be frozen or too shallow or glutinous for navigation.

E. H. W.

OCELLUS (or *Occeclus*) of Lucania occurs in Iamblichus' list of Pythagoreans (testimonia in H. Diels, *Vorsokr.* i. 440-1), but the work *Περὶ τῆς τοῦ παντὸς φύσεως* bearing his name and known as early as the first century B.C. is undoubtedly spurious. It shows considerable traces of Aristotelian influence, and may probably be dated about 150 B.C.

Ed. R. Harder (Berlin, 1926). *PW* xvii. 2361.

W. D. R.

OCTAVIA (1) *major*, half-sister of Augustus, was the daughter of C. Octavius and his first wife Ancharia. She married Sextus Appulcius (*ILS* 8783. Plutarch, *Antony* 31, confuses her with Octavia minor). Her son Sextus was consul in 29 B.C.

OCTAVIA (2) *minor* (d. 11 B.C.), sister of Augustus and wife of Antony, whom she married after the death of her first husband, C. Marcellus, in 40. She spent the winters of 39-38 and 38-37 with Antony in Athens, and in 37 was instrumental in bringing about the Treaty of Tarentum. In 35 she set out for the East with supplies and 2,000 picked men for Antony's army, but was forbidden to proceed beyond Athens. She rejected her brother's advice to leave Antony's house, and when he divorced her (in 32) contrived to care for her stepchildren. Octavia's nobility, humanity, and loyalty won her universal esteem and sympathy. She bore a son and two daughters to Marcellus and two daughters to Antony.

Plutarch, *Antony*; Suetonius, *Caesar* and *Augustus*; Appian, *BCiv.* bks. 3-5; Dio Cassius, bks. 47 ff. Drumann-Groebe, *Gesch.* Roms iv. 250-8.

G. W. R.

OCTAVIA (3) (b. A.D. 40?), daughter of Claudius and Messallina, was betrothed to Domitius Ahenobarbus (Nero) in 49 and married to him in 53. Nero, who disliked and neglected her, divorced her in 62 in order to marry Poppaea, and sent her to live in Campania under military surveillance. When a rumour that she had been reinstated evoked demonstrations of popular approval she was banished to Pandateria (on a fictitious charge of adultery and treason) and then murdered.

[Seneca], *Octavia*; Tacitus, *Annals* 11-14; Suetonius, *Nero*; Dio Cassius, bks. 60-2. B. W. Henderson, *Life and Principate of the Emperor Nero* (1903).

G. W. R.

OCTAVIA, the one extant *praetexta*, dramatizes in 983 lines the fate of Nero's neglected empress. Seneca is brought in as a character to protest against the emperor's barbarity, and Agrippina's ghost comes to foretell Nero's doom in words so true to fact as to show that they were written after the event of A.D. 68. Commonly printed with Seneca's tragedies, it is not by him, but by someone who wrote in his manner soon after Nero died. There is too much melancholy repetition and too little epigram for Seneca, and there are metrical differences.

See J. Wight Duff, *Lit. Hist. Rome* (Silver Age); Schanz-Hosius; J. Schmidt, *PW*; V. Ciaffari assigns *Octavia* to L. Annaeus Cornutus, *Riv. Fil. N.S.* xv (1937). Text: edns. of Seneca's tragedies, e.g. F. Leo. With notes, C. L. Thompson (U.S.A. 1921); C. Hosius (1922). J. W. D.

OCTAVIANUS, see AUGUSTUS.

OCTAVIUS (1), GNAEUS, curule aedile, a member of the embassy assuring Greek allied rights in 170/169 B.C., was praetor in 168, commanding the Roman fleet against Perseus, whom he captured at Samothrace. He celebrated a naval triumph, and from spoil built the *Porticus Octavia*. Consul in 165, he led the embassy to the East in 162 which attempted to settle Syria in Roman interests after the death of Antiochus Epiphanes, destroying ships and elephants, and was murdered in a patriotic riot at Laodicea.

Polyb. bk. 31; Appian, *Syr.* 46 ff.; Justin. 34. 3, 6. B. Niese, *Gesch. der griech. und maked. Staaten* iii (1903), 243; P. V. M. Benecke, *CAH* viii. 285; E. R. Bevan, *ibid.* 518. A. H. McD.

OCTAVIUS (2), MARCUS, perhaps a son of (1), was tribune in 133 B.C. and a friend of Tiberius Gracchus, but he was persuaded to veto his Agrarian Bill—and accordingly deposed from his tribunate. Gaius Gracchus prepared a Bill to prevent persons thus deposed from standing for further office, but was persuaded by his mother Cornelia not to press it. M. H.

OCTAVIUS (3), GNAEUS, an Optimite, was consul with Cinna in 87 B.C., when Sulla left for the East. He resisted Cinna's proposed revival of Sulpicius' plan to distribute the new citizens throughout the thirty-five tribes, and drove Cinna from Rome. But he failed to hold Rome against the renewed attack and siege by Cinna and Marius and fell with the city (the so-called *Bellum Octavianum*). M. H.

OCTAVIUS (4), GAIVS, belonged to a wealthy equestrian family of Velitrae, rose to the praetorship (61 B.C.), and governed Macedonia with conspicuous ability. He died shortly after his return (59 or 58). Octavius was twice married and left two daughters and a son (later Augustus).

ILS 47; Suetonius, *Augustus* 2-4. G. W. R.

OCTAVIUS, see also AUGUSTUS, TITINIUS (2).

OCYPETE, see HARPYIAE.

ODAENATHUS, SEPTIMIUS, a Palmyrene noble of consular rank, on the capture of Valerian assumed the title of king and at the head of local troops inflicted a severe defeat on Sapor (A.D. 260). Gallienus rewarded him with the post of *dux* and, it would seem, *corrector totius orientis*, and Odaenathus on his behalf crushed the usurper Quietus at Emesa. From 262 to 267 he led the Roman army of the East and his own Palmyrene troops against Persia, reconquering Mesopotamia, but failing to capture Ctesiphon; he was rewarded with the title of *imperator*. In 267 he and his eldest son were murdered. Odaenathus' main interest was to protect the Eastern trade of his own city against the Persians, and he was content to acknowledge the suzerainty of Gallienus, since his nominal submission gave him command over the Roman army of the East.

J. G. Février, *Musée de Palmyre* (1931), 70-102. A. H. M. J.

ODEUM (ὀδεῖον), a small theatre or roofed hall for musical competitions and other assemblages. The earlier Athenian Odeum, which according to Plutarch (*Pericles*) was built by Pericles, was a building of a different kind. Plutarch's description, 'many-seated and many-columned', suggests a resemblance to the Telesterion at Eleusis—a square building—and his description of the roof as conical or pyramidal (said to have been copied from the tent of Xerxes) also seems to imply approximate equality of length and breadth. Recent excavations, however, appear to indicate a plan of c. 208 by 62 feet, and the relationship of the tent-shaped roof to this remains doubtful. Vitruvius (5. 9) states that Pericles ornamented the building with stone columns and with the masts and spars of ships captured from the Persians, and that it was destroyed by fire during the Mithridatic war and rebuilt by king Ariobarzanes.

IL W. R.

ODYSSEUS (Ὀδυσσεύς, Lat. *Vlixes*, a dialectical form, not Ulysses), son and successor of Laertes king of Ithaca, husband of Penelope and father of Telemachus (qq.v.). Like Achilles (q.v.) he comes from a fringe of the Achaean world and is a favourite of Homer. Throughout the *Iliad* he is both brave and sagacious; he gives prudent counsel (e.g. 19. 154 ff.); he is enterprising and so chosen by Diomedes as his companion in the night expedition (10. 242 ff.); he displays great valour in battle, especially 11. 312 ff., where he and Diomedes stop the rout of the Greeks and Odysseus continues to fight after Diomedes is wounded till he himself gets a flesh wound and Menelaus and the greater Aias (qq.v.) rescue him. He is one of the three envoys sent to carry Agamemnon's offer to Achilles in bk. 9. In the funeral games of Patroclus he wins the foot race, Aias the Locrian coming in second (23. 778-9); he draws a wrestling match with the greater Aias (708 ff.).

2. He is the central figure of the *Odyssey*, which, by direct narrative of the poet and his own tale of his adventures in bks. 9-12, covers his career from the fall of Troy till ten years later. Leaving the Troad, he attacked the Cicones, but was beaten off with loss (9. 39 ff.); he was then caught by a storm, visited the country of the Lotophagi (q.v.), and wandered thence to the land of the Cyclopes (q.v.). Escaping from Polyphemus, he next visits Aeolia, the home of Aeolus (q.v. 1), who gives him a sack containing all the winds save the one which will bring him home. But while Odysseus sleeps his crew untie the sack, a storm arises and blows them from the coast of Ithaca back to Aeolia, where Aeolus refuses to have anything more to do with them (10. 19 ff.); after six days' sailing they reach the Laestrygonians (q.v.), and Odysseus barely escapes with his own ship and crew. He reaches Aeaea, the home of Circe (q.v.), and is told by her that he must, in order to reach home, go to Hades and consult the ghost of Tiresias (q.v.). This he succeeds in doing, sees many of the ghosts, and is told by Tiresias that after reaching home he is to sacrifice to Poseidon in a place where salt is unknown and an oar mistaken for a winnowing-fan, thus appeasing the god's anger for the blinding of his son Polyphemus. He will then find an easy death 'from the sea' (11. 134) in old age. Returning to Aeaea, he is given directions for his further voyage; by means of these he passes the Sirens (q.v.), runs between Scylla and Charybdis (qq.v.) with the loss of six men to the former, and comes to the island where the cattle of the Sun pasture. Here his men insist on landing, but, being windbound and short of provisions, they eat of the cattle. Helios demands revenge, and when they leave the island the ship is caught in a gale and destroyed by a thunderbolt; Odysseus alone escapes, and drifts to the island of Calypso (q.v.). Seven years later she lets him go by order of Zeus (5. 43 ff.) on a boat of his own making

Poseidon wrecks him, he swims ashore at Seheria and there is relieved by Nausicaa (q.v.) and sent home, after munificent entertainment, by Aleinous (q.v.). Meanwhile Telemachus has returned from his search for news of his father; Odysseus, disguised as a beggar by Athena, enters his own palace and disposes of the suitors of Penelope with the help of his son and the two faithful thralls, Eumaeus and Philoetius (21-2). He is reunited to Penelope, and an attempt by the kinsmen of the suitors to take vengeance is stopped by Athena, who makes peace between the two parties after the father of Antinous (q.v.) has been killed by old Laertes (24. 523).

3. The lost *Telegonia* continued the story. Odysseus performs his pilgrimage, meeting some subsidiary adventures; Telegonus, his son by Circe, sets out to look for him, lands in Ithaca and starts to plunder it; in the succeeding fight he kills Odysseus. Circe then makes the survivors immortal; she marries Telemachus and Penelope Telegonus.

4. Later authors, especially the tragedians, tend to blacken Odysseus' character. In Homer he is cunning and lies fluently on occasion; in some of the later legends he is a cowardly rascal. As early as the *Cypria* he tries to avoid coming to Troy, but is outwitted by Palamedes (q.v.), and he and Diomedes murder him (fr. 21 Allen). The same pair steal the Palladium, and Odysseus tries to murder Diomedes on the way back, to get all the credit himself (*Little Iliad*, fr. 9). In the surviving *Philoctetes* of Sophocles and apparently in that of Aeschylus also (see Rose, *Handb. Gk. Lit.* 169) his cunning is contrasted with the straightforwardness of Diomedes, or Neoptolemus, who accompanies him.

5. Odysseus had occasional worship as a hero in historical times, though, curiously enough, not in Ithaca (see Farnell, *Hero-Cults*, 326). There is no sufficient reason to suppose him other than a real local chieftain originally, though no doubt his actual doings are hopelessly overlaid with details of Homer's imagination or that of later writers. The plot of the *Odyssey* in particular is a folk-tale, as was pointed out by Nilsson (*Mycenaean origin of Gk. myth.*, U.S.A. 1932, p. 96; the motif is Stith Thompson K 1815. 1).

6. By the most probable theory the scene of his wanderings is outside known territory, however much vague reports of foreign lands may have helped to provide details (see, however, V. Bérard, *Les Phéniciens et l'Odyssee*, 1902-3). But during and after the period of colonization numerous identifications of places in the *Odyssey* with those in or on the way to Italy and Sicily became very popular. Of these perhaps the most plausible is that of Seheria with Corcyra; for some account of this see A. Shewan, *Homeric Essays* (1935), 242 ff. The site of Ithaca itself has been hotly disputed (*ibid.* 1 ff.), though the traditional place, the modern Thiaki, is probably the one Homer means.

Besides the literature cited in the text, J. Schmidt in Roscher's *Lexikon*, s.v., gives much useful material. H. J. R.

OEA (modern *Tripoli*), a port on the Syrtie Sea, was founded by Tyrian colonists about the seventh century B.C. With Sabratha and Leptis (q.v.) it constituted the African Tripolis, which acknowledged the suzerainty of Carthage and Masinissa's house in turn. Trade jealousy resulted in hostilities with Leptis, which continued even when both had been included in Proconsular Africa. Oea's relations with Sabratha were friendlier; both supplied Rome with grain, and Sabratha maintained a guild-house at Ostia. An *arcus quadrifons* survives to testify to Oea's prosperity under M. Aurelius.

W. N. W.

OEBALUS, an early Spartan king, who had a hero-shrine at Sparta (Paus. 3. 15. 10). He has no legend, merely a place in several mutually contradictory genealogies, for which see Wörner in Roscher's *Lexikon*, s.v.

Hence *Oebalius*, *Oebalides*, etc., in Latin poetry often mean Spartan, and the name itself is now and then used for some minor character of Spartan or Peloponnesian origin (as Verg. *Aen.* 7. 734). H. J. R.

OECLES (*Οἰκλῆς*) or OECLEUS (*Οἰκλέους*), in mythology, father of Amphiarus (q.v.; Aesch. *Sept.* 609 and often). He has neither a consistent place in genealogy nor a legend of the smallest importance.

OEDIPUS (*Οἰδῖππος*, anciently, and probably correctly, taken to mean 'swell-foot'), in mythology, son of Laius king of Thebes and his wife Iocasta (Epicaste in Homer, *Od.* 11. 271 ff.). The story is told there that he married his mother unwittingly, and when it was found out she hanged herself, but he continued to be king. He afterwards fell in battle and had a great funeral feast (*Il.* 23. 679 f.). Hesiod says (*Op.* 162-3) that some men of the heroic age fell before Thebes fighting for the flocks of Oedipus; he may therefore have been killed in warding off a raid. Clearly this is inconsistent with his later story, dating in essentials from the cyclic epics *Thebais* and *Oedipodia* but best known from the tragedians.

Laius had been warned by Apollo that if he begot a son that son would kill him (*Ar. Ran.* 1184-5). This was his punishment for sinning against Pelops (q.v.), who had been his host while he was in exile from Thebes; he had carried off Pelops' son Chrysippus (*Soph. OT*, argument). Nevertheless, he neglected the warning (Aesch. *Sept.* 842; *Soph. OT* 711 ff.); a son was born and Laius exposed him, running a spike through his feet (to prevent his ghost walking?). The infant was found by a shepherd of Polybus king of Corinth, who was herding on the summer pastures of Mt. Cithaeron; Polybus, who was childless, adopted him and passed him off as his own, naming him Oedipus from the state of his feet. But Oedipus, being taxed in young manhood with being a supposititious child, went to Delphi to ask who his parents were. He was told that he should kill his father and marry his mother. Determining never to revisit Corinth, he wandered to Thebes, killing Laius in a chance encounter by the way. Arrived at Thebes, he found the city plagued by the Sphinx, a monster which destroyed those who could not solve a riddle she asked. He guessed it and she killed herself; or he overcame her in fight (Robert, *op. cit. infra*, ch. 2). His reward was the hand of the widowed queen. They had four children, Eteocles and Polynices, Antigone (q.v.) and Ismene (the *Oedipodia*, fr. 1 Allen, made a second wife, Eurygancia, their mother after Iocasta's death). But the secret of the relationship came out; Iocasta hanged herself, Oedipus either blinded himself or (Euripides, fr. 541 Nauck) was blinded by Laius' servants. Thus he ceased to be king, going into exile or retirement. The former is Sophocles' version, the latter that of the lost epics, followed by Euripides (*Phoenissae*) and Statius (*Thebais*). His death is variously told, corresponding to his various cults (see Farnell, *Hero-Cults*, 332 ff.). The Attic version of his disappearance from earth at Colonus is told by Sophocles, *OG*.

But two explanations of the story seem possible. Either Oedipus is a real person, about whom fabulous details had gathered, following on the whole the lines of well-known folk-tales (so Rose, *Modern Methods in Class. Myth.* (1930), 24 ff.), or he is pure Märchen, taken up by epic (so Nilsson in *Gnomon* 8, p. 18). See, however, M. Delcourt, *Oedipe ou la légende du conquérant*, 1944.

The classical work and best collection of facts is C. Robert, *Oedipus* (1915). H. J. R.

OENEUS (*Οἰνέως*), in mythology, king of Calydon, husband of Althaea and father or reputed father of Deianira and Meleager (qq.v.). The names of husband and wife ('Wine-man' and 'Healer') and the story that Dionysus was the real father of Deianira (*Hyg. Fab.* 129,

and Rose ad loc.) suggest that they were originally wine-gods. Oeneus is also connected with Ares, who is his grandfather in Nicander ap. Anton. Lib. 2, Meleager's father in Hyg. *Fab.* 171. 1. Periboea, daughter of Hipponous or Olenus, whom he married after the death of Althaea and who was the mother of Tydeus, is variously said to have been with child by Ares, Oeneus, or a certain Hippostratus (Apollod. 1. 74 f.; Diod. Sic. 4. 35. 1-2). In his old age he was robbed of his kingdom by his brother Agrius, but restored by Diomedes (q.v.) or Tydeus (Hyg. *Fab.* 175 and Rose ad loc.; Pherecydes in schol. *Iliad* 14. 120). An obscure story apparently from Ps.-Apollod. (see Wagner's Teubner ed., p. 186) says that Agamemnon and Menelaus (qq.v.) were put in his charge for a time to escape Thyestes. H. J. R.

OENOMAUUS (Οἰνόμαος) (1), see PELOPS.

OENOMAUUS (2) of Gadara (c. A.D. 120), Cynic philosopher. Works (of which a few frs. remain): *Περὶ κυνισμοῦ*; *Πολιτεία*; *Περὶ τῆς κατ' Ὁμήρον φιλοσοφίας*; *Περὶ Κράτητος καὶ Διογένηος καὶ τῶν λοιπῶν*; *Γοήτων φῶρα* (= *Κατὰ χρηστηρίων*); *Κυνὸς αὐτοφωκία*; and tragedies. The fragments of *Γοήτων φῶρα* show it to have been a lively attack on the belief in oracles, an attack resting in part on the belief in freewill. He aimed at a Cynicism which did not follow slavishly either Antisthenes or Diogenes, and defined Cynicism as 'a sort of despair, a life not human but brutish, a disposition of soul that reckons nothing noble or virtuous or good'.

PW xvii. 2249.

W. D. R.

OENONE (Οἰνώη), a nymph of Mt. Ida, loved by Paris (q.v.). When he deserted her for Helen she was bitterly jealous, and on learning that he had been wounded by Philoctetes (q.v.) with one of Heracles' arrows, she refused to cure him. Relenting too late, she came to Troy and found him already dead, whereat she hanged herself or leapt upon his funeral pyre.

Apollodorus 3. 154-5; Parthenius 4; Quintus Smyrnaeus 10. 259 ff., all with small variations. H. J. R.

OENOPIDES of Chios (fl. c. 450-425 B.C.), astronomer and mathematician, discovered the obliquity of the ecliptic, and introduced improvements in elementary geometry; he may have been the first to require that only the ruler and the compasses should be used in the solution of simple problems.

PW xvii. 2258.

W. D. R.

OENOPION (Οἰνοπίων), see ORION.

OENOTROPOE (Οἰνοτρόποι), in mythology, daughters of Anius (q.v.).

OFELLA, QUINTUS LUCRETIUS, a Roman *eques*, deserted from Marius to Sulla. He successfully conducted the blockade of Praeneste (82 B.C.), held by the younger Marius. In 81 in defiance of Sulla's law he presented himself as a candidate for the consulship, although he had not yet been quaestor. Sulla had him murdered by a centurion.

F. Münzer, *PW* xiii. 1656 and xvii. 2039; R. Gardner, *Journ. Phil.* 1919. p. 1. A. M.

OFONIUS, see TIGILLINUS.

OGULNIUS, QUINTUS (cos. 269 B.C.), as tribune of the plebs together with his brother Gnaeus, in 300 carried a law (*Lex Ogulnia*), despite the opposition of patricians and Appius Claudius Caecus (q.v.), by which plebeians became eligible for the highest priesthoods, and gained the majority in the college of the augurs. Possibly (so Helrich, *Röm. Gesch.* 330 f.) the *Lex Ogulnia* was passed in 269, when the Ogulnii were exiles. In this year

they set up near the *Ficus Ruminalis* a figure of the wolf suckling Romulus and Remus. In 292 Q. Ogulnius headed the delegation sent to Epidaurus to bring Aesclepius to Rome, which in 293 had been visited by a pestilence. In 273 he officially visited Alexandria.

F. Münzer, *PW*, s.v.; F. Altheim, *Hist. of Roman Religion* (1938), 283 f. P. T.

OGYGUS (Ὠγγυς, etymology and meaning uncertain), a primeval king, generally of Boeotia (as Paus. 9. 5. 1), but of Lycia, Steph. Byz. s.v. *Ὠγγυλία*; of Egyptian Thebes, schol. Lycophr. 1206; of the Titans, Theophilus, *ad Autol.* 3. 29. The first Deluge was in his time, Eusebius, *Praep. Evang.* 10. 10. 7. H. J. R.

OIKISTAI (οἰκιστᾶι), see CITY-FOUNDERS.

OIL, USE OF. Greek gods being anthropomorphic for the most part, it was only natural that they should be supposed to use olive-oil as men did, in food, as ointment, and for light, though hardly as medicine. Hence the occasional use of it for libations, *ἐλαιόσπονδα* (Porphyrus, *Abst.* 2. 20). To oil a cult-object is one of the commonest acts of worship (e.g. Paus. 10. 24. 6; Theophrastus, *Char.* 16. 5; Prudentius, *c. Symm.* 1. 204). For the oiling of the doorposts in a Roman marriage see Rossbach, *Röm. Ehe*, p. 365. For full references to the sacred use of oil see Pease in *PIV*, s.v. 'Oleum', 2466-9. H. J. R.

OINTMENTS served for medical purposes, mere pleasure, and religious ceremonies. The medical application, of course, was determined only by the expediencies of treatment. Half-way between remedy and luxury was the use of ointments in the gymnasium and as stimuli. To the side of luxury belonged, in spite of climatic conditions in the Mediterranean, the use of ointments before, during, and after the bath, at dinner, at almost any time of day or night. Neither the reprobation of the moralists nor governmental restrictions could check this indulgence; people liked ointments, elaborate mixtures, the attribute of Aphrodite, rather than pure oil, that of Athena. Moreover, the use of ointments was a sign of nobility and distinction and therefore was important also in the veneration of the gods and in burial ceremonies.

Material for the fabrication of ointments came from all over the world. Both wholesale trade and retail business were considerable, and hardly of any detrimental effect on the economic life as has been claimed; rather they provided a good tax revenue.

The receptacles in which ointments were kept, vases of various shapes and boxes, are among the most refined objects of art. Dry ointments were also wrapped in papyrus; to serve this purpose was the final destination of many an ancient book.

Hug, *PW* i B. 1851, s.v. 'Salben'; A. Schmidt, *Drogen u. Drogenhandel im Altert.* (1924). Economic implications entirely evaluated, M. Rostovtzeff, *Social and Economic History of the Hellenic Empire* (1926). Handbooks on Greek and Roman antiquities. Archaeological material ('Lekythoi', 'Aryballoi', 'Alabastra', 'Pyxis', 'Piemmecher') surveyed by G. M. A. Richter and M. J. Milne, *Slaves and Names of Athenian Vases* (1935), with bibliography. L. L.

OKNOS, delay or hesitancy personified; a figure of Greek folk-lore. For some reason he is associated with the lower world (Plut. *De trans. anim.* 473 c; cf. Paus. 10. 29. 1, Polygnotus' picture of Hades). He is always making a straw rope, which an ass eats as fast as he twines it (cf. the futile labour of the Danaids, q.v.; this may explain his infernal associations). Another version seems to be that he loads the ass with sticks, which fall off as fast as he puts them on (Apuleius, *Met.* 6. 18); perhaps the rope is to tie them.

See H. J. R. in *Kramer's Lexikon*, s.v.

H. J. R.

OLBIA, a colony of Miletus, situated near the mouth of the Hypanis (*Bug*), and within easy reach of the estuary of the Borysthenes (*Dnieper*). Its traditional foundation-date, c. 645 B.C., is confirmed by finds of Ionian pottery. It was a fishing-centre and the terminal point of a trade-route up the Hypanis into central Europe; but its main importance lay in its export of wheat from the 'Black Earth' area of south-west Russia, much of which it bought for resale from the Scythian hinterland. Olbia enjoyed its highest prosperity in the sixth century and until the middle of the fifth, at which time it was visited by Herodotus. It apparently had no share in the grain trade with Athens after 450, and in the third century it suffered from the growing insecurity of its hinterland (*SIG* 495—a record of frequent danegelds paid to marauding chieftains by a wealthy citizen). It was sacked c. 60 B.C. by the Dacian king Burebistas, and the rebuilt city appeared to Dio Chrysostomus (c. A.D. 80) impoverished and half-barbarized, though its inhabitants professed a passionate regard for Homer. It recovered some of its prosperity when Hadrian gave it a garrison, but it was destroyed by the Alans in the third century.

Dio Chrys. Or. 36; E. H. Minns, *Scythians and Greeks* (1913), 451–89. M. C.

OLEN, mythical epic poet, before Musaeus (q.v.); a Hyperborean or Lycian; said to have brought the worship of Apollo and Artemis from Lycia to Delos, where he celebrated their birth among the Hyperboreans in hymns which continued to be recited there (*Hdt.* 4. 35; *Callim. Del.* 304–5; *Paus.* 1. 18. 5; cf. *eund.* 8. 21. 3). See *HYMNS*. W. F. J. K.

OLIGARCHY, the 'rule of the few'; on its connexions with the old nobility and its growth out of aristocracy see *ARISTOCRACY*. The chief difference consisted in the replacement of birth by wealth as the decisive qualification: oligarchy was plutocracy. There were many conflicts between the old nobility and the 'nouveaux riches', but finally 'money made the man' (*Alcaeus* and *Theognis*, *passim*). This also meant a victory of urban over tribal organization. In assuming political power the wealthy classes took over the economic burdens of the State.

In oligarchy political power was confined to a minority of the citizens; the majority had citizenship, but without full political rights. The method of selecting the 'few' varied extremely, according to the economic conditions of each city. In most States the landowners predominated for a long time. In addition, the ruling few might be limited to a fixed number which differed greatly in the different States, often rising to the 'rule of the Thousand'. Sometimes there was a scale of several citizen classes distinguished by wealth and accordingly by political rights (timocracy). In his classification of oligarchies (*Pol.* 6. 1292^a38 ff., 1293^a11 ff.) Aristotle differentiates between aristocracy and oligarchy rather than the actual forms of oligarchy. Political power in oligarchies was generally concentrated in the council. But formally the final decision was left to the assembly of all citizens, i.e. of full citizens, and in cases where the number of citizens was very small, the assembly could preserve a real activity. It is difficult sometimes to distinguish the assembly from the council, e.g. the 600 in Massilia. Sometimes, as in the case of the Areopagus (q.v.), the Council was composed of retired high officials formerly elected by the assembly. Some characteristic features of oligarchy appear in Sparta, always its champion. But Sparta represented a particular form of State, and its institutions must not be considered as typically oligarchic.

L. Whibley, *Greek Oligarchies* (1896); G. Glotz, *The Greek City* (1929). V. E.

OLIVE CULTURE. We know from finds that olives were grown in the Mediterranean area and Minoan Crete during the neolithic age. Plantations are mentioned

by Homer, and oil was exported from Attica in the time of Solon. As soon as it became possible by imports of corn to satisfy most of the requirements of the Greek people, crops such as olives and grapes took the place of corn and were very widely cultivated in Greece during the classical age. There was a similar increase of olive cultivation in Italy after the Punic Wars. From the later first century A.D., exports of oil and wine from Italy being no longer able to compete with the increased local production of the Roman provinces, a more equitable cultivation became a characteristic of the Mediterranean areas.

Methods of cultivation were much improved from the classical Greek period to the early Principate, bringing about a world-wide interchange of varieties. Two hundred trees, for example, were exported from Attica to Egypt under Ptolemy II. At least twenty-seven varieties were known, and improved mills and presses increased production. The grafting of olive-shoots on fig-trees and vines was successfully performed, and wild olives were grafted on the cultivated stocks to improve production (*terebratio*). Cheap labour, mostly servile, was used for the harvest. Olives were more remunerative to the large owner than to the small peasant, as it might take fifteen years to ensure a profitable return on an investment in a new plantation.

In Cato's time the average profit was c. 6 per cent. on the capital invested. A model plantation of 160 acres described by Cato employed a slave overseer, his wife, five slave labourers, three ox-drivers, one ass-driver, a swineherd, a shepherd, with its oil mills, cattle, and working implements. Rome seems to have occasionally restricted cultivation in the provinces to protect Italian growers. Olive cultivation in the ancient world created a tradition in most Mediterranean countries which has never been completely lost until to-day.

OLYMPIA, the main sanctuary of Zeus in Greece, was situated in a rich and lovely tract of Elis, in a hollow between the low hills that flank the river Alpheus. Strabo states that its fame was first derived from an oracle of Earth, like that at Delphi, and a pre-Hellenic occupation of the site is proved by the discovery of pottery and houses of the Bronze Age at the foot of Kronos Hill; but there does not seem to have been a Mycenaean occupation. According to Pindar the Olympic festival was founded by Heracles, and this tradition was also held at Elis; but the local belief was that Pelops originated it after his victory over Ocnomaus. The games were said to have started in the ninth century, but the first Olympiad was dated 776 B.C.

The sanctuary of 'Altis' was a walled enclosure, which came into full occupation soon after the Dorian Invasion. The oldest shrine was that of Pelops. There were two temples, that of Hera, dating from the early seventh century and originally constructed of wood, and that of Zeus, completed in 457. On the north side, under Kronos Hill, lay eleven Treasuries (q.v.) of various Greek States in a row. The only building on the east side, other than a portico, was the circular 'Philippeum', built by Philip II of Macedon to commemorate himself. Innumerable statues of athletic victors stood in the Altis. Outside it were many large buildings of various dates: the Palaestra, a hostelry known as the Leonidaeum, of fourth-century date, used by officials, a Prytaneum, and a Bouleuterium.

Olympia was excavated by German archaeologists in 1881, although an earlier expedition from France in 1829 had secured parts of the sculptured metopes of the temple of Zeus, now in the Louvre. The German excavators found the remaining metopes and almost 80 per cent. of the pedimental sculptures. Among other notable discoveries were the head of Hera from the Heraeum, the Victory of Paconius, the Hermes and

Dionysus, and a bronze head of a boxer attributed to Silanion. Renewed German excavations are now revealing the stadium, which was built of earth, without stone seats. An edict of the Emperor Theodosius, enjoining the destruction of all pagan shrines, made an end of Olympia as a show-site.

E. N. Gardiner, *Olympia, Its History and Remains* (1925). S. C.

OLYMPIAS, daughter of Neoptolemus of Epirus, married Philip II of Macedon in 357 B.C. and bore him two children, Alexander (in 356) and Cleopatra. Passionate and mystical, she gave her son these qualities; but his practical and imaginative mind was not hers. Her relations with the polygamous Philip became strained, but the story that she was his real murderer was only Cassander's propaganda. Devoted as Alexander always remained to her, he wisely refused to let her exercise any power, and he supported his governor in Macedonia, Antipater, against her. In 331 she quitted Macedonia for Epirus, which for years she virtually ruled. After Alexander's death she waged a propaganda war against Antipater's house, until in 317 Polyperchon invoked her help against Antipater's son Cassander in Macedonia. Macedonians regarded Alexander's mother as sacred; she mastered Macedonia without a blow, murdered Philip III, and made her grandson (Alexander IV) sole king. But her unbridled passions, displayed in an orgy of murder, ruined her chances and brought Cassander back; she had to surrender, and Cassander's army condemned her to death. But even so they dared not touch her themselves; she was finally killed by relatives of her victims.

OLYMPIC GAMES. According to tradition the Olympic Games, held once every four years, were founded in 776 B.C., and a list of the winners from that year to A.D. 217, drawn up by Julius Africanus, has been preserved for us by Eusebius. In A.D. 393 (or 426) they were abolished by the Emperor Theodosius I. At first they were confined to one day and the contests consisted only of running and wrestling; but in the early years of the seventh century B.C., perhaps under the influence of Pheidon, tyrant of Argos, they were reorganized and enlarged, with races for chariots and single horses as the chief events. The Spartans, who till then had supplied the majority of the winners, thereupon withdrew and their place was taken by the Sicilian and Italian Greeks.

The games were in honour of Olympian Zeus. In his precinct, the Altis, lying between the rivers Alpheus and Cladeus, stood his temple, together with the statues of victorious athletes (see *OLYMPIA*). The first of the five days, to which the games in 472 were extended, was spent in sacrifices and general festivity, while the competitors and judges took the oath of fair dealing. On the second morning the herald proclaimed the names of the competitors, and the day passed in chariot- and horse-races together with the pentathlon competition for men. The boys' contests came on the third day; the men's foot-races, jumping, wrestling, boxing, and pankration on the fourth, the last event being the race for men in armour. On the fifth day there were sacrifices, and in the evening a banquet at which the victors were entertained. The prizes consisted of chaplets of wild olive.

E. N. Gardiner, *Olympia* (1925). For other literature see *ATHLETICS*. F. A. W.

OLYMPIEUM, the temple of Zeus Olympius at Athens; begun by Antistates, Callicrates, Antimachides, and Porcius, architects employed by Pisistratus, but abandoned after the latter's death, and not resumed until Antiochus Epiphanes employed the Roman architect Cossutius to continue the work. It was completed at

the order of Hadrian (Vitruv. 7 *praef.*). The Pisistratean building was planned as an Ionic temple. Cossutius changed the order to Corinthian, but in general seems to have adhered to the original plan, dipteral at the sides, tripteral at the ends. The cella was of the open-roofed type called 'hypaethral' (Vitruv. 3. 2). The stylobate measured c. 135 by 354 feet, and the Corinthian columns were nearly 57 feet in height. H. W. R.

OLYMPIODORUS (1) (fl. 307-280 B.C.), democratic Athenian commander, secured Aetolian help against Cassander (c. 306), whom he subsequently repulsed from Elatea. He gave support to Lachares (q.v.), but subsequently headed the opposition against him at Piraeus (Paus. 1. 26. 3) and after the recapture of Athens by Demetrius Poliorketes became virtually tyrant, holding the archonship for two successive years (294-292). In 287 he led the insurrection against Macedon, seizing the Museum; later he helped Demochares to take Eleusis.

W. S. Ferguson, *Hellenistic Athens* (1911); W. B. Dinsmoor, *Archons of Athens* (1931); G. De Sanctis, *Riv. fil.* 1936. F. W. W.

OLYMPIODORUS (2) of Gaza, sceptical philosopher, pupil of Carneades (who lived 214-129 B.C.). See Zeller, *Phil. d. Griechen* 3^d. 1. 544.

OLYMPIODORUS (3) of Thebes in Egypt, see *ALCHEMY*, para. 4.

OLYMPUS (1), a mountain of nearly 9,600 feet, on the borders of Macedonia and Thessaly. Being the highest peak in the Greek peninsula, it was regarded as the home of the gods. The huge massif covers a large area extending inland from the coast of Pieria, and it therefore served to shield Greece on the north-east, since invaders must either force the narrow defile of Tempe (q.v.) or use the mountain-passes of Petra and Volustana to the west of Olympus. It also contributed to the isolation of Thessaly by cutting it off from Macedonia and the Thracian Gulf. H. D. W.

OLYMPUS (2), in Cyprus (mod. *Troodos*), rises to 6,000 feet and constitutes the main mountain mass of the south-west part of the island. It was reputed to have held on its summit a temple of Aphrodite Acrea, which women were not allowed to enter. On the lower slopes are modern mines of asbestos, and in antiquity there were said to have been gold mines. It is used to-day as a summer resort. S. C.

OLYNTHUS, a city north of Potidaea on the mainland of the Chalcidic peninsula. Originally Bottiaeian, it became a Greek city after its capture by Persia (479 B.C.) and repopulation from Chalcidice; its position and mixed population made it the natural centre of Greek Chalcidice against attacks from Athens, Macedonia, and Sparta. In 433 the city was strengthened by further migration and received territory from Macedon (Thuc. 1. 58), and it soon became the capital of a Chalcidian League issuing federal coinage; by 382 the growth of the League aroused the enmity of Sparta, which reduced Olynthus after a two-year siege and disbanded the League (Xen. *Hell.* 5. 2. 11 f.). When Sparta collapsed, Olynthus re-formed the League and resisted Athenian attacks on Amphipolis; when that city fell to Philip II of Macedon Olynthus allied with him against Athens (Diod. 16. 8), expelled the Athenian cleruchy from Potidaea, and received Anthemus from Philip (357-356). Alarmed by the growing power of Philip, Olynthus intrigued with Athens, harboured rivals to the Macedonian throne, and with Athenian assistance defied Philip; the city fell by treachery (Dem. 19. 266 f.) and was destroyed (348).

OMENS, *see* AUGURES, AUSPICIUM, DIVINATION.

OMOPLATOSCOPY, *see* DIVINATION, para. 6.

OMPHALE, in mythology, a Lydian queen, daughter of Iardanus (Apollo), 2. 131, which *see* for the story, which is much older, perhaps going back to Creophylus and mentioned in Tragedy, e.g. Soph. *Trach.* 248 ff.). Heracles (q.v.), having killed Iphitus son of Eurytus of Oechalia, could find no one to purify him (cf. NELEUS) and applied to Apollo. The god would give him no answer till Heracles started to carry off his tripod, saying he would found an oracle of his own. Zeus stopped the quarrel with a thunderbolt, and Apollo said he could be purified and rid of the madness which afflicted him if he was sold as a slave and the price given to Eurytus. Hermes arranged the sale and Omphale was the buyer. According to Apollodorus, she set him labours of the usual type, against brigands, etc., none of which has a Lydian setting or geography; Alexandrian poets (*see*, e.g., Ovid, *Her.* 9. 53 ff.) make great play with the theme of her setting him to women's work. The length of the slavery varies (one year in Soph., three in Apollod.), and it is commonly said he had a son, Lamus, by Omphale (Ovid, *loc. cit.*).

See further Tümpel and Sieveking in Roscher's *Lexikon*, s.v.; W. R. Halliday, *Plutarch's Greek Questions* (1928), 187.

H. J. R.

OMPHALOS, the navel, a name given to objects, especially stones, of navel shape. Such stones were cult-objects in the most primitive religion of the Aegean region. They remained attached to several cults when a higher level of religion had been reached. The most famous omphalos was that in the adytum of Apollo's temple at Delphi (q.v., and *see* APOLLO, para. 4). Late and untrustworthy authors call it the tomb of Python or of Dionysus; this raises the question of the relation of the omphalos to omphaloid tombs and omphaloid altars. In any case, if the small limestone block inscribed ΓΑΣ, found in the adytum, is actually the omphalos, it could at most have been the marker of a tomb. Two other omphaloi have been found at Delphi, manifestly copies, one being the marble omphalos seen by Pausanias before the temple. Its surface is covered with a sculptured network that represents the woollen fillets placed around the true omphalos.

Any centrally located place was called the omphalos of its region, as Phlius of the Peloponnesus. So Delphi's omphalos was thought to mark the centre of the earth. The story was that Zeus, desiring to find the centre of the earth, started two eagles of equal speed at the same moment, one from the eastern edge of the world, one from the western; they met at Delphi. This story led to the placing of two golden eagles beside the omphalos, which were taken by Philomelus in the Sacred War.

'Neue Omphalosstudien', *ibid.* (1915), no. 1; L. B. Holland, *AJArch.* xxxvii (1933), 201-14. The articles of Roscher and Holland are venturesome. *See* A. B. Cook, *Zeus* ii (1925), Plate ix for photographs of the Delphic omphalos.

J. E. F.

ONAGER, *see* SIEGECRAFT, ROMAN.

ONASANDER (Ὀνάσανδρος, the preferable spelling), whom tradition makes a Platonic philosopher, wrote his *Στρατηγικός* under Claudius. It is a treatise on the duties of a commander, a dull exposition of commonplace military and ethical principles, for which the author disclaims any originality; it was enormously popular during the Renaissance.

A. Köchly, *Ὀνομασθένος Στρατηγικός* (1860); Illinois Greek Club, *Onasander* (Loeb, 1923), with full bibliography.

W. W. T.

ONESICRITUS of Astypalaea, seaman, Cynic, and Alexander-historian, was with Alexander in India; he steered Alexander's ship down the Jhelum, and was Nearchus' lieutenant on his voyage. He has left a reputation as a liar, but his book did not profess to be history; it was an historical romance resembling Xenophon's *Cyropaedia*, with Alexander as a Cynic hero and culture-bringer. It formed an element in the vulgate, and Strabo and Pliny used it for natural history; but it exercised little direct influence.

See ALEXANDER (3), Bibliography, Ancient Sources.

W. W. T.

ONOMACRITUS, *see* MUSAEUS (1).

ONOMARCHUS, Phocian commander in the Third Sacred War (q.v.). After the Phocian defeat at Neon (354 B.C.) he was elected *strategos autokrator* and employed the temple funds at Delphi to bribe Thessaly into neutrality and to hire mercenaries. Defeating the Locrians and Boeotians, he refounded Orchomenus in Boeotia, and forced Philip II of Macedon to evacuate Thessaly (late 353). All-powerful from Olympus to the Corinthian Gulf, Onomarchus hoped with Athenian and Spartan aid to crush Thebes; but he was drawn northwards by Philip's invasion of Thessaly. Marching towards his ally, Lycophron of Phrae, probably in co-operation with an Athenian squadron, Onomarchus was defeated and killed at the battle of the Crocus Field (352). An able and unscrupulous individualist, Onomarchus made Phocis a first-class power; gambling on the dwindling assets of Delphian monies, he came near to success.

OÖSCOPY, *see* DIVINATION, para. 6, and EGG.

OPELLIUS, *see* MACRINUS.

OPHELLAS, Macedonian officer under Alexander; sent by the satrap Ptolemy to subdue Cyrene (322 B.C.). He became governor there; but we know nothing certain of his attitude in the Cyrenean revolt of 313/312, nor whether he was concerned with the constitutional reforms of that period (*see* CYRENE). At any rate, he became almost independent. There is little information about his relations to Carthage. But he took part in Agathocles' (q.v.) campaign to Africa, when, overestimating his forces, he hoped to subdue Carthage, and to found an African realm. Having assembled a large body of Greek soldiers and colonists, he lost many of his men during the march through the desert. Eventually the two Greek generals joined forces. But soon after (probably 309), Ophellas was murdered by Agathocles, who incorporated his troops. Almost all the colonists perished.

OPHELTES, *see* HYPISIPYLE.

OPHION (Ὀφίων), Orphic god, husband of Eurynome and ruler of the universe before Kronos (q.v.); Apoll. Rhod. 1. 503 ff.; Kern, *Orphicorum fragmenta*, p. 98, no. 29.

OPHTHALMOLOGY was greatly advanced by the Greeks. Twenty operations were devised; until the beginning of the eighteenth century only four were added. The treatment of more than thirty diseases was not essentially changed until the beginning of the seventeenth century. This great achievement, mostly due to the Hellenistic physicians, was closely connected with the development of human anatomy and probably with that of mathematical optics. Other factors may have contributed to a special interest in the subject and thereby to the amazing success: the frequency of eye diseases

in the Mediterranean world, the importance of sight for every human being, the valuation of sight peculiar to the Greeks.

As regards anatomy, the fabric of the eye was almost entirely unravelled. Seven membranes were distinguished, the optic nerve was accurately described. The theories of vision were less satisfactory, depending too much on the various philosophical conceptions; Galen assumed that a sight-spirit proceeds from the brain along the nerves, envelops the object seen, and then returns to the crystalline humour, thus completing the act of vision. The explanation of diseases, in spite of all anatomical knowledge, was based mainly on humoral conceptions. The therapy consisted in certain dietetic measures and also in the local application of collyria, the great variety of which is attested by the innumerable seals of Roman oculists. As for surgery, it suffices to refer to the astounding operations for cataract, as described by Celsus and as practised by Antyllus (2nd c. A.D.).

Texts: Celsus, bks. 6 and 7; Aetius, bk. 7; the only Greek treatise preserved: Th. Puschmann, 'Nachträge z. Alexander Trallianus', *Berl. Stud. f. class. Philol. u. Archaeol.* v. 2 (1886). Medieval compilations, probably based on ancient material now lost: P. Pansier, *Collectio ophthalmologica Veterum Auctorum* (1903), (fasc. vii Ps.-Galen, *De oculis*). Fragments of the canon of ophthalmology, written by the Hierophilean Demosthenes (1st c. A.D.) and dependent on Hierophilus' book on eye diseases, collected J. Hirschberg, *Arch. f. Gesch. d. Med.* (1918-19); concerning a medieval translation of this work, M. Wellmann, *Hermes* 1903. Translation of Antyllus, M. Meyerhof, *Die Antike* 1933.

St. Milne, *Surgical Instruments in Greek and Roman Times* (1907). Seals, *CIL* xiii, 3, 10021.

OPIGENA, see JUNO.

OPI(L)IUS, AURELIUS (early 1st c. B.C.), a freedman who wrote on philosophy, rhetoric, and grammar, and was cited as an authority by Varro and Verrius Flaccus. One of his works in nine books was entitled *Libri Musarum*. He interested himself in determining the canon of the genuine works of Plautus, an author whom he frequently cited in his explanations of the meanings of words.

Cf. G. Funaioli, *Gramm. Rom. Frag.*, 86-95; Teuffel § 159. 4; Schanz-Hosius, § 195. 2. J. F. M.

OPIMIUS, LUCIUS, was a leading Optimatus in the Gracchan period. As praetor (125 B.C.) he subdued the revolt of Fregellae. As consul in 121 (he failed to be elected for 122) he led the opposition to Gaius Gracchus; and in the final struggle, supported by the *Ultimum Decretum* of the Senate—then first used—took arms against the Gracchans. Gaius, with Flaccus and others, lost their lives. Opimius then set up a special *Quaestio* to try Gracchus' supporters, over 3,000 of whom were executed. In 120, Opimius was tried before the people for executing citizens *iniussu civium*; Carbo, then consul, defended him, and he was acquitted. But the democrats were revenged on him in 110, when the Mamilian commission condemned him, with other Optimates, for having received bribes from Jugurtha; he died in poverty at Dyrrhachium. M. H.

OPISTHOGRAPH, see BOOKS, I. G.

OPPIAN of Cilicia (late 2nd c. A.D.), author of Greek hexameter poetry, the *Cyreneica*, for each verse of which Caracalla gave him a piece of gold, and possibly also the *Hellenica*, which may, however, be by another Oppian of Syria, early third century A.D.; the poems do not contain much new scientific knowledge on their subjects, but have some grace and power of expression.

Text: A. W. Muhl (1865, 1925).

W. F. J. H.

OPPIDUM means not a community—*civitas*, *pagus*, *municipium*, or *colonia* (qq.v.)—but the town centre of such a community, or else any urban agglomeration in Italy or the provinces to which no territory was juridically attached. In Roman territory before 89 B.C. the chief *oppida* were those of the ex-Latin incorporated States. In them was centred the local administration of their former *territorium*. The towns of the indigenous Romans, known as *fora* and *conclibula*, had less authority, if any, over the locality. All these *oppida* were, however, assimilated to *municipia* between 89 and 44 B.C., becoming the centre of self-government for the adjacent territory. In the provinces regular communities of Roman citizens (Italian immigrants or enfranchised natives) were at first called *oppida civium Romanorum*, whether administered like villages by boards of *magistri*, or with a fuller constitution. Later these were assimilated to the Italian *municipia* by the grant of charters based on the Italian model.

See the works cited in the bibliography under *MUNICIPIUM* (Modern Views, (a) Republic). A. N. S.-W.

OPPIUS (1), GAIUS, a tribune of 215 B.C. who carried a war-time sumptuary measure (*Lex Oppia*) forbidding women to own more than half an ounce of gold, wear multi-coloured dresses, or ride in two-horsed vehicles in Rome. It was repealed despite the fierce opposition of Cato in 195.

Livy 34. 1-8.

II. H. S.

OPPIUS (2), GAIUS, Caesar's friend of equestrian rank and manager, with L. Cornelius Balbus, of his affairs. He corresponded with Cicero and helped Octavian. He wrote many biographies: certainly of Scipio Africanus and Cassius, probably of Caesar. He wrote a pamphlet to prove that Caesarion was not the son of Caesar by Cleopatra. Some ancient critics wrongly attributed to him the *Bellum Alexandrinum*, *Africum*, *Hispaniense* (qq.v.).

H. Peter, *HRRel.* II, p. lxiix; Schanz-Hosius, *Röm. Literatur*, I, 350; R. Syme, *The Roman Revolution* (1939), see index. A. M.

OPRAMOAS of Rhodiapolis in Lycia is famous for the huge inscription (*IGR* iii. 739) engraved on his temple tomb, which records the honours decreed to him by the Lycian League between A.D. 124 and 152, and the letters of the procurators and legates of Lycia Pamphylia and of the Emperor Antoninus Pius relative to these decrees. He gave more than 600,000 denarii to the League and its constituent cities for games, buildings, distributions, etc., and perhaps hoped by bringing his munificence to the Emperor's notice to achieve senatorial rank. He lived to see his great-grandchildren senators.

A. H. M. J.

OPS, Roman goddess, of obscure functions. Her festivals (Opalia, 19 Dec.; Opiconsivia, 25 Aug.) suggest by their dates and the title of the latter association with Consus (q.v.); Consualia, 15 Dec. and 19 Aug.), but the December festival also a connexion with Saturnus (q.v.); Saturnalia, 17 Dec.), and, indeed, she is regularly associated with him by the ancients, he being identified with Kronos and she with Rhea. Her oldest place of worship was a small chapel in the Regia (Varro, *Ling.* 5. 21; Festus, p. 202, 20 Lindsay); for her other shrines, see Platner-Ashby, p. 372; Rohde, 750 ff. Her titles are Consiva and Opifera, Festus *ibid.* and Fort. *Arval.* on 23 Aug. (Volcanalia, where she is one of a group of deities receiving sacrifice).

See Rohde in *LG*, v.

II. J. H.

OPTATIANUS PORFYRIUS, PAPHLAGIAN (4th c. A.D.), poet. From exile he sent (before A.D. 385) a verse panegyric to Constantine and after his recall he became

praefectus urbi. His poems (ed. E. Kluge, 1926) are full of ingenuities, such as acrostics and deliberate limitations of the kind of words employed; some are arranged to have the shape of altars, water-organs, etc.

Cf. Teuffel, § 403, 1-3; Schanz-Hosius, §§ 783-4. J. F. M.

OPTICS, *see* PHYSICS, para. 6.

OPTIMATES, a conservative political group in the later Roman Republic. They were neither a nobility of blood nor a political party, but merely the members of the few families which, owing to their wealth, influence, and ability, had succeeded in exercising control over public finances and administration. Membership of the Senate enabled the *Optimates* to distribute magistracies and commands to candidates of their own choice and class, thus keeping a narrow political leadership, which only a century of revolution could overthrow.

M. Gelzer, *Die Nobilität d. röm. Republik* (1912), and in *Neue Jahrb.* 1920; F. Münzer, *Röm. Adelsparteien u. Adelsfamilien* (1920). P. T.

ORACLES (*oracula*, *μαντεία*, *χρηστήρια*). The primary meaning of *oracle* is the response of a god to a question asked him by a worshipper. It may also indicate either the body of priests that administer an oracular shrine or the shrine itself. There were many established oracular shrines in the ancient world, several of which had widespread fame. In each the god was consulted by a fixed mode of divination. At the most primitive oracles the god's will was revealed by the casting of lots or by the observation of signs: the movements of objects thrown into a spring, the movements of the god's image when carried, the markings of the entrails of victims sacrificed upon the god's altar, the rustle of the leaves in the god's sacred oak. At healing-oracles, after the performance of preliminary rites, the consultant slept all night in the shrine (*see* INCUBATION) and received a dream-vision. At the most highly developed oracles the god spoke through the mouth of a man or woman. Such was the method at Delphi, which is typical of all inspirational oracles. The prophetess spent several days in purificatory preparation and then entered into a trance, during which she heard the consultant's question. Her answer, no doubt unintelligible to the untrained auditor, was interpreted by the attendant priests and transformed by them into intelligible verse or prose.

At the major oracles the consultants had to go through preliminary rites of sacrifice and purification, and were admitted to consultation only if all signs were favourable. Usually their questions were submitted in writing, and the answer was returned to them in writing. Only at the simplest oracles did the consultant approach the god directly. Usually, whatever the mode of divination, the consultant addressed the god through the cult-functionaries.

Many of the gods spoke oracles at some of their sanctuaries, but Apollo was most esteemed as an oracular god. He had many oracles of the inspirational type: the world-famous Delphi, Didyma, and Claros, and numerous shrines in Lycia, Troas, and Boeotia. Zeus, also esteemed as an oracular god, spoke through signs at Dodona and Olympia. Asclepius at Epidauros, Rome, and elsewhere, and Amphiaraus at Oropus sent healing visions. Trophonius at Lebadea had the most famous of hero-oracles.

The great oracles were Greek (except that of Ammon, q.v.), but there were oracular establishments in Syria, Egypt, and Italy. Worthy of mention among Italian oracles are the oracle of the dead (*νεκυομαντεῖον*) at Avernus, the incubation-oracle of Faunus at Tibur, and the lot-oracle of Fortuna at Praeneste.

ORBILIUS PUPILLUS, LUCIUS, of Beneventum, teacher and grammarian (Suct. *Gram.* 9), migrated to Rome aged fifty (63 B.C.). His pupils included Horace (*Epist.* 2. 1. 69), who calls him *plagosus* ('Whacker') from thrashings administered during lessons on Andronicus' translation of Homer's *Odyssey*. He wrote embittered criticisms of contemporary characters and conditions.

G. C. W.

ORCADES, Orkney and Shetland Islands, were probably discovered by Pythias (q.v.), and were visited by the fleet of Agricola (q.v.), who temporarily subdued them. Pomponius Mela gave their number as 30-40; Ptolemy mentioned some by name, but placed them incorrectly.

Mela 3. 54; Tac. *Agr.* 10; Ptol. *Geog.* 2. 3. 31.

ORCHOMENUS. (1) Eponym of the Boeotian Orchomenus, a vague genealogical figure. He is son of Zeus and the Danaid Isonoc (schol. Ap. Rhod. 1. 230; obviously late, cf. DANAUS) and father of Minyas (q.v.); son of Minyas (Paus. 9. 36. 6 and elsewhere); his brother, and so son of Eteocles (not the Theban) (schol. Pind. *Isthm.* 1. 79). (2) Eponym of the Arcadian Orchomenus (Paus. 8. 36. 1).

H. J. R.

ORCHOMENUS, the name of an Arcadian and a Bocotian town. Bocotian Orchomenus stood on a promontory on the north of the Copaie plain. It was an important neolithic and Bronze Age site and had a Late Bronze Age palace and beehive tomb. It was the northernmost Mycenaean fortified town and was associated by Homer and Greek tradition with the Minyans; its wealth implies that the Copaie was then drained. It was among the first Bocotian cities to coin (c. 550 B.C.), and appears then not to have belonged to the Boeotian League. It declined continually, as a result of the hostility of Thebes and the flooding of Lake Copaie, and was destroyed by the Boeotian League in 364. The Nymphs were especially worshipped there (Pindar, *Ol.* 14).

OREITHYIA, *see* BOREAS.

ORESTES, in mythology, son of Agamemnon and Clytemnestra (qq.v.). In all accounts he avenged the death of his father, but the story is variously told in authors of different ages.

(1) Homer says that when Orestes reached manhood he killed Aegisthus (q.v.), and implies that he also killed Clytemnestra; it was a most laudable and exemplary deed, for which he won great reputation. No details are given, save that till the vengeance was accomplished Orestes was in exile (he came from Athens, *Od.* 3. 307), as indeed he must have been to escape. It is a straightforward telling of a quite possibly real event, and no regrets are expressed by anyone at his having to kill his mother; she was 'hateful' (*Od.* 3. 310), and in any case Orestes, as head of the family, would be her only possible

judge and executioner. See *Od.* 1. 29 ff.; 298 ff.; 3. 310; 4. 546-7; 11. 458 ff.

(2) Stesichorus (we may neglect the shadowy and perhaps fabulous Xanthus of Sicily, Aelian, *VH* 4. 26) told a slightly different and much more elaborate story in his *Oresteia* (see Vürtheim, *Stesichoros' Fragmente und Biographie*, 45 ff.). The scene was transferred to Sparta, an interesting reflection of the political situation; Sparta is Menelaus' kingdom, not Agamemnon's, in Homer. Here Simonides (schol. Eur. *Orest.* 46) and Pindar (*Pyth.* 11. 16) followed him. Orestes was apparently a baby when his father was killed, for his nurse rescued him (fr. 8 Vürtheim), whereas in Homer only eight years intervene between the murder and the revenge. Whether Stesichorus said that he was sent to Strophius of Phocis and that the latter's son Pylades became his close friend and helper (Pindar, *ibid.* 15. 35) does not appear from the scanty remains; but Clytemnestra was put on her guard by a boding dream (fr. 9) and, most important of all, Orestes was haunted after her death by the Erinyes and given a bow by Apollo with which to keep them away (fr. 7). See further *ELECTRA*.

(3) The tragedians elaborate three points especially: the manner of the return, the characters of Orestes and his sister, and the consequences of the deed. In Aeschylus (*Choephores*) he returns by strict command of Apollo, gets access to the palace as a stranger, bringing news of his own death, can scarcely bring himself to kill Clytemnestra, and is at once haunted by the Erinyes, of whom he is rid in the sequel (*Eumenides*). Sophocles (*Electra*) brings him into contact with his mother by a like stratagem, but otherwise has a Homeric atmosphere, with no Erinyes and no remorse, only a little natural hesitancy, which Electra does not share. Euripides modernizes the whole setting (*Electra*, *Orestes*) and makes brother and sister hateful monomaniacs. He also, following local legends (cf. *IPHIGENIA*), makes the ridding of Orestes from the Erinyes (who are purely subjective phantoms of his disordered conscience) a long process, involving a journey to the land of the Tauri (*Iphegenia in Tauris*).

(4) Later and less known versions of the story elaborate sundry minor points and tell parts of the adventures of Orestes and his companions differently. Some of the accounts we have may be due to lost tragedies, while others are local traditions; others are seen, by the date of the vases and other works of art by which we know them, to be old, although our literary authorities say nothing about them. See C. Robert, *Bild und Lied* (1881), pp. 149 ff.; Höfer in Roscher's *Lexikon*, s.v. For example, Pausanias was shown (1. 28. 5) an altar which Orestes set up in commemoration of his being freed from the Erinyes by verdict of the Areopagus (as in Aeschylus), a stone at Troezen (2. 31. 4) on which he had been purified, and another at Gythium where he was cured of madness (3. 22. 1); also a place near Megalopolis in Messene where he had bitten off a finger in his madness and so been cured (8. 34. 1-3). In Hyginus, *Fab.* 122. 3, Orestes kills Aletes son of Aegisthus, but Artemis rescues Aegisthus' daughter Erigone from him. See also *ANDROMACHE*, *HERMIONE*, *NEOPTOLEMUS*.

Of his death there is no consistent account. His childhood has no real legend, but he is introduced as a subsidiary figure into one or two stories, see, for instance, *TELIPHUS*.

For literature see references in the text.

H. J. R.

ORESTHEUS, in mythology, a king of Aetolia, grandfather of Oeneus and son of Deucalion (qq.v.). He had a bitch which brought forth a stick; this he buried and from it sprang a vine. From its branches, *ὄζον*, the Ozolian Locrians were named, and Orestheus called his son Phytios, 'Plant-man'. Athenaeus, 35 a-b + Pausanias, 10. 38. 1 (= Hecataeus of Miletus). For the connexion of the family with wine cf. *OMENUS*. H. J. R.

ORGEONES (*ὄργωνες*), at Athens, were members of groups, other than kin-groups, for purpose of common worship (*ὄργια*, rites). As there was a law compelling the *phratritai* (q.v.) to admit *orgeones* as members, it is probable that they originally consisted largely of the new citizens admitted by Solon and Pisistratus, and that the law belongs to the sixth century, or perhaps to a time shortly after Cleisthenes, who left the phratrities undisturbed.

A. W. G.

ORIENTATION is the placing of any person or thing so as to front a definite point, generally a quarter of the compass, as north or south. This was not infrequently done in building ancient temples. In Greece they commonly faced more or less due east (e.g. the Parthenon), although examples of other positions are not wanting (e.g. Apollo at Bassae has the long axis N.-S.). This may be a consequence of the east being the lucky quarter, that from which light comes. If so, the same motives were at work in determining the position of a Greek augur, who regularly faced north and counted lucky those omens which appeared on the right (e.g. *Iliad* 12. 237 ff., where 'right' and 'east' are explicitly identified). Contrast, however, Hippocrates, *Περὶ διαίτης ὁρίων*, 8 (Kühnwein), which says the left is the lucky side in some cases; cf. Psellus (ed. Hercher) in *Philol.* viii (1853), p. 167, 23 ff. To curse one turned west (Lysias 6. 51), and occasionally the dead were buried facing west (Plut. *Solon* 10; cf. Rose in *CR* xxxiv (1920), 141 ff., for suggestions). In Italy the common augural position and the correct direction for an Etruscan temple were facing south; for the former, however, there was also an eastward position (Livy 1. 18. 6; cf. Rose in *JRS* 13 (1923), 82 ff.). In general a *templum* had two axes, N.-S. and E.-W. Racial differences may have something to do with this. Sporadic examples of Italian graves apparently oriented have been found (F. von Duhn, *Italische Gräberkunde* i (1924), index under 'Orientierung').

H. J. R.

ORIENTIUS, a Gaul of the fifth century A.D. who composed an elegiac exhortation to a Christian life (Teuffel, § 464).

ORIGEN (ORIGENES ADAMANTIUS) (probably A.D. 185 or 186 to 254 or 255; Euseb. *Hist. Eccl.* 7. 1, Hieron. *De Vir.* III. 54) was born at Alexandria of Christian parents. His life is known to us chiefly from Eusebius, who devoted the greater part of the sixth book of his *Ecclesiastical History* to him, collected many of his letters (now lost), and joined with O.'s pupil Pamphilus in writing an *Apology for Origen*, of which one book is extant in a translation by Rufinus (Migne, *PG* xvii. 521-616). O. received his education from his father Leonides (who perished in 202 in the persecution under Septimius Severus) and later in the Catechetical School of Alexandria under Pantaeus and Clement (q.v.). He became a teacher and was so successful that, though still a layman, he was recognized, at first informally then in 203 officially, as head of the School. In order better to understand pagan thought he attended the Neoplatonic lectures of Ammonius Saccas. He also visited Rome. Literally applying the precept in Matthew xix. 12, he underwent castration (Euseb. *Hist. Eccl.* 6. 8). His career as a teacher was interrupted in 215 by the massacre of Alexandrians known as the Fury of Caracalla. O. withdrew to Palestine, but after a time was recalled by his bishop Demetrius. He now engaged in extensive literary work and acquired such personal influence in the Eastern Church as to become its unofficial arbiter. On a journey to Greece in this capacity he allowed himself, without the consent of his bishop, to be ordained priest by the bishops of Caesarea and Jerusalem (c. 230). This irregularity caused umbrage to Demetrius, who may also have taken exception to certain elements in O.'s

teaching. O. was banished from Alexandria and deposed from the presbyterate, on what precise grounds is not known; but the decision was disregarded in Palestine, and O. in 231 settled at Caesarea where he continued his labours. In the Decian persecution (250-1) he was repeatedly tortured. His health gave way and he died at Tyre at the age of 69.

WORKS

Origen's writings were voluminous and their range wide, but only a small proportion has survived. He was a pioneer in textual criticism of the Bible, in exegesis, and in systematic theology.

(1) *Critical*. His chief work in this sphere was the *Hexapla*, begun before 231 and not completed till 244-5. In it were set out in six columns (a) the Hebrew text of the O.T., (b) the same transliterated in Greek characters, (c) and (d) the two Greek versions thereof by Aquila and Symmachus, (e) the LXX, (f) the revision of this by Theodotion. Only a few fragments of the work are extant. Origen's critical work led him into controversy with Julius Africanus; his *Letter to Africanus* survives.

(2) *Exegetical*. He wrote commentaries on the greater part of Scripture. Some of these took the form of scholia on obscure passages; others of homilies on numerous books of the O.T. and N.T., many of which homilies are preserved in the original or in Latin translations by Jerome or Rufinus; others again, *τόμοι* or volumes, are elaborate commentaries on divers books of the O.T. and on the Gospels of St. Matthew and St. John (fragments or considerable parts of some of these are extant). O.'s method of exegesis was allegorical, seeking out a moral as well as a mystical sense in the literal words.

(3) *Doctrinal*. The *De principiis* (*Περὶ ἀρχῶν*) is a remarkable exposition of Christian dogma written before O. left Alexandria. Setting out from certain points of doctrine given by the tradition of the Church, he proceeds by speculation to show how these can 'be arranged as a whole by the help either of statements of Scripture or of the methods of exact reasoning' (*DCB* iv. 119). Considerable fragments of the original Greek survive; and the work is preserved in full in a 'translation', frequently adjusted in the interests of orthodoxy, by Rufinus.

(4) *Apologetic*. A certain Celsus, a Platonist and 'an enlightened advocate of the reformed paganism' (Bigg), had, probably in 176, in his *Λόγος ἀληθής* written an elaborate indictment of Christianity. O.'s reply, *Contra Celsum*, written c. 249, which survives, deals with this point by point.

(5) *Devotional*. Two of O.'s works in this category have come down to us, *De Oratōne* (*Περὶ εὐχῆς*) and *Exhortatio ad martyrium* (*Προτροπικὸς λόγος μαρτύριον*). The former, written probably c. 231, treats of prayer in its various aspects. The latter was written c. 235 to his friends Ambrosius and Proctetus, who suffered in the persecution under Maximin.

The *Philocalia* is a collection of excerpts from O.'s writings by Gregory of Nazianzus and Basil. It preserves the original text of many passages known otherwise only in Latin translations and is interesting as showing what in the fourth century were regarded as characteristic points in O.'s teaching.

Origen exerted great influence and left important schools of followers; but the venturesome nature of his speculations aroused controversy, and he himself came repeatedly under ecclesiastical condemnation.

TEXTS: *Opera omnia*, C. de la Rue (Paris, 1733-59); C. H. E. Lommatsch (1831-48); Migne, *PG* xi-xvii; *Origenes Werke*, in *Die griechischen christlichen Schriftsteller* (1899 ff. [not quite complete, 1941]). *Origenis Philocalia*, ed. J. A. Robinson (1893).

GENERAL LITERATURE: Eusebius, *Hist. Eccl.* bk. 6; Jerome, *De Vir.* ll. 54; B. F. Westcott in *DCB*, s.v.; C. Bigg, *The Christian Platonists of Alexandria* (Bampton Lectures, 1886); O. Bardenhewer, *Geschichte der altkirchlichen Lit.* ii³ (1914), 96-194; B. J. Kidd, *History of the Church to A.D. 461* (1922), i, ch. 15; E. de Faye, *Origène, sa vie, son œuvre, sa pensée*, 3 vols., 1923-8.

ORIGENES, Neoplatonist, next to Plotinus the most important pupil of Ammonius Saccas. He shared Plotinus' general standpoint, but did not distinguish the supreme being, the One, from Nous. He was much inferior to Plotinus in philosophical power. Works: *Περὶ δαιμόνων*, "Ὅτι μόνος ποιητῆς ὁ βασιλεὺς" (that the supreme being is also the creator—in opposition to Apuleius and Numenius).

See Zeller, *Phil. d. Griechen* iii. 2⁴, 513-16. *PW* xviii. 1033.

W. D. R.

ORION (*Ὠ(α)ρίων*), in mythology, a gigantic hunter, identical, at least in name, with the constellation as early as Homer (*Il.* 18. 486, cf. *Od.* 11. 572-5), an unprecedentedly early star-myth. He was Eos' love and killed by Artemis (*Od.* 5. 121-4); bigger and handsomer even than the Aloadae (q.v.; *Od.* 11. 309-10). A part of his story in later authors is evidently astral; he pursued the Pleiads, or Pleione their mother (schol. *Pind. Nem.* 2. 16), a clear reference to the relative position of the constellations.

There is some reason for saying that he is Boeotian. A rather late legend (Aristomachus in Hyginus, *Poet. Astr.* 2. 34; see Frazer on Ovid, *Fasti* 5. 494) says that Hyrieus, eponym of Hyriae, asked for offspring from three gods (their names vary) whom he had hospitably received. They made water (*ὕδωσαν*) on a bull's hide and bade him bury it; in time a child was born, which he called Urion, the name afterwards becoming Orion. For more Boeotian legends about him see Rose, *Handb. Gr. Myth.* 116; Küntzle in Roscher's *Lexikon* iii. 1028 ff. He is also connected with Chios. He loved Merope, daughter of Oenopion ('Wine-face'), king of that island, but Oenopion disapproved, made him drunk, and blinded him. He therefore waded through the sea (in one version he is Poseidon's son, and has the power to walk through water) till he came to the farthest east, and there got his sight back from the sun's rays. He was finally killed by Artemis for insulting her, or by a scorpion sent by Earth, because he boasted that he would kill all animals. The story varies greatly in detail; see Küntzle's art., cited above.

Cf. S. Eitrem in *Symb. OsI.* vii. 53 ff.

H. J. R.

ORMENUS, (1) father of Ctesius king of the island Syrie and grandfather of Eumaeus (*Od.* 15. 414). (2) Name of two Trojan warriors, *Il.* 8. 274 and 12. 187. (3) Eponym of the city Ormenion on the Gulf of Pagasae (Demetrius of Scepsis in Strabo 9. 438, cf. *Il.* 9. 448).

H. J. R.

ORNAMENTA were insignia of a magisterial rank (*quaestoria*, *aedilicia*, *praetoria*, *consularia*), which were conferred by the Roman emperors and entitled the recipients to the courtesies of that rank. This honour was sometimes conferred upon men outside the *senatorialis ordo*. Tiberius gave *praetoria ornamenta* to *praefecti praetorio*, *quaestoria* to a *praefectus vigilum*, and Claudius accorded them even to freedmen. Grants of this kind were usually made by decree of the Senate, but they did not include a seat in the Senate. *Ornamenta triumphalia* were conferred upon successful generals under the Empire as a substitute for the *triumphus* (q.v.) of Republican times.

J. P. B.

ORODES II (c. 56-38 B.C.), son of Phraates III of Parthia and brother of Mithridates III (Dio Cass. 39. 56), with whom he disputed the throne in a struggle lasting many years, and finally gained sole control. In 53, when Parthia was threatened by a Roman invasion, Orodes marched against Rome's ally Armenia, while his general Suren opposed Crassus in Mesopotamia. After the Roman defeat at Carrhae, Orodes' son Paecorus invaded Syria. Profiting by the Roman civil wars, Orodes

occupied nearly all the Asiatic possessions of Rome (c. 40 B.C.), but was dispossessed by M. Antonius and P. Ventidius (38). He died soon after. M. S. D.

OROMASDES, *see* RELIGION, PERSIAN.

OROPUS, on the north-east frontier between Boeotia and Attica, belonged geographically to Boeotia, of which it was originally part. In the fifth century it was annexed to Attica, but not incorporated; it was lost in 412, and changed hands repeatedly later, being most often Boeotian. It was the landward end of the nearest Athenian route for supplies from Euboea (Thuc. 8. 28; [Dicaearchus] 1. 6, in *FHG* ii. 256). In the territory of Oropus was the Amphiareum, where the earth had opened to receive Amphiaraus (cult and legend are Theban importations of the late fifth century). Oracles were given by the interpretation of dreams and cures effected. The chief remains are of the third century, theatre, stoa, and temple.

Paus. 1. 34 and Frazer *ad loc.*; E. Fiechter, *Das Theater in Oropos* (1930). T. J. D.

OROSIUS, PAULUS, was a Spaniard. A presbyter at an early age, he fled before the Vandals to Africa, A.D. 414. There he became a pupil of Augustine (q.v.). His *Commonitorium de errore Priscillianistarum et Origenistarum* led Augustine to address to him a work on the subject. But his chief title to fame rests on his *Historiae* in seven books. This work, completed probably in 418, was written after Orosius returned from the East, where at Jerusalem in 415 he had prosecuted Pelagius (q.v.) for heresy. The work is an 'apologetic' history whose interest now is that Orosius used lost portions of an epitome of Livy and of Tacitus' *Historiae* as 'sources'. Its aim was very much that of Augustine's *City of God*—to rebut the charge that the fall of Rome to Alaric in 410 was due to Christianity.

Ed. K. Zangemeister (Teubner, 1889); *CSEL* xviii for *Commonitorium*; Cf. H. Svernung, *Orosiana* (1922). A. S.

ORPHEUS, the founder of Orphism, generally said to be a Thracian. His fame in Greek myth as a singer is due to the poems in which the Orphic doctrines and myths were set forth. A metope of the treasure house of the Sicyonians at Delphi represents him (the inscription reads 'Ὀρφέας') on board the Argo with a lyre in his arms. The first mention in literature is found in Ibycus or perhaps in Alcæus. Aeschylus and Euripides say that he attracted trees and wild beasts and even stones and was able to charm whom he wished. In vase and wall paintings, even in the Catacombs, he is often represented singing. The Christians referred the representation to the Prince of Peace of whom Isaiah speaks. The best-known myth tells how his wife Eurydice was killed by the bite of a snake, and Orpheus went down to the Underworld and persuaded its lord to allow him to bring her back on the condition that he should not turn round and look at her before he reached the upper world. According to the earlier myth the ending was happy. The common tradition that he was not able to fulfil the condition is later, but existed probably in the fifth century B.C. The myth is probably connected with some Orphic poem called the 'Descent into the Underworld'. Another myth, also represented in vase paintings, tells that Orpheus was killed and dismembered by Thracian women or Maenads. His severed head floated singing to Lesbos. This myth was the subject of Aeschylus' tragedy *Bassaræ*. Some scholars think that Orpheus in fact may have been a real personage, the founder of Orphic religion, others take him to be purely mythical; to Kern he is a projection of the Orphic sect. The question must be left undecided.

J. E. Harrison, *Proleg. to the Study of Greek Religion* (1903); cf. 3. 1022b, 453 ff.; O. Kern, *Orpheus* (1909); M. P. Nilsson, *Heim. Theol. Rev.* xxviii (1933), 183 ff.; W. K. C. Guthrie, *Orpheus and Greek Religion* (1935), 25 ff.; Alcæus as referred to in E. Diehl, *Anth. Lyr. Græc.* v, fr. 15, p. 129. M. P. N.

ORPHIC LITERATURE. Many poems were in circulation at an early date under the name of Orpheus (q.v.). Euripides and Hippas hint at their existence, Plato is the first to quote verses from them, and Aristotle speaks of the 'so-called Orphic epics'. The fame of Orpheus as a singer is due to these poems. It is said that Onomacritus, who lived at the court of Pisistratus, wrote Orphic poems. A few fragments preserved show that they contained a cosmogony and an anthropogony and that they were dependent on Hesiod. A list of Orphic poems and authors, due to an Alexandrian scholar, Epigenes, is preserved in Clement of Alexandria and Suidas. The majority of these poems are *pseudepigrapha*. The dates and personalities of the alleged authors are unknown to us and were unknown to Epigenes himself. The most important poem was the *Rhapsodic Theogony*, from which Neoplatonic writers quote many passages. Its age is controversial; most probably it is a compilation, not very much earlier than the authors who quote it, but it may have incorporated earlier elements. Under the name of Orpheus are preserved some late poems: the *Argonautica*, which is dependent on Apollonius Rhodius, the *Lithica* (on precious stones), which has hardly anything to do with Orphism, and a number of Hymns to various gods, probably composed in Asia Minor in the Roman age. The poems are edited together with the fragments by E. Abel, *Orphica* (1885). As regards the fragments this defective edition is superseded by the fundamental work of O. Kern, *Fragmenta Orphicorum* (1922); *idem*, 'Die Herkunft des orphischen Hymnenbuchs' in *Genethliakon G. Robert* (1910), pp. 89 ff. M. P. N.

ORPHISM, a religious movement originating in the archaic age, the first Greek religion which had a founder (*see* ORPHEUS) and laid down its doctrines in texts (*see* ORPHIC LITERATURE). The early poems being lost, our knowledge of the Orphic system depends on late sources. It comprised a cosmogony and an anthropogony. At the head of the cosmogony was Chronos, the Time which never grows old; of him were born Aither (q.v.), Chaos, and Erebus. Chronos formed an egg in the Aither and from this Phanes (q.v.) sprang forth, the creator and first king of the gods. His daughter Night assisted him and bore to him Uranus and Gaea. Then follows the common myth of Kronos and Zeus. Zeus was praised as the beginning, the middle, and the end of all; the contradiction thus implied to the creation by Phanes was solved by the statement that Zeus swallowed Phanes and all was created anew. By Demeter Zeus had the daughter Kore-Persephone who bore Dionysus, who was also named Zagreus. Zeus wanted to hand over his royal power to the child, but the wicked Titans lured it to them with toys, tore it to pieces, and devoured its limbs. Yet Athena saved its heart and brought it to Zeus, who ate it, and of him a new Dionysus, the son of Semele, was born. The Titans were struck by the lightning of Zeus and burned to ashes from which man was formed.

The important question is how much of this belongs to the old Orphism of the sixth and even the seventh centuries B.C. in which it spread abroad, especially in Attica and south Italy. Plato quotes an Orphic verse referring to the six generations of Orphic cosmogony, and Aristophanes in his *Birds* (685 ff.) expounds a cosmogony which is justly taken for Orphic; it does not essentially differ from that quoted above. It begins with Chaos, Night, Darkness, and Tartarus, adding that neither earth, nor air, nor heaven existed. Black-winged Night bore a wind-egg in the bosom of Darkness and from this emerged Eros (who takes the place of Phanes), gold-winged and like the swift whirlwinds. The high-sounding epithets betray the imitation of hieratic poetry. A little later Ikerates testifies to the fact that Orpheus more than others told crude and immoral stories of the

gods. So far Orphism was dependent on old cosmogonic myths, embodying crude folk-tale motives, and especially on Hesiod, but enlarged them and developed them in a speculative sense.

The anthropogony is in fact the original contribution of Orphism to the development of religious thought. The killing of Dionysus-Zagreus is not mentioned in the classical age, except for a reference in Pausanias to an Orphic poem attributed to Onomacritus; he says that Onomacritus took over the name of the Titans from Homer and instituted orgia for Dionysus and invented the story that the Titans caused the sufferings of Dionysus. The authenticity of this information can hardly be doubted, for Plato speaks of the 'Titanic nature' of man as a proverbial saying in the sense of his innate evil nature, which can only be understood as referring to the crime of the Titans as told by the Orphics. Because man had been formed of the ashes of the Titans who had devoured the Divine Child, he contains within himself something of the divine and something of the evil Titanic nature. Further, Plato says that the followers of Orpheus called the body (*σῶμα*) a tomb (*σῆμα*), because the soul is punished for that for which it is punished and it seems to have this covering—the likeness of a prison—in order that it may be kept in custody. First it is to be noted that evidently the body is the evil and the soul the divine part of man. Abstinence from killing animals and eating their flesh was the best known feature of Orphic life, noted, e.g., by Euripides and Plato. The reason for this prohibition may be found in the uncleanliness of the body or in the crime of the Titans or most probably in the belief in metempsychosis (see TRANSMIGRATION). This belief is not expressly ascribed to the Orphics, but it is to be remembered that Orphism is no isolated religious phenomenon but is in various ways related to the mystic movements and beliefs of the archaic age which it took up and systematized. Plato tells of sorcerers who produced books by Musaeus and Orpheus and through sacrifices according to these and pastimes called initiations promised deliverance and purification from guilt and from pains in the after-life: the righteous were to be rewarded by a symposium in the Nether World. The Orphics had appropriated the belief in punishments in the Underworld. Though it was not peculiar to them it had a special note: whosoever had not undergone the purifications in this life was to lie in the mire in the Nether World; the initiated and righteous were to live in happiness. This belief appealed to the broad public and was important for Orphic practice. In the words quoted from Plato the soul is apparently punished by being imprisoned in the body. In the archaic age there was a tendency, opposed to general Greek ideas, to scorn this life and to attribute a higher value to the other life in which the soul is freed from the fetters of the body. This is consistent with Orphism. Gold leaves from the Hellenistic age, found in tombs in south Italy and Crete, contain verses to be spoken on arrival in the Underworld, in which the dead man presents himself as a child of Earth and Heaven and asks for a drink from the Lake of Memory; it is also said that he has escaped from the sorrowful wheel.

Although Dionysus is the chief god of the Orphics, there is an apparent hostility between the adherents of Orpheus and those of Dionysus. This is understandable from the fact that the Orphics transformed the central sacred rite of the orgia, the omophagy, into the primeval crime of the Titans. On the other hand, Orpheus is connected with Apollo; he is even sometimes said to be his son. The reason is that both laid stress on purifications and righteousness. Orphism implied legalism of ritual and life, mysticism of cult and doctrine, a speculative cosmogony and an anthropogony which emphasized the mixture of good and evil in human nature; it contributed to the transformation of the Underworld into

a place of punishment. It made the individual, in his relationship to guilt and retribution, the centre of its teaching. But its high ideas were mixed up with crude myths and base priests and charlatans misused them in practice. In the classical age it was despised; only Pindar and Plato understood its great thoughts. It sank down to rise again with the rerudescence of mystic ideas in a later age. See also AFTER-LIFE.

Kern, *Orphicorum fragmenta* (1922).

M. P. N.

ORTYGA, old name of Delos ('Quail Island'); its nymph was identified with Asteria (q.v.). But as some half-dozen other places were called Ortygia, it is by no means certain that all references (e.g. *Od.* 5. 123) are to Delos. See Höfer in Roscher's *Lexikon*, s.v.

OSCAN, see DIALECTS, ITALIC.

OSCANS (*Ὀσικοί*), whom the Greeks sometimes reckoned identical with Italici generally, were strictly the inhabitants of Campania (q.v.): (Thuc. 6. 2; Pliny, *HN* 29. 1; cf. Juv. 3. 207). These Campanians, when Rome first encountered them, spoke the language of the Sabelli (q.v.), which the Romans consequently always called Oscan (Livy 10. 20; Festus, p. 121 L.). Central Italian coins reveal that a more correct name would be Safine (etymologically identical with Latin *Sabinus*). Safine was spoken by Paeligni, Marrucini, Vestini (and probably by Aequi, Marsi, and Sabini) (North Oscan), Frentani, Samnites, Campani (Central Oscan), Apuli, Lucani, Bruttii, Mamertini (South Oscan). The numerous inscriptions, few earlier than 300 or later than 90 B.C., are meticulously written, usually in a modified Etruscan alphabet. Oscan with Volscian and Umbrian forms one group of Italic languages, Latin and Faliscan forming the other. It differs greatly from Latin in sound changes, word forms, and vocabulary, less in syntax (see DIALECTS, ITALIC). Official and educated classes in Italy long continued to use Oscan; but the Social War ensured its ultimate displacement by Latin. Strabo (5. 233) makes the astonishing statement that Atellane farces, the only Oscan literary form known to us, were performed in Oscan at Rome in his day. Certainly the language was still spoken at Pompeii in A.D. 79 and in country districts survived even longer.

OSIRIS represented the deceased Pharaoh. He died, was brought to a new life, and reigned in the Underworld. He was associated with fertility, and in Herodotus (2. 144) is identified with Dionysus. The Egyptians believed that men (and sacred animals as well) were identified with Osiris, hence Osirified, in the next life. In Hellenistic times, although the name and character of Sarapis indicate his relationship to Osiris, the latter appears sometimes in the cult of the Egyptian deities along with Sarapis, Isis, Anubis, and Harpocrates. In Egypt Osiris remained primarily the god of the Underworld. With the construction of the elaborate mysteries of Isis and their spread throughout the Roman Empire, Osiris travelled along with Isis as a central figure in the liturgical and ritual drama.

OSROËNE, kingdom in north-west Mesopotamia, bounded on three sides by the Khabûr and Euphrates, and on the north by Mt. Masius. In the second century B.C. it broke away from Seleucid control and formed a separate kingdom with Edessa (q.v.) as its capital. Its kings bore Semitic names, and the population was mainly Aramean, with an admixture of Greeks and Parthians. As a Parthian vassal State Osroëne played a prominent rôle in the struggle between Rome and Parthia. After the campaigns of L. Verus it became a Roman dependency, later a province. Long coveted by the Sassanids, it was at last conquered by the Arabs (A.D. 637).

M. S. D.

OSSA, a mountain of nearly 6,500 feet in Thessalian Magnesia. On the north it is separated from the massif of Olympus by the defile of Tempe (q.v.), but on the south it forms with Pelion an almost unbroken wall which shuts off the interior of Thessaly from the sea.

OSTIA. The site of Ostia, commanding the Tiber mouth some 16 miles from Rome, was of natural importance, but its traditional colonization by Aeneas Marcius has not yet been confirmed by excavation. Walls of the first known settlement (c. 350–300 B.C.) are built of tufa quarried near Fidenae and enclose some 5½ acres; the four gates of the rectangle are flanked by strong towers. Ostia was thus one of the maritime colonies designed to protect Italy's west coast, and probably, like the others, had 300 colonists.

2. Ostia later became an important naval base, especially during the Second Punic War. She soon spread beyond her walls and assumed growing commercial importance. Goods from Spain and the West and the vital corn supply came to the Tiber's mouth, and so up-river to Rome. This made the town a major objective in the fighting between Marians and Sullans. Marius sacked the town. Under Sulla new walls were built and now enclosed over 170 acres. A new town-plan was also laid down, which needed little subsequent change.

3. Ostia was sacked by pirates (c. 68 B.C.), but under Augustus a period of vigorous building began, including the construction of a theatre, behind which was laid out a great colonnade, where representatives of overseas trade could rent offices. Under Gaius wells were replaced by an aqueduct. The development of the town was due partly to imperial generosity, largely to increasing trade; but the Tiber's mouth was silting up and proving dangerous, especially to the corn transports. Caesar had contemplated work here, but it was left to Claudius to build a completely new harbour some three miles to the north. Two moles and a lighthouse were built, and connexion was made with the Tiber by canal. For greater security Trajan added a hexagonal inner basin.

4. Ostia had developed steadily during the Julio-Claudian and Flavian periods, but the building of Trajan's harbour was followed by a more intensive expansion, especially under Hadrian. Though granaries and offices were built round the harbours, the old town remained the centre of the workers' guilds and her government controlled the new settlements. Large areas were rebuilt, including the dock-quarter, with its granaries and market, and an imposing Capitolium to crown it. To protect the granaries Hadrian stationed at Ostia a detachment of *vigiles*. Already the Pompeian type of house was giving way to a more modern pattern, to meet the increasing population; in Hadrian's rebuilding the tall brick-built blocks, well lit by rows of large windows, became universal. In the business quarters the blocks were designed to be let in single apartments or flats, with separate access to the upper stories; in the more residential parts of the town, particularly towards the coast, the houses were no doubt more luxurious and less compact.

5. Under the Antonines the new harbour system, which now eclipsed Puteoli, was the receiving port of the largest consuming centre in the world, and trade attracted men from all parts. The profits of trade rapidly increased the number of knights, and the governing classes were generous. The common people found satisfaction in their numerous guilds of builders, boatmen, bakers, etc., with their patrons, officers, guild-houses, and banquets. For recreation they had more than six sets of public baths, a theatre, and possibly an amphitheatre. Ostia also provided good sea-bathing.

6. The town's religious life changed with her growing cosmopolitanism, though Vulcan remained Ostia's *patrius deus*. There were temples to Roma et Augustus (Julio-Claudian) and to Magna Mater (? Claudian); Isis and, from the second century, Mithras were freely worshipped. Christianity is not certainly found until c. A.D. 200, but by 250 Ostia had her own bishop.

7. Decay set in before A.D. 200. New building became rare, the financial office of quaestor became ominously important, men seldom held magistracies (an expensive honour) more than once, the population dropped rapidly. This decline was hastened when Constantine made the harbour settlement, Portus, independent.

8. While Portus was worth protecting, Ostia became a prey successively to Goth, Hun, and Saracen. Attack and the growth of malaria gradually made the site a desert. In the Middle Ages it became a quarry for the builder, in the Renaissance and later for the collector. Systematic and continuous excavation on the site began only in 1907. By 1938 roughly a quarter of the area was cleared and the pace was then quickened in order to expose the whole town for the projected International Exhibition of 1942.

Ostia's inscriptions are collected in *CIL* xiv and supplement. A second supplement arranges the inscriptions topographically. Excavation reports in *Notizie degli Scavi*, especially 1908 f. 1. OSTORIUS SCAPULA, **PUBLIUS**, of equestrian family, *consul suffectus* before A.D. 47, when he succeeded Plautius as governor of Britain. He seems to have built the Fosse Way (*JRS* xiv. 252–6) and a forward line (modern *Ryknild Street*) as *limites* against the Britons of the Highland zone, with Viroconium (*Wroxeter*) as an advanced point and his rear secured by a *colonia* at Camulodunum (*Colchester*). Attempts at the offensive against Highland tribes were less successful: an advance to the Irish sea proved premature; and though Ostorius defeated Caratacus, who had fled thither, he was unable to subdue the Silures and Ordovices of Wales, and died worn out in A.D. 56.

OSTRACA. Potsherds were not habitually used for writing in Greece, except as voting tablets at Athens. In Egypt such use began after the Greek conquest; the first dated example is of 274 B.C. Nearly all early Ptolemaic ostraca are tax-receipts; later, orders and lists are common, and letters, school exercises, magical spells, and religious texts, pagan or Christian, were inscribed on them. The Thebaid is the most prolific source of ostraca of all periods, especially Thebes itself, with Hiermonthis and Crocodilopolis; a fair number have come from Elephantine and Coptos; a single group is recorded from Pselcis in Nubia, another from Tentyra. Oxyrhynchus has produced some hundreds, nearly all Byzantine. In the Fayûm they are rare before Roman times; one lot from Philadelphia is the only considerable find of Ptolemaic date; under the Empire they occur on

most town-sites till c. A.D. 400. No ostraca have been reported from the Delta. Outside Egypt Latin ostraca have been found near Carthage. Except in the Fayûm, few have been obtained by scientific excavation: they are usually found in ancient rubbish-mounds or in house-ruins.

OSTRACISM (ὄστρακισμός), at Athens, banishment without disgrace and without loss of citizen rights or property for ten years. It was, we are told, instituted by Cleisthenes, 'because Pisistratus as popular leader and strategist had made himself tyrant'—an altogether trustworthy account: the new democracy feared lest another popular leader might make himself too powerful (without having committed a crime against the State) and establish a second tyranny. It was first used in 487–485 B.C. against relatives and suspected friends of the tyrant. Thereafter, as the democracy became firmly established, it tended to become an instrument of party warfare. Among its victims were Xanthippus, Aristides, Themistocles, Cimon, and Thucydides son of Melesias (qq.v.). It was not used again till 417, when, by an intrigue between Nicias and Alcibiades, Hyperbolus, a minor demagogue, was ostracized; this was the last occasion.

Once a year a preliminary vote was taken whether a vote of ostracism should take place. If there was a majority in favour, the second vote took place shortly after. As for all *vômoi ἐπ' ἀνδρί*, i.e. the application of a law to an individual by the Ecclesia, voting was by *phylae* and secret; and a quorum was necessary. It is not clear whether only a total of 6,000 was necessary, or 6,000 against any individual. Strongly in favour of the first view is the general regulation about *vômoi ἐπ' ἀνδρί*; in favour of the second is our best authority (Philochorus), and the fact that, if only a total of 6,000 votes was necessary, if 3,001 were given against A and 2,999 against B, A would be ostracized, whereas if 5,999 were given against A and no other vote was given at all, there would be no ostracism. In other *vômoi ἐπ' ἀνδρί* there was no conflict between individuals; perhaps it was so in this case too, the individual against whom a vote was to be taken having been decided at the preliminary vote.

The name of the individual to be ostracized was cut by the voters on *ostraca*, broken pieces of pottery. Several hundred such ostraca have been found, and on them the names of all those known to have been ostracized.

Similar institutions are known at Argos and (for a short period c. 450 B.C.) at Syracuse, where the names were written on olive-leaves (*petala*: hence the vote was called *petalismos*).

G. Busolt-H. Swoboda, *Griechische Staatskunde* (1920–6), 884–6; R. J. Bonner, *CPhil.* viii. 223 ff.; J. Carcopino, *L'Ostracisme athénien* (1935). A. W. G.

OTACILIUS CRASSUS, TITUS, praetor in 217 and 214 B.C., served in Sicily 216–211, raiding the African coast (215 and possibly in 212) and commanding a fleet at the siege of Syracuse. His exploits in 212 (Livy 25. 31) and his election to the consulship before his death in 211 are doubtful. H. H. S.

OTHO, MARCUS SALVIUS (A.D. 32–69), whose father received patrician rank from Claudius, was husband of Poppaea Sabina and friend of Nero. As Nero fell in love with his wife (afterwards divorced), he was sent to Lusitania as governor in 58 and remained there until Nero's death (68). He supported Galba and hoped to be his heir. Disappointed, he organized a conspiracy among the Praetorians and was hailed emperor (15 Jan. 69). He tried to appear as the legitimate successor of Nero. Egypt, Africa, and the legions of the Danube and the Euphrates declared for him. But the legions of the Rhine had already chosen Vitellius (q.v. 1), to whom he made unsuccessful advances. He was attacked in Italy and could oppose only an inferior army. He had to arm 2,000 gladiators. He dispatched his generals Annius Gallus and Vestricius Spurinna to hold the line of the Po (March 69), but remained idle in Rome until April. A body of troops, which was sent by sea to Gaul, achieved nothing. The decisive battle was fought at Bedriacum, c. 22 miles east of Cremona. Notwithstanding some help from Illyricum, Otho was decisively beaten and his army surrendered. He committed suicide (April 69). Tradition reasonably represents him as an incapable and profligate man.

Sources: Plutarch, *Otho* (commentary by E. G. Hardy, 1890); Suetonius, *Otho* (commentary by G. W. Mooney 1930), etc. See further s.v. GALBA (1); cf. L. Paul, *Rh. Mus.* 1902, 76; Nagl, *PW* iA, 2035; A. Passerini, 'Le due battaglie presso Betriacum', *Studi di antichità classica offerti a E. Ciaceri* (1940). A. M.

OTHO, see also JUNIUS (2), ROSCIUS (2).

OTUS, see ALOADAE.

OURANOS, see GAEA.

OVATIO was a minor form of *triumphus* (q.v.). It might be granted to a general who could not claim a full triumph, e.g. if his victory had not involved the destruction of a large number of the enemy or if he had handed over his army to a successor. He entered Rome on foot or horseback, wearing a wreath of myrtle instead of laurel, and the procession was much less spectacular. H. H. S.

OVID (PUBLIUS OVIDIUS NASO, 43 B.C.–A.D. 17?) was born at Sulmo, a town of the Pacligni. He prided himself that he was of equestrian rank by birth, not through property or service (*Tr.* 2. 110 ff.; 4. 10. 7; *Am.* 3. 15. 3). He was educated at Rome in law and rhetoric under Arellius Fuscus, whose redundant manner he reflected, and Porcius Latro, whose style was more restrained. Ovid's heart, however, was not in pleading but in poetry. His prudent father tried to dissuade him from that unprofitable pursuit. For a time he followed this advice. He completed his education at Athens (*Tr.* 1. 2. 77), and travelled in Sicily and Asia Minor with a poet-friend, the younger Maecr. On reaching manhood he assumed the *angustus clavus*, as he did not aspire to a senatorial public career. He served in the centumviral court, acted as arbitrator (*Tr.* 2. 93–6; *Pont.* 3. 5. 23), and on the board of *tresviri capitales*, in charge of prisons and executions (*Tr.* 4. 10. 34; Owen, *Tr.* ii, p. 140). He was married three times. He had a daughter probably by his second wife. His third wife was a dependant of Paullus Fabius Maximus, and intimate with his wife Marcia (*Pont.* 1. 2. 136–8). He speaks of her with affection, praising her loyalty. She was a widow, with one daughter Perilla (Wheelcr, *AJPhil.* xlv. 28). He had attended *recitationes* by the didactic poet Maecr, Horace, and Propertius his personal friend. Virgil he saw only (*Tr.* 4. 10. 51). His friendship with Tibullus was cut short by that poet's death, which he lamented in exquisite verse (*Am.* 3. 9). He knew many of the younger poets.

2. With comfortable means he lived in Rome devoting himself to society and poetry. The *Amores* at once

brought him celebrity. The fair frail idol of his verse, called by the fictitious name Corinna, was no real person, but the creation of his fancy, the epitome of many women. The *Heroides* won fresh applause. In his fortieth year he produced his masterpiece of witty impropriety, the *Ars*, which marked him as the chief of erotic poets. The publication of the *Ars* followed closely on the banishment of Augustus' daughter Julia, whose profligacy was a grave blow to her father's moral reforms. Augustus was angered by the pernicious influence of the *Ars*, and it was the contributory cause of O.'s banishment.

3. Ovid's brilliant talent was now acknowledged and his social position assured when, in the island of Elba (*Pont.* 2. 3. 84), he learned that he was sentenced (A.D. 8) to banishment to a place prescribed (*relegatio*); he retained his property, and the possibility of pardon was not excluded. The charges were two, his poem and a mistake of conduct ('*duo crimina, carmen et error*', *Tr.* 2. 207). The 'error' was the more serious. He had concealed something he had seen which affected the Emperor and his family. Ovid never dared to disclose what this offence was. There have been many guesses as to its nature. It may have been concerned with some scheme regarding the popular prince Germanicus which clashed with the dynastic aims of Livia and Tiberius, who obdurately refused to pardon the poet. Ovid departed into exile Nov. A.D. 8, reaching Tomis in spring or summer of A.D. 9.

4. Tomis (not Tomi, cf. MSS. *Tr.* 3. 9. 33; *Pont.* 4. 14. 59), a frontier fortress on the Euxine, now *Constanza*, was inhabited by half-bred Greeks and barbarian Getae, expert horsemen, who constantly went armed. Life was insecure, harassed by raids from wild tribes beyond the Danube. The severe winter cold is vividly described by O. in terms not overdrawn. The languages (Latin was almost unknown) were corrupt Greek, but chiefly Getic and Sarmatian, which tongues O. learned. At Tomis he lived, busy with verse-making and poetical epistles. He was abstemious, slender and not strong (*Pont.* 1. 5. 51; 10. 29), genial and lovable (*Sen. Controv.* 2. 2. 8). He won the goodwill of the Tomitae, who exempted him from taxes (*Pont.* 4. 9. 101). Even his native Sulmo, he says, could not have been kinder (*Pont.* 4. 14. 49). He died in exile according to Jerome in A.D. 17. A reference to the restoration by Tiberius of the temple of Janus (*Fasti*, 1. 223-6) suggests that he may have lived till 18.

5. WORKS

(1) *Amores*, love poems which, except in the lament for Tibullus, show little real feeling. Ed. 1 (five books) appeared soon after 16 B.C. (1. 14. 45); ed. 2 (rearranged in three books; cf. epigram prefixed to bk. 1) shortly before the *Ars* (*Ars Am.* 3. 343).

(2) *Heroides* (so cited by Priscian, Kcil, *Gramm. Lat.* ii. 544, referred to as *Epistulae* by O., *Ars Am.* 3. 345), mostly letters addressed by noble ladies of the legendary past, in *Ep.* 15 by the poetess Sappho, to absent husbands or lovers. The idea of the fictitious love-letter may be derived from Propertius 4. 3 (letter of Arethusa); but O.'s claim to originality holds good, since Propertius dealt with contemporary fact, O. with mythological past.

The last six letters, in pairs, were suggested by the replies composed by O.'s friend Sabinus to six of the *Heroides* (*Am.* 2. 18. 27). Encouraged by the popularity of the original issue (1-15), O. added the pair letters in the complete edition. He testifies that he wrote a letter of Sappho (*Am.* 2. 18. 26). But the genuineness of the *Ep. Sapph.* (15), also of 16-21, has often been questioned on insufficient grounds. Loss of sheets in the archetype may explain the absence from its place of *Ep.* 15 in the chief manuscripts and of the conclusion of *Ep.* 21.

(3) *Medicamina faciei femineae*, a fragment in elegiacs, is a handbook of cosmetics for the female toilet.

(4) *Ars Amatoria*, three books. O. as professor of

Love ('praeceptor amoris', 1. 17) presents Love as a science in didactic mockery of current text-books, *ars grammatica* and such. It is concerned not with respectable women but with the demi-monde; therefore O. argued it was not immoral (*Tr.* 2. 247). Books 1 and 2 instruct men how to find and keep a mistress, bk. 3 contains corresponding instruction for women. Beautiful narrative episodes enliven the work. Allusions to the *naumachia* of 2 B.C. (1. 171) and the Parthi (1. 179) indicate that it appeared soon after 1 B.C.

(5) *Remedia amoris*, one book, followed soon after the *Ars* (155), the wantonness of which had roused disapproval. O. replies that erotic poetry must be erotic; his aim is renown; this the *Ars* has brought him. The specifics for escape from irregular entanglements are obtained chiefly by 'converting' the rules of the *Ars*.

(6) *Metamorphoses*, fifteen books in hexameters, a collection of stories mainly Greek, some Roman, involving changes of shape, from the change of chaos into order down to that of Julius Caesar into a star. In combining, like Callimachus in the *Aitia*, short stories into a continuous whole, O. followed Alexandrian precedent. The subject of transformations was treated by Alexandrian poets. The '*Opiboyoyia*' of Boios was adapted by Aemilius Macer. O. had heard Macer recite, and thence possibly conceived his idea (*Tr.* 4. 10. 43). He draws mainly from Greek dramatists and poets, towards the end from Virgil. When he was banished, the *Met.* lacked his final revision. He burnt it in disgust, but it was preserved in copies possessed by friends (*Tr.* 1. 7. 13).

A storehouse of mythology, this great poem has inspired medieval and later painters, sculptors, and poets, among them Chaucer and Shakespeare. O.'s proud confidence of immortality (15. 871) has been amply justified.

(7) *Fasti*, six books, a poetical calendar of the first six months of the Roman year, a book allotted to each month, arranged under three heads, astronomical, historical, religious. The risings and settings of constellations are expounded, with remarks about the weather. Legendary and historical events connected with dates are sketched. Festivals and religious rites are recorded with minute information. Six out of twelve projected books were completed when O. was banished. These at his death he had incompletely revised, prefixing the dedication to Germanicus (1. 3). They were issued posthumously, the original dedication to Augustus being retained at 2. 3-18. The last six books were too unfinished to be published.

The aetiological conception of the *Fasti* comes from Callimachus' *Aitia*, though the poems of Propertius on legends (bk. 4) may have influenced O.

(8) *Tristia*, five books (A.D. 8-12), letters addressed to persons whose names are generally suppressed, lest connexion with the disgraced poet might injure them. Where that was not feared, names are given, in three letters to Augustus, six to his wife, and in that to his stepdaughter Perilla. These 'mournful numbers' are pathetic, often servile supplications, pleading for mitigation of his sentence. The defence of himself (bk. 2) is interesting, especially the survey of Greek and Latin poets, and the summary of games.

(9) *Epistulae ex Ponto*, four books, letters of the same sort, except that names of recipients are given. Books 1-3 were written A.D. 12-13; book 4 was published posthumously. The latest chronological reference (4. 9. 4) is to the suffect consulship of Gracinus A.D. 16.

(10) *Ibis*, a comprehensive curse, expressed by recondite allusions, imprecating disaster and death of every conceivable kind on an enemy who persecutes the poet's wife and attempts to deprive him of his property. This person, whom O. calls Ibis, has been identified with the man referred to in *Tr.* 1. 6. 14; 3. 11. 2 and 20; 4. 9. 15 ff. Title and idea were borrowed from the lost poem

in which Callimachus attacked Apollonius Rhodius under the name Ibis, a bird seen everywhere in Alexandria, of dirty habits (Strabo, p. 823). Ovid's adaptation was written at Tomis (*Ib.* 11 ff.; 637), later than *Pont.* 4. 14. 44, where he says that he had written no poem of personal attack.

(11) *Halieutica*, in hexameters, a fragment on fishes. Pliny, who gives the title, paraphrases it (*HN* 32. 11), and concludes that certain fishes recorded here only were peculiar to the Euxine, where O. began this poem at the end of his life. It was published posthumously, unrevised. This accounts for metrical and other blemishes, which have caused its genuineness to be impugned unnecessarily (Owen, *CQ* viii. 267).

(12) *Nux*, the lament of a nut-tree over its sufferings from stones thrown at it by passers by. Written probably towards the end of O.'s life, it is allegorical, the innocent victim of persecution representing the poet. The compliment to the Emperor, who brought peace (143-6), supports this interpretation. It is an expansion of an epigram by Antipater (*Anth. Pal.* 9. 3), or some such work. Its genuineness, often questioned, was established by Ganzennmüller.

(13) *Lost poems*. To the early period belong the unfinished (entirely lost) *Gigantomachia* (*Am.* 2. 1. 11-16; Owen, *Tr.* ii. 63) and the tragedy *Medea* (*Tr.* 2. 553) (of which two lines survive), praised by Quintilian (*Inst.* 10. 1. 98) and ranked by Tacitus (*Dial.* 12) with the *Thyestes* of Varius.

Besides one *Priapeum* (*Priap.* 3) fragments exist of epigrams, of a shortened adaptation of Aratus' *Phaenomena* (Laetantius *Inst.* 2. 5. 24), and others of uncertain location.

Nothing but the titles remain of the following: (1) *Liber in malos poetas* (Quint. *Inst.* 6. 3. 96). (2) *Epithalamium* for Paullus Fabius Maximus (*Pont.* 1. 2. 131). (3) *Epicedium* on M. Valerius Messalla Corvinus (*Pont.* 1. 7. 30). (4) *Panegyric* on the Pannonian Triumph of Tiberius (*Pont.* 3. 4. 3). (5) *Epicedium* on Augustus (*Pont.* 4. 6. 17; 9. 131). (6) *Poem* praising the imperial house, written after Augustus' death, in the Getic language (*Pont.* 4. 13. 19-36).

The fragments are collected in Owen, *Tristia*, etc., O.C.T., Lenz, *Halieutica*, etc., Paravia.

6. A poet by instinct, Ovid lacked the dignity and earnestness which the loftiest poetry demands. His one tragedy has perished and cannot be assessed. By his own confession he abandoned epic as beyond his powers. But as an interpreter of his age he is a master. He reflects its spirit, grateful subserviency to the ruler who had established peace, and enthusiastic appreciation of its blessings. His message was to the cultured society of the capital; his mission to cheer, give pleasure, and amuse. His success is due to his vivacity and sparkling wit. He is deeply sensitive to beauty, the physical beauty of youth and strength, the beauties of nature, of scenery and the gay tints of flowers, idealized with peculiar richness of terms for glowing colour. Having a fertile and creative imagination, he is unrivalled in the ease and liveliness with which he conceives and describes scenes and incidents. His style is brilliant and lucid. The variety of his metaphors and polished similes, the dexterity with which he enlivens his diction by introducing legal phrases and formalities, and the many new words with which he enriched the language add peculiar charm. He was learned, but carried his learning lightly. He had an extensive knowledge of Greek literature, especially of the Alexandrians, from whom he drew much, and of the Latin poets, both predecessors and contemporaries. With striking originality he enlarged the slender range of the elegiac couplet. In this metre having perfected the artistic form of the Roman love-eclegy, he used the couplet in the *Heroides* for psychological studies of the fluctuating moods of women; in

the *Ars Amatoria* for didactic poetry; in the *Fasti* for sustained serious effort; in the *Ibis* for vituperation; during his exile for personal letters which, though monotonous from their circumstances, are always neat and ingenious. His most ambitious work, the *Metamorphoses*, though epic in form, is in fact a new creation. It is not a concrete whole, but a string of stories of love and adventure, a wonderland of fancy, passing from grave to gay. In this great poem, intensely modern in its appeal through its vivacity and swiftness of narrative shifting from scene to scene, O. stands forth as the forerunner of romance. His faultless precision of metre gave its final polish to the elegiac couplet, and added fluidity to the stately hexameter of Virgil. His faults, to some of which he was not blind and which were deliberate (Sen. *Controv.* 2. 2. 12; Quint. *Inst.* 10. 1. 88), are frivolity and irreverence, lapses into bad taste, want of restraint in describing what decency should have forbidden, and redundancy of language. But though shocking he is not prurient; though redundant he is not diffuse.

OVINIUS, as tribune of the plebs proposed a resolution (the *Lex Ovinia* or *plebiscitum Ovinium*, probably passed between 318 and 312 B.C.) by which the right of enrolling members of the Senate was transferred from the consuls and military tribunes to the censors. It directed the censors to enrol 'optimum quemque ex omni ordine' (Festus, p. 246), which probably means only ex-magistrates, not 'the best men of every rank', so as to counteract individual authority or family influence. As a result membership of the Senate depended on the conduct of the magistrate while in office.

OXUS (Ὠξος, mod. *Amu Darya*). This river was known by name to Herodotus and Aristotle, but was apparently confused by them with the Araxes (q.v.). It was discovered by Alexander, and some Indian

merchandise was known to come by it, and thence by the Caspian and the rivers Cyrus and Phasis to the Euxine. But later information about it was from hearsay only, and the belief persisted that it flowed into the Caspian—which may have been true of prehistoric times. Its efflux into the Aral Sea was never located by Greek geographers.

OXYRHYNCHUS (*Behnesa*) is now represented only by extensive mounds beyond the Bahr Yusuf to the west of the Nile, which have proved the richest source of papyri in Egypt yet discovered. The first scientific exploration of the site was by Grenfell and Hunt in 1897; since their last campaign there in 1906 other diggers, official and unofficial, have reaped good harvests. The proportion of Ptolemaic papyri is small: most are Roman and Byzantine. Apart from the information derived from these papyri, practically nothing is known of the history of the town. J. G. M.

OXYRHYNCHUS, The historian from. In 1906 some 900 lines of a lost Greek historian were discovered at Oxyrhynchus in Egypt. The writer dealt in consider-

able detail with events in the Greek world, 396-395 B.C., and was an authority of the first importance. The papyrus indicates a strict chronological arrangement by summers and winters, competent criticism and analysis of motives, a first-hand knowledge of the topography of Asia Minor, and certain details found in no other work on the period. It was probably a continuation of Thucydides beginning with the autumn of 411, was written between 387 and 346, and its elaborate scale suggests that it covered only a short period, perhaps to the battle of Cnidus, 394.

Its authorship has been much discussed. Grenfell and Hunt preferred an attribution to Theopompus (q.v. 3), later strongly supported by E. Meyer; the case for Ephorus was ably argued by E. M. Walker, in spite of his previous advocacy of the shadowy Cratippus, and more recently F. Jacoby has argued for Daimachus (q.v.). The close resemblance of the text with Diodorus bk. 14 coupled with significant divergencies indicates that Diodorus' source, Ephorus, had P, as the editors termed the author of the papyrus, before him for his universal history. The question of authorship does not yet admit of a definite solution.

P

PACATUS, MINUCIUS, *see* EIRENAEUS.

PACATUS DREPANIUS, LATINUS (*fl.* A.D. 390), Gallo-Roman orator; *see* PANEGYRIC, LATIN.

PACŪVIUS, MARCUS (220-c. 130 B.C.), tragedian and painter, nephew of Ennius, born at Brundisium; he died at Tarentum. We are told that as a tragedian he equalled Accius in moral elevation and surpassed him in learning, if inferior in native force; further that he was a polished metrist but that his latinity was poor. The extant titles (only about a dozen, with one *praetexta*, *Paulus*) and the fragments (about 400 lines) suggest that he was a painstaking if slow worker, original in choice of subject (e.g. *Armorum Iudicium*) and in treatment (cf. the stoicizing of Ulysses' death-agonies in the *Niptra*, translated from Sophocles, to suit Roman *gravitas*), fond of complicated plots (Medus, son of Medea, pretends to be Hippotes; Medea, wishing to injure the supposed Hippotes, accuses him of being—Medus!), debates (Amphion and Zethus, in the *Antiopa*, discuss the artistic versus the practical life), and pathetic scenes (e.g. the famous appeal by the ghost of the murdered Deiphilus to his mother Iliona). Command of metre and sound-effect is shown in the words of the old nurse in the *Niptra*:

manibus isdem, quibus Ulixi stepe permulsi, abluam
lassitudinemque minuum manuum mollitudine,

or in the bitter words of Telamon to Teucer:

segregare abs te ausu's aut sine illo Salaminam ingredi . . . ?

pictorial power in the descriptions of calm or storm at sea; rationalism in the attack on divination in the *Chryser*. Word-forms like *monerint* (= *monuerint*) and compounds like *incantiteruicium* perhaps support Cicero's charge of bad latinity.

Text: E. H. Warmington, *Remains of Old Latin* II (Leeds, 1936). W. B.

PADUS (Ligurian *Bedunus*, Greek *Ἰπὸδαρος*, now-days Po); Italy's longest river with numerous tributaries. It rises in the Cottian Alps, flows over 400 miles east-

ward through Cisalpine Gaul, and enters the Adriatic near Ravenna. Its valley was inhabited in prehistoric times by *terramaricoli* (*see* TERREMARE), and from Etruscan days dikes have protected its reclaimed riparian lands. In antiquity navigation as far as Turin was possible but hazardous owing to the swift current. Since ancient times floods and the silt carried down have considerably altered its lower course and delta.

Polyb. 2. 16; Strabo 4. 203 f.; 5. 212, 217; Pliny, *HN* 3. 117-22. C. Jacini, *Il Viaggio del Po* (1937) with full bibliography. E. T. S.

PAEAN. The Paean seems originally to have been a hymn addressed to Apollo in his rôle as Healer (*Il.* 1. 473; schol. *Ar. Plut.* 636), but it was early used for other purposes, such as (1) military, as in *Il.* 22. 391, Aesch. *Sept.* 635, schol. *Eur. Phoen.* 1102; (2) symposiastic, when all the guests sang it in unison after the libations and before the symposium, as in Alcman fr. 71, Aesch. *Ag.* 247, *Ath.* 149 c, *Pl. Symp.* 176 a, *Xen. Symp.* 2. 1; (3) on public occasions such as the ratification of peace (*Xen. Hell.* 7. 4. 36; *Arr.* 7. 11); (4) in the Hellenistic age Paeanes were addressed to successful individuals, such as Lysander (*Plut. Lys.* 18) and Titus Flamininus (*Plut. Flam.* 16). Paeanes were by no means confined to Apollo, but were also sung to Zeus (*Xen. An.* 3. 2. 9), Poseidon (*id. Hell.* 4. 7. 4), Dionysus, Asclepius, and Hygieia. *See also* HYMNS. C. M. B.

PAEDAGOGUS, *see* EDUCATION, III. 1.

PAENULA (vellum cover), *see* BOOKS, II. 2; (cloak) *see* DRESS, para. 3.

PAEONIUS, Greek sculptor, native of Mende in Thrace, known mainly for his Victory of Olympia, now in the Olympia Museum. His full inscription on the base informs us that the statue was dedicated by Mesteniens. This is confirmed by Pausanias. The occasion of the dedication was almost certainly the battle of Sphacteria in 424 B.C. It is now known that the statue at Olympia is a contemporary version in marble of a bronze original

that stood at Delphi, where its base has been found. Paeonius is said by Pausanias to have been the sculptor of the east pediment of the temple of Zeus at Olympia. Our knowledge of the sculptor's style makes this view untenable. But Paeonius did, as his inscription tells us, make acroterial figures for the temple. S. C.

PAESTUM (Ποσειδωνία), coastal town of Lucania famous for its roses and pottery (Strabo 5. 251); now-days *Pesto*, with excellently preserved walls and temples. Founded with Doric-speaking colonists by Sybaris c. 600 B.C., it became a flourishing town by 540 (Hdt. 1. 167). Early attacked by Lucani, Paestum was under their domination from c. 390 until 273 when Rome made it a Latin colony (Ath. 14. 632; Vell. Pat. 1. 14). Paestum loyally resisted Hannibal (Livy 27. 10). Under the Empire its municipal life continued, but the neighbouring marshes made it increasingly unhealthy. Finally Paestum was deserted.

D. Randall-MacIver, *Greek Cities of Italy and Sicily* (1931), 9; A. D. Trendall, *Paestan Pottery* (Rome, 1936); J. Bérard, *Bibliogr. topogr.* (1941), 79; see too bibliography s.v. MAGNA GRAECIA. E. T. S.

PAETUS, LUCIUS CAESENNIUS (*cos.* A.D. 61), was sent by Nero in 61 or 62 to defend Armenia as a legate of Cappadocia. He failed and capitulated on disgraceful terms in his camp at Rhandaia. Dismissed, but unpunished, in 70 he was appointed governor of Syria by Vespasian (whose relative he probably was) and annexed the kingdom of Commagene.

PIR², C 173.

A. M.

PAETUS, see also AELIUS (1), AUTRONIUS, THRASEA.

PAGANALIA, Roman festival of the *pagi*, or village communities. They were *sacra publica* (Festus, p. 284, 20 Lindsay), but not *pro populo*, because not on behalf of the people as a whole. They are also called *paganicae feriae*, Varro, *Ling.* 6. 16, who says they were 'agri culturae causa susceptae'; *Pagualia*, Macrobi. *Sat.* 1. 16. 6, who lists them among *feriae conceptivae*, or movable feasts.

H. J. R.

PAGANUS, an inhabitant of a *pagus* (q.v.). Hence, by Imperial times (as Tacitus, *Hist.* 3. 24, where Antonius derisively calls the Praetorians *pagani*, cf. Julius Caesar's *Quirites*, Suet. *Divus Iulius* 70; Pliny, *Tra.* 86 b), one who stays at home, a civilian. Hence, in Christian use, one who is not a *miles Christi*, a heathen (*fides pagana*, Tert. *De Corona* 11, and so often; used also of non-Jews, cf. Augustine, *Retract.* 2. 43, who says it is the usual term for polytheists). Some authors (as Orosius 1, prol. 9, Prudentius, c. *Symm.* 1. 449) imply that this use is derived from the sense of 'rustic', 'uncultured', rather than 'civilian'.

H. J. R.

PAGASAE, the principal harbour-town of Thessaly. Originally Magnesians, it was appropriated by the Thessalians at an early date and became the port of Pherae. Since it commanded the only convenient outlet from the Thessalian plain to the sea, it virtually monopolized the export of corn, meat, and slaves, thus contributing largely to the rise of the Pherean tyranny. Philip captured Pagasae in 353 B.C. and subsequently terminated its dependence upon Pherae.

The walls, dating from c. 350, are impressive, but the site was ill chosen, and Pagasae was later supplanted by Demetrias (q.v.).

F. Stählin and E. Meyer, *Pagasae und Demetrias* (1934), a detailed archaeological and historical account.

H. D. W.

PAGUS, an area of land with its population as distinguished from the *oppidum* or *vicus* (qq.v.) which housed the inhabitants, was the smallest unit of the Italian territorial system. Every community, tribal or urbanized,

consisted of a group of *pagi*, which thus persisted after the municipalization of Italy. Within the Roman State before 90 B.C. the *pagi* of those parts where the municipal system was undeveloped were the only intermediaries between the *populus Romanus* and the individual citizens. In the provinces agricultural immigrants from Italy settled in *pagi*, whereas groups of Romans in provincial towns were known as *conventus*. Such *pagi*, which were usually attached to the nearest Roman municipality, assisted the spread of Roman civilization in the neighbouring native *civitas*, whose *oppidum* the *pagus* might share, and with which it was eventually united as a *municipium* or *colonia* (qq.v.). The provincial communities also, especially the great cantons of Gaul, were sometimes subdivided into *pagi*. The administrative powers of a *pagus* varied with its comparative independence. In Italy they had boards of three or four aediles or *magistri*; Roman or peregrine *pagi* in the provinces might form a miniature *res publica*.

For bibliography see MUNICIPIUM (Modern views (a) Republic). A. N. S.-W.

PAIDOTRIBES, see EDUCATION, III. 2.

PAIGNION, a title, of which *jeu d'esprit* is a rough equivalent, applied to various very different types of literature. It was used of the satirical poems of Crates the Cynic and of poems of Philetas and Theocritus, and generally of effusions of a light character (L. & S., s.v. *παίγνιον*, III. 3). Gorgias (fr. 11. 21) similarly designates his *Helena*, the prototype of later essays in light-hearted whitewashing and denigration composed by Isocrates (*Helena*) and later by Asiatic rhetoricians; cf. Polyb. 12. 26 b *Ἑγκώμιον Θεοπίτου, Ψόγος Πηνελόπης*. See also MIMUS and TECHNOPAGNIA.

J. D. D.

PAINTING. Except for a few clay plaques and stone stelae little ancient painting survives that is earlier than the Roman period. The sources are references in literature, vase-painting (q.v.; until c. 400 B.C. often of the highest quality), Etruscan tomb-painting (7th to 4th c.), and occasional copies of earlier pictures in painting and mosaic.

2. *Before the fifth century.* The scenes on geometric vases are in silhouette with filling ornament; the artist shows all the essential parts of figures and objects disregarding spatial relations (e.g. the corpse is placed above the bier on his side to show both arms and legs). From about 750 the silhouette changes partially into outline, and a more normal two-dimensional representation is adopted; but figures are still composed of typical views of each part—head profile, frontal eye, frontal body, profile legs (cf. particularly Proto-Attic and Melian vases). Corinth was early famous for painting; her claim is justified by the clay metopes from Thermon representing Perseus, etc., the elaborate battle scenes on Proto-Corinthian vases (both 650–620), and the later Amphiarus vase (560). From c. 625 the black-figure style predominates in Athens for vases and plaques; the red-figure style begins c. 530. After 540 forms are more rounded and clothing more decorative and elaborate (see EXECIAS, ANDOCIDES). Ionian pictures of c. 525 are echoed by the Caeretan hydriae (Embassy to Achilles, Busiris, etc.). From c. 515 painters experiment with uneven stance, back views, frontal faces, etc., which later become common (see EUPHRONIUS, EUTHYIMIDES; cf. Pliny on Eumarus of Athens, 'figuras omnis imitari ausum').

3. *Fifth century.* Three-quarter faces and varied expressions, ascribed to Cimon of Cleonae, appear on the vases of the Cleophrades painter and his contemporaries; the frontal eye gradually changes into the profile eye. Between 470 and 460 further advances were made by Micon and Polygnotus (qq.v.); in their large

pictures the surface of the wall was divided by undulating lines representing hillocks, which supported or partly hid the serious figures of men 'better than ourselves', arranged in groups united by a common emotion. The use of perspective was greatly developed by Agatharchus (q.v.), painting c. 470-430, and shading by Apollodorus (q.v.), c. 430. Parrhasius (q.v.), painting from c. 450, achieved plastic effects by his outline; he also developed further the painting of facial expression. Aglaophon (c. 420) painted in the rich, sweet style known from the vases of the Meidian painter (q.v.). Zeuxis (q.v.) united the romantic, emotional, and realistic tendencies of the late fifth century, the art which Plato rejected in the *Republic*. Copies of late-fifth-century painting have been seen in paintings on marble from Herculaneum.

4. *Fourth century.* The Sicyonian school (see PAMPHILUS and MELANTHIUS) in revolt against the colour effects of Zeuxis, etc., insisted on line, composition, and severity; their art influenced mirrors, ivories, and Kertch and Tarentine vases. Aristides (q.v.) continued the emotional tradition of Parrhasius, etc.; he 'first painted soul, feelings, and passions'. Encaustic (q.v.), of which Pausias (q.v.) was the first great master, made greater realism possible; Nicias, who unlike Pausias chose large subjects, made his figures stand out from the canvas (copies of his Io and Andromeda have been recognized). Of Apelles (q.v.), the most renowned painter of antiquity, nothing survives; the charm (*χάρης*) of his works distinguished him both from the austerity of the Sicyonians and from the over-elaboration of Protogenes (q.v.). The earliest interior scenes to receive mention are the late-fourth-century 'Alexander and Roxane' by Action (q.v.) and 'Boy blowing the fire' by Antiphrilos. Philoxenus (q.v.) painted a 'Battle of Alexander with Darius' (the Issus mosaic in Pompeii is a copy), a brilliant composition of crowded figures in a shallow strip of space.

5. *Hellenistic.* Literary sources are less informative and the contributions of different schools are difficult to assess. The enucleation and dating of the originals behind frescoes and mosaics at Pompeii, etc., are largely conjectural. To the third century may be assigned the stele of Hediste from Pagasae and the original of the Pharmaceutriae by Dioscorides (mosaic; c. 100 B.C.); both have shallow interior scenes. Hediste is a realistic portrait; the Pharmaceutriae and its companion, the 'Street Musicians', represent the Hellenistic genre tendency. The original of the 'Arcadia and Telephus' from Herculaneum should from the subject be Pergamene, second century; the diagonal composition gives the picture considerable depth; the basket of fruit in the foreground is a still life, a descendant of Pausias' (q.v.) flowers, an ancestor of Sosus' 'Drinking doves' and many small pictures in Pompeii.

6. *Roman period.* Timomachus of Byzantium, the last great painter recorded, painted in the time of Julius Caesar a Medea and an Iphigenia; reflections in Pompeii show that his figures derived from the fourth century or earlier. The Aldobrandini marriage may also be an eclectic original of c. 50 B.C. The Second Style of wall-painting begins in Pompeii, Delos, and Athens early in the first century B.C.; the simple architecture leaves room for large pictures of great spatial depth such as the ritual scenes of the Villa Igem, the illusionistic buildings and gardens of the Boscoreale villa (cf. Vitruvius on Apaturius of Alabanda), and the Odysseus pictures from the Esquiline, as well as the smaller landscapes in the house of Livia (cf. Pliny on Studius). The painted architecture of the Third Style (20 B.C.-A.D. 20, perhaps contemporary with the later stages of the second style) is elaborate and fantastic, and frames academic groups set against a landscape backcloth. The pictures of the Fourth Style (extending into the Flavian period) are also set in fantastic architecture; the composition is

often based on diagonals, and the painting is often impressionistic (cf. the putto in the catacomb of Domitilla). The earliest of the mummy portraits from Egypt belong to the first century A.D.; the series lasts into the fourth century; most of the portraits are in the encaustic (q.v.) technique, and many are excellent pictures. After the austerity of the Trajanic period and the softer, more impressionistic style of the second century, the spirituality of Early Christian art begins to appear, as in the apostles from the tomb of the Aurelii and the best drawings on gold glass.

Recent works. General: E. Pfuhl, *Malerei und Zeichnung der Griechen* (1923); J. D. Beazley and B. Ashmole, *Greek Sculpture and Painting* (1932); M. H. Swindler, *Ancient Painting* (1929); R. P. PALACES. That the abodes of kings in Greek and Hellenistic times were like extra large houses seems probable. There are scant evidences of palaces comparable in size or magnificence with those of Minoan Crete or Assyria. Unfortunately the palace of the Ptolemies at Alexandria has completely disappeared, nor is it likely that Antioch will yield much of the palaces of the Seleucid kings. The fortress town of Pergamum (see TOWNS), the best preserved of the major Hellenistic sites, was too constricted to permit a palace of great extent. The most hopeful site so far has been Palatitzia, in Macedonia, where valuable evidences of grandiose entrance planning have been disclosed, and further research may prove even more clearly the importance of this link between Hellenistic and Roman palace planning. The entrance buildings at Palatitzia led to a spacious pillared forecourt, and all the evidences from Pergamum and Miletus point to palace buildings as an assemblage of such courts with rooms on two stories opening into the pillared loggias which surrounded them: an enlargement of ideas which are evident from the houses at Priene and Delos.

Of Roman palaces in the times of the earlier Caesars the evidences are also comparatively scanty. Eastern conceptions of the segregation of women no doubt had some effect: the House of Livia on the Palatine Hill, which has well-preserved elements, points to separate quarters for royal ladies and their retinue. In Roman palaces, however, it is evident that assemblages of units were more fully mastered than in Greek and Hellenistic times, and Roman constructive possibilities gave increased scope to grandiose planning (see PATIES). By far the most complete Roman palace in existence, that of Diocletian at Spalato—invaluable to the architectural historian for many reasons—shows a fortified building planned with characteristic simplicity and practicality of outlook. It was guarded by strong walls with gates and soldiers' quarters on the three land sides, and on the sea side, where were the emperor's quarters, with a continuous terrace raised above a vaulted passage (*cryptoperticus*), the temples being planned with some dignity between the front and the middle region containing courtiers' quarters.

Anderson, Spier, and Dörmeier, op. cit. under *ARCHITECTURE*, p. 185; Anderson, Spier, and Ashby, op. cit. *ibid.*, p. 133. T. F.

PALAEMON, in mythology, see **ATHALUS**, **LEUCOTHEA**.

PALAEMON, QUINTUS REMMIUS, a manumitted slave who under Tiberius and Claudius won a reputation for his evil life, arrogance, and unusual learning. Martial (2. 86. 11) pours scorn on his verses. He was the first Roman to write a really comprehensive grammatical treatise (see GRAMMAR) which influenced all subsequent writers (e.g. Charisius, Diomedes, Priscian). The extant *Ars Palaemonis* (ed. Keil, *Gramm. Lat.* v. 533; cf. also vi. 206) is spurious.

See SCHOLARSHIP, LATIN, IN ANTIQUITY and cf. Teuffel, § 282. 3; Schanz-Hosius, § 475; K. Barwick, *Remmius Palaemon und die römische ars grammatica* (1922) = *Philol. Suppl.* xv. 2. J. F. M.

PALAEOGRAPHY is the science that studies writing upon papyrus, wax, parchment, and paper, while Epigraphy deals with inscriptions carved in hard materials; it teaches us to read old writings and to observe their changes particularly for criteria of date and place. It is also concerned with the layout of the written leaf and the form of the book. We here confine ourselves to Greek and Latin writing and refer to the articles on Papyrology, Greek and Latin, for those branches of the subject. In both languages carved and written letters start by being identical, but the written change more quickly under the influence of three forces: the first, the desire to make letters with less labour, and the second, the need of being legible, oppose each other; the third, regard for beauty, whether in the individual letter, the line as a whole, or the page, tends to careful work, but sometimes the scribe, forcing the letters into one mould to attain a pleasant regularity, makes them hard to distinguish.

2. Writings may be classed as *Book-hands* and *Cursives* or everyday hands: both have existed side by side as far as our documents go back; the book-hand is conservative, but the cursive may change very quickly; its forms tend to invade the book-hand. Hands are also divided into *Majuscles* and *Minuscles*: in *Majuscles*, comprising *Capitals*, *Uncials*, and early *Cursives*, the letters lie in the main between two parallel lines, though, e.g., Φ in Greek or F in Latin Capitals and several letters in Latin Uncials (e.g. h and Q) project above and below them. *Uncials* is the name given to the earliest book-hand deviating from Capitals, marked by certain rounded forms. It means 'inch-high', being taken from Jerome's attack upon the elaborate letters in gold and silver on purple parchment fashionable in his day: it matters not that really they were never more than $\frac{5}{8}$ in. high. Later Cursive both in Greek and Latin developed many tall and tailed letters and these passed into the book-hands derived from it. Such hands are called *Minuscles*, scripts in which the bodies of the letters lie between two inner lines but the 'ascenders and descenders' reach out towards two outer lines above and below; only one line is actually ruled, upon which the letters stand, or from which in Greek after A.D. 1000 they hang.

3. The *Materials* that receive writing deeply influence its development; as against papyrus and paper, parchment encourages a more careful and heavier style; wax produced in letters special deformations that have left their mark on all subsequent Latin writing, e.g. in d, g, f. Papyrus was the general material from classical times till the fourth century A.D., after which it was, save in Egypt, a mere survival; the latest papyrus is a Papal bull of the eleventh century. In the fourth century parchment, hitherto rare though of very ancient use, won a sudden victory. Paper, adopted from China by Islam, spread through Europe in the thirteenth to fifteenth centuries. Wax was used from at least the fifth century B.C. until the Renaissance.

4. Papyrus (see PAPHYROLOGY), which did not stand folding well, was mostly used in the form of a roll, the text being in narrow columns; the criss-cross structure

of papyrus guided the scribe in keeping these vertical and his lines regular. The bound book arose in Egypt in the second century A.D.; though at first made of papyrus, it suited parchment better; its form was perhaps suggested by that of the wax codex of joined tablets. Its rise was probably associated with the spread of Christianity (see BOOKS). Writing on parchment involves elaborate cutting and folding of the double leaves which make up the quires, and laborious pricking and ruling to guide the scribe. The methods of doing this, now being studied, may furnish indications of date and place of writing.

5. The *Ink* used on papyrus is finely divided carbon and gum ('Indian ink'), chemically very stable but sensitive to damp. That used on parchment is a solution of oak-galls and iron, not always satisfactory chemically. Pens were of reed and in medieval times of quill. Writing on parchment was often erased and a new text written over it: this is called a *Palimpsest* (q.v.). The older writing may be read by the application of ammonium sulphide, or better if it is photographed under ultraviolet rays. Study of manuscripts is largely dependent on photographs; these are cheaper when taken white on black (*rotographs* or *photostats*), or still cheaper as *microfilms* which can be read by using a projector. The difficulty of reading manuscripts, apart from bad preservation, is due to the unfamiliar forms of the letters, the non-division of the words, and the use of abbreviations. The first trouble is much increased by the presence under cursive influence of *ligatures*, i.e. combinations in which two or more letters are knotted together and lose their original shapes, e.g. &, a combination of E and C.

6. *Abbreviations* are divided into *suspensions*, in which the first letter or the beginning of a word is given but not the ending (sign: a dot or a transverse stroke); *contractions*, giving the first letter, generally some of the middle of a word and always the last letter (sign: a *tittle* or horizontal stroke above); and *specific signs* denoting particular words, syllables, or letters. These largely go back to ancient shorthand, e.g. in Latin to the *Notae Tironianae* (see TACHYGRAPHY). Numerals are marked by *tittles*, so sometimes foreign words, or by flanking signs, also used for 'quotes'. A letter wrongly written may be dotted above or, more usually, below.

7. These difficulties tend to increase as time goes on, save that later manuscripts begin to divide the words. Division into paragraphs is at first rare and inconspicuously marked; later it is indicated by the methods still in use. Punctuation too is at first scarce and irregular, and never becomes very helpful.

8. A scribe sometimes is good enough, especially in later times, to add at the end of a manuscript a note, called a *Colophon*, giving his name with place and date of writing: the Greek era runs from 5508 B.C. We also find *subscriptions* (q.v.), notes by readers who have corrected a manuscript, and these are sometimes dated.

9. The study of the decoration of manuscripts and of miniatures does not really concern classical students: the ancient book until its very latest stage was practically devoid of ornament.

10. *Greek Writing* has a simple history: starting with epigraphic capitals it soon adopted rounded shapes for E, C, W and made small changes in some other letters. The *Uncial* thus established continued as the only book-hand until the ninth century, the cursive meanwhile developing independently. The uncial changes very little until parchment encouraged scribes to make the vertical strokes thick and gradually arrive at a heavy style (miscalled 'Slavonic') too elaborate for ordinary books. Accents and breathings, hitherto sporadic, and used mostly in difficult texts, now become general. About A.D. 800 scholars in Constantinople got right away from the heavy uncial (which lingered on for another three centuries in liturgical use), and deliberately

designed a new book-hand, a *Minuscule*, founded on the cursive: this was the vehicle of Greek literature until the introduction of printing, but it degenerated steadily through the centuries, admitting capricious forms and abbreviations and complicated ligatures combining the letters with the accents; these survived into printing, but have now been eliminated.

11. The *Latin Book-hand* is like the inscriptions until the fifth century, having the same two varieties, the rare *Square Capital* and the more usual *Rustic* made quickly with a slanting pen. Only school-books and law-books seem to have been produced in an easier style with an admixture of cursive forms. This contributed to the *Latin Uncial*, which became the regular book-hand from the fourth to the eighth century, its characteristic letters are a, ð, e, h, l, m, q, u; it sometimes admits b and d. When more cursive letters, a, g, m, p, r, f, are used (but n remains), the script is called *Half-uncial*: books written in it are few, but it is the ancestor of the script called *Insular*, developed by the Irish in the fifth and sixth centuries and taught by them to the English and in many monasteries on the Continent. We gave up its use for Latin in the tenth century, but retained it for Anglo-Saxon. The Irish used it for Latin till the fifteenth century and still keep it for their own language.

12. Meanwhile, from the sixth century, the cursive, which was developing upon wax and papyrus, began to be used for books, and by A.D. 800 had been made tolerable in every Latin-using country save 'Insular' Ireland and England; south and north Italy, Spain, Gaul, and Germany each had fair 'National' hands labelled *Lombardic*, *Visigothic*, and *Merovingian*, but they are all still disfigured by ligatures. In the late eighth century book-production was systematized at Tours under Charles the Great; in these books *Square* and *Rustic Capitals*, *Uncial* and *Half-uncial*, were used for headings, prefaces, initials, etc., and a *Minuscule* called *Caroline* or *Carolingian*, eliminating most of the ligatures, was designed for the text. Caroline quickly superseded the various forms of *Merovingian* and the *Lombardic* in north Italy, and in the eleventh century the *Visigothic*, but south Italy and *Dalmatia* retained their beautiful writing, now called *Beneventan*, until the end of the twelfth century. Caroline is the main vehicle of Classical literature; manuscripts in capitals are not more than twenty, half of them *Virgils*: few *Uncials* are classical; of the other scripts only *Insular* and *Beneventan* have any importance for the classics. For most authors a ninth- or tenth-century *Caroline* manuscript is the best authority; the *Caroline* scholars copied the ancient manuscripts, which then went out of use and perished; they did their best to produce a good text but had not the necessary scholarship. Of a few authors, e.g. *Catullus*, the *Caroline* has been lost and we have only later copies. In other cases later copies derived from a lost *Caroline* may preserve good readings not found in extant *Carolines*.

13. *Caroline* changed very little till the twelfth century; then it developed, first of all in north France, into the angular hand we call *Gothic* or *Blackletter*; this came to vary greatly in style in different countries; it can be very handsome, but suffers from the letters being very much alike, and from innumerable abbreviations.

14. In the fifteenth century the Italian scholars revived the *Caroline*, thinking it to be the writing of the ancient Romans, and used it with singular elegance. Manuscripts and printing in this *Humanistic* or *Roman* hand gradually spread over Europe, and likewise the cursive derived from it. Only Germany retained till the other day the *Blackletter* derived from France.

BIBLIOGRAPHY

LATIN. F. Steffens, *Latinitische Palaeographie*², 1929; in French, Paris, 1907-9 (varied contents, best moderately priced book). A. Cappelli, *Dizionario di Abbreviature Lat. ed Ital.*³, 1929 (most convenient). W. M. Lindsay, *Notae Latinae*, Cambridge, 1915 (deals with abbreviations till about A.D. 900; D. Bains, *A Supplement to N.L.*, 1936 (brings them down to 1100)).

Facsimiles. W. Wattenbach et C. Zangemeister, *Exempla Codd. Lat. Litteris Majusculis Scriptum*, 1876-9 (still very useful). E. Châtelain, *Paléographie des classiques latins*, 1884-1900 (the standard collection, almost complete for French libraries). Id., *Uncialia Scriptura Codd. Lat. novis exemplis illustrata*, 1922 (the standard collection for uncials). W. Arndt u. M. Tangel, *Schrifttafeln zur Erlernung d. lat. Paläographie*, 3 parts, 1904-7 (a very varied and interesting collection). F. Ehrle et P. Liebert, *Specimina Codd. Lat. Vaticanorum*, 1912 (best cheap collection of varied facsimiles). E. A. Lowe, *Codices Latini Antiquiores*, Oxford, 1934- (will give a description and specimen of every Latin manuscript up to the year 800 with a bibliography of each. Incomparable). J. Mellon, R. Marichal, C. Perrat, *L'Écriture latine de la capitale romaine à la minuscule*, 1939 (a convenient series of facsimiles).

SPECIAL SCRIPTS. *Uncial*. E. A. Lowe and E. K. Rand, *A Fifth Century Fragment of the Letters of Pliny the Younger*, U.S.A. 1922.

Half-uncial. E. A. Lowe, 'A Handlist of Half-uncial MSS.', *Misc. Ehrle*, iv, 34-61, Rome, 1924. *Codices Lugdunenses Antiquissimi*, Lyon, 1924.

Dark-age writing. L. Traube, *Vorlesungen u. Abhandlungen*, 3 vols., 1909-20. W. M. Lindsay, *Early Irish Script, Early Welsh Script*, and the *Journal Palaeographia Latina*, all publications of St. Andrews University, 1922-9. No complete account of *Insular* exists.

Beneventan. *Palaeographia Antiqua di Monte Cassino*, 1876-81 (coloured plates). E. A. Lowe, *The Beneventan Script*, 1914 (best study of any hand). Id., *Scriptura Beneventana*, 1929 (facsimiles).

Visigothic. P. Ewald et G. Loewe, *Exempla Scripturae Visigothicae*, 1883. E. A. Lowe, 'Studia Palaeographica', *Sitz. Bayer. Akad. Phil.-hist. Kl.*, 1910 (important for all National Hands). J. M. Burnam, *Palaeographia Iberica*, U.S.A. 1914 (good facsimiles). Z. G. Villada, *Palaeographia Española*, 1923 (with album). R. P. Robinson, 'MSS. 27 and 107 of the Municipal Library at Autun', *Ann. de l'École*, xvi, 1929 (redates all early Visigothic).

Caroline. E. K. Rand, 'The Vatican Library and the script of Tours', *Am. Arch. Rev.*, 1, 1919 (very important for transmission of classical texts). Id., 'Studies in the Script of Tours', 1, 3, *Medieval Arch.*, of Amer. 3, 20, 3, Cambridge, Mass., 1929, 1934. P. Lauer, 'La Réforme carolingienne de l'écriture ligure', *Mém. Acad. Inscr. et Belles-Lettres*, 1924 and 1933. L. W. Jones, 'The Script of Cologne', *Med. Arch. of Amer.*, 10, 1932. E. H. M.

PALAEPHATUS wrote (? in the late 4th c. B.C.) a *Π. ἀπίστων*, extant only in an excerpt, in which myths are rationalized. It had considerable influence in the Byzantine period. The name Palaephatus is perhaps a pseudonym.

N. Festa, *Mythographi Graeci* iii. 2 (1902); J. Schrader, *Palaephatea* (1893). J. D. D.

PALAESTRA (παλαίστρα), was a low building with a central courtyard in the interior covered with fine sand, and rooms about it for undressing and washing. It was frequently the private property of a schoolmaster, and was especially used by boys who were there taught the rules of wrestling. See EDUCATION, III. 2; GYMNASIUM; BATHS. F. A. W.

PALAMEDES (Παλαμήδης, 'the handy or contriving one'), a proverbially (cf. Ar. *Ran.* 1451) clever hero, son of Nauplius (q.v.). His chief distinctions are the invention of letters and his cunning while serving with Agamemnon. These respectively bring him into competition with Cadmus and Odysseus (qq.v.). For the former sundry accounts divide the invention of the alphabet between them, e.g. Hyginus, *Fab.* 277. 1 (see Rose ad loc.). For the latter, tradition, from the Cypria, makes them rivals and enemies; Odysseus pretended to be mad to avoid going to Troy and Palamedes detected him by a stratagem (see, e.g., Hyginus, *Fab.* 95. 2 and Rose ad loc.). In revenge Odysseus forged a letter from Priam to Palamedes, arranging for him to betray the Greeks, and hid a sum of gold in his tent; on this evidence Palamedes was found guilty and put to death by the army (Hyg. *Fab.* 105). See Lewy in Roscher's *Lexikon*, s.v. H. J. R.

PALATINE, the chief of the seven hills of Rome, traditionally (Varro, *Ling.* 5. 164; Tac. *Ann.* 12. 24; Dionys. Hal. 1. 87; Livy 1. 7, etc.) the site of the oldest settlement there. The etymology is disputed, and the ritual reasons usually given for the early choice of the hill for settlement are probably archaic inventions, like the legend of *Roma quadrata* (Phil. *Wochenschr.* 1903, 1645). Tradition assigns fortifications to the hill, but their reality is still in need of sound archaeological confirmation. Early settlement is represented by two archaic cisterns and rock-cut post-holes. Indigenous deities included Aius Locutius (390 B.C.), Viriplaca, Luna Noetiluca, and Febris. Later came the temples of Victoria, near the *clivus Victoriae* (294), the Magna Mater (191), and possibly Jupiter Viator (see *Bull. Com. Arch.* 1917, 84-92). The hill was also the seat of many houses, from at least 330 onwards (Livy 8. 19. 4; 20. 8), famous owners being Fulvius Flaccus, Lutatius Catulus, Cicero, Crassus, Milo, P. Sulla, M. Antony, Livius Drusus, and Hortensius. The house of Hortensius became the *domus Augusti* (Suet. *Aug.* 72) and is still visible. A new palace was built near it, in association with a temple of Apollo (Vell. Pat. 2. 81), the latter being identified with a large Augustan temple-platform south of the *domus Augusti* (JRS 1914, 201-8). An Augustan triumphal arch was erected on the *clivus Victoriae* (AJArch. 1923, 400). Tiberius built a large palace, *domus Tiberiana* (Tac. *Hist.* 1. 27) on the Cermalus, or north-west summit, to which Gaius added a vestibule contiguous with the temple of Castor. Nero built yet another sumptuous palace, *domus transitoria*, covering Republican houses, and itself covered in turn by the foundations of his *domus aurea* (q.v.; Suet. *Nero* 31). Domitian was responsible for the Flavian state-apartments and gardens (*hippodromus*), by the architect Rabirius, and also extended the *domus Tiberiana* towards the *nova via*, as did Hadrian still further. Severus built out towards the south-east, masking his work with the Septizonium (q.v.). The

palaces continued to be used until the sixth century, when they were repaired by Theodoric and Athalaric.

Not. Scav. 1904, 43-6; C. Hülsen-H. Jordan, *Topographie der Stadt Rom* (1907), 29-111; Hülsen, *Forum und Palatin* (Berlin 1926, U.S.A. 1928); G. Lugli, *Roma antica* (1946). I. A. R.

PALATINI, in origin the troops forming the Palace Guard, became the senior branch of Constantine's field army. Like the *Comitatenses* they were commanded by the *magistri militum* and comprised cavalry (*vexillationes*) and infantry (*legiones* and *auxilia*) in that order of precedence. See COMITATENSES. H. M. D. P.

PALES, see PARILIA.

PALFURIUS SURA, an able orator (Suet. *Dom.* 13) and active *delator* under Domitian, is mentioned in Juvenal, 4. 53-5, as an upholder of the emperor's unlimited claims over property. After Vespasian expelled him from the Senate he turned Stoic.

PALIBOTHTA (*Pataliputra*, now *Patna*), situated on the Royal Road from the river Beas down the Ganges valley, was the capital of the Mauryan kings of north India (c. 300 B.C.). The Seleucid kings kept Greek residents, Megasthenes (q.v.) and Deimachus, at the court of Kings Chandragupta and Vindusara. In his account of India Megasthenes gave an accurate account of the city's fortifications, a stockade and a moat. It remained an important royal seat, though little noticed by later Greek or Roman visitors to India.

Strabo 2. 70, 15. 702; Plin. *HN* 6. 63; Ptol. *Geog.* 1. 12. 9, etc. E. H. W.

PALICI (Παλικοί), twin gods of the pool now known as *Lago Naftia* or *Fetia*, more learnedly as *L. dei Palici*, in Sicily, which still sends up a considerable amount of natural gas. Of the bulky ancient literature we have left some extracts in Macrobius, *Sat.* 5. 19. 15 ff., also Diod. Sic. 11. 88. 6 ff., Servius on *Aen.* 9. 581. For some modern writers see Bloch in Roscher's *Lexikon* iii. 1281. Their legend was that a local nymph, Thalia, being with child by Zeus, begged to be swallowed up in the earth to escape Hera; this was granted her, and when she bore twins they made their way up through the pools known as Delloi. The most noteworthy thing about their worship was that a suspected person might go to the pools and swear he was innocent; if he lied, he lost his life by the power of the gods (the gases are in fact somewhat poisonous); if not, he returned safe and might claim damages from his accuser. H. J. R.

PALIMPSEST (παλίμψηστος), a term applied to manuscripts in which the original text has been scraped or washed away, in order that another text may be inscribed in its place. As the term properly implies scraping, it must have originally been applied to such materials as leather, wax, or vellum, and only by analogy to papyrus, which could be washed, but not scraped. The term seems to occur first in Catullus (22. 5); cf. Plut. 2. 504 d, 779 c, where it is treated as synonymous with *ἐκπλutos*. When vellum was scarce (especially, it seems, about the ninth century) early manuscripts were not infrequently treated thus; and since the removal of the original writing was seldom complete, valuable texts of the Bible, Cicero, Plautus, Gaius, Licinianus, etc., have been recovered from such palimpsests.

V. Gardthausen, *Gr. Paläographie*² (1911) i. 103-9; E. M. Thompson, *Introd. to Gr. and Lat. Palaeography* (1912), 64-66. F. G. K.

PALINODE, see STESICHORUS.

PALLA, see DRESS, para. 3.

PALLADAS of Alexandria (fl. A.D. 400), Greek epigrammatist, was a schoolmaster, miserably poor; he was also a pagan in the age of rising Christianity. The *Anthology* contains over 150 epigrams of his, deeply melancholy in tone. He is the Juvenal of epigrammatists: even his jokes are bitter as wormwood—see those on matrimony in *Anth. Pal.* 9. 165 ff., and those on fortune and human life in *Anth. Pal.* 10. 77 ff. He has no great verbal dexterity, but the depth and strength of his emotion are remarkably impressive.

P. Sakolowski, *De Anth. Pal. quaestiones* (1893); A. Franke, *De P. epigrammatographo* (1899). G. H.

PALLADIUM, an ancient sacred image of Pallas (Athena), said to have been sent down from heaven by Zeus to Dardanus, the founder of Troy (Aretinus ap. Dion. Hal. 1. 69), or to his descendant Ilus (Ov. *Fasti* 6. 419–22). It was believed that the protection of the city depended on its safe custody. Greek legend told that Diomedes and Odysseus, at the instigation of Calchas or Helenus, carried off the Palladium and thus made possible the sack of Troy (Serv. ad *Aen.* 2. 166, Sil. Ital. 13. 36–50). Virgil adopts this legend (*Aen.* 2. 162–79), but adds that the theft was followed by the displeasure of the goddess. The more common Roman tradition was that the Palladium was rescued from the burning Troy by Aeneas, who brought it to Italy, where it was ultimately placed in the *pemus Vestae* as a pledge of the safety of Rome (Dion. Hal. l.c.; cf. Cic. *Phil.* 11. 24). The Palladium was believed to have saved Rome from the attack of the Gauls in 390 B.C. (Sil. Ital. 13. 79–81), and when the temple of Vesta caught fire in 241 B.C., it was rescued by the Pontifex Maximus, L. Caecilius Metellus (Ov. *Fasti* 6. 436–54, Cic. *Scaur.* 48). These two legends are clearly inconsistent; Ovid (*Fasti* 6. 433–5) is content not to judge between them, but stories were invented to reconcile them, such as that the image stolen by the Greeks was only a copy (Dion. Hal. l.c.), or that Diomedes brought the Palladium to Italy and handed it over to Aeneas at Lavinium (Sil. Ital. 13. 51–78). The truth probably is that many cities possessed such talismans, which owing to the fame of the Trojan image all came to be known as Palladia; in Greece Argos and Athens claimed the Palladium, and in Italy not only Rome but Lavinium and Luceria and the Graeco-Roman city of Heraclea in Lucania (Strabo 6. 1. 14).

C. B.

PALLADIUS, RUTILIUS TAURUS AEMILIANUS (4th c. A.D.), a practical farmer, wrote an *Opus agriculturae* in fourteen books, arranged according to the farmer's year. The last, on grafting, is in elegiac verse: a prose 'book XIV', *de ueterinaria medicina*, probably authentic, has recently been discovered and published by Svennung (*Eranos*, Göteborg, 1926). P. follows Columella, Gargilius Martialis, Vitruvius, and unnamed 'Graeci', besides personal observation; phrases such as 'quod expertus sum' constantly occur. Medieval scientists, notably Albertus Magnus, used him extensively. His prose style is jejune; his verses are metrically faultless, but monotonous and of limited vocabulary.

Teubner text (J. C. Schmitt, 1898); H. Widstrand, *Palladii studien* (1926); J. Svennung, *Untersuchungen zu Palladius* (1935); H. Fischer, *Mittelalterliche Pflanzenkunde* (1929). R. G. A.

PALLAS, (1) Πάλλας, -ἄδος, title of Athena (q.v.). A late legend, Philodemus, *De pict.* p. 6 Gompertz, Apollod. 3. 144 (spurious), says she was a friend of Athena whom the goddess accidentally killed and made the Palladium (q.v.) to commemorate her. (2) Πάλλας, -ατος, (a) a Titan (Hesiod, *Theog.* 376); (b) a giant, killed by Athena (Apollod. 1. 37); (c) an Attic hero who with his sons opposed Aegeus and was overcome by Theseus (qq.v.; Plut. *Theseus* 13; Apollod. 3. 206); (d) the son of

Evander the Arcadian, an ally of Aeneas, killed by Turnus (Verg. *Aen.* 9. 104, 514 ff.; 10. 441 ff.); (e) son of Hercules and Evander's daughter (Dion. Hal. *Ant. Rom.* 1. 32. 1). H. J. R.

PALLAS (3), freedman of Antonia and financial secretary (*a rationibus*) of her son, the Emperor Claudius. His wealth, success, and arrogant temper made him deservedly unpopular. Devoted to Agrippina and alleged to be her lover, he successfully promoted her candidature in the competition after the execution of Messalina; he also hastened Claudius' adoption of her son. The Senate voted him *ornamenta praetoria* and a sum of money; he refused the money and received public commemoration for virtue and frugality (Tacitus, *Ann.* 12. 53; cf. Pliny, *Ep.* 7. 29. 2; 8. 6. 1, who indignantly quotes the senatorial decree inscribed on the tomb of Pallas on the Via Tiburtina). After the accession of Nero, Pallas, like Agrippina, was gradually and firmly thrust aside from power. Compelled to resign his office, he stipulated that no questions should be asked, that his accounts be regarded as balanced. Finally he was put to death by Nero, because of his wealth, it is said (A.D. 62). R. S.

PALLIATA, see *FABULA* and *DRAMA*, paras. 2 ff.

PALMA FRONTONIANUS, AULUS CORNELIUS (cos. I, A.D. 99), governor of Tarraconensis (c. 101), became governor of Syria c. 104. Operating with Legio VI Ferrata, he annexed Nabataea and formed it into a province by 106; the conquest was easy and coins commemorated *Arabia adquisita*. Palma was honoured with *ornamenta triumphalia* and was cos. 11 (*ordinarius*) in 109. Rich and influential, he apparently gave offence to Hadrian in Trajan's lifetime, being put to death after the Conspiracy of the Four Consulars (118).

E. Groag, *PIV*, s.v. 'Cornelius (279)'; *PIR*², C 1412.

C. H. V. S.

PALMARIUM, see *ADVOCATUS*.

PALMYRA (Aramaic *Tadmor*) owed its wealth to its position as an oasis between Syria and Babylonia. Owing to the disturbed condition of Mesopotamia in the first century B.C. it captured the trade between these two countries, organizing caravans direct across the desert, which it policed from the Euphrates to Damascus. The city was formed by the amalgamation of about twenty-five tribes, four of which held a dominant position. It was slightly hellenized, Aramaic being regularly used (sometimes with a Greek version added) in the inscriptions, which cover the first two and a half centuries A.D. Palmyra was raided by Antony. It was probably annexed in A.D. 17 by Germanicus; the tenth legion occupied it about this date, and Pliny's statement (in 'Titus' reign) that it was an independent buffer State is certainly false, for Vespasian built a road from Palmyra to Sura in 75. It retained much independence, however, maintaining its own army till the reign of Septimius Severus, who made it a Roman colony, and collecting for its own use the frontier customs: a tariff of the reign of Hadrian survives. Under Odaenathus and Zenobia (qq.v.) it ruled the Eastern Empire for a brief space, but after its reduction by Aurelian in 273 it never fully recovered. The ruins, which include the great temple of Bel, colonnaded streets, and triumphal arches, are impressive. The necropolis, with its curious tower tombs, has produced many examples of the local, and markedly oriental, school of sculpture.

History: J. G. Février, *Histoire de Palmyre* (1931). Monuments: T. Wiegand, *Palmyra* (1932). A. H. M. J.

PAMPHILA of Epidauros, a scholar and historian (of literature) at Rome under Nero. Her chief work, *Ἀρχαία ἱστορικὰ ὑπομνήματα*, was summarized by Favorinus.

PAMPHILUS (1) (4th c. B.C., painter, of Amphipolis. Pupil of Eupompus of Sicyon (contemporary of Parrhasius); teacher of Apelles, Pausias, Melanthius (qq.v.). He painted a 'Battle at Phlius' (probably 367 B.C.) and the Heraclidae, referred to by Aristophanes (*Plut.* 385: before 388 B.C.). His pupils paid him a talent for a course lasting twelve years. He insisted on a knowledge of arithmetic and geometry, and had drawing introduced in Sicyon as a school subject. T. B. L. W.

PAMPHILUS (2) of Alexandria (fl. A.D. 50), lexicographer. He wrote a *Τέχνη κριτική, Φυσικά, Περί βοτανῶν*, and, in ninety-five books, a great lexicon—*Περί γλωσσῶν ἥτοι λέξεων*—which absorbed many previous specialist collections (cf. GLOSSA, GREEK). It was used by Athenaeus, and abridged by Vestinus. Cf. DIOGENIANUS (2). P. B. R. F.

PAMPHOS, mythical pre-Homeric writer of hymns.

PAMPHYLI, see DORIANS.

PAMPHYLIA was traditionally colonized by a mixed multitude of Greeks led by Amphilochus and Calchas (or Mopsus); the local dialect, which is related to Arcadian, confirms this tradition. The name in early times denoted all the coast from Phaselis to Coracesium, but was later restricted to the plain where lay Magydus, Perga, Sillyum, Aspendus, and Side. Despite Cimon's victory on the Eurymedon these cities remained under Persian rule till they surrendered to Alexander. Though occupied by Ptolemy I and III Pamphylia was generally subject to the Selcucids till 189 B.C. when it was ceded to Rome by Antiochus III; most of the cities were received into the Roman alliance by Cn. Manlius, and the Attalids gained only the strip of coast where they founded Attaleia. Pamphylia was probably part of the province of Cilicia from 102 till c. 44, when it was transferred to Asia. In 36 it was granted by Antony to Amyntas, who coined in Side, and from 25 B.C. was part of Galatia till in A.D. 43 Claudius formed Lycia-Pamphylia. Reattached to Galatia by Galba (the Lycians having been freed), it was reunited to Lycia by Vespasian, remaining a separate *κοινόν*.

Jones, *Eastern Cities*, 124 ff.; R. Syme, *Klio* xxvii (1934), 122 ff., xxx (1937), 227 ff. A. H. M. J.

PAN (*Πάν*), a god native to Arcadia (q.v.). His name, of which a form *Πάων* also exists, is probably to be derived from the root found in Lat. *pa-sco*, and interpreted 'the Feeder', i.e. herdsman. Since Arcadia was not rich in large cattle the goat was its characteristic beast, and Pan is half-goatish in shape (human body to the loins, goat's legs, ears, and horns). A vague deity, he is not unheard of in the plural, Panes. The ancients regularly associated his name with *πᾶς* or *πᾶν* (see *Hymn. Hom. Pan.* 47; Pl. *Crat.* 408 e); hence in late theologizings he becomes a universal god (see Kern, *Relig. d. Griechen* iii. 127 ff.). This, however, has nothing to do with either his native worship or any normal developments of it.

He is regularly son of Hermes, the only other Arcadian deity of importance ('Homer' and Plato, locc. cit., and often); but his mother varies. He has little mythology, hardly more than a couple of late stories of his love affairs, see ECHO, SYRINX; another is that he loved Pitys the nymph of the fir-tree, who ran away from him and changed into her tree-shape (Nonnus, *Dion.* 42. 258 ff.). In general he is amorous, as is natural in a god whose chief business it was to make the flocks fertile. When they did not increase a primitive rite was resorted to of flogging his statue with squills (*Thuc.* 7. 106 ff., where one of the scholia says it was when hunting was unsuccessful). This was no doubt meant at once to arouse the god and to strike fresh vigour into him. He was also on occasion formidable; it is well to be quiet at noonday (still a haunted time in Greece, see, e.g., Schmidt, *Volksleben d.*

Neugriechen, 94), because he is asleep then and will be angry if disturbed (*Theoc.* 1. 15 ff.). He can induce 'panic' terror (like that of a frightened and stampeding flock or herd) among men, as Polyb. 20. 6. 12 Büttner-Wobst (the actual word is not pre-Hellenistic). He sends nightmares (Artemidorus, 2. 37, p. 139, 18 Hercher), but not all dreams of him are bad (*ibid.* 12 ff.). In general, he is thought of as loving mountains, caves, and lonely places (i.e. the regular haunts of flocks in hilly country) and as musical, his instrument being the pan-pipe (still used by shepherds; cf. SYRINX).

He has few relations with other gods. On Mt. Lycæon he and Zeus both had shrines (Paus. 8. 38. 5). Selene was one of his loves, and he trapped her by attracting her attention to a fine fleece (Verg. *G.* 3. 391 ff., and Servius ad loc.), or bribed her with sheep ('Probus', ad loc.).

His cult began to spread beyond Arcadia early in the fifth century B.C. Pindar, whose piety embraced quite minor deities, wrote him an ode (frs. 85-90 Bowra). Athens adopted him and gave him a cave-shrine on the Acropolis in the year of Marathon, when he was supposed to have promised and given help against the Persians (for the legend of his appearance to the runner Philippides see Herodotus 6. 105. 2-3). There were yearly sacrifices and torch-races in his honour (*ibid.* 4); L. Deubner, *Attische Feste* (1932), p. 213, doubts the latter, which, indeed, are hard to connect with Pan. Elsewhere he is not testified before the fourth century (Farnell, op. cit. infra, 432).

Of higher developments he has none. Aeschylus (*Ag.* 56) makes him an avenger of wrongs done to beasts; Plato (*Phdr.* 279 b-c) includes him among the gods to whom Socrates prays for inward beauty; pastoral poets make him a kind of divine patron of their literature; but these have nothing to do with his cult.

Farnell, *Cults* v. 431 ff., and the larger dictionaries s.v. H.J.R.

PANACEA (*Πανάκεια*), 'All-Healer', daughter of Asclepius (q.v.; Pliny, *HN* 25. 30 and often).

PANAENUS (fl. 448 B.C., Pliny), painter, brother (or nephew) of Phidias (q.v.), Athenian. He helped Phidias with the colouring of the Olympian Zeus and painted mythical scenes on screens between the legs of the throne. In the temple of Athena in Elis he put on a plaster mixed with saffron (for fresco?), and painted the inside of the shield of Colotes' Athena. The best sources ascribe to him, rather than to Micon or Polygnotus, the 'Battle of Marathon' in the Stoa Poikile (soon after 460); on the left, equal combat, with Miltiades urging on the Athenians and Plataeans; in the centre, Persians fleeing into the marsh; on the right, the fight round the ships with Cynegeirus and Callimachus; attendant gods and heroes, Theseus rising from the ground.

Overbeck, 696, 698, 1054, 1083, 1094-1108; Pfuhl, 717. T. B. L. W.

PANAETIUS (c. 185-109 B.C.), son of Nicagoras of Rhodes, Stoic philosopher. He attended the lectures of Crates of Mallos at Pergamum and then went to Athens, where he became a disciple of Diogenes the Babylonian, then head of the Stoa, and of his successor Antipater of Tarsus. Between 170 and 150 he must have returned to Rhodes for a short time, since he became priest of Poseidon Hippios at Lindus. In about 144 he went to Rome and soon joined the circle which gathered around P. Scipio Aemilianus. In 141 he accompanied Scipio on his travels in the Orient. After that he lived alternately in Rome and in Athens. In 129 he succeeded Antipater as head of the Stoa; and he held this position until his death in 109.

In spite of his Stoic creed Panaetius was an admirer of Plato and Aristotle and adopted the Peripatetic doctrine of the eternity of the universe. He tried to adapt

Stoic ethics to the requirements of the life of the Roman *grands seigneurs* with whom he associated, by putting into the foreground the more active and brilliant virtues of magnanimity, benevolence, and liberality as against the more passive virtues of fortitude (*not* to be disturbed in danger) and justice (*not* to do wrong), preached by his predecessors. His work *Περὶ τοῦ καθήκοντος* was used by Cicero in his *De Officiis*.

Panaetii et Hieratonis fragmenta, ed. H. N. Fowler (1885); R. Philippson, *Rh. Mus.* lxxviii (1929), *Philol.* lxxxv (1930), 357-413; B. N. Tatakis, *Panaetius de Rhodes* (1931); L. Labowsky, *Die Ethik des Panaetius* (1934); M. van Straaten, *Panaetius, sa vie, ses écrits et sa doctrine avec une édition des fragments* (1946). K. von F.

PANATHENAEA, an Athenian festival celebrated every year, and every fourth year with much greater pomp (the Great Panathenaea), on the 28th Hecatombaeon (July/Aug.), which was considered to be the birthday of Athena. It comprised a procession, sacrifices, and games. Citizens, maidens carrying sacred implements, youths conducting the sacrificial animals, metics, chariots which were to take part in the contests, and the cavalry figured in the procession. A famous representation is found on the frieze of the Parthenon. An embroidered peplos, hoisted on the mast of a ship set on wheels, was brought to the goddess. The flesh of the numerous victims was distributed among the people. The prize of the games was oil from the holy olives, stored in amphorae with a representation of Athena brandishing the spear and of one of several kinds of games.

E. Pfuhl, *De Atheniensium pompis sacris* (1900), 3 ff.; L. Deubner, *Attische Feste* (1932), 22 ff.; G. von Brauchitsch, *Die panathenäischen Preisamphoren* (1910). M. P. N.

PANCHAEA, *see* EUHEMERUS.

PANDAREOS (Πανδάρως), name of either one or two obscure mythological persons, the father of Aëdon (q.v.), and, if this is not the same Pandareos, the father of two daughters whose story is told *Od.* 20. 66 ff., whereon see the ancient commentators. Their names were Cleo-thera and Merope, and they were left orphans (the scholiast says Zeus killed their father and mother because Pandareos had stolen his dog from Crete). Hera, Athena, Artemis, and Aphrodite befriended them, brought them up and gave them all manner of good qualities; but while Aphrodite was visiting Zeus to arrange their wedding, the Harpyiae (q.v.) carried them off and gave them to be servants to the Erinyes (q.v.). Cf. Roscher, *Lexikon*, s.v. H. J. R.

PANDARUS, a Trojan, son of Lycaon (*Iliad* 2. 826-7), and an archer favoured by Apollo. At the instigation of Athena, he broke the truce between the Greeks and Trojans by shooting at and slightly wounding Menelaus (q.v.; 4. 88 ff.); wounded Diomedes (5. 95 ff.), and was killed by him (290 ff.). H. J. R.

PANDORA, *see* PROMETHEUS.

PANEGRICIS, *see* FESTIVALS.

PANEGRIC (πανηγυρικός), GREEK, properly a speech composed for a general gathering (πανήγυρις), such as the Olympic festival. Gorgias delivered such a speech (the *Olympiacus*), of which the theme was the necessity of union among the Greek States; Lysias in his *Olympiacus* followed similar lines. The best-known discourses of this kind are those of Isocrates, viz. the *Panegyricus*, composed, probably, for Olympia, in which he urged that Athens and Sparta should unite against Persia, and the *Panathenaicus*, in which he did not deal with contemporary politics, but enlarged on the glories of Athens through the ages. Thus the *panegyric* is hardly

distinguishable from an *encomium* (q.v.), and in Roman times the word was particularly used of speeches in praise of the emperor, e.g. Pliny's *Panegyric of Trajan* and that of Aelius Aristides on Marcus Aurelius. A collection of *Panegyrici Veteres* was edited by E. Bachrens, 2nd ed. by G. Bachrens (Teubner, 1911). J. F. D.

PANEGRIC, LATIN. The origins of Latin panegyric are to be sought in the ancient institution of the *laudatio funebris*. Such speeches of Cicero as the *Ninth Philippic*, the *Pro Lege Manilia*, and the *Pro Marcello* show developments and extensions of eulogy in relation both to deceased and to living persons. The *Pro Marcello* combines *laudatio* and *gratiarum actio*. In the Imperial age the *gratiarum actio*, formerly addressed to Senate or People, was delivered in honour of the emperor. A *senatus consultum* passed under Augustus required newly elected consuls to return thanks publicly to gods and emperor, but by Pliny's time the emperor's praise had supplanted that of the gods. This consular *gratiarum actio* provided the model for panegyrics addressed to the emperor or his representative on various occasions.

A collection of such speeches was found by Aurispa, 1433, in a Mainz manuscript (now lost) under the title of *XII Panegyrici Latini*. Its contents are (numeration according to W. A. Bachrens' ed. 1911): I. Pliny's (q.v. 2) *gratiarum actio* to Trajan on Pliny's elevation to the consulship. II. Latinus Pacatus Drepanius' panegyric to Theodosius. Pacatus (q.v.), a Gaul, had been sent to Rome to congratulate Theodosius on his victory over Maximus. III. Claudius (q.v.) Mamertinus' *gratiarum actio* to Julian, at Constantinople, on Mamertinus' elevation to the consulship. IV. Nazarius' panegyric to Constantine (in his absence) on an important imperial anniversary. V. Anonymous Gallie orator's *gratiarum actio* to Constantine, at Trèves, for benefits conferred on Autun. VI. Anonymous Gallie orator's panegyric to Constantine, at Trèves. VII. Anonymous orator's panegyric to Maximian and Constantine, at Trèves, in celebration of Constantine's marriage to Fausta. VIII. Anonymous Gallie orator's panegyric to Constantius, at Trèves, after the death of Allectus and the recovery of Britain. IX. Eumenius' (q.v.) *Pro Instaurantis Scholis Oratio*, in honour of all four emperors, at Autun, in presence of a provincial governor. X. Panegyric of an anonymous *magister memoriae* (unjustifiably named Mamertinus in the editions) to Maximian, in Gaul, on Rome's birthday. XI. *Panegyricus Genethliacus* to Maximian by the author of X. XII. Anonymous orator's panegyric to Constantine, at Trèves, after the defeat of Maxentius.

Although Pliny's speech is prefaced to the collection as the model of later panegyrics, the later speeches are much shorter, the longest, by Pacatus, being less than half as long as Pliny's. Otherwise there is considerable similarity, and Pliny's methods of adulation are imitated with progressive exaggeration. Former emperors, historical and mythological heroes, the gods, and nature herself are disparaged in favour of the emperor, whose most neutral and even unpraiseworthy actions and characteristics are eulogized with fantastically ingenious artificiality. The authors' outstanding virtue is the purity of their latinity, which is almost Plinian, if scarcely Ciceronian. The speeches are by no means equal in quality: they contain frequent passages of real beauty and eloquence, in spite of their general tawdriness. *Pro Instaurantis Scholis* is a pleasing speech, to whose author some of the anonymous panegyrics have been attributed. The *panegyrici* are of considerable historical interest, and throw much light on fourth-century Gaul.

Examples of panegyric not included in this collection are Ausonius' *Gratiarum Actio* and Ennodius' *Panegyricus*, addressed to Gratian and Theodoric respectively.

Verse panegyric is represented by the pseudo-Tibullian *Panegyricus Messallae*, the anonymous *Laus Pisonis*, Statius' *Silvae* 5. 2, and the panegyrics of Claudian and Apollinaris Sidonius (qq.v.). Its methods resemble those of prose panegyric.

Texts: Teubner (E. Baehrens, W. A. Baehrens). Style, diction, etc.: R. Pichon, *Les Derniers écrivains profanes* (1906); Schanz-Hosius-Krüger, *Gesch. röm. Lit.* iii (1922; for authorship problems). W. S. M.

PANEGYRICUS MESSALLAE, aptly characterized by Sellar as 'a strange specimen of a fly preserved in amber', a tasteless and bombastic eulogy of Valerius (15) Messalla Corvinus in 212 hexameters, which opens the fourth book of the collection of Tibullian poetry. That is why it survives. Fruitless attempts have been made to identify the unknown author with Tibullus, Propertius, and Ovid. Once wealthy, but now vexed by 'the sense of loss', he tries hard, by celebrating Messalla's exploits, to find favour in his eyes—and to secure a reward. The piece was composed between 31 and 27 B.C.

Text in editions of Tibullus; with commentary, in the older editions by Heyne and Dissen; G. Némethy, *Lygdami Carmina, acc. Panegyri in Messalam* (1906). See F. Hankel, *De Panegyrico in Messallam Tibulliano* (1874); H. Hartung, *De Panegyrico ad Messallam Pseudo-Tibulliano* (1880); R. S. Radford, 'The Juvenile Works of Ovid' (*Trans. Am. Phil. Ass.* li); (most exhaustive) S. Ehrengruber, *De Carmine Panegyrico Messallae Pseudo-Tibulliano* (1889-99); cf. Schanz-Hosius, *Gesch. röm. Lit.* ii (1935). J. H.

PANGAEUS, a mountain of southern Thraace, rising steeply to 6,000 feet, and important by reason of its timber supplies and the gold and silver mines at its base. The mines were first exploited by Thracian chieftains or by private Greek concessionaires. But the city of Thasos had acquired partial possession of them by 500 B.C.; the Athenians gained access to them in 437 (see AMPHIPOLIS); and in 358-357 Philip of Macedon occupied the main auriferous region to the east of Pangaeus, where he founded the town of Philippi (q.v.). The mines brought to Philip an annual revenue of 1,000 talents, but after 300 their productivity declined.

S. Casson, *Macedonia, Thraace, and Illyria* (1926), esp. 63-6; P. Perdrizet, *Klio* 1910, p. 1.

PANKRATION (παγκράτιον). In this event boxing and wrestling were combined with kicking, strangling, and twisting. It was a dangerous sport, but strict rules were enforced by umpires who closely watched the combatants. Biting and gouging were forbidden, but nearly every manoeuvre of hands, feet, and body was permissible. You might kick your opponent in the stomach; you might twist his foot out of its socket; you might break his fingers. All neck holds were allowed, the favourite method being the 'ladder-grip', in which you mounted your opponent's back, and wound your legs round his stomach, your arms round his neck.

F. A. W.

PANNONIA, a Roman province south and west of the Danube, was originally the land of the warlike Pannonians, who were Illyrians, only to a small degree celticized, and split up into many tribes. The southern part of Pannonia was subdued by Octavian in 35 B.C., but in 16 South Pannonian tribes invaded Istria, and in 14 a revolt had to be repressed in Pannonia. In 13 B.C. Roman troops commanded by M. Vinicius and M. Agrippa successfully took the offensive. After Agrippa's death the resistance of the Pannonians stiffened; Tiberius became commander-in-chief and conquered them (12 and 11), with the result that the whole of Pannonia up to the Danube came under Roman rule and was added to Illyricum. After a revolt in 8 B.C., put down by Sex. Appuleius, peace prevailed till A.D. 6, when the well-prepared Illyrian-Pannonian revolt broke out: Pannonians, Illyrians, and Dalmatians, led by two chiefs named Bato (q.v.), desperately fought for independence, until their country was reconquered by Tiberius by

A.D. 9 (see R. Rau, *Klio* 1924; C. Patseh, *Sitzb. Wien*, 214. 1, pp. 110 ff.). Shortly afterwards or even during the revolt, Pannonia was separated from Illyricum, and organized as an imperial province under a *legatus Augusti pro praetore* (a list of the governors is given by E. Ritterling, *Arch.-Epigr. Mitt. Österr.* xx (1897), 1-40; cf. R. Egger, *JOAI* ix (1906), Bbl. 63 f.). Shortly after A.D. 103 (perhaps in 106) it was divided into *P. Superior*, containing the northern and western parts, under a consular *legatus Augusti pro praetore*, and *P. Inferior*, covering the southern and eastern parts, under a praetorian *legatus Augusti pro praetore*, the latter being replaced by a consular *legatus* under Caracalla. Inscriptions (Dessau, *ILS* 2457 and 545) show that from the time of Gallienus *P. Inferior* was put under equestrian administration, which must also be presupposed for *P. Superior*. Under Diocletian both provinces were subdivided, *P. Superior* into *P. Prima* in the north (capital probably Savaria) under a *praeses* and a *dux*, and *P. Ripariensis* or *Savia* in the south (capital: Siseia) under a *dux*; *P. Inferior* into *Valeria* in the north (chief places: Aquinum and Sopiana) under a *praeses* and a *dux*, and *P. Secunda* in the south (capital: Sirmium) under a consularis and a *dux* (cf. *Rh. Mus.* xlv (1890), 203 ff. and *JOAI* ix (1906), 63 ff.). In the fourth century Pannonia was increasingly threatened by the barbarians. Unable to hold it, the Romans recalled the garrisons and gradually relinquished Pannonia after 395. The view (of Alföldi) that Pannonia was officially surrendered to the Huns in A.D. 406 is improbable (see W. Ensslin, *Phil. Wochenschr.* 1927, 848).

PANNYCHIS, an all-night festival or vigil in honour of a deity, e.g. Demeter at the Halao (Deubner, *Attische Feste*, 62); Artemis at the Tauropolia (ibid. 208). Since these were on occasion made an excuse for illicit love-affairs (see Menander, *Epit.* 234 ff. Allinson), it is not surprising that Pannychis appears as an attendant of Aphrodite (see Höfer in Roscher's *Lexikon*, s.v.). It was also a common name for a hetaera, as in Lucian, *Dial. Meret.* 9 (name of a speaker). H. J. R.

PANORMUS (nowadays *Palermo*), despite its name, was never Greek. Originally a Phoenician settlement in northern Sicily, it subsequently became Carthaginian; its spacious and beautiful harbour made it the capital of Carthaginian Sicily, an important naval and military base (so, e.g., in the Himera campaign, 480 B.C.). Except for its temporary loss to Pyrrhus (276), Panormus remained continuously in Carthaginian hands until captured by Rome (254). Carthage, despite valiant efforts by Hamilcar Barca from neighbouring Hercte (q.v.), never recovered it. Under Rome Panormus was a privileged *civitas libera et immunis*, acquired the status

of *colonia* (c. 20 B.C.), and was recolonized under Vespaasian and Hadrian (*Lib. Colon.* p. 211). It has, indeed, never ceased to be a flourishing, populous, commercial centre.

PANSA, GAIUS VIBIUS, defended Caesar's interests as tribune in 51 B.C., governed Cisalpine Gaul in 45, and was designated consul for 43. Pansa was attached to Cicero. In March 43 he led four legions of recruits by the Via Cassia to join Hirtius (q.v.) against Antony. He was wounded in a preliminary engagement at Forum Gallorum, 8 miles from Mutina, and after the battle of Mutina he died. Gossip alleged that Octavian had poisoned him. G. E. F. C.

PANSPERMIA, *see* FIRST FRUITS.

PANTHEON, a temple in the Campus Martius built with Baths and water-gardens by M. Agrippa in 27–25 B.C. and twice destroyed by fire. The existing building, repaired by Septimius Severus (*CIL* vi. 806), is by Hadrian (S.H.A. *Had.* 19) with Agrippa's dedication retained (*CIL* *ibid.*). It is a rotunda (43.20 m. in internal diameter) of brick-faced concrete, stuccoed externally to imitate masonry, with a portico (34 m. wide and 13.60 m. deep) of Corinthian columns, eight in front and two groups of four behind, facing north. Below the portico lies a rectangular foundation (43.76 m. wide and 19.82 m. deep) with porch (21.26 m. wide) opening southwards on a circular enclosure concentric with Hadrian's rotunda. Hadrian's building, evidently an entire remodelling, was largely screened by unconnected structures, including a large hall to south. The rotunda is 43.20 m. high, with central skylight 9 metres in diameter; its wall (6.20 m. thick) contains four rectangular and three semicircular alcoves. The door, breaking the circle, is flanked by niched buttresses, a common structural device also occurring in the body of the wall, which is converted by semicircular chambers into eight piers built as niches, all vertically linked by a very elaborate system of relieving arches extending to the haunch of the richly coffered dome. This covers a sumptuous interior, decorated in marble, framed by an entablature above the columned alcoves and canopied statue-bases. A flat panelled attic, with shallow rectangular niches, then prepares us for the dome, of which the upper structural system remains unknown. The bronze doors still remain.

PANTHOUS (Πάνθοος, Πάνθους), a Trojan elder (*Iliad* 3. 146). Apollo protects his son, Polydamas (q.v.; 15. 521–2), whence some said he was a Delphian (schol. *ibid.*). In Verg. *Aen.* 2. 318 ff. he is a pious priest of Apollo, killed by Aeneas' side at the storming of Troy.

PANTICAPAEUM, a colony of Miletus, on the west side of the Cimmerian Bosphorus (*Straits of Kerch*), founded probably c. 600 B.C. It thrived on the fisheries of the Straits, on the trade along the river Tanais, and especially on the export of wheat from the Crimea. It was ruled successively by two dynasties, the Archaeanactids (probably a line of Greek tyrants), and the Spartocids (q.v.), who gained power in 438. The gold coinage of Panticapaeum and the magnificently furnished rock tombs of its chief citizens attest its wealth in the fourth and third centuries. It subsequently (c. 115) became the capital of Mithridates VI's territory in south Russia, and was the seat of the local Crimean dynasty founded by his descendants under Roman sovereignty. In the third century A.D. it fell to the Sarmatians and Goths.

E. H. Mears, *Sythians and Greeks* (1913), 502–6. M. C.

PANTOMIMUS, a dancer who represented traditional themes in dumb show, supported by instrumental music and a chorus. (The apparent meaning is 'one who imitates everything', but the distinctive quality of pantomime was that the chief performer did everything by imitation.) This type of performance (the Greeks called it the 'Italian dance') was created at Rome in 22 B.C. by Pylades of Cilicia and Bathyllus of Alexandria. 'To dance the shepherd Cyclops' in tragic mask and buskins was nothing new (*Hor. Sat.* 1. 5. 64); Pylades' innovation, according to himself (*Maerob. Sat.* 2. 7), was to add the orchestra and chorus. Bathyllus seems to have specialized in light themes, akin to comedy or satyric drama, with a rustic setting—e.g. Pan revelling with a satyr (*Ath.* 1. 20; *Plut. Quaest. conv.* 7. 711 f.; *Sen. Con. Ex.* 3. pref. 10 and 16; cf. Lucian, *Salt.* 74 and Libanius iii, p. 392, Reiske); Pylades' style is said to have been 'high flown, passionate, melancholy' and more akin to tragedy; but these comparisons with drama look artificial; the immediate origins of pantomime do not appear to have been dramatic; its themes, whether erotic or otherwise, are taken from mythology or (occasionally) remote history as presented by the poets, whether dramatic or epic. It was a highly sophisticated type of entertainment, demanding much from both performers and spectators; though demoralizing, it was not coarse, like the mime.

Performances took place on the public stage or in private houses. The pantomimus, usually a handsome, athletic figure, wore a graceful silk costume (long tunic and cloak, *Suet. Calig.* 54), which allowed of free movement, and a beautiful mask with closed lips (*Lucian, Salt.* 29, A. Baumeister, *Denkmäler des klassischen Altertums* (1885–8), figs. 1351–2). Behind him stood the chorus, the players of flutes, pipes, cymbals, etc., and the *scabillarii*, who beat time by pressing with the foot on the *scabillum*, a wooden or metal instrument fastened underneath the sandal (*see* Baumeister, fig. 1350). Beside the pantomimus there sometimes stood an assistant—perhaps an actor with a speaking part (*ὑποκρίτου εὐφώνιον*, *Lucian* 68). *Lucian* tells (83) of a pantomimus who overacted the part of 'mad Ajax': he tore the clothes of one of the *scabillarii*, snatched a flute from an instrumentalist and with it struck the triumphant 'Odysseus' a blow which would have been fatal but for Odysseus' traditional head-dress (the *πῆλος*); then, springing down into the body of the theatre, he seated himself between two alarmed ex-consuls—all this to the delight of the rabble, who thought it the perfection of acting. Better performers were more subtle: Pylades, when the chorus uttered the words τὸν μέγαν Ἰλαμένεον, expressed the monarch's greatness by assuming an air of statesmanlike reflection (*Maerob. l.c.*). The dancer never in one piece have to appear in five different roles, each with its own mask (*Lucian* 66; change of costume seems unproved; cf. *eodem pallio*, *Fronto*, p. 57, 3, ed. Naber—but *Amobius, Adv. Gent.* 7. 33, seems to speak of a special costume for the part of Adonis). To convince an unbeliever, a pantomimus acted single-handed the love-tale of Ares and Aphrodite—*Helios* bringing his tidings, *Hephaestus* setting his snare, the gods coming one by one to look at the entrapped lovers, the confusion of Aphrodite, the abject alarm of Ares (*Lucian* 63; *Lucian* adds a story of a foreigner from the Pontus on a visit to Rome who, though he could not follow the song of the chorus because of his lack of Greek, found the pantomime's performance so lucid that he wished to take him home as an interpreter). The dancer's power to convey his meaning by steps, postures, and above all gestures (*Quint. Inst.* 11. 3. 84) was aided by certain conventions, e.g. there was a traditional dance for 'Thyestes devouring his children', which one pantomimus unfortunately performed when wishing to represent *Kronos* devouring his children.

The songs of the chorus were of secondary importance

(Libanius p. 381); such fragments as we possess are in Greek. Lucan and Statius wrote libretti for pantomimes—a degrading (Sen. *Suas.* 2. 19), if lucrative, occupation (Juv. 7. 87). That the chorus also expounded the narrative in recitative, while the dancer was changing for his next role, seems to be merely a guess of Friedländer. The music, like the whole performance, was enervating (Plin. *Pan.* 54).

For the popularity of the pantomimi (and pantomimae), the faction-fights of their supporters, the effect of their performances on public morality and the efforts of the government to deal with the problem, see Friedländer, *Rom. Life* (Engl. Transl.) ii. 100–17, and consult Daremberg et Saglio, Lübker, and esp. Smith's *Dict. Ant.*, s.v. 'pantomimus'. W. B.

PANYASSIS of Halicarnassus (5th c. B.C.), epic poet, uncle of Herodotus; revived epic poetry; author of a *Heraclea*; classed by some critics second to Homer; discussed by Quintilian (*Inst.* 10. 1. 54); said to have plagiarized a poem of Creophylus. See EPIC CYCLE.

EGF 253–65.

PAPAS, see ATTIS.

PAPHLAGONIA, a territory of north Asia Minor, which included the mountainous coastal region between Bithynia and Pontus and extended inland to the plateau. It was noted for its ship timber and cabinet woods. In social structure it was similar to Pontus. Villages predominated, organized in administrative districts, and temple territories were numerous. Greek settlements dotted the coast from Heraclaea to Sinope, but in Persian times the native population remained largely autonomous. After Alexander Paphlagonia was broken up, part falling to Bithynia and part to Pontus; and either then or at the fall of the Pontic kingdom the coastal cities acquired extensive territories. From the third century B.C. a portion south of Mt. Olgassys, called Inner Paphlagonia, kept its independence under native kings. Occupied in turn and divided by the kings of Bithynia and Pontus, and entrusted at first by the Romans to various dependent kings, this portion was attached by Augustus to the province of Galatia (6 B.C.). Diocletian revived Inner Paphlagonia as a province under a *corrector*. The chief town was Gangra-Germanicopolis.

Strabo 12. 542–4; R. Leonhard, *Paphlagonia* (1915); Jones, *Eastern Cities*, 148 ff.

PAPHOS was a city situated a short distance inland from the west coast of Cyprus, and settled by colonists from Greece in the Mycenaean period. It contained a famous temple of Aphrodite, who was believed to have risen from the sea near Paphos. The sanctuary was reputed to have been founded by Cinyras, a contemporary of Agamemnon, whose descendants combined the priesthood of Aphrodite with the royal authority in Paphos down to the time of the Ptolemies. After the fall of the Cinyrad dynasty the upper city was superseded by its port town (situated some 7 miles away), which became an assize centre and perhaps the seat of the proconsul under Roman rule. In Roman times the name of Paphos was reserved for the port town, the upper city being known as Old Paphos (*Παλαιάπαφος*).

D. G. Hogarth, *Devia Cypria* (1889), ch. 1. For the temple of Aphrodite see M. R. James, *JHS* ix. 175 ff.; C. Blinkenberg, *Le Temple de Paphos* (1924).

PAPINIANUS, AEMILIUS, one of the greatest classical Roman jurists. His origin (Syria?, Africa?) is uncertain; some peculiarities of his language do not suffice to establish his Oriental origin. He was seemingly a pupil of Cervidius Scaevola (q.v. 5). His official career was brilliant and in A.D. 203 he became *Praefectus Praetoria*.

He was executed in 212 by order of Caracalla for having disapproved of the murder of the emperor's brother Geta. Papinian owes his high reputation principally to his collective works, mostly of casuistic character: *Quaestiones* (37 bks.), completed before 198, and *Responsa* (19 bks.). Neither of these works, however, is uniform: the *Quaestiones* are not free from doctrinal discussions and contain numerous citations of earlier jurists, while the other work does not consist merely of *responsa*, being more casuistic than *responsa* normally were, and containing *responsa* of other jurists, decisions pronounced in the emperors' and prefects' *auditoria* and even in imperial constitutions. *Notae* to both these works were written by Paulus, to the *Responsa* also by Ulpian. Other writings of Papinian: *Definitiones*, *De adulteriis*. He did not publish any comprehensive systematical work.

Papinian was highly appreciated by posterity. In the Law of Citations (426) his pre-eminence was recognized by the provision that, failing a majority of jurists cited on one side or the other, Papinian's view should be decisive. The exclusion of Paulus' and Ulpian's notes on Papinian is likewise a tribute to his personal value. Justinian said justly of him: 'aetissimi ingenii vir' and 'merito ante alios excellens' (*Cod.* 6. 42. 30). The quotations from him are among the most instructive, though sometimes difficult on account of the conciseness of his style. The independence of his judgement and the sagacity of his mind led him not infrequently to original solutions which are not governed by a rigid technical process, but left room for equity, and to ethical and moral arguments. The logic of his thought is incontestable, his criticism is deliberate, yet without prejudice or harshness. He is not averse to changing his opinion when another appears to him to be right (cf. *Dig.* 18. 7. 6. 1: 'nobis aliquando placebat . . . , sed in contrarium me vocat Sabini sententia').

E. Costa, *Papiniano* (1894–9); H. Fitting, *Alter und Folge der Schriften röm. Juristen* (1908), 71 ff. On P.'s language: Leipold, *Sprache des Juristen Aemilius Papinianus* (1891); W. Kalb, *Röm. Juristen* (1890), 111 ff.

PAPINIUS, see STATIUS.

PAPIRIANUS (5th c. A.D.), grammarian, from whose *De Orthographia* excerpts are preserved by Cassiodorus (ed. Keil, *Gramm. Lat.* vii. 158–66). Cf. Teuffel, § 472. 5; Schanz–Hosius, § 1108.

PAPIRIUS (1) **CURSOR**, LUCIUS, Roman hero of the Second Samnite War, consul in 326, 320, 319, 315, 313 B.C.; dictator in 325, 309. The details of his military career, especially in the years immediately after the Caudine Forks disaster (321), are untrustworthy (cf. Livy 9. 15). But his Samnite victory and triumph in 309 stamp him as a great general, a fit match for Alexander the Great according to Livy (9. 16; 9. 38 f.). Rhetorical accounts are also given of his eating, drinking, and running abilities, while his alleged attempt to execute the other patrician hero of the age, Fabius (q.v. 3) Rullianus, for fighting against orders illustrates his strictness and severity (Livy, bks. 8 and 9; [Aur. Viet.] *De Vir. Ill.* 31; Eutrop. 2. 8; Zonar. 7. 26). Possibly Cursor was partly responsible for the law which virtually terminated enslavement for debt (H. Last, *CAH* vii. 545).

E. T. S.

PAPIRIUS (2) **CURSOR**, LUCIUS, son of (1), twice consul with Spurius Carvilius: in 293 B.C. when he defeated specially consecrated Samnite levies at Aquilonia (Livy 10. 38–42: numbers exaggerated); and in 272 when he ended the Pyrrhic War by subduing Lucani, Brutii, and Tarentines (Zonar. 8. 6). He created the first sundial at Rome (Pliny, *HN* 7. 213).

E. T. S.

PAPIRIUS, see also CARBO, FABIANUS.

PAPIUS MUTILUS, GAIUS, Samnite, was an Italian leader in the Social War. He invaded Campania in 90 B.C., and took many towns, but was repulsed by the consul Sex. Caesar, losing 6,000 men. Sulla defeated him in 89. He may be the Mutilus who perished in Sulla's proscription (82). M. H.

PAPPUS of Alexandria (fl. c. A.D. 300), a distinguished mathematician, wrote commentaries (1) on the *Elements* of Euclid, fragments of which are quoted by Proclus and others, while the section on bk. 10 has come down in Arabic; (2) on Ptolemy's *Syntaxis*; bks. 5 and 6 of this survive (edited by A. Rome, *Biblioteca Apostolica Vaticana*, 1931); (3) on Ptolemy's *Planisphaerium* and the *Analemma* of Diodorus (lost). But his great work is the *Synagoge*, 'Collection', edited by F. Hultsch 1876-8, invaluable for its accounts, (a) of Greek achievements in higher geometry, notably works (now lost) by Euclid, Aristaeus, and Apollonius belonging to the 'Treasury of Analysis' (*Tóπος ἀναλυτικός*); (b) of works by Autolycus, Theodosius, and Menelaus belonging to the 'Little Astronomy' (*Μικρὸς ἀστρονομούμενος*), Euclid's *Optics* and *Phaenomena*, and Aristarchus' *On the sizes and distances of the sun and moon*; (c) of various solutions of the problem of the two mean proportionals, a method of inscribing the five regular solids in a sphere, Archimedes' spiral, Nicomedes' 'cochloids', and the *quadratrix*; (d) of Archimedes' semi-regular solids, and of the subject of *Isoperimetry*, or the comparison of the areas and volumes of different figures with equal contours and equal surfaces respectively, including the volumes of the five regular solids which have their total surfaces equal; (e) of works on theoretical and practical mechanics by Archimedes, Philon of Byzantium, Heron, and Carpus. Pappus supplies many lemmas, etc., to the treatises elucidated, and important additions of his own, e.g. an extension of Eucl. i. 47 to any triangle, proof of the constancy of anharmonic ratios, measurement of the superficial area bounded by a spiral on a sphere, an anticipation of the theorem called by the name of Guldin, and 'Pappus' Problem', which was taken up by Descartes. T. H.

PAPPUS (πάππος), the old grandfather in *Atellana* (q.v.).

PAPYROLOGY, GREEK. Papyrus (see BOOKS), a marsh plant that grew abundantly in the Nile valley and elsewhere (though the Egyptian variety alone was manufactured into paper), was the normal writing material of the ancient world from the classical age onwards. Yet with few exceptions, of which the chief are (a) the Epicurean papyri from Herculaneum, (b) the papyri found at Dura-Europos on the Euphrates and the unpublished find from south Palestine, (c) the Ravenna and papal documents of the early Middle Ages, all our papyri come from Egypt south of the Delta, where the rainless climate favours their survival. A few have been found placed in tombs, some have been extracted from the wrappings of mummies; but the great majority come from the ruined buildings and rubbish heaps of the towns and villages of Upper Egypt, abandoned when the irrigation level receded; hence the fragmentary condition of so many of our texts. From 1788 onwards miscellaneous papyri (including some rolls of Homer and of the lost speeches of Hyperides) were acquired by travellers and made their way into European collections; excavations of Graeco-Roman sites did not begin till a century later. The most successful of these were carried out by B. P. Grenfell and A. S. Hunt, in particular at Oxyrhynchus (q.v.) which, with the Fayûm, the ancient Arsinoite nome, has proved the most fertile source of papyri.

2. We have no papyri certainly anterior to Alexander's conquest of Egypt in 332 B.C., though it is likely that our

oldest literary papyrus, the *Persae* of Timotheus, dates from the middle of the fourth century; our earliest dated document is a marriage contract of 311 B.C. from Assuan, the latest documents extend well beyond the Arab conquest of A.D. 642. Under the first two Ptolemies settlers from all parts of the Greek world flocked into Egypt, and in the first century of Greek rule the country was steadily hellenized. Greek was the official language of the country and remained so throughout the Roman and Byzantine periods; for a large part of the population it was also the language of business and of everyday life. Of this civilization—Hellenistic, Roman, Byzantine—the papyri are the record; of it, thanks to their endless variety, which includes ephemeral matter such as private letters, school exercises, prayers and charms as well as literary texts and public and legal documents, we can form a picture in singular detail. The number of published texts, varying enormously in size, condition, content, and value, is approximately 20,000. The extent of the material as yet unpublished is unknown.

3. Papyrology, which is strictly the decipherment and study of anything written on papyrus, is not a unified subject except in as far as all the papyri represent the different activities of a single civilization. The most obvious division is between literary and documentary texts. We owe the former, about 1,500 in number, in part to the fact that a knowledge of the Greek classics, in particular of Homer, was the staple of education throughout the period. Among them the new texts slightly outnumber those already known to us, though in the later centuries new texts become rare; yet the Byzantine papyri have given us the codex of Menander and a poem of Sappho's. The new texts include, besides those mentioned, various fragmentary manuscripts of the lyric poets, Bacchylides, much of Callimachus (notably the *Aitia* and the *Iambi*), Herodas, the *Ichnutae* of Sophocles, and many other fragments of the dramatic poets, including Aeschylus, Aristotle's *Constitution of Athens*, and the *Hellenica Oxyrhynchica*, an historical work probably from the hand of Ephorus.

4. Of the papyri of extant Greek authors more than half are texts of Homer, the *Iliad* appearing more frequently than the *Odyssey*. The later Homeric papyri add very little to what we know from our medieval manuscripts, but the 'eccentric' papyri of the earlier Ptolemaic period, with their numerous additions and omissions and variant readings, even if the text they present is an inferior one, yet enable us to appreciate the work of the Alexandrian scholars in standardizing the text. For the textual criticism of other authors the papyri have often been of great value. They are almost invariably not only older than the medieval manuscripts (in the case, e.g., of Xenophon or Lysias by as much as 1,000 years) but are also older than the families into which the manuscripts are commonly divided. There are not a few instances of new and improved readings contributed by, a few of emendations confirmed by, the papyri; but on the whole they bear witness to the general soundness of our tradition, by showing that the text as known to the Graeco-Roman world differed little from that we already possess. These papyri are, as a rule, from the standpoint of our medieval manuscripts, 'eccentric'; they agree now with one manuscript, now with another, and not infrequently the readings of the later and less valued manuscripts have been found in papyri, with the result that textual criticism relies less than formerly on the testimony of a single, ancient manuscript and takes more into account the evidence of the later, inferior manuscripts.

5. Besides the strictly literary papyri there are others which may be termed 'quasi-literary'; these include the scientific, in particular the medical, texts, the astrological and the magical; texts of these last two classes are of value for social and religious history. But more important than any of these are the Christian literary texts.

Here the papyri of texts already known are hardly, if at all, less important than the new texts; the Chester Beatty papyri, which consist of extensive portions of eleven papyrus codices, take our knowledge of the text of the Greek Bible back to the second century A.D., while the Rylands Library at Manchester has some fragments of Deuteronomy dating from the second century B.C. Here again, in spite of important modifications in the history of the text at various points for which we are indebted to the papyri, its general soundness is confirmed. Among the new texts the most sensational discoveries have been those of the Oxyrhynchus *Sayings of Jesus* and the Unknown Gospel in the British Museum of the second century; there are other fragments of apocrypha and of liturgical, theological, and hagiological works—of the last class the lengthy *Acta Pauli* is the best representative. Evidence of Christianity can also be found in some of the documents, notably in the *libelli* (certificates of sacrifice) of the Decian persecution and in private letters; of the latter the small archive of letters relating to the Meletian schism (A.D. 330–40) is particularly noteworthy.

6. The great mass of the papyri is roughly classified under the heading of documents—official, legal, and private papers of every description. Their value to the historian lies less in the direct information about events of historical importance which they convey (though texts of this character are extant, e.g. decrees of the Ptolemaic kings, the letter of the Emperor Claudius to the Alexandrians, the imperfect text of the *Constitutio Antoniniana* of A.D. 212 announcing the extension of the Roman *civitas* throughout the Empire) than in the indirect evidence about the historical background; such evidence may be all the more valuable because it was not deliberately selected for the benefit of posterity. Their contribution, apart from that to such specialist studies as metrology and numismatics or chronology, belongs to economic and social history in the widest sense and to the history of Greek and Roman law. In the Ptolemaic period, for example, we can observe in detail the nature and methods of Greek colonization of an Eastern Mediterranean country and its adaptation to the local conditions, and the growth of a bureaucracy which set the precedent for that of Rome; in the Roman age we see at close quarters what the Roman system of government meant to the governed and the exploitation of the country in the interests of Rome; in the Byzantine period there is the change-over to a quasi-feudal system, the growth of the great estates, the decay of Greek culture and its final disappearance before the Arab invaders.

7. The history of Greek culture and education in Egypt is partly to be found in the literary texts, their frequency, their geographical distribution, and their contents, partly in the private letters relating to education, and not least in the language of the documents themselves. Of this language, the Egyptian *Koine*, there is not one variety but many in the documents; not only does the clear, straight-forward Greek of the Ptolemaic documents differ from the cumbersome, half-understood periphrases of the Byzantine age, but in a given century the language of the official document will differ from that of a business document or that of a private letter of an educated writer, and these again from the illiterate documents closest to the spoken tongue. The language of the documents has been of the greatest value for the study of the contemporary works of the New Testament both in syntax and vocabulary, and provides a link connecting the language of the classical age with that of Byzantine and modern Greece.

BIBLIOGRAPHY

The only general work that deals with the whole subject is still W. Schubart's *Einführung in die Papyrskunde* (1917); for the historical and legal documents the *Grundzüge und Chrestomathie der Papyrskunde* (1912: 4 vols., with briefly annotated editions of

882 texts) of L. Mitteis and U. Wilcken is indispensable; for the legal papyri cf. also P. M. Meyer, *Juristische Papyri* (1917). For essays on some of the new literary texts see J. U. Powell and E. A. Barber, *New Chapters in Greek Literature* (three series, 1921–33); for a survey of the literary texts, new and extant and including the Christian, see J. G. Winter, *Life and Letters in the Papyri* (U.S.A. 1933: includes chapters on social life).

The list of published volumes of papyri is too long to give here; the most up-to-date list is that in A. Calderini, *Manuale di Papirologia* (1938). Of English publications the Oxyrhynchus series (ed. B. P. Grenfell, A. S. Hunt, H. I. Bell, vols. i–xvii, 1898–1927; in progress) is the most representative. For a selection of the documents see A. S. Hunt and C. C. Edgar, *Select Papyri* (Loeb, 2 vols., 1932–4). For publication of new books, texts, etc., on all branches of the subject see the annual bibliography of Graeco-Roman Egypt in *The Journal of Egyptian Archaeology*. C. H. R.

PAPYROLOGY, LATIN. Latin papyri (with parchments, waxed tablets, and ostraca) are less numerous and valuable than Greek papyri: they are found not only in Egypt but at Herculaneum and at Dura-Europos on the Euphrates. In Roman Egypt Latin did not supplant Greek, but was employed in official documents, legal and military, and in education.

CLASSIFICATION

(1) Legal documents: imperial rescripts, *ἀπογραφῆς*, wills, birth-certificates, deed of appointment of guardian to woman.

(2) Military documents: Registers of cohorts, accounts, receipt for loan of money, birth-registration; private letters, e.g. recommendation to military tribune, *Select Papyri* (Loeb) i. 122. Cf. *The Excavations at Dura-Europos*, Prel. Rep. of fifth season, ed. M. I. Rostovtzeff (U.S.A. 1934), pp. 295–303, pl. xxx–xxxi.

(3) Scholastic work: (Cicero) see 'Latin Exercises from a Greek Schoolroom', *CPhil.* xix (1924), 317; (Virgil, with Greek translation) *PRyl.* iii. 478 (4th c. A.D.); (Babrius, with Latin translation) *PAmh.* ii. 26 (3rd–4th c. A.D.); (Q. Remmius Palaemon, *Ars Grammatica*) Milne, *Cat. Lit. Pap.* 184 (2nd c. A.D.). Graeco-Latin lexica: *PLund* 5 (2nd c. A.D.), *PLondon* ii. 481, p. 321 (4th c. A.D.).

(4) Literary texts (less trustworthy than Greek texts on papyrus): (a) new authors: (from Herculaneum) C. Rabirius (?), *Carmen de Bello Aegyptiaco* (*Actiaco*, Lowe, *Codd. Lat. Antiq.*; 70 hexameters), Bachrens, *PLM* i. 212, I. Ferrara, *Poematis latini rell. ex vol. Herculaniensi* (1908). Anonymous histories, e.g. *POxy.* xvii. 2088 (2nd c. A.D.; on Scrvius Tullius, perhaps by L. Aelius Tubero, Cicero's friend, author of *Annales*).

(b) New parts of known authors: Sallust, *Histories* (*PRyl.* iii. 473, 2nd–3rd c. A.D.); Livy, *Epit.* 37–40, 48–55 (*POxy.* iv. 668; E. Kornemann, *Klio* 1904, 2. Beihft.).

(c) Texts already known: Sallust, *Catilina*, *Jugurtha*: Cicero (the best represented Latin author), *Verr.* 2. 2, *PLaud.* v. 90, time of Augustus—the oldest Latin papyrus and the oldest manuscript of Cicero; Virgil, *Aeneid*, *POxy.* viii. 1098 (4th–5th c. A.D.), *PFouad* i. 5 (4th–5th c. A.D.), *POxy.* i. 31 (5th c. A.D.), *PSI* i. 21 (5th c. A.D., with accents and marks of long quantity); Livy bk. 1; Lucan; Juvenal 7. 149–98 (parchment, c. A.D. 500), *JEGArch.* xxi (1935), 199 (line 156 *fronte* with four less important manuscripts).

Facsimiles of Latin literary papyri in British collections: E. A. Lowe, *Codices Latini Antiquiores*, ii (1935).

(5) Liturgical fragment, *PRyl.* iii. 472 (3rd–4th c. A.D.).

(6) Legal texts, e.g. Gaius (Teubner, 1935) and the *Digest* (*PRyl.* iii. 479).

Medieval Latin papyrus books include Paris Homilies of St. Avitus (6th c. A.D.), Paris and Geneva Sermons and Letters of St. Augustine (7th c. A.D.), the Vienna Hilary, the Milan Josephus: see Preisendanz, *Papyrusfunde u. Papyrusforschung* (1933), 18.

PARADOXOGRAPHERS. Interest in the marvellous and out-of-the-way, as such (παράδοξα, θαυμάσια), is prominent in the *Odyssey*, the histories of Herodotus, Theopompus, and Ephorus, and other Greek writings. Paradoxography came into existence, as a distinct literary genre, early in the Alexandrian age, and continued to be practised for many centuries. The Seven Wonders of the World (τὰ ἑπτὰ θαύματα, or θαύματα), that is, the temple of Zeus at Olympia, the Colossus of Rhodes, the hanging gardens of Semiramis, the walls of Babylon, the Pyramids, the Mausoleum, and the temple of Artemis at Ephesus (or the Delian altar of Apollo), seem to have been canonized in Alexandrian times. Callimachus' contemporary, Bolus, who wrote *Περὶ τῶν ἐκ τῆς ἀναγνώσεως τῶν ἱστοριῶν εἰς ἐπίστασιν ἡμᾶς ἀγόντων*, and Callimachus himself, one of whose Ὑπομνήματα was entitled *Θαυμάτων τῶν εἰς ἅσας τὴν γῆν κατὰ τόπους ὄντων συναγωγή* (so Suidas), may perhaps be regarded as the founders of paradoxography. Archelaus composed Ἰδιοφυῖ (epigrams on 'peculiarities') for Ptolemy Euergetes (247-221 B.C.), and Antigonos (q.v. 4) of Carystus wrote on similar themes at about the same time. Callimachus' pupil, Philostephanos of Cyrene, wrote, like Archelaus in verse, on *Παράδοξοι ποταμοὶ* and *κρήναι*. Prominent among the paradoxographers of the Roman period are Isigonos and Phlegon (qq.v.). After Phlegon paradoxography seems to have declined in popularity. But as late as the sixth century A.D. Philo of Byzantium wrote *Π. τῶν ἐπὶ θαυμάτων*. The paradoxographers often took some particular country as their field, Sicily, Scythia, etc. Natural phenomena, especially rivers, attracted them greatly. But zoology, history, and social customs also came within their purview.

A. Westermann, *Paradoxographi* (1839); O. Keller, *Remon naturalium scr. gr. minores* (1877). J. D. D.

PARAGRAPHE (παράγραφη). In Athens this corresponded roughly to demurrer in Anglo-American practice. Upon the expulsion of the Thirty Tyrants in 403 B.C. an amnesty between their adherents and their opponents was arranged. A law sponsored by Archinus was enacted that if a defendant claimed the protection of the amnesty, he could enter a special plea (παράγραφη) that the case was not actionable, and he was permitted to speak first in an action to determine the validity of his plea. If the defendant won, the original case was dismissed; otherwise it went to trial. Early in the fourth century the procedure was extended to practically all civil suits. It is now established that the law of Archinus applied only to civil suits.

G. Calhoun, *CPhJ.* 1918, 169 ff.

R. J. B.

PARAKLAUSITHURON, a serenade or lover's complaint sung at his mistress's door (Plut. *Aem.* 8). A good example comes from a Tebtunis papyrus (J. U. Powell, *Coll. Alex.*, 177-80).

PARASITE (παράσιτος), originally 'guest' with no invidious meaning, had associations especially with one of the local cults of Heracles: see Diodorus of Sinope fr. 2. 23 (*C.H.F.* ii. 421), cf. article CARRON, and writers cited by Athenaeus 6. 234 ff. (from Epicharmus onwards).

From contemporary life Comedy early adopted the parasite, 'sponger', or man-about-town, as a regular character. In Eupolis, *Κόλακες*, parasites doubtless form the chorus. Plays of Middle Comedy are entitled *Παράσιτος* (Antiphanes, Alexis; also, later, Diphilus) from their chief character; and in New Comedy the parasite is the satellite of the swaggering soldier, playing upon his vanity (Menander, *Κόλαξ*; Terence, *Eumuchus*).

Notorious parasites in real life are described in Comedy, e.g. Chaerephon (Menander, *Sam.* 258), who belonged to the generation before Menander and wrote the first book on Dining; and a parasite nicknamed *Ζωμός*, 'soup', because he was always there at the beginning of dinner.

Outside Comedy, but indebted to it, are the studies of parasites in Lucian, *Περὶ παρασίτου*, and Alciphron, *Epistles*.

See O. Ribbeck, *Kolax*, *Abh. süchs. Ges. Wiss.* 9 (1883).

W. G. W.

PARCAE, see FATE.

PARCHMENT, see BOOKS, I, paras. 12, 13.

PARENTALIA, Roman feast of All Souls, on the *dies parentales* (13-21 Feb.), the last of which was a public ceremony, the Feralia (q.v.), while the rest were days reserved for private celebrations of the rites to the family dead (cf. *di parentum*, or *parentes*). They were *dies religiosi* (cf. *DIES FASTI*) during which the magistrates did not wear the *practexta*, temples were closed and no weddings celebrated, but not all *nefasti* (Lupercalia, 15th, Quirinalia, 17th, 18th-20th all *comitiales*).

Ovid, *Fasti* 2. 532 ff., and Frazer ad loc.

H. J. R.

PARILIA, festival of the god and goddess Pales (cf. *Palibus II, fast.* *Antiaties* on 7 July, and the varying gender of the name in literature), held on 21 April. As they were the patrons of flocks and herds, their feast was one of purification of the beasts, herdsmen, and stalls. The Vestals distributed *februa*, in this case ashes of the calf of the Fordicidia, blood of the October Horse (see MARS), and bean-straw. The beasts were sprinkled with water at dawn, the stalls swept out and decked with branches and wreaths; sulphur and other purifying agents were used to fumigate the beasts, and bonfires lighted through which the celebrants jumped three times. A prayer to Pales was recited four times, facing east (Ovid, *Fasti* 4. 721 ff., with Frazer's notes). For some unknown reason it was supposed by Cicero's time (*Div.* 2. 98; Varro, *Rust.* 2. 1. 9) that it was the foundation-day of Rome (*natalis urbis*).

Cf. Wissowa, *RE* 199 ff.

H. J. R.

PARIS (Πάρις) or **ALEXANDER** (Ἀλέξανδρος), in mythology, son of Priam and Hecuba (qq.v.). Homer introduces him as a well-known character and merely alludes to his doings before the *Iliad* begins. He had insulted Hera and Athena (24. 28-30), an earlier equivalent of the Judgement (see below); he had carried off Helen from Laedaemon (3. 443 ff.). He takes part in the fighting with some distinction, especially as an archer, but shrinks from Menelaus (q.v.; 3. 16 ff.), and though he afterwards challenges him to a duel to decide the war, he gets much the worst of it and is only rescued by Aphrodite (67 ff., 340 ff.). His death is implied but not mentioned in the *Odyssey* (see MEMENTO).

The Cypria gave a more detailed account (Proclus, in Photius). After the incident of the 'apple of Discord' (see EUS), Hera, Athena, and Aphrodite are brought by Hermes to Paris to judge which is the most beautiful; bribed with a promise of Helen, he prefers Aphrodite. This incident is not later than the seventh century, see *Artemis Orthia* (*JHS* supp. vol. v. p. 223 and pl. cxvii; cf. Reinhardt, *Das Parionsteil* (1938), p. 6.) An ivory

from Sparta shows Paris seated, holding the apple, as the goddesses approach him. It is essentially a folk-tale of choice (which is best, kingship, warlike prowess, or love?), comparable to the Hebrew story of the choice of Solomon (1 Kings iii. 5 ff.; wisdom, long life, riches, destruction of enemies). How it came to be attached to the (possibly) historical Paris is not known. As a result, the Cypria continued, he built ships by advice of Aphrodite, went to Sparta, and so carried off Helen (q.v.). He was killed, according to the *Little Iliad* (Proclus), by Philoctetes (q.v.); cf. OENONE.

His early adventures cannot now be traced farther back than the tragedians, though they may have been told in some quite lost part of the Cypria, or other epic. As the tragedies also are lost (Soph. and Eur., *Alexandros*), our remaining sources are the mythographers. Hyginus, *Fab.* 91, says that he was one of the younger children of his parents, and Hecuba while pregnant dreamed that she brought forth a torch from which serpents issued. The dream-interpreters ordered her child to be destroyed, but the servant charged with killing him exposed him instead; he was rescued by shepherds, grew up, and made a pet of a bull which Priam's servants carried off for a prize at funeral games. Paris, to recover it, entered Troy, took part in the games, won all his events, and was recognized and restored. Something like this must have been the plot of the lost plays, especially that of Euripides, see the frs., Nauck 42-64. Apollodorus (3. 148 ff.) makes him the second son, says he was suckled by a she-bear, and omits the incident of the games.

For his slaying of Achilles see ACHILLES. He does not appear to have had any hero-cult (correct Farnell, *Hero-Cults*, p. 412, note 97; the passage there cited refers to Alexander of Abonuteichos, q.v.).

Convenient summary of literature in Türk's art. 'Paris' in Roscher's *Lexikon*; some later refs. in text. H. J. R.

PARIS, see also JULIUS (9).

PARMA, see ARMS AND ARMOUR, ROMAN.

PARMENIDES of Elea is said to have legislated for his native city and (c. 450 B.C.) to have visited Athens in his sixty-fifth year (Pl. *Prm.* 127 b). His didactic poem, in prosaic but trenchant hexameters, survives in large fragments. It opens with an allegory describing his chariot-journey from the House of Night to that of Day, where he is greeted by a goddess whose welcoming address forms the remainder of the work.

There are three ways of thought, that It is, that It is not, and that It is and is not (the last being that of Heraclitus). The two latter she denounces, the first, which Parmenides has just travelled, she describes in detail; it is a rigorous deduction of the characteristics of what is from the premiss that it is. What is is without beginning or end, single, motionless, continuous, determinate, like a sphere.

It follows that the diversity of nature exists only in name; and the goddess now, starting afresh and rejecting explicitly the monism of earlier physicists, derives our acceptance of experience as true from an original convention to 'name' two contrasting 'forms' (Light and Darkness), and unfolds a cosmology which is no longer her own divine revelation but an historical account of the world according to human belief.

Parmenides' account of the ways of thought is the earliest discussion of method in philosophy; his rejection of the third way the discovery of the Law of Contradiction; his distinction of the object and method of thought (*noûs*) from that of belief (*δόξα*) the separation of philosophy from physics; his journey along the Way of Persuasion the discovery of the possibility of cogent logical proof.

Diels, *PPF* 48-73; *Vorsokr.* i. 217-46; Burnet, *EGP*⁴, 169-66; K. Reinhardt, *Parmenides und die Geschichte der griechischen Philosophie* (1914); G. Calogero, *Studi sull' eleatismo* (1932); W. Jaeger, *The theology of the early Greek philosophers* (1947), ch. vi.

A. H. C.

PARMENION (1) (c. 400-330 B.C.), son of Philotas, a Macedonian noble, became the best general of Philip II, though few details are known of his activities at this time. He accompanied Alexander to Asia as second-in-command of the army, and besides holding independent commands was present at all the great engagements of the first three years; at Issus and Gaugamela he commanded the left (defensive) wing. He was left at Ecbatana to guard the Persian treasure and the lengthening communications when Alexander himself moved east (330); but the trial and execution for treason of his son Philotas made him an obvious danger to Alexander, who promptly had him murdered.

Parmenion was certainly no accomplice to the alleged treason of Philotas. But he was not in sympathy with Alexander's bold ideas for the conquest (still less the government) of the Persian Empire: he represented the older school among the Macedonian officers ('Philip's men'), in contrast to Alexander and his intimates. He was certainly a good general, but the view (K. J. Beloch, *Griechische Geschichte*², iv. 2, pp. 290 ff.) that his was the brain directing Alexander's victories is fantastic.

Arrian, *Anabasis*, bks. 1-3; H. Berve, *Alexanderreich*, no. 666. G. T. G.

PARMENION (2) of Byzantium (1st c. B.C.), one of the last original dialect-lexicographers. See GLOSSA (GREEK).

PARMENISCUS, pupil of Aristarchus and defender of his texts against Crates of Mallos, wrote *Πρὸς Κράτητα, Περὶ ἀναλογίας* (recognizing eight noun declensions), and some commentaries.

PARMENO, of Byzantium, author of *Iambi*, i.e. choliambi. The fragments exhibit P. as a realist with a turn for moralizing. He was probably contemporary with Phoenix of Colophon, i.e. first half of third century B.C.

Texts: J. U. Powell, *Collectanea Alexandrina* (1925), 237-8; A. D. Knox, *Herodes, Cercidas, and the Greek Choliambi Poets* (Loeb, 1929), 272-3. General literature: G. A. Gerhard, *Phoenix von Kolophon* (1909), 211-13. E. A. B.

PARNASSUS, outlying spur of the Pindus range, running south-east and rising to 8,200 feet. It separates the Cephissus valley from that of Amphissa and runs into the Corinthian Gulf at Cape Opus. Its limestone mass is mostly barren, but its lower slopes are well-watered; they carry the Phocian towns on its eastern flank and the plain of Crisa with the high valley of Delphi on the south. The best ascent is from Daulis; the passes, which cross its spurs, run from Cytinium to Amphissa and from Daulis to Delphi via the *σχιστή ὁδός*, where the latter is joined by the route from Lebadca. A sacred mountain especially to the Dorians. N. G. L. H.

PARODOS, see TRAGEDY, para. 14. In the structural sense see THEATRES.

PARODY, GREEK (*παρωδία*). A cartoon exaggerates a prominent feature of the subject and presents him in incongruous dress and surroundings. Parody uses the same means, exaggeration and incongruity, either together or singly. Much ancient and modern parody contents itself with describing trivial things in the language of high poetry. The subtler task of bringing into bolder relief, by exaggeration, the salient features of an individual's style was seldom attempted by the Greeks. Aristophanes achieves it brilliantly in the Glyke song in the *Frogs* (1331-63), with a bathetic subject (the stolen cock) to add to the fun; and Plato's parodies, unaided by bathos, are perhaps as near to their originals as Max Beerbohm's

Meredith in *Seven Men*. Aristotle (*Poet.* 1448^a12) mentions Hegemon as ὁ τὰς παρωδίας ποιήσας πρῶτος, but Athenaeus (15. 699 a) says, more precisely, that he was the first to enter τοὺς θυμεικοὺς ἀγῶνας and win contests at Athens for parody. (For similar contests cf. an Eretrian inscription of c. 400 B.C., 'Ἐφημερίς Ἀρχαιολογική (1902, pp. 98 ff.).) Athenaeus (15. 698b), following Polemon, regards Hipponax as the real inventor of the genre, and quotes from him four burlesque hexameters on a parasite. In the same vein are some of Simonides' iambs on women (fr. 7. 83-93). But we can go farther back than any of these poets. The *Margites*, generally attributed to Homer in antiquity, was known to Archilochus (8th-7th c. B.C.). It described the adventures of a Simple Simon, and had iambs mixed up with its hexameters. Virtually nothing of it or of the *Cereopes* remains. The extant *Batrachomyomachia* (*Battle of the Frogs and Mice*), written perhaps during the Persian Wars, is a mildly amusing piece. Athena, impartially detesting the mice who gnaw holes in her Peplus and the frogs who keep her awake in the small hours (178-96), is entertaining, and the dying mouse (65-81) rather pathetic as well. The tradition of Homeric parody runs through comedy from Cratinus to Diphilus, the gastronomists (Matron, Archestratus, etc.), and the Sillographers (see TIMON 2).

2. Epicharmus' mythological burlesques must have contained much parody, but little of it survives (frs. 42-3. 10-11, 229). In Old Attic Comedy Hermippus seems to have been fond of parody and in Middle Comedy Eubulus had a flair for it. Fr. 10 (a Euripidean epilogue) is excellent; in fr. 64 even the well-worn theme of the 'Lady of Copais in her robe of beet' amuses; and there is freshness in fr. 75. Parody survives sporadically in Diphilus and Menander (Diph. frs. 30, 126; Men. pp. 150, 188, 267, 402, 414, 477-8, Loeb); but by this time the poet sometimes has to warn his audience that he is parodying.

3. In Aristophanes the rise and fall of style is almost as persistent as in Wodehouse. Noble and ignoble words rub shoulders, 'guts and glory' at *Eq.* 200, 'poniards and piles' at *Vesp.* 1119. *Lys.* 715 descends precipitately to Rabelaisian frankness, set off (as often in Ar., cf. *Eq.* 1242) by the smoothest of tragic rhythm. Mnesilochus-Palamedes, writing his letter (*Thesm.* 781), momentarily forgets the dignity of his rôle and curses 'that rotten rho'. Often comic tails are appended to well-known passages. *Ran.* 931 'Oft in the stilly night, ere slumber's chain has bound me, I lie wondering what on earth a brown horse-cock is'. *Eq.* 1250-2 the farewell of Cleon-Alceste. The apostrophe to the soul (*Eur. Med.* 1057) takes unexpected turnings (*Ach.* 450 ff., *Eq.* 1194, *Vesp.* 756 (1)). In other passages the contrast is given by two characters talking in contrasted styles, as in the dialogue between Lamachus and Dicaeopolis at the end of the *Acharnians*. In this vein nothing can beat *Thesm.* 808: 'Why live I still?'—'The crows don't know their job.'

4. Sometimes, again, the parody is concerned, not with poetical or tragic style in general, but with some particular feature of tragedy (a prologue, a messenger's speech, a recognition scene), or of religious, political, or forensic procedure (*Eq.* 1316-34, *Vesp.* 892-1008, *Ran.* 738-55, and passages in *Thesm.* 332-432, *Ecl.* 151-65). Then there are parodies of situation, Odysseus under the ram's belly (*Vesp.* 177 ff.), Bellerophon mounted on Pegasus (*Pax* 76 ff.), Palamedes, Helen, and Andromeda (*Thesm.* 769-1135), which give us an idea of what a mythological burlesque was like (see COMEDY and MYTHOLOGY).

5. Aristophanes also parodies the styles of particular authors, especially Euripides. The tragedian's supposed passion for enigmatical epigram is satirized at *Ach.* 307, *Thesm.* 5-8, *Ran.* 1443-4. In the Glyke song (*Ran.*

1331-63) the points are (over and above metrical and musical considerations which are hard to assess) certain idiosyncrasies of diction, such as ὄρφα and compounds in -φαίς (cf. *Ach.* 460, *Vesp.* 1484, *Thesm.* 881, 1075 κληῖρα χαλδᾶσθω, ἑξῶπιος, δ'χληρός), incessant repetitions of words (often parodied elsewhere), and the 'wings of a dove' motif (1352); in the cento (1309-22), excessive affection for the polysematist dimeter (see METRE, GREEK, III. 12), a licentious anapaest (1322), the use of melisma (1314), and perhaps the constant references to animal life. In other places Aristophanes takes off the jargon of philosophical and other cliques (see *CQ* 1927, 113-21, and cf. Damoxenus fr. 2). But many of Aristophanes' poetic flights (cf. *Nub.* 1005-8, *Ran.* 154-7) cannot justly be described as parodistic. They are gay, enchanting lyrics, light as air, which he wrote to delight himself and us. Such parody as they contain consists in the lightest touches, and we are seldom brought down to earth with a bump. Of such a kind are *Eq.* 551-64, 581-94, *Nub.* 563-74, 595-606 (though there the Socratic-Euripidean deity Αἰθήρ is meant to look out of place among the Olympians), and many lyrics in the *Birds*. There is gentle irony in the beauty with which the frogs invest their surroundings (*Ran.* 209-69), but the beauty matters more than the irony. At the same time, the style absorbs a word like κραπαλόκωμος without incongruity. Aristophanes resembled Shakespeare more than any Greek tragedian in his power to bring homeliness within the compass of beautiful or passionately serious verse (e.g. *Lys.* 1122-61).

6. Plato deftly hits off the manner of Prodicus, distinguishing between apparent synonyms (*Prt.* 337 a-c), and Polus with his assonances (*Grg.* 448 c). At *Resp.* 452 d, for no apparent reason, he breaks off into an amusing skit on the Antiphontine manner. If the *Menexenus* is his, the funeral speech it contains is a parody—for he cannot have meant it seriously. Best of all is the parody of Agathon in the *Symposium* (194 e-197 c); little as we have of Gorgias, the Gorgianic touches are unmistakable here.

7. Lucian's parodies are not on the level of Aristophanes, but his rollicking humour is irresistible. In the *Timon* (9) Zeus' thunderbolt has gone for repairs; he hurled it at Anaxagoras, but missed, and it lit a temple instead. The *Prometheus* has a good law-court speech (7-19). There are some clever touches in the *Deorian Dialogi*: 1. 2 Zeus' ignorance of Caucasian geography; 5. 4 Hephaestus, the grubby waiter; 9. 1 Zeus bears children all over his body; 10. 2 the Sun-god, ordered to arrange a Νύξ Μακρά, grumbles that 'there weren't goings on like this in old Kronos' time; day was day then, and night night'. Best of all is 20, the Judgement of Paris; Zeus is a benign father, Hermes a charming guide, and the three goddesses admirably catty to each other. *Zeus Τραγωδός* has some amusing passages; *Τραγωδοποδάγγρα* and *Ωκύπους* are pretty dull.

H. Tücher, *De uru parodiae apud Aristophanem* (Progr. 1849); W. H. S. Bakhuyzen, *De parodia in comediis Aristophanis* (1877); A. T. Murray, *On parody and paratragedy in Aristophanes* (Berlin, 1891).

PARODY, LATIN. The two types of literary parody—(a) pastiche, which caricatures the manner of an original without adherence to its actual words, and (b) parody proper, in which an original, usually well known, is distorted, with the minimum of verbal or literal change, to convey a new sense, often incongruous with the form—are both found in Latin, though less often than in Greek; they occur more often in verse than in prose. The former type demands some measure of literary appreciation in the reader, while the latter generally aims at a simpler comic effect.

Examples of (a) occur sporadically in comedy, when the grandiose language of tragedy is burlesqued. This type is sometimes used as a vehicle of literary criticism;

so some lines of Lucilius parody the clumsy solemnity of Ennius and the tragic bombast of Pacuvius. Some parts of the poem on the Civil War recited, as a model for epic, by Eumolpus in the *Satyricon* of Petronius (119-24) read like a pastiche on Lucan.

The only extant example of sustained parody of type (b) is the tenth poem of the *Catalepton* (see APPENDIX VERGILIANA) in which poem 4 of Catullus, addressed to a yacht, is turned, with remarkable dexterity, into an address to a parvenu magistrate. The *Antibucolica* of Numitorius seem to have been parodies of the 1st and 3rd Eclogues of Virgil, but only the opening lines are preserved by Donatus; in these the point of the parody turns on alleged liberties taken with language by Virgil.

PAROEMIAC, see METRE, GREEK, II (7).

PAROEMIOGRAPHERS. The Proverb (*παροιμία*), or concise saying in common and recognized use, often summarizing experience or embodying practical wisdom, is a constant feature in Greek literature, both prose and verse, from Homer onwards. It not only provided an ingredient calculated to please the ordinary hearer, but contributed not a little to the formulation of moral philosophy. It might be in prose or metrical form, and gave its name to the Paroemiac (see METRE, GREEK, II (7)). Paroemiography, or the making of collections of proverbs for specific purposes, may be said to have begun with Aristotle in a work entitled *Παροιμιαί* (Diog. Laert. 5. 26); he was followed in this by his pupil, the Peripatetic Clearchus of Soli, and later by the Stoic Chrysippus; Theophrastus also wrote *Π. παροιμιῶν*. So far such collections were made for the purposes of philosophy. In the Alexandrian age collections for literary purposes began to be made by such writers as the antiquarian Demon (*Π. παροιμιῶν*, of which a fragment has been recovered); Aristophanes of Byzantium, who made prose and metrical collections; Didymus (13 books); and Lucillus of Tarrha (in Crete). The later sophistic movement led to a great demand for the proverb as an ornament of style, as may be seen, for example, in the works of Lucian (W. Schmid, *Atticismus* i. 411) and Libanius. The origins of the existing *Corpus Paroemiographorum* go back to Zenobius, a sophist of the time of Hadrian; he made an Epitome in three books of the collections of Didymus and Lucillus Tarrhaeus (Suidas, *Ζηνόβιος*), obliterating their book-divisions in the process; they appear to have been already arranged according to literary genres. The Corpus in its original form, as constituted in the early Middle Age, consisted of (i) the work of Zenobius, arranged alphabetically for scholastic purposes; (ii) a collection of *Proverbs of Plutarch used by the Alexandrians*, probably deriving from Seleucus of Alexandria (Suidas, *Σέλευκος*); and (iii) an alphabetical list of *Popular Proverbs*, derived from the same sources as Zenobius, ascribed to the lexicographer Diogenianus (time of Hadrian), but probably the work of an anonymous writer. From these were formed later the collections of Gregory of Cyprus (13th c.), Macarius (14th c.), and Apostolius (15th c.); these have no independent value.

PAROS, the second largest of the Cyclades, a centre of Aegean trade, and famous for its marble. Early in the seventh century the Parians colonized Thasos. In 490 the island furnished a trireme to the Persians under Datis, for which the Athenian Miltiades later besieged the town without success. In 480 the Parians played a double game, and after the battle of Salamis were compelled by

Themistocles to pay an indemnity. Paros was a member of the Delian Confederacy, also of the second Athenian Confederacy, but later revolted, and lost importance before the establishment of Macedonian authority. Here was found the Marmor Parium (q.v.).

logical exploration). W. A. L.

PARRHASIUS, painter, son and pupil of Evenor of Ephesus, later Athenian. Pliny dates Evenor 420 B.C. and Parrhasius 397 (with Zeuxis, q.v.); but he made designs for Mys' reliefs on the shield of the Athena Promachus (before 450). He was arrogant and wore a purple cloak and a gold wreath. He painted a 'rose fed' Theseus (i.e. in the rich style; Pliny attributes 'elegantiam capilli, uenustatem oris' to him), Demos, 'Healing of Telephus', Philoctetes, 'Feigned madness of Odysseus'. Such pictures displayed the details of expression, 'argutias uoluit', which he discusses with Socrates in the *Memorabilia* of Xenophon. He wrote on painting. He was famed for subtlety of outline (cf. white lecythi, e.g. Pfohl, figs. 543, 552); therefore perhaps did not use shading (contrast Apollodorus, q.v.). His gods and heroes became types for later artists; his drawings on parchment and wood were used by craftsmen (probably metal workers) in Pliny's time.

PARRICIDIUM. The word *paricidas* (whose original meaning is much discussed) first occurs in a law attributed to Numa (Festus, s.v. 'Parricidium') in which it denotes the intentional—*dolo sciens*—murderer of a free man. In later terminology *parricidium* meant the murder of near relations (e.g. in the *Lex Pompeia de parricidiis*, c. 70 B.C.); it retains this meaning in classical texts and in Justinian's codification, which defines precisely for this purpose the circle of persons considered as near relations (Dig. 48. 9). *Parricidium* was, together with *perduellio* (q.v.), the first crime prosecuted by the State: the *quaestores parricidii* are mentioned in the XII Tables. A wider general sense was given to the term *homicidium* (rarely used in earlier texts, but more frequent in the legislation of the later Empire). In ancient times the parricide was drowned in the sea, tied up in a sack (*culleus*). In the later legislation the penalty was differentiated according to the gravity of the act, but the death-penalty remained the normal sanction.

Mommsen, *Röm. Strafr.* (1899); C. Ferrini, 'Dir. penale romano' (*Encicl. del dir. penale ital.* Pessina, 1902). Cf. the literature mentioned in H. F. Jolowicz, *Historical Introduction* (1932), 324 and S. Riccobono, *Fontes iuris Romani anteiust.* i² (1941), 13 n. 4 and Add. p. xvi. A. B.

PARTHENIUS of Nicaea (1st c. B.C.), enslaved during the Third Mithridatic War, was taken to Italy, where he was freed. Of his poetry, mostly elegiac, for which he was well known in antiquity, only a few fragments remain. Extant is a collection of prose outlines of love-stories (*Ἐρωτικά παθήματα*) culled from poets, historians, etc., and intended for the use of Cornelius Gallus, the Roman elegist. P., with the elegist's predilection for unhappy endings, has little or no connexion with the tradition of the Greek Novel, but his extracts illustrate the romantic tendency of much Alexandrian literature.

Text: E. Martini, *Mythographi Graeci* ii. 1 (Teubner); with translation, Loeb (Edmonds). See also on the NOVEL, GREEK. R. M. R.

PARTHENON, the most renowned Greek temple, the culmination of Doric proportion and refinement without loss of strength, exhibiting all of the various subtleties of building expression more or less prevalent from sixth to fourth centuries B.C.; carried out under Pericles (q.v.) in 447-432 by Ictinus and Callicrates (qq.v.), and the

sculpture by Phidias (q.v.) or his school, and still remarkably preserved, after an explosion in 1687, on the Athenian Acropolis (q.v.), south side, though most of the sculpture is in the British Museum. Executed entirely in Pentelic marble, it stands on the foundations of an earlier temple, also of Athena Parthenos, and is peripteral octastyle (columns 8×17), measuring 228 ft. \times 101 ft. on top step of stylobate. There were great doors at each end of the cella and metal grilles between the columns entirely enclosed the pronaos and opisthodomus (see TEMPLES). The shorter (western) part of the cella had four columns, probably Ionic; the longer (eastern) part had the arrangement usual in large temples—two rows of double-tiered columns forming central and side compartments; but the Parthenon was unique, not only in the great relative width of the 'nave' but in the return of the colonnades round its western end. Well in front of this return is the foundation of the great pedestal, about 26 ft. \times 13 ft., which carried the colossal chryselephantine statue of Athena, by Phidias. Other Ionic features were the carving of two moulded members (in antae capitals and external frieze), and the continuous frieze in low relief representing the Panathenaic Procession, within the peristyle at the top of the cella wall. The metopes (panels between triglyphs) of the external entablatures contained high relief sculptures of combats between centaurs and lapiths. The pediments were fully sculptured in the round, representing east, the birth of Athena, and west, the contest between Athena and Poseidon for the Attic land.

PARTHENOPAEUS (Παρθενόμαχος), in mythology, one of the Seven against Thebes (cf. ADRASTUS). In earlier tradition, he is a brother of Adrastus and an Argive; in later, an Arcadian, son of Atalanta (q.v.). See Wilamowitz-Moellendorff, *Aeschylus Interpretationen*, p. 100 f., with schol. on Aesch. *Sept.* 547, Soph. *OC* 1320, Eur. *Phoen.* 150 (Antimachus, fr. 17 Wyss).

H. J. R.

PARTHIA has recently assumed an increasingly important place in the story of Asia. The people whom Greeks and Romans called Parthians were traditionally Parni, members of the semi-nomadic Dahae Confederacy north of Hyrcania. They occupied the Seleucid satrapy called Parthia (*Parthava*), traditionally in 248–247 B.C., whence their Greek name; later they ruled from the Euphrates to the Indus, with Ecbatana as their capital. They were never more than a land-owning military aristocracy. The king was feudal superior of his nobles, including the seven great Pahlavi families who were almost kings in their territories, Seistan, Atropatene, etc. There were other vassal kingdoms, but Parthia never assimilated Persis, which ultimately overthrew her, while before the Christian era the Surenis (q.v.) in Seistan became independent and gradually created an Indo-Parthian kingdom.

2. The Parthians spoke Parthian Pahlavi, a North Iranian dialect akin to Sogdian; they adopted popular Iranian Mazdaism, but tolerated every other religion. They were a silent and easy-going race, fond of hunting, not bad rulers. They were the supreme imitators of the ancient world; they stepped into a ready-made Greek kingdom, and just copied the Seleucids. They utilized Greek science, Greek secretaries, Greek methods of administration and Court titles, wrote on parchment, and had Greeks on their Council; they even flirted with Greek king-worship, and Seleucia struck their coins for them with Seleucid dating instead of their own Arsacid era (from 248 ?), itself an imitation. They imitated Bactria by turning the Seleucid eparchies into satrapies; later, an occasional Parthian reached China, and there imitated the Chinese by becoming a Chinese scholar. But in war they were original and competent; before

Carrhae they discarded Greek notions and employed cavalry only; the nobility fought as cataphracts, mailed knights with enormous spears, and their retainers as horse-archers, and they bred the Nesean horses into magnificent chargers for the cataphracts. Their Greek cities had perhaps rather more autonomy than under the Seleucids, and there was an outburst of Greek literature in the East; never was communication across Asia less trammelled, and Seleucia, centre of all routes, dominated Asia's trade.

3. A change came in A.D. 10 when a collateral branch from Atropatene replaced the old Arsacid line. There was an Iranian reaction against the former Philhellenism; Mazdaism was emphasized; Seleucia revolted for seven years, whereupon the capital was shifted to Ctesiphon and subsequently Vologasia was founded (near Babylon), in an attempt to divert from Seleucia the increasingly important trade between China and Roman Syria; Parthia realized her lucrative position as middleman and now prevented direct communication between the two empires. The influence of 'Parthian' art—a revived Iranian art of many branches, which utilized and sometimes misapplied Greek elements—spread far and is historically interesting.

PASION (d. 370 B.C.) was the wealthiest banker and manufacturer of his time in Athens. He began his career as a slave with a banking firm, becoming a freedman and later an Athenian citizen. We learn much of his business activity from the speeches of Demosthenes and the *Traxipiteus* of Isocrates. The revenue derived from his bank and a shield workshop amounted to 120–60 minae after his death, the bank alone bringing in 100 minae. He left a fortune of 40 talents.

PASIPHAË, see MINOS.

PASENNUS PAULUS, a contemporary *eques* whom the younger Pliny (*Ep.* 6. 15) praises for his *elegi* as being, like his actual descent, Propertian.

PASSIENUS (d. 9 B.C.), Augustan orator, a distinguished representative of the old style (*Sen. Controv.* 3 *pr.* 14, 10 *pr.* 11).

PASTORAL (or BUCOLIC) POETRY, GREEK (βουκολικά). Ancient authorities (e.g. *Proleg. scholl. ad Theocr.*; Diomedes, 486 K.; Probus in *Verg. Ecl.* 2. 8 K.; Servius, *praef. in Ecl.*), who derive bucolic from religious ritual, deserve little credence. Modern theories of the same sort (R. Reitzenstein, *Epigramm und Skolion* (1893), 193–263) are equally unconvincing. Pastoral song, accompanied by the flute, doubtless existed in all Greek lands from an early date (cf. *Il.* 18. 525–6), and especially (*Diod. Sic.* 4. 84) in Sicily, the home of Daphnis, the bucolic hero. This popular origin accounts for certain features, e.g. singing-match, refrain, strophic arrangement, which are found in later bucolic. But the intermediate steps are obscure. Aelian (*VH* 10. 18) makes Stesichorus the founder of bucolic, but probably Stesichorus merely described Daphnis' unhappy love and death. Athenaeus (14. 619 a, b) regards a Sicilian herd, Diomus, as the founder and says that Epicharmus (fr. 105 K.) mentioned him in two plays. Diomus is probably mythical, like Daphnis, but Epicharmus perhaps dramatized bucolic themes, and some of Sophron's *Mimes* dealt with the life of rustics and fishermen. In Greece itself legend (Hemerisnaux, frs. 2, 3) connects Daphnis and Menalcas, another bucolic figure, with Boeotia and Euboea, and the dimeter (μικραὶ ἐπείε, ὁ Μενάλκας),

repeated by the despairing Eriphanis in search of Menalcas, is assigned by Athenaeus (14. 619 d) to a pastoral song. In literature bucolic matter was handled in satyr-plays (Euripides, *Cyclops*), in the dithyramb (Philoxenus, *Cyclops*), and by Peloponnesian epigrammatists (Anyte of Tegea, but this does not wholly explain Arcadia as the later bucolic paradise). Bucolic love finds expression in the lyric of Lycophronides (c. 350) (cf. Diehl, *Anth. Lyr. Graec.* 2. 1, p. 157). All this would suffice to explain the creation of full-blown bucolic by Theocritus, but the facts of his life and the peculiar character of much of his pastoral poetry suggest that the immediate inspiration came rather from a school already existing at Cos when he first visited the island. In *Id.* 7 he describes a bucolic masquerade at Cos, in which he and his friends took part, and, while the evidence for Philetas' writing bucolic is disputable, Hermetianax' treatment of bucolic themes is certain. Theocritus' reaction to this apparently romantic form of the Coan school was twofold. In some Idylls (1, 3, 6, 7, 11) he complies with the mode and its idealization of bucolic life, though even in these poems many details come from first-hand observation. In others (4, 5, 10) he adopts a more realistic tone without altogether eschewing topical allusions (4. 31; 5. 105). The metre of Theocritus' Bucolics is the hexameter, except that 8. 33-60 are in elegiacs, which is one argument against Theocritean authorship of that poem, but various devices modify the 'heroic' character of the verse. The dialect, a literary Doric, may result from the accident of Theocritus' Syracusan birth, but was well suited to the genre and was adopted by Theocritus' successors, Moschus and Bion. These, to judge by the scanty fragments, added little or nothing to bucolic as such.

The word εἰδύλλιον (Idyll) is a diminutive of εἶδος, and Pindar's lyric odes were called εἶδη, according to some because the εἶδος ἀρμονίας in which they were to be sung was written over each. Hence εἶδη came to mean separate poems (cf. Suidas, s.v. Σωτάδης) and εἰδύλλια short separate poems (cp. Pliny, *Ep.* 4. 14. 9). The full description in Greek of a pastoral is εἰδύλλιον βουκολικόν.

PASTORAL POETRY, LATIN. Latin Pastoral poetry, if viewed as extant bucolics on the Theocritean model, consists of Virgil's ten eclogues, Calpurnius Siculus' seven, two Einsiedeln eclogues, and four by Nemesianus (qq.v.). But this is not the full reckoning. Other pastorals, long since lost, were written, such as those by Cornelius Gallus which influenced or, some would say, inspired Virgil (F. Skutsch, *Aus Vergils Frühzeit* (1901)); and pastoral motifs entered into other genres. Fragments of Roman epigrammatists early in the first century B.C. who introduced pastoral colour into their short poems give cause for regretting their loss. Virgil's claim, indeed, to have first adapted Theocritus to Latin verse (*Ecl.* 6. 1) must be qualified as in itself an echo of Callimachus, and in any case does not gainsay the previous employment of bucolic themes by Latin poets who did not follow the Theocritean norm. Even a sketch must spare a few glances for these poets.

2. The so-called *Elegia in Messallam* (Catalepton 9. 13-20), unless with Hubaux we date it as Neronian, indicates that M. Valerius Messalla was a pioneer in Greek imitations of Theocritus which the unknown author of the poem translated into Latin. Among four love-lyrics cited by Antonius Julianus (Gell. *NA* 19. 9) one from Porcius Licinus ('custodes ouium . . .') typically combines bucolic with erotic elements of a sort in favour with Roman literary circles about 90 B.C. The welcome by Lutatius Catulus to young Archias led to the composition of similarly erotico-bucolic epigrams. If the

two poems *Dirae* and *Lydia* could be decisively credited to Valerius Cato, their blends of idyll and elegy might be regarded as in a sense preludes to Virgil's *Eclogues*. The *Culex*, *Moretum*, *Copa* of the *Appendix Vergiliana* all contain pastoral ingredients, and the conclusion to be drawn from many pieces of evidence is that there was at Rome a group of bucolic poets of which Virgil was the chief but not the only representative. Fontanus' 'Naiads beloved by Satyrs' (Ovid, *Pont.* 4. 16. 35) may or may not imply bucolic poetry. Pollio presumably wrote bucolics and influenced Virgil; and the question how far pastoral themes appeared in the poems of Virgil's contemporaries Codrus (questionably identified with Helvius Cinna), Valgius Rufus, Varius, Bavius, Mævius, and others is discussed by Hubaux (*Les Thèmes bucoliques*, 66 ff.). It is likely that Domitius Marsus, continuing the epigrammatic tradition, wrote short poems at once erotic and bucolic.

3. Among extant Latin bucolic poets Virgil reigns supreme in literary power and influence. His debt to Theocritus is deep: he adapts and combines themes, he translates (even mistranslates), he paraphrases. His shepherds are 'Arcades' (*Ecl.* 7. 4; 10. 31-33), but their Arcadia is mixed with north Italian scenery, where 'Mincio fringes his green banks with waving reeds' (*Ecl.* 7. 12-13). Here is an Arcady whose frontiers can be infinitely extended in imagination: from rural surroundings an escape may be made at will into themes of epic dignity, although the Sicilian muses are still invoked (*Ecl.* 4. 1). Or a break-away may be made when the poet's own sufferings from land-confiscations are disguised under a thin allegory. Virgil's realism depends not merely on his knowledge of the country-side and country life, but on his allusions to contemporary events like the military expropriation of land and to contemporary figures, political or poetical, like Caesar, Pollio, Gallus. The call to sing of themes 'paulo maiora' was Virgil's great transformation of bucolic poetry. Theocritus' poetry, perfect in form, had as a rule presented rustics busy with their loves or songs; but Virgil's famous 'Pollio' opened up a world of enchanted hopes: its Age of Gold remained a *locus communis* for subsequent bucolic writers and exerted influence outside the bucolic field on Tibullus and Ovid.

4. Except for the 'Messianic' presages of *Eclogue* 4 Virgil's bucolics turn partly on his personal experiences (1, 6, 9, and 10), partly on elegiac or erotic motifs, in which 'omnia uincit amor'. Propertius' welcome to the forthcoming *Aeneid* (3. 34. 65 ff.) specially mentions the love-melodies of Virgil's rustics. Their warm feeling and sweet cadences are suggestive now of rural peace, now of poetic learning. Horace (*Sat.* 1. 10. 44) significantly uses one of Virgil's frequent epithets when he stresses his impressionable vivacity ('molle atque facetum'), implying his openness to beauty around him and his grace of expression. One may listen to his shepherds singing as though they should never grow old.

5. In the Neronian age, Calpurnius and the Einsiedeln Eclogues have an eye not only for shepherds but also for the times. The Alexandrian notion of a beneficent ruler as a saving deity (σωτήρ, θεός ἐπιφανής) was familiar to Virgil, and this soteriologic idea reappears in the Golden Age associated with the early part of Nero's reign. The Virgilian and Theocritean sources of Calpurnius are illustrated by E. Cesario (*La Poesia di Calpurnio Siculo*, 1931). Both influences acted on the pastorals by Nemesianus of Carthage in the third century. Nemesianus was, besides, a sedulous pillager of the text of Calpurnius, but he deserves credit for restoring the pleasant music of the refrain.

6. Even in Christian poems on pastoral subjects by St. Paulinus the classic forms of paganism kept their vitality. In Endelechius' *De Mortibus Boum*, where Tityrus has saved his herd from plague by the Sign of

the Cross, the elegant aselepiads make an innovation, but the names Aegon and Tityrus and the manner of the dialogue descend from Virgil.

7. Later still, during the Renaissance, in different countries, the Virgilian tradition remains operative on such pastoral authors as Baptista Mantuanus (called by Erasmus 'Christianus Maro'), Sannazaro, Geraldini, Andrelinus, Arnolletus, and Cayado (edns. of these by W. P. Mustard, U.S.A.).

For differences among Virgil's imitators see Calpurnius, Einsiedeln Eclogues, and Nemesianus in J. W. and A. M. Duff's *Minor Latin Poets* (Loeb, 1935). Cf. J. Hubaux, *Le Réalisme dans les bucoliques de Virgile* (1927); and *Les Thèmes bucoliques dans la poésie latine* (1930); G. Knaack, 'Bukolik', *PfW* iii. 998-1012.

J. W. D.

PASTURAGE. Cattle was the main source of wealth of the Greek and Roman peasants from earliest times. Horses were reared by the wealthier owners, horned cattle by the less well-to-do, and small cattle by the smaller peasants. Selection in cattle-breeding dates back to archaic Greece and Italy. Stall-feeding is mentioned in Homer (*Od.* 18. 367). Herdsmen formed one of the typical very early crafts of ancient agriculture. Poultry-breeding also flourished during the Classical and Hellenistic periods, and in Italy under the Republic. The horses of Thessaly, the cattle of Epirus, and the Milesian sheep, famous throughout the world, were exported to all countries where scientific agriculture flourished during the period from Alexander to Augustus.

There was not enough natural pasturage for all the cattle of the Mediterranean world. Grazing-grounds were therefore sown by governments and private owners. Many States reserved pasture rights (*epinomia*) for their own citizens; for an alien to receive it was a great honour. Some States (e.g. Delos and Teos) introduced pasture taxes. The Ptolemaic government owned large herds and claimed the right to requisition all cattle in the country for agricultural purposes. For the use of the royal pastures as well as for protection while grazing high fees were imposed.

The Roman *latifundia* developed stock-breeding economy to its highest pitch, often converting commandments to pasture and so diminishing the population of the country-side. The largest pasture estate mentioned in any ancient source (S.H.A., *Aurelian*, ch. 10) fed 2,000 cows, 1,000 horses, 10,000 sheep, and 15,000 goats, with 500 slaves to work it. Development ended with the breakdown of the ancient slave economy, but the strains developed in ancient times persisted throughout the Middle Ages and are in the main the ancestors of our modern stocks.

PATAVINITAS, the provincial smack of Livy's native Patavium declared by Asinius Pollio (Quint. *Inst.* i. 5. 56; 8. 1. 3) to mark or mar the style of Livy (q.v.). Pollio, as governor of Cisalpine Gaul, might claim to recognize northern expressions in contrast with true Roman *urbanitas*. His charge against Livy excited the indignation of Morhof (1639-91) who retorted on Pollio's 'Asinity' in *De Patavinitate Liviana* (1685).

See Whistmough, 'Quemadmodum Pollio reprehendit in Livio Patavinitatem' in *Harr. Stud.* xlv (1913).

J. W. D.

PATAVIUM, a city situated near celebrated springs in a fertile part of Cisalpine Gaul (Strabo 5. 212 f.; Pliny, *HN* 2. 103); nowadays *Padua*. The Veneti, but certainly not Antenor, probably founded Patavium. It became their capital, successfully resisting a Spartan attack in

301 B.C. (Livy 10. 2). By 174 it was subject to Rome, but retained local autonomy (Livy 41. 27). Asinius Pollio temporarily oppressed Patavium, probably because it opposed Antony, 43 B.C. (Macrob. 1. 11. 2; Cic. *Phil.* 12. 10). But in general it prospered. It was a road-centre, and canals connected it with the sea. Its flourishing woollen industries made Patavium the wealthiest north Italian city in Augustus' time. Later Mediolanum and Aquileia outstripped it, but Patavium always remained important even after Huns (452) and Lombards (601) sacked it. Its most famous sons were Livy, Asconius, and Thrasea Pactus (Tac. *Ann.* 16. 21).

PATER PATRATUS, see FETIALES.

PATER PATRIAE. After the execution of the Catilinarian conspirators in 63 B.C., Cicero was hailed in the Senate as *Pater Patriae* or *Pater Patriae*, and after Munda the title *Pater Patriae* was accepted by Julius Caesar (*CAH* ix. 720). Augustus was given the title *Pater Patriae* by 'the Senate, the equestrian order and the whole Roman people' in 2 B.C. The title was not held by the short-lived emperors, Galba, Otho, Vitellius, and was refused by Tiberius and by Gaius. On inscriptions it is found for Augustus before 2 B.C., and for Tiberius and Gaius. Nero accepted it late in his reign, and so did Claudius and Hadrian, who here copied Augustus' action.

J. P. B.

PATERCULUS, see VELLEIUS.

PATRAE (modern *Patras*), situated in Achaea outside the narrows of the Corinthian Gulf, had an unimportant early history. It supported Athens in the Peloponnesian War (Thuc. 5. 52), took the lead with Dyme in expelling the Macedonians and reforming the Achaean League (c. 280 B.C.), but ceased to be inhabited as a city at some date before the Roman occupation. Augustus planted a Roman colony there, attaching to it the neighbouring Achaean towns (Paus. 10. 38. 9). As the port where travellers from Italy landed, it attained an importance which it still keeps.

Paus. 7. 18 ff.; W. M. Leake, *Travels in the Morea* (1830), ii. 123 ff.

T. J. D.

PATRIA POTESTAS. At the head of the Roman family, which was the main pillar of the Roman social constitution, was the *pater familias*, who exercised a sovereign authority over all members of the family (his wife, if the marriage was with *manus* (q.v.), his children, the wives of his sons subject to the same condition, the children of his sons, and so on). The absolute character of the *patria potestas* in its original form offers some analogies (both in name and in fact) with the *imperium* (q.v.) in the early Roman State. *Familia* signified originally all persons living together under the *potestas* of the *pater familias*, the house with all its inmates; in its later meaning the term embraced the totality of persons and things (the whole property) which were placed under the legal power of the *pater familias*. The members of the family united under a single *patria potestas* were connected by the agnatic tie (*agnatio*), as opposed to the relationship by blood, *cognatio*. The Roman family was especially noteworthy for the peculiar position of the *pater familias* and for the *patria potestas* which was 'proprium ius civium Romanorum' (Gai. 1. 55).

2. The autocratic character of the *patria potestas* manifested itself not only in the father's right to punish but also in his *ius vitae necisque* which he had over his children, with all its consequences (killing the new-born, exposure of children), though custom, sacred law, and the family council composed of relatives and friends had a restraining influence on it. The *pater familias* had a

full right of disposal over his children, as over slaves and things; he might sell them into slavery *trans Tiberim*; but if he sold them to a citizen they came to be *in mancipio* (a status analogous to slavery) to the purchaser, and on manumission reverted to the *potestas* of the father; only after three such sales did the son become finally free of the father by a provision of the XII Tables. The son also passed *in mancipii causam*, if he was surrendered (*in noxam deditus*) by the father to an injured person on account of a delict committed by the son. The father could, however, when sued by an *actio noxalis*, avoid handing over the son by paying the damages.

3. It was an old rule that the '*filius familias nihil suum habere potest*'. What he acquired (by inheritance, legacy, or transaction *inter vivos*) he acquired for his father, but he could not involve him in any liabilities. The praetorian law, however, admitted a suit against the *pater familias* for his son's debts under special circumstances (when the son had a particular authorization from his father or when he had received from the father a personal fund (*peculium*) for free administration). The *peculium* remained, however, the property of the father. On the other hand, the *peculium castrense* (everything that the son gained in or on account of his military service) was his own from the time of Augustus, as was also in later days the *peculium quasi castrense* (the son's acquisitions in some public employments and professions). From the time of Constantine the ownership of the son was extended to inheritance from his mother, and later to other acquisitions from the mother's side. Justinian finally set up the general rule that all the son's acquisitions (except those *ex substantia patris*, and *peculium castrense* or *quasi-castrense*) belonged to him as his *bona adventicia*, on which the father retained only the usufruct or life interest. Together with this gradual recognition of the son's capacity to have a fortune of his own proceeded the development of his capacity to be a party to a civil lawsuit.

4. The father acquired the *patria potestas* over his children begotten in *iustae nuptiae* (see MARRIAGE), if he himself did not stand under his father's *patria potestas*. Artificially *patria potestas* arose from *adoptio* (q.v.) and *adrogatio*. *Patria potestas* over the whole family was terminated by the death or *deminutio capitis* (even *minima*) of the father. It was also extinguished over individual children if a son underwent *emancipatio* (q.v.) or became *flamen Dialis*, and if the daughter was married with *conventio in manum* or became a *virgo Vestalis*.

Very few vestiges of the ancient *patria potestas* remained in Justinian's law: it dwindled into a simple domestic authority. This development was influenced partly by Christianity, partly by the legal conceptions of Hellenistic provinces.

PATRICIUS. Patricians were the privileged class of Roman citizens. Their name is probably connected with *pater*, meaning 'member of the Senate', as exemplified by certain technical phrases such as '*patrum auctoritas*', '*auspicia ad patres redierunt*'. There is no reason to believe that the patrician *gentes* were the whole citizen body of primitive Rome. In the distinction between patrician '*gentes maiores*' and '*minores*' there is probably a trace of the gradual formation of the patriciate. We have furthermore some hints of the admission of new families in early times: e.g. of the *gens Claudia* at the beginning

of the Republic. The same *gens* could probably develop plebeian and patrician branches; this would explain the apparently plebeian names of some of the kings (Hostilius, Marcius), if these kings are not antecedent to the creation of a patriciate (see PLEBS).

Until 445 B.C. *patricii* were not allowed to marry plebeians. *Confarreatio* (q.v.) was perhaps a special form of marriage for the patricians. The patricians were the holders of the magistracies and of the most important religious offices. They served in the cavalry, and six centuries were probably reserved to them. The diminution of their political influence (see PLEBS) corresponded to a certain extent with the diminution, absolute and relative, of their numbers: about 50 patrician *gentes* are known in the fifth century, 22 (with 81 families) c. 367 B.C., only 14 (with 30 families) at the end of the Republic. Only a patrician could become *rex sacrorum*, *interrex*, and perhaps *princeps senatus*. The *patrum auctoritas* (q.v.) was confined to the patrician senators.

The patricians could renounce their status by a special public act (*transitio ad plebem*) or by simple *adoptio* or *adrogatio*. Caesar (by a *Lex Cassia*, 45 or 44 B.C.) and Octavian (by a *Lex Saenia*, 30) were empowered to admit new members to the patriciate. The later emperors conferred the rank on the strength of their censorial powers. In the senatorial *cursus* the patricians were *quaestores Augusti* in the quaestorship and passed directly from the quaestorship to the praetorship. The patriciate apparently disappeared in the third century A.D.

The new dignity of *patricius* created by Constantine was a personal title, conferred for faithful service to the Empire.

PATRIMONIUM CAESARIS, the fortune of Augustus, as kin to the line of the Caesars, and of his successors in the imperial office. *Patrimonium* denotes the property of a *pater familias*, and the *patrimonium Caesaris*, in origin, differed little from other *patrimonia*, except in its extent. It was a private, not a public, chest, and the procurators who administered it were much like those of any private individual. The public revenues of the emperor were administered by the *fiscus*. It cannot be determined with certainty where the line was drawn between the two chests, but the *patrimonium* was mainly fed by the immense private fortunes bequeathed to the emperor; the estates of Agrippa in the Hellespont will serve as an example.

Though private in origin, the *patrimonium Caesaris* was far too important to be detached from the imperial office and passed from emperor to emperor. A *patrimonium privatum* was therefore separated off to deal with the emperor's own private fortune. Some emperors made over their fortune to the State: Antoninus Pius settled his on his daughter, Faustina the younger, but devoted its yield to public ends. A new private chest, the *res privata* (q.v.), was created by Septimius Severus and soon came to overshadow the *patrimonium*.

PATROCLES, Greek commander at Babylon after 312 B.C. under Seleucus I, whom he assisted against Demetrius. Under Seleucus and Antiochus I, he governed lands from the Caspian towards India, gathering reliable geographical material including north-west India. G. 285 he was sent to explore the Caspian, voyaged up its

western and then its eastern sides, learnt about Indian trade down the Oxus, but mistakenly asserted that the Oxus and Jaxartes flowed into the Caspian. His reports confirmed the belief that this sea opened into the nearby Northern Ocean.

Strabo 2. 68-70, 74; 11. 508-9; 15. 689. Cary-Warmington, *Explorers*, 51-2; Warmington, *Greek Geography* (1934), 67-9; W. W. Tarn, *JHS* xxi. 10 ff. E. H. W.

PATROCLUS, in mythology, son of Menoetius (q.v.). Having accidentally killed a playfellow, the young Patroclus took refuge with Peleus (q.v.; *Iliad* 23. 85 ff.). He and his father were kindly received, and Patroclus, who was somewhat older than Achilles (11. 787), was assigned to him as a personal attendant. For the rest see **ACHILLES**. H. J. R.

PATRONAGE, LITERARY. I. IN GREECE. Literary patronage in Greece, formally an extension of the duty of *ἐκεία*, is due to the tyrants who attracted to their courts the leading representatives of the arts. The Pisistratids at Athens, Polycrates in Samos, the tyrants of Corinth and especially those of the Greek cities in Sicily, surrounded themselves with men of letters; and poets such as Arion, Alcman, Pindar, Bacchylides, and Simonides were patronized by all of them in turn. Anacreon on the fall of Polycrates went to Hipparchus in Athens; Simonides from Athens to the Scopadæ in Thessaly and then to Hieron of Syracuse. In Athens the patronage of the Pisistratids was in part taken over by Cimon and Pericles; but here official and public competitions on the whole replaced individual patronage. Aeschylus ended his days under the protection of a Sicilian court and Euripides died in the home of a Macedonian tyrant, Archelaus, who had collected at his court a literary coterie including Agathon and Timotheus, and in whose honour Euripides wrote an *Archelaus*. In Hellenistic times the literary patronage of the tyrants was carried on by the successors of Alexander, notably the Ptolemies, the first of whom founded the Museum of Alexandria, which supported and housed a brilliant succession of poets and men of letters. Similar patronage was exercised in Asia Minor notably by the kings of Pergamum.

W. Jaeger, *Paideia* i. 292 ff.; M. Cary, *A History of the Greek World from 323 to 146 B.C.*, 318 ff.

II. AT ROME. Literary patronage at Rome was an extension of the ordinary social relation between *patronus* and *cliens*, and was fostered by the fact that so much of the early literature was due to freedmen (e.g. Livius Andronicus) or to Italians of non-Roman origin (Plautus, Naevius, Ennius), whose social and legal position but for such protection might have been precarious. But, while the relation was formally that between *patronus* and *cliens*, the actual relations between the patron and the man of letters varied according to the character of both and the social conventions of the period: e.g. while Livius Andronicus was probably in the position of a *libertus* to the family of the Livii, P. Terentius Afer, on the other hand, stood apparently in a different relation to his patrons of the 'Scipionic circle' (q.v.). Ennius accompanied his literary patron M. Fulvius Nobilior on his expedition to Aetolia and obtained Roman citizenship. As acquaintance with the work of Greek historians and philosophers increased, these also were drawn into the range of Roman literary patronage, and the 'Scipionic circle' embraced Polybius and Panaetius as well as Terence; the same is true of Q. Lutatius Catulus and his 'circle', and towards the end of the Republic the flow of Greek men of letters to Rome increased in the hope of the patronage to be expected there. In the Augustan age the emperor himself, as well as Maecenas, Asinius Pollio, and others, carried on the tradition. This was the Golden Age of Roman literary patronage. Virgil and Horace were both *amici* to their patrons rather than

clientes: each was given a small property which ensured his independence, and Horace's manly letter to Maecenas (*Epist.* 1. 7) is a striking testimony to the character of the relations between the poet and his 'pater et rex'. During the first century A.D. this tradition was on the whole maintained. Nero, Titus, and Domitian (in his early years) wished to be known as patrons of literature; Vespasian established Quintilian in Rome. Many wealthy men and imperial officials adopted the role of Maecenas. Some of these (e.g. Silius Italicus) wrote poetry themselves and were the patrons of humbler poets. To writers of the Flavian period we are indebted for most of our knowledge of the nature and extent of imperial literary patronage: Statius in his *Silvae* claims as his *amici* his wealthy *patroni*, as does Martial in his epigrams, though the latter is full of complaints of the stinginess of many professed patrons. While Juvenal in his *Satires* is full of bitter complaints derived from his earlier experience under the Flavians, he professes hopes of better things from their successors.

Lutatius Catulus* (1893); Abbé Reure, *Les Gens de Lettres et leurs Protecteurs à Rome* (1891); D. M. Schullian, *External Stimuli to Literary Production in Rome, 90-27 B.C.*, Chicago diss. (1932).

R. M. H.

PATRONUS, at Rome, was a man who agreed to protect another person, Roman or non-Roman, by making him his client. Several types of *patroni* may be distinguished.

(1) In the early days of Rome the members of the ruling families attached to themselves a number of poorer citizens to whom they gave financial or legal assistance in return for political services or social deference. The bond between patron and client probably could not be enforced by legal sanctions, but by long custom it acquired a quasi-religious force.

(2) With the growth of slavery and the increasing frequency of emancipation, the relation between a slave-owner and his freedman developed into a special type of patronage which was clearly defined by law (see **FREEDMEN**). The patron retained a certain amount of domestic jurisdiction over his freedmen-clients. Patrons and freedmen were often buried together, and epigraphic evidence (especially since the 2nd c. A.D.) indicates that a genuine feeling of friendship often subsisted between them.

(3) Under the later Republic the function of legal assistance by *patroni* was extended to include cases where practised forensic speakers supported litigants in return for a fee. Though a *Lex Cincia* of 204 B.C. forbade the payment of *patroni*, this statute was frequently circumvented. The forensic *patronus* is to be held distinct from the technical legal adviser or *advocatus* (q.v.).

(4) Roman generals assumed a general patronage over peoples conquered by them, and this patronage was transmitted to their descendants. As early as 278 B.C. C. Fabricius took the Samnites as his clients, while the Claudii Marcelli undertook to look after the interests of the province of Sicily (conquered in 210 B.C. by Claudius Marcellus, q.v. 1). The patronage of Pompey extended widely over the Empire; in 83 B.C. he raised three legions of clients in Picenum and his son Sextus could still get help in Spain and Asia from the clients of his family. It is probable that a patronage of this type was one of the elements that went to make up the *auctoritas* of the emperors.

(5) A similar form of patronage, which became common under the Empire, originated in the action of Roman municipalities, which appointed one or more influential Romans to defend their interests in Rome and to serve as channels of communication between themselves and the emperors (cf. the *tabula patronorum* of Canusium—*ILS* 6121).

(6) Under the Roman emperors many *collegia* or clubs appointed *patroni* similar to those of the municipalities.

(7) Under the emperors men of wealth kept large numbers of merely parasitic clients for the sake of ostentation. See *CLIENS*.

For the political *patronatus*, Fustel de Coulanges, *Histoire des institutions politiques de l'ancienne France* (1892), 205; M. Gelzer, *Die Nobilität der römischen Republik* (1912), 43; R. Syme, *The Roman Revolution* (1939); A. v. Premerstein, *Vom Werden und Wesen des Prinzipats* (1937). For the *municipia*, Mommsen, *Lex Coloniae Genetivae*, *Juristische Schriften* i. 188; A. v. PATRUM AUCTORITAS was the consent given by the *patres* to the deliberations and to the elections of the popular assemblies in Rome. The conditions under which this consent was given are uncertain. It was probably the prerogative of the patrician senators, not of the whole Senate (Livy 6. 42. 10; Sall. *Hist.* 3. 48. 15; Cic. *Dom.* 14. 38; Gaius 1. 3). As the Senate became mostly plebeian, the *patrum auctoritas* was reduced to a matter of form. A *Lex Publilia* of 339 B.C. (Livy 8. 12) established that it must be given to new laws before the voting of the *Comitia*. The rule was extended by a *Lex Maenia* of the third century (Cic. *Brut.* 14. 55) to elections. The *patrum auctoritas* affected the *Comitia Curiata* and *Centuriata* and (probably) the *Comitia Tributa*.

PAULINUS OF NOLA (MEROPHIUS PONTIUS PAULINUS), born at Bordeaux c. A.D. 353, was a favourite pupil of Ausonius (q.v.), and entered on a brilliant career in the State service, attaining the consulship quite early. In Italy he was baptized and dedicated himself to a monastic life, as did his wife Therasia. Paulinus' letters, among them those to Ausonius, number over fifty. The remainder of his works are thirty-three poems, which about equal the letters in bulk. The letters are in part addressed to Augustine, and the poems are in various metres; the subjects of both are definitely Christian.

Ed. W. v. Hartel (*CSEL* xxix, xxx, 1894).

A. S.

PAULLUS (1), LUCIUS AEMILIUS (cos. I 219 B.C.), brilliantly defeated Demetrius of Pharos in the Second Illyrian War. In 218 he was on the embassy to Carthage opening the Second Punic War. Consul again in 216 he shares, despite the senatorial tradition, in the strategical responsibility for the disaster of Cannae; he fell on the battlefield. Aemilius Paullus (2) Macedonicus was his son; his daughter, Aemilia Tertia, married Scipio Africanus. A distinguished figure, his memory was preserved in the Scipionic Circle and is glorified in Polybius.

Polyb. 3. 16-19; 106 ff.; Livy 21. 18; 22. 35 ff. M. Holleaux, *CAH* vii. 848; De Sanctis, *Stor. Rom.* iii. 2, pp. 1, 55. Cf. J. Van Antwerp Fine, *JRS* 1936, 30 ff. A. H. McD.

PAULLUS (2) MACEDONICUS, LUCIUS AEMILIUS (cos. I 182 B.C.), curule aedile in 193 B.C., augur by 192, was praetor in 191 in Further Spain, where after initial failure he subdued the Lusitanians (190-189); note the decree for *turris Lascutana* (Dessau, *ILS* 15). On the commission for settling Asia, he opposed the triumph of Cn. Manlius Vulso. Consul in 182, he subjugated the Ligurian Ingauni in 181. In 171 he was patron in the inquiry into extortion in Spain. Consul again in 168, he ended the Third Macedonian War at Pydna; a monument remains at Delphi. His settlement of Greece, including the sack of Epirus, carried out the Senate's policy. Of the spoil he kept only Perseus' library. His triumph was clouded by the death of his two younger

sons. Censor in 164, he died in 160; the *elogium* is partly preserved (*CIL* i², 194). His elder sons, by Papiria, were Q. Fabius and P. Scipio Aemilianus; a daughter married Cato's son.

Aemilius symbolizes the union of Roman tradition with Hellenism. Cultured yet conservative, a fine soldier and just administrator, strict in religious observance, he played an honourable and authoritative part in public and private life in Rome.

Livy 37. 46 and 57; 38. 44 ff.; 40. 25-8; 43. 2; 44-5; Polyb. 18, 35; 29-32; Plutarch, *Aemilius Paullus*. On sources: H. Nissen, *Krit. Unters. über die Quellen der IV und V Dekade des Livius* (1863), 280; W. Schwarze, *Quibus fontibus Plut. in vita L. Aem. Paull. usus sit* (1891); historical commentary in Dutch: C. Liedmeier (1935). PAULLUS (3), LUCIUS AEMILIUS (cos. 50 B.C.), son of Lepidus (q.v. 2) and brother of the triumvir, accused Catiline *de vi* (63 B.C.). While quaestor in Macedonia he was accused (absurdly) by the informer Vettius of conspiracy against Pompey (59). As aedile he began to rebuild the Basilica Aemilia (55). Consul in 50, he was bought by Caesar with 1,500 talents, which he wanted for the Basilica. In 43 he declared his brother a public enemy and was later proscribed, but allowed to escape. He passed over to Brutus, and continued to live at Miletus, although pardoned.

Klebs, *PW* i. 564.

A. M.

PAULLUS (4), LUCIUS AEMILIUS LEPIDUS, son of (3) above, commanded a fleet for Brutus in 42, subsequently became a supporter of Octavian, and was *consul suffectus* in 34 and censor in 22. He completed the Basilica Aemilia begun by his father.

Propertius 4. 11; Velleius 2. 95; Dio Cassius 49. 42; 54. 2 and 24. G. W. R.

PAULLUS (5), LUCIUS AEMILIUS, son of (4) above, and husband of Julia (q.v. 3), was consul with C. Caesar (A.D. 1). He entered into a conspiracy against Augustus and was executed. (Date uncertain. Dessau, *ILS* 5026 is attributed to his son.)

PAULUS (1), JULIUS (fl. c. A.D. 200), one of the most prominent representatives of the classical Roman jurisprudence. The place and date of his birth and of his death are unknown. A disciple of Cervidius Scaevola (q.v. 5), he began his juridical activity as a practising advocate, was assessor of Papinian when he was *praefectus praetorio*, then *magister memoriae*, and member of the imperial *consilium* of Severus and Caracalla. Banished by Elagabalus, he was soon recalled by Alexander Severus and nominated *praefectus praetorio*, an office which he probably held with his younger contemporary Ulpian. It is strange that they do not cite one another in their works.

Paulus was in great demand as a respondent jurist; he was a celebrated teacher, and several of his works are of an educational character (*Institutiones*, *Manualia*, *Regulae*, *Sententiae*; his authorship of this last collection is denied by several authors). He was a very voluminous writer (nearly 320 books, written in the period between Commodus and Alexander Severus). We find among his works a long commentary on the Edict (80 bks.), an extensive exposition of *ius civile* (*Ad Sabinum*, 16 bks.), extracts from and commentaries on the works of older jurists (Plautius, Neratius, Vitellius, Labco, and Alfenus), a commentary on Papinian, his contemporary and as it seems also a pupil of Scaevola; a long series of monographs on *leges*, *senatus consulta*, imperial constitutions, and on various topics of private, criminal, fiscal, and constitutional law.

Paulus was highly esteemed by the ancient authors, jurists, and emperors; less favourable opinions were passed upon him in the modern Romanist literature of the nineteenth century, which criticized him severely, not only for his language and want of clarity, but also for faults of character (alleged intolerance of other men's views) and lack of legal insight. The Romanists of this century judge him very differently, many texts of Paulus which gave occasion for attacking him having been demonstrated as interpolated. Paulus is neither an uncritical copyist nor a compiler; he is rather a critical and original thinker who knows how to examine with penetrating logic what others say, and to present his own opinion. The best proof of his sound method, precision in exposition, mastery of his subject, and cogency in demonstration lies in the circumstance that his texts in particular have been used by the Compilers of the *Digest* who plentifully excerpted him (nearly one-sixth of the *Digest* is composed of his works) for completing the expositions of other authors, especially those of Ulpian.

H. Fitting, *Alter und Folge der Schriften röm. Juristen*³ (1908) 81 ff.; P. Krüger, *Gesch. der Quellen und Literatur des röm. Rechts*⁴ (1912), 227 ff.; A. Berger, s.v. 'Julius Paulus' *PIV* x, 690-752; B. Kübler, *Gesch. der röm. Rechts* (1925), 283 ff. Literature on the question of genuineness of Paulus' *Sententiae*: E. Volterra, *Rivista di storia del dir. ital.* viii (1935), who gives a list of glosses and interpolations inserted in the literature on the *Sententiae*. Editions of *Sententiae*: P. PAULUS (2), entitled *Silentiarius*, 'private secretary', was a high official at Justinian's court c. A.D. 560 and a close friend of the epigrammatist Agathias. Some eighty of his epigrams are in the *Greek Anthology*—forty are erotic and twenty aesthetic fancies inspired by pictures, gardens, etc. His love-poems, though all imitated from classical models (*Anth. Pal.* 5. 275 = Propertius 1. 3), are bright and vivid. He also wrote an elaborate *ἐκφρασις* (see *ΕΚΦΡΑΣΙΣ*), or poetical description, of the restored church of St. Sophia—the work is interesting archaeologically, but not poetically.

B. L. Gildersleeve, *AJPhil.* 1917, on the epigrams; P. Friedländer, *Johannes v. Gaza und P. Silent.* (1912), text of the St. Sophia poem, with commentary. G. H.

PAULUS, see also **PASSIENUS**.

PAUSANIAS (1), son of the Spartan king Cleombrotus I (d. 480 B.C.), and nephew of Leonidas. In 479 he commanded the combined Greek forces at Plataea and was largely responsible for the Greek victory by meeting the Persian onset with a counter-attack. In 478 he captured Byzantium at the head of an allied Greek fleet, but provoked a mutiny by his arrogant behaviour and fell under suspicion of treasonable negotiations with the king of Persia; it was said that he offered to enslave Greece to Persia in return for the hand of a Persian princess. Recalled to Sparta for trial on this charge, he escaped conviction and returned to Byzantium, where he established himself with a private army. Expelled from Byzantium by Cimon (c. 475), he maintained himself at Colosse in the Troad and was believed to be continuing his negotiations with Persia. He was again recalled and tried c. 470, only to be once more acquitted. But he now came under further suspicion of fomenting a helot revolt; to escape arrest by the ephors he took sanctuary in a temple, where he was starved out. At the last moment he was taken out of the sanctuary to expire on unconsecrated ground. Whatever the truth about his earlier plots, it is probable that he finally planned a coup against the ephorate.

Herodotus, *bk.* 9; Thucydides 1. 95, 121-4; Aristotle, *Pol.* 1307A.

PAUSANIAS (2), grandson of (1), king of Sparta 445-426 and 408-394 B.C. His first reign (after the temporary deposition of his father Pleistoanax) was merely nominal, as he was a minor. He resumed the kingship after his father's death. In 403 he was sent to replace Lysander at the head of the Spartan forces engaged in besieging Thrasylbulus and the Athenian democrats in the Piraeus. Reversing Lysander's policy, he procured the return of the democrats to Athens and the removal of the remnant of the Thirty Tyrants (q.v.). In 395 he was sent to co-operate with Lysander in an invasion of Boeotia, but failed to join hands with him and retired without a battle. For this failure he was sentenced to death, but he lived on in exile.

Xenophon, *Hell.* 2. 4. 29 ff.; 3. 5. 6. 21-5.

M. C.

PAUSANIAS (3) of Lydia (?) (fl. c. A.D. 150), Greek traveller and geographer, knew Palestine, Egypt, Italy, and Rome, but especially Greece, and wrote *Περὶ Ἑλλάδος*, 'Description of Greece'. I. Attica, Megara. II. Argolis, etc. III. Laconia. IV. Messenia. V-VI. Elis, Olympia. VII. Achaia. VIII. Arcadia. IX. Boeotia. X. Phocis, Delphi.

Generally, P. sketches the history and then the topography of important cities, and of their surroundings, often including worships and superstitious customs, mythology, and the like. Descriptions of scenery are uncommon, but he dwells on natural phenomena, and in later books we get glimpses of products and social life. He loves all religious and historical remains, as at Olympia and Delphi, the older glories of Athens, and historic battlefields and memorials, but above all, artistic monuments, on which he writes plainly and honestly. His accuracy herein is confirmed by existing remains.

J. G. Frazer, *Pausanias' Description of Greece*, text, translation, and commentary, 6 vols. 1898; W. Gurlitt, *Über P.* (1890); R. Heberdey, *Die Reisen des P.* (1894). Text and transl., H. L. Jones (and R. Wycheley), 5 vols. (Loeb). E. H. W.

PAUSANIAS (4) and **AELIUS DIONYSIUS** (q.v. 3) were important Atticists at Rome in the second century A.D. From Aristophanes of Byzantium, Didymus, Pamphilus, and others they compiled *Attic Lexica*, used by Photius and Eustathius.

D. et P. fragments: E. Schwabe, 1890.

P. B. R. F.

PAUSIAS (4th c. B.C.), painter, son and at first pupil of Bryes, then of Pamphilus, a Sicyonian. Restored painting by Polygnotus at Thespiae. According to Pliny was the first to paint ceiling-panels (some, however, survive from the fifth-century Nereid monument). He liked small pictures of boys and flowers (thereby influencing Gnathia vases and later decoration), but also painted a Sacrifice with a frontal view of an ox, painted in black without high light, and Methe (in the Tholos at Epidaurus, about 350 B.C.) drinking from a glass cup through which her face could be seen. Such subjects displayed the encaustic technique of which he was the first great master.

Overbeck, 1062, 1726, 1760-5; Pfuhl, 79A.

T. B. L. W.

PAUSILYPUS MONS, named after Vedius Pollio's care-dispelling villa (παύλων λυπητή), separates Puteoli from Naples: nowadays *Posilipo*. Two ancient tunnels pierce the hill: the *Grotta di Seiano* built c. 37 B.C., and the *Grotta di Posilipo*, near Virgil's reputed tomb, probably built by Claudius.

Dio Cass. 54. 23; Pliny, *HN* 9. 167; Strabo 5. 245. R. T. Guenther, *Paesilipon* (1913). E. T. S.

PAX, the personification of (political) peace, cf. *ΕΙΡΗΝΗ*. Scarcely heard of before Augustus, she comes (as Pax Augusta) to represent one of the principal factors which made the Imperial government both strong and popular,

the maintenance of quiet at home and abroad (cf. Tacitus, *Ann.* 1. 2. 1: 'eunetos dulcedine otii pellexit'). The most famous, but not the only, monuments of the cult were the Ara Pacis Augustae (see Platner-Ashby, 30 ff.) erected by the Senate in 9 B.C. (voted 13 B.C.) and the Flavian 'Templum Pacis' (op. cit. 386 ff.), erected A.D. 75.

Cf. Wissowa *RK*² 334 f.

H. J. R.

PECULIUM was the private property of a slave which from humble beginnings (tips, wages, perquisites, savings of food, produce of a plot of land) might increase greatly and include property, businesses, ships, slaves (*vicarii*), rights, and claims, which, however, his master would have to help him to enforce. In law the *peculium* was the property of the master, but was often regarded as the slave's; it enabled a third party to deal with the slave, for it guaranteed his good faith. For the business enterprises of the slave the master was liable to the extent of the *peculium*. The slave could neither 'donate' his *peculium* nor dispose of it by will (though slaves in the service of the State could bequeath half of it). On the sale of a slave the *peculium* was not included. On manumission in the lifetime of the master the slave retained his *peculium* (unless expressly reserved), but not on manumission by will unless the will so enjoined. See also *PATRIA POTESTAS*, para. 3.

R. H. B.

PECUNIA TRAIECTICIA, see *BOTTOMRY LOANS*.

PEDIUS, **QUINTUS**, son (less probably grandson) of Caesar's elder sister. He served in the Gallic War, suppressed Milo's rising when praetor in 48 B.C., was sent to Spain (probably as governor of Hispania Citerior) in 47, and fought in the campaign of Munda. Pedius put the property which he inherited from Caesar at Octavian's disposal, was elected consul with him in 43, and carried a law providing for the trial of Caesar's murderers. He died apparently from overstrain due to the commencement of the Proscription.

Appian, *BCiv*, bks. 3 and 4, and Dio Cassius, bks. 43 and 46.

G. W. R.

PEDIUS (2), **SEXTUS**, a Roman jurist who lived perhaps between A.D. 50 and 120. He wrote a commentary on the praetorian and aedilician Edict, which is often quoted by the later commentators, Paulus and Ulpian, but which is not represented in the *Digest* by any direct excerpt. He was an original thinker who frequently asserts his own doctrines. He wrote also a dissertation *De stipulationibus*.

A. B.

PEDO ALBINOVANUS, see *ALBINOVANUS*.

PEGASUS (1), in mythology, winged horse who carries the thunderbolt of Zeus (*Eur. fr.* 312). The dying Medusa gave birth to him (*Hes. Theog.* 280). When P. was drinking at the fountain Pirene he was caught and tamed by the hero Bellerophon, with the aid of Athena Chalinitis or of Poseidon (*Paus.* 2. 4. 1). He helped Bellerophon to fight the Chimaera, the Amazons, and the Solymi (*Hes. Th.* 325, *Pindar, Ol.* 13. 86), but when Bellerophon attempted to fly to heaven P. threw him. In another story Bellerophon flung Anteia or Sthenoboea from Pegasus (*Eur. Sthenoboea*). P. was said to have stamped many famous sources out of the earth with his hoof.

The ending -aōos shows that P. is of pre-Greek origin and his legend probably goes back to pre-Greek inhabitants of Asia Minor. P. became early a favourite of Greek artists and poets; proto-Corinthian vases show P. in action against the Chimaera (*H. Payne, Necrocorinthia* (1931), 133, cf. pl. 4, 1) and his birth is represented in the early archaic pediment of Corcyra. He also appears on early coins of Corinth, the city with which he is most closely connected by legends. P. has no

connexion with poets in ancient sources beyond the fact that he created Hippocrene (*Paus.* 9. 31. 3). In Roman times P. becomes a symbol of immortality.

L. Malten, *JDAI* 1925, 138 ff.; J. Aymard, *Mélanges École franç. Rome* 1935, 143 ff.; F. Cumont, *Études syriennes* (1917), 91 ff.; M. Launy, *Mon. Piot* (1935), 32, 47. G. M. A. H.

PEGASUS (2), a Roman jurist of the time of Vespasian; he was consul and *praefectus urbi*; successor of Proculus in the leadership of the Proculians' School. He was considered very erudite ('liber, non homo'). He passes for the author of the *senatus consulta* mentioned by Gaius 1. 31 and 2. 254 f. (the latter is called *SC Pegasianum*).

A. B.

PEISANDER (*Πεῖσανδρος*) (1) of Cameirus in Rhodes (7th or 6th c. B.C.), epic poet, author of a *Heraclea*, perhaps the most important poem so named; the first to represent Heracles with a club; said to have plagiarized the *Heraclea* from Pisinus; other poems attributed to him were spurious (*Suid.*). See *EPIC CYCLE* and *QUINTUS SMYRNAEUS*.

EGF 248-53.

W. F. J. K.

PEISANDER (2), Athenian politician, *floruit* between 430 and 411 B.C. Often attacked in comedy for corruption and cowardice, and ridiculed for extreme fatness. He was the principal actor in the negotiations between the oligarchic faction and Alcibiades in 412, and in the overthrow of the democracy in 411. He made the proposal in the assembly at Colonus for the appointment of a new Boule of 400, and of the '5,000' to take the place of the Ecclesia. On the overthrow of the oligarchs he fled to the Spartans and was condemned for treason in his absence.

A. W. G.

PEISANDER (3) of Laranda (early 3rd c. A.D.), epic poet, author of a long Greek poem on world history under the title *Ἡρωικὰ θεογὰμια*.

PEISISTRATUS, see *PISISTRATUS*.

PEITHO (*Πειθώ*), persuasion personified, Lat. *Suada*. Although, in the great majority of cases where she is mentioned, she is no more than a poetical or rhetorical figure, she has a slight hold on cult and mythology. Peitho is a cult-title of Aphrodite in a few places (*Farnell, Cults ii.* 664; Fischer, *Nereiden und Okeaninen*, *Diss. Halle* 1934, 31); it is a curious fact that she is daughter of Ocean in *Hesiod, Theog.* 349 (attempted explanation, Fischer, p. 32). She is a marriage-goddess in the opinion of the theologians cited by *Plut. Quaest. Rom.* 2. As an attendant on Aphrodite she appears constantly in art and literature; see Weizsäcker in *Roscher's Lexikon*, s.v.

H. J. R.

PELAGIUS (*fl.* A.D. ? 360-? 425), either British or Irish. Between 405 and 409 he wrote in Rome his *Expositions of Thirteen Epistles of St. Paul*, the earliest surviving work from the British Isles. His denial of 'original sin' caused bitter controversy and his excommunication. The value of his works nevertheless led to their being preserved either anonymously or under other names. He wrote also an *Epistula ad Demetriadem*, which had great vogue. His literary style is of high quality.

Expositions, ed. A. Souter (3 vols. 1922-31), who discovered the original form in 1906; G. de Plinval, *Pelage, ses écrits, sa vie et sa réforme* (1943). A. S.

PELASGIANS (*Πελασγοί* = ? *Πελαγ-σ-κοί*, Sea-people?) a tribe mentioned by Homer (*Il.* 2. 840; 17. 301) as Trojan allies, 'from Larisa, afar' (apparently in Thrace). In Greece, Achilles' domain includes 'Pelasgian Argos' (*Il.* 2. 684), perhaps named after former inhabitants, and Achilles worships 'Pelasgian Zeus' of Dodona (16, 233). In *Od.* 19. 177 Pelasgi are among the motley population

of Crete. In historic times the district round Thessalian Larisa was still called Pelasgiotis. Herodotus (1. 57) records surviving Pelasgian villages east of Cyzicus, and 'beyond the Tyrsenians' at Creston in Chalcidice; they preserved a common non-Greek language.

The Pelasgi seem to have been primarily a North-Aegean people, uprooted (to judge from their scattered distribution) by Bronze Age migrations. The Greeks, however, soon came to use their name for all 'aboriginal' Aegean populations (*see* PELASGUS). To Herodotus (1. 57) 'Pelasgian' stands for all 'pre-Aryan' and 'Mediterranean' elements in Greece.

J. L. Myres, *JHS* xxvii; J. A. R. Munro, *JHS* liv. A. R. B.

PELASGUS, eponym of the Pelasgi (*see* PELASGIANS), the pre-Hellenic inhabitants of Greece. Hence the name is given to mythical ancient princes of various districts whose inhabitants claimed to be autochthonous, or at least of very long residence: Arcadia (Asius in Pausanias, 8. 1. 4; he was son of Earth); Argos (Aesch. *Supp.* 251; Hyginus, *Fab.* 145. 2; contemporary with the rape of Persephone, Paus. 1. 14. 2); Thessaly (schol. *Il.* 2. 681; grandson of Thessalos, eponym of Thessaly). Generally speaking, he is either Peloponnesian (and if so, either Arcadian or Argive), or else Thessalian. Weizsäcker in Roscher, s.v.

H. J. R.

PELEUS (Πηλεΰς), in mythology, son of Aeacus (q.v.), and therefore an Aeginetan; but as his name seems to mean 'man of Pelion' and his chief adventures are in that neighbourhood, it is highly likely that there has been an early conflation of two genealogies (Achilles is already an Aeacid in Homer), for some reason quite unknown. His transference from one district to the other is explained by the story that he and Telamon killed their half-brother Phocus (Apollod. 3. 160), whereat their father banished them both. Peleus then went to Phthia, was purified by Eurytion, and married his daughter Antigone; but at the Calydonian boar-hunt he accidentally killed Eurytion and was again exiled. This time he reached Iolcus, where Aeacus son of Pelias purified him, and he took part in Pelias' funeral games. But Astydameia, Aeacus' wife, fell in love with him. As he was unwilling, she sent word to Antigone that Peleus was to marry Sterope, Aeacus' daughter, whereat Antigone hanged herself; Astydameia then lied to Aeacus much as Phaedra did to Theseus (*see* HIPPOLYTUS). Aeacus thereupon took him out hunting on Pelion, hid his sword as he slept (for the sword cf. Ar. *Nub.* 1063, and schol. there, who says Hephaestus made it and the gods brought it to Peleus when he was left defenceless), and left him to be attacked by the Centaurs; but Chiron brought him the sword again, he escaped, and took vengeance upon Astydameia, capturing Iolcus and cutting her to pieces (Apollod. 173, who says he led his army between the pieces, a ritual of purification, cf. Livy 40. 6. 1; Plut. *Quaest. Rom.* 290 d). Finally, for his virtue, he was given Thetis (q.v.) to wife; from the Chest of Cypselus on (Paus. 5. 18. 5) he had to win her by wrestling with her, while she took all kinds of shapes (Apollod. 170). She left him because he interfered when she tried to make Achilles immortal by burning his mortality away in a fire (ibid. 171, cf. Lycophron, 178-9). Finally he was reunited to her and made immortal (Eur. *Andr.* 1253 ff.). H. J. R.

PELIADES (Πηλιάδες), the daughters of Pelias; *see* MEDEA.

PELIAS, *see* NELEUS, MEDEA.

PELION (τὸ Πήλιον ὄρος), a mountain of over 5,300 feet in Thessalian Magnesia. The mountain system of Pelion with that of Ossa cut off the plain of Pelasgiotis from the Aegean. On the east the steeply rising coast was harbourless, but beneath its fertile south-western slopes were good harbours on the Gulf of Pagasae.

H. D. W.

PELLA (mod. *Alaklissi*) capital of Macedonia c. 400-167 B.C., situated in a strong natural position beside the lake of the river Lydias, which was navigable from Pella to the sea (Livy 44. 46; Strabo 7. fr. 20). Known to Herodotus (7. 123) and Thucydides (2. 100. 4), it became the capital of Archelaus and the largest Macedonian city (Xen. *Hellenica* 5. 2. 13), until replaced in importance by Thessalonica in 146 B.C. Pella was later a Roman colony.

N. G. L. H.

PELOPIDAS was born about 410 B.C. of a distinguished Theban family. He must have attached himself prominently to the democratic party of Ismenias before the seizure of the Theban citadel by the Spartans (382), when he took refuge in Athens. He led the *coup d'état* by which the oligarchy was overthrown and the citadel recovered (winter 379/378), and became notable at once as a statesman and general. In 378 he was a Boeotarch, and in the war with Sparta won great fame by his leadership of the Sacred Band (q.v.), especially at Tegyra (375) and Leuctra (371). He accompanied Epaminondas on his first invasion of the Peloponnese (winter 370/369). But after that he turned his attention to Thebes' northern enemies, Alexander of Phrae and Macedon. On his second expedition (368) he was made prisoner by Alexander, but was rescued by Epaminondas. On an embassy to the Great King he persuaded him to withdraw his diplomatic support from Sparta (367). He defeated Alexander of Phrae at Cynoscephalae, but died in action (364).

Pelopidas' energy and leadership were of great service in the advancement of Thebes. He showed less originality than Epaminondas, but equal capacity.

Nepos' and Plutarch's *Lives*; G. Reineke, *PIW*, s.v. 'Pelopidas'. H. W. P.

PELOPONNESIAN LEAGUE, the earliest known, and likewise the most long-lived and influential Greek *symmachia* (q.v.). The name is modern, the usual Greek term being 'the Lacedaemonians and their allies'. After an earlier period of separate treaties between Sparta and individual States the League was organized shortly before 500 B.C. as a permanent offensive and defensive alliance under the presidency of Sparta, who held the command in war and summoned and presided over the assembly of allies. Only after the majority of this body, in which each allied State cast one vote, had ratified a proposal to go to war could Sparta demand the support of all members. She herself probably cast no vote in the Assembly but exercised great influence over its decisions by her power to refuse to call a meeting except to consider proposals that had her own approval. When no League war was in progress, the members were free to carry on separate wars even with other members. Thus the League could not support every allied State in war; even to secure defence against aggression from the League as such it was necessary to convince first Sparta and next the Assembly. Athens, at the time of her surrender in 404, and later other allies, were forced to accept treaties promising complete obedience on questions of peace and war. In other ways, too, a tendency to transform the League into an empire was shown. This process was not completed before the collapse of the power of Sparta and the dissolution of the League in 366 B.C.

Ancient sources: Herodotus, Thucydides (especially bk. 1); Xenophon, *Hell.* For modern literature *see* under *SYMMACHIA*. The origin and constitution of the League are discussed by Larsen in *CPH*, 1932, 1933, and 1934. An interpretation differing on many points is given by U. Kahnt, *Griechischer Staatsrecht* (1922).

J. A. O. L.

PELOPONNESIAN WAR (431-404 B.C.). The cause of the war, according to Thucydides, was that the Athenian Empire had destroyed the autonomy of some Greek States and threatened many more. There was a general fear of Athens, particularly on the part of Corinth which was hemmed in both on east and west, and goodwill towards her enemies who were to be the 'liberators of

Greece'. Nothing, however, in 'Thucydides' opinion, would have come of this if Sparta had not feared for her own position. Thucydides, well aware of the economic factor in the conduct of the war, does not consider it as a cause. Athens was morally the aggressor, but her enemies began the war. Military victory was therefore a necessity for the Peloponnesians; a draw meant victory for Athens.

2. The main lines of strategy were simple. A superior hoplite force was at that time irresistible on land; it could master an enemy's territory, depriving him of supplies, and if necessary besiege the city. But in the absence of effective siege-engines a besieged city could normally be reduced by famine only, and Athens had countered this risk by her Long Walls (q.v.), which provided a refuge space for her country population, and secured her connexion with the sea. On land she could not muster a force half as strong as her enemies (among whom the Spartans and Boeotians were the finest soldiers in Greece); but she was overwhelmingly strong at sea, in numbers, skill, and morale. She could thus temporarily sacrifice her land without sacrificing her people, and she could neither be taken by assault nor reduced by starvation. At the same time she could harry her enemies' trade (the Peloponnese depending partly on imported food, though not at all to the same extent as Athens) and their coasts. Pericles therefore persuaded his countrymen to transfer themselves and all their movable goods within their walls. The one advantage the Peloponnesians had at sea was that they could concentrate their forces to secure a local superiority; but this was neutralized by their lack of skill and confidence, and by their financial weakness. In available wealth, indispensable for the fleet and for overseas supplies, Athens had a decided advantage.

3. In autumn 433 a quarrel between Corinth and her colony Corcyra gave Athens the opportunity to secure in Corcyra an ally with a considerable fleet and Athenian intervention robbed Corinth of the fruits of a naval victory over Corcyra. In Naupactus she already possessed an important naval base in the Corinthian Gulf. Next year Potidaea revolted from Athens, and Corinth unofficially sent help. In the autumn the Peloponnesian League voted for war. In May 431 war was declared and the Peloponnesians invaded Attica, ravaged the deserted land for about a month, and retired. The first year went according to Pericles' plan: Athens was undamaged and the issue depended on Athenian patience and morale; and so it continued for six years. In 430 a devastating pestilence broke out among the crowded people within the walls (where no proper provision had been made for their housing), and Athens lost more than a quarter of her population, a blow from which she never fully recovered; and Pericles died (429), the one man with enough influence to carry out a consistent policy. But Potidaea was forced to capitulate, Phormion gained two brilliant naval victories over superior forces off Naupactus (429), a revolt in Lesbos was crushed, the Peloponnesian fleet failing to help the island (428-427), and Demosthenes gained a decisive victory over the Peloponnesians in Acarnania (426). In 425 Pylos on the west coast of Messenia was captured, which gave Athens not only a permanent post in the enemy's country in a vulnerable spot—for helots could be encouraged to revolt—but a number of Spartan prisoners. Sparta was being hemmed in; fearful for her prisoners and of leaving her territory now, she gave up the annual invasions of Attica and sued for peace. Pericles' strategy had triumphed.

4. But the Athenians, at the instance of Cleon, a demagogue who had made capital out of the victory of Pylos, refused the peace. In 424 a brilliant Spartan, Brasidas, first saved Megara from capture by Athens, then slipped through Thessaly, and with support from Perdiccas II of Macedon won over several Athenian dependencies in the Thracian region, including the

important Amphipolis. At the same time an ambitious attempt by Athens to overthrow Boeotia was decisively defeated at Delium. A year's truce was concluded (423); in the autumn of 422 Cleon took a force to Thrace, but after some successes was decisively defeated at Amphipolis; both he and Brasidas fell. Brasidas had been unable to extend his successes; and peace was now made between Sparta and Athens, practically on the basis of the *status quo ante bellum*. This was in effect a victory for Athens, the more so because her enemies were divided, Corinth and Boeotia refusing to sign the peace; the united forces of the rest of Greece had been unable seriously to weaken the Athenian Empire.

5. But again the ambition of a politician wrecked the peace: Alcibiades intrigued against Sparta in the Peloponnese, and a coalition was formed against her—Argos, Elis, Mantinea, and Athens. But Athens sent half-hearted help, and Sparta recovered herself at Mantinea (418). Athens suddenly attacked and destroyed the unoffending Melos (416), because it was an island not subject to her, and then launched the grandiose expedition to Sicily (415-413), championed by Alcibiades and opposed by Nicias. The finest force that ever left Greek shores went to Sicily; but Alcibiades was soon recalled to answer charges to which his lawless private life had exposed him, and he promptly went over to the enemy; and the irresolute Nicias allowed initial successes to be turned into defeat. Large reinforcements under Demosthenes were sent; but finally the whole force was utterly destroyed (Oct. 413).

6. Meanwhile Sparta had renewed the war in Greece and occupied Decelea in Attica as a permanent base (spring 413). Athens had lost almost all her fleet, and though she began to rebuild she no longer had trained crews. Persia provided money for a Peloponnesian fleet, which crossed the Aegean, and the subject States began to revolt; Athenian food-supplies from the Bosphorus and from Egypt were endangered. Further, there was political strife in Athens, ending in the revolution of the Four Hundred and the loss of Euboea (411). But the new fleet, led by Alcibiades, who had been recalled, gained several victories in the Hellespont, secured the food-supply, and recovered many revolted allies (411-408). However, Lysander with Persian help recreated the Peloponnesian fleet. Almost exhausted, Athens won the costly battle of Arginusae (406). But once more politics destroyed what the fleet had saved: a new peace offer was rejected and the victorious generals were tried and executed for failure to rescue the crews of waterlogged ships. In 405 the last Athenian fleet was surprised and destroyed at Aegospotami in the Hellespont. Besieged by sea and land, Athens capitulated in April 404.

7. The Peloponnesian War had been, as Thucydides says, the greatest 'disturbance' in Greek history. Methods of warfare, never gentle in Greece towards prisoners and non-combatants, became more cruel; the only hopeful attempt at Greek unity was defeated; and the old autonomy was not won back, but an incompetent imperialism substituted for an enlightened one. Greece hardly recovered from the war.

ANCIENT SOURCES. For the first twenty years Thucydides is our authority; for the last seven the less adequate Xenophon (*Hellenica*, 1-2, 2). Diodorus' history (12, 30-13, 107; probably only an epitome of Ephorus) covers the whole war, but contains little of value. Of the subsidiary sources, Aristophanes gives incomparable pictures of Athens in war-time. Several speeches of Antiphon, Andocides, and Lysias, and the partisan pamphlet on the *Constitution of Athens* (falsely ascribed to Xenophon) also throw light on contemporary feeling. Plutarch's *Lives* of Pericles, Nicias, Alcibiades, and Lysander add much biographical detail. For inscriptions see *IG* i (ed. minor, 1924); M. N. Tod, *Greek Historical Inscriptions* (1946), containing a valuable selection of indispensable official documents.

MODERN WORKS. Besides the general histories of Greece (of which Busolt's, which gives the sources throughout, is most useful), see G. B. Grundy, *Thucydides and the History of his Age* (1948). See also the separate articles on most of the individuals mentioned above. A. W. G.

PELOPONNESUS, 'Isle of Pelops', the large peninsula of south Greece, connected with the mainland only by the Isthmus of Corinth. The name Peloponnesus, mentioned for the first time in the *Cypria* (fr. xi Allen) and the Homeric Hymn to Apollo, proves that the whole territory was considered an island, a separate part of Greece. Ancient geographers knew about its peculiar shape, comparing it to the leaf of a plane-tree; the medieval name Morea is said to have been taken from the mulberry.

The area of Peloponnesus, including the islands except Aegina and Cythera, amounts to about 8,430 sq. miles (cf. Sicily 9,930, Cyprus 3,580 sq. miles). The number of the population can scarcely be estimated. The civic population may have been about 500,000 or 600,000 in 400 B.C. (1928: 1,053,300).

Although virtually an island, and indented by deep gulfs, Peloponnesus had but little communication with the sea, for the few good harbours (mostly in Argolis) had almost no hinterland. Arcadia, the central, nearly inaccessible district, did not touch the sea at all; the surrounding divisions (Laconia, Messenia, Elis, Achaea, Isthmus, Argolis, qq.v.) were separated from one another by mountains, which also were a great hindrance to intercourse by land.

The parallel mountain chains of central Peloponnesus running to south-south-east once formed part of the huge arc stretching from Albania through middle Greece and Crete to Asia Minor. This original system was destroyed by the subsidence which created the large gulfs and most of the plains in the interior. In the Isthmian province and Argolis the predominant direction of the ranges is west to east, as in the eastern parts of middle Greece. The western and southern divisions of Peloponnesus are characterized by larger plains, forming a kind of counterweight to the smaller ones of east and north. And as the mountain-ranges seem to radiate from Arcadia, the Peloponnesus, in spite of its heterogeneous geological formation, gives the impression of a peculiar system, with a centre surrounded by other districts.

There are plains fit for agriculture; by far the largest part of Peloponnesus, however, is mountainous, uncultivable, and poor. About 50 per cent. of the surface, consisting of chalk and limestone, provides only pasture for sheep and goats, the oak-woods also for swine. Flora and climate depend, of course, upon the geographical and geological conditions, which vary greatly. Arcadia and the east are almost entirely continental, while the western parts are subject to maritime influences.

Most important sources: Strabo 8. 335-89; Pausanias, bks. 2-8; E. Curtius, *Peloponnesos* (1851); A. Philippson, *Der Peloponnes* (1892) (with good maps); E. Meyer, *PA*, s.v. Area and population; J. Beloch, *Bevölkerung der griech.-röm. Welt* (1886), 109 ff. V. E.

PELOPS (Πελοψ), in mythology, son of Tantalus (q.v.). His chief adventures are: (1) In childhood he was killed and cooked by his father, who served his flesh to the gods to see if they could tell that it was not that of a beast. Demeter inadvertently ate part of his shoulder; the other gods brought him to life again, replacing the lost part by ivory. See especially Pindar, *Ol.* 1. 46 ff. (controverses ordinary account); schol. *ibid.* 40; Apollod. *Epit.* 2. 3 ff. (2) By favour of his lover Poseidon he became possessed of wonderful horses and great skill in driving. On reaching manhood he wooed Hippodameia daughter of Oenomaus of Pisa. This king had an incestuous love for his daughter, or had been warned that her husband would kill him (Apollod. *ibid.* 4). He therefore let it be known that anyone who wished might carry her off, on condition that he might pursue, and spear the suitor if he caught him. Thirteen suitors had already perished when Pelops appeared. He bribed Myrtilus, Oenomaus' charioteer, to take out the linchpins of his master's chariot (the details vary in different authors; see Roscher's

Lexikon, arts. 'Myrtilos', 'Oinomaos'). Oenomaus was thus thrown and killed and Pelops carried off his bride. But, either because he was ashamed to owe his victory to Myrtilus (Hyginus, *Fab.* 84. 5), or because Myrtilus loved Hippodameia and Pelops was jealous (Apollod. *ibid.* 8), he cast him into the sea which was afterwards called Myrtoan. Myrtilus, or Oenomaus, cursed Pelops in dying, and the curse was efficacious, the more so as they were both sons of gods, Hermes and Ares respectively; see, for the later fortunes of his family, ATREUS, AGAMEMNON. However, for the time being Pelops prospered greatly and had six sons by his wife (various lists in schol. Pind. *ibid.* 144). But various stories of his offspring were current, see Bloch in Roscher iii, 1872. He was supposed (falsely, for the 'barrow' contained no burial) to be buried at Olympia. H. J. R.

PELTASTS (πελτασταί) were Greek soldiers, named from their small round shield (πέλτη). Originally they had no body-armour and their chief weapons were light throwing-spears (ἀκόντια). They are first recorded as derived from Thrace, and were imported into Greece in the later fifth century B.C. to act as skirmishers. Their style of equipment was adopted in Greek armies, and achieved numerous successes, especially under Iphicrates (q.v.) and Chabrias. To Iphicrates are attributed the changes whereby the length of their spears was increased by a half, and the size of their swords almost doubled. The object of these alterations was to enable the peltasts to act as regular troops and not mere skirmishers. After the rise of the Macedonian armies apparently they fell into disuse.

Aristotle, fr. 498 (Rose), and Diod. 15. 44 (on their equipment). O. Lippelt, *Die griechischen Leichterbewaffneten bis auf Alex. d. Gr.* (1910); J. Kromayer and G. Veith, *Heereswesen und Kriegsführung* (1928), 88 ff.; H. W. Parke, *Greek Mercenary Soldiers* (1933), 17 ff. and 79 ff. H. W. P.

PELUSIUM, a city at the eastern mouth of the Nile. Renowned for its flax, it was especially important as a frontier fortress towards Palestine. Near it Cambyses defeated the Egyptians (525 B.C.). In 374 Pharnabazus and Iphicrates were bailed here by floods; but the position was carried in 343 by Artaxerxes III, in 333 by Alexander, in 169 by Antiochus IV, in 55 by Gabinius and M. Antonius, and in 30 by Octavian (against Antonius). Under the Roman Empire it was a station on a route to the Red Sea. E. H. W.

PEMPHREDO, see GRAIAE.

PENATES, DI, 'the dwellers in the store-cupboard (penus)', cf. *Aquinas*, *Arpinas*. These guardian *numina* of the family larder were worshipped in close conjunction with Vesta (q.v.), also with the Lares (q.v.), properly the Lar Familiaris. It was the chief private cult of every Roman household, especially in early times. It would seem, however, that the royal *di penates*, like the royal Vesta, were reckoned of especial importance to the community; this at least is the most reasonable explanation of the cult of the *Penates Publici*. This was attached to Vesta's temple (Tacitus, *Ann.* 15. 41. 1), but there was also a separate shrine, of unknown but fairly early date, on the Velia (see Platner-Ashby, p. 388). Speculation was rife as to who these Penates originally were, and it was generally supposed that they were the Dioscuri (q.v.). But, since the latter were commonly identified with the Samothracian gods also, and the Penates were called *di magni*, like the Cabiri (q.v.), it was held, not later than Cassius Hemina (see Servius on *Aen.* 3. 12; Cassius Hemina, fr. 5 Peter), that the Roman, and other Italian, *Penates Publici* owed their origin to Samothrace, having been brought by Aeneas (Klausen, *Aeneas und die Penaten*).

Wissowa, *RE* 161 ff.

H. J. R.

PENELEOS (*Πηνέλεως*; also *Πηνέλαος*, *Etym. Magn.* 670. 50 Sylburg, but reading uncertain; Peneleus, Hyginus, *Fab.* 81, cf. *Πηνέλεον*, read by Aristophanes in *Iliad* 13. 92), son of Hippalcimus or Hippalcus (Diod. Sic. 4. 67. 7; Hyginus, *Fab.* 97. 8); one of the Boeotian leaders (*Iliad* 2. 494); killed by Eurypylus (Quint. Smyrn. 7. 104); wooed Helen (Apollod. 3. 130); an Argonaut (*ibid.* 1. 113). H. J. R.

PENELOPE (*Πηνελόπη*, Epic *Πηνελόπεια*), in mythology, daughter of Icarius, brother of Tyndareos (q.v.), and wife of Odysseus (q.v.). In the *Odyssey* she faithfully awaits his return, although pressed to remarry one of her numerous suitors, the local nobles. She puts them off for a while by pretending that she cannot marry until she has finished weaving a shroud for Laertes, Odysseus' father. This she unravels every night, so that the work is never finished, but after three years she is betrayed by one of her maids and compelled to complete it (*Od.* 2. 93 ff.; 19. 137 ff.; 24. 128 ff.). At last, ten years after the fall of Troy and twenty after the departure of her husband, she is at her wits' end and determines to give herself in marriage to whoever can bend Odysseus' bow. This is at Athena's prompting (*Od.* 21. 1) and is used by Odysseus to get hold of the weapon and kill the wooers with it. Later writers add very little, save some particulars concerning her father's adventures and the statement (in the *Telegonia*) that she married Telegonus after Odysseus' death.

There is, however, another story of Penelope so different from that of the epic tradition that it seems possible that we have here to do with a different figure (nymph or minor local goddess?) of the same name. This is that she was the mother of Pan. Tzetzes, who mentions the tale that she and Hermes were his parents, is already of this opinion (schol. Lycophron, 772, cf. Apollod. *Epit.* 7. 38). It of course produced sundry reconciliations and rationalizations, the most notorious, that of Duris of Samos in Tzetzes, *ibid.*, being simply an indecent pun. But possibly the whole legend is no more than an etymological fancy, a connexion of *Πάν* with Doric or Doricized *Πανελόπα*. For more details see J. Schmidt in Roscher's *Lexikon*, s.v. H. J. R.

PENESTAE, see *SERFS*.

PENIA (*Πενία*), poverty personified, a literary figure, perhaps also popular (see Hdt. 8. 111. 3), and so appearing in various allegorical contexts (pleads her cause against Wealth, Ar. *Plut.* 489 ff.; mates with Abundance to produce Eros, Plato, *Symp.* 203b f.; humorously said to guard a poor man's house, *Anth. Pal.* 9. 654), not in cult. H. J. R.

PENTADIUS (3rd c. A.D.) has left elegiac poems in 'echoic' verse on Fortune, Spring, Narcissus, besides several epigrams. Text and translation: J. W. and A. M. Duff, *Minor Lat. Poets* (Loeb, 1935).

PENTAKOSIOMEDIMNOI, the richest of the four census classes at Athens with a (comparatively low) minimum rating of 500 *medimnoi* of corn, or their equivalent in other produce or money. By the constitution of Solon (q.v.) they alone could be elected archons or *tamiai*. This privilege was preserved by Cleisthenes (q.v.), but it was abolished soon after. See HIPPEIS, ZEUGITAI, THETES. A. W. G.

PENTATHLON, see *ATHLETICS*, paras. 2 and 3.

PENTECONTAETIA, the 'period of fifty years' between the Persian and Peloponnesian Wars, is treated by Thucydides, but not so called, in his first book, chs. 89-118. It did not comprise exactly fifty years, being merely the period from autumn 479 (Sestos) until spring 431 (attack on Plataea). The detailed chronology of the Pentecontaetia is highly controversial. V. E.

PENTHESILEA (*Πενθεσίλεια*), in mythology, queen of the Amazons who came to the aid of Troy after the death of Hector (q.v.), *Aethiopis*, fr. 1 Allen. According to this poem (see Proclus and cf. Quint. Smyrn. 1. 18 ff.) she was daughter of Ares (cf. AMAZONS) and did valiantly until finally overcome and slain by Achilles. She was buried by the Trojans, and Achilles, by a touch of un-Homeric sentimentality, grieved over her so that Thersites (q.v.) reviled him for being in love with her, whereat Achilles slew him and consequently quarrelled with Diomedes (q.v.), his kinsman in this version (Thersites was son of Agrius (see OENEUS) and so first cousin once removed to Diomedes, Quint. Smyrn. 1. 770 ff.). The reason for her being willing to help Priam was that after Theseus married Phaedra, Hippolyte (see HIPPOLYTUS) roused the Amazons against him and in the ensuing battle was accidentally killed by her own comrade Penthesislea. The latter then obtained purification from her blood-guilt at the hands of Priam (Apollod. *Epit.* 5. 1). This is plainly a secondary addition to the story, and in fact Apollod. *ibid.* gives two other accounts of Hippolyte's death.

Like all Amazons, Penthesislea is a common and favourite subject in art. H. J. R.

PENTHEUS (*Πενθεύς*), in mythology, son of Agave, daughter of Cadmus (q.v.), and her husband Echion. When Dionysus returned to Thebes from his conquests in the East, Pentheus denied his deity and refused to let him be worshipped. But the supernatural strength of the women who had gone out to worship Dionysus was too much for his soldiers, and he consequently (by advice of a mysterious stranger, the god in disguise or another) went out to spy upon them. He was detected and torn in pieces, his mother, who in her frenzy took him for a beast, leading the rest. It is possible that this goes back to some ritual killing, cf. DIONYSUS. See especially Euripides, *Bacchae*, whence Ovid, *Met.* 3. 511 ff., Nonnus, *Dion.* 44-6, chiefly derive. H. J. R.

PERDICCAS (1) I, the first king of Macedon (Hdt. 8. 139), who probably conquered the Macedonian coast c. 640 B.C.

PERDICCAS (2) II, king of Macedon c. 450-413 B.C. By astute diplomacy Perdicas survived rebellions in Upper Macedonia, invasion by Sitalces (q.v.), and intervention by Athens and Sparta, and succeeded in uniting Macedonia and diminishing the Athenian control of his coast. In alliance with Athens until she founded Amphipolis in 436, he subsequently promoted the revolt of Potidaea and the Chalcidians, whom he advised to concentrate at Olynthus. The Athenians aided by Derdas, prince of Elimiotis, and by Philip, exiled brother of Perdicas, captured Therme before they came to terms with Perdicas in order to invest Potidaea. Perdicas assisted Potidaea until Sitalces negotiated a treaty for him with Athens, who ceded Therme (431); probably Derdas also submitted to Perdicas. In 429 the invasion of Sitalces was repelled by the Macedonian cavalry, and a marriage-alliance was contracted; in 425 Perdicas allied with Brasidas to oust Athens and to reduce Arrabaeus, prince of Lyncestis, but when the campaign in Lyncestis failed, allied with Athens (422). Allying in 417 with Sparta and Argos, he allied again with Athens when attacked in 415, and died c. 413.

F. Geyer, *Historische Zeitschrift, Beiheft* 19 (1930). N. G. L. H.

PERDICCAS (3) (d. 321 B.C.), son of Orontes a Macedonian noble, accompanied Alexander to Asia as 'taxiarch' commanding a brigade of Macedonian infantry. He was promoted 'Bodyguard' (member of Alexander's personal staff; 330), and thereafter often held independent commands. Craterus' return to Europe and Hephaestion's death (324) made him Alexander's second-in-command,

and when Alexander died he became in effect, if not in name, regent of the empire (323-2), an arrangement which alarmed Antipater and Craterus in Europe, and the insubordinate satraps Antigonus (Phrygia, etc.) and Ptolemy (Egypt). In the ensuing war Perdiccas tried to invade Egypt, but Ptolemy's skilful defence and propaganda incited his Macedonians to mutiny, and they killed him. Able, brave, and loyal, but unpopular because of his arrogance, Perdiccas is the type of a Macedonian nobleman and general who just missed greatness.

G. T. G.

PERDUELLIO (from *perduellis* = *hostis*) signified in the ancient Roman law all kinds of hostile activity against the State, especially collusion with the enemy. It was the first crime to be prosecuted by the State, which exercised justice by means of special *duoviri perduellionis*. The penalty was death at all times; the same sanction is mentioned in the XII Tables for cases of treason, even for the act of *civem hosti tradere*. *Perduellio* was absorbed at later times in the wider conception of *crimen maiestatis* (sc. *imminutae*) including all offences against the security, independence, or honour of the Roman people. Augustus' *Lex Julia maiestatis*, to which Justinian dedicated the first title dealing in the *Digest* with public crimes (48. 4), embraced a long series of criminal acts classified as *crimen maiestatis*, which was enlarged considerably by the classical jurisprudence. The profession of Christianity was classified also as *crimen maiestatis*.

Besides the text-books of Criminal Law (q.v.), E. Pollack, *Majestätsgedanke im röm. Recht* (1908); F. Vittinghoff, *Der Staatsfeind in der röm. Kaiserzeit* (1926); C. H. Brecht, *Perduellio* (1938).
A. B.

PEREGRINATIO AD LOCA SANCTA, strictly *Itinerarium Aetherae abbatissae*, discovered in a fragmentary state in a Monte Cassino manuscript at Arezzo, was first published by Gamurrini, 1887. He believed that he had found a work by one Silvia, but the lady's name was Silvanus, and Férotin made it clear in 1903 that the guess was false. The work, when complete, consisted of letters sent by the head of a nunnery to the nuns under her charge. She was one of the early pilgrims to the Holy Land, and describes in rather colloquial Latin her journeys to Egypt, Palestine, Asia Minor, and Constantinople. She is interested in all biblical sites, liturgical practice, and monastic life. The date is uncertain; whereas much points to the latter part of the fourth century A.D., the religious and literary atmosphere is much like that of Gregory of Tours and the sixth century, to which the high authority of Löfstedt assigns the book.

Ed. W. Heraeus (3rd ed. 1929); commentary by E. Löfstedt, *Philol. Komm. zur Peregrinatio Aetherae* (1911).
A. S.

PEREGRINI, meaning the citizens of any State other than Rome, implied membership of a definite community. Some non-Romans were distinguished from *peregrini*, notably the *Latini* (q.v.). The *socii Italici* remained *peregrini* till 89 B.C., and all provincial peoples enjoying any form of local autonomy were *peregrini* (see *CIVITAS*, *ORDINIS*). They sometimes enjoyed *conubium* or *commercium*, but could not receive the Roman citizenship unless they surrendered their own sovereignty. In practice, however, the grant of Roman status to an individual *peregrinus* meant, by the end of the Republic, that he was automatically freed from liability to the civic duties of his native *civitas*, while enjoying its amenities; for no Roman could be a citizen of two States. This led to abuses, as Roman citizenship spread abroad, which were rectified by a decree of Augustus affirming the liability of such Roman citizens to their local *municipia* (q.v.).

For bibliography see *socii*; *municipia*; *CIVITAS*, *ROMAN*.
A. N. S.-W.

PEREGRINUS (with the nickname *Proteus*) of Parium in Mysia (c. A.D. 100-65), Cynic. Our knowledge of him comes almost entirely from Lucian *Περὶ τῆς Περειργίου τελευτῆς*. He was suspected of murdering his father, and to avoid the scandal travelled in Palestine, where he became a Christian. For his activities in this connexion he was imprisoned. On being released he returned to Parium, but soon resumed his travels. He quarrelled with the Christian community, and betook himself to Egypt, where he studied under the Cynic Agathobulus. From there he went to Italy, and then to Greece, as a wandering preacher. His reputation became such that by some he was classed with Epictetus, but Lucian has no high opinion of his character. In 165 he committed suicide by throwing himself on the flames at the Olympic Games.

PIW xix. 656.

W. D. R.

PEREMNIA, see *AUSPICUM*.

PERGAMUM, a city of Mysia, in the fertile Caicus valley c. 15 miles from the sea, must have been inhabited from early times, though we hear nothing of it before 401 B.C. Its true history begins only in the third century B.C., when under the so-called Attalid dynasty it became the capital of a Hellenistic kingdom inferior in importance only to Macedonia, Egypt, and the Seleucid realm. For the political history of this development, see *PHILETAERUS*, *EUMENES*, *ATTALUS*, *ARISTONICUS*.

Although the original Greek population of the city cannot have been large, it possessed the constitution of a Greek city-state even under the Attalids, who assumed, however, wide powers of interference at will. They also ruled directly the native population in the surrounding country under their control, and with the expansion of the kingdom and broadening of their political aims, they became increasingly like the great Hellenistic kings, relying on a Greek bureaucracy and a semi-professional army also predominantly Greek, though less elaborate than the Seleucid and Ptolemaic systems based on permanent military settlements. The expansion of Pergamum was due to a skilful exploitation of its natural wealth, which included silver-mines, but also an annual surplus from agriculture (corn) and stock-breeding, with its dependent industries of woollen textiles and parchment. The wealth of the country can perhaps be judged best from its unhappy fate later as the Roman province of Asia.

The Attalids were not great founders of cities, but they made Pergamum itself one of the greatest and most beautiful of all Greek cities. The public buildings, laid out in terraces on a hill-side and culminating in the palace and fortifications of the acropolis, were a splendid example of Hellenistic town-planning. With her famous school of sculpture, her library second only to that of Alexandria, and her kings who were philosophers at least in their spare time, Pergamum became a leader of the Greek world in culture even more than in politics and commerce.

ANCIENT SOURCES. Inscriptions: *Altuntürk von Pergamon* viii (M. Fränkel, 1890-5); see also *CAH* ix, bibliography to ch. 19; *Abh. Berliner Akademie*, 1932. For the period 220-168 B.C. Polybius and Livy (bks. 30 ff., using Polybius) are the most important.

MODERN LITERATURE. Hellenistic period: G. Cardinali, *Itinerario di Pergamo* (1906); M. Rostovtzeff, *Hellenistic World* (1921); id., *CAH* viii; E. V. Rieu, *The Attalids of Pergamon* (1947). Roman period: Jones, *Eastern Cities*, 55 ff., 82 ff.
G. T. G.

PERIANDER (Περικλῆς), tyrant of Corinth c. 625-585 B.C., and son of Cypselus (q.v.). He recovered Corcyra, founded Potidaea and probably Apollonia and Epidamnus, thus controlling the Damastium silver-mines and what was later the Via Egnatia. He deposed his father-in-law Procles of Epidaurus and seized his dominions; propitiated Delphi and Olympia, had dealings

with Thrasybulus of Miletus and Alyattes of Lydia; and arbitrated between Athens and Mytilene in their dispute for Sigeum. Contacts on his part with Egypt are indicated by Egyptian objects found at Perachora and by the Egyptian name of his nephew Psammetichus. Arion the dithyrambic poet came to his court from Lesbos and sailed from it in a Corinthian ship to tour Italy and Sicily. The scene of Plutarch's *Septem Sapientum Convivium* is Periander's court. Arts and crafts, industry and commerce flourished exceedingly under him, witness the ruins of the Apollo temple and the Peirene fountain at Corinth and the Gorgon pediment at Corcyra. The famous chest of Cypselus at Olympia was probably a dedication of Periander. The potteries increased their output. Periander is said to have built triremes and plied both seas, to have forbidden idleness and luxury, and to have continually found employment for his subjects. His vivid and passionate character left a deep impression, of which we have a picture in Herodotus' dramatic tale of his relations with his son Lycophron. His sons all predeceased him and he was succeeded by his nephew Psammetichus (Cypselus II), whose murder shortly after ended the seventy-three years of the tyranny of the house of Cypselus.

Herodotus, bks. 1, 3, 5 (with How and Wells' *Commentary* ii. 340-2); Nic. Dam. frs. 59, 60; Pausanias 5. 17. H. G. Payne, *Necrocorinthia* (1931), 54, 85, 240-4, 350-1. See also CYPSELUS and CORINTH. P. N. U.

PERIBOEA, see OENEUS.

PERICLES (c. 495-429 B.C.), Athenian statesman, was the son of Xanthippus (q.v.) and of Agariste, niece of Cleisthenes (q.v.) and granddaughter of Agariste of Sicyon and Megacles (q.v.). He was *choregus* when Aeschylus' *Persae* was produced in 472; but first came into prominence as one of the State prosecutors of Cimon (q.v.) in 463. In 462-461 he joined with Ephialtes (q.v.) in the attack on the Areopagus. According to Plutarch he became popular leader and the most influential man in Athens after Ephialtes' death and the ostracism of Cimon. But little is recorded of him for some years, and we do not know his attitude to the Egyptian war (459-454) and to the campaigns of 457 which resulted in the Athenian domination of Boeotia, Phocis, and Locris. He perhaps initiated the building of the Long Walls (q.v.; 458-456). In domestic politics he proposed payment for the dicasts, and perhaps instituted the theoric fund (q.v.)—in rivalry with Cimon for the popular favour, we are told, and therefore probably after the latter's recall, which he proposed in person. In 451-450 he proposed the law restricting the citizenship to children both of whose parents were citizens. In 454 or 453 he was *strategus* and campaigned in the Corinthian Gulf against Sicyon and Oeniadae. After the truce with Sparta (451 or 450) he led an expedition which restored Delphi to the Phocians (448?). He is said to have opposed the rash expedition of Tolmides which ended in the defeat of Coronea (447) and to have bought off the invading Peloponnesians in 446. He reduced Euboea, which had revolted from the League, to submission; and in the winter of 446-445 he secured Sparta's recognition of the Athenian empire in the Thirty Years' Peace. In 440-439 Pericles reduced the insurgent island of Samos after a nine months' siege.

2. Meanwhile his great influence had been shown in other directions. He initiated many cleruchies (q.v.) to strengthen the empire, especially in the Hellespont, and he established an important colony at Thurii (q.v.) to spread Athenian influence in Italy. He called, perhaps in 448-447, a general congress of all Greek States to consider the rebuilding of the temples destroyed by the Persians, the freedom of the seas for all, and peace—but nothing came of it, owing to the opposition of Sparta. He was building commissioner for the Parthenon (begin-

in 447) and the other great buildings of this time. His bitter enemy at home in this imperial policy was Thucydides (q.v. 1), son of Melesias, who was at last ostracized in 443; henceforth Pericles had no eminent opponent, and he was elected *strategus* every year till his death. In 437 he founded a colony at Amphipolis (q.v.), and about this time he led an expedition to establish Athenian influence in the Black Sea.

3. When war with the Peloponnesians threatened, Pericles determined to resist their demands. He doubtless counselled the alliance with Corcyra in 433, and he was the author of the decree against Megara in 432. When war broke out the whole of the Athenian strategy was devised by him (see PELOPONNESIAN WAR). The invasion of Attica provoked indignation and excitement in the city, but he remained supreme till the ravages of the pestilence in 430 momentarily broke Athenian morale. He was now driven from office, tried for embezzlement, and fined. Soon after (probably spring 429) he was again elected *strategus*; but he too had been attacked by the pestilence, and he survived only another six months.

4. Pericles' long eminence was due to his incorruptible character, a consistently intelligent policy, and remarkable powers as an orator. He was reserved and even haughty in demeanour, with nothing democratic about him (unlike Pisistratus, with whom he was often compared). He was intimate with many of the leading philosophers and artists, especially Anaxagoras, Sophocles, and Phidias. His first marriage was unhappy and ended in divorce; but c. 450-445 he formed a lasting union with Aspasia (q.v.). Commonplace minds resented his distant superiority; scandalous and ridiculous stories were spread about him; and finally prosecutions were begun against his friends, Phidias and Anaxagoras, and against Aspasia, who was acquitted. These attacks, however, did not affect Pericles' ascendancy.

We have comparatively good and contrasted sources for Pericles' life—Thucydides' detailed account of political events from 433 to 429 and summary of his character and policy (1. 24 to 2. 65), and Plutarch, who adds much biographical detail, mostly from contemporary sources. A. W. G.

PERICLYMENUS, in mythology, (1) son of Poseidon (and Chloris daughter of Tiresias, schol. Pind. *Nem.* 9. 57, but cf. (2)). Defended Thebes against the Seven, killing Parthenopaeus (q.v.; Eur. *Phoen.* 1157); pursued Amphiarus (q.v.; Pind. *Nem.* 9. 26). (2) Son of Neleus (or Poseidon, Seneca, *Med.* 635) and Chloris daughter of Amphion; Argonaut; killed by Heracles (q.v.) while in the form of a fly, Poseidon having given him power to assume any shape when fighting (Ap. Rhod. 1. 156 ff., and schol.). H. J. R.

PERIGUNE, see SINIS.

PERIOCHAE, the summaries in the Roman epitomizing treatment of long, usually chronographical, works, represent in particular the abridgement of Livy, an epitome of whose history is mentioned by Martial (14. 190). The epitomized Livian tradition appears in the *Periochae* (for all 142 books except 136-7, with two *periochae* of bk. 1) and in the Oxyrhynchus Epitome (for bks. 37-40, 48-55), 'contaminated' with further chronological, anecdotal, and antiquarian data, perhaps including *exempla* and reference to Livy's full text.

E. Kornemann, 'Die neue Livyusepitome aus Oxyrhynchus', *Klio*, Beiheft 2 (1904); G. Costa, *I fasti consolari Romani* i (1910); A. Klotz, *Hermet* 1913, 542; *Philol.* 1936, 67; M. Galdi, *L'epitome nella letteratura latina* (1922). A. H. McD.

PERIOIKOI (περίοικοι, *perioeci*), 'those that dwell round about', was the name used to describe groups of subjects or half-citizens, normally with local self-government. They formed parts of or were subject to various Greek States without having a share in their government.

Perioikoi were found in Argolis, Crete, Elis, Thessaly, and elsewhere, but those of Sparta are best known. These, like the Spartiates, were counted as Lacedaemonians, served in the Lacedaemonian army, were on a par with Spartiates in the payment of taxes, and so were citizens with lesser rights. Nevertheless, though such government never is described, they clearly formed communities with local self-government. Thus the entire complex resembled a federal State with the federal government delegated to the Spartiates, though the emphasis on military service caused it also to resemble an alliance. In Laconia the perioecic towns along the coast and in the mountains roughly formed a circle around the Spartan land; in Messenia they were less numerous, particularly on the west coast. To them must have fallen what industry and commerce there was, but it seems that the *perioikoi* that served in the army and controlled their communities were landholders. The proportion of Dorians and pre-Dorians among them is unknown and cannot be determined by their dialect, for Spartiates, *perioikoi*, and helots spoke the same language. As in Sparta, so in Crete and Elis, the *perioikoi* appear as citizens with lesser rights, while in Thessaly they are described as subject allies.

G. Gilbert, *The Constitutional Antiquities of Sparta and Athens* (1895), 35-7; A. H. J. Greenidge, *Greek Constitutional History* (1902), 78-83; Larsen, *PIW*, s.v. '*Perioikoi*'. These works refer to other literature and the scattered sources; the Lacedaemonian *perioikoi* are discussed—with emphasis on their citizenship—by F. Hampl in *Hermes* 1937.

J. A. O. L.

PERIPATETIC SCHOOL. The name of Aristotle's school is Peripatos (*περίπατος* = covered walking-place in a gymnasium; school) or Lyceum (*Λύκειον*). After the name Peripatos had become popular, members of the school were called Peripatetics (*οἱ ἀπὸ τοῦ Περιπάτου: Περιπατητικοί*). The name is rather insignificant, like Epicurus' 'garden'. Since early Hellenistic times its meaning has often been misunderstood and connected with the ancient method of teaching while walking (*περιπατεῖν* = to walk), which is by no means characteristic of Aristotle (wrong, e.g. Hermipp. ap. Diog. Laert. 5. 2; id. 1. 17; right, Hesych. in *Menagii Vita Aristot.* p. 10. 12 R. = Suid. s.v. *Ἀριστ.*).

There are two main periods of the school. In the first the Peripatos has its widest influence under Theophrastus and becomes rather specialized under Straton. This was a time of lively scientific research, in which the basis for most of the branches of European scholarship was laid. Metaphysical speculation, however, loses ground after Aristotle. The second great era of the school dates from Andronicus (1st c. B.C.). Although it cannot be compared with the vigour and scope of the earlier period, it is in some respects more important for the development of philosophy. For the new school rediscovered Aristotle as the metaphysician and logician who had been almost forgotten during the Hellenistic age. Peripatetics now prepared editions of Aristotle's difficult speculative writings, worked out commentaries, and moreover, framed a system of Aristotelian philosophy which became an important part of Neoplatonism and of scholastic philosophy in the Middle Ages. The most important figure of this school of systematizers and commentators was Alexander of Aphrodisias (c. 200 A.D.).

E. Zeller, *Philos. d. Griechen* II², 566 f.; III¹, 641 f., 804 f. Ueberrück-Prachter, *Grundriss* II¹, §§ 52, 66, 71, 85; K. O. Brink, art. '*Peripatos*' in *PIW*, suppl. vol. vii.

R. O. R.

PERIPETEIA, see *TRAGEDY*, para. 15.

PERIPHETES (*Περύφτης*, 'famous', 'notorious'), name of several minor mythological figures, see Höfer in *Roscher* s.v., and especially of a brigand, also called Corymbetes (*Κορυμβήτης* 'club-wielder'), killed by Theseus (q.v.) on his way to Athens. He was son of Hephaestus and Anticleia, Apollo's. 3. 217, who adds that he lived in

Epidaurus, was weak in the legs (or feet, *πόδας*) and killed all passers-by with an iron club. This Theseus took from him and afterwards carried (another resemblance between Theseus and Heracles). Hyginus (*Fab.* 38. 1) says he was son of Poseidon; no other author mentions his mother. See further Höfer, op. cit., and literature of THESEUS.

H. J. R.

PERIPLOI (*περίπλοι*, 'circumnavigations') were (a) reports of navigations by pioneers along unexplored coasts, (b) manuals for the use of navigators, which collected and systematized the information of previous travellers. The term primarily referred to sailings round an enclosed basin like the Mediterranean and Black Seas, but was also applied to continuous navigations along any kind of coast, even a straight coast (thus partially replacing the more appropriate terms *παράπλοι*, *ανάπλοι*). Some Periploi contained, in addition, descriptions of the adjacent lands and peoples.

Periploi of the former class include (1) an account of the outer coast of Spain, with references to Britain and Ireland, by a Massilian captain (c. 525 B.C.?), quoted by Avienus. (2) A description (extant in Greek) of the west African coast by Hanno (c. 500?). (3) The narrative of Nearchus' cruise from Indus to Euphrates (325-324), reproduced by Arrian. (4) Pytheas' account of his Atlantic voyage (late 4th c.), quoted by Strabo and others. (5) Arrian's extant *Periplus of the Euxine Sea* (c. A.D. 132).

The Periploi of the latter class comprise (1) the survey of the Mediterranean and Black Seas compiled c. 325 B.C. (?) under the name of Scylax. (2) Agatharchides' description of both Red Sea coasts (c. 110 B.C.), partly reproduced in Diodorus and Photius. (3) *The Periplus of the Erythraean Sea* (1st c. A.D.), describing the coastal routes from Egypt to India and along E. Africa, with copious information for navigators and traders. (4) *The Stadiasmus Maris Magni* (4th c. A.D.), an excellent sailing direction, with details of harbourage and water-spots, and of distances from point to point. (5) Marcianus' description of the 'Outer Sea' (Indian and Atlantic Oceans; c. A.D. 400?), a poor compilation from Ptolemy.

Texts in GGM. Text of the *Periplus of the Erythraean Sea* by Frisk; translation and notes by W. H. Schoff (1912). F. Gisinger, *PIW*, s.v. '*Periplus*'. See also s.v. AVIENUS, HANNO, NEARCHUS, etc., in the present work.

E. H. W.

PERONE (*περόνη*), see *FIBULA*.

PERPERNA (1), MARCUS, of Etruscan origin, was the first of his family to reach the consulship (in 130 B.C.). He served in 135, as praetor, in the Sicilian Slave-War; and bore the brunt of the war in Asia against Aristonicus (130-129). He died near Pergamum.

PERPERNA (2) **VENTO** (or perhaps **VEIENTO**), MARCUS, a son of the consul of 92 B.C., was a partisan of Marius and praetor in Sicily (82 B.C.), but managed to escape, probably to Liguria. In 78 he joined Lepidus; after their failure they sought refuge in Sardinia. On Lepidus' death (77) Perperna joined Sertorius in Spain with the rest of the army and the treasure. According to tradition, he intended to carry on the war on his own account, but was compelled by his soldiers to submit to Sertorius, with whom he served for five years without distinction. In 76 he failed to hold the Ebro against Pompey. When the fortune of Sertorius declined, Perperna murdered him and assumed command (72). Defeated and captured, he offered Pompey the papers of Sertorius, which compromised many aristocrats, but Pompey burnt them unread and killed Perperna.

A. M.

PERRHAEBI, a tribe occupying a mountainous district on the northern border of Thessaly and commanding passes from Macedonia. Oloosson, the tribal capital, and Phalanna were situated in fertile plains, but remained insignificant. The Perrhaebi, who had been thrust

northwards by the invading Thessalians, were reduced to the status of *perioeci*. Though liable to a war-tax, they enjoyed some degree of autonomy whenever the Thessalian *κοινόν* was weak, and they held two votes on the Amphictionic Council. Philip of Macedon severed Perrhaebia from Thessaly, and it remained under Macedonian control until liberated by Flamininus in 196.

F. Stählin, *Das hellenische Thessalien* (1924), 5-39; B. Lenk, *PW*, s.v. 'Perrhaebi'. H. D. W.

PERSAEUS (c. 306-c. 243 B.C.), son of Demetrius of Citium in Cyprus. He was brought up at Athens in the house of his fellow-countryman Zeno, founder of the Stoic school, became his disciple, and later taught philosophy under his guidance. In 277, when Zeno declined the invitation of Antigonos Gonatas to come to his court at Pella, Persaeus was sent in his stead. He became the educator of Antigonos' son Halcyoneus and acquired great political influence. In 244 he was made commander of Acrocorinthus, but lost the town and citadel to Aratus in 243, whereupon he committed suicide. He defended orthodox Stoicism against the heretics Ariston and Herillus, and elaborated on the doctrine of the philosopher king.

WORKS: *On Kingship*, *Polity of the Lacedaemonians*, *Dialogues*, and others (cf. Diog. Laert. 7. i. 36.). Fragments: von Arnim, *SVF* i. 4. 96ff.

PW xix. 926.

PERSECUTION. The Romans, the most religious of peoples, lived under the sense of divine protection. The Senate, as guardian of the common weal, maintained traditional worships, fended off Eastern philosophies and religions, and occasionally suppressed such a subversive cult as the *Bacchanalia* in 186 B.C. The Empire, faced with new problems, kept the same spirit. A 'Roman interpretation' was extended to the miscellaneous cults of the provinces. The worship of the emperor became a bond of union. The Jews, religiously intolerant themselves, were treated with great tolerance in matters purely religious. It was political discontent added that brought tragedy here.

2. The Christian Church presented a new problem. Originally known only as a troublesome sect of the Jews, it first came into prominence in A.D. 64, when Nero found in the hated Christians scapegoats for the Great Fire of Rome. Domitian too persecuted the Church, perhaps in connexion with his merciless scrutiny of the Jews. Pliny, in A.D. 112, writes from Bithynia to Trajan, asking how to deal with the rapidly growing Church there. Trajan is unwilling to persecute—'non sunt exquirendi'—but he admits the principle that persistence in Christianity after challenge is punishable with death. For long this continued to be the official position. Clement emperors, like Hadrian, discouraged denunciation, while Christian apologists tried to commend their religion to the authorities. Under Marcus, in A.D. 177, there was a great persecution at Lugdunum. Commodus was lenient, Septimius more harsh, but his dynasty was on the whole favourable. Persecution of the Church as a body, perhaps planned by Maximinus I, was set on foot by Trajan Decius, who enforced sacrifice on all his subjects. Many fell away, but the persecution, continued by Valerian, was ended in 259 (?) by Gallienus, who granted peace to the Church. This peace, threatened for a moment by Aurelian, lasted till c. 296, when Diocletian began to purge army and civil service of Christians. In 303 he was led on by Galerius to open persecution, which became harsher and more bloody, till it threatened to destroy the Church. Buildings were destroyed, books burnt, leaders arrested. Yet by 311 Galerius admitted defeat and granted a grudging toleration. Constantine took up the cause of the Christians and to toleration added marked favour. From thenceforward the Church grew and paganism declined.

Julian's apostasy stopped short of actual persecution and ended with him. Under Theodosius the revolution was complete: Christianity had become the official religion of Rome.

3. To the Roman government the Christians at first were simply an affair of the police—an obscure and turbulent sect, suspected of cannibalism, incest, and a general 'hatred of their fellow-men'. As a society not protected by charter they had no status under law. Hence arose 'persecution for the name', apart from crimes supposed to adhere to it. As the Church grew in numbers and quality, authority tended to treat it with consideration; persecution usually arose out of local embitterment. In the third century came a change of tone. The State was racked and strained, the Church grew in power and pretensions, its loyalty was on some points questionable. Hence the official attempt to crush it, ending in the acceptance of it as the official religion.

4. Rome certainly never persecuted for theological reasons—always for social or political. Yet the Roman State and religion were so closely related that this distinction made little difference. The Christian, refusing to sacrifice to the Genius of the Emperor and to curse Christ, knew himself a martyr to his religion; to the Roman official he was a troublesome and contumacious citizen. The Church, in accepting the protection of Constantine, surrendered much of its power of attack.

Bibliography in *CAH* xii. 775 ff., 794 ff. Cf. especially E. G. Hardy, *Christianity and the Roman Government* (1906); H. Last, 'The Study of the Persecutions' in *JRS* 1937, 80 ff.; W. M. Ramsay, *The Church in the Roman Empire before A.D. 170* (1903). H. M.

P[H]ERSEPHONE, PERSEPHASSA or -ATTA (*Περσεφόνη, Περσ-, Περσέφασσα, -αττα*) or **KORE** (*Κόρη*); in Latin *Proserpina*, a simple mispronunciation, to which a false etymology from *prosperere* came to be attached (Augustine, *De civ. D.* 4. 8, from Varro), with the absurd explanation that she was the deity who made food-plants germinate. The varying forms of the name and the presence in one of the well-known pre-Hellenic suffix *-ss-* suggest that she is a very old native goddess of the Greek peninsula, taken over by the invaders and identified with the 'virgin daughter' (Kore) of their own corn-goddess. For the story of her carrying off by Hades see DEMETER.

Another and very remarkable story in which she bears a part is the Orphic myth of Zagreus (cf. ORPHISM). The earliest reasonably certain mention of this is in Pindar (fr. 133 Bergk, 127 Bowra), where the poet states that those in the other world 'at whose hands Pherscphona accepts satisfaction for her ancient grief' return in the ninth year to this world and become kings or otherwise distinguished men, later passing to the status of heroes. The 'grief' seems to mean the death of her child Zagreus (Rose in *Greek Poetry and Life* (1936), 79 ff.). For the story itself see Kern, *Orphicorum fragmenta*, nos. 209 ff.; it is fully told only in late authors, as Firmicus Maternus, *De Errore*, 6; Nonnus, *Dionys.* 6. 155 ff. Zeus, in serpent form, approached Perscphone and begat Zagreus, to whom he intended to give all power in the universe. But the Titans, incited by the jealous Hera, attracted the child's attention with toys, set upon him, tore him in pieces, and devoured him. Athena saved his heart, which Zeus swallowed, being thus enabled later to beget Dionysus. He destroyed the Titans with thunderbolts, and from their ashes sprang mankind.

In cult Perscphone has little place save with her mother, when she is more commonly called Kore (e.g. at Eleusis). For a list of places where the two goddesses are worshipped together see Bloch in Roscher's *Lexikon* ii. 1288 ff. It does not appear (see Paus. 6. 25. 2) that she shared the unique cult of Hades (q.v.) at Elis, although they are continually associated in literature and art. See MYSTERIES.

H. J. R.

PERSEPOLIS, in Persis, residence of the Achaemenid kings. Alexander in 331 B.C. took and looted Persepolis and set fire to the palaces (Diod. 17. 71-2). The royal quarters, built on a hill-terrace, contained two palaces, consisting in either case of a forecourt, a large colonnaded reception-hall which apparently had no outer wall, and a storehouse and armoury.

Excavations on the site have revealed that Darius I levelled the rock-terrace and built the great *apadana* (audience-hall), the main palace-buildings, and the harem. These were completed by Xerxes; Artaxerxes finished the Hall of a Hundred Pillars and built his own palace. Around the whole complex was a fortification wall, and a great gate and stairway led up to the terrace. The bas-reliefs of these palaces are among the finest extant examples of Achaemenid art. The graves of the Achaemenid kings are nearby.

PERSEPTOLIS, see NAUSICAA.

PERSES of Thebes, whose first datable poem is of 316 B.C., has eight or nine simple epigrams in the *Anthology*. Unlike many contemporary epigrams, they are genuine inscriptions: two of them actually describe the reliefs beneath which they were carved (*Anth. Pal.* 7. 445, 730). They are in poetry what the beautifully restrained and impersonal Attic tombstones are in sculpture. G. H.

PERSES, see also HESIOD.

PERSEUS (1), a mythological hero. The following, founded on Apollod. 2. 34 ff., is the usual legend; for variants, etc., see the larger works on mythology. Acrisius, brother of Proetus (q.v.), being warned by an oracle that his daughter Danaë's son would kill him, shut her in a bronze chamber. Zeus visited her there in a shower of gold. Acrisius, learning that she had borne a son, whom she called Perseus, put both in a chest and set it afloat. It drifted to Seriphus, where mother and child were received by the king Polydectes. When Perseus was grown the king contrived to send him to fetch the head of the Gorgon Medusa. This he did by the help of Athena (cf. GRAIAE). After rescuing and marrying Andromeda (q.v.) he returned to Seriphus, where he used the Gorgon's head to turn Polydectes and his followers into stone for persecuting Danaë. He now gave the head to Athena and returned his flying shoes and the wallet in which he had carried the head, also the Cap of Darkness which had made him invisible, to Hermes. With his wife and mother he then came to Argos to see his grandfather, whom he at length found in the Pelasgiotis. Here he contended in some funeral games and, throwing the discus, accidentally struck and killed Acrisius, thus fulfilling the oracle. Leaving Argos to the son of Proetus, he became king of Tiryns and founder of the dynasty of the Perseidae. H. J. R.

PERSEUS (2), king of Macedon 179-168 B.C., the elder son of Philip V and legitimate heir despite the tradition of slave birth, was born about 213/212. He fought against Rome (199) and the Aetolians (189). Representing his father's Antigonid imperialism against the Roman sympathies and royal aspirations, with Roman favour, of his brother Demetrius, he intrigued against him from 183 until Philip ordered Demetrius' death in 181. Polybius' description, reproducing a partisan version (cf. Livy 41. 23-4), does scant justice to the realities of the political struggle.

Succeeding Philip in 179, he renewed his treaty with Rome, and continued consolidating Macedon, declaring an amnesty. He extended influence in Thrace, Dardania, and Illyria, the northern field of Macedonian imperialism. In Greek diplomacy he married Laodice, daughter of Seleucus IV, gave his sister to Prusias, and was honoured by Rhodes; he influenced the social struggles in Thessaly and Actolia, subdued Dolopia, and visited Delphi with his army. This challenge to the predominance of Pergamum sent Eumenes to Rome and brought on the Third Macedonian War (171-168). Yet the tradition of his warlike designs against Rome may be discounted; his policy, based on the north, aimed at prestige, not war, in Greece.

His military strategy of defence on the Macedonian frontiers was at first successful. But Roman reinforcements and the collapse of his ally Genthius, opening up Macedonia from the west, forced a decision at Pydna. The charge of the phalanx was his last stroke, failing before Aemilius Paullus' experienced generalship. He was captured at Samothrace, and adorned Paullus' triumph, dying two years later at Alba Fucens.

Vigorous in campaigning, he lacked tactical initiative. His alleged miserliness often rather reflects caution in policy. The charge of cowardice at Pydna is to be rejected. Sound in diplomacy and generalship, he yet lacked in both the virtuosity necessary to reconcile Antigonid aims with the Roman protectorate over Greece.

Livy, bks. 38-45; Polyb. bks. 22, 25, 27-30; Plutarch, *Aemilius Paullus*; Diod. bks. 29-31; Appian, *Mae.* 11-16. P. Heiland, *Unters. zur Gesch. des Königs Perseus* (1913); De Sanctis, *Stor. Rom.* iv, 1, pp. 251, 270; C. F. Edson, *Harv. Stud.* 1935, 191; F. W. Walbank, *Philip V of Macedon* (1940, see Index). A. H. McD.

PERSEUS (3) (2nd c. B.C.), mathematician. Proclus describes him as the discoverer of the sections of the *σπείρα* (tore or anchor-ring).

PIV xix, 1021.

PERSIA, in its widest geographical sense, includes all the great Iranian plateau bounded on west and east by the valleys of Tigris and Indus, and on the north by the Armenian mountains, the Caspian Sea, and the steppes of south Russia—an area of c. 1,000,000 sq. miles. The high mountain ranges lie at the edges of the plateau, so that it resembles a basin. These mountains abound in mineral wealth, gold, silver, copper, lapis-lazuli and other prized stones; the numerous rivers carry down silt and cultivation is possible in the valleys. The interior of the plateau is a vast of salty lakes and marshes, with wide tracts of desert. In spite of this Persia has always had importance as the bridge between east and west Asia, and the ancient trade-routes are still used.

The Aryan Persians probably entered Iran from the north-east; the date at which they reached their final home is unknown. In the ninth century the Assyrians mention Parsua, a northern country adjoining Median territory. If this was for a time their home, they moved southward, for Teispes the Achaemenid was king of Anshan and Parsa, the country later to be known as Persia proper (Persis, mod. *Fars*). It was from this southerly kingdom that Cyrus II set out to conquer western Asia; Susa remained the administrative capital of the Persian Empire.

The organization of this empire was begun by Cyrus, and completed by Darius. It was a great advance on any previous imperial system, combining local autonomy with the centralization of authority in a supreme controlling power. The country was divided into provinces, each governed by a satrap (q.v.), who might be the local ruler, or a Persian of one of the six privileged noble families. Within his province the satrap had absolute authority, but the presence of military and civil officials responsible only to the king, and of travelling inspectors,

constituted a check on his power. Each satrapy had to contribute a fixed amount to the royal treasury and furnish levies for the army. Local forms of government were preserved as far as possible, e.g. in the Phoenician and Greek city-states religion, language, and local custom were not interfered with. Royal inscriptions are written in the three official languages, Persian, Elamitic, and Babylonian. A universal gold coinage, introduced by Darius, and the building of highways facilitated trade, and a royal messenger post linked the farthest corners of the empire with Susa.

Religion played an essential part in the life of the Persians. The Achaemenid kings were Zoroastrians, worshippers of Ahura Mazda, whose vicegerents they regarded themselves (*see* ZOROASTER). The Magian sect, who specialized in ritual observances, acted as the priests of Mazdaism. Popular religion was syncretistic, including the worship of the elements, especially fire, and that of more ancient deities.

Achaemenid art owes much to Babylonia and Assyria, and something to Greece and even Egypt, but it is by no means merely derivative, as the palaces at Persepolis (q.v.) and elsewhere, with their delicate bas-reliefs and impressive architecture, show.

Classical sources for Achaemenid Persia: Herodotus; Ctesias, *Persica*; Xenophon, *Cyropaedia*, *Anabasis*, etc.; Strabo bks. 11-17. Cuneiform: F. H. Weissbach, *Keilschriften der Achämeniden* (1911). Archaeological: E. Herzfeld, *Archäologische Mitteilungen aus Iran*. Modern works: CAH iv, ch. 1, 9, 10; vi, ch. 12; P. M. Sykes, *History of Persia i* (1930); A. Godard, *L'Art de la Perse ancienne* (1930); PW, arts. on individual kings. *See also* ACHAEMENIDS, ARSACIDS, SASSANIDS.

M. S. D.

PERSIAN WARS. (1) **CAUSES.** Economic causes played a comparatively small part in bringing on the Persian Wars. The Ionian Revolt which constituted their first phase may have been prompted by commercial losses among the Asiatic Greeks, consequent upon the Persian conquest of the Levant and a possible increase of Phoenician trade competition; but any deficit on this score would be offset by the increased security of communications and wider commercial facilities, which King Darius made available to all his subjects in the reorganization of the Persian Empire. In any case the expansion of Persia did not hinder the commercial activities of the Greek homeland, and the intervention of European States like Athens in the Ionian Revolt was from the Persian point of view an act of aggression justifying reprisals upon Greece proper. But for reasons of a political order the Greeks both in Asia and in Europe regarded Persia with aversion and alarm. Darius upheld tyranny among his Asiatic Greek subjects, and by affording hospitality to fugitive despots from the Greek homeland such as Hippias (q.v.) he kept alive the fear that he might reinstate these forcibly. Though the Persian régime honestly strove to promote the welfare of the subjects and to respect local customs, the Greeks not unnaturally regarded it as the negation of their own system of government and the enemy of the very idea of liberty as understood by them. The ultimate cause of the Persian Wars therefore lay in the anxiety of the Asiatic Greeks to recover their autonomy, and of the European Greeks to preserve theirs.

(2) **THE IONIAN REVOLT.** Its immediate author was the Milesian Aristagoras (q.v.), who laid down his 'tyranny' and brought about a general expulsion of tyrants among the cities of Ionia (499 B.C.). The rebel cities formed a league which directed the war and issued a federal coinage. Aristagoras secured a reinforcement of twenty ships from Athens and of five from Eretria, but for one campaigning season only, and he obtained no assistance from Sparta, which shrank from overseas expeditions and was preoccupied with an impending war against Argos; yet success in the revolt depended on support from Greece. In 498 the insurgent army captured and burnt Sardes (thus giving the Persians a good

pretext for retaliating upon Greek cities); the fleet spread the rebellion along the coast from Byzantium to Cyprus, and in 497 defeated a Phoenician squadron off Cyprus. But disunion and insubordination among the Greeks allowed the Persians to recover Cyprus despite a naval defeat, and Aristagoras withdrew from the scene of war. After two years' deadlock the Greek fleet, weakened by rivalries and treason, was crushed at Lade (494). Miletus and other cities were destroyed, but Darius eventually imposed a lenient settlement.

(3) **THE CAMPAIGN OF MARATHON.** In 492 Mardonius (q.v.) prepared the way for Xerxes' later expedition by the definite reduction of Thrace and Macedonia. In 490 Datis and Artaphernes conducted a punitive expedition by sea against Athens and Eretria. Obtaining the surrender of the Cyclades *en route*, they carried Eretria by treachery and made a landing on Attica at Marathon (probably on the advice of Hippias). An appeal to Sparta for help was conveyed by Pheidippides (q.v.) in record time, but the Spartan forces arrived too late, and the Athenians, some 10,000 strong, with 1,000 Plataeans only to assist them, had to encounter the far stronger Persian army. Under the leadership of Miltiades (q.v.) the Athenians routed the Persians with heavy loss (c. 6,000 men) and by a prompt return march to Athens they thwarted an attempt by the Persian fleet to take the city by surprise. The battle of Marathon made Athens safe for democracy and strengthened her alliance with Sparta—and only by a united front could the Greeks hope to resist the main Persian attack, which befell ten years later.

(4) **THE EXPEDITION OF XERXES** (480). This was planned as a co-ordinated invasion by land (c. 100,000 soldiers) and sea (1,000 ships); but (notwithstanding the statement of Ephorus) it was not made in concert with the simultaneous Carthaginian attack upon the Greeks of Sicily. By a preliminary diplomatic offensive Xerxes won over Thessaly, most of central Greece, Argos, and the oracle of Delphi. But meantime the Athenians had acquired a powerful fleet (*see* THEMISTOCLES), and at a Panhellenic congress held at the Isthmus (autumn 481) they combined with Sparta to resolve internal feuds in Greece and to organize a national league of common defence. Sparta held the chief command, but the plan of campaign was mainly by Themistocles. The Greeks abandoned the Thessalian frontier after a mere inspection, and posted their army and fleet at the interdependent positions of Thermopylae and Artemisium (qq.v.). The fleet held the Persians in a three days' battle, but insufficient forces at Thermopylae, combined perhaps with treason, allowed the Persians to circumvent the pass, in which the Spartans and their king Leonidas (q.v.) perished to the last man. All central Greece was now lost to the Greeks, Athens was hastily evacuated before Xerxes occupied and sacked it, and the Greek fleet withdrew to Salamis. The Peloponnesians now advocated passive defence on the Isthmus of Corinth, but Themistocles, supported by the Spartan commander Eurybiades (q.v.), forced a naval decision in the narrows of Salamis, by which the Greeks gained definite command of the sea. Xerxes now retired to Asia with the remnant of his fleet, but Mardonius was left to winter in Thessaly and to carry on the campaign by land.

(5) **THE CAMPAIGN OF 479.** After two vain attempts in the next spring to detach Athens with the offer of a separate peace Mardonius fell back to Boeotia, where his superior cavalry forces severely harassed an oncoming army of c. 40,000 Peloponnesian and Athenian hoplites. During a retreat to higher ground near Plataea the Spartan commander Pausanias (q.v. 1) was set upon by the Persians, but repelled and routed them; Mardonius fell, and the remnant of his army evacuated Greece. Meanwhile a Greek fleet under the Spartan king Leotychides (q.v.) cut out and destroyed the remains of the Persian fleet in a land battle off C. Mycale. This victory

started a new revolt by the islanders and the Asiatic Greeks.

(6) **THE GREEK COUNTER-ATTACK.** In support of this rebellion the Greeks cleared the entrance to the Black Sea, and in 478 a fleet under Pausanias started a revolt in Cyprus and captured Byzantium. Friction between Pausanias and the Spartan government led to the recall of the Spartan and Peloponnesian contingents; but the Athenians, assuming command of the liberated Greeks in the Aegean islands and Asia Minor, and enrolling them in the Delian League (q.v.), carried on the war. Their operations (of which little is known) were probably not continuous, but c. 469 Cimon (q.v.) made a bold advance to Pamphylia and Cyprus, and destroyed a Persian army and fleet at the river Eurymedon. He did not follow up this success, but c. 459 Pericles sent 200 ships to support a rebellion in Egypt. Difficulties of communication and the outbreak of war in home waters prevented the timely dispatch of reinforcements, and after some early successes, in which the Persians were driven up the Nile, the Greek fleet succumbed to a strong counter-attack and was destroyed near Memphis (c. 454). Another expedition was sent c. 450 to resuscitate the Egyptian rebellion and to safeguard Cyprus against a Persian counter-attack; but in spite of a victory off Cyprian Salamis it abandoned the island, and the death of its commander Cimon left Pericles a free hand to come to terms with Persia. In 449/448 an agreement (whether a formal treaty or simply a non-aggression pact) was negotiated by Callias (q.v. 1), which secured the independence of the Asiatic Greeks (save those of Cyprus) and closed the Aegean to Persian warships.

(7) **RESULTS OF THE WARS.** The Persian Wars facilitated the undisturbed development of the Greek system of city-state government, which found its characteristic expression in the democracy of Athens, the Delian League, and the autonomy of the Asiatic Greeks. They gave the Greeks a greater confidence in the city-state and a more vivid consciousness of their common nationality and of the value of their national freedom. Yet they did not bring about the development of the Greek war-coalition into a permanent organ of national government. The wars further brought home to them the superiority of their culture over that of the barbarians—a belief which finds clear expression in Aeschylus, Pindar, and Herodotus—but the mediocrity of Delphi disturbed belief in traditional religion.

SOURCES. By far the most important is Herodotus. For the operations after 479 see Thucydides 1. 93–112. The chief other ancient sources are Diodorus bk. 11 (reproducing Ephorus), and Plutarch, *Themistocles*, *Aristides*, *Cimon*, and *De maliginitate Herodoti*. These are of occasional value only. On source-criticism see G. Busolt, *Griechische Geschichte* ii² (1895), 600 ff.

MODERN WORKS. See the general histories of Greece. For military details: G. B. Grundy, *The Great Persian War* (1901); H. Delbrück, *Geschichte der Kriegskunst* i² (1920); J. Kromayer, *Antike Schlachtfelder* iv. 1 (1924); G. De Sanctis, *Riv. Fil.* 1925–6, 1930, 1931.

P. T.

PERSIUS FLACCUS, AULUS (A.D. 34–62), born in Etruria. Rich and well connected, he knew Lucan, Thrasea Pactus, and most of the Stoic 'opposition' to the Principate. His intimacy with the Stoic philosopher L. Annaeus Cornutus began when he was sixteen, continued until his death, and was (cf. *Sat.* 5) the strongest influence on his character. After his death Cornutus prepared his poems for publication: they had immediate success.

WORKS. His satires form one *libellus* of 650 hexameters and a brief choliambic apologia. 1, the introduction, derides the fashionable admiration for smooth mythological poetry, and calls for readers with robust taste. 2 attacks the popular conception of prayer, mocking those who ask heaven for external goods rather than virtue. 3 is a quasi-medical description of the effects of chronic vice on the sick soul. 4 urges the popular young statesman

Aleibiades (= Nero?) to examine his own soul, disregarding public admiration. 5, eulogizing Cornutus, develops into a general indictment of mankind, slaves to vice, who could be freed by virtue. 6 preaches the wisdom of living as comfortably as one's means allow.

Persius will never be popular, because his thought, though sincere, is contorted, and his language, though vigorous, is obscure. He strains and even breaks the thread of his argument by digressions, forced emphases, and answers to hypostasized objections. Always striving to impress, he writes in a grotesque mixture of forced metaphors, cryptic allusions, and harsh colloquialisms; and he converts every abstract disquisition into a series of realistic pictures which seldom harmonize with one another (cf. 5. 115–18). Yet he rarely describes real life: many of his phrases and most of his characters are taken from Lucilius and Horace; so that his work has what he himself (1. 106) calls 'the taste of bitten nails'. His use of sound and rhythm, however, is extremely skilful (e.g. 1. 92–102, 3. 34, 3. 84, 5. 132 f.).

G. H.

PERSONIFICATIONS of abstract ideas play an important part in the worship, the literature, and the art of the Greeks and Romans. Between the objects of actual popular worship and the literary devices of a poet the line is often hard to draw; at one pole stands the cult of Tyche (q.v.), at the other pole the description of Fama (see **PHEME**) by Virgil (*Aen.* 4. 173–88). A single figure, such as Ate, varies from passage to passage and from poet to poet, being now a physical or psychological phenomenon, now a moral force, now a full-fledged divinity with family connexions (*Il.* 9. 505–7; 19. 91–6, 126–33; Hes. *Op.* 216, 231, 352, 413; Aesch. *Ag.* 355). Even a given poet within a single work often vacillates between the genuine personification of a vividly characterized abstraction and 'grammatical apotheosis' (the illuminating phrase is that of Bouché-Leclercq), to the despair of modern editors who would like to be consistent in the matter of capital letters. So within sixty lines of the *Philoctetes* of Sophocles one encounters the fully personified Hypnos (827), the barely personified Thanatos (797), the hardly personified Phthonos (776) and Kairos (837). Complete personification may be said to exist where an abstraction is the recipient both of cult and of a substantial amount of characterization in literature or art.

2. The way in which abstractions came to receive worship is often doubtful; no single formula will fit all cases. Some hardly personified beings, corresponding to passing phenomena (e.g. Fear), may have been worshipped at a very early time. Both in Greece and in Italy an abstraction that had some independent validity was capable of attachment to a major divinity as *paredros* or satellite or epithet. In Homer abstractions play a relatively small part. War spirits, such as Phobos and Iris, and Hypnos and Thanatos receive hardly more than mention; Aidos, Nemesis, and Moira do not achieve real personality. But Ate, devastating daughter of Zeus, and the wrinkled 'Prayers' are conceived as real persons (*Il.* 9. 502–12), though a far more complete projection of a moral or intellectual event is to be found in the appearance to Achilles of the fully anthropomorphic Athena

(*Il.* 1. 188–222). The Hesiodic *Theogony* is peopled in part with shadowy abstractions, many of them certainly pre-Hellenic, chthonian beings, whose relationships are set forth: the 'Children of Night' include Moros and Ker and Nemesis, as well as the Moirai, who are now three in number and have names; but the latter appear also as daughters of Zeus and Themis, along with Eunomia and Dike (q.v.) and Eirene (q.v.) (*Theog.* 211–25, 901–6). Hesiod's *Works and Days* more successfully moralizes such abstractions; if the two kinds of Eris are almost lifeless (11–24), Aidos and Nemesis, who in the Iron Age gather their white garments about them and leave earth for Olympus (197–200), seem on the verge of coming alive; while Dike, daughter and assessor of Zeus, champions justice among men (219–24, 256–62). She, like other moral abstractions, was to play her part in the religious and philosophic thought of later Greece: e.g. Dike in Parmenides and in Orphic literature; Philotes and Neikos in Empedocles; Chronos and Eros in Pherecydes of Syros; Eros and Ananke in Plato (*Symp.* 203 b–e; *Rep.* 616 c–621 a); Heimarmene (see FATE) in the Stoics; Themis (q.v.) and Moira passim. Such use of personification made easier the allegorical interpretation of literature from the fifth century on; for the anthropomorphic deities of mythology could be regarded as concrete expressions of moral and psychological phenomena, as indeed they sometimes were.

3. Lyric poetry, and still more tragedy, appropriated the personification of earlier poetry, Aeschylus most fully and Euripides next, Sophocles somewhat less. But by the latter half of the fifth century such exploitation was less the result of vivid poetic imagination or personal conviction than of a rhetorical tendency. This is due in part to sophistic influence, and has little to do with religion. The 'Choice of Heracles' between Arete and Kakia in the moral apologue of Prodicus (*Xen. Mem.* 2. 1. 21–34), or the appeal of the Laws to Socrates in Plato's *Crito* (50 a–54 c) imply nothing as to cult. The literary tendency was carried still further in comedy; Aristophanes employed such characters as Plutus, Penia (qq.v.), Demos, and Basileia, and presented the rivalry of Dikaioi Logos and Adikos Logos. The mention of these names indicates how far the older religion was being superseded by intellectual, economic, and political ideas—in a word, by humanism.

4. In the Greek world cult and poetry had thus far in general kept pace together. Pausanias records the dedication at Athens of altars to Eleos, Aidos, Peme (q.v.), and Horme; to his list may be added Eukleia, Eunomia, and Pistis, abstractions with a political significance, as are many of those which we first encounter during the fifth century and later. There are evidences of cults at Sparta of Phobos, Thanatos, and Gelos; at Corinth of Bia, Ananke, and the Moirai; and in other regions of Nemesis (q.v.; notably at Rhamnus, in Attica), Soteria, Kairos, Metameleia, Hygieia Dike, Peitho (once associated with Aphrodite, later also with political significance), Homonoia, Eirene, Demos (and even Demokratia), Themis (cf. the Hymn of the Kouretes, J. E. Harrison, *Themis*, p. 8), and Tyche. Naturally cult called into being works of art, so that many personifications appear on vases and coins, as well as in sculpture. Well known is the form of the child Plutus carried in the arms of Eirene, as also the various representations of Nike, usually winged and with floating drapery. The ideals thus fostered in the fourth century were particularly Victory (Nike, earlier associated with Zeus or with Athena), Peace (Eirene, first given a cult at Athens after the Battle of the Eurymedon, c. 468 B.C.), Wealth (Plutus), and Concord (Homonoia, a concept of increasing political and philosophic importance in the period of the Peloponnesian War and afterwards). And in this twilight of the elder gods, amid the decay of the *polis*, the power that came more and more to take the place of the gods was Fortune

(Tyche). Unknown to Homer, she appears in the lyric poets, in tragedy, and in historical and philosophic thought; she represents the capriciousness and the inevitability of events and man's lack of responsibility for them. Devoid of moral content at first, she is often worshipped as a power that may bring good fortune, as Agathe Tyche (sometimes associated with Agathos Daimon); embodying the good fortune of a *polis* or of its ruler, she receives a cult as *Tyche Poleos* (or with the proper name substituted).

5. Despite the Roman gift for abstract thought, the worship of personifications in Rome came comparatively late, seldom appearing in cult before the third century B.C. In time they played a very important part, though they never achieved vivid personalities or were subjects of myths. Cicero suggests (*Nat. D.* 2. 23) that the good things given by the gods come in time to be worshipped in their own right, and seeks to purify the list of unworthy conceptions. His roster includes Fides, Mens, Virtus, Honos, Ops, Salus, Concordia, Libertas, Victoria. It is only a step from Cicero's view to the view that deified abstractions achieved divinity by separation from the gods to whom they had been attached; thus Fides, Good Faith, may well have been detached from (Jupiter) *Dius Fidius*. Some personifications, however, must have had a different career; Ops (q.v.), for example, is simply the deified fullness of the grain, and finds a place in the oldest Roman calendars. Salus (q.v.), at first any kind of safety, especially military or political, presently was identified with the Greek Hygieia. (Fors) Fortuna (q.v.), who may well be in origin an Italic birth-goddess, became, like the Greek Tyche, the representative of Chance, and received famous cults in the oracular shrines at Praeneste (here as Fortuna Primigenia) and Antium; still later she was associated, again like Tyche, with the fortunes of cities and of the emperor. Libertas, possibly detached from Jupiter Liber, represented personal, and later political, liberty. The worship of certain abstractions dates from events that called them into being: the temple of Concordia, dedicated in 367 B.C., marked the new political accord that was to follow the Licinian Laws; Spes received a temple after the First Punic War; the Ara Pacis Augustae, dedicated c. 9 B.C., commemorated the return of peace to a long-troubled world. The epithet Augustus was often added during the Empire to words indicating qualities which the emperor was supposed to possess, such as Clementia. The altar of Victoria, who had presided over success in battle, changed in the late fourth century to become a precious symbol of dying paganism in its last stand, under Q. Aurelius Symmachus, against Christianity, championed by St. Ambrose, though Christian emperors usually tolerated the worship of abstractions which could be interpreted as attributes of the true God.

6. Latin poetry mirrors Roman cult, and adds much in the way of merely literary use of personifications. Fortuna, Salus, and Spes are conventional, as Plautus uses them; when Terence quotes 'Fortes Fortuna adiuvat' (*Phorm.* 203), or Pacuvius moralizes on Fortune (Ribbeck, *TRF* i. 124–6), they are not thinking of the goddess of Praeneste. Virgil introduces abstractions sparingly: *Justitia* (*G.* 2. 474, a Hesiodic echo), *Fides* (*Aen.* 1. 292), *Fama* (*Aen.* 4. 173–88, an effective conception, often imitated), the ghostly forms at the threshold of the Lower World (*Aen.* 6. 273–81). Prominent in Tibullus is *Pax* (1. 10. 45 and 67), and his poems reflect the feeling of the Ara Pacis Augustae. Horace can personify on his own responsibility: 'Post equitem sedet atra Cura' (*Carm.* 3. 1. 40) is as vivid as Keats's 'Joy, whose hand is ever at his lips | Bidding adieu'; whereas in the ode to Fortuna (1. 35) Horace uses the accepted attributes of the goddess of Antium and her associates as the occasion of his own reflections. Later poets duly perpetuate the personifications of their predecessors.

7. Finally it should be noted that the personifications of classical paganism find a place in late Orphic, Neoplatonist, Gnostic, and Hermetic literature: Dike, Tyche, Ananke, Aion or Chronos, and now Physis (in an Orphic hymn) are among the agents in the later as in the earlier cosmologies.

PERSPECTIVE in painting, see AGATHARCHIUS.

PERTINAX, PUBLIUS HELVIUS, who had distinguished himself as a general under Marcus Aurelius in Raetia and under Commodus in Britain, was after the latter's assassination (A.D. 193) proclaimed emperor by the Praetorian Guard on the proposal of the prefect Laetus and through the promise of a large donative. During his rule of three months he attempted to restore the Augustan principles of government and revived for himself the title of *princeps senatus*, while refusing the titles of Augustus and Caesar for his wife and son. An excessive eagerness for reform, however, caused discontent in the Senate, and the sale of State offices undermined confidence in his economic policy. At the same time his failure to pay the promised donative aroused the resentment of the Praetorians, and after an abortive conspiracy to make the consul Falco emperor, Laetus urged the Praetorians to invade the Palatine. Pertinax, deserted by all his retinue except Eclectus, fell a victim to the spear of a Tungrian soldier (28 March A.D. 193). Upon his tombstone might fittingly be inscribed Tacitus' epitaph for Galba 'capax imperii nisi imperasset'.

PERUSIA, nowadays *Perugia*, an ancient Italian hill city with interesting walls and Etruscan tombs. Originally perhaps Umbrian, Perugia first appears in history as an Etruscan city. In 295 B.C., despite a treaty, it fought against Rome, then submitted and signed a lengthy truce (Serv. ad *Aen.* 10. 201; Diod. 20. 35; Livy 10. 30, 31, 37). Thereafter it remained loyal, e.g. against Hannibal (Livy 23. 17; 28. 45). When Perugia sheltered L. Antonius in 41 Octavian besieged, captured, and plundered it (Perusine War: App. *BCiv.* 5. 32-49). Subsequently called *Augusta Perusia*, Perugia always flourished but is rarely mentioned before the sixth century.

Strabo 5. 225; Pliny, *HN* 7. 52; W. Heywood, *History of Perugia* (1910); C. Shaw, *Etruscan Perugia* (U.S.A. 1939). E. T. S.

PERVIGILIUM VENERIS is a poem of ninety-three trochaic verses of unknown date and authorship, but written not earlier than the second century A.D. and perhaps nearer to the fifth than the second. The poet, who was a man of culture and learning, combines material for a hymn to Venus with a description of spring; the latter is interrupted with explanation why the coming festival is appropriate at that time, and the festival itself, set in Sicily, is the theme of thirty lines in the middle of the poem which ends on a mysterious and unexpected note of private sadness introduced by the line: 'illa [the nightingale] cantat, nos tacemus: quando uer uenit tuncum?' Detailed interpretation is a little difficult because of uncertainty about the proper order of the verses. Whatever may be the exact date of this bright and lively poem, which has as a refrain 'cras amet qui numquam amavit, quique amavit cras amet',

the warmth of its description and its delight in passion set it between two worlds and make it the prologue of the Middle Ages.

Standard edition (introd., text, transl., facsimiles, commentary, full bibliography) by Sir Cecil Clementi (1936), the only one making use of all three manuscripts in which the poem is preserved. D. S. Robertson, *CR* lii (1938), 109-12, argues on historical grounds that it was written about A.D. 307 by a poet belonging to the circle of Romula, mother of Galérius. G. B. A. F.

PESCENNIUS NIGER JUSTUS, GAIUS, came of an equestrian family. Enrolled by Commodus into the Senate, he was consul in A.D. 190 and next year governor of Syria, where after the murder of Pertinax he was proclaimed emperor by his legions. Unable to forestall Septimius' advance upon Rome, he attempted to secure his position from Byzantium, which voluntarily surrendered to him. Defeated at Perinthus, Cyzicus, and Nicæa (winter of 193-4), he withdrew to Antioch and was routed at Issus. Fleeing towards the Euphrates he was overtaken and executed. See SEPTIMIUS SEVERUS.

H. M. D. P.

PETALISMOS, see OSTRACISM.

PETASOS, see DRESS (para. 4) and EPHEBI.

PETIL(L)IUS. Two cousins named Q. Petillius, *tribuni plebis* in 187 B.C., initiated the attack on L. Scipio (q.v. 7). Livy, following Valerius Antias, wrongly states that they accused Africanus also. One is probably Q. Petillius Spurius, the praetor who burnt the forged writings of Pythagoras discovered in 181 (Livy 40. 29) and campaigned in Liguria as consul (176).

H. H. S.

PETILLIUS, see also CERIALES.

PETOSIRIS, see NECHEPSO.

PETRA (Aramaic *Selah*, 'the Rock') was the capital of the Nabataeans by 312 B.C. After A.D. 105 it ceased to be the administrative centre but remained the religious metropolis of Arabia. The town lies in a hollow surrounded by mountains; the only access is by narrow gorges. The ruins of the town itself, though extensive, comprising several temples, two theatres, baths, markets, gymnasium, etc., are not impressive. The rock-hewn temples and tombs in the surrounding hills are most magnificent, ranging in style from a primitive blend of Egyptian, Assyrian, and Greek motifs to a highly developed Hellenistic with strong baroque tendencies.

R. E. Brünnow and A. von Domaszewski, *Die Provincia Arabia* i (1904), 125-428; G. Dahn, *Petra und seine Felsheiligtümer* (1905); T. Wiegand, *Petra* (1921); Sir A. Kennedy, *Petra* (1925). A. H. M. J.

PETREIUS, MARCUS, probably son of Cn. Petreius Atinas, a Marian *primipilaris*, was already 'uir militaris' of thirty years' service in 63 B.C. (Sall. *Cat.* 59. 6), when as proprætor in Northern Italy he defeated Catiline at Pistoria. From 55 he governed Hispania Ulterior as Pompey's legate, and in 49 brought his two legions to the Ebro, where he proved more stubborn than Afranius in the retreat from Ilerda. In 48 he was in Peloponnesus, but he joined the Pompeians in Africa, where early in 46 he won a success over Caesar. After Thapsus, by compact with King Juba, he killed the king and then himself.

G. E. F. C.

PETRONIUS (1), PUBLIUS (est. suff. A.D. 19 with M. Junius Silanus), passed some laws in favour of slaves (e.g. the *Lex Iunia Petronia*, which provided that if the *indictes* were equally divided the judgement had to be in favour of liberty). He was præconsul of Asia and in 39 legate of Syria. Commanded to erect a statue of Gaius in the temple of Jerusalem, he desisted because

of Jewish opposition. Gaius' order to commit suicide arrived after the news of the emperor's death. A connexion between the *Lex Junia Petronia*, the *Lex Petronia* of Dig. 48. 8. 11. 2, and the *praefecti (iure dicundo) lege Petronia* (ILS 6125, 6359, 6518) is very doubtful.

W. W. Buckland, *The Roman Law of Slavery* (1908) 36, 654, 664; J. Marquardt, *Röm. Staatsverwaltung* i.³ 170; G. Rotondi, *Leges publicae populi Romani* (1912), see index. A. M.

PETRONIUS (2) ARBITER. The main question about Petronius Arbitr (his *praenomen* is uncertain, being given as Titus by the elder Pliny and Plutarch (Plin. *HN* 37. 20, Plut. *Mor.* 60 d), and as Gaius by Tacitus) is whether the author of the fragmentary novel that has come down to us is identical with the Petronius described by Tacitus (*Ann.* 16. 18) as once the *elegantiae arbiter* of Nero's Court but later fallen into disfavour and enjoying an elegant suicide. The style and language of the novel are perfectly consonant with the second half of the first century A.D., and arguments designed to bring him to the second or third century, whether linguistic or historical, seem quite unsuccessful. As to the character and intellect of the writer and the courtier, it is almost inconceivable that there should be two people of the same name, of the same age, so alike in genius and sentiment.

2. Petronius had proved his worth as proconsul of Bithynia and then as *consul suffectus* when he rose in Nero's favour and became a Master of the Emperor's pleasures—a delicate voluptuary, lending a certain elegance to the corrupt court, whose distractions lacked refinement. In A.D. 66 the all-powerful Tigellinus (Ofonius) saw in him the possibility of a dangerous rival, and turned Nero's mind against him, by suborning a slave to defame him and by alleging his friendship with Scaevinus, the leading figure in Piso's conspiracy. The court was in Campania, and Petronius was hurrying thither to justify himself, but at Cumae learned that his position was hopeless, and determined to end matters by suicide: he opened his veins and bound them up again, rewarded some slaves and punished others, broke a murrhine vase that the tyrant might not have the pleasure of it, and destroyed his signet-ring for fear that misuse of it should bring other people into trouble. Instead of making a will full of flattery of Nero or his favourite, he wrote a document denouncing the imperial vices with the names of his accomplices, and then passed from life to death. This denunciation has nothing to do with the literary remains of Petronius that have come down, though it was natural that it should be believed in the medieval period, and even in the Renaissance, that we have here fragments of the famous document recorded by Tacitus.

3. Of his literary work we have all too little: fragments of the fifteenth and sixteenth books of a romance of which we do not know the whole extent. An epitomator has sadly cut down even what has come to us, though the *Cena Trimalchionis* is almost intact. The book is unique in Latin literature—and it probably had no Greek model—as a picaresque novel, its nearest succession being Apuleius' *Metamorphoses*, in which, however, there is a mystical and magical element absent from Petronius. It seems to have been little known or appreciated in antiquity: we have bare references to it in Terentianus Maurus and Sidonius Apollinaris, the latter giving him a connexion with Marseilles which has confirmation, though the circumstances are unexplained, in our fragments. In the Middle Ages he was mostly known from the Florilegia, but John of Salisbury (d. 1180) had a better acquaintance with his works, and even quoted from a part of them which was only rediscovered some five hundred years later.

4. The novel recounts the adventures, mostly in southern Italy, of three disreputable young persons of

the freedman class, Encolpius (the narrator), Ascyltus, and Giton. They have much trouble with the authorities, many love-affairs, and occasional good times, as at Trimalchio's Feast, in the course of which we have an unexampled store of 'Vulgar Latin' from the lips of the diners—there is nothing to compare with it except the Pompeian wall-inscriptions—who are all of the lowest stratum of Italian society. The form of the work is 'Menippean'—i.e. prose interlarded with occasional verse, and it contains some anecdotes of the type of the Milesian Fables (see NOVEL), among which is the famous *Widow of Ephesus*. Our remains include two longer poems, a *Troiae Halosis* which may or may not be a parody of Seneca, and a *Poem on the Civil War*, which is almost certainly an enlightened and penetrating criticism of Lucan's treatment of the same theme.

5. Petronius has also left to us a small collection of lyric and elegiac poems which look back to Ovid and forward to Martial, some of considerable merit; but he will live in the world's literature as the master novelist of low and adventurous life. See also LITERARY CRITICISM, LATIN, paras. 4 and 5.

BIBLIOGRAPHY

[There is a fairly complete bibliography down to 1909 by S. Gaselee, *Transactions of Bibliographical Society*, 1910.]

Texts: Ed. princ., Milan (c. 1482) in *Panegyrici Veteres*. Text improved by J. Sambucus (Antwerp, 1565); Jean de Tournes (Lyons, 1575); P. Pithou (Paris, 1577); J. Douss (Leyden, 1585). 1st ed. of *Cena Trim.* (Trau fragment), Giovanni Lucio (Amsterdam, 1670). The whole work appeared in an important 'variorum' ed. by P. Burman (2 vols., Utrecht, 1709). The beginning of modern criticism of Petronius is the ed. maior by Fr. Buecheler (Berlin, 1862); his editiones minores still hold the critical field. See also E. Sage, New York, 1929 (critical and explanatory notes). On MSS. C. Beck (U.S.A. 1863) remains useful; S. Gaselee, facsimile of Codex Tragiensis (1915). *Cena Trim.* Best commentary by L. Friedländer (1891², 1906). See also W. D. Lowe (1905); W. B. Sedgwick (1925).

POEMS: E. Bachrens, *PLM* iv; H. E. Butler in Loeb Petronius (1913).

ENGLISH TRANSLATIONS: Burnaby (1694); John Addison (1736); M. Heselstine (Loeb, 1913); J. M. Mitchell (1922). Of *Cena* only, H. T. Peck (U.S.A. 1898); M. J. Ryan (1905).

STYLE AND DICTION: I. Segebadt et E. Lommatsch, *Lexicon Petronianum* (1898); W. Heraeus, *Die Sprache des Petronius und die Glossen* (1899). S. G.

PETRONIUS (3) TURPILIANUS, PUBLIUS (cos. A.D. 61), succeeded Suetonius Paulinus as governor of Britain. His policy was one of peace. In 63 he was *curator aquarum* in Rome. He contributed to the repression of the Pisonian conspiracy. In 68 Nero entrusted to him the command against the rebels. His conduct is uncertain (Dio 63. 27. 1; Plut. *Galba* 15, 17). He was killed by Galba. A. M.

PETS. An ancient house sheltered many more domestic pets than would normally be found in a modern dwelling. The tame mullets of Lucullus were a rich man's fantasy, but hares, monkeys, and serpents were quite usual pets. The hare was a favourite present from lovers in Greece; monkeys both in Greece and Rome contributed to the gaiety of family life; serpents in Rome would creep about the dinner-table and eat from the master's hand. Birds also of every kind moved freely around the house; small birds such as pigeons, doves, quails, and partridges, and larger kinds such as geese and ducks. Parrots were a late introduction from India; cats and caged birds were very rare. The commonest pet of all was the small Maltese dog, with its sharp nose and bushy tail, which frequently had a special attendant and was sometimes buried in a marble tomb. See DOGS.

Catullus 2 and 3; Ovid, *Am.* 2. 6; Martia 11. 109. F. A. W.

PEUCESTAS (b. c. 360 B.C.), son of an Alexander, a Macedonian noble, accompanied Alexander the Great to Asia, but held no high command till after the Indian expedition, on which he saved Alexander's life (325). He

was then promoted to Alexander's personal staff ('Body-guard'), and to the important satrapy of Persis (325-324). Alone of the important Macedonians he learned Persian and adopted Persian dress, which pleased Alexander and the Persians greatly, and in equal measure displeased the Macedonian soldiers. In the disorders after Alexander's death he probably took the lead among the eastern satraps, but in the war of Antigonos and Eumenes he chose the losing side, and though his life was spared by Antigonos he disappears from history thereafter (316).

H. Berve, *Alexanderreich*, no. 634; W. W. Tarn, *CAH* vi, ch. 15, G. T. G.

PEUTINGER TABLE, a world-map of the third or fourth century A.D., copied from a lost original by a monk of Colmar (A.D. 1265) and acquired in the sixteenth century by a scholar named Peutinger. It is a long narrow strip, in twelve sections, and was intended to serve as a portable road-map. All distances are greatly elongated (from east to west), and the only features systematically marked on it are rectilinear roads, towns, and the chief mountains and rivers. It extends from Britain to the Ganges mouth, but most of Britain, all Spain, and west Mauretania are missing.

K. Miller, *Die Weltkarte des Castorius* (1888), *Itineraria Romana* (1916); J. Wartena, *Inleiding op een Uitgave der Tabula Peutingeriana* (1927). E. H. W.

PHAEA (Φαῖα, Φαῖα), the name, according to Plut. *Thes.* 9, and other authors, of a monstrous sow (a boar, Hyginus, *Fab.* 38. 6, with some support from art, see Höfer in Roscher, iii 2203, 20), killed by Theseus (q.v.) at Crommyon in Attica (Bacchylides 17. 23 and later writers). Apollod. *Epit.* 1. 1 says that Phaea was the name of the old woman who kept the sow. H. J. R.

PHAEACIANS, see ALCINOUS, SCHERIA.

PHAEAX (Φαῖαξ), Athenian politician and opponent of Alcibiades (Plut. *Alc.* 13). As ambassador to Italy and Sicily in 422 B.C. he tried to stir up anti-Syracusan feeling (Thuc. 5. 4). According to Theophrastus (Plut. *Nic.* 11) Phaeax, not Nicias, joined Alcibiades in promoting Hyperbolus' ostracism. His oratory is mentioned by Eupolis and Aristophanes (*Eg.* 1377 ff.). The attribution of the speech *Against Alcibiades* (see ANDOCIDIS 1), § 4 to Phaeax is improbable (Jebb, *Attic Orators* i. 136).

Protop. Att. n. 13921.

H. H. S.

PHAEDON (Φαῖδων) of Elis (b. c. 417 B.C.), founder of the philosophical school of Elis. He was brought as a slave to Athens but later set free. He became one of Socrates' most devoted pupils, and Plato named after him the dialogue in which Socrates' last hours are depicted. His own teaching seems to have been confined to ethics. Of the dialogues ascribed to him *Zopyrus* and *Simon* were probably genuine.

Ph. xix. 1538.

W. D. R.

PHAEDRA, see HIPPOLYTUS.

PHAEDRUS (1) of Athens (c. 450-400), Socratic philosopher, a character in Plato's *Prt.* and *Symp.* as well as in the *Phdr.* He was a member of the Socratic circle though not precisely a pupil. His personality appears in Plato's dialogues as enthusiastic and rather naive.

Ph. xix. 1555.

W. D. R.

PHAEDRUS (2) (fl. 300-270 B.C.), of the deme Sphettus, Athenian statesman, joint leader of the moderate, anti-democratic party after Ipsiades (301). He served as general under Lachares (296/5), but joined Demetrius Poliorcetes when he recovered Athens (294) and headed the government on the death of Stratoles (293). When Demetrius finally lost his hold on Athens (288), Phaedrus was debarred from office, but he recovered favour when Demetrius' son Antigonus rose to power (277), and in

Xenophon's archonship (probably 274) he was general *ἐπὶ ταῖς ὄπλαις*. A decree in his honour was passed some time later than 263 (*IG* ii² 682; wrongly dated in *SIG* 409).

W. S. Ferguson, *Hellenistic Athens* (1911); *Athenian Tribal Cycles* (1932). F. W. W.

PHAEDRUS (3) (c. 140-70 B.C.), Epicurean philosopher, perhaps an Athenian by birth, was in Rome, where Cicero heard him lecture, before 88. He was head of the Epicurean school in Rome for a short time. He appears in Cicero as one of the most respected Epicureans of the time, but perhaps more for his character than for his philosophic ability. Cicero refers to his work *Περὶ θεῶν*. He is hardly mentioned except by Cicero, and does not seem to have been an independent philosopher.

Ph. xix. 1557.

W. D. R.

PHAEDRUS (4) (or possibly PHAEDER; c. 15 B.C.-c. A.D. 50), the Roman fabulist. His works, which provide the only details of his life, show that he was a native of Macedonia, came early to Italy, there received a good education, and became a freedman of Augustus. Under Tiberius, by suspected references in his fables, he offended Sejanus and suffered punishment of a nature unknown. The last book was the work of his old age. Scarcely noticed by Roman writers (being passed over by both Seneca and Quintilian in their references to fable), he is first mentioned by Martial (3. 20. 5 'improbi iocos Phaedri', the meaning of which is obscure, 'shameless' being scarcely appropriate to the extant works, and possibly some unknown mime-writer is referred to), and next by Avianus (*praefat.*). Prose paraphrases of his fables, entitled 'Romulus', were subsequently made, and in the Middle Ages, when P. himself was forgotten, exercised an immense influence.

The fables form five books which are clearly incomplete and to which certainly belong thirty other fables (*Appendix Perottina*) included in Perotti's epitome of fables (c. 1465). In addition, about twenty new fables, undoubtedly going back to P., are contained in the paraphrases of 'Romulus'. The importance of P., who is very proud of his achievement, lies in his elevation of the fable into an independent genre of Roman literature. His fables, written in iambic senarii, consist of beast-tales based largely on 'Aesop' as well as jokes and instructive anecdotes taken not only from Hellenistic collections but also from his own personal experience. Added weight is sought for his work by borrowings from the *χρεια* and *διατριβή*. Besides his professed purpose of providing amusement and counsel, P. also satirizes contemporary conditions both social and also, to an extent difficult to determine, political (e.g. the *delatores*). Retorts to his detractors are frequent. The presentation is, in general, marked by vivacity, charm, and a brevity of which P. is rightly proud, but which sometimes leads to obscurity. Eagerness, however, to emphasize the moral, which is sometimes misunderstood, often mars the effect. Departures from his originals are seldom happy. In his outlook P. displays resignation rather than the gloomy pessimism sometimes ascribed to him, but offers no profound philosophy. In language, skilfully adapting the *sermo urbanus*, he shows an admirable purity (apart from an unclassical use of abstract nouns and occasional vulgarisms), clearness, and a simplicity that is in refreshing contrast to the turgid rhetoric of his day. His iambic senarius is modelled on that of the early comic writers and is very regular. P. is not a great creative artist, yet in the history of the fable he occupies an important place. See also FABLE.

Havet, *Les Fables Latines* (1892); H. Vandel, *Quaerente 12 fables fabulae romuleae* (1927); J. W. Duff in *Lit. Hist. Pers.* (Silver Age, 1927); R. S. S. (U.S.A. 1929), ch. 6. A. H. W.

PHAENIAS of Eresus (*fl.* 320 B.C.), a pupil of Aristotle who inherited the Peripatetic interest in literary and historical research. Amongst various writings may be noted *Τυράννων ἀναιρέσεις ἐκ τιμωρίας*, an expansion of Aristotle, *Pol.* 1311^a25, marked by moral judgements characteristic of the period, and *Περὶ τῶν ἐν Σικελίᾳ τυράννων*.

FHG ii. 293.

G. L. B.

PHAESTUS stands on a hill at the west end of the Messara plain in south Crete, 3½ miles from the sea. The earliest habitation was of the Neolithic Age, and the site increased in importance in the Early Bronze Age, when neighbouring sites show Egyptian contacts. The palace was founded early in the Middle Bronze Age; it consisted of a series of buildings grouped round courts. It was enlarged during the Middle Bronze Age, a shrine was built, and flights of steps added to the north side of the west court made it resemble the theatral area at Cnossos. In the last phase of the Middle Bronze Age the palace was entirely remodelled. It resembled Cnossos with its light wells, magazines, and propylaea, but the peristyle of the central court, a feature which occurs too at the neighbouring villa of Hagia Triada, had no Cnossian parallel. Phaestus did not suffer from the earthquakes which affected Cnossos towards the end of the Middle Bronze Age; but except for inevitable alterations, it retained the same form, till it too perished in the universal catastrophe at the end of the second phase of the Late Bronze Age (c. 1400 B.C.). It was reoccupied during the third phase and in the Early Iron and Archaic Ages. In Classical times it was a well-known city, with a temple on the site of the ruined palace. It survived till Roman times, when it was overshadowed by its neighbour Gortyn.

L. Pernier, *Il Palazzo Minoico di Festos* (1935); J. D. S. Pendlebury, *Archaeology of Crete* (1939).

A. J. B. W.

PHAETHON (*Φαέθων*), in mythology, son of Helios (q.v.) and the heroine Clymene. Learning who his father was, he set out to the East to find him, and arriving at his palace, asked him a boon. The Sun granting him in advance anything he liked, he asked to guide the solar chariot for a day. But he was too weak to manage the immortal horses, which bolted with him and were likely to set the world on fire till Zeus killed Phaethon with a thunderbolt. He fell into the Eridanus, and his sisters, mourning for him, turned into amber-dropping trees. See Eur. frs. of *Phaethon*, with Nauck's notes.

H. J. R.

PHALAECEAN, see METRE, GREEK, III (10).

PHALANX, infantry in order of battle. It was used of the common soldiers by Homer, and in the classical period of Greek hoplites generally; but modern usage applies it particularly to the Macedonian infantry after the reform ascribed to Philip II (Diodorus x6. 3. 1 f., under the year 359 B.C.; it may really have been earlier). The new phalanx owed its great successes under Philip, and later under Alexander, to its numbers (Macedonia could produce at least 25,000 men for this service), to its unusually long pike (*sarissa*; about 13 feet), to its superior training which made it comparatively mobile and flexible when disposed in depth (up to sixteen deep), and to the splendid cavalry which guarded its flanks and rear, where every phalanx was vulnerable. Inside it the tactical unit was the brigade (*taxis*: about 1,500 men), subdivided into companies (*lochoi*) and sections (*dekades*).

Alexander's conquests made this phalanx, or imitations of it, a primary instrument of Hellenistic strategy, and the problem of man-power became acute. Alexander had planned a mixed phalanx of Macedonians and Asiatics. The 'Successors', unable to get enough Macedonians, used Greeks. The Ptolemies and Seleucids in particular based their army-systems upon military

settlers, mostly Greek mercenaries by origin, who received land and became a hereditary soldier class. The Seleucid phalanx lasted well (numerically), mustering 20,000 at a review in 166. Technically, however, the phalanx deteriorated, even in Macedonia, mobility and individual skill being sacrificed to depth and weight and a longer *sarissa* (up to 21 feet). When it met Roman legions it was long past its best (Cynoscephalae 196; Magnesia, 189; Pydna, 168); and Pyrrhus in Italy (280-275) had few Macedonians.

W. W. Tarn, *Hellenistic Military and Naval Developments* (1930), 1 ff.; J. Kromayer in *Heerwesen und Kriegführung der Griechen und Römer* (1928), especially pp. 95 ff. and 136 ff.

G. T. G.

PHALARIS, tyrant of Acragas (c. 570-554 B.C.), notorious for cruelty, especially for the hollow brazen bull in which his victims were confined and roasted alive. This practice, recalling the ritual of Phoenician cults, 'appears to be better authenticated than the nature of the story would lead us to presume' (Grote). Polyaeus records that Phalaris became tyrant after being entrusted with the building of a temple and arming his workmen. He was finally overthrown by Telemachus, ancestor of Thero. The letters bearing his name were written by a sophist, perhaps of the second century A.D. (proved by Bentley in 1697).

V. E.

PHALERUM, the harbour of Athens until the early fifth century (see PIRAEUS) was the nearest point to Athens on the coast, at or near the modern Old Phaleron. There is little shelter here; the early port was an open beach. A cemetery of the eighth and seventh centuries on the marshy ground west of Old Phaleron has been excavated.

Σ. Πελεκίδης, 'Ανασκαφαὶ Φαλήρου', *Αρχ. Δελτ.* 2. 13 ff.; J. Day, *Cape Colias, Phalerum and the Phaleric Wall*, *AJArch.* 1932. 1 ff.

T. J. D.

PHALLUS, a model or image of the male organ of generation, used (a) in certain rites connected with fertility, e.g. at the rural Dionysia, Ar. *Ach.* 243 (see DIONYSIA), cf. 265 ff., for a song in honour of a daimon Phales, a sort of personification of the symbol (Herter, *de dis Atticis Priapi similibus*, 42 ff.); (b) as an attribute of some gods, notably Hermes (q.v.) on herms and Priapus (q.v.).

H. J. R.

PHANES, a god of the Orphic cosmogony, born from an egg fashioned by Chronos in the Aither, also called Protagonos, the First-born. He is the creator of all, bisexual, radiant with light, gold-winged, and has the heads of various animals. His daughter is Night, who bore Gaea and Uranus to him. He is also called Eros, Metis, and Erikapaïos. See ORPHIC LITERATURE, ORPHISM.

W. K. C. Guthrie, *Orpheus and Greek Religion*, 80 and 95.

M. P. N.

PHANOCLES, Greek poet (place and date of birth unknown). The six fragments from his verse seem all to come from one elegiac poem, the title of which is given by Clement of Alexandria as *Ἐρωτες ἢ Καλοὶ*. This was a catalogue-poem and dealt with the affection of gods (e.g. Dionysus) and heroes (e.g. Orpheus, Tantalus, Agamemnon) for beautiful boys. Probably each episode began with a stereotyped ἦ ὧς in the Hesiodic manner, cf. frs. 1 and 3. The longest fragment, in which P. describes the death of Orpheus and its sequel, proves that the author possessed considerable skill in narration. The language is simple and well chosen and the versification melodious, though, like Hermesianax, P. is too prone to the arrangement of the pentameter by which an adjective closes the first half and the noun with which it agrees the second. It is possible that the *Erotes* was intended as a male counterpart to the *Leontion* of Hermesianax, but P. is more interested in aetiology than Hermesianax, cf. frs. 1, 5, 6. A rationalistic interpretation of myth appears in fr. 4. Apollonius Rhodius (*Argon.* 4. 903) seems to

imitate an unusual scansion found in Phanocles, fr. r. r. If this is correct, P. lived in the first half of the third century B.C. He was perhaps a younger contemporary of Hermesianax.

Texts: J. U. Powell, *Collectanea Alexandrina* (1925), 106-9; E. Diehl, *Anth. Lyr. Graec.* vi (1924), 225-7. General literature: v. Blumenthal, 'Phanokles' in *PIV* xix. 1781-3. E. A. B.

PHANODEMUS of Athens, born in the first quarter of the fourth century B.C. and probably father of the historian Diyllus. Since his identification by Ad. Wilhelm (*Anz. d. Wien. Akad.* 1895, 45) with the Phanodemus who played a prominent part in the public life of Athens after the Peace of Philocrates (346), we have inscriptional evidence for his activities in four decrees. Three of these (*SIG³* 227, 287, 298) record the granting of civic crowns as a reward for his services to the Boule and Demos between 343 and 329, and show his strong interest in the festivals of Dionysus and Amphiaras. In 329 he was elected to assist in conducting the latter's festival, and a fourth decree (*ibid.* 296) mentions his appointment as *ἐποποιός* to Delphi in 330. His interest in Attic cults and myths found expression in an *Atthis* of at least nine books. He also wrote an account of the island of Icus, which was probably one of Callimachus' sources for his *Atthis*.

FHG i. 366.

G. L. B.

PHAON, a legendary ferryman in Lesbos, made so handsome or given such a potent charm by Aphrodite, that Sappho among others fell desperately in love with him, finally jumping off the Leueadian rock for his sake. The story apparently is a comedian's invention (see Ovid, *Her.* 15, with Palmer's notes).

H. J. R.

PHARMAKOS, a kind of human scapegoat or embodiment of ill-luck. In Ionia a *pharmakos* was used when some disaster (as famine) befell a community. He was chosen for his ugliness, led to a certain place (presumably outside the city), and there burned in pretence or reality (Tzetzes, *Chil.* 5. 726 ff., with Hipponax, frs. 6 ff. Diehl, quoted there). A like custom existed at Massilia (Petronius in Servius on *Aen.* 3. 57). In Athens, at the Thargelia (q.v.), there were annually two *pharmakoi*, one for the men and one for the women, called also *sybakechoi*; they were sent out of the city, but no one says they were killed (Harpoeration and Photius s.v.). Details are obscure.

See L. Deubner, *Attische Feste* (1932), p. 179 ff.; V. Gebhard, *Die Pharmakoi in Ionen* (Munich Diss. 1926).

H. J. R.

PHARNABAZUS, satrap of Dascyleum c. 413-370 B.C. He co-operated with Sparta against Athens at Abydos, Cyzicus, and Chalcidon, but in 408 encouraged the Athenians to open negotiations with Darius, though these broke down through the pro-Spartan sympathies of Cyrus. In 404, at Lysander's request, he caused the refugee Alcibiades to be assassinated. In the war with Sparta which followed Cyrus' downfall Dascyleum was ravaged by Dercyllidas (398) and again by Agesilaus, whose famous meeting with Pharnabazus (Xen. *Hell.* 4. 1. 29 ff.) occurred in 395. He strongly supported the revival of Persian sea-power, and shared the command with Conon at Cnidus and in the later naval operations. Recalled to Susa in 392, he was entrusted with the reconquest of Egypt, but failed in two attempts (385-383 and 374), and died shortly afterwards.

T. Lentschau, *PIV*, s.v. 'Pharnabazos (2)'.

D. E. W. W.

PHARNACES (1) I, king of Pontus, succeeded Mithridates III c. 185 B.C. He captured Sinope (c. 183) and made war on Eumenes II of Pergamum. He refused to come to terms at the instance of a Roman commission, but he was defeated by a combination of kingdoms and cities against him and compelled to surrender most of his conquests (179). However, he kept Sinope and united her colonies Cerasus and Cotyora to form the city

of Pharnacia. His diplomatic relations with cities and principalities of south Russia show that he anticipated Mithridates Eupator's dream of a Pontic empire (*IFE* i². 402); and an Attic decree attests his gifts to Athens. He died in 169.

For bibliography see MITHRIDATES.

T. R. S. B.

PHARNACES (2) II, son of Mithridates the Great, led the revolt that drove his father to death, and was granted the Bosporan kingdom by Pompey. This he reduced to order and enlarged. During the war between Caesar and Pompey he seized Colchis, Lesser Armenia, and some of Cappadocia, defeated Calvinus, Caesar's lieutenant, and overran much of Pontus, but was defeated at Zela by Caesar himself, who announced his victory with the words 'Veni, vidi, vici'. He escaped to his kingdom but was killed in a rebellion.

T. R. S. B.

PHARSALUS, a city of Thessaly, dominating the tetrad of Phthiotis (q.v.) and situated on the main road from Larissa to central Greece. A hill overlooking the well-watered plain supplied an impressive acropolis. The Echeeratidae of Pharsalus were among the most powerful baronial houses of Thessaly, but they were expelled in 457 B.C. In the struggle between the Pheraean tyranny and the rest of Thessaly, Pharsalus was several times occupied by a garrison. Yet, thanks to the policy of its leaders in furthering the intrigues of Philip, it became the strongest city of Thessaly under the Macedonian régime, and Pharsalian cavalry served Alexander well in Asia. In the Lamian War, however, the Pharsalians attempted to throw off the yoke of Macedon and paid dearly for their failure.

In the neighbourhood were fought three important battles, the victories of Pelopidas (364 B.C.) and Flamininus (197) at Cynosephalae, and that of Caesar over Pompey (48).

F. Stählin, *Das hellenische Thessalien* (1924), 135-43. II. D. W.

PHASELIS, a Greek colony in Lycia, was founded early in the seventh century B.C. by Rhodes. It was a member of the Delian League (454-417 B.C.), surrendered to Alexander, was ruled by the Ptolemies from 309 to 197, when it was captured by Antiochus III. From 169 it seems from its coinage to have been a member of the Lycian League, but it seceded before the first century B.C. began. In about 78 it was ruled by its territory by Servilius Isauricus for abetting the pirate king Zenicetes. Under the Roman emperors it belonged to the Lycian League.

A. H. M. J.

PHAYLLUS (1), an athlete from Crotona in south Italy who gained three victories in the Pythian Games and also fought at Salamis (480 B.C.) in a ship which he fitted out at his own expense. He is said to have jumped 55 feet, but this is certainly a poetical exaggeration.

F. A. W.

PHAYLLUS (2), brother of Onomarchus (q.v.) and Phocian commander in the Third Sacred War (q.v.). He was defeated by Philip II of Macedon in Thessaly (353 B.C.), but succeeded Onomarchus upon his death in 352. Realizing Philip's intention to march south, Phayllus united the Phocian people, occupied Thermopylae with a Phocian and mercenary army, and received assistance from Sparta, Achaia, and Athens. After Philip's withdrawal, Phayllus was able to concentrate on the war with Thebes. In 351 he invaded the Peloponnese to assist Sparta against Thebes. He died of illness, and was succeeded in his command by Phalaecus.

N. G. L. H.

PHEGEUS (*Φηγεύς*), in mythology, father of Arsinoe, wife of Alcmaeon (q.v.); his sons murdered Alcmaeon when he remarried (cf. CALLISTO; Apollod. 3. 87 ff.).

An undatable but probably late story (*Certam. Hom. et Hes.*, p. 249 Rzach) says Hesiod stayed for some time at his court and was put to death by his sons, who suspected him of seducing their sister. H. J. R.

PHEIDIAS, see PHIDIAS.

PHEIDIPIDES (so the best MSS. of Herodotus) or **Philippides** was the Athenian courier dispatched to solicit Spartan help upon the news of the Persian landing at Marathon (490 B.C.). He is credited with the exploit (which need not be regarded as fictitious) of having covered the distance (c. 150 miles) in two days. Legend connected him with the establishment of the Athenian cult of Pan. P. T.

PHEIDON, king of Argos, changed the kingship into a tyranny (Aristotle, *Pol.* 1310^b). He made their measures (*metra*) for the Peloponnesians and interfered at Olympia (Hdt. 6. 127). Later writers add that he struck in Aegina the first Greek coins and dedicated to Hera the spits previously current, and recovered the 'lot of Temenus', the Dorian conqueror of north-east Peloponnesus, from whom they make him variously sixth, seventh, or tenth in descent (i.e. between 900 and 700 B.C.). Pausanias (6. 22. 2) dates the interference at Olympia Olympiad VIII (748), but a plausible emendation proposes XXVIII (668), and an earlier date is scarcely possible. Herodotus mentions a 'son' of Pheidon c. 575, and even if 'son' is loosely used it favours a date for Pheidon not earlier than early seventh century, the period of the first Aeginetan coins. The statements about Pheidon's striking them are probably genuine tradition, preserved perhaps in the Argive Heraeum, where a bundle of spits has been discovered which may be Pheidon's dedication. Herodotus' story of an occupation of Aegina by Argos that resulted in both adopting the distinctive standard of Aeginetan coins (5. 82-9) may be a distorted version of Pheidon's achievements. He would thus be the immediate predecessor of the tyrant dynasties of Corinth and Sicyon, whose rise c. 660-650 meant his own collapse (Nic. Dam. fr. 41).

Strabo 8. 358, 376, 355; Marmor Parium, 30; *Etyim. Magn.* s.v. *ῥηέλοκος*. P. N. Ure, *Origin of Tyranny* (1922), 154 f.; H. T. Wade-Gery, *CAH* iii. 539 f., 761 f.; T. Lenschau, *PW*, s.v. 'Pheidon'. P. N. U.

PHEME (φήμη), a rumour of unknown origin which springs up among the people at large; unprompted and unguided popular opinion. It is a god (Hesiod, *Op.* 763-4) and is never quite in vain (οὐ . . . πάμπαν ἀπόλλυται).

PHERAE, a city of Thessaly, strategically situated on the southern verge of the plain of Pelasgiotis. When in possession of Pagasae (q.v.), Pherae controlled the export of Thessalian corn. Though prominent in mythology, it remained politically insignificant except during the half-century (c. 406-352 B.C.) when it was ruled by the family of Jason (see LYCOPHRON (1), JASON (2), ALEXANDER (5)). Philip of Macedon expelled the tyrants and terminated the prosperity of Pherae by depriving it of Pagasae.

Excavation has disclosed a badly preserved temple, apparently of Zeus Thaulios, dating from the sixth century but reconstructed in the fourth.

F. Stählin, *Das hellenische Thessalien* (1924), 104-7; Y. Béguignon, *Recherches archéologiques à Phères de Thessalie* (1937). H. D. W.

PHERECRATEAN, see METRE, GREEK, III (8).

PHERECRATES, writer of Old Comedy. Anon. *Περὶ κωμ.* 8 says he began as one of Crates' actors and was afterwards his rival. Dramatic *floruit* about 430-410 B.C. (*IG* ii². 2325). The *ἄγριοι* (420; cf. *Pl. Prt.* 327 d) seems to have depicted (?) two Athenian citizens who, tired of city life, retire to some uncivilized country. A

mention (fr. 19) of the faithlessness of Argos in the *Αὐτόμολοι* probably assigns that play to 417. The *Δουλοδιδάσκαλος* seems to have pictured a model household (Ath. 6. 262 b). The *Κοριανῶ* (named from a *meretrix*) satirized the drinking habits of prostitutes and contained a quarrel between a father and a son over one of them. The scene of the *Κραπαταλοὶ* ('Hell's pennies'; cf. Poll. 9. 83) was laid in Hades (schol. Ar. *Pax* 749). The *Μυρμηκάνθρωποι* contained the story of Deucalion's flood, and Zeus' repopulation of the earth by turning ants into men—a conflation of the Flood myth with the story of Zeus' re-peopleing by that method of Aegina after a plague (schol. Pind. *Nem.* 3. 13). The *Πέραςαι* contained an *ἀγών* between Wealth and Poverty. The *Τυραννίς* may have had a plot similar to that of Ar. *Eccl.* It also attacked the female toping (fr. 143). The *Μεταλλῆς* ('The Miners'; reference to mines at Laurium as entrance to Hades) depicts a woman returned from Hades and singing the praises of the life there. The *Χείρων* contains a conversation between Achilles, a pupil of Chiron, and Odysseus. The *Ἰπνός ἢ παννυχίς* may probably be assigned to 414.

Pherecrates, comparatively early though he was, seems to mark the transition to Middle Comedy in his avoidance of personal satire, and to have been inventive in plots (*εὐρετικός μύθων*; Anon. *Περὶ κωμ.* 8).

FCG ii. 252 ff.; *CAF* i. 145 ff.; Demiańczuk, *Suppl. Com.* 66 ff. M. P.

PHERECYDES (1) of Syros (fl. c. 550 B.C.), mythologist and cosmologist, one of the earliest writers of Greek prose. Author of *Ἑπτὰμυχος*, a work in which is described the origination of the world by three primal deities—Zeus (the supreme god and the upper heaven), Chronos or Kronos (the second god and the lower heaven), and Chthonie (the earth-goddess). *Testimonia* and *frs.* in Diels, *Vorsokr.* 5 i. 43-51.

PW xix. 2025.

W. D. R.

PHERECYDES (2) of Athens, 'the genealogist' (later confused with (1)), wrote copious *Histories* mythical and genealogical, commended by Dion. Hal. *Ant. Rom.* 1. 13. 1. Eusebius' date is 456 B.C. (*Ol.* 81. 1).

FHG i. 70, iv. 639b; *FGH* i. 3.

PHIDIAS (Φειδίας), Athenian sculptor, born probably c. 490 B.C., and a reputed pupil of Hecgias and of Ageladas. When he first became known is uncertain. But a recently published inscription (B. Meritt, *Hesperia* 1936, 355 ff.) proves that one of his most famous works, the Athena Promachos, was made in 460-450. This statue, in bronze, stood on the Acropolis near the Propylaea and rose to a height of some 30 feet. Part of its base survives, but there is no extant copy of the statue. It was the largest metal statue ever made at Athens.

Soon after its construction Phidias seems to have made another bronze, the Athena Lemnia, for colonists at Lemnos in 451-448. A fine Roman copy of an Athena without a helmet consisting of a head at Bologna and a body at Dresden has been identified as this statue. This attribution is most probable.

Our main knowledge of the style of Phidias rests in the marble sculptures of the Parthenon (constructed in 447-432). He was commissioned to design these by Pericles, and was responsible for the design of the sculptures and their composition. He made the models for the actual sculptors, who worked under him. Being primarily a bronze-worker, he almost certainly made models of clay and plaster, which were exactly reproduced by his sculptors. This close dependence of stone-carving on a clay or plaster model profoundly affected the development of Greek sculpture and made carving subordinate to modelling. It enabled sculptors to embark on highly elaborate adventures in the carving of drapery; and it is probably this new approach to carving which gave to

Phidias his reputation as an innovator. Certainly sculpture throughout Greece after 450 adopted the manner and style of Athenian sculpture, and all the regional styles vanished with the exception of the Peloponnesian (on which see POLYCLITUS). See also AGORACRITUS.

Phidias acquired much of his fame from his skill at chryselephantine statues. His Athena Parthenos survives to us in several tolerable copies, but his equally famous Zeus of Olympia is only a memory. As the Athena Promachos was finished by 450 and the Parthenon was built in 447-432 Phidias must have gone to Elis after 432. He went there in exile owing to political charges against him by the opponents of Pericles, and he died either there or in Athens some fifteen years later. He is said to have returned to Athens to stand his trial.

No work from his hand survives, but the Parthenon sculptures can be taken as representing his style correctly.

S. C.

PHILADELPHIA (1) (Φιλαδέλφεια), in the north-east of the Fayûm, was founded by Ptolemy II Philadelphus in connexion with the reclamation of the Moeris basin. The site, now *Darb Gerze*, was partly excavated for the Berlin Museum in 1908/9; the plan showed the normal Ptolemaic scheme of rectangular *insulae*, mainly of private houses, with a temple and possibly an official bureau. Considerable finds of papyri and small objects were secured by the excavators; others, before and after them, by native diggers, among these being the papers of Zenon (see APOLLONIUS 3). The cemetery, lying to the east, has produced many mummy-portraits: one was found in a house. The town seems to have been abandoned in the fourth century.

P. Viereck, *Philadelphica* (1928), gives a full description and bibliography.

J. G. M.

PHILADELPHIA (2), a city in Lydia, founded by Attalus II Philadelphus (159-138 B.C.) in the valley of the Cogamus, near the pass which carries the principal road from the Maeander to the Hermus valley, now *Alaschir*. It lies in a volcanic district, which produces excellent vines, and it has suffered much from earthquakes—for some time after A.D. 17 it lay in ruins. It was one of the 'Seven Churches' of the Apocalypse.

W. M. C.

PHILAE, see ELEPHANTINE.

PHILAMMON (Φιλάμμων), a musician, either wholly fabulous or so ancient as to be much overlaid with mythical details. Son of Apollo (Hesiod, fr. 111 Rzsch+Pherecydes in schol. *Od.* 19. 432); invented maiden choirs (ibid.); first to celebrate the birth of Leto's twins and institute choruses at Delphi ([Plut.] *De mus.* 1132 a).

H. J. R.

PHILARGYRIUS, JUNIUS (5th c. A.D.), a commentator on Virgil; but there is some doubt about his real name (Filargius?). His *Explanatio in Bucolica* is extant (ed. H. Hagen in Thilo's Servius, III. ii) in a longer and a shorter version, both of which contain Celtic glosses. The Berne scholia to the *Eclogues* and *Georgics* (ed. H. Hagen, *Jahrb. für class. Phil. Suppl.* 4, 1867, 749 ff.) which mention 'Iunilius Flagrius' as one of their sources, and the *Brevi expositio Georgicorum* (ed. H. Hagen in Thilo's Servius, III. ii) probably owe a great deal of their material to Philargyrius.

Cf. G. Funaioli, *Fragmenta Virgiliana Antica* (1930); Teuffel, § 472, 9; Schanz-Hoerius, § 248, 6.

J. E. M.

PHILEMON (1) (Φιλέμων), in mythology, a good old countryman, who lived with his wife Baucis in Phrygia. Zeus and Hermes, coming to earth to test men's piety, were refused hospitality elsewhere but received by them.

The gods revealed their deity and warned them to climb a mountain. On arrival near the summit, they saw the district covered by a flood. They then became priest and priestess and finally were turned into trees.

Ovid, *Met.* 8. 618 ff.; cf. W. M. Calder in *Discovery* 1922, 207 ff.; J. E. Fontenrose in *Univ. of Cal. Pub. in Class. Phil.* 1945, 93 f.

H. J. R.

PHILEMON (2) (c. 361-262 B.C.), New Comedy poet, Menander's successful rival, of Syracuse (or of Soli in Cilicia—Suidas). The grant of Athenian citizenship to P. is attested by inscriptions (*IG* ii². 3073, 4266). In a long life (Suidas says 99 or 101 years), spent partly at Alexandria, he wrote ninety-seven comedies, of which sixty-four titles (including *Λιθογλύφος*, not in either Meineke or Kock) are known. Only two titles indicate mythological burlesque (*Μυρμιδόνες*, *Παλαμίδης*)—surprisingly few, for Apuleius (*Flor.* 16) designates P. 'a writer of Middle Comedy'. It seems that P.'s early plays (from c. 341 B.C., *Λιθογλύφος*) were in the Middle style, and only after Menander had gradually developed the type of New Comedy did P. write in the New style. Contemporary judgement awarded P., although of foreign origin, frequent victories over the Athenian Menander; but the final verdict of ancient critics ranked P. inferior to Menander (Quint. *Inst.* 10. 1. 72). Well over 200 fragments survive, illustrating P.'s thought and style, e.g. fr. 73, uselessness of tears; fr. 89, varieties of character; fr. 93, animals happy as compared with man; fr. 118, a god that hideth himself—cf. fr. 166. Like Menander, P. has many gnomic lines and couplets, often lacking Menander's terse precision (but cf., e.g., fr. 147). P. differs from Menander in detail—he uses less varied metres (only one certain passage in trochaic tetrameters, fr. 213), but more examples of the old dative in -οισι, -αισι.

Of P.'s technique in complete plays Latin adaptations by Plautus furnish evidence—*Mercator* (from *Εμπορος*), *Trinummus* (from *Θησαυρός*), *Mostellaria* (from *Φάσμα*). Certain additions by Plautus are recognizable, but doubt exists about others, e.g. the prologue by Luxuria and Inopia (Philemon's *Ἀήρ*, fr. 91, is a real prologue, whereas Luxuria expressly disclaims such a role, v. 16). *Mostellaria* probably gives the clearest impression of a comedy of the best period of Philemon (*Φάσμα*, later than 289 B.C.).

Like other comic poets, P. had a great admiration for Euripides: see the new fragment—*Εὐριπίδης πού φησιν οὕτως, ὅς μόνος | δύναται λέγειν* (life of Euripides by Satyrus), and cf. fr. 130.

In Athens P.'s comedies were revived after his death; in the second century A.D. a statue was erected there in his honour. But as an index of diminished popularity as compared with Menander, there are far fewer quotations from Philemon, and no papyrus certainly assigned to P. has been recovered in Egypt (*PSI* x. 1176 is possibly by P.).

FCG iv. 3 ff.; CAF ii. 478 ff., iii. 747 ff.; Demiańczuk, *Suppl. Com.* 71 ff. See C. A. Dietze, *De Philemone Comico* (1901).

W. G. W.

PHILEMON (3) the Younger, son of the celebrated Philemon (2), and himself a New Comedy poet; wrote fifty-four plays (none known to us by name) and won six victories.

FCG iv. 68; CAF ii. 540.

PHILEMON (4). A fourth Philemon, whether of the same family as (2) and (3) or not, is known from didascalic inscriptions as author of *Μολογία* (CAF ii. 540), 183 B.C.

PHILEMON (5). In the middle of the fourth century B.C. lived a fifth Philemon, an actor, mentioned by Aeschines (1. 115) and Aristotle (see ANAXANDRIDES).

PHILEMON (6) of Aixonae (an Attic deme) (probably early 2nd c. B.C.), grammarian, edited Homer and compiled *Ἀττικαὶ γλῶσσαι*.

PHILEMON (7) of Athens (c. A.D. 200), an Atticist grammarian, wrote *Σύμμικτα* and *Περὶ Ἀττικῆς ἀντιλογίας* (? ἀναλογίας) τῆς ἐν ταῖς λέξεσιν.

PHILETAERUS (1), Middle Comedy poet, said by Suidas to be the son of Aristophanes, but this was disputed; however, allusions assign him to the earlier period of Middle Comedy. Of twenty-one comedies (Suidas) thirteen titles are preserved, four or five being mythological burlesques. Many references to living contemporaries.

FCG iii. 292 ff.; CAF ii. 230 ff.

W. G. W.

PHILETAERUS (2) (c. 343–263 B.C.), son of Attalus of Tios and a Paphlagonian mother. First an officer of Antigonos (before 302), and next commander of Pergamum for Lysimachus, who kept a large treasure there, he deserted opportunely to Seleucus (282), and henceforth was ruler of Pergamum under Seleucid suzerainty. He may have enlarged his territories somewhat in his last years, but his best work was in defending Pergamum from the Galatian invaders of Asia Minor (278–276), and in founding the Attalid dynasty, which he did by adopting his nephews, one of whom (Eumenes) succeeded him. He was himself said to be a eunuch.

G. T. G.

PHILETAS (rather than *Philitas*) of Cos, son of Telephus, born not later than 320 B.C., became tutor of Ptolemy II Philadelphus (born in Cos 309/8). Other pupils of P. were Zenodotus, Hermesianax, and (probably 275–271) Theocritus. Since P. is described as suffering from bad health and abnormally thin, it is unlikely that he lived to a great age. Certainly he was dead when Theocritus (after 270) wrote *Id.* 7. His grave seems to have been in Cos, where the Coans put up a bronze statue of him (Hermesianax, fr. 7. 75–8 Powell).

WORKS. (1) *Verse*. According to Suidas (s.v.) P. wrote 'Epigrams and Elegies and other works'. The sources cite five titles: *Demeter*, *Hermes*, *Telephus*, *Epigrammata*, *Paegnia*. The *Demeter* was a narrative elegy, recounting the goddess's wanderings, among them perhaps her visit to Cos (cf. schol. Theocr. 7. 5–9 f.). The *Hermes* was an epyllion, in which P. narrated the intrigue of Odysseus with the Aeolid Polymele (Parth. 2). The emotions of Polymele formed the central theme, but Odysseus told Aeolus the tale of his wanderings, though not in the Homeric order. The *Telephus* included a reference to the marriage of Jason and Medea. It is uncertain whether *Paegnia* (frs. 10 and 11) and *Epigrammata* (frs. 12 and 13) were separate works or alternative titles for one collection. Among the unassigned fragments fr. 22, a reference to the *Bougonia* of bees, has been thought to prove that P. anticipated Theocritus' treatment (7. 78–89) of the Comatas legend. In any case Theocritus acknowledged P. as his master (7. 39–41).

(2) *Prose*. Thirty fragments survive from a work entitled *Miscellaneous Glosses* or *Miscellanea* (*Ἀρακτοὶ γλῶσσαι*, *Ἀρακτα*). This was a lexical compilation explaining rare words drawn from Homer (Aristarchus wrote a brochure 'Against Philetas') and various dialects, and also technical terms. The book became famous almost at once, being referred to in the *Phoenicides* of Straton (Ath. 9. 382 c). This passage already figures in a school anthology of c. 220, cf. Guéraud and Jouquet, *Un Livre d'écolier du III^e siècle avant J.-C.* (1938). [Strabo] 3. 168 assigns to P. a work with the title *Ἐρμηνεία* (? *Interpretation*) and quotes from it an elegiac couplet (fr. 17). If this was a prose work, the lines were cited by P. as an illustration and need not be by him.

Though Aelian (*VH* 10. 6) calls P. 'the poet of

hexameters', it was as an Elegist that he won lasting fame. He was included in the Canon of Elegists and, according to Quintilian (*Inst.* 10. 1. 58), in the opinion of most came second to Callimachus. Propertius and Ovid several times allude to him as their model in Elegy. In two passages (*Tr.* 1. 6. 2; *Pont.* 3. 1. 57–8) the latter refers to one Battis or Bittis as having been sung by P. This is confirmed by Hermesianax, fr. 7. 77–8, where the name is Bittis. It is uncertain whether this lady was P.'s wife or mistress, and in what kind of verse P. celebrated her charms. It is unlikely that P. wrote subjective love-elegies in the Roman manner, but tributes to Bittis may have been included in the *Epigrams* or *Paegnia*. P.'s great reputation as a poet among his younger contemporaries—besides Hermesianax and Theocritus, Callimachus too mentioned him in the preface to his *Aetia* and probably in fr. 254—may have been influenced by his position as the inaugurator of the scholar-poet tradition which the Alexandrians continued.

Texts: J. U. Powell, *Collectanea Alexandrina* (1925), 90–6; E. Diehl, *Anth. Lyr. Graec.* vi (1924), 209–14; A. Nowacki, *Philittae Cui fragmenta poetica* (1927); G. Kuchenmüller, *Philetas Cui Reliquiae* (1928). The last includes the prose fragments. General literature: v. Blumenthal, 'Philetas (1)', in *PW* xix. 2165–70; H. E. Butler and E. A. Barber, *The Elegies of Propertius* (1933), xxxix–xliv, xlv–xlviii; A. A. Day, *The Origins of Latin Love-Elegy* (1938), 14–19.

E. A. B.

PHILICUS (not *Philiscus*), of Corcyra, was one of the 'Tragic Pleiad' under Ptolemy II Philadelphus, also Priest of Dionysus at Alexandria and possibly Eponymous Priest of Alexander (Schubart from *PHib.* 30. 23). In the procession of 275–274 he marched at the head of the *technitai* (Ath. 5. 198 e, from Callixenus). Suidas credits P. with forty-two tragedies but no certain title or fragment survives (cf. *TGF* 819). As a lyric poet P. claimed in his *Hymn to Demeter* (Diehl, *Anth. Lyr. Graec.* vi. 296) to have invented the *metrum Philicum* (catalectic choriambic hexameters) used in that poem. Fragments from a *Hymn to Demeter* written in this metre have been published (by M. Norsa in *Stud. Ital.* N.S. v (1927), 87 ff.) from a papyrus and plausibly identified as belonging to P.'s poem. The fragments testify to the author's skilful craftsmanship and power of realistic description.

E. A. B.

PHILINUS (1) of Cos (fl. c. 250 B.C.), a pupil of Herophilus, was called the founder of the Empirical School of Medicine. He wrote about difficult words in Hippocratic books and rejected any diagnosis based on the pulse—that is all the information which the fragments yield, except a few pharmacological precepts. If Philinus' doctrine is identical with that of his school—and the Empirical system, according to ancient sources, remained essentially unchanged—he must have denounced inquiry into hidden causes, explanation of physiological processes, systematic study of anatomy in dead or living bodies, and general theories concerning diseases. Relying only on his own experience and that of others, and on the conclusions resulting therefrom by analogy, he must have paid attention to factors which evidently influence illness and to the individual differences of people and localities.

Fragments. K. Deichgräber, *Die Gr. Empirikerschule* (1930). *Galen on Medical Experience*, ed. and transl. by R. Walzer (1944); review *The Philosophical Review* (1947), historical background and philosophical dependence of empiricism. H. Diller, *PW* xix. 2193.

L. E.

PHILINUS (2) of Acragas, pro-Carthaginian historian of the First Punic War, writing probably in monograph form, was used by Polybius (1. 13–64) with Fabius Pictor, and perhaps by Diodorus (23–4).

FGH ii, B, p. 897, BD, p. 598; F. W. Walbank, *CQ* 1945, 1 ff.

PHILIP (1) II, king of Macedon 359–336 B.C., laid the foundations of Macedonia's greatness. Internally, he unified Macedonia by removing the semi-independent principalities of upper Macedonia and incorporating territorial divisions in the army system, by favouring Greek culture, and by promoting urbanization and trade. The capture of Pydna, Methone, and Amphipolis, the exploitation of the Pangaeum mines (yielding 1,000 talents annually), and the alliance with the Chalcidian League favoured the economic growth of Macedonia; by incorporating Thrace, Chalcidice, and Thessaly under the royal mint he created an economic power capable of supporting a standing army and launching the expedition of Alexander. Under the stress of long warfare Philip forged a professional army with national spirit, which became the Grande Armée of Alexander; he developed siegecraft, trained the Macedonian infantry in the novel phalanx formation, employed the tactic of offensive and defensive wings, and bequeathed an able staff to Alexander. At Chaeronea the Macedonian power created by Philip overwhelmed Greece as decisively as it later overwhelmed Persia.

In the rise of Macedon Philip displayed diplomatic genius by exploiting the enmity between Athens and Chalcidice, the Social and Sacred Wars, and the dissension in Thrace and Thessaly. By making peace with Athens in 358 he covered his attack on Amphipolis and Pydna, and by allying with the Chalcidian League in 356 he captured Potidaea and defeated a Balkan coalition organized by Athens. By marriage alliances with the Molossian royal house and the Aleuadae of Larissa, and by annexing western Thrace he acquired sufficient strength to intervene in the Sacred War. He defeated Onomarchus, organized Thessaly, and penetrated to Thermopylae (352). He invaded and annexed Chalcidice, instigating a revolt against Athens in Euboea to synchronize with it (349–348). After these successes he concluded peace and alliance with Athens, and terminated the Sacred War (346). Invited by Isocrates to lead Greece against Persia, Philip endeavoured to conciliate Athens, until the opposition hardened under Demosthenes' leadership; frustrated at Perinthus and Byzantium by Athenian and Persian help, he used a diplomatic opening offered by the Delphic Amphictiony to force the issue at Chaeronea. He used his victory to give Greece a federal constitution under his leadership as elective Hegemon (the League of Corinth), and to ally it with Macedonia. He was assassinated at the age of 46, when about to lead the forces of Macedonia and Greece against Persia.

Of his contemporaries the nationalist Demosthenes saw in Philip a perfidious despot, the Panhellenist Isocrates and Ephorus a leader of Greece, and the individualist Theopompus the greatest man Europe had known. Modern scholarship, while divided in interpretation of his personality, is unanimous in appreciating his statesmanship, diplomacy, and generalship.

PHILIP (2) ARRHIDAEOUS (c. 358–317 B.C.), son of Philip II of Macedonia and Philinna of Larissa; his correct title was Philip III of Macedonia. Practically nothing is known of his life under Philip and Alexander, except that he was feeble-minded. His election as king,

jointly with Alexander's posthumous son Alexander IV (323), gave him no real power, but he was steered skilfully through the early struggles of the 'Successors' by his wife Eurydice, his name and authority being used by (successively) Perdiccas, Antipater, Polyperchon, and Cassander. He was ultimately captured and killed by Olympias, who desired the full succession for Alexander's son.

G. T. G.

PHILIP (3) V (238–179 B.C.), king of Macedon, son of Demetrius II and Phthia (Chryseis), was adopted by Antigonos III, and succeeded in summer 221. The Social War (220–217), in which the Hellenic Confederacy opposed Aetolia, Sparta, and Elis, brought him considerable renown, notwithstanding the intrigues of his ministers, headed by Apelles (executed 218), against Achaea. After the Peace of Naupactus (217), instigated by Demetrius of Pharos, he took up arms against Rome in Illyria, first by sea, later, after losing his fleet (214), by land; his treaty with Hannibal (215) defined spheres of operation. His brutal attacks on Messene in 215–214 alienated Achaea. An Aetolian alliance (211) and Attalus of Pergamum's collaboration now gave Roman forces in Greece an advantage; but Philip held out, and when they retired in 207, he sacked Thermum and forced terms on Aetolia (206). The war concluded with the favourable Peace of Phoenice (205). Philip then turned eastward: he employed a pirate, Diacarchus, to obtain resources, and in 203/2 combined with Antiochus of Syria to plunder the possessions of the infant Ptolemy V. His terroristic methods, however, aroused Rhodes and Pergamum, who in 201 defeated him by sea off Chios, and by alarmist reports persuaded the Senate to declare war on him. This declaration Philip received at Abydos (200), after a campaign against Athens and the Thracian Chersonese; by September a Roman army was in Illyria. After two campaigns in Macedonia (199) and Thessaly (198) the Romans under Flamininus defeated him decisively at Cynoscephalae in Thessaly (197); and the subsequent peace settlement confined him to Macedonia, and exacted 1,000 talents indemnity, almost his whole fleet, and hostages, including his younger son, Demetrius. Until 189 Philip collaborated with Rome, and having sent help against Nabis (195) and Antiochus and Aetolia (192–189), made acquisitions in Thessaly. For facilitating the Scipios' advance through Macedon and Thrace he had his tribute remitted and Demetrius restored (190). Henceforward he concentrated on consolidating Macedon: finance was reorganized, populations were transplanted, mines reopened, central and local currencies issued. Accusations from his neighbours, however, led to constant Roman interference; and in 185 adverse decisions convinced him that his destruction was intended. In three campaigns (184, 183, 181), therefore, he extended his influence in the Balkans; meanwhile Demetrius' pro-Roman policy led to a quarrel with the crown-prince Perseus, and his own execution for treason (168). Philip's policy was essentially a scheme for directing the Macedonian state towards a position of independence at Amphipolis. His unbalanced temperament, however, was trapped in politics by his unbalanced temperament. He maintained popular loyalty while combining the protection of his northern frontiers with expansionist programmes elsewhere; but he lacked a consistent constructive policy, hence his main significance is as a figure in the history of Roman expansion.

PHILIPPI, a town in the plain east of Mt. Pangaeus. Founded by Philip II of Macedon in 358/7 B.C., it replaced a former Thasian settlement named Crenides,

and became the chief mining-centre in the Pangæus goldfields. In 42 B.C. it was the scene of the double battle in which Antony defeated M. Brutus and Cassius. After the battle of Actium Octavian constituted it as a colony for partisans of Antony evicted from Italy. Philippi was the first European town to hear a Christian missionary (St. Paul). For the battle see Appian 4. 105-31 (good description of the site); Dio Cass. 47.42-9.

M. C.

PHILIPPIDES, New Comedy poet, an Athenian, who won a victory in 311 B.C. Of forty-five comedies (Suidas) we know fifteen titles—one a mythological burlesque, *Ἀμφιδρώμους*. As a friend of Lysimachus, king of Thrace, P. possessed great influence, and boldly denounced the sacrilege of Demetrius Poliorcetes (fr. 25, c. 300 B.C.). Fr. 9, the ways of *nouveaux riches*; fr. 18, Euripides quoted for consolation in trouble.

FCG iv. 467 ff.; CAF iii. 301 ff.

W. G. W.

PHILIPPIDES, see also PHEIDIPPIDES.

PHILIPPOPOLIS, a city of Thrace, commanding the main road from Macedonia to the Black Sea. It was founded by Philip II of Macedonia in 342 B.C., and reoccupied by Philip V in 183, as a military outpost beyond Mt. Rhodope; but in either case it soon reverted to native rule. Under Roman rule it served as the meeting-place of the provincial parliament of Thrace, and as a stronghold against Gothic invaders (A.D. 250-70). From the mixed character of the population which Philip II settled there it obtained the nickname of 'Poneropolis' ('Crookham').

M. C.

PHILIPPUS (1), JULIUS VERUS, Roman emperor A.D. 244-9, a native of Arabia, succeeded Timesitheus as Praetorian Prefect and connived at Gordian's assassination (see GORDIAN III). After concluding peace with Persia he reached Rome with his son in 244, where he established good relations with the Senate. A great victory over the Carpi in 247 was followed by the elevation of his son to the rank of Augustus and by the celebrations in the ensuing April of the thousandth birthday of Rome. But in the summer the Goths invaded Moesia and pretenders arose in the Balkans and the East. Decius was appointed to the Danubian command and his popularity with the troops led to his acclamation as emperor. Despite assurances of loyalty Philip mistrusted Decius' sincerity. He and his son were killed in a battle at Verona.

Later tradition honoured Philip as the first Christian emperor, but it is questionable whether his indulgence to the Faith entailed his conversion.

H. M. D. P.

PHILIPPUS (2) of Opus (fl. c. 350 B.C.), mathematician and astronomer, pupil of Plato. An ancient tradition (D.L. 3. 37) describes him as having edited Plato's *Laxos* for publication and written the *Epinomis*. It is still in doubt whether the latter was the work of Plato or of a pupil.

PIV xix. 2351; H. C. G. Friedrich, *Stylistische Untersuchung d. Epinomis d. Philippi von Opus* (1927).

W. D. R.

PHILIPPUS (3) of Thessalonica, who lived in Rome, and was probably a rhetor, published about A.D. 40 a *Garland* of Greek epigrams written since Melcager, with a shockingly dull preface imitating him (see ANTHOLOGY). Some eighty of his own survive in the *Anthology*, mostly imitated from earlier authors; his vocabulary is rich and affected, and he tends to cultivate point at all costs.

C. Cichorius, *Röm. Stud.* ch. viii. 9 (1922), dating the *Garland*. G. H.

PHILIPPUS, see also MARCIUS.

PHILISCUS (1) (c. 400-325 B.C.), rhetorician from Miletus, who came to Athens and studied under Isocrates. His works included a *Μυλησιακός* and an *Ἀμφικτυονικός* (probably political brochures) and a life of the orator Lycurgus.

PIV xix. 2. 2384-7.

PHILISCUS (2), Middle Comedy poet, to whom Suidas assigns six plays (five being mythological burlesques; fourteen lines in a papyrus, *PSI* x. 1175, are doubtfully attributed to Διδὸς γοῦαλ).

FCG iii. 579 f.; CAF ii. 443 f.

PHILISCUS (3) of Acgina (4th c. B.C.), came under the teaching of Diogenes of Sinope at Athens and joined the Cynic school. He is said to have taught Alexander the Great, but this is doubtful. Seven tragedies were ascribed to him in antiquity, and the ascriptions may well be correct.

PIV xix. 2. 2382.

W. D. R.

PHILISCUS (4) of Thessaly (c. A.D. 190-220), rhetorician, professor of rhetoric at Athens under Caracalla.

PIV xix. 2. 2887.

PHILISCUS, see also PHILICUS.

PHILISTION of Locri, physician, a contemporary of Plato (c. 427-347), according to Callimachus the teacher of Eudoxus, illustrious in his art according to Plutarch, was the main representative of the Sicilian School of medicine. Like Empedocles he assumed four elements, fire, air, water, earth, which he equated with the qualities hot, cold, moist, dry, and considered responsible for all bodily processes. Respiration he regarded as the cooling of innate heat. His interest in anatomy may be inferred from the fact that the name *ἀετοί* for certain veins was attributed to him. In the physiology of drinking he agreed with Plato, as Plutarch relates (2. 1047 c). Diseases he explained by the excess or deficiency of the four elements, by external causes like wounds, climate, nourishment, or by changes in the bodily constitution, especially by difficulties of breathing, which he believed to occur all over the body. His book on dietetics must have been famous (half of the fragments preserved come from it, 9-16).

Fragments, M. Wellmann, *Die Fragmente d. Sikeliischen Ärzte* (1901). Influence of P. Wellmann, *Hermes* (1900). Influence on Plato, A. E. Taylor, *A Commentary on Plato's Tim.* (1928), 9, 599, n. 1; cf. F. Cornford, *Plato's Cosmology* (1937), 334; W. Jaeger, *Dionysius v. Karystos* (1938), 9 f.; 212, n. 1 (P. identical with the Philistion mentioned in the second Platonic Letter?). H. Diller, *PIV* xix. 2405.

L. E.

PHILISTUS of Syracuse, Sicilian historian who in his youth saw Gylippus rescue Syracuse (414 B.C.), and took a prominent part in supporting Dionysius I and II. He assisted the former to become general and tyrant (405), and served as his counsellor and governor of Syracuse, but later quarrelled with him and was banished. Recalled by Dionysius II, he expelled Dion (366), and was appointed admiral. He failed to intercept Dion's expedition from Greece (357), and committed suicide after a naval defeat by Dion (356).

The history (*Σικελικά*) was written during his exile. There were at least twelve books, of which the first seven dealt with Sicilian affairs from the earliest times until 406. Philistus was a competent historian and imitator of Thucydides. The charge of flattery of the tyrants should be discounted in view of the characteristic Greek refusal to recognize their achievements.

FHG i. 185.

G. L. B.

PHILO, see PHILON, PUBLILIUS (2), JEWISH GREEK LITERATURE.

PHILO JUDÆUS, see PHILON (4).

PHILOCHORUS of Athens, the most famous of the athidographers. Sprung from a distinguished family, he held the official positions of *μάντις καὶ ἱεροσκόπος* in 306 B.C. The *Atthis* reached 261/260, and P. was executed shortly afterwards by Antigonus Gonatas as a partisan of Ptolemy II Philadelphus.

Philochorus' religious duties implied a close knowledge of Athenian festivals and cults, and this was linked with an interest in the myths and history of Attica. His large literary output was mostly concerned with books on religious antiquities and customs, and is sparsely represented in the extant fragments. His most important work was an *Atthis* in seventeen books. Unlike most athidographers, and perhaps because the material had already appeared in other works, he dealt summarily with early Athenian history (bks. 1-2), passed on to the constitutional problems of Solon and Cleisthenes (bk. 3) and the fifth century (bk. 4), and devoted some two-thirds of his narrative to a detailed survey of contemporary politics. The last seven books are almost entirely lost, probably because they had no interest for Alexandrine scholars, who used him chiefly in explanation of the Attic orators.

The style of the *Atthis* is plain and unattractive, but its chronological arrangement by kings and archons and the evidence of an eyewitness who was also interested in genuine research established P.'s position as an historian. He produced an abridged version which may be identical with the 'Atthis against Demos', a polemical treatise criticizing the earlier athidographer.

FHG i. 384.

G. L. B.

PHILOCTES, nephew of Aeschylus, wrote 100 plays and defeated Sophocles on the occasion when the latter produced the *Oedipus Tyrannus* (Suidas s.v., Arg. Soph. OT), but is frequently attacked by the comic poets (e.g. Ar. *Vesp.* 461; *Thesm.* 168; Cratin. fr. 292). His unpleasant style earned him the nicknames *Χολή* (Gall) and *Ἀγυῶν* (son of Brine). His plays included a tetralogy, the *Παρθενία*, on the story of Tereus (schol. Ar. *Av.* 281).

TGF 759-60.

A. W. P.-C.

PHILOCOMUS, see VETTIUS (1).

PHILOCRATES, an Athenian statesman who initiated the peace negotiations with Philip II of Macedon after the fall of Olynthus (348 B.C.). He headed the first peace embassy and secured a place on it for Demosthenes, who had defended him in court (347-346). On the embassy's return Philocrates proposed, and finally carried, a peace and alliance with Philip. He headed a second embassy to obtain Philip's signature, returned to carry a proposal to implement the alliance, despite Demosthenes' opposition, and served on two more embassies to Philip. Prosecuted in 343 for corruption in the peace negotiations, Philocrates absconded and was condemned to death; his prudent policy had become unpopular. N. G. L. H.

PHILOCTETES, in mythology, son of Poeas (*Od.* 3. 190) and leader of the seven ships from Methone and other towns of that region (*Il.* 2. 718), but left behind in Lemnos suffering from a snake-bite (*ibid.* 722-3). Homer says no more of him but that he returned safely from Troy (*Od.* *ibid.*); the *Cypria* (in Proclus) add that while the Greeks were on their way to Troy they sacrificed in Tenedos and there Philoctetes was bitten and left behind because of the stench of his wound. The *Little Iliad* continues the story. Odysseus captured Helenus, the Trojan prophet, and learned from him that Troy could not be taken unless Philoctetes was present; he therefore went to Lemnos with Diomedes and brought him. Tragedy (the *Philoctetes* of Sophocles survives, and plays on the subject were written also by Aeschylus and Euripides) gives further details. Philoctetes had the bow and arrows of Heracles (q.v.) given him (Soph. op. cit.

801 ff.) or his father (Apollod. 2. 160) for lighting the pyre on Mt. Oeta. Without these Troy could not fall. He was therefore persuaded or tricked into coming (in Soph. Odysseus' companion is Neoptolemus, q.v., and his honesty produces complications in the plot), healed on arrival by Machaon (q.v.; *Little Iliad*), and there killed Paris. Since he had hero-cults in more than one place (near Sybaris and at Maeella, Lyeophron, 919 ff., cf. [Aristotle] *Mir. Ausc.* 107) it was naturally said that he had wandered to Magna Graecia after leaving Troy and founded cities there; cf. Apollodorus in Strabo 6. 254.

H. J. R.

PHILODAMUS, of Searphea, author of a Paean to Dionysus discovered at Delphi. The poem, of some 150 lines in Aeolic metres, describes the birth and early travels of Dionysus and gives directions for his cult. Date 335-334 B.C.

Text: E. Diehl, *Anth. Lyr. Graec.* ii. 252-7; J. U. Powell, *Coll. Alex.* (1925), 165-71. Criticism: H. W. Smyth, *Greek Melic Poets*, 525 ff.; Powell and Barber, *New Chapters* i. 42-3. C. M. B.

PHILODEMUS (c. 110-c. 40/35 B.C.), born at Gadara, died probably at Herculaneum; he came to Rome c. 75 B.C. as a consequence of the First Mithridatic War and enjoyed there the favour and powerful friendship of the Pisones. One of them, L. Calpurnius Piso Caesoninus (cos. 58), who was probably his disciple, presented him with a magnificent villa at Herculaneum. Cicero's somewhat ironical praise of Philodemus (*Pis.* 28. 68 ff.) shows that he was already well known in 55 B.C. His connexions with Piso brought Philodemus the opportunity of influencing the brilliant young students of Greek literature and philosophy who gathered around him and Siron at Herculaneum and Naples. In 44/43 B.C. he strongly opposed the policy of Antony, and aroused republican feelings in several of his disciples, as is shown by Varius' *De morte*, Virgil's *Appendix*, and the military career of Horace. Although his prose work was dull and colourless, Philodemus greatly surpassed the average literary standard of the Greek Epicureans. In his elegant but often indecent love epigrams, some twenty-five of which are preserved in the *Anthologia Palatina*, he displays taste and ingenuity worthy of his fellow-citizen Meleager. The success of these poems is proved by the allusions to, and imitations of, them in several passages of Horace and Ovid. Although Cicero seems to imply that Philodemus' main activity was poetry, he devoted himself chiefly to the task of popularizing Greek philosophy, which he dealt with systematically and historically (in his treatise *σύνταξις τῶν φιλοσόφων*, comprising an outline of the doctrines of Greek thinkers viewed from the standpoint of Epicureanism, in ten or more books). His work covered a wide field, including psychology, theology, logic, ethics, aesthetics, and rhetoric. Particularly remarkable was his theory of art, which he conceived as an autonomous activity of the mind, independent of morals and logic, and determined not by its content, but by its aesthetic value. Though scarcely original as a philosopher, Philodemus achieved his great ambition of influencing the most learned and distinguished Romans of his age. No prose work of Philodemus was known until several rolls of papyrus, charred but partly legible, containing fragments of his writings, were discovered among the ruins of Piso's villa at Herculaneum.

Texts: No complete edition of Philodemus has hitherto been published. His epigrams were edited with a commentary by G. Kinkel (1886). His prose works, apart from the general editions of the Herculaneum papyri, in part appeared in the Teubner series (Suhrhaus, Olivier, Jensen, Herke, Völke), and in part were edited elsewhere by Gomperz (*Herk. Stud.* ii. 185-6), Gertel (*Kleines u. Meeresmus.* 1926), Diehl (*Anth. Berl. Akad.* 1912-16), Jensen (1923, Weidmann 1926), and A. Voelcker in *Epigramm und Epigrammische Sprache* (1921). A Greek Philodemus (I) is being published by C. J. Vogt (1924).

General Literature: F. Sauer, *Ed. Gerh. Diehl, Litt. Alex.* ii. 257 ff.; Lehrs-eg-Fischer, *Gesch.* ii. 427 ff.; H. Paul, *Philos.*

PW xix, 2444 ff.; W. Crönert, *Memoria Graeca Herculanensis* (1903); C. Cichorius, *Röm. Studien* viii, 1 (1922). For Philodemus' life and villa, D. Comparetti, *Mélanges Chatelain* (1910), 118 ff.; for his theory of art, A. Rostagni, *Atene e Roma* (1920); *Riv. Fil.* 1923-4; introduction to Rostagni's commentary on Horace's *Ars* (1930); *PW* xix, 2444. P. T.

PHILOLAUS of Croton, Pythagorean contemporary with Socrates. Works: *Περὶ φύσιος, Βάκχαι* (possibly the same work). The authenticity of the frs. has been much discussed, and the question cannot be regarded as settled.

See Zeller-Mondolfo, *Filosofia dei Greci* ii, 304-8, 367-82. Testimonia and frs. in Diels, *Vorsokr.* i, 398. W. D. R.

PHILOLOGUS, see **ATEIUS**.

PHILOLOGY, COMPARATIVE, or, as it is now better named, Comparative Linguistics, is a modern study. The Greeks were little interested in languages other than their own, and without comparison with other languages but little progress could be made even in Greek. The Sophists, and later Plato, dabbled in language and made attempts at etymology that were crude and often ridiculous. The Stoics, with their special interest in the *etymon*, also pursued this study, which in due course was taken up by the Romans, notably Aelius Stilo and Terentius Varro. But no certain principles of linguistic development were yet laid down; there was no phonetic, no clear discrimination between root, stem, and termination, and no proved method in etymology (q.v.). Thus *vulpes* is derived from *volo*+*pes*, i.e. 'flying-foot', and *lepus* from *levi*+*pes*, i.e. 'light-foot', although *ped-*, the stem of *pes*, is not present in *vulpes* -is or *lepus* -oris. Other fantastic etymologies in Varro's *De Lingua Latina* are *cervi* (<*gervi*: 'quod gerunt cornua'), *aper* (<*asper*), *aries* (<*ara*), *pecus* (<*pes*). Another type is the famous *lucus a non lucendo*: cf. 'caelum a celando quod apertum est'. Sometimes they even assumed hybrid formations e.g. *caelebs* (<*caelum*+*blos*; i.e. a bachelor has a heavenly life!).

2. The Romans, then, scarcely improved upon the Greeks and throughout the Middle Ages (see Isidore's *Etymologiae*) linguistic study remained just as the Romans had left it. The rediscovery of learning at the Renaissance and the greatly increased travel made possible by geographical exploration extended the knowledge of languages, but no real advance was made in the understanding of linguistic development and relationships. There was much speculation about the original language of mankind and because of scriptural tradition it was commonly believed that man's original language was Hebrew, from which by some process of unexplained change and decay all other tongues were derived. But in the eighteenth century, when the British occupation of India made Sanskrit known to Western scholars, linguistic studies were revolutionized; for Sanskrit was particularly suited both by its structure and its ancient grammatical tradition to reveal even upon a cursory examination its relationship to the languages of Europe. In 1786 Sir William Jones in a paper to the Asiatic Society of Bengal declared that both in the roots of verbs and in grammatical forms Sanskrit bore a stronger affinity to Greek and Latin than could possibly have been produced by accident, and probably Gothic and Celtic were similarly connected also. He further suggested that they were all derived from 'some common source which, perhaps, no longer exists'. Here in embryo is what is now called the Indo-European family of languages, and it has been the task of succeeding scholars to fill in the outlines and extend the limits of the sketch presented by Jones. They no longer admit the possibility that original Indo-European exists or even that it can be reconstructed, as Schleicher attempted, but ever since Jones's pronouncement they have been working out in detail the historical developments and the comparative relationships not merely of the many members (and their

dialects) of the Indo-European family but of the other great linguistic families, the Semitic, the Finno-Ugrian, etc., as well.

3. While the German Franz Bopp (1791-1867) has often been called 'the father of Comparative Philology', the first of the great specialists in this study was undoubtedly the Dane, Rasmus Rask (1787-1832). In 1811 the Danish Academy of Science held a prize competition on the origin of the ancient Scandinavian language and its relation to the Germanic dialects, and in his brief essay entitled *Investigation on the Origin of Old Norse Rask* clearly showed that Germanic, Baltic, Greek, Latin, Armenian, 'and probably Indian and Iranian' are related languages, while Eskimo, Celtic, Basque, Finno-Ugrian, and Semitic are unrelated. The Napoleonic Wars had cut England off from the Continent and impeded the study of Sanskrit, and, when Rask wrote, Sanskrit and Avestan were still practically unknown in western Europe; hence his doubts about Indian and Iranian. He was wrong in excluding Celtic; but by 1818 he corrected that, though he still excluded Albanian, which, however, had been so badly preserved that it was not established as Indo-European until the end of the century by Gustav Meyer (1850-1900). It is also Rask's great triumph that he clearly perceived and enunciated the sound-changes that exist between the classical and the Germanic languages and also the later consonantal changes in High German, a discovery which is usually ascribed to Jacob Grimm (1785-1863), who has had the honour of having it named Grimm's Law. But Rask's essay, written in Danish, was not easily accessible to scholars, and so the first detailed Indo-European grammar came to be written by Bopp, who in 1816 published a short treatise on *The Verbal Inflection of Sanskrit compared with Greek, Latin, Persian, and Germanic*. Bopp had the great advantage of really knowing Sanskrit, and his analyses of verbal morphology were a tremendous advance, in spite of the fact that he thought he could find some part or trace of the verb 'to be' in all verbal terminations. Thus in all -s endings he sought the root *es-* (Latin *es-t*, *s-unt*). In phonology Bopp was much inferior to Rask; but just as Sanskrit with its clear structure separating root, stem, and termination had brought about the admirable clarity of Indian grammar, so it produced Comparative Grammar when it became widely known among European scholars. Bopp's work provided a great stimulus to further study such as Rask's without a real knowledge of Sanskrit could not do, and in that sense Bopp is the founder of Comparative Philology.

4. Two periods are clearly discernible in modern Comparative Philology, the earlier stretching from Rask to Schleicher (1821-68), and the later commencing in 1876 and continuing until the present day. August Fick (1833-1916) shares in both; for his earlier work belongs to the pre-Brugmann era, while his later work participates in the new method and outlook. Next to Rask comes Grimm, whose great contribution was his *German Grammar*, a vast work in which he made a detailed comparison of all the Germanic dialects and by which he became 'the father of historical grammar'. In it he formulated with copious examples the sound-changes which bear his name. In 1833 Bopp began to follow up his first success by a *Comparative Grammar of Sanskrit, Zend, Greek, Latin, Lithuanian, Gothic, and German*, and in a subsequent edition he included also Celtic and Albanian. But his treatment of sounds was still very weak and the next advance in phonology was made by August Pott (1802-87) in his *Etymologische Forschungen*, a comparative Indo-European grammar with the emphasis on phonology. Pott displays real understanding of sound-change and insists on the historical character of sound-laws. But like his predecessors he has no idea that these laws, when properly formulated, admit of no exceptions. In this he was followed by Georg Curtius

(1820-85), Schleicher, and Fick. They all proclaim their strict adherence to sound-laws; but Curtius differentiated between 'regular sound-changes' and 'sporadic sound-changes', while Schleicher's laws were sufficiently flexible to enable him to follow some of Bopp's worst mistakes. Curtius did his best work as a teacher in making Comparative Philology known to a wider public; but he also succeeded in breaking down Grimm's triad of three original vowels *a, i, u*, and showing that *e* was also Indo-European and that *e* of Latin *ēdo* was older than *a* of Sanskrit *admi*. More important than Curtius was Schleicher, who, besides doing valuable work in Slavonic and Baltic, brought organization into linguistic study by his excellent *Compendium of Comparative Indo-European Grammar* (1861-2, 4th ed. 1876). Unlike Bopp, Schleicher is strong in phonology and his grammar is clearly written and well arranged. But a decisive change was approaching both in outlook and method; and Fick, the last of the scholars of the earlier period, overlaps into the later. The decisive year for the transformation in Indo-European linguistics was 1876. Schleicher was already dead, and Curtius steadfastly opposed, but in vain, the new ideas; but Fick, whose *Wörterbuch der indogermanischen Sprachen* first appeared in 1868 and shows the old standpoint, had by the time of the fourth edition in 1890 been won over completely to the new.

5. The difficulty before 1876 had been the great uncertainty and irregularity of the same vowels and consonants as represented in the various languages; but a series of brilliant discoveries in the seventies by the Italian Ascoli (1829-1907), the Danes Thomsen (1842-1927) and Verner (1846-96), the Frenchman de Saussure (1857-1913), and the German Brugmann (1849-1919) brought order out of chaos. In 1870 Ascoli attacked the *k* problem which had baffled both Bopp and Schleicher and showed that there was not only one *k* series in the parent language but three quite distinct series represented, for example, in the initial sounds of Latin *centum*, *caccus*, *quis*. Ascoli, however, wrongly thought that the Sanskrit palatals were original: so his discovery was retarded and only two of his series were accepted, and the existence of three had to be proved again in 1890 by Bezzenberger (1851-1922) and Osthoff (1847-1909). In 1875 Verner published his famous article wherein he established Verner's Law, which explains the apparent exceptions to Grimm's Law. In the following year Brugmann in defiance of Curtius published his epoch-making article on Sonant Nasals (e.g. Gk. *τάρως*, Lat. *tentus* < Ind. Eur. **tyútós*; Gk. *δέκα*, Lat. *decem* < Ind. Eur. **dekyn*; Gk. *πόδα*, Lat. *pedem* < Ind. Eur. **pejodny*). This article greatly advanced the knowledge of Vowel Gradation or Ablaut, which received its most inspired treatment in de Saussure's 'Treatise on the primitive vowel-system of the Indo-European languages' in 1879. Brugmann's work was strongly opposed by Curtius and others; and thence arose the furious struggle on the strictness of Phonetic Laws to which Brugmann and his followers, nicknamed the Junggrammatiker, declared that there were no exceptions. The two great forces operating in linguistic change are Phonetic Law and Analogy, and for long it was so strongly held that the former admitted of no exceptions that in recent years the extreme position of Brugmann's school has been again challenged by Hermann's penetrating *Lautgesetz und Analogie* (1931). To Brugmann we also owe the authoritative survey of Indo-European linguistics, the *Grundriss* (2nd ed. 1897-1911). In this vast work the Syntax was undertaken by Delbrück (1842-1922), whose contribution in this sphere has been quite outstanding. Another excellent work on syntax, particularly of Latin and Greek, is the *Verläugnen über Syntax* (1924-8), of Wackernagel, who is also the author of the first *Comparative Sanskrit Grammar*. In the study of Meaning or Semasiology the

pioneer work is the *Essai de Sémantique* (4th ed. 1908) of Michel Bréal (1832-1915), a study which now has a journal of its own, *Wörter und Sachen* (1909-). An interesting offshoot of Indo-European Comparative Philology is Indo-European Prehistory, which deals with the original habitat and civilization of the undivided Indo-European community. Outstanding on this subject is the *Sprachvergleichung und Urgeschichte* (3rd ed. 1907) of Otto Schrader (1855-1919). On the general principles of language the standard work is the *Prinzipien der Sprachgeschichte* (5th ed. 1920) of Hermann Paul (1846-1921).

6. In this brief sketch little has been said of phonetics, inscriptions, or linguistic geography, and many famous scholars have not been mentioned. But an excellent account of their work is contained in *Linguistic Science in the 19th Century* by Pedersen and Spargo (Harvard University Press, 1931).

7. For the classical languages the reader should consult A. Meillet, *Introduction à l'étude comparative des langues indo-européennes* (1937); A. Meillet and J. Vendryes, *Traité de grammaire comparée des langues classiques* (1927); C. D. Buck, *Comparative Grammar of Greek and Latin* (U.S.A. 1937).

P. S. N.

PHILOMELA (Φιλομήλα). Pandion king of Athens had two daughters, Procne (Πρόκνη) and Philomela, of whom the former was married to his ally, Tereus king of Thrace, son of Ares. Tereus, pretending that Procne was dead, asked that Philomela might be sent to him, and on her arrival raped or seduced her and then cut out her tongue to prevent her telling. She contrived to send her sister a piece of embroidery on which she had woven her story. Procne found her and took revenge on Tereus by serving him at a meal with the flesh of his and her child Itys. Finding this out, he pursued the women, but the gods turned him into a hoopoe, Procne into a nightingale, and Philomela into a swallow (a later tradition, represented in Latin authors, reverses these last two).

Apollod. 3. 193 ff.; Ovid, *Met.* 6. 424 ff.

H. J. R.

PHILOMELUS, Phocian commander in the Third Sacred War (q.v.). Elected *strategos autokrator* of Phocis at the threat of war, he seized Delphi (summer 356 B.C.), raised 5,000 mercenaries, defeated the Locrians and Boeotians in the winter, and allied Phocis with Athens and Sparta. In autumn 355, when the Amphictiony declared a Sacred War on Phocis, Philomelus used temple funds to raise 10,000 men; in 354 he defeated the Thessalians and defended southern Phocis until he was defeated and committed suicide near Neon (late autumn 354). An able diplomatist and general, he based Phocian power on mercenaries and the Delphic monies.

N. G. L. H.

PHILON (1) of Eleusis (4th c. B.C.), architect. He designed the arsenal at Piraeus, and added a porch to the Telesterion at Eleusis. The former building was destroyed by Sulla, and no vestiges of it have been identified; but we possess a detailed specification (*IG* ii. 1054). His books on the arsenal, and on the proportions of sacred buildings (*Vitruv.* 7 *praef.*), have not survived.

H. W. R.

PHILON (2) of Byzantium (early 2nd c. B.C.), mechanician, followed in the footsteps of Ctesibius, and his works were used by Heron. He wrote a *Μηχανική σύνταξις*; a fragment on engines of war is preserved (ed. H. Diehl and E. Sehrmann in *Abh. Berl. Akad.* 1918, 19), and, in Arabic and a Latin translation from the Arabic, some chapters on *Pneumatica* (V. Rose, *Anecdota graeca* ii. 299-313; Heron, *Opera* i. 458 ff.). Heron in his *Automata*, c. 20, alludes to a setting by Philon of the 'Nauplius story', which presumably came from *Automata* by Philon; Philon's explanations were apparently not much in

advance of Aristotle's standpoint; the theoretical basis is much better put by Heron. Philon is credited with a solution of the problem of finding two mean proportionals; it has a slight variation from, but is equivalent to, solutions attributed to Apollonius and Heron.

T. H.

PHILON (3) of Larissa in Thessaly (Stob. *Ecl.* 2. 38, etc.) (160/59–80 B.C.), founder of the so-called fourth Academy (Sext. *Emp. Pyr.* 1. 220; etc.). He succeeded Clitomachus as president of the Academy 110/9. On the outbreak of the Mithridatic War in 88 he fled to Rome (Cic. *Brut.* 306) where he became famous, and taught important pupils and hearers, amongst whom was Cicero (*Acad. Index Herc.* col. 33. 3 f.).

Philon held that things were not comprehensible in the Stoic sense but that they were knowable in themselves (Sext. *Emp. op. cit.* 235). So he led Academic scepticism a step farther away from Carneades towards the teaching of his pupil and opponent Antiochus of Ascalon.

E. Zeller, *Eclectics*, Engl. Transl., 75 f.; A. Goedeckemeyer, *Gesch. des Skeptizismus*, 103 f.; Ueberweg-Præchter, *Grundriss*¹², 469 f.; PW xix. 2535.

K. O. B.

PHILON (4) commonly known as **Philo Judaeus** (c. 30 B.C.–A.D. 45), spent all his life in his native city of Alexandria and became head of its Jewish community, which he represented on the delegation sent to Rome in A.D. 39–40 to ask exemption from the duty of worshipping the emperor. This is the only incident from the life of P. of which anything is known; it is related at length in his pamphlet *Legatio ad Gaium*. Here and in his *In Flaccum*, a similar treatise of earlier date, P. tries to show that God is mindful of His people and punishes with death their persecutors (i.e. the Roman prefect of Egypt and the emperor). These works exerted a lasting influence upon early Christian literature, e.g. upon the *De mortibus persecutorum*; the latter took over from P. the idea that persecutors themselves are responsible for evoking the inevitable punishment which, by God's judgement, eventually overwhelms them. P. cannot, however, be considered as an enemy of Hellenistic and Roman civilization merely because he was opposed to the worship of the Emperor Gaius; for besides speaking of Augustus and Tiberius in very high terms of praise, and adapting formulas of the Hellenistic ruler-cult to the praise of the Jewish patriarchs, he casts the traditions of Judaism into the literary forms of Greek allegory. Modern scholars have often overestimated the extent of P.'s indebtedness to Judaism, especially to the Alexandrian school. In fact, he owes far more to Greek philosophy, and his very efforts to demonstrate a substantial similarity between Hellenic and Jewish doctrines are a proof of his Hellenistic character. His main sources were indisputably Plato, Aristotle, and the Stoics, above all Posidonius; the extent of his indebtedness to Neopythagoreanism, although great, is now difficult to estimate. Despite his scanty originality as a philosopher, P. played a very important role in the history of ancient thought as a mediator between Hellenistic philosophy and both Christianity and Neoplatonism. Not only did the author of the *De mortibus persecutorum* and Plotinus borrow from him, but St. Augustine probably derived from P. his theory of the two cities, which is merely an application of P.'s dualism to the realm of politics. Nevertheless, P. did not bridge the gulf between the world of God and the world of matter, since, had matter been created by God, the existence of evil would be inexplicable. To establish an artificial connexion between the two worlds P. introduced intermediary beings representing the different aspects of God's existence and thought. With these God communicates only through an intermediary, which P. calls Logos and is careful to distinguish from God himself: the word Logos refers to God in so far as His existence is conceived as

pure thought, while the word God merely indicates His essence as pure Being. Man's duty is to conform to the will of God, not only by living according to His law, but by 'seeing' Him. This supreme achievement, the discovery of the essence of God, can be reached only by means of 'ecstasy', which P. thinks of as an act of grace. But worship and purity of life and mind enable man to succeed in achieving communion with God in His existence as thought. In P.'s system the soul of man is ultimately dependent on the grace of God and cannot enjoy communion with Him also by a spontaneous activity of love unassisted by grace.

Texts: Best complete edition: Cohn, Wendland, Reiter (ed. major, 7 vols., 1896–1930; ed. minor, 6 vols., 1896–1915). Ed. T. Mangey (London, 2 vols., 1742). English Translation: Loeb (9 vols., 1929 ff.). Frs., ed. J. Rendel Harris (1886). The *In Flaccum* edited with an historical commentary by H. Box (1939).

A full bibliography (by H. L. Goodhart and E. R. Goodenough) in appendix to E. R. Goodenough, *The Politics of Philo Judaeus* (1938). Most important works on Philo: J. Drummond, *Philo Judaeus* (2 vols., 1888); É. Herriot, *Philon le Juif* (1898); J. Martin, *Philon* (1907); É. Bréhier, *Les Idées philosophiques et religieuses de Philon*¹ (1925); T. H. Billings, *The Platonism of Philo* (1910); I. Heinemann, *Philos. griech. u. jüdische Bildung* (1932).

F. T.

PHILON (5) of Byblos (A.D. 64–161) composed in Greek a learned work of euhemeristic character in which for the Phoenician religion he cites at length, as he alleges, from the Phoenician Sanchuniathon, who had devoted a treatise in his own language to theogony, cosmogony, and the origins of civilization. Extensive fragments of Philon have been preserved by Eusebius in his *Demonstratio evangelica* (1. 9; 22–10; 28); with a parallel in Theodoret. These fragments have now been critically republished, along with translation, extensive essays, and full bibliography, by C. Clcmen, 'Die phönikische Religion nach Philo von Byblos', *Mitteilungen d. vorderasiatisch-ägyptischen Gesellschaft* xlii, pt. 3 (1939). Over Philon's alleged translation there has been long dispute, distinguished scholars like Baudissin regarding it as a fraud. But the extraordinary recent discoveries at Ras Shamra, ancient Ugarit, on the Syrian coast north of Ladoicea–Latakia, of fourteenth-century B.C. documents, in alphabetic cuneiform script, and of Hebrew language, containing lengthy mythological texts, epic, choric, etc. (published for the most part in *Syria* since 1929), have proved conclusively that Sanchuniathon is doubtless a reality in view of the many correspondences between him and these fresh texts and of the picture of the lush development of Phoenician mythology by the middle of the second millennium.

See O. Eissfeldt, *Ras Shamra u. Sanchuniathon* (1939), esp. 79 ff.

J. A. M.

Philon also wrote a *Ῥηματικόν* (paradigm of verb-flexions), and a dictionary of synonyms (the probable source of the Byzantine Pseudo-Ammonius). He was much used by Hesychius of Miletus. See also **SANCHUNIATHON**.

P. B. R. F.

PHILONIDES, an older contemporary of Aristophanes, various of whose plays he produced. First victorious c. 410 B.C. (*IG.* ii². 2325). Suidas mentions *Κόθορροι* (an attack on Theramenes (cf. *Ar. Ran.* 534 ff.)), *Φιλέταιρος*, and *Ἀπῆνη*.

FCG ii. 421 ff.; CAF i. 254 ff.; Demiańczuk, *Suppl. Com.* 73.

M. P.

PHILOPAPPUS, Syrian prince, Roman consul (A.D. 109), and Athenian archon. His sepulchral monument, erected between 114 and 116, stands at Athens on the top of the Muscum Hill. His full name was C. Julius Antiochus Epiphanes Philopappus, his grandfather being Antiochus IV, the last king of Commagene.

OGI 409–13. *PIR* ii². 166, 99; ii². 262, 1086.

V. E.

PHILOPATOR, Stoic, probably of the time of Hadrian (A.D. 117–38). See Zeller, *Phil. d. Griechen*, iii. 1⁴. 169, 714.

PHILOPOEMEN of Megalopolis (c. 253–182 B.C.), the Achaean soldier and statesman, was trained from his youth in arms and taught by the patriotic Megalopolitan philosophers, Eedemus and Demophanes. He resisted Cleomenes (223) and won praise from Antigonus Doson at Sellasia. After ten years' mercenary soldiering in Crete, he became Hipparch of the Achaean League in 210/9 and General in 208/7, reforming the army, and in 207 defeated Machanidas of Sparta at Mantinea. General again in 206/5 and 201/200, he repelled Nabis in 202–200. In the Second Macedonian War, favouring neutrality, he lost influence and returned to Crete (199/8). Reappearing after the Roman evacuation to find war with Nabis, he became General (193/2) and blockaded Sparta. Flamininus made a settlement, but on Nabis' assassination (192) Philopoemen incorporated Sparta in the Achaean League. In annexing Messene and Elis (191) and as General in 191/90 or 190/89 and in 189/8 he dominated policy; finally, in 188, on an ambiguous ruling of the Senate, he demilitarized Sparta and abolished the Lyeurgan institutions. General again in 187/6 and 183/2, he was captured during the revolt of Messene and given poison (182). A great soldier and patriot, 'the last of the Greeks', he remained in politics the Megalopolitan, narrow and rancorous, pressing Flamininus' and the Senate's acquiescence in Achaean rights to dominate the Peloponnese, when wider statesmanship was needed to strike a balance with Roman power in Greece.

Polybius 2. 40; 2. 67–9; bks. 10–11, 16, and 20–4; Livy bks. 35–9; Plutarch, *Philopoemen*; Flamininus. G. Niccolini, *La Confederazione Achea* (1914); De Sanctis, *Stor. Rom.* iii. 2, pp. 427, 443; iv. 1, pp. 57, 133, 169, 229, 238, 402–6; A. Aymard, *Les Premiers rapports de Rome et de la Confédération achaienne* (1938). On *strategiae*, De Sanctis, op. cit. iv. 1, p. 402; cf. A. Aymard, *Rev. Ét. Anc.* 1928, p. 1. A. H. McD.

PHILOSOPHY, HISTORY OF. Aristotle often gives in the introductions to his works a survey of the history of the problem he is going to treat. The scope is more systematic than historical; the treatment is rather polemical. He advised his pupils, however, to write similar works of their own, not as introductions but as separate and autonomous books. Thus Theophrastus wrote a history of Physics and Metaphysics (the fragments and the later history of which are treated in a masterly way by H. Diels, *Doxographi Graeci*, 1879), Eudemos histories of Theology, Astronomy, Geometry, and Arithmetic. In these works history prevails over systematic philosophy, although they follow the order of problems, not of time, and contain some criticism. They are the basis of all later work in this field. In the same generation another Aristotelian, Aristoxenus, became the first writer of philosophical biography.

Scholars in Alexandria found an external principle of unification by arranging the extensive material under 'successors' (διδάσχοι). They made up lineages of teachers, pupils, and pupils of the pupils, many of whom became presidents and successors of their respective schools. This also is the scheme of the only complete ancient history of philosophy which has been preserved, that of Diogenes Laertius. In this work, as was often the case, biography and doxography are combined.

The standard general work (which takes account of Roman as well as of Greek philosophers) is E. Zeller, *Philosophie der Griechen*: 1st (1910–20), the Pre-Socratics (Engl. Transl. 1881); 2nd (1889) (E.T. Socrates and the Socratics, 1883, Plato and the Older Academy, 1888); 3rd (1921), Aristotle and the Earlier Peripatetics (E.T. 1897); 3rd (1909), Stoics Epicureans and Sceptics (E.T. 1880); 3rd (1903), Eclectics (E.T. 1883). An Italian transl., with extensive additions, by R. Mondolfo (1932–8), comes down to the Neoplatonists (inclusive). There is a shorter work by Zeller, *Grundriss der Geschichte der griechischen Philosophie* (1925) (E.T. 1882).

A shorter but still fairly full treatment and an excellent bibliography will be found in F. Ueberweg, M. Heintze, and R. Prantler, *Grundriss der Geschichte der Philosophie*, 11th (1928).

The chief collections of fragments are: I. G. A. Muelher, *FGP* (Paris, 1860, 1872, 1873); H. Diels, *Fragmenta der Philosophen* (1926, 1928, 1932); H. von Arnim, *Stoicorum Veterum Fragmenta* (1903, 1905, 1924); H. Ritter and L. Preller, *Historia Philosophiae Graecae*

(1934), is a useful collection of leading passages, with notes. II. Diels, *Doxographi Graeci* (1879), is the standard edition of the Doxographers.

Other books are mentioned under the various schools and philosophers. K. O. B. and W. D. R.

PHILOSTEPHANUS of Cyrene (3rd c. B.C.), pupil or friend of Callimachus, wrote: (1) geographical works, full of marvels and fables (Ath. 7. 297 f, 8. 331 d; Aul. Gell. 9. 4. 2; Harpocr. svv. Βούχρα, Στρώμη; schol. Pind. Ol. 6. 77); (2) a mythological and antiquarian treatise *Notebooks* (ὑπομνήματα) (schol. Ap. Rhod. 2. 124); (3) *On Discoveries* (Clem. Al. Strom. 1. 308 a). J. F. L.

PHILOSTRATI. Four members of this family, which was of Lemnian origin, are probably to be distinguished. (I) Verus, a sophistic writer of the second century A.D., none of whose works survive. (II) Flavius P., son of Verus, born c. A.D. 170. He studied at Athens, and later joined the philosophical circle patronized by Septimius Severus and his wife Julia Domna. At her instance he wrote the *Life of Apollonius of Tyana*, a philosophizing mystic of the first century A.D.; the *Ἡρωικός*, a dialogue concerned with the cult of Protesilaus, probably belongs to the same period. After returning to Athens he wrote *Βίοι σοφιστῶν*, chiefly interesting for notices of his contemporaries. He is probably also the author of a few of the Philostratan *Ἐπιστολαὶ ἑρωτικά*, of the protreptic *Γυμναστικός*, of the second of the two *Διάλεκται*, and of the dialogue *Νέρων*, wrongly attributed to Lucian. He died in the reign of Philippus Arabs (A.D. 244–9) (Suidas). (III) P. Lemnius (*Βίοι σοφ.* 2. 27), born c. A.D. 191; a great-nephew of P. I, and son-in-law of P. II. He wrote the earlier *Εἰκόνες*, purported descriptions of pictures in a Neapolitan collection; probably also the second *Διάλεκται* (see LITERARY CRITICISM IN ANTIQUITY, 1. 6). (IV) A grandson of P. III (*Εἰκ. B. proem.*), who wrote the later *Εἰκόνες*.

The *Life of Apollonius* is not uninteresting on account of the mystical and orientalizing tendencies which it illustrates; the *Ἡρ.* shows similar characteristics. But P. II finds his happier vein in the *Βίοι σοφ.*, a work which throws valuable light on the habits and personalities of the Second Sophistic. It is written in the affectedly simple and unmethodical style. The earlier *Εἰκ.*, though they add to our knowledge of Hellenistic art, are hardly, in spite of their subsequent popularity, to be accepted as a serious contribution to criticism; they are exemplary exercises in the art of rhetorical description. The later *Εἰκ.* are distinctly inferior to them.

Suidas (confused notice). Editions: C. L. Kayser (1844–53; comment.); (1870–1, Teubner); J. Jülicher (1909; *Teubn.*); O. Rendorf and C. Schenkl (1893; *Eik. A.*); C. Schenkl and A. Reich (1902; *Eik. B.*). Text and translation: *Life of Apollonius*, F. C. Conybeare (Loeb, 1912); *Βίοι σοφιστῶν*, W. C. Wright (Loeb, 1922); *Εἰκόνες*, A. Fatibanks (Loeb, 1931). Translation: *Life of Apollonius*, J. S. Phillimore, 1912. Criticism: K. Münchler, *Philol. Suppl.* x (1907) (authorship, etc.). W. Schmid, *Atticismus* iv (1896) (P. II, language). W. M. L.

PHILOTAS (c. 360–330 B.C.), a Macedonian noble, son of Parmenion (q.v.), and the commander of the *ἐταῖροι* or Guards Corps in the early campaigns of Alexander the Great. He was distinguished among Alexander's marshals by his gallant bearing and liberality, but gradually became alienated from the king himself. This estrangement may have been due to Philotas' resentment of the disfavour shown by the king to Parmenion, or of Alexander's tendency to disregard Macedonian custom and to adopt oriental habits. In 330 he was accused of conspiracy by Alexander before the Macedonian army, which found him guilty and executed him with a volley of javelins. Philotas was clearly convicted of connivance at a plot against Alexander, but it is uncertain whether he was an active conspirator. The story that under torture he incriminated his father may be dismissed as a later embroidery.

Arrian, *Anab.* 3. 16; Plutarch, *Alex.* 45–9. Perce, *Alexandria*, no. 202. M. C.

PHILOXENUS (1) of Cythera (436/5–380/379 B.C., *Marm. Par.* 82), dithyrambic poet. He lived at the court of Dionysius of Syracuse, who sent him to the quarries (Ael. *VH* 12. 44). His most famous work was his *Cyclops*, in which the Cyclops sang a solo to the lyre—a great innovation (schol. Ar. *Plut.* 290). The work is parodied in *Plut.* 290 ff. See MUSIC, § 10.

Text: E. Diehl, *Anth. Lyr. Graec.* ii. 132–4. Criticism: A. W. Pickard-Cambridge, *Dithyramb, Tragedy, and Comedy* (1927), pp. 61–4. C. M. B.

PHILOXENUS (2), author of poem *The Banquet* quoted by Plato Comicus (ap. Ath. 6 d), which described a feast in full dithyrambic language (Ath. 146 f). He may be the same as Philoxenus son of Eryxis (Ar. *Ran.* 932 ff.).

Text: J. M. Edmonds, *Lyra Graeca* iii. 340–63. Criticism: U. von Wilamowitz-Moellendorf, *Textgesch. d. griech. Lyr.* (1900), 85–8. C. M. B.

PHILOXENUS (3), painter of Eretria, pupil of Nicomachus (dated by Pliny 330 B.C.). Painted for Cassander (after 306?) a 'Battle of Alexander and Darius'. A mosaic in Pompeii (Pfuhl, fig. 648), probably of the third century, is proved by likeness to the Alexander sarcophagus (Winter, *KB* 336–7) to represent faithfully a fourth-century original, probably the picture by him; the half-hidden figures illustrate his 'breuiores compendiaris' (Pliny).

Overbeck 1775, 1777; Pfuhl 828; H. Fuhrmann, *Philoxenos von Eretria* (1931). T. B. L. W.

PHILOXENUS (4) of Alexandria (1st c. B.C.) wrote on the text of Homer, accents, metre, verbs, and Atticism, and compiled important (lost) lexica of Homeric and other dialects. See ETYMOLOGY.

Furnioli, *Gramm. Rom. Fragm.* i. 443 ff.

PHILUMENUS of Alexandria, member of the eclectic school of medicine, c. A.D. 180. An excerpt from his work *De Venenatis Animalibus* (on poisonous animals), the basis of the 13th bk. of Aelian, has been edited by M. Wellmann in *CMG* (1908). He also wrote a book on diseases of the bowels (only part extant, in a Latin tr., ed. Michaelcanu, 1910), and one *Περὶ γυναικείων* (on gynaecology, not extant). W. D. R.

PHILUS, see FURIUS (2).

PHILYLLIUS, Athenian comic poet (fl. c. 410–390 B.C.), victorious 7400 (*IG* ii². 2325). The titles suggest a preference for mythological burlesque, e.g. *Αἰγύς*, *Αταλάντη*, *Αὔγη*, *Ἐλένη*, *Ἡρακλῆς*, *Πανυτρίαι* ἢ *Ναυσικάα*.

FCG ii. 857 ff.; CAF i. 781 ff.; Demiańczuk, *Suppl. Com.*, pp. 73–4. M. P.

PHILYRA, i.e. linden-tree; in mythology an Oceanid loved by Kronos (q.v.), who, being surprised by Rhea while with her, turned himself and Philyra into horses. Her child was the centaur (q.v.) Chiron, and she was so horrified at his monstrous shape that she prayed to change her own form, and so became the tree called after her.

Hyginus, *Fab.* 138.

H. J. R.

PHINEUS. The best known of several mythological persons so named was a Thracian king. For some offence, he was plagued by the Harpies (q.v.); since they stole or defiled all his food, he was nearly starved to death by the time the Argonauts arrived at his land (Salmydessus, Soph. *Ant.* 970). He made a compact with them; if they would deliver him from the Harpies, he would prophesy to them the further course of their adventures. The sons of Boreas therefore (see CALAIS) attacked them, followed them through the air, and finally

meeting Iris, received a pledge through her that Phineus should no longer be troubled. They then turned back from the islands afterwards known as the Strophades (Islands of Turning); Ap. Rhod. 2. 178 ff.

What the offence was is a question variously answered. The best-known account, which does not in all versions lead up to the story of his rescue, and so probably is not originally connected with it, is the following. He married Cleopatra, daughter of Boreas (q.v.), and had sons by her. The marriage coming to an end, by her death or otherwise, he remarried, and the stepmother so slandered her stepsons that Phineus either blinded them himself or let her do so (Soph. loc. cit. and schol. there); the latter records a variant that Cleopatra herself blinded them, in anger at being cast off by Phineus. The name of the second wife, those of the sons, and the reason for their ill-treatment all vary in different sources. Another sin attributed to Phineus was betrayal of divine secrets which he had learned through his prophetic powers (Ap. Rhod. loc. cit. 180 ff.); this obviously suits his delivery by the Boreadae much better. For more details and authorities see Jessen in Roseher's *Lexikon*, s.v.

H. J. R.

PHLEGON of Tralles, a freedman of Hadrian, author of *Olympiades* (a history reaching from the first Olympiad to A.D. 140), *II. θανμασίων*, and *II. μακροβίων*.

A. Westermann, *Paradoxographi* (1839), 197–212; O. Keller, *Resum natural. script. graec. min.* (1877), 57–105; *PHG* iii. 602–24.

PHLEGYAS, eponym of the Phlegyaee, a Thessalian people, son of Ares (Apollod. 3. 41 and elsewhere; his mother's name varies). He is also represented as living near Lake Boebeis (Pindar, *Pyth.* 3. 34), or in Orchomenus (Paus. 9. 36. 1), while the Epidaurian legend (Paus. 2. 26. 4) brings him to the Peloponnesus. He was father of Coronis, the mother of Asclepius (q.v.; Pindar, *ibid.* and elsewhere); of Ixion (q.v.; Eur. fr. 424 Nauck). Verg. *Aen.* 6. 618, whereon see Servius, puts him in Tartarus.

H. J. R.

PHLYAKES. Fares (also called *ἱλαροτραγωδία*) which were performed by 'phlyakes' in south Italy and at Alexandria in the fourth and third centuries B.C. The chief authors of these ludicrous scenes from daily life or from mythology are Rhinthon, Sciras, and Sopater of Paphos (qq.v.).

A. Olivieri, *Frammenti della Comedia Graeca e del Mimo nella Sicilia e nella Magna Graecia*; *CGF* 183–97. W. G. W.

PHOCAEA, the most northerly of the Ionian cities in Asia Minor, occupying a site with twin harbours midway between the Elaitic and Hermacian Gulfs. She pioneered in the exploration and colonization of the western Mediterranean, though Lampsaecus was almost her only contribution to the opening-up of the Euxine. In the sixth century B.C. her trading stations were strung along the route linking Magna Graecia with Spain, where Arganthonius, king of Tartessus, was her friend; and the foundation of Massilia gave the Greeks access to southern Gaul. In 540, when Phocaea was besieged by a Persian army, most of the citizens preferred emigration to submission, and finally found refuge at Elea in Italy. Phocaea never recovered from their loss. Dionysius, the generalissimo of the Greek fleet in the Ionian Revolt, was a Phocaean, but his city contributed only three ships.

M. Cary and E. H. Warmington, *The Ancient Explorers* (1929), 22. D. E. W. W.

PHOCAS (5th c. A.D.), grammarian, author of an *Ars de nomine et verbo* (ed. Keil, *Gramm. Lat.* v. 410–39) and a *Vita Vergilii* in hexameters (often published, e.g. in Baehrens, *PLM* v. 85). A *De aspiratione* attributed to him (ed. Keil, *Gramm. Lat.* v. 439–41) is apocryphal. Cf. Teuffel, § 472. 4; Schanz-Hosius, § 1106. J. F. M.

PHOCION (4th c. B.C.), Athenian general and statesman. Although contemptuous of the people's fickleness and of popular leaders, Phocion commanded constant respect and was elected general forty-five times. Making his military reputation in the service of Persia (350 and 344 B.C.), he distinguished himself by campaigns in Euboea (348 and 341), by defending Megara (343) and Byzantium (339), and by repelling a Macedonian attack on Attica in the Lamian War (322). In politics Phocion supported Eubulus, Aeschines, and Demades against Demosthenes and Hyperides. Realizing the military strength of Macedonia, Phocion advised Athens to treat for terms when outmanoeuvred before the battle of Chaeronea. After her defeat he assisted Demades in preserving peace with Philip and Alexander, opposed Harpalus, and sought to prevent Athens joining in the Lamian War, after which he acted as envoy to Antipater and sponsored with Demades the limitation of the franchise at Athens. By an error of judgement he allowed Cassander's general Nicanor to seize the Piraeus. When the democracy was restored, Phocion was condemned to death (318). Prudent, patriotic, and responsible, he controlled Athens by a force of character which is portrayed in Plutarch's *Life of Phocion*. N. G. L. H.

PHOCIS, a country of central Greece comprising the middle Cephissus valley and the valley of Crisa, which are linked loosely by passes over the southern spurs of Mt. Parnassus. Both areas were fertile, the former possessing pasture and agricultural land, and the latter olives, vines, and corn. In the sixth century B.C. Phocis was organized in a strong federation, issuing federal coinage and levying a federal army. Her internal unity enabled her to resist the aggression of her neighbours, who coveted the control of Delphi and of the route to northern Greece via the Cephissus valley and the pass of Elatea to Thermopylae, and she showed skill in her diplomacy. Deprived of Delphi and the Crisaean plain in the first Sacred War (c. 596) and overrun by Thessaly, her ambition was to regain her outlet to the sea; checked from expanding at the expense of Doris by Sparta, the Phocians allied with Athens (457), seized Delphi, and were confirmed in their control by an expedition under Pericles (448), to whom a Phocian alliance was valuable for encircling Boeotia. After the battle of Coronea (447) Phocis joined Sparta, was loyal to her during the Peloponnesian War and in the early fourth century, until Boeotia impressed her into her Central Greek League. Her bid for independence in the Third Sacred War broke Theban power but exhausted Phocis. See PHILOMELUS, ONOMARCHUS.

L. B. Tillard, *BSA* 1910-11.

N. G. L. H.

PHOCUS (Φῶκος), in mythology, son of Aeacus (q.v.) by the nymph Psamathe, who took the shape of a seal, φῶκη, hence the name of her son (Apollod. 3. 158). He proved a distinguished athlete, which aroused the jealousy of the legitimate sons, Pelus and Telamon (qq.v.); they drew lots to see which should kill him, and Telamon, to whom the task fell, murdered him while they were exercising; Aeacus found out and banished them both (ibid. 160).

H. J. R.

PHOCYLIDES (fl. 544-541 B.C., Suidas), elegiac and hexameter poet of Miletus. His work is of a gnomic character. He sometimes begins his lines with the formula καὶ τῷδε Φωκυλίδου, writes about traditional matters such as the virtues of husbandry (fr. 7), the badness of women (fr. 2), the Mean (fr. 12), protecting spirits (fr. 16); he disbelieved in noble birth (fr. 3) and liked club-life (fr. 14).

Text: L. Diehl, *Anth. Lyn. Græc.* i. 1. 55-62.

C. M. B.

PHOEBE (Φοῖβη), a Titaness, daughter of Heaven and Earth (Hesiod, *Theog.* 136); wife of Coeus and mother of Leto (q.v.; ibid. 404 ff.). She is thus grandmother of

Artemis. But her name, 'the bright one', is not infrequently used for the Moon (e.g. Statius, *Theb.* 1. 105), though never in an early author; and therefore also for Artemis and Diana, as identical with the Moon (e.g. Stat. *Silv.* 1. 3. 76). Of several other mythological figures who bear this name, the only well-known one is a daughter of Leucippus, see DIOSCURI. The schol. Stroziana on Germanicus, *Aratea*, p. 175, 3 Breysig, says Hesiod called one of the Heliades Phoebe. H. J. R.

PHOENICIANS (Φοίνικες, *Poeni*) are said by Herodotus (1. 1; 2. 44; 7. 89) to have migrated from the Persian Gulf (c. 2750 B.C.). At this date, under Sargon of Akkad, Mesopotamian traders and armies certainly were reaching Syria and Cappadocia. Byblus was a very early Phoenician port.

2. Phoenician seafaring, however, began only about 1250. The only sea-people known to the Eighteenth Dynasty in Egypt were Keftiu—Minoans or Cilicians. Minoan, too, are the prehistoric remains at Thebes, traditionally founded by 'Cadmus the Phoenician'; and as the name 'Phoenix' is pure Greek (cf. Φοῖνιξ, φῶνις, φόνις), we infer that the name 'Red Men' was applied by the presumably fairer early Hellenes to any copper-skinned Mediterraneans. 'Phoenician' in Greek myths, then, usually = Minoan Cretan.

3. Homer, however, knows Phoenicians well, as craftsmen and traders. Sidon is their great city; Tyre is not mentioned (*Il.* 6. 290-1; *Od.* 13. 272 ff., 14. 288 ff., etc.). The rise of sea-power among these Semites, who called themselves *Chna*, Canaanites (Hecataeus, fr. 272, *FGH*), probably resulted from the strong Aegean influence, from c. 1400 onwards, revealed by excavations at Ras Shamra and elsewhere (Schaeffer, *Antiquity*, 1930). After the Philistine migrations (c. 1200) there arose a new Phoenicia, nautical and cosmopolitan; its art was a weird mixture of Egyptian, Mesopotamian, and other elements; and it possessed a hieratic literature (Virolleaud, *Antiquity*, 1931). Their scripts included, besides cuneiform, the new Phoenician Alphabet (q.v.).

4. Stimulated by the collapse of Minoan carrying trade, the Phoenicians now explored the whole Mediterranean, winning footholds in Cyprus, Sicily, Africa, and Spain. The foundation of Cadiz (Gaddir, 'the Walled Place') c. 1100 and Utica, in Tunis, c. 1087 (Velleius 1. 2; [Aristotle], *Mirabilia* 134) is inherently probable. The Phoenicians took no land and traded for their food with the natives, with whom consequently, unlike the Greeks, they remained on excellent terms. Even Carthage paid rent until after 550 for the very site of the city (Justin, bk. 18).

5. Tyre now took the lead, though from ancient custom Ethbaal, King of Tyre, is still called in an eighth-century inscription from Cyprus (*Corp. Inscr. Semit.* i. 5) 'King of the Sidonians'.

6. Of Phoenician annals from c. 970 to 772 we have a summary in Josephus (*AJ.* 8. 5. 3, *Ap.* 1. 17, 18) derived from Menander of Ephesus. This includes the story of Dido and Pygmalion.

7. From the ninth century onwards the cities were repeatedly attacked and held to ransom by Assyrians, and later by Babylonians; but Tyre on its island site was impregnable, and Phoenician trade continued to flourish. The *locus classicus* for its character is Ezekiel xxvii, which, reduced to prose, describes the export of Asiatic manufactures against metals and minerals from overseas, and a local trade with the hinterland for food and raw materials (cf. 1 Kings v. 9; Acts xii. 20). There was also a slave-trade in both directions (Joel iii. 4 ff.; Amos i. 6). Phoenicia, like Israel, sometimes flirted unsuccessfully with Egypt; and Phoenicians are credibly reported to have circumnavigated Africa for Pharaoh Necho (Hdt. 4. 42).

8. With the beneficent imperialism of Persia Phoenicia soon came to terms. Phoenician squadrons under native

kings formed the backbone of Persian navies. From 535 to 335 the cities had peace and prosperity at home, and the Persian wars with Athens, as recent Syrian excavations show, seldom interrupted their brisk trade with that city. Trade with Carthage and Spain continued, though there is no evidence that Phoenicians from Tyre or Sidon reached Cornwall. The desperate resistance of Tyre to Alexander the Great shows well in what light it regarded the change of masters.

G. Contenau, *Les Phéniciens* (1926); A. R. Burn, *Minoans, Philistines and Greeks* (1930). See also CARTHAGE, SIDON, TYRE.

A. R. B.

PHOENICIDES, New Comedy poet. Fr. 1 refers to a peace made in 287 B.C. In fr. 4 a *ἐταῖρα* bids farewell to the gay life, describing her experiences with various lovers.

FCG iv. 509 ff.; CAF iii. 333 ff.

PHOENIX, in mythology, (1) son of Amyntor king of Hellas (in the old sense of the word), who left home when young on account of a quarrel with his father. The latter had a concubine of whom his wife, Phoenix' mother, was jealous; she induced her son to corrupt the woman and thus make her lose Amyntor's favour. The old man, finding this out, cursed his son with childlessness, and Phoenix, despite his relations' attempts to stop him, escaped and went to Phthia, where Peleus (q.v.) received him kindly and made him a sort of tutor to the young Achilles (q.v.). He accompanied his charge to the Trojan War, where he was one of the ambassadors sent to bring Agamemnon's offers of reconciliation (*Iliad* 9. 168 ff.); Euripides, in his lost *Phoenix*, followed a version in which Amyntor blinded Phoenix and the latter was finally healed by Chiron (see Nauck, *TGF*, p. 621 ff.).

(2) Son of Agenor and brother of Cadmus (q.v.); like Cadmus, he was sent to look for Europa, did not return home, and founded a people, the Phoenicians, who were named after him (Eurip. fr. 819, etc.). He is a shadowy figure whose story, such as it is, varies in different authors, see Türk in Roscher's *Lexikon* iii. 2401 ff.

H. J. R.

PHOENIX (3) of Colophon, iambic poet of third century B.C., author of moralizing choliambics and of a poem *Coroniatae* based on a Rhodian beggars' song. See IAMBIC POETRY (GREEK).

Text: E. Diehl, *Anth. Lyr. Graec.* i. 3. 104-10; J. U. Powell, *Collectanea Alexandrina* (1925), 231-6. Text and translation: A. D. Knox, *Herodes, Cercidas, and the Greek Choliambic Poets* (Loeb, 1929), 242 ff.

PHOENIX, 170 lines (elegiac) on the fabulous bird whose resurrection to life through death made appeal to both pagan and Christian thought. Many critics have endorsed its ascription to Lactantius (q.v.).

Text and transl. (with bibliog.) J. W. and A. M. Duff, *Minor Lat. Poets* (Loeb, 1935).

PHOLUS, see CENTAURS.

PHORBAS, name of several mythological persons, all obscure. (1) A Thessalian (Lapith), son of Lapithes, the eponym of the Lapiths, or of his son Triopas (Paus. 5. 1. 11; *Hymn. Hom. Ap.* 211). His home, according to various accounts, is Thessaly, Elis, Argos, or Rhodes; see Höfer in Roscher's *Lexikon* iii. 2424 ff. This may be the Phorbas who takes part in the fight of the Lapiths and Centaurs (Ovid, *Met.* 12. 322). (2) A Phlegyan, living at Panopeus, who challenged pilgrims on their way to Delphi to box with him and so killed them, till he was killed by Apollo in human disguise (schol. *II.* 23. 660, cf. Ovid, *Met.* 11. 414, Philostratus, *Imag.* 2. 19). (3) An Athenian hero, said to have been an attendant on Theseus, schol. Pind. *Nem.* 5. 89. A shrine, the Phorbanteion, belonged either to him or to (4), an ally of Eumolpus (q.v.), killed by Erechtheus (Harpocration, s.v. *Φορβαρείων*).

H. J. R.

PHORCYS, in mythology, son of Nereus and Earth (Hesiod, *Theog.* 237). Marrying his sister Ceto, he became father of the Graiae and Gorgons (qq.v.; *ibid.* 270 ff.). Other children are ascribed to him in various sources, as Thoosa, mother of Polyphemus (q.v.; *Od.* 1. 71); the Sirens (q.v.; Sophocles in Plut. *Quaest. conv.* 745 f.). In general he is the father or leader of sea-monsters, such as the Tritons (q.v.; Verg. *Aen.* 5. 824).

H. J. R.

PHORMION, Athenian admiral, first mentioned in 440 B.C. before Samos. In the next years he proved an excellent military leader in Acarnania, at Potidaea, and in Chalcidice. In 430 he blockaded Corinth from Naupactus; and next summer, by brilliant tactics, he defeated two superior Peloponnesian fleets, thus restoring Athenian influence in Acarnania. After his return (428), he is said to have been sentenced for peculation (schol. Ar. *Pax* 347). Probably he died at this time.

Thuc. bks. 1 and 2; *Prosop. Att.* 14958; Adcock, *CAH* v, *passim*. V. E.

PHORMIS (or **PHORMUS**), writer of Dorian comedy. Aristotle (*Poet.* 5. 1449^b6) calls him a contemporary of Epicharmus. Suidas agrees, adding that he was tutor to the sons of Gelon (d. 478 B.C.). He further attributes to P. the invention of long cloaks for his actors and curtains for his stage. Of the seven plays mentioned by Suidas all have historico-mythological titles.

CGF 148; A. W. Pickard-Cambridge, *Dithyramb, Tragedy, and Comedy*, p. 413 f. M. P.

PHORONEUS (*Φορωνεύς*), a very ancient ancestral figure of Argive tradition. He was older than Deucalion's flood (Plato, *Tim.* 22 a), husband of the Argive Niobe, the first earthly love of Zeus, cf. Hyginus, *Fab.* 145. 1, who makes her his daughter. He was son of Inachus (q.v.; *ibid.* 124, cf. Apollod. 2. 1, where his descendants are given). He has no legend, except that he was one of the judges between Hera and Poseidon for possession of the country (Paus. 2. 15. 5), but he had a cult (*ibid.* 20. 3).

H. J. R.

PHOROS, see FINANCE, GREEK, para. 7.

PHOSPHORUS (*Φωσφόρος* = *Ἑωσφόρος*; Lucifer), the morning star, personified son of Eos and Astraeus (Hes. *Th.* 381) or Cephalus (Hyg. *Poet. Astr.* 2. 42; cf. Hes. *Th.* 986-91), sometimes represented as a youth bearing a torch. As a cult name P. was applied to Hecate, Artemis (cf. Diana Lucifera), and, more rarely, to other divinities. The *deus bonus puer P.* is the Syrian god, Aziz.

F. R. W.

PHOTIUS, the best of the Byzantine scholars and (A.D. 858-67, 878-86) Patriarch of Constantinople. 'At the pressing intreaty of the Caesar (Bardas), the celebrated Photius renounced the freedom of a secular and studious life, ascended the patriarchal throne, and was alternately excommunicated and absolved by the synods of the East and West. By the confession even of priestly hatred, no art or science, except poetry, was foreign to this universal scholar, who was deep in thought, indefatigable in reading, and eloquent in diction' (Gibbon, ch. 53). His most important work is the *Bibliotheca* (or *Myriobiblion*), 'a living monument of erudition and criticism' (Gibbon, l.c.). It is a hastily compiled, ill-arranged critical account (in 280 chapters, with numerous extracts) of 280 prose works read by Photius in the absence of his brother, Tarasius, for whose information, and at whose request, the work was composed, at some date before A.D. 858. Theology and history predominate, oratory, romance, philosophy, science, medicine, and lexicography also come within its scope. Besides its intrinsic value (the criticisms are often felicitous and acute), it has a considerable adventitious importance as

the best or sole source of our information about many notable lost works. The *Lexicon*, which is an earlier work, is a glossary based ostensibly and in fact indirectly upon Aelius Dionysius, Pausanias, and Diogenianus, but immediately drawn from such later compilations as Timaeus' Platonic lexicon, and chiefly from the *Ενναγυρίη* (see LEXICA SEGUERIANA). The *Lexicon* was long known only from the *Codex Galeanus* at Cambridge, now supplemented by a manuscript at Athens and one at Berlin, from which last Reitzenstein edited the lost beginning (*Α—Ἀναπρος*), *Der Anfang d. Lexicons d. Photios*, 1907.

Editions: *Bibl.* Bekker, 1824-5; Migne, PG (1860), vol. 103. *Lexicon*: Naber, 1864-5. Criticism: E. Orth, *Photiana* (1928), *Stilkritik d. P.* (1929). P. B. R. F.

PHRAATES IV (c. 38-2 B.C.), king of Parthia. He secured the succession by murdering his father Orodes II (q.v.) and many Parthian princes and nobles (Plut. *Ant.* 37, Dio Cass. 49. 23). He soon had to face a Roman invasion, when M. Antonius penetrated into Media Atropatene, but Phraates' general Monaces forced him to retire with great loss. From 31 to 25 B.C. Phraates had to contest his throne with the rebel Tiridates (q.v. 1). His embassy to Augustus led to better relations between Rome and Parthia, and the standards captured from Crassus and Antony were restored to Rome. He was assassinated in a harem intrigue. M. S. D.

PHRATRIAI, 'brotherhoods' or kinship groups whose members were called *φράτρες* (*fratres*). They occur in Athens and many other States (in others, again, we find *παρπαί* or *παρπιαί*, which were probably of similar origin and function). At Athens they held property, and had their own cults and officials (*phratrarchoi*) and priests. They were smaller than the *phylae*, more comprehensive than the *gene*. All alike worshipped Zeus Phratrion and Athena Phratrion, and the Apaturia (q.v.) was their common festival. They made their own regulations at meetings of all the *phrateres*. Soon after birth a child (boy or girl) was entered by its father into his phratry, which scrutinized its legitimacy. Admission to a phratry was good proof of citizenship. This was the religious recognition of citizenship, as the entry into the deme (see DEMOI) was the secular recognition; but whether every citizen must belong to a phratry is doubtful. A phratry could subsequently eject a member, but apparently he did not thereby lose his citizenship, as he did if ejected from his deme; and some phratries seem to have had stricter laws of membership than others. It was, however, certainly normal for citizens to be members; and a judgement of a dicastery that a man was a legitimate son of a citizen compelled a phratry to accept him. A foreigner on receiving citizenship was entered in a phratry as well as a deme.

IG ii², 1277, SIG 921; Wilamowitz, *Aristoteles und Athen* (1893), ii. 260 ff.; Wade-Gery, *CQ* xxv (1931), 129-43. A. W. G.

PHRIXUS, see ATHAMAS.

PHRYGIA, a country comprising part of the central plateau and the western flank of Asia Minor. The conquest of central and western Asia Minor by the European Phrygians took place towards the end of the second millennium B.C., and was still remembered when the Trojan saga was taking shape (*Iliad* 3. 184 ff.); it extended farther to the north and west than the Phrygia of the Greek and Roman periods. The limits of the original Phrygian conquest were driven in on the west by the emergence of the Lydian Kingdom, and in the north by subsequent invasions from Europe of Mysians and Bithynians, and, much later, Galatians; in the Roman period the northern boundary of Phrygia lay well south of the northern mountain parapet and far from its early

maritime base on the Sea of Marmara. On the east and south the later boundaries still represent the extreme limit of the original Phrygian permanent settlement, which appears not to have crossed the Halys or penetrated beyond Iconium or Pisidian Antioch or south of the Maeander basin.

In Phrygia the European invaders absorbed the older population and founded a kingdom, associated in Greek legend with the names of Midas and Gordius, whose memorials survive in the rock-cities and sculptured façades, some of them inscribed, of the 'Phrygian Monument Country' south of Dorylaeum. After its conquest by Lydia Phrygia never again appears as an independent State; the old warrior stock was merged in the peasant population, and to the classical Greeks 'Phrygian' was equivalent to 'slave'. Phrygia was subject in turn to the Persians, Seleucids, and Attalids; in 116 B.C. the greater part of it was absorbed in the province Asia (q.v.), and in 25 B.C. the remaining eastern portion became a region of the province Galatia. The Phrygian religion, whose male god Papas took his place beside the old Anatolian Mother goddess, and the Phrygian language survived until the early Byzantine period. Diocletian made Asian Phrygia a separate province, which Constantine subdivided into two, Prima or Pacatiana and Secunda or Salutaris, administered from Laodicea and Synnada respectively.

W. M. Ramsay, *Cities and Bishoprics of Phrygia* (1895-7).

W. M. C.

PHRYNICHUS (1), an Athenian tragic poet, coupled by some ([Plato], *Minos* 320 c) with Thespis as one of the originators of tragedy. His first victory is dated 511 B.C. (Suidas, s.v.). He produced a play dealing with the taking of Miletus by the Persians in 494, and was fined for reminding the Athenians too vividly of the misfortunes of their friends (Hdt. 6. 21). Another historical play, the *Phoenissae* (probably identical with his *Πεῖραι*), related to the Persian War just ended; the scene was laid in Persia and opened with a servant setting seats for the Persian nobles (Arg. Aesch. *Persae*). In 476 Themistocles was his choregus at the Great Dionysia (Plut. *Them.* 5), and this may have been the date of the *Phoenissae*. Among his mythological plays were the *Pleuoniae* (from the story of Meleager and Oeneus); the *Argyptii* and *Danaides*; the *Autaeus* and the *Alkestis* (probably a satyric play) from the Heraclian cycle, and the *Actaeon*. He was remembered for the beauty of his lyrics (Ar. *Vesp.* 220, *Av.* 748 ff.) and the many varieties of dance which he invented (Plut. *Quaest. conv.* 8. 0. 3); Aristophanes admired him greatly (see also *Thesm.* 165 ff., *Ran.* 1298 ff.), though he hints (*Ran.* 910 ff.) that Phrynichus' audiences did not exact too high a standard of art. He was said (Suidas, s.v.) to have been the first tragic poet to employ a feminine mask, i.e. to introduce a female character. The few fragments suggest that he employed metaphors freely.

TGF 720-5.

A. W. P.-C.

PHRYNICHUS (2), Athenian comic writer, dramatic activity roughly 430-400 B.C.; constantly confused by ancient authorities with (1) the tragedian, (2) the actor, and (3) the politician of the same name. Anon. *Περί κωμ.* 10 gives his first production as 430, and the victors' list (IG ii², 2325) puts the first of his two victories as 428. Plays: *Ἐφύλακς* (variously explained, probably 'The Nightmare'; cf. Crates' *Ἀόρτα*). A *Κόμπος* (Socrates' music-master) is attributed to Ameipsias also, but it is possible that there was only one play of this name, P. giving it to Ameipsias to produce as his own. Similarly with the *Κωμᾶνται*. Ameipsias produced a *Κωμ.* in 414 (arg. 1 Ar. *Ar.*) and P. his *Μοιροπόρος*. The *Κωμᾶνται* probably dealt with the hermocypid scandal, the *Μοιροπόρος* with the life of some misanthrope (fr. 18, 16 ff.

Τίμωνος βλον). The *Μούσαι* contained an *ἄγων* between Sophocles and Euripides, in which Sophocles seems to have been victorious (Schol. Soph. O.C. 17). The *Μύσαι* may probably be dated 407.

CFG ii. 580 ff.; CAF i. 369 ff.; Demiańczuk, *Suppl. Com.* 74 ff. M. P.

PHRYNICHUS (3) **ARABIUS**, of Bithynia, Atticist, rhetorician, and lexicographer under M. Aurelius and Commodus. He compiled *Σοφιστική προπαρασκευή*, a lexicon of 'Attic' words in 37 books, preserved only in a summary by Photius and in fragments; also *Ἀττικιστής* (*περὶ κρίσεως καλῶν καὶ δοκίμων ὀνομάτων*), extant in an abridgement, our *Ἐκλογή*. They were based on Eirenaeus and Aelius Dionysius. Phrynichus criticizes Pollux (q.v.) for his laxity in the choice of words, and, with Moeris, ranks among the strictest of the 'Atticists'. His models are Plato, the Ten Orators, Thucydides, Aeschines Socraticus, Critias, Antisthenes, Aristophanes, Aeschylus, Sophocles, and Euripides. Nor would he accept the usage of even the best of these without cavil. In the letter to the Imperial Secretary, Attidius Cornelianus, which introduces the *Ἐκλογή*, he reprobrates those who try to justify their diction by citing the impeached words from classical authors: *ἡμεῖς δὲ οὐ πρὸς τὰ διημαρτημένα ἀφορῶμεν, ἀλλὰ πρὸς τὰ δοκίμωτάτα τῶν ἀρχαίων*. Such critical scrutiny, however, if at all possible, would demand a clearer perception than the Atticists ever had of the nature and relations of spoken and literary Attic, and of the diverse sources from which the language of the poets was drawn. Nevertheless, Phrynichus' work contains many acute and accurate observations.

Editions. *Σοφ. προπ.*: (Summary) Bekker, *Anecd.* i.; (Fragments) H. von Borries, Teubner, 1911. *Ἐκλογή*: C. A. Lobeck, 1820. W. G. Rutherford (*The New P.*), 1881; M. Naechster, *De Pollucis et Phrynichi controversiis* (1908). P. B. R. F.

PHRYNIS, see MUSIC, § 10.

PHTHIOTIS, a district of Thessaly. In mythology, when it was the realm of Achilles, and in Roman times it included Achaia Phthiotis and extended from Cynoscephalae to the border of Malis. In the intervening period, however, Phthiotis denoted only the neighbourhood of Pharsalus (q.v.) and formed one of the tetrads of Thessaly proper, whereas Achaia Phthiotis belonged to the Periocis and owed allegiance to Thessaly, particularly to Pharsalus.

Achaea, a mountainous district including the Othrys range, has a coastal plain on the Bay of Pagasae. Its principal towns were Phthiotie Thebes, Larissa Cremaste, Melitaea, and Halus. The Achaeans rarely enjoyed freedom from external intervention. When liberated from Alexander of Phraea they were forced to join the Boeotian League, and when Philip detached the Periocis from Thessaly they became subjects of Macedonia. An Achaean League apparently existed in the third century B.C. G. Kip, *Thessalische Studien* (1910), 53-64; F. Stählin, *Der hellenische Thessalien* (1924), 135-44 and 150-91. H. D. W.

PHYLACUS, in mythology, (1) father of Iphiclus, for whose story see MELAMPUS, son of Deion and so grandson of Aeolus (q.v.; Apollod. i. 86). (2) Son of Iphiclus and grandson of (1) (Eustath. *Il.* p. 323, 42). (3) A local hero of Delphi (Hdt. 8. 39. 1). He appeared with Autonous, another local hero, and helped to drive off the Persian raiders in 480 B.C. (ibid. 38). H. J. R.

PHYLAE (*φύλαι*), the largest political divisions of a Greek State. There is no evidence of their existence in Thessaly or Boeotia, but they are found or may be inferred in all the Dorian and most of the Ionian States. In all Dorian States the same three *phylae*—Hylleis, Dymanes, and Pamphyli—recur, though in cities like Argos and Sicyon, which contained a non-Dorian element, other *phylae* might be added: the three *phylae* were therefore anterior to the Dorian Invasion. The

original four *phylae* of Athens—Geleontes, Hopletes, Argadeis, and Aegicoreis—recur in some Ionian States (though seldom all in one State), together with other *phylae* for the non-Ionian population. The *phylae* were kinship groups, comprising the entire citizen-body. They were corporate bodies with their own priests and officials (*φυλοβασιλεῖς* at Athens); but they were also administrative and military units of the city. In Athens, at least, they were also local divisions, like the three *trittyes* (q.v.) and the twelve *naukrariai* (q.v.) into which they were subdivided. The *phylae* of a city were liable to be reorganized, following a change in the citizen-body or the constitution.

2. In Sparta, it seems, the three Dorian *phylae* were replaced by five local *phylae* (perhaps in the 8th c.), which formed the five *lochoi* or regiments of the Spartiate army and elected the five ephors. A similar change was made by Cleisthenes (q.v.) at Athens, where the old *phylae* had been dominated by the nobles, and excluded many new citizens, admitted under the legislation of Solon and by the tyrants. For these he substituted ten new *phylae* (the old surviving for a few sacred cults only). To break up not only the old ascendancy of the nobles but the more recent division in the State between the Pedieis, Parali, and Diacrii (see PISISTRATUS), he divided each *phyle* into three *trittyes* (q.v.), one from each of the main territorial divisions of Attica—the town (*τὸ ἄστυ*, including Piraeus and Phaleron, and part of the plain of Athens), the coast, and the interior. Membership of these new *phylae* (as of the *trittyes* and of the *demoi*, q.v.) depended on residence at the time of the reform. It was not broken by a subsequent change of residence, but was transmitted by descent. The *phylae* were not units of local government—each had its headquarters in the city. The new State administration was based on them: magistracies (the nine archons and their secretary, the *strategi*, etc.) were mostly in colleges of ten, one from each *phyle*; the ten prytanies of the Boule each represented a *phyle* (see PRYTANIS); the ten regiments of hoplites and (later) ten squadrons of cavalry were recruited from the separate *phylae*. The *phylae* were also represented as such by choruses and *choregi* (q.v.) in the dithyrambic contests at festivals. Their names and official order were: Erechtheis, Aegaeis, Pandionis, Leontis, Acamantis, Oeneis, Ceeropis, Hippothontis, Aeanthis, Antiochis.

In Hellenistic and Roman times new *phylae* were occasionally added (by a redistribution of the citizens) in honour of powerful princes, as Antigonis Demetrias, Attalis, Plotemais, Hadrianis. The usual number was twelve. A. W. G.

PHYLARCHUS of Athens, the most important historian of the period between Pyrrhus' death, 272, and the defeat of Cleomenes by Antigonus Doson, 220 B.C. His history (*Ἰστορίαι*), one of a number of works, ran to twenty-eight books. Its arrangement cannot be ascertained, but it was not based on a chronological scheme. The few definite facts of books 6-14 all refer to the east, the remainder to Greece. P. was Plutarch's chief authority for the lives of Agis and Cleomenes. His moralizing digressions and bias against Macedon throw suspicion on his reliability.

FGH ii. 81. FHG i. 334.

G. L. B.

PHYLAS, name of four minor mythological persons, the least unknown being a king of the Dryopes. He sinned against the shrine at Delphi, and consequently Heracles (q.v.) overthrew him and gave his people to Apollo as serfs. Many of them, either escaping or being sent by Apollo's command, went to the Pcloponnesus, where they settled at Asine and other places. Heracles had by Phylas' daughter a son Antiochus, after whom the Attic tribe Antiochis was named (Diod. Sic. 4. 37; Paus. i. 5. 2; 4. 34. 9-10). H. J. R.

PHYSICA ET MYSTICA, *see* ALCHEMY, para. 4.

PHYSICS. Until the time of Plato and Aristotle physics was a part of philosophy. Occupied with the study of nature and cosmogony, the first philosophers knew only a few isolated facts in physics discovered by experience (cf. Thales on the property of the lode-stone, and Pythagoras' discovery of the musical intervals); they had no general theories, except that of transmutation of elements by rarefaction and condensation (cf. the upward and downward courses in Heraclitus), or the eternal mixing and unmixing of them, combined with the indestructibility of matter (Empedocles). Perhaps the first attempt to state a law was Heraclitus' *Πάντα ῥεῖ*. On the other hand, centrifugal force is postulated by Anaxagoras, and we have Empedocles' declaration that light travels and takes time to pass from one place to another. Anaxagoras and Empedocles both realized the corporeal quality of air; Empedocles, by an experiment with a water-clock, showed that water can enter a vessel only as air escapes. The first to make systematic experiments was apparently Democritus, whose theory of atoms approaches nearer to the most modern views than any other that has been held before or since. Important also is the declaration of Leucippus that 'nothing comes into being for nothing; everything happens on a rational ground and by the pressure of necessity'.

2. Aristotle made a point, in his treatises, of summarizing all that was so far known in each subject, with a view to adapting it to his own philosophical system. His views on physical subjects are spread over the *Physics*, *De Caelo*, *De Generatione et Corruptione*, and the *Meteorologica*. Physics is for him one of the theoretical sciences; it deals with natural bodies having in them a source of movement or rest. Aristotle discusses such things as matter and form, the four causes, three kinds of 'motion' (increase and decrease, change, and locomotion), 'place', and space, the void, the continuous, the infinite, the laws of motion, e.g. the dependence of speed on the weight of the object moved and on the density of the medium through which it moves, natural and forced movement and the prime mover, the application of the theory to the heavenly sphere, the movement of the elements (including the 'aether') to their 'natural places'. Among the things bearing on mechanics we find the germ of the principle of 'virtual velocities' and a statement very like Newton's 'First Law of Motion'; in a void, if a thing is in motion, 'no one can say why it should stop anywhere; for why here rather than there? hence it will either remain at rest or it must move *ad infinitum* unless something stronger prevents it' (*Phys.* 4. 8. 215^a20-2). The *Mechanica*, containing mechanical problems, is not by Aristotle, but it retains many ideas which are found in Aristotle's works. It contains the 'parallelogram of velocities' (ch. 2) and the principle of the lever (ch. 3), which it applies extensively to the explanation of many mechanical devices, e.g. the balance, interacting pulleys, etc.

3. But, for mechanics, the scientific foundation was laid by Archimedes in his proof of the principle of the lever and his investigation of the position of the centre of gravity in a number of bodies (*Plane Equilibrium* I, II, and the *Method*, in which he makes full use of the 'moment' about a fixed point)—to say nothing of his machines for moving a great weight by a small force (*ὁδὸς μοι τοῦ σπῆς, καὶ κυλῶ τὰν γῆν*), his water-screw, etc.

4. Archimedes further initiated the whole science of hydrostatics (*Περὶ ὕδρῳstaticῶν, On Floating Bodies*), laying down the principles that a body floating in a fluid will take a position in which its weight is equal to that of the portion of the fluid which it displaces, and that a body weighed in a fluid will be lighter than its true weight by the weight of the displaced portion of the fluid. He further lays it down that the upward force

exerted by the fluid on the floating solid will act along the line perpendicular to the surface of the fluid which passes through the centre of gravity of the displaced portion of the fluid. With these principles, Archimedes works out fully the positions of rest and stability of (1) any segment of a sphere and (2) a right segment of a paraboloid of revolution floating in a fluid either way up.

5. On the mechanical side Archimedes' work was continued by Ctesibius, Philon, and Heron. Only Heron's works survive in any completeness, but we find there the recognition of the elasticity of air and the force of steam; his engines include a thermoscope, a forcing air-pump, siphons, a fire-engine, and the first steam-engine, in which the recoil of steam issuing in jets from four tubes, the open ends of which are perpendicular to the tubes, while the tubes issue from a centre, forming a cross (like the *steastika*), makes a ball or a wheel revolve.

6. *Optics.* Until the time of the Atomists it was supposed that sight resulted from visual rays proceeding in straight lines from the eye and impinging on the object seen. The Atomists postulated atoms constantly proceeding from the object and carrying, as it were, copies of it to the eye. Aristotle, too, regards the eye as a receptive organ only; the object acts on the eye through a transparent medium (*De Anima* 2. 7, *De Sensu* ch. 2). Aristotle gave an explanation of the rainbow and the halo in the *Meteorologica* (3. 2-6). The first systematic treatise on geometrical *Optics* was by Euclid and survives in a version by Theon. The law of reflection was known before Euclid. Heron (*Catoptrica*) bases it on the assumption of a minimum path. Ptolemy wrote *Optica*, in which occurs the first attempt to discover a law of refraction. The hypothesis of atmospheric refraction appears in Cleomedes (*De motu circulari*, ch. 6).

7. *Acoustics.* The dependence of the musical intervals on numerical ratios was discovered by Pythagoras. There were many writers on harmonics, e.g. Archytas, Aristoxenus, Euclid, Ptolemy. The *κατατομή κανόνος* included in the *Musici Scriptores* may be partly based on the *Elements of Music* by Euclid.

8. *Electricity and Magnetism.* Thales is said to have discovered the attractive power of the lode-stone (*Arist. De An.* 1. 2). Theophrastus mentions the *Lyncurion* as having still stronger force, and notes the necessity of rubbing the lode-stone (*Περὶ λίθων*). Pliny's data in the *Natural History* 37. 13 and 2. 37 rest on legend and are of no scientific value.

In the Platonic *Ion* 533 we are told that the lode-stone not only attracts bits of iron, but communicates to them the same power: apparently the first hint of magnetic induction. T. H.

PHYSIOGNOMONICI, writers who try to divine the true character of man by comparing him to certain types of animals or races, the moral nature of which they suppose to be known (*[Aristotle]*, *Phys.* 805^a20), or by inferring a person's idiosyncrasy from movements, gestures of the body, colour, characteristic facial expressions, the growth of the hair, the smoothness of the skin, the voice, conditions of the flesh, the parts of the body, and the body as a whole (*ibid.* 806^a26). Such observations of necessity result from any social and political contact; they are, therefore, already contained in early Greek literature (*Simonides*, fr. 7); later, after physiognomy, based on the theory of the interdependence of body and soul (*Aristotle*, *An. Pr.* 70^b7), had been developed by philosophers, especially by Socrates and Stoics (*Poridonius*), the results influenced in ever-increasing measure painters, writers, orators, and actors. In medicine physiognomical signs had been valued from the beginning. They were particularly emphasized by the gymnasts of the second century A.D., probably in connexion with the codification of physiognomical studies by Polemon. But at no time in antiquity does

physiognomy seem to have been nearly as important as during the Middle Ages and the Renaissance.

TEXTS: R. Förster, *Scriptores Physiognomici* i-ii (Teubner 1893), containing Ps.-Aristotle, Polemon (2nd c. A.D.), Adamantius (4th c. A.D.), Anonymi, *De physiognomia, Secreta secretorum* (cf. also Roger Bacon, V, ed. R. Steele (1920)). References in Greek and Latin authors collected, Förster ii. 237. Additional material, R. Asmus, *Philol.* (1906); J. Jüthner, *Philostratos über Gymnastik* (1909); R. A. Pack, *ApPhil.* (1935). New MS. readings, Förster, *Rh. Mus.* 1900.

LITERATURE: Förster, i, introduction (history of Ph., tradition, etc.). Best survey, Förster, *Die Physiognomik d. Griechen* (1884); E. Rohde, *D. griech. Roman*, 160; cf. also A. Macalister, *Enc. Brit.* (11th ed.), s.v. 'Physiognomy'; E. C. Evans, *TAPA* (1941); R. A. Pack, op. cit. *PW* xx, s.v. 'Physiognomik'. L. E.

PHYSIOLOGUS ('the Naturalist'), a collection of some fifty fabulous anecdotes from natural, mostly animal, history, of a moralizing and symbolical character. The date and place of its production are uncertain; Christian writers towards the end of the fourth century A.D. (more doubtfully Origen in the third century) knew and used it; it was translated into Latin about this time. The subject-matter is largely drawn from traditional Christian commentary on Scriptural passages; in general spirit the work may be said to belong to the class of popular descriptions of the marvels of nature, real or imaginary, which tended increasingly to usurp the place of legitimate natural science after Theophrastus. The work as it stands appears from internal evidence, including that of translations, to have taken shape in Egypt; its ultimate source may be the pseudo-Democritean writer Bolus of Mendes (2nd c. B.C.). The *Physiologus* enjoyed great subsequent popularity; it was translated into the principal languages of Europe and the Near East; its material continued to be reproduced in the medieval Bestiaries. Many traditional religious symbols, such as the Pelican and the Phoenix, derive from it.

PHYSIOLOGY, see ANATOMY AND PHYSIOLOGY.

PHYTALUS, eponym of the Phytalidae, an Attic clan having certain duties in the worship of Theseus (q.v.; Plut. *Thes.* 23). According to what is no doubt the clan-legend, Phytalus received Demeter in his house when she visited Attica, and she gave him the fig-tree, whereof he is apparently the presiding hero or daimon, hence his name, 'planter', and his descendants welcomed Theseus. Paus. i. 37. 2 and 4. H. J. R.

PICENES. Picenum is that part of the Adriatic coast which is contained between Ancona and the river Sangro. Linguistic and archaeological evidence connect the Picenes very closely with the opposite coast of Illyria and have suggested a definite Illyrian immigration of doubtful date and magnitude. The view, however, that this region continued to be inhabited principally by descendants of the original neolithic stock must be given due weight. Less important is the probable intermingling of Picene-speaking Italic tribes. The name Picenes may be considered in archaeology as a regional term to include the inhabitants of the whole district on the east of the Apennines from Rimini to Vasto. This constitutes a homogeneous cultural province contrasting in every respect with its northern and western neighbours. These 'Picenes', in the broader sense, preserve the burial custom of inhumation, unlike the Villanovans. The earlier phases of their civilization are bound up with Istria and the Balkans, while the later and richer developments after 600 B.C. depend on land-trade with Magna Graecia.

Material for study is rare before 800 B.C. Some large eighth-century cemeteries demonstrate the remarkably war-like character of the Picenes; every man's grave contains weapons, among which many are of Balkan types. Dress and ornaments are well represented in

graves of the sixth century; the similarity to objects found round Como (q.v.) betrays the existence of definite trade-routes. The prodigal use of amber points to the head of the Gulf of Venice (see AMBER). In the sixth and fifth centuries carvings in amber and ivory, figured bronzes of Ionic style, and fine bronze bowls and censers are evidence of a lively trade through Apulia with Tarentum. Apulian painted pottery is occasionally found in Picene graves. Many works of art remain unpublished in the museum of Ancona.

D. Randall-MacIver, *The Iron Age in Italy* (1927); and in brief summary, *Italy before the Romans* (1928). For the linguistic side, J. Whatmough, *The Foundations of Roman Italy* (1937).

D. R.-MacI.

PICTOR, see FABIVS (6).

PICUMNUS, see PILUMNUS.

PICUS, properly the woodpecker, sacred to Mars (q.v.), but rationalized into an early king of the Italians (for his identification with Zeus in Diod. Sic. 6, frag. 5, see Halliday in *CR* xxxvi (1922), 110 ff.). Ovid (*Met.* 14. 320 ff.) gives an explanation, perhaps his own, of how he came to be changed into bird-form. H. J. R.

PIETAS is the typical Roman attitude of dutiful respect toward gods, fatherland, and parents and other kinsmen (Cic. *Nat. D.* 1. 116: 'est enim pietas iustitia aduersum deos'; Cic. *Inv. Rhet.* 2. 66: 'religionem eam quae in metu et caerimonia deorum sit appellant, pietatem quae erga patriam aut parentes aut alios sanguine coniunctos officium conservare moncat'). Pietas, personified, received a temple in Rome (191 B.C.); she is often represented in human form, sometimes attended by a stork, symbol of filial piety; during the Empire, Pietas Augusta appears on coins and in inscriptions. Some Romans adopted as cognomen the term Pius; Virgil's 'pius Aeneas' significantly expresses the Roman ideal in his religious attitude, in his patriotic mission, and in his relations with father, son, and comrades. W. C. G.

PIGNUS, see SECURITY.

PIGRES, Carian poet; brother of Artemisia wife of Mausolus; said to have interpolated pentameters into the *Iliad*, and to have written the *Margites*.

EGF 65.

PILATUS, see PONTIVS (4).

PILUM, see ARMS AND ARMOUR, ROMAN.

PILUMNUS and **PICUMNUS**. By Roman custom, when a woman was delivered, three persons kept off Silvanus (q.v.) from her by chopping, sweeping, and pounding with a pestle; the deities Intercidona, Deverra, and Pilumnus were supposed to preside over these actions (Varro in Aug. *De civ. D.* 6. 9). More puzzling is the statement of Varro in Nonius (p. 528 M), which associates Picumnus with Pilumnus as marriage-gods. H. J. R.

PILUS, see CENTURIO, PRINCIPILUS.

PINDAR (*Πίνδαρος*) (518-438 B.C.), lyric poet, of Cynoscephalae in Boeotia, born in the Pythian year of the 65th Olympiad, i.e. 518 B.C. (Suidas, s.v. *Πίνδαρος*, fr. 183). Nothing is known of his parents, Daiphantus and Cleodice, but they must have belonged to an aristocratic family, since Pindar himself claims to be a member of the Aegeidae, an international clan with high connexions in Sparta, Thera, and Cyrene (*Pyth.* 5. 75, with scholl., cf. Hdt. 4. 149). He learned his craft first from his uncle Scopelinos, later at Athens from Apollodorus and Agathocles, who was also the teacher of Damon (Pl. *La.* 180 d). His earliest known poem is *Pyth.* 10, written in 498 for a young protégé of the powerful Thessalian Aleuadae. In 490 he made the acquaintance of Theron's brother, Xenocrates, and celebrated his

chariot-victory with *Pyth.* 6, while *Pyth.* 12, written in the same year for a Sicilian flute-player, is probably due to the same connexion. In 486 he wrote *Pyth.* 7 for the ostracized Alemaeonid Megacles. To the same years may belong *Ol.* 14, and *Paeon* 6 and *Nem.* 7, which show a curious conflict between him and his Aeginetan patrons; they seem to have thought that in the first poem he had libelled their hero Neoptolemus, and in the second poem he maintains his position against them. In the Persian Wars of 480-479 Pindar seems to have accepted the Theban policy of neutrality (fr. 99), but without satisfaction, as *Isthm.* 8, written soon after, shows, while *Isthm.* 5 shows his appreciation of Aeginetan courage at Salamis. In 476 he went to Sicily, where he produced *Ol.* 1 in honour of Hieron's victory in the horse-race and *Ol.* 2 and 3 in honour of Theron's in the chariot-race. *Ol.* 2 is an important and intimate document about life after death, and shows the influence of Orphic ideas, which were prevalent in Sicily. *Nem.* 1 and 9, also written for Sicilian patrons, may belong to the same period. On his return Pindar probably wrote his famous Dithyramb for Athens (frs. 64-5), and it is possible that in *Pyth.* 9 (474 B.C.) he defends himself before a Theban audience against the charge of undue partiality for Athens. *Pyth.* 11 may belong to the same year, but the alternative date of 454 cannot be entirely disregarded. Though he did not return to Sicily, he maintained his connexion with Hieron. *Pyth.* 3 is a poetical letter, sent probably about 474 as a consolation to the suffering tyrant; it refers to the cult of Pan, for which Pindar wrote a Hymn (frs. 85-90). *Pyth.* 1 celebrates both Hieron's chariot-victory of 470 and the official foundation of his new town of Aetna under his son Deinomenes. *Pyth.* 2, a dark and unhappy poem, may have been written in 468, when Hieron won the chariot-race at Olympia, but asked Bacchylides instead of Pindar to celebrate his victory for him. At the same time Pindar sent a *Hyporchema* (fr. 94) to Hieron. *Ol.* 6, written for a friend of Hieron's, probably belongs to the same year. At this period Pindar numbered patrons in many different parts of Greece. He wrote an Encomium for Alexander of Macedon (fr. 106), a *Paeon* for Abdara (fr. 36), poems for Sparta (frs. 101, 189), *Ol.* 7 for a Rhodian in 464, and *Ol.* 13 and fr. 107 for a Corinthian in the same year. The height of his achievement in these years were *Pyth.* 4 and 5, written for the King of Cyrene in 462-461. In the first of these Pindar enters high politics and appeals to the king to recall his exiled kinsman Damophilus. Before 460 Pindar shows no hostility to Athens, but after it he seems to have been shocked and pained by the policy of the Athenian imperialists. At first he maintained his personal loyalties to Athenians such as Melesias (*Ol.* 8 in 460), but in *Isthm.* 7, which seems to have been composed after Oenophyta (c. 456 B.C.), he combines a quietist attitude in himself with a conviction that the gods punish the presumptuous. His latest known poems are *Pyth.* 8, written in 446 for a young Aeginetan at a time when it seemed possible that Aegina might free herself from Athens, and *Nem.* 11 and fr. 108 for the boy Theoxenus of Tenedos, who is said to have been with Pindar at his death. He died at the age of eighty in 438.

Pindar's works were collected in seventeen books, Hymns, *Paeans*, Dithyrambs (2), Processional Songs (2), Maiden-Songs (2), other Maiden-Songs *Hyporchemata* (2), Encomia, Dirges, and Epinicians (4). The Epinicians have by an accident survived complete; despite their peculiar character they are probably typical of all Pindar's work, and new fragments of *Paeans* and Dithyrambs show little difference of style and thought. Pindar seems to have made the rejoicing over victory a religious occasion on which he demonstrated the power of men to find, temporarily, a happiness like that of the gods by displaying their *ἀρετή*. This

ἀρετή was itself partly inborn and due to men's having divine blood in their veins. His Epinicians are usually choral hymns in which the victor is presented to some god, and they have the traditional characteristics of such hymns,—moral maxims, a myth, and praise of the gods. Into this frame the victor's own achievements are fitted, not always easily. In his maxims Pindar sometimes achieves a great beauty and insight. His myths, inserted for varying reasons, tend to stress elements in a story rather than to tell a straight tale. In them Pindar often improves on his originals in the interests of morality, notably in *Ol.* 1, where he rejects the story that Pelops' shoulder was eaten. Sometimes, as in the great Argonautic saga of *Pyth.* 4, the myth is told for its own sake; more often it has a moral, as in *Pyth.* 3 and *Ol.* 1. Some of the shorter Epinicians were sung at the place of victory, notably *Ol.* 11 and *Pyth.* 7, but more usually a longer poem was sung when the victor came home. The other types of poem show a similar high style and temper, though the Maiden-Songs may have been more simple. Pindar's language is an elaborate poetical creation, made of several dialects, with many echoes and variations from Homer. His poems are written in regular stanzas, either in a series of strophes on the same plan or in a series of triads, each consisting of strophe, antistrophe, and epode. Except for *Isthm.* 3 and 4, which may be the same poem, no two poems are the same metrically. Pindar uses three main classes of metre, Dorian or 'dactylo-epitrite', Aeolian built up from such elements as the glyconic, choriambic dimeter, etc., and *paenion* as in *Ol.* 2. Pindar was a great conservative in politics, morals, and religion, but the glory of his poetry lies largely in his sense of joy and honour. He was capable of deep emotion and, at times, of a sublimity to which there is no parallel.

PINDARUS, a name in medieval manuscripts for Homerus Latinus (see *ILIAS LATINA*), due perhaps to the possible use of 'Thebanus' as an epithet for Homer.

J. W. Duff, *Lit. Hist. Rome* (Silver Age), 344.

PIRACY was an endemic plague in the ancient Mediterranean. From prehistoric times this sea was the world's chief highway of traffic, and most of the traffic proceeded by regular routes (usually near the coast), which lay open to observation. Ancient merchantmen were slow and unhandy, and therefore fell a ready prey to the pirate cutters, whose crews, lurking in the numerous gulfs and coves of the Mediterranean, or behind off-shore islands, and making full use of their knowledge of local winds and currents, could often spring a surprise on passing traffic. The social and political conditions of the ancient world favoured the growth of piracy. The institution of slavery made kidnapping profitable; lack of land, spells of unemployment for mercenary soldiers or rowers, and political revolutions with their harvests of broken men, provided a constant stream of recruits to the corsairs. Ancient city-states encouraged privateering in war (see *SYLL*), and the less scrupulous towns acted as receivers for the pirates: in the first century B.C. Delos became notorious as a slave mart where no awkward questions were asked. The Mediterranean was full of pirate haunts (though the Moroccan Riff did not yet possess its later evil reputation). In western waters Liguria and the Balearics, Ichia and the Aeolian Isles, and, above all, the Illyrian coast were regular stations for corsairs. In the Aegean

area the islands off Thessaly, the channel of Cythera, and (more especially) Crete served as bases. In the Black Sea, the Crimea and the Caucasus foreshore were infested. But the most extensive pirate base was the rugged coast of south Asia Minor.

2. In prehistoric times the Aegean Sea was cleared of corsairs by the sea-kings of Crete. In the Homeric age, after the breakdown of the Minoan thalassocracy, piracy was not only common but almost respectable (Thuc. 1. 5). Hence early Greek cities were usually built some distance inland, harbours were fortified, and watch-towers set along the coast. In the eighth and following centuries piracy was checked by the institution of city-state navies, until the tyrant Polyerates (q.v.; c. 525 B.C.) used his war-fleet for systematic plunder. After the Persian Wars the Athenian navy regularly policed the Aegean Sea, which now became safer than ever in Greek history. But a scheme of Pericles to establish a pan-Hellenic patrol-fleet miscarried (Plut. *Per.* 17), and in the Peloponnesian War privateering became a serious scourge. In the fourth century piracy again became rife (Isoc. *Paneg.* 117); the restored Athenian navy was not wholly successful in repressing it; and the plan of Philip II of Macedon (renewed by Demetrius the Besieger—*SEG* i. 75, l. 22) to create a pan-Hellenic naval police was not carried into effect. After the death of Alexander the intensified warfare of the Diadochi gave a fresh fillip to piracy, but the Ptolemaic and Rhodian fleets rendered good service in protecting shipping.

3. In the western Mediterranean the Greeks had to contend not only with regular pirates but with the privateering attacks of their Carthaginian and Etruscan rivals; and the fleets of Syracuse made only desultory attempts to safeguard Greek shipping. In the fourth and third centuries better protection was given by the Romans, who destroyed the pirate base at Antium in 338, instituted a small patrol fleet in 311 (see *DUOVIRI NAUALES*), and made two pirate-drives in the Adriatic (229 and 219). But in the second century the Republic disbanded its navy, and the Hellenistic States followed suit. Consequently Mediterranean piracy reached its height in the first century B.C. Regular flotillas of war-ships, based on Crete and south Asia Minor, were organized for the plunder of entire towns, and entered into league with the enemies of Rome, Mithridates VI and Sertorius. After spasmodic attempts to cope with this danger in 102 and 78–68 (see *ANTONIUS* 1 and 2, *METELLUS* 8, *SERVILIUS* 2), the Romans commissioned Pompey to make a comprehensive drive against the pirates, and by a series of excellently organized operations the Mediterranean Sea was all but cleared in three months. After a temporary recrudescence of piracy under Sextus Pompeius (q.v. 5), Augustus instituted patrol fleets which kept the Mediterranean and the west European seaboard safe for some 250 years; but the Black and the Red Seas were left unprotected. After A.D. 250 the Goths and in the fifth century the Vandals infested Mediterranean waters, and from the third century Saxon pirates frequented the North Sea and the Channel.

M. C.

PIRAEUS (*Πειραιεύς*) is a promontory four miles from Athens, with a landlocked harbour on the west (Kantharos or *μέγας λιμὴν*) and two small harbours on the east (Zea and Munychia, q.v.). Themistocles fortified it from the time of his archonship (493–492 B.C.); it grew first as a naval harbour, with docks and ship-houses, and fortifications narrowing the harbour-mouths so that they could be closed with chains; then as a commercial harbour, with quays and warehouses on the great basin. It grew rapidly, and after the Persians had destroyed Athens was suggested as the capital of Attica. *G.* 450 Hippodamus of Miletus laid it out on a rectangular plan.

The inhabitants were the radical party of Athens, attached by interest to navy and empire; they included many foreigners, who introduced strange cults (e.g. Bendis; Plato, *Resp.* 327 a). It was joined to Athens by the Long Walls (q.v.); its fortifications were destroyed in 404 but rebuilt by Canon in 393. The chief event in its later history was its siege and destruction by Sulla (87–86). Considerable parts of the walls remain; also ships' houses at Zea and Munychia, and two theatres.

W. Judeich, *Topographie von Athen*² (1931), 144 ff.; 430 ff.

T. J. D.

PIRENE (*Πειρήνη*), see PEGASUS.

PIRITHOUS (*Πειρίθοος* or *-θους*), in mythology, a Lapith, son by Zeus of Ixion's wife Dia (*Il.* 14. 317–18; Pherecydes in schol. *Ap. Rhod.* 3. 62). Homer knows of him as fighting the Centaurs (*Il.* 1. 263 ff.), presumably in the quarrel mentioned *Od.* 21. 295 ff., and a doubtfully genuine verse (*Od.* 11. 631) mentions him in Hades. In the first and last of these passages he is associated with Theseus (q.v.), whose close friend he is in later authors. Hence, as our mythological tradition is largely Attic, he tends to appear as little more than the pendant of his friend. He is actually an Athenian in schol. *Il.* 1. 263.

One of the few adventures which are his rather than Theseus' is his wedding-feast. Marrying Hippodamia daughter of Butes (*Il.* 2. 742 and schol. on 1. 263), he forgot, according to one account, to include Ares among his guests (Servius on *Aen.* 7. 304). For that or some other reason (the simplest is that they were very drunk, cf. *Od.* 21. 295, where one Centaur is responsible for the disturbance) the Centaurs abused his hospitality by offering violence to Hippodamia, and a great fight began (Ovid, *Met.* 12. 210 ff.; the earlier accounts of a story which the Parthenon metopes show to have been well known in the fifth century, if not before, have not survived), ending in the victory of the Lapithae.

For the rest, Pirithous took his share in the carrying off of Helen, the war against the Amazons, and finally Theseus' descent to Hades, which, indeed, in one account (Hyginus, *Fab.* 79. 2) was undertaken to get Persephone as wife for Pirithous, in return for his services in the matter of Helen. Theseus in most accounts escapes; Pirithous generally does not (but cf. Hyginus, *ibid.* 3).

Weizsäcker in Roscher's *Lexikon*, s.v.

H. J. R.

PISA was the district round Olympia; it probably never contained a town, but the Pisatans were in early times a power independent of the Eleans. After Pheidon's usurpation of the Olympic Games (668 B.C.) they held the presidency until c. 580, under the tyranny of the house of Pantaleon. Their claim was revived by the Arcadians in 364 (Xen. *Hell.* 7. 4. 28).

H. T. Wade-Gery, *CAH* iii. 544 ff.

T. J. D.

PISAE, nowadays *Pisa* on the Arno, an Etruscan, possibly originally a Ligurian, town (it was certainly not founded from Pisa in Elis: Serv. ad *Aen.* 10. 179; Dion. Hal. 1. 20). Although presumably important earlier, it is first mentioned in 225 B.C. when the Romans used its harbour (Polyb. 2. 16 f.; Livy 21. 39). Pisae served as a frontier fortress for Rome against the Ligurians and in 180 offered territory for a Latin colony (Livy 33. 43, etc.; 40. 43). Apparently this colony never materialized, although in 177 neighbouring Luna (q.v.) received a citizen colony. Later Pisae became a prosperous Augustan *colonia* but, despite its importance, is seldom mentioned (Strabo 5. 222; Dessau, *ILS* 139 f.).

N. Toscanelli, *Pisa nell' antichità*, 3 vols. (1933–4).

E. T. S.

PISIDIA, a mountainous district of south Asia Minor, at the western extremity of the Taurus chain. It was inhabited by predatory tribes which evaded all attempts

by the Persian kings and their Hellenistic successors to subdue them effectively, though they made temporary submission to Alexander, and were partly held in check by the neighbouring Seleucid colony of Antioch (q.v. 2). The Pisidians apparently escaped invasion by Servilius (q.v. 2) Isauricus in 75 B.C., and they beat off an attack by the Galatian king Amyntas (25); but they were finally reduced by Sulpicius Quirinius and incorporated in the province of Galatia. The earliest urban centres of Pisidia were at Selge and Termessus; under Roman occupation, especially in the second century A.D., many prosperous small cities sprang up.

Strabo 569-77. Jones, *Eastern Cities*, 125-47.

M. C.

PISISTRATIDS, see HIPPIAS, HIPPARCHUS.

PISISTRATUS (Πεισιστρατος), tyrant of Athens 560-527 B.C., claimed descent from the Neleids of Pylos and Pisistratus, archon 669/8 B.C. His mother was related to Solon. As polemarch (c. 565) he distinguished himself in war against Megara. During the subsequent faction fights he raised a third party called *Hyperakrioi*, *Diakrioi*, or *Epakrioi* (of which, though all explanations are speculative, the nucleus was probably the free mining population of the Laurium district adjacent to Sunium, ἀκρον Ἀθηνῶν), and in 560 made himself tyrant with a body-guard granted him by the Athenian people (CAH Plates I. 284). After five years he was expelled by a coalition of the Plain and Coast parties, but an understanding with the Alcmaeonids soon led to his peaceful restoration. (On the story of his restoration by Athena see *PIW* xix. 163.) The new entente soon broke down and Pisistratus withdrew to Macedonia and the Mt. Pangaeus mining district; here he made money, raised mercenaries, and fostered alliances with Thessaly, Thebes, Eretria, Naxos, and Argos, and after ten years returned to Attica. He defeated his opponents at Pallene, and firmly based his tyranny on mercenaries and money derived partly from the Strymon district, partly from Attica. He died of sickness in 527.

Pisistratus retained the forms of the Solonian constitution, remaining to the end affable and benevolent. He encouraged small farmers and aimed at keeping them content to pay a moderate tax on their produce: hence the district judges instituted by him and his frequent journeys about the country. He succeeded in placating many of the nobles; only the very greatest left Attica, either to establish a tyranny elsewhere under a friendly understanding, like Miltiades I in the Thracian Chersonese (opposite Pisistratus' own outpost at Sigeum), or in definite opposition, like the Alcmaeonids at Delphi. In his day Attic black-figured pottery became the foremost fabric in the Greek world, and Attic coinage one of its foremost currencies. His building programme included the Enneakrounos fountain and the temple of Olympian Zeus. The large industrial population implied by these developments was essentially urban, and the tyrant's good-humoured but determined efforts to keep the farmers out of the city is sufficient evidence that it was the basis of his power. Only at the great festivals of the Panathenaea and Dionysia did all Athenians assemble to celebrate the glory of their city. Apollo was placated by a solemn purification of Delos.

The levelling tendency of the Athenian tyranny prepared the way for the equalitarian democracy of the succeeding century, but Pisistratus' personal pliability and the way he repeatedly bowed to the storm only to return triumphant were also momentous in Athenian history, if they suggested to Cleisthenes the possibility of a government which might be in word the rule of the leading citizen but in fact a democracy.

P. N. U.

PISO (1) FRUGI, LUCIUS CALPURNIUS (cos. 133 B.C.), the Roman annalist, was tribune in 149, carrying his *Lex de pecuniis repetundis*, consul in 133, and censor, probably in 120. His *Annales* covered from the origins of Rome to his own times in at least seven books, the year 158 in bk. 7, the latest date 146; antiquarian and mythological fragments are also attributed to him. He rationalized the legends and, presumably under Cato's influence, set the ancient virtues against contemporary vices. Plain in style, although with lively anecdotes, he did not elaborate his material, and his authority was recognized by Cicero, Varro, Livy, Dionysius, and Pliny; Gellius quoted him for his archaism.

H. Peter, *HRRel.* 1² (1914), pp. clxxxi, 120; W. Soltau, *Litius' Geschichtswerk* (1897), exaggerating Livy's use of Piso; T. Frank, *Life and Literature in the Roman Republic* (1930), 172.

A. H. McD.

PISO (2), GAIUS CALPURNIUS, as consul (67 B.C.) opposed the Gabinian law and proposed a *Lex Acilia Calpurnia de ambitu*. He governed Gallia Narbonensis (66-65). In 63 he was defended by Cicero against a charge *de repetundis* brought at Caesar's instigation. In revenge he vainly attempted to accuse Caesar of conspiracy with Catiline.

F. Münzer, *PIW* iii. 1376; E. Ciaceri, *Cicerone* 1 (1926); W. McDonald, *CQ* 1929, 196; J. A. O. Larsen, *CPhil.* 1931, 127; H. Last, *CAH* ix. 341.

A. M.

PISO (3), GNAEUS CALPURNIUS, an unscrupulous and dissipated friend of Caesar and Crassus, formed with Catiline in 66 B.C. the so-called first conspiracy. Sent out of the way to Hispania Citerior as *quaestor pro praetore*, he was murdered in 64 by the natives.

F. Münzer, *PIW* iii. 1379.

A. M.

PISO (4), MARCUS PUPPIUS (cos. 61 B.C.), a Calpurnius adopted by M. Pupius, married Cinna's widow, Annia, whom he divorced when he went over to Sulla. He was propraetor in Spain and Pompey's legate. As consul, in the case against P. Clodius (q.v.) he proposed that the praetor should select a special jury from the then existing panels of judges. But Pupius obstructed his own proposal, and a modified plan was adopted, the *Lex Fufia*.

A. H. J. Greenidge, *The Legal Procedure of Cicero's Time* (1901), 387; J. L. Strachan-Davidson, *Problems of the Roman Criminal Law* ii (1912), 40.

A. M.

PISO (5) CAESONINUS, LUCIUS CALPURNIUS, father-in-law of Caesar, was consul with Gabinius (58 B.C.). He supported the proposals of Clodius (q.v.), and in return he was granted the province of Macedonia, with extraordinary powers, by a direct vote of the assembly. On his return in 55 he wrangled bitterly with Cicero, who had already attacked him in his speeches *Pro Sestio* and *De provinciis consularibus* (56) and now, in the *Oratio in L. Pisonem*, charged him with peculation, misgovernment, and neglect of the safety of his province. Through Caesar's influence he was appointed censor in 50; he followed Pompey to Capua in 49, but soon returned to Rome to join his son-in-law.

J. M. C.

R. Syme, *Roman Revolution* (1939), see Index.

PISO (6) FRUGI, LUCIUS CALPURNIUS (cos. 15 B.C.), called 'the pontifex' to distinguish him from the *augur* (no. 8). Born in 48, son of no. 5, Piso inherited a prudent nature and philhellenic tastes; he was the patron of the poet Antipater of Thessalonica. (According to Porphyrio on Horace, *Ars P.* 1, that poem was dedicated to the sons of this Piso.) Attested in Pamphylia in 13 B.C. (Dio 54. 34. 6), presumably as consular legate of the province of Galatia, he was summoned to Thrace to put down a serious insurrection, which task took three years and earned him the *ornamenta triumphalia* (Dio 54. 34. 6 ff.; Velleius 2. 98). Soon after this he may have been appointed proconsul of Asia (cf. *Anth. Pal.* 10.

25. 3 f.). Piso died in A.D. 32, after having been *prae-fectus urbi* for twenty years (Tacitus, *Ann.* 6. 11, if correct). He had enjoyed the unbroken confidence of Tiberius; and his notorious convivial habits impaired neither his efficiency nor his reliability (Seneca, *Ep.* 83. 14).

*PIR*², C 289. R. Syme, *Roman Revolution* (1939), see Index.
R. S.

PISO (7). GNAEUS CALPURNIUS (*cos.* 7 B.C.), who inherited from his father (*cos. suff.* 23 B.C.) a Republican independence of temper, was appointed governor of Syria in A.D. 17, for the avowed purpose of lending counsel and assistance to Germanicus Caesar when he journeyed to the East. After reciprocal bickering and open quarrel, Germanicus broke off his 'amicitia' with Piso. Germanicus' death (19) was attributed by his friends to magical devices or poisoning by Piso and his wife Plancina. Returning to Rome, Piso was prosecuted in the Senate, but took his own life before the trial was terminated, protesting his innocence and his loyalty to Tiberius.

R. S.

PISO (8). LUCIUS CALPURNIUS, consul (1 B.C.) and proconsul of Asia, pronounced in A.D. 16 a famous speech against the corruption of public life. Accused of *maiestas* in 24, he died before trial.

E. Groag, *PW* iii. 1383; *PIR*², C 290.

PISO (9). GAIUS CALPURNIUS (d. A.D. 65), came of a wealthy and distinguished family. He was exiled by Gaius, who compelled his wife Livia Orestilla to leave her husband in favour of himself and then accused the pair of adultery (probably A.D. 40). Under Claudius Piso became *consul suffectus*, but he showed no real ambition. He lived in magnificent style and was one of the most popular figures in Rome, with his charming manners and oratorical gifts, which he put at the service of rich and poor alike. It is surprising, therefore, to find him at the head of the 'Pisonian' conspiracy against Nero in 65. When the plot was betrayed, Piso, together with his associates, was compelled to suicide. His irresolution at the end, and the cringing flattery of Nero which he displayed in his will, reveal Piso as a man whom accident made famous.

*PIR*², C 284.

R. L. J.

PISO (10). LUCIUS CALPURNIUS, consul in A.D. 57 with Nero, whose adviser he was, served as proconsul in Africa (69). Suspected in 70 of aspiring to the throne, he was murdered by Valerius Festus, who was in touch with Licinius Mucianus in Rome.

E. Groag, *PW* iii. 1385; *PIR*², C 294.

PISO (11). CALPURNIUS, a contemporary of the younger Pliny (*Ep.* 5. 17), chose a Greek title *καταστερισμοί* for his elegiac poem on Constellations. His identification by Mommsen with the consul of A.D. 111 is doubtful.

PITHECUSAE, see AENARIA.

PITHOEGIA, see ANTHESTERIA.

PITHOLAUS, see VOLTACILIUS.

PITS, CULT. Apart from a *mundus* (q.v.), pits were dug in ritual for two principal reasons. (a) In rites of invocation of the dead, and in their tendence generally, liquid offerings were often poured into a pit, *βόθρος*, apparently by way of getting them underground into their realm; e.g. *Od.* 11. 517; Lucian, *Charon*, 22. (b) Consecrated objects, when worn out or useless (e.g. broken ornaments, bones and ashes of sacrifice, etc.), being still sacred, were often buried in a pit (Lat. *fauissa*) in the temple precincts.

H. J. R.

PITTACUS of Mytilene (c. 650–570 B.C.), statesman and sage. He commanded in the war against Athens for Sigeum, on which Periander of Corinth later arbitrated; helped to overthrow the tyrant Melanchrus, and after further party struggles in Mytilene was elected *aesymnetes* (q.v.) for ten years. He died ten years after laying down office. His best remembered law doubled the penalty for all offences if committed under the influence of drink. A moderate democratic reformer like his contemporary Solon, Pittacus was violently attacked by his younger fellow-citizen Alcaeus, whose family had helped to overthrow tyranny but wished to restore the old aristocracy.

Strabo 13. 617; Diogenes Laertius 1. 4; Suidas, s.v. 'Pittacus'; Plato, *Protagoras* 26 ff.; Plutarch, *Septem Sapientum Convivium*; C. M. Bowra, *Greek Lyric Poetry* (1936), ch. 4. P. N. U.

PITYOCAMPTES, see SINIS.

PIUS CESTIUS, see CESTIUS.

PLACENTIA, a north Italian town near the confluence of Po and Trebia, nowadays *Piacenza*. Placentia is first mentioned as a Latin colony successfully established despite Boian opposition (218 B.C.). Military mention of Placentia is frequent: it harboured Romans after the Trebia battle, resisted Hasdrubal, rose again after Gallic and Ligurian devastations (200–190), witnessed Civil War battles and Aurelian's Marcomannic defeat (Polyb. 3. 40. 66; Livy 27. 39. 43; 31. 10. 21; 34. 22. 56; 37. 46 f.; App. *Hann.* 7; *BCiv.* 1. 92; Suet. *Otho* 9; S.H.A. *Aurel.* 21). Otherwise, although always a prosperous *municipium* or *colonia* on the Via Aemilia, it is seldom mentioned (Cic. apud Asc. p. 3 Cl.; Tac. *Hist.* 2. 19).

E. T. S.

PLACIDUS (1), grammarian of fifth or sixth century A.D. The glossary extant (in several versions) under his name is a compilation from two separate works, one of which (now called pseudo-Placidus) was based on marginal notes in copies of Republican poets. The ed. of J. W. Pirie and W. M. Lindsay (*Glossaria Lat.* iv. 12–70) supersedes that of G. Goetz (*Corp. Gloss. Lat.* v. 3–158).

Cf. Teuffel, § 482. 6; Schanz-Hosius, § 1120.

J. F. M.

PLACIDUS (2), LACTANTIUS (6th c. A.D.?), a grammarian under whose name is extant a collection of scholia on the *Thebais* of Statius (ed. R. Jahnke, 1898). He is not identical with the glossographer.

Cf. Teuffel, § 321. 10; Schanz-Hosius, § 408.

PLACITA PHILOSOPHORUM, see AËTUS.

PLAGIARISM. I. GREEK. The charge of plagiarism was freely bandied about by Greek authors. Aristophanes accused Eupolis of 'vilely turning his *Knights* inside-out in the *Maricas*' (*Nub.* 553–4) and other comic poets of stealing his 'images' (ibid. 559), and Phrynichus Comicus was similarly accused (Scholl. Ar. *Av.* 750, *Ran.* 13). Isocrates said that some of his rivals made a living out of copying his writings (12. 16, cf. 5. 94). Among philosophers, Democritus is reputed (Favorinus ap. Diog. Laert. 9. 34) to have charged Anaxagoras with 'filching' (*ὑφρῆσθαι*) astronomical theories from someone else. Plato was said to have taken the idea of the *Republic* from Protagoras (Diog. Laert. 3. 37), and Epicurus to have plagiarized from his teacher Nausiphanes (id. 10. 7 and 14). Heraclides accused Apollonius of Perga of appropriating Archimedes' unpublished work on conic sections.

Investigation of plagiarism formed a part of Alexandrian scholarship. Aristophanes of Byzantium wrote *Παράλληλοι Μενάνδρου τε καὶ ἀφ' ὧν ἐκλεβεν ἐκλογαί*. Such studies enjoyed a great vogue in the first century

A.D. *Mimesis*, conscious imitation of good models, was recommended by the Atticists of that period to the aspiring writer, who was urged to say to himself, 'How would Homer, Plato, Demosthenes, or Thucydides have expressed this?' ([Longin.] *Subl.* 14.) Such imitation may lead to direct plagiarism, and Longinus (ibid. 13) is careful to distinguish between *μίμησις* and *κλοπή*. How freely plagiarism was discussed in the first century A.D. is shown by the list of authors who wrote, mainly in that century, *περὶ κλοπῆς*, preserved by Porphyry (ap. Euseb. *Praep. Evang.* 10. 3. 12).

So much Greek literature has been lost that it is seldom possible to say whether the charge is strictly maintainable in a particular case. But it must be remembered that the Greeks laid less stress than we do on originality of material. Originality of style was what mattered in their eyes. Further, in so far as historical works are concerned, writers were unwilling to break the flow of their style by constant references to authorities, until the conscientious Aristotle set the precedent, followed by Alexandrian writers, for extensive documentation. Herodotus often uses Hecataeus, but never names him except to disagree. Ephorus uses Herodotus, Plutarch (in his life of Coriolanus) Dionysius of Halicarnassus, without mentioning their sources. But the absence of an acknowledgment is not, of itself, sufficient ground for a charge of plagiarism

E. Stemmlinger, *Das Plagiat in der griechischen Literatur* (1912).
J. D. D.

II. LATIN. When Roman literature came under Greek influence, the Greeks themselves had fallen under the spell of their own past and found the royal road to authorship in imitating the best models. Thus Cicero (*De Or.* 2. 90), Horace (*Art. P.* 268 f.), and Quintilian (*Inst.* 10. 2) merely follow Greek theorists when they urge imitation on the young author. So it is not surprising to find that the Romans did not insist on originality as the prime literary virtue, but, freely acknowledging their debt to Greek models, made it a proud boast to have been the first to introduce a particular Greek genre into Latin poetry. Thus study preceded composition. Catullus can write no poem, he says, without his library and Horace must warn Albinovanus Celsus against borrowing too many plumes from the Palatine library. Indicative of the Roman attitude is Terence, who when accused of lifting certain characters from Naevius and Plautus defended himself on the ground that he had taken them straight from Menander—the virtue of original theft. Macrobius, too, apropos of Afranius' confession of promiscuous theft, remarks that both Greeks and Romans plundered one another. Ennius borrowed from Naevius and Lucretius from Ennius, while Virgil incorporates in his poems, often with striking improvements, many turns of phrase from his Latin predecessors. On the other hand, the occurrence of a line recalling the frivolous *Coma Berenices* in the passage describing the meeting between Aeneas and Dido (*Aen.* 6. 460) must surely be an unfortunate unconscious reminiscence.

We must mention, too, the habit of quoting another author's poems as a form of literary compliment. Thus Virgil includes in his tenth eclogue some four verses by his friend Cornelius Gallus.

PLANCINA, MUNATIA, was in Syria with her husband, Cn. Calpurnius Piso, governor of the province, when Germanicus and Agrippina were in the East (A.D. 18-19). By temperament no less domineering than Agrippina, she was, moreover, a friend of Livina. It was inevitable, therefore, that she should quarrel with Agrippina, and when Germanicus died in 19 Agrippina accused her of murder. Livina's intercession saved her life when Piso was condemned in 20. Accused again in 32, she committed suicide.

PLANCUS (1), LUCIUS MUNATIUS (*cos.* 42 B.C.), served under Caesar in the Gallic and Civil Wars, was *praefectus urbi* in 46 B.C., and subsequently governor of Gallia Comata (44-43), where he founded veteran colonies at Lugudunum and Raurica. He joined Antony before the end of the War of Mutina, was consul in 42, commanded an Antonian force in the Perusine War, and governed Asia (from 40) and Syria (c. 35) as Antony's *legatus*. Opposing Cleopatra's intended participation in the campaign of Actium, he went over to Octavian in 32. Plancus was the proposer of the title of Augustus for Octavian (27), was censor in 22, and restored the temple of Saturn.

Cicero, *Letters*; Velleius, bk. 2; Appian, *BCiv.* bks. 3-5; Dio Cassius, bks. 46-54. Modern literature: E. Jullien, *Le Fondateur de Lyon* (1892); F. Stähelin, *Munatius Plancus* (1900); Drumann-Groebe, *Gesch. Roms.* iv. 223-9; Tyrell and Purser, *Correspondence of Cicero vi*² (1933), pp. lxxvi-lxxvii.

PLANCUS (2) BURSA, TITUS MUNATIUS, brother of (1) above, promoted riots after Clodius' death and strongly favoured Milo's condemnation. After his tribunate (52 B.C.) he was accused by Cicero *de vi* and was condemned. He escaped to Caesar and returned in 49. In the campaign of Mutina he fought for Antony and was defeated near Pollentia.

A. M.

PLANTS, SACRED. Plants are associated with many deities, the reason being sometimes quite clear. Thus, corn is sacred to Demeter and Ceres alike, it being their province (mythologically the gift of the former; of the latter we have no legends). Similarly, vines belong to Dionysus (q.v.), since he is among other things a wine-god. In other instances we may reasonably conjecture that the plant is associated with the deity because used for some medical or magical purpose which falls within his or her province. Thus, wormwood is called *Artemis'* herb (*artemisia*), hence in some sense sacred to her; but she is a woman's goddess, and the herb was used to cure some diseases of women (Pliny, *HN* 25. 73), apparently those arising out of childbirth or pregnancy, for it is especially *Artemis Eileithyia* whom Pliny mentions in this connexion. Laurel had a reputation for purging from other than bodily ills (Festus, p. 104. 23 Lindsay); hence it is natural enough that Apollo, the divine specialist in purification, should be its patron. It should not, however, be assumed without further examination that the medical or magical use of the plant comes first and the association with the god is secondary, for the reverse may be true. Often the reason for the association is quite unknown and the ancients invented fantastic explanations; thus, no one can tell why the wreaths in Britomartis' festival must be of pine or mastic, and why myrtle (Aphrodite's especial plant) must not be used (Callimachus, *Dian.* 200 f.).

H. J. R.

PLANUDES, see ANTHOLOGY (para. 6).

PLATAEA, a town in south Boeotia between Mt. Cithaeron and the river Asopus, was influenced by its geographical position and by Theban enmity to collaborate constantly with Athens from 519 B.C. onwards. It joined the latter at Marathon (490) and suffered heavily from Mardonius (q.v.), who encamped near by (479). Plataea was the scene of the Greek victory over Mardonius, and a four-yearly festival (the *Eleutheria*) was instituted there to commemorate the battle. The town was attacked by Thebes in 431, and besieged by the Spartans (429-427). The inhabitants received asylum and isopolity at Athens, until their restoration by Sparta in 386. Plataea was again razed by the Thebans c. 373 for its fidelity to Athens (cf. the *Plataicus* of Isocrates). Philip restored the walls (c. 338), and Alexander helped to reconstruct it (c. 331). But Plataea never recovered its fifth-century prosperity.

G. B. Grundy, *Great Peloponnesian War* (1921), 435 ff. P. T.

PLATO (Πλάτων) (1) (c. 429–347 B.C.), son of Ariston and Perictione, both Athenians of distinguished lineage. His writings show the enormous influence that Socrates had upon him both by his life and by his death. He relates in his *Seventh Letter* that the spectacle of contemporary politics, during the ascendancy of his own associates as well as under the democracy, gradually weakened his original intention to become a statesman and drove him to the paradox that there was no hope for cities until philosophers became rulers or rulers philosophers. After the execution of Socrates in 399 he retired for a time to Megara with other Socratics. In the next twelve years he perhaps travelled to many places, including Egypt. At any rate he visited Italy and Sicily in 387, where he met Dionysius I and initiated lifelong friendships with Dion of Syracuse and the Pythagorean Archytas of Tarentum. On his return he was perhaps captured and ransomed at Aegina. It was probably only a few months later that he began formal and continuous teaching at a place near the grove of Academus about a mile outside the wall of Athens (see *ACADEMY*). This was his chief occupation almost without interruption for the remaining forty years of his life; but he made two more visits to Syracuse. Dionysius I died in 367; and Dion thereupon summoned Plato to try to realize the philosopher-king in the person of Dionysius II, and also to strengthen Dion's declining influence at court. Plato felt bound to try; but the new ruler's suspicion of Dion was soon reinforced by jealousy of his friendship with Plato. He banished Dion and sought to retain Plato. Some years later Plato was obliged to visit Syracuse for the third and last time, because Dionysius had promised to 'do as you wish about Dion' if he came, and to do nothing of the sort if he did not. Dionysius not merely broke his promise, but practically confiscated Dion's money and kept Plato a prisoner until the influence of Archytas procured his release. In 357 Dion re-entered Syracuse by force and expelled Dionysius. A few years later Dion was assassinated by persons who seem to have had something to do with Plato. The *Seventh Letter* was written to Dion's party after his death, ostensibly to urge moderation and constitutional procedure, but more to explain and justify Plato's own part in the whole miserable affair.

2. His **PUBLICATIONS**, which are all preserved, consist of some twenty-five dialogues and the *Apology*. There are also thirteen letters whose genuineness is much debated; but even those who reject them appear to think the *Seventh* reliable in its history. The precise order of these works is unknown; but stylometric and other inferences permit a rough division into three periods, of which the early certainly includes *Apology*, *Laches*, *Charmides*, *Enthyphro*, *Crito*, *Hippias Minor*, the middle certainly includes *Phaedo*, *Symposium*, *Republic*, and the late certainly includes *Sophist*, *Statesman*, *Philebus*, *Timaeus*, *Laws*. (For Plato's poetry see *ELEGIAC POETRY*, GREEK.)

3. The **EARLY DIALOGUES** aim primarily at portraying a character. Plato's Socrates is ugly in body but magnetic in mind; convivial and erotic, yet Spartan in habits and of enormous physical endurance. The most striking thing about him is his conversation, to which he devotes his whole life. At first appearing absurdly simple and homely, it soon becomes intensely impressive. Its main tone is great moral earnestness, often paradoxically strict; but this is seasoned with paradoxes of another sort (as that pleasure is the only good in *Protagoras*) and with an apparently mischievous treatment of his interlocutor. The main doctrine to which he tends is that virtue is knowledge. He usually does not specify what it is knowledge of, but on the whole seems to mean: of the individual's happiness or good. Hence, since real knowledge is supremely effective in practice, no one willingly does wrong; and so-called incontinence is

ignorance. Hence, also, virtue should be teachable; and Socrates wonders why great statesmen have not taught it to their sons. Hence, lastly, Socrates holds it his duty to shatter the false conceit of knowledge wherever it occurs. He asks questions to which there is only one answer; and when these admissions are put together they entail the contradictory of the answerer's original assertion. He explains in Plato's *Apology* that this bewildering elenchus is an essential preliminary to the acquisition of real knowledge and virtue; but neither there nor elsewhere does he justify his sly and mischievous manner of conducting it. The search for knowledge appears to him mostly as a question in the form: 'What is X?' When offered examples he says he wants 'not many X's but the one X', 'X itself', the 'form' or 'idea' or 'essence'. He regards this question as prior to all others, and even as answerable apart from any examples of X. Yet he cannot himself produce any answer, and all those proffered by others are dissolved by his elenchus. The typical form of an early Platonic work is therefore a dialogue which raises the question 'What is so and so?', refutes all suggested answers, and ends in ignorance.

4. The typical work of THE MIDDLE PERIOD is a narration of an earlier conversation, and Plato makes magnificent use of the opportunity to describe the external scene. The elenchus now yields to a blaze of positive doctrine; and the combination of artistic and philosophic excellence thus achieved makes the *Republic* a very great book. Instead of pursuing some particular 'form', Socrates is now represented as concerned about the nature of a 'form' as such, about the whole collection of 'forms' as such, and about the consequences of the hypothesis that there are such entities. 'We are accustomed to posit some one form concerning each set of things to which we apply the same name', *Resp.* 596 a. This form is the very thing itself meant by the name. Being invisible, it is grasped by thought and not by sense. It is absolutely and perfectly what it is, independent of all else, changeless, divine. The 'forms' constitute a second class of existences, more real than the changing animals and things around us. The 'form' of the Good has a unique status among them, being 'even beyond essence'; it has some of the characteristics the Christian ascribes to God, but Plato distinguishes it from God and regards all the 'forms' as quite independent of Him. He leaves the relations between 'forms' and things somewhat vague; but the 'forms' are certainly causes of things, both in that each 'form' causes the things named after it and, apparently, in that the 'form' of the Good helps to cause all things. The relation of a 'form' to its namesake is represented as that of the original to the copy, but also as that of what is shared in to what shares; and Plato apparently thought the two accounts compatible. Modern interpretations of these 'forms' as 'concepts' or 'hypotheses' are wholly mistaken; and even the terms 'substances', 'universals', and 'ideals' can be applied only with careful distinctions and reservations. The 'forms' were 'separate' in that they were independent and self-sufficient and not parts or elements of things; but they were 'unseparated' in that Plato meant his spatial language about them to be taken metaphorically, and in that he really believed that things 'shared' in them and could not have been what they are if there had been no 'forms'.

5. As the 'forms' are absolutely distinct from things, so our apprehension of them, which is knowledge, is absolutely distinct from opinion, which is a faculty set over things. There can be no true knowledge of the changing. Opinion is changeable, fallible, irrational, and the result of persuasion; knowledge is enduring, infallible, rational, exact, clear. Knowledge comes from teaching rather than persuasion, but from recollection rather than teaching; it is our recollection of the 'forms' we saw with the mind's eye before the body imprisoned and

confused us. The things we see now remind us of the 'forms' they imitate (*Phd.*); and the love of a beautiful person can lead us to the love of wisdom and of the 'form' of beauty itself (*Symp.*). In other places Plato seems to allow no part at all to sense in the creation of knowledge. Knowledge is by nature practical and commanding; for *ἐπιστήμη* and *τέχνη* are identical. For the method by which it advances see DIALECTIC.

6. The hypothesis that there are 'forms' has among its consequences that soul is immortal; and this is elaborately argued in the *Phaedo*. Within the human soul Plato finds three parts, the natural appetites, the spirit or resolution by which we can if we will resist the appetites, and the reason that determines when we should resist (*Resp.* bk. 4). Virtue is the proper functioning of these three. The man is wise if his reason decides rightly, brave if his spirit carries out the decision firmly, temperate and just if the better part rules the worse and each confines itself to its own business. Vice is necessarily unhappy because it is disorder and anarchy among these parts. Analogously, the ideal city will separate from the mass a small class of soldiers, living together without private property or family, and rendered by their education completely devoted to the protection of the city. They will perpetuate themselves mostly by procreation, but occasionally by enlisting a common citizen of superior metal. Within this 'spirit' of the city a higher education in mathematics and dialectic, and a series of examinations, will gradually elevate a few philosophic souls to an understanding of the 'form' of the good; and this will give them the duty though not the desire to rule. Plato's main political principle is that government is a science and requires expert knowledge. To this he adds a constitutional love of neatness and order. Both lead him to the strongest condemnations of democracy.

7. With the *Parmenides* and the *Theaetetus* Plato's late period approaches. In the latter he explicitly abandons narrated dialogue as cumbersome (143); in the former Socrates is for the first time a subordinate character. The *Parmenides* consists first of an apparently extremely damaging critique of the 'forms', and secondly of a sustained piece of abstract and self-contradictory dialectic. Undoubtedly Burnet and Taylor are mistaken in believing that the first part is really directed against the existence not of the 'forms' but of the sensibles. Undoubtedly also the 'forms' here attacked are those of Plato's own middle dialogues. But beyond this all is uncertain; and interpretations of the second part range from finding it a parody of some fallacious kind of reasoning to finding it an exposition of superrational truth.

8. The *Theaetetus*, applying the Socratic question to the concept of *ἐπιστήμη*, examines three likely answers with great thoroughness and insight. The first, that knowing is perceiving, is developed into an elaborate relativist theory of perception and knowledge, based on Protagorean and Heraclitean notions, before being abandoned because (1) it cannot deal with the undeniable difference between the layman and the expert, and (2) being or *οὐσία* is grasped by 'the soul herself by herself' and not through the senses. The second, that knowledge is true opinion, is quickly dismissed, but gives occasion for a digression on false opinion, in which Plato compares the mind to a waxen tablet and to an aviary. The third, that knowledge is true opinion with *λόγος*, allows him to examine the meanings of *λόγος*, and to consider the theory that knowledge is the analysis of compounds into their unknowable elements.

9. The *Sophist*, where the leader is an unnamed Eleatic, is Plato's most intense study in metaphysics. Sophistry entails falsehood, which entails 'not-being', which seems self-contradictory. 'Being' is no better; it raises difficulties alike for pluralists, monists, materialists, and immaterialists; it is neither rest nor motion, yet everything must either rest or move. The solution is

the doctrine of 'communication'. Some things communicate with each other, so that we can sometimes truly say 'A is B'. Some things do not communicate with each other. Some things communicate with everything else; e.g. otherness, for each thing is other than each other thing. Not-being therefore exists and has being as otherness; while being itself 'is not' myriads of things. Using this discovery, Plato finds an explanation for falsehood and error.

10. Inquiring about the *Statesman*, Plato reiterates that government like medicine is a job for experts, and infers that the perfect ruler should be completely irresponsible to the people and unfettered by any inviolable constitution. Law is a second-best, useful only when science is lacking. The best constitution is simply the rule of the expert; but, failing that, we have, in order of diminishing goodness, law-abiding monarchy and aristocracy and democracy, and then lawless democracy and oligarchy and tyranny. In this dialogue, and in *Phaedrus*, *Sophist*, *Philebus*, much space goes to the method of *διαίρεσις* and *συναγωγή*. *Διαίρεσις* is occasionally analysis into elements (*Phdr.* 270-1), but oftener distinction, and especially the 'carving' of a 'form' into component 'forms', which seems to be an ancestor of Aristotle's 'genus and species'. By repeated carving until we reach an 'atomic form', Plato expects to reach a definition for any 'form', and also, apparently, to 'demonstrate' its truth. By *συναγωγή* he understands 'seeing the one in the many', which probably includes both our 'universal in the particulars' and our 'genus in the species' (*Phlb.* 16-18).

11. The *Philebus*, weighing the claims of pleasure and knowledge to be the good, and undertaking a close analysis of the former, rejects both, but sets knowledge nearer to that unity of 'beauty and symmetry and truth' which makes a thing good. It is hard to say whether Plato considered this a termination of the *Republic's* quest for the 'form' of the good.

12. The *Timaeus*, devoted to natural science, describes how the creator made the world a single spherical living thing, having both soul and body, modelled upon 'the living creature that truly is', peopled with gods visible and invisible and with men. Tradition declares that this creator is only a mythical device for exhibiting the rationality inhering in the world, which has always existed and always will. Plato goes on to exhibit the complementary element, necessity. Besides the world and its model there is a third thing, the receptacle in which the copy becomes. The four elements can be analysed into the regular solids. The dialogue then deals at length with man, his various perceptions, the irrational part of his soul, his body, his diseases, and his health. This study, being directed towards things and not 'forms', cannot achieve infallible or even perfectly consistent results (29 c); but it will be as good as possible if we take care always to pursue both kinds of cause, reason and necessity (48 a).

13. The *Lysis*, Plato's longest and perhaps last dialogue, takes up again the question of the best constitution for a city. Though reaffirming the *Republic's* doctrine that the ideal is perfect unity achieved through communism (739), Plato now writes in a different temper and plans a different city. Extremes are bad, whether of despotism or of freedom; so let us have a mixed constitution. The citizens shall be 5,040 persons, each supporting his family by the cultivation of two inalienable parcels of land. Trading and teaching shall be practised exclusively by resident foreigners. There shall be an 'Assembly' and 'Council'. A long panel of officers culminates in the thirty-seven 'lawguards', for whom Plato gradually accumulates a multifarious set of duties; their authority, constitutional from the beginning, is further limited in the last book by the institution of 'Examiners' and of a 'Nocturnal Council' to revise the

laws. Contrary to the *Republic* and the *Statesman*, this work values law very highly, institutes 'preambles' to the laws by which the legislator adds persuasion to command, and is chiefly remarkable for its immense wealth of detailed enactments, regulating every part of public and private life. Furthermore, dialectic and philosophy, which the *Republic* emphasized as the coping-stones of the constitution, here yield almost entirely to religion. The reality of the divine can be proved both from the soul and from the stars, which are gods. Plato infers that everyone should be taught astronomy, and that atheists should be converted or killed.

14. Aristotle in his *Metaphysics* attributes to Plato doctrines not stated in the dialogues, especially that (1) there is a class of entities intermediate between 'forms' and things, immutable like 'forms' but plural like things, and these are what mathematics studies; (2) the 'forms' are numbers, composed of 'inassociable' units; (3) these number-forms are not ultimate, but result from the action of 'the One' upon 'the indefinite Dyad of the Great and Small'; thus produced, they in turn act upon this Dyad to produce the world of changing things. This report of Aristotle's cannot be wholly mistaken or fictitious; and something of these doctrines was probably delivered in Plato's famous lecture on the Good, for the Good and the One were apparently identical. Plato's view on the inefficiency of writing (*Phdr.* and *Letter 7*) is sufficient explanation of their not being found in the dialogues.

15. Burnet's edition of the *Phaedo* (1911) urged that Plato must have meant this dialogue to be essentially a true account of what was said on Socrates' last day. It would follow that Socrates had studied physics in his youth, that he believed in immortality and the 'forms', and that Plato was not the inventor of the 'forms'. Burnet and Taylor have since developed this theory into the general principle that Plato aimed at historical accuracy, ascribed to famous persons only the sort of view they had really held, and expressed himself only through such characters as the 'Eleatic stranger'. The extreme consequence, that the *Timaeus* is a minute reconstruction of the state of science several decades earlier, is brilliantly drawn in Taylor's commentary; and it constitutes an adequate disproof of Burnet's hypothesis by reduction to impossibility.

R. R.

16. Plato's style possesses infinite variety. He can write easy, graceful, charming narrative, lit up with flashes of humour (openings of *Protagoras* and *Republic*, *Symp.* 217 a-21 c) or infused with the noblest pathos (end of *Phaedo*). In another vein he is capable of the gorgeous pageantry of the *Phaedrus* myth (245 c ff.), the passionate religious fervour of the address to the young atheist (*Leg.* 904 e-6 c), and the solemnity of the last paragraph of the *Republic*. Once or twice he recalls the statuesque grandeur of the pre-Socratics (*Phdr.* 245 e-e, *Resp.* 617 d-e), perhaps the only literary influence definitely traceable in him.

His language has a lavish fullness, sometimes amounting to redundancy. In structure he ranges from the simplest λέγεις εἰπομένην (*Resp.* 328 b-c) to very long periods, often straggling and anacoluthic (*Resp.* 488 a-e), but sometimes even more powerful than those of Demosthenes, though quite different from them (*Crit.* 120 b-c and the tremendous period at *Leg.* 865 d-e). He fully appreciated the potentialities of a very short clause, closing a period or immediately following it (*Leg.* 727 c βλέπται γάρ: *Phdr.* 238 c ἔρως ἐκλήθη). His language, as the ancient critics noted, is often deeply tinged with poetry. It is packed with metaphors (sometimes dead metaphors revived), especially from music. He will go back to a metaphor, as a dog goes back to a bone, when one thinks he has done with it. Much of the *Sophist* is cast in the form of an extensive metaphor, the elusive Sophist, so hard to define, being represented as a hunted animal eluding chase. In his

later years P.'s style shows traces of mannerism—a trick of interlacing the order of words, and some affectations of assonance (*Leg.* 657 d ἡμῶν ἡμᾶς, cf. 659 c; *figura etymologiae*, *Leg.* 868 e), including the pun, which fascinated P., though he laughed at it in others. But all in all, from the earliest works to the latest, no other author reveals as Plato does the power, the beauty, and the flexibility of Greek prose.

Dion. Hal. *Comp.* 18, *Pomp.* passim: [Longin.] *Subl.* 12-13, 32. For an admirable discussion of P.'s style and ancient criticisms of it see E. Norden, *Antike Kunstprosa* (1898) i. 104-13. J. D. D.

The following works, arranged in a probable chronological order, may be confidently accepted as genuine: *Hippias Minor*; *Laches*; *Charmides*; *Ion*; *Protagoras*; *Euthyphro*, *Apology*, *Crito* (comm. J. Burnet, 1924); *Gorgias* (comm. W. H. Thompson, 1894); *Meno* (comm. E. S. Thompson, 1901); *Lysis*; *Menexenus* (c. 386); *Enthydemus*; *Cratylus*; *Symposium* (c. 384); *Phaedo* (comm. J. Burnet, 1911); *Republic* (comm. J. Adam, 1902, etc.; tr. A. D. Lindsay, 1908, etc.); *Parmenides* (c. 370, tr. A. E. Taylor, 1934); *Theaetetus* (c. 368, comm. L. Campbell, 2nd ed. 1883); *Phaedrus* (comm. W. H. Thompson, 1868); *Sophist* (360 or later) and *Statesman* (comm. L. Campbell, 1867); *Philebus* (comm. R. G. Bury, 1897); *Timaeus* (A. E. Taylor comm. 1928, tr. 1929); *Critias*; *Laws* (comm. E. B. England, 1921; tr. A. E. Taylor, 1934).

The following are doubtfully genuine: *Hippias Major* (comm. D. Tarrant, 1928); *Clitopho*; *Epinomis* (tr. with notes J. Harward, 1928); *Letters 2-13* (comms. F. Novotny, 1930, and G. Morrow, *Illinois Univ. Studies in Lang. and Lit.* xviii, 1935; tr. L. A. Post, 1925).

The following may be confidently rejected as spurious: *Letter 1*; *Alcibiades 1* and *2*; *Hipparchus*; *Amatores*; *Theages*; *Minos*; *De Justo*; *De Virtute*; *Demodocus*; *Sisyphus*; *Eryxias*; *Axiochus*; *Definitions*.

PLATO (2), Athenian comic writer. First play, Ζεύς κακούμενος, (?) 428 B.C.; last datable reference 389. Wrote twenty-eight comedies (Suid. and anon. *Περὶ κωμ.*) both Old and Middle, many on political themes. Such are *Nikai* (ref. to Peace of Nicias); *Περὶ αλλαγῆς* (c. 420, possibly dealt with sufferings of Athens under Hyperbolus); *Συμμαχία* (possibly produced by Cantharus, q.v.); *Πείσανδρος* (possibly attacked the politicians whose machinations resulted in the rule of the Four Hundred); *Τοπράι* (c. 414; attacked Diotriches (cf. *Ar. Av.* 798, 1442)); *Ἑλλάς ἡ Νῆσοι* (?) dealt with the break-up of the Athenian Empire); *Κλοφῶν* (405 (hyp. 1 *Ar. Ran.*)); *Ἰπρέβεις* (?) ref. to embassy sent to Persia after Cnidus).

He also wrote mythological burlesques: Ζεύς κακούμενος; Εάντρηαι ἡ Κέρκυρας; Νῦξ μακρά (all three dealt with the Heracles saga); Ἀδωνις; Δαίδαλος (possibly really by Aristophanes, q.v.); Λαῖος; Μενέλαος; Φάων (depicting the loves of Aphrodite and Phaon; a long fragment (174) shows the goddess acting as *leno* to her favourite). A third class of his plays treated of social subjects: e.g. Αἱ ἀφ' ἑρῶν; Λάκωνες ἡ Ποιηταί (possibly dealt with recall of one or more of the old school of poets from Hades); Σκευαί (? = 'Accoutrements of Tragedy'); Σοφισταί (parodies Eur.; a play probably on the lines of Ar. Nub.). The few ancient criticisms on Plato we possess comment on his elegance and his scurrility. The fragments show a prevalence of erotic motive.

FCG ii. 615 ff.; CAF i. 601 ff.; Demiańczuk, *Suppl. Com.* 76 ff. M. P.

PLATONISM, MIDDLE, see MIDDLE PLATONISM.

PLATONIUS (of uncertain date) wrote *On the Difference between Comedies*, i.e. between Old, Middle, and New Comedy, and *On the Difference of Types*, in which he discussed the characteristics of individual comic poets. The extant fragments, prefixed to editions of Aristophanes, are brief but valuable. J. F. L.

PLATORIUS NEPOS, AULUS, consul in A.D. 119 and governor of Lower Germany, was legate of Britain from July 122 (JRS xii. 65; xx. 21) until after Sept. 124 (CIL vii. 1195 = xvi. p. 64, no. 70). He was a personal friend of and possible successor to Hadrian (S.H.A. *Had.* 4. 2; 15. 2) whom he apparently accompanied to Britain (122), bringing Legio VI Victrix from Lower Germany. He built the milecastles (CIL vii. 660-3; JRS xxv. 16) and forts (JRS xxvii. 247; xxviii. 201) of Hadrian's Wall (q.v.). I. A. R.

PLAUTIANUS, GAIVS FVLIVS (cos. A.D. 203), was, like Septimius Severus, a native of Africa, and is said to have been exiled by Pertinax for treason. The origin of his relationship with Septimius is unknown, but by the time of the Second Parthian War he had won his confidence and vigorously persecuted the adherents of Niger. Appointed Praetorian Prefect, he came to exercise an almost autocratic power, and while retaining the Emperor's trust amassed a private fortune. In A.D. 202 he reached the zenith of his career by the marriage of his daughter Plautilla to Caracalla. Next year he was consul with Geta and thus held at the same time the two highest appointments open to senators and knights. His influence over the Emperor was resented by Julia Domna, and when he caused his own statue to be placed among those of the imperial family he fell from favour (203). But his disgrace was short-lived, and for another year he continued to enjoy the indulgence of the Emperor. His final downfall was due to Caracalla, who was disappointed in his marriage and induced his father to believe that the prefect was plotting his assassination (205).

For bibliography see SEVERUS (1).

H. M. D. P.

PLAUTIUS (1) SILVANUS, MARCUS, a moderate popularis of obscure origin, as tribune in 89 B.C. was responsible with C. Papirius Carbo for the *Lex Plautia Papiria* which, supplementing the *Lex Julia* of 90, offered the citizenship to insurgents who withdrew straightway from the revolt, and to folk not covered by the previous law, in particular to certain persons who, though attached to the *municipia* incorporated in 90 as *adscripti*, were then resident not in their municipality but at Rome or elsewhere in but not outside Italy. Such persons were to apply to the *praetor urbanus* within sixty days.

Plautius also modified the *questio Variana*, which was trying the friends of Livius Drusus and other sympathizers with the insurgents, by a *lex iudiciaria* which introduced mixed instead of equestrian juries.

Agricola, *Com.* p. 721; Cicero, *Arch.* 4. 7. A. N. Sherwin-White, *The Roman Citizenship* (1939), 218. A. N. S.-W.

PLAUTIUS (2) HYPSSAEVS, PVBLIVS, was Pompey's quaestor in the East and consular candidate in 53 B.C. with Q. Caeilius Metellus Scipio against Milo. He contributed to the riots of the year. After Clodius' murder he and Scipio attacked the *interrex* M. Aemilius Lepidus in his house in order to obtain election. But Pompey was appointed sole consul and abandoned Plautius, who was condemned for bribery.

T. Rice Holmes, *The Roman Republic* ii (1923), 164.

A. M.

PLAUTIUS (3) SILVANVS, MARCVS, consul in 2 B.C. with Augustus, was proconsul of Asia, and probably legate of Galatia. He probably fought the mountaineers of Isauria (A.D. 6) and certainly commanded troops in the Pannonian War. His mother Urgulania was a friend of Livia, his daughter Urgulanilla married the future Emperor Claudius.

PIR, P 361; E. Groag, *JÖAI* xxi-xxii (1922-4) Beibl. 445; R. Syme, *Klio* 1934, 139; id., *Anatolian Studies Presented to W. H. Buckler* (1939), 332. A. M.

PLAUTIUS (4), AVLVS (cos. *suff.* A.D. 29), governor of Pannonia in 43, when he was appointed by Claudius to command the British expedition. He defeated the sons of Cunobellinus in battles (probably at the Medway and at the Thames), and took the Belgic capital, Camulodunum. Before his departure (47) he seems to have conquered Britain up to the oolitic ridge on the Cotswolds-Lincoln Edge line. On his return he received the honour of an ovation. In 57, 'according to ancient custom', he himself conducted an inquiry into charges of 'externa superstitio' against his wife—and acquitted her.

Dio Cass. 60. 19-21; *Tac. Ann.* 13. 32; *PIR*, P 344; Collingwood-Myres, *Roman Britain*, 78-91. C. E. S.

PLAUTIUS (5) SILVANVS AELIANVS, TIBERIVS (cos. *suff.* A.D. 45, cos. II 74), is barely known to history save for the long inscription recording his career and exploits, still extant at the Mausoleum of the Plautii near Tibur (*ILS* 986). The precise degree of his relationship to M. Plautius (3) Silvanus is uncertain. Silvanus served as a legate in the conquest of Britain, clearly enjoying the favour of the Emperor Claudius (whose first wife, Plautia Urgulanilla (see PLAUTIUS 3), belonged to his family). After being proconsul of Asia (c. A.D. 57) Silvanus was appointed legate of Moesia, in which function he conducted diverse operations, and made the frontier safe, though his army was weakened by the dispatch of troops to the East for Corbulo's campaigns. He prevented a disturbance among the Sarmatians, relieved the siege of Chersonesus, transplanted more than 100,000 natives to the southern bank of the Danube, and sent a copious supply of corn to Rome. For these services, however, he got no honour from Nero; Vespasian subsequently granted him the *ornamenta triumphalia*. After governing the province of Hispania Tarraconensis (70-73?), he was appointed *praefectus urbi* by Vespasian.

L. Halkin, *Ant. Clav.* 1934, 121.

R. S.

PLAUTIUS (6) LATERANVS, a Roman senator, deprived of his rank in A.D. 48 as a lover of Messalina, was restored by Nero (55). Consul designate (65), he took part in the Pisonian conspiracy and was executed.

PIR, P 354.

PLAUTIUS (7), a Roman jurist of the time of Vespasian, not directly excerpted in the *Digest* and known only through commentaries entitled *ad Plautium* and written by Neratius, Javolenus, Pomponius, and Paulus. This interest of posterity in Plautius' work, which apparently dealt mostly with the praetorian law, though its title is unknown, proves his high reputation. His original work seems to have played the same important part as the *Libri juris civilis* of Sabinus in relation to later treatises on private law.

A. H.

PLAUTUS, **TITUS MACCIUS** (so the name is given by the Ambrosian palimpsest, in the subscriptio to the *Casina*; references in the text are usually to *Plautus*, but *Merc.* 10, where the MSS. read *mactici*, *mattici*, presumably corruptions of *Macci Titi*, and *Asin.* 11, where the nominative appears as *Macculus*, throw a doubtful light on the subject; Festus-Paulus derives *Plautus* from *plotus*, 'flat-footed'), is stated by Cicero (*Brut.* 60) to have died in 184 B.C.; the date of his birth appears to have been not later than 251, as he was already 'senex' (*Cic. Sen.* 50) when the *Pseudolus* was produced in 191 (didasc.). The other details are filled in by Jerome (who unfortunately gives the year of his death as 200) and Gellius (3. 3. 14), who claims to be quoting Varro: they are that he was born at Sarsina in Umbria, that after acquiring some capital in the service of the theatre he lost it in trade, and that, when forced by poverty to work as a labourer in a flour-mill, he wrote the *Saturio*, the *Addictus*, and another play. Leo (*Plautinische Forschungen*) unconvincingly (?) argues that these statements are mere inferences from passages in lost plays; Marx (*Z. für die öst. Gym.*, 1898) accepts the traditional account. We can be certain that the *Stichus* was produced in 200 (didasc.); the references in *Miles Gloriosus* (211-12) to the imprisonment of Naevius would suggest that this play was produced soon after 206. P. was a highly popular dramatist, and his plays continued to be produced long after his death (*Cas. prol.*); imitators seem to have tried to pass off their work as his, with the result that 130 plays were in later times attributed to him (*Gell.* 3. 3. 11 ff.). Varro drew up a list of twenty-one which were universally regarded as Plautine (*Gell.* 3. 3. 3); these must be the twenty-one which have come down to us: *Amphitruo*, *Asinaria*, *Aulularia*, *Bacchides*, *Captivi*, *Casina*, *Cistellaria*, *Curculio*, *Epidicus*, *Menaechmi*, *Mercator*, *Miles Gloriosus*, *Mostellaria*, *Persa*, *Poenulus*, *Pseudolus*, *Rudens*, *Stichus*, *Trinummus*, *Truculentus*, *Vidularia*. Varro assigned other plays also to Plautus on stylistic grounds, and we may note that Terence ascribes to Plautus the *Colax* (*Eum.* 25) and *Commorientes* (*Ad.* 7), neither of which plays has reached us. Terence's words, however, may imply that the *Colax* was partly the work of Naevius, and Gellius (l.c.) states that Plautus was in the habit of touching up plays written by other writers: here we have, perhaps, the explanation of the confusion which seems to have prevailed from an early time as to which plays were the work of Plautus.

2. Unlike his predecessors, Plautus confined his activities to one branch of literature, the translation of works of the Greek New Comedy. That he treated his originals with considerable freedom is evident not only from the puns and topical allusions which occur frequently in his plays, but from Terence's general reference to his 'neglegentia' (*An.* 20) and Terence's explicit statement (*Ad.* 9, 10) that he omitted a whole scene in Diphilus' *Συναποβιζακοντες*. We may well believe that he lost no opportunity of raising a laugh, that he expanded or inserted passages which would appeal to the rough taste of his audience, and that as a result there is much in his plays which jars upon our sense of dramatic propriety; but attempts to ascertain more precisely the nature of Plautus' methods as a translator are rendered nugatory by the fact that we possess scarcely a line of any of his originals, and that no play of New Comedy has come down to us complete (see *CONTAMINATIO*). From Menander he took the *Cistellaria* (cf. 89 ff. with Meineke, *Menandri et Philem. Reliquiae*, Berl. 1823, *Incert. fabb.* 32), the *Stichus* (didasc.), and the *Bacchides* (line 817 is a translation of a line of the *Δις ἐξαπατών* preserved by Stobaeus); from Philemon the *Trinummus* (l. 19) and *Mercator* (l. 10) but not the *Mostellaria* (see Terzaghi's edition 1929, pp. xxi ff., and A. Ernout, *Plaute* v, p. 13); from Diphilus the *Casina* (l. 32) and *Rudens* (l. 32); from Demophilus the *Asinaria* (l. 11);

the statements made by modern writers about the authors of the other originals are little more than guesses. The dates of production of the *Pseudolus* and *Stichus* are known from the didascaliae; the *Miles* seems to have appeared soon after the imprisonment of Naevius (see above); the *Cistellaria* during or soon after the Hannibalic War (ll. 197-202); the *Truculentus*, like the *Pseudolus*, was a work of Plautus' old age (*Cic. Sen.* 50); the *Bacchides* was subsequent to the *Epidicus*, to which it contains a reference (214-15); further than this we have no sure evidence, though it has been plausibly argued that, e.g., the *Mercator* is early and the *Trinummus* late. The argument of Sedgwick (*CQ* xxiv. 102-5) that Plautus increased the lyrical element in his plays as he gained skill must be regarded as a mere hypothesis, though a not unreasonable one.

3. The plays of Plautus vary widely in tone. If we can judge from his own expression of liking for the *Epidicus* (*Bacch.* 214-15) and Cicero's remark (see supra) that Plautus was much attached to the *Pseudolus* and the *Truculentus*, we may infer that his favourite type of play was one of lively, complicated, and somewhat shady intrigue; but against this we must set the unexceptionable sentiments expressed in the *Trinummus*, the nobility and pathos of the *Captivi*, and the heroic figure of Alcmena in the *Amphitruo*. There is enough obsequy to suggest that its comparative rarity was not due merely to police supervision; it is mostly of a trivial character. The conscious rectitude of the prologue and epilogue to the *Captivi* is not typical; the general tone is one of genial cynicism. Among the most noteworthy plays are the *Aulularia*, with its powerful if exaggerated portrait of Euclio, who is something between a miser and a worthy poor man whom the sudden acquisition of wealth has made wretched; the *Menaechmi*, an entertaining 'Comedy of Errors' (and the source of Shakespeare's play); the *Miles*, the richest portrait of the swaggering poltroon so popular on the stage of Hellenistic times; the *Mostellaria* with its high-spirited intrigue and its hero Tranio, most engaging of all the *servi callidi*; and the *Rudens* with its unusual setting and interesting plot.

4. The language of Plautus is all his own; here his claims to greatness are undeniable. No one ever exploited more fully the resources of Latin for expressions of endearment and abuse, for animated dialogue and effective repartee. For him words had an interest in themselves: we see this in the frequent assonance, word-play, and comic compounds. Connected with his command of language is his command of metre, e.g. the solemn senarii of Areturus' utterance (prologue to the *Rudens*), the vigorous cretics in which Sosia describes the battle (*Amph.* 223 ff.), above all, perhaps, the varied uses of the trochaic septenarius.

5. *Prosody*. The prosody of the early Latin dramatic poets corresponds to the facts of pronunciation more closely than does the artificial verse of the Augustan period. Many syllables (especially final) were still long which afterwards became shortened; final -s was still so faintly sounded that it could be disregarded in scansion before an initial consonant. A combination of mute and liquid can be, and was, pronounced with the following vowel (*ā-gros*); therefore it is nowhere allowed by Plautus to give the preceding syllable length by position. Hiatus may legitimately occur at a pause in the sense, e.g. when the speaker is deciphering a letter. The words are so arranged that the recurrent beat of the verse (*ictus*) corresponds as far as possible with the stressed syllables:

qui'st Imperātor dūom et hōminum Iūppiter.

A rigid classification of syllables into longs and shorts does not do justice to the flexibility of speech, especially in a stress-accent language. In Plautus we find certain syllables scanned now long, now short; many such cases are covered by the so-called law of *brevi breuians* (q.v.),

or iambic shortening, which may be stated thus: an unaccented syllable, normally long by quantity or position, which is immediately preceded by a short syllable and immediately (a) preceded or (b) followed by an accented syllable ((a) $\acute{\text{u}} - (b) \text{u} - \acute{\text{x}}$) is so weakened in pronunciation that it may be scanned as a short. The position and value of the accent itself is not quite fixed, but depends to some extent on the arrangement of the words and on the sense.

6. The *Prologues*. There seems no good reason for regarding these as post-Plautine, except *Cas.* 1-20 (written for a revival performance after the death of Plautus), the opening lines of the *Menaechni* (3, 'adporto uobis Plautum'), and perhaps the brief Prologue to the *Pseudolus* (2):

Plautina longa fabula in scaenam uenit.

Certainly many of the criteria by which critics have pronounced other prologues spurious (e.g. clumsiness, tautology, references to a seated public) are of doubtful validity; see Lindsay's edition of the *Captivi*, pp. 113-15. (Lindsay does, however, find some linguistic evidence that the prologue to the *Captivi* is in parts post-Plautine. No doubt the prologue would be the part of the play most exposed to alteration by producers of a later age.) In many cases Plautus must have translated his prologues from the Greek (though we may well suppose that here he took even more than his usual liberties); the postponed prologue of *Auxilium* in the *Cistellaria* (translated from Menander) is in position and form not unlike the prologue of *Ἀγνοία* in the *Περικυρμένη*. If Plautine, the prologues throw light both on the outlook of the dramatist and on the character of the turbulent crowds before whom his pieces were performed.

See also DRAMA, para. 3.

BIBLIOGRAPHY

MANUSCRIPTS: (a) the fifth-century Ambrosian palimpsest, discovered in 1815, now indecipherable and only to be studied in the autograph of W. Studemund (1889), which cost the author his sight; (b) the Palatine family—tenth or eleventh century. See W. M. Lindsay, *An Introduction to Latin Textual Emendation* (1896).

TEXT: This was first put on a sound basis by F. Ritschl, whose first volume appeared in 1848. His pupils, G. Götz, G. Löwe, F. Schöll, completed his work in their authoritative edition, with full apparatus (1871-94, since partly re-edited). J. L. Ussing's text (1875-86) contains a Latin commentary; Fr. Leo's edition (1895-6) is ingenious and important, but arbitrary; W. M. Lindsay's Oxford Text (1903) and A. Ernout's Budé edition (below) are more conservative.

(The scene-division is based on the manuscripts; the act-division is the work of Renaissance editors.)

EDITIONS OF SEPARATE PLAYS: Specially important are Lindsay, *Captivi* (1900); E. A. Sonnenschein, *Rudens* (1901) and *Mostellaria* (1922); F. Marx, *Rudens* (1928); Brix-Niemeyer, *Menaechni* (1929), *Captivi* (1930), and *Trinummus* (1931), and P. J. Enk, *Mercator* (1932).

TRANSLATIONS WITH TEXT: P. Nixon (Loeb, 1928-35), in general accurate and lively; A. Ernout (Budé, 1932- , not yet completed).

GENERAL: The most readable and reliable work is perhaps that of G. Michaut (*Plautus*, 1920). P. Lejay (*Plaute*, 1924) gives special attention to music. Other well-known works are Ph. E. Legrand's *Dact., Tableau de la comédie grecque* (1910), which lays scarcely sufficient emphasis on P.'s originality, E. Fraenkel's *Plautinische im Plautus* (1922), and G. Jachmann's *Plautinische und Attische* (1931), which go perhaps too far in the attempt to distinguish between Greek and Latin elements.

PROTOPY, METRE, ETC.: W. M. Lindsay, ed. of *Captivi* (above) and *Early Latin Verse* (1922); E. Fraenkel, *Itus und Akzent* (1928); H. Drexler, *Plautinische Akzentstudien* (1932).

SYNTAX: W. M. Lindsay, *Syntax of Plautus* (1907). Fuller bibliography in Schanz-Hosius, *Röm. Lit.* i (1927), 55-56. W. B.

PLEBISCITUM was a resolution passed by the plebs. As only the *populus* (q.v.) was originally allowed to carry a law, plebiscites could bind only the group that had issued them in the *concilia tributa plebis* (from the first decades of the 5th c. B.C.). Many plebiscites, however (e.g. the *Lex Canuleia* in 445 B.C.), must have obtained a *de facto* recognition from the whole community, before the *Lex Hortensia* (c. 287) gave plebiscites the force of

law. Sulla made them again dependent on the approval of the Senate, but Pompey and Crassus as consuls in 70 re-enacted the *Lex Hortensia*.

Mommsen, *Röm. Forsch.* i. 177 ff.; *Röm. Staatsr.* iii. 150 ff.

P. T.

PLEBS was the name given to the general body of Roman citizens, as distinct from the privileged *patricii*; it is perhaps related to *παῖθος*. The contrast between it and the *patricii* no doubt arose through the differentiation of certain wealthier and more influential families into a separate class. The modern hypothesis that the plebs was racially distinct from the *patricii* is not supported by ancient evidence; and the view of some ancient writers (Cic. *Rep.* 2. 16; Dion. Hal. 2. 9; Plut. *Rom.* 13) that the plebeians were all clients of the patricians in origin can be true only in the sense that the clients were plebeians. The plebeians were originally excluded from religious colleges, magistracies, and the Senate, and by a law of the XII Tables they were debarred from intermarriage with patricians. But they were enrolled in the *gentes, curiae, and tribus*; they served at all times in the army and could hold the office of *tribunus militum*. It is very doubtful whether it is legitimate to speak of plebs for the period of monarchy. A sharp distinction between the two classes seems to have developed only in early Republican times.

The 'Conflict of the Orders', by which the plebs achieved political equality with the patricians, forms part of the general history of Rome. The victory of the plebs was essentially due to the fact that it organized itself into a separate corporation, which held its own assemblies (*concilia plebis*), appointed its own officers, the *tribuni* and *aediles plebis* (usually selected from the wealthier members of their order), and instituted its own Record Office (in the temples of Diana and of Ceres on the Aventine). It secured inviolability for the persons of its officers by a collective undertaking to protect them, and at times of special crisis it withdrew *en masse* from Rome (see *SECESSIO*). After two centuries of struggle the plebs attained all its political objects by 287 B.C. Under the later Republic the name 'plebeian' acquired in ordinary parlance its modern sense of a member of the lower social orders. In Imperial times those who did not belong to the senatorial and equestrian orders, or to the *ordo* of the *municipia*, were often called plebeians.

Mommsen, *Röm. Staatsr.* iii (1887); G. De Sanctis, *Stor. Rom.* i. 224; J. Binder, *Die Plebs* (1909); A. Rosenberg, *Hermet.* 1913, 359; H. J. Rose, *JRS* 1922, 106; H. Stuart Jones, *CAH* vii. 413; F. Altheim, *Lex Sacra, Die Anfänge der plebeischen Organisation* (1940); H. Last, *JRS* 1945, 30. See also TRIBUNI PLEBIS; PATRICIUS.

PLEBS FRUMENTARIA, see CONGIARIUM.

PLEIAS, see TRAGEDY, para. 21.

PLEMINIUS, QUINTUS, praetor in 205 B.C., under Scipio Africanus recaptured Locri from Hannibal. Left in charge of a garrison Pleminius plundered Locri, including the treasury of Persephone. After an inquiry by Scipio he retained his command and continued to oppress the Locrians until they appealed to the Senate. He was arrested by a senatorial commission of inquiry and perhaps held in prison until his death (195?).

H. H. S.

PLINY (1) THE ELDER (GAIUS PLINIUS SECUNDUS) (A.D. 23/4-79), born at Comum, came to Rome as a boy for education. Following the military career appropriate to his equestrian family, he served as cavalry officer in Germany 47-57, to which last year is usually ascribed his *centurie centurionum* (*HN praef.* 3) with the future Emperor Titus. He practiced also as a pleader, but during Nero's reign devoted his time to literature; under Vespasian, with whom he was intimate, he held various

successive procuratorships with the highest integrity' (Suet. *Vita*), in Gallia Narbonensis, Africa, Hispania Tarraconensis, and Gallia Belgica. The claim (Momm- sen, *Hermes* xix. 644) from a restored inscription (*CIG* iii. 4536) that he was on the staff of Titus in the Jewish War of 70 is controverted. His last post was as admiral at Misenum, whence, fired by scientific zeal, he sailed to get a closer view of the eruption of Vesuvius, 24 Aug. 79. His nephew, the Younger Pliny, describes his last hours, before he succumbed to asphyxiation on the sea-shore at Castellammare.

WORKS (Nos. 1-6 are lost):

1. *De iaculatione equestri*, on the javelin as a cavalry weapon, written as *praefectus alae* in Germany, *HN* 8. 162.

2. *De vita Pomponi Secundi*, a biography in two books of his early friend and literary preceptor, *HN* 14. 56.

3. *Bellorum Germaniae libri xx*, a narrative of all Roman wars with Germans, intended to rescue the memory of Drusus from oblivion, and used by Tacitus (*Ann.* i. 69).

4. *Studiosi*, in three books, each of two parts, on rhetorical training from childhood, and containing specimens from declamations. Quintilian (3. i. 21) recognized it as pedantically careful.

5. *Dubius Sermo*, eight books, published A.D. 67, when technical subjects like grammar were alone safe, *HN praef.* 28. Pliny took a middle position between analogists and anomalists.

6. *A fine Aufidi Bassi*, thirty-one volumes, a history of his own times from the point where Aufidius Bassus left off, probably the close of Claudius' reign. Written with scrupulous care, it was left for publication posthumously.

7. *Naturalis Historia*, sole extant work of Pliny's 102 volumes. Though dedicated to Titus by a preface of 77, revision still proceeded at Pliny's death; in its final form it consisted of the preface, a book containing tables of contents and lists of authorities (who were also given with each book) 'to facilitate handling and acknowledge indebtedness to sources', and thirty-six books of subject-matter. The topics are: ii, the Physical Universe; iii-vi, Geography and Ethnology; vii, Anthropology and Physiology; viii-xi, Zoology; xii-xix, Botany; xx-xxvii, Botany in relation to Pharmacology; xxviii-xxxii, Zoology in relation to Pharmacology; xxxiii-xxxvii, Mineralogy and Metallurgy and their use in the arts. Included were 20,000 matters worthy of attention, gathered from 2,000 books and 100 principal authors, who cannot be disentangled from the 146 Roman and 327 foreign authors in the indexes. For each topic he probably depended on a few main authorities (thus, for Physics, Varro, behind whom lay Posidonius), and added a mosaic of excerpts from his 160 note-books, mingling Roman examples with material basically Greek.

Pliny had a disinterested love of knowledge but was not a scientific observer. With an encyclopaedist's superficiality he introduces many avoidable inaccuracies and lacks constructive criticism ('prodenda quia sunt prodita', *HN* 2. 85). His style is the most formless among contemporary writers; with a dry catalogue of facts in abrupt sentences he mingles vivid periodic descriptions of considerable power, and plentiful rhetorical devices. His vocabulary has poetical elements and many borrowings from Greek, but is not extensively colloquial.

PLINY (2) THE YOUNGER (A.D. 61 or 62-before 114), born at Comum, was a son of L. Caecilius Cilo, and nephew of Pliny the Elder (q.v.). His father's early death brought him under the guardianship of the distinguished soldier Verginius Rufus; later, on adoption by his uncle, he changed his name from P. Caecilius Secundus to C. PLINIUS CAECILIUS SECUNDUS. At Rome he studied under Nicetes Sacerdos and Quintilian, began his career as a pleader at 18, and became a specialist in disputes concerning property. His wealth and the influence of his guardian secured him early preferment, and his discretion enabled him to retain Domitian's favour, though several of his friends fell victims to the reign of terror (*Ep.* 3. 11). The chronology of his career has been much disputed (Momm- sen, *Hermes* iii. 31; W. Otto, *Sitz. Bayer. Akad.* 1919, 1923), but it is known that besides fulfilling the *cursus honorum* he was appointed *praefectus aerarii militaris* by Domitian, *praefectus aerarii Saturni* by Nerva, and by Trajan *augur* and *curator alvei Tiberis et riparum et cloacarum urbis*. As *consul suffectus* in 100 he addressed to Trajan the customary *gratiarum actio*, and later published the elaborate rhetorical essay which survives as the *Panegyricus*, based on this speech (*Ep.* 3. 18), but considerably expanded (see Dury's ed., p. 9; for disputed date of publication, *ibid.* pp. 9-15). To the modern reader this epideictic oration may seem fulsome and tedious, but its reputation in antiquity can be judged from its position as the earliest, by two centuries, of the *XII Panegyrici*. Rightly interpreted, it appears not as mere unctuous flattery but as an admonitory tract (cf. 45. 6, 62. 9). We possess none of the forensic orations on which P. relied for fame. He figured in several important political trials, first as prosecutor, his most notable success being the impeachment of Marius Prisenus in 100, and later as counsel for the defence of two senatorial ex-governors accused of maladministration in Bithynia (104 and 106). The knowledge thus acquired, together with his treasury experience, made P. the obvious choice when Trajan decided to place Bithynia under an imperial legate with special powers to overhaul its finances. P. certainly spent two winters in Bithynia, and his term of office overlapped that of Calpurnius Macer, who is known to have been governing Moesia Inferior in 112 (*Plin. Tra.* 42, etc.; *CIL* iii. 77). Beyond this his governorship cannot be dated with precision, nor is it known whether he ever returned to Italy; that he died before 114 is inferred from an inscription (*CIL* v. 5262) on stone erected after his death, in which Trajan is mentioned without the title *Optimus*, assumed in that year.

The first nine books of P.'s correspondence belong to the years 97-109, and were published during his lifetime, probably in groups of three (H. Peter, *Der Brief in d. röm. Lit.* (1901), 107 ff.). Unlike Cicero's letters, they were written, or rewritten, with a view to publication. Each letter is a self-contained causerie on some one topic, with no allusion left unexplained; even in an affectionate letter to his wife (6. 4.) P. is careful to inform the reader of the reason for her absence from home, which must have been known to herself. In spite of their self-conscious artistry the letters have considerable charm, and present a richly varied picture of the life of the more cultured Romans under the Empire. P. himself is revealed as a man of great kindness and generosity,

though vain and self-complacent. As a writer he possesses great descriptive powers, and among his most famous letters are the description of his Laurentine villa (2. 17) and his account of the eruption of Vesuvius in which his uncle perished (6. 16 and 20). P.'s correspondents included the historians Tacitus and Suetonius; himself a dabbler in verse (7. 4), he patronized the poets of his day (1. 13), including Martial (3. 21).

There also survives a tenth book consisting of letters exchanged between P. and Trajan, mainly concerned with the administration of Bithynia. Strictly practical in scope, these show P. as a conscientious and fair-minded administrator, though Trajan's replies to his requests for advice sometimes imply that he might well have been more self-reliant. These letters are, with the *Panegyric*, among the main historical sources for Trajan's ill-documented reign; especially celebrated are those dealing with the Christians (*Tra.* 96-7; see *TRAJAN*). See also *LETTERS (LATIN)*.

PLOTINA, POMPEIA, who married Trajan (q.v.) before his accession, was famous for her simplicity, dignity, fidelity, and virtue. Refusing the title 'Augusta' A.D. 100, she accepted it only in 105; from 112 she enjoyed an honorific coinage (her *Vesta* type emphasized the purity of family ties). She bore no children. Present at Trajan's death in Cilicia, she probably facilitated the succession of Hadrian (q.v.), long her favourite. Hadrian honoured her on the coinage of 117-18. Dying c. 121-2, she was consecrated: Hadrian commemorated her by a temple at Nemausus and another, dedicated to Trajan and Plotina, in the Forum Traiani.

PLOTINUS (Πλωτίνος) (A.D. 205-269/70). The main facts of his life are known from Porphyry's memoir (prefixed to editions of the *Enneads*). His birthplace, on which Porphyry is silent, is said by Eunapius and Suidas to have been Lyco or Lycopolis in Egypt, but his name is Roman, while his native language was almost certainly Greek. He turned to philosophy in his 28th year and worked for the next eleven years under Ammonius (q.v.) Saccas at Alexandria. In 242-3 he joined Gordian's unsuccessful expedition against Persia, hoping for an opportunity to learn something of eastern thought. The attempt was abortive, and at the age of 40 he settled in Rome as a teacher of philosophy, and remained there until his last illness, when he retired to Campania to die. At Rome he became the centre of an influential circle of intellectuals, which included men of the world and men of letters, besides professional philosophers like Amelius and Porphyry. He interested himself also in social problems, and tried to enlist the support of the Emperor Gallienus for a scheme to found a Platonic community on the site of a ruined Pythagorean settlement in Campania.

2. WRITINGS. Plotinus wrote nothing until he was 50. He then began to produce a series of philosophical essays arising directly out of discussions in his seminars (*symposia*), and intended primarily for circulation among his pupils. These were collected by Porphyry, who classified them roughly according to subject, arranged them rather artificially in six *Enneads* or groups of nine, and eventually published them c. 300-5. From this edition our manuscripts are descended. An edition by another pupil, the physician Eustochius, is known to have existed (schol.

Enn. 4. 4. 30); and it has been argued by some scholars (Henry, *Recherches etc.*, see Bibliography) that the extracts from Plotinus in Eus. *Præp. Evang.* are derived from this Eustochian recension. Save for the omission of politics, Plotinus' essays range over the whole field of ancient philosophy: ethics and aesthetics are dealt with mainly in *Enn.* 1, physics and cosmology in *Enns.* 2 and 3; psychology in *Enn.* 4; metaphysics, logic, and epistemology in *Enns.* 5 and 6. Though not systematic in intention, the *Enneads* form in fact a more complete body of philosophical teaching than any other which has come down to us from antiquity outside the Aristotelian corpus. Plotinus' favourite method is to raise and solve a series of ἀπορίαι: many of the essays give the impression of a man thinking aloud or discussing difficulties with a pupil. Owing to bad eyesight, Plotinus never revised what he wrote (Porph. *Vita Plot.* 8), and his highly individual style often reflects the irregular structure of oral statement. Its allusiveness, rapid transitions, and extreme condensation render him one of the most difficult of Greek authors; but when deeply moved he can write magnificently.

3. PHILOSOPHICAL DOCTRINE. In the nineteenth century Plotinus' philosophy was often dismissed as an arbitrary and illogical syncretism of Greek and oriental ideas. Recent writers, on the other hand, see in him the most powerful philosophical mind between Aristotle and Aquinas or Descartes; and in his work a logical development from earlier Greek thought, whose elements he organized in a new synthesis designed to meet the needs of a new age. These needs influenced the direction rather than the methods of his thinking; its direction is determined by the same forces which resulted in the triumph of the eastern religions of salvation, but its methods are those of traditional Greek rationalism. Plotinus attached small value to ritual, and the religious ideas of the Near East seem to have had little direct influence on the *Enneads*, though Bréhier would explain certain parallels with Indian thought by postulating contact with Indian travellers in Alexandria. To Christianity Plotinus makes no explicit reference; but *Enn.* 2. 9 is an eloquent defence of Hellenism against Gnostic superstition.

4. Plotinus holds that all modes of being, whether material or mental, temporal or eternal, are constituted by the expansion or 'overflow' of a single immaterial and impersonal force, which he identifies with the 'One' of the *Parmenides* and the 'Good' of the *Republic*, though it is strictly insusceptible of any predicate or description. As 'the One', it is the ground of all existence; as 'the Good', it is the source of all values. There is exact correspondence between degrees of reality and degrees of value, both being determined by the degree of unity, or approximation to the One, which any existence achieves. Reality, though at its higher levels it is non-spatial and non-temporal, may thus be pictured figuratively as a series of concentric circles resulting from the expansion of the One. Each of these circles stands in a relation of timeless dependence to that immediately within it, which is in this sense its 'cause'; the term describes a logical relationship, not an historical event. Bare Matter (ἄλη) is represented by the circumference of the outermost circle: it is the limiting case of reality, the last consequence of the expansion of the One, and so possesses only the ideal existence of a boundary.

5. Between the One and Matter lie three descending grades of reality—the World-mind (νοῦς), the World-soul (ψυχή), and Nature (φύσις). The descent is marked by increasing individuation and diminishing unity. The World-mind resembles Aristotle's Unmoved Mover: it is thought-thinking-itself, an eternal lucidity in which the knower and the known are distinguishable only logically; within it lie the Platonic Forms, which are conceived not as inert types or models but as a system of interrelated forces, differentiations of the one Mind

which holds them together in a single timeless apprehension (*νόησις*). The dualism of subject and object, implicit in the self-intuition of Mind, is carried a stage farther in the discursive thinking characteristic of Soul: because of its weaker unity, Soul must apprehend its objects successively and severally. In doing so it creates time and space; but the World-soul is itself eternal and transcends the spatio-temporal world which arises from its activity. The lowest creative principle is Nature, which corresponds to the immanent World-soul of the Stoics: its consciousness is faint and dreamlike, and the physical world is its projected dream.

6. Man is a microcosm, containing all these principles actually or potentially within himself. His consciousness is normally occupied with the discursive thinking proper to Soul: but he has at all times a subconscious activity on the dreamlike level of Nature and a superconscious activity on the intuitive level of Mind; and his conscious life may lapse by habituation to the former level or be lifted by an intellectual discipline to the latter. Beyond the life of Mind lies the possibility of unification (*ἑνωσις*), an experience in which the Self by achieving complete inward unity is momentarily identified with the supreme unity of the One. This is the Plotinian doctrine of ecstasy. Plotinus was not its originator; but the essays in which he expounds it, on the basis of personal experience, show extraordinary introspective power and are among the classics of mysticism. It should be observed that for Plotinus unification is independent of divine grace; is attainable very rarely, as the result of a prolonged effort of the will and understanding; and is not properly a mode of cognition, so that no inference can be based on it.

7. Plotinus also made important contributions to psychology, particularly in his discussion of problems of perception, consciousness, and memory; and to aesthetic, where for Plato's doctrine that Art 'imitates' natural objects he substitutes the view that Art and Nature alike impose a structure on Matter in accordance with an inward vision of archetypal Forms. His most original work in ethics is concerned with the question of the nature and origin of evil, which in some passages he attempts to solve by treating evil as the limiting case of good, and correlating it with Matter, the limiting case of reality.

BIBLIOGRAPHY

TEXTS: R. Volkmann (Leubner, 1884); H. F. Müller (1880); E. Bréhier (Budd, 1924-38). Critical edition by P. Henry and H. R. Schwyzler in preparation.

COMMENTARIES: G. F. Creuzer (Oxford, 1835, unsatisfactory); R. Harder (in preparation).

TRANSLATIONS: S. MacKenna and B. S. Page (1917-30). French: E. Bréhier (with text, see above). German: R. Harder (1930-7, the most trustworthy).

MSS. AND HISTORY OF TEXT: P. Henry, *Recherches sur la 'Préparation Évangélique' d'Eusèbe et l'édition perdue des œuvres de P. publiée par Eustochius* (1935); *Les États du texte de P.* (1938); *Les Manuscrits des Ennéades* (1941).

PHILOSOPHY: (a) General: T. Whittaker, *The Neoplatonists* (1918); E. Bréhier, *La Philosophie de P.* (1928); W. R. Inge, *The Philosophy of P.* (1929, brilliant but over-emphasizes kinship with Christian mysticism); F. Heinemann, *Plotin* (1921, attempts to trace development in Plotinus' thought).

Nebel, *P.'s Kategorien der intelligiblen Welt* (1929); C. Schmidt, *P.'s Stellung zum Gnosticismus und kirchlichen Christentum* (1901); A. H. Armstrong, *The Architecture of the Intelligible Universe in the Philosophy of P.* (1940). E. R. D.

PLOTIUS TUCCA, a friend of Virgil (*Catal.* 1) and Horace (*Sat.* 1. 5. 40) and a member of Maccenas' literary circle. He assisted Varius (q.v.) Rufus as literary executor to Virgil, whose initial instructions to burn the *Aeneid* were rejected, the poem being published at Augustus' command without additions after merely superficial revision (Donat. *Vita Verg.* 39; Serv. *Præf.* 2. 12 Th.). G. C. W.

PLOTIUS, see also SACERDOS.

PLUTARCH (Πλούταρχος) (c. A.D. 46-after 120), son of Autobolus of Chaeronea, Academic philosopher and biographer. When Nero visited Greece (A.D. 66) P. was at Athens (*Mor.* 385 b) studying physics, natural science, and rhetoric; but his enthusiasm was for ethics. Public duties sent P. to Rome, where his many friends included the philosopher Favorinus; he may have held a consulship (Suidas) and under Hadrian was procurator of Achaia and an Athenian citizen. P. visited Sparta, Corinth, Patrae, Sardes, and Alexandria, but resided mainly at Chaeronea, where he kept a private school. He was in close touch with Delphi (holding a priesthood for life from A.D. 95) and may have assisted the renewed vogue of the oracle under Trajan. P. lived until perhaps A.D. 127 (*Mor.* 380 b; cf. *Juv. Sat.* 15). His wife Timoxena bore him four sons, and a daughter who died in infancy.

WORKS

The so-called Lamprias catalogue, containing 277 works by P. (not all authentic) is incomplete; no detailed chronology yet exists.

A. Moralia: P.'s ethical, religious, physical, political, and literary studies are cast as Dialogues or Diatribes.

Dialogues: these vary from a series of speeches to informal conversation-pieces with occasional narrative-matter; characters usually from P.'s family circle; time and place rarely indicated.

1. *Convivium septem sapientium* (Τῶν ἐπὶ σοφῶν συμποσίων) and *De genio Socratis* (Περὶ τοῦ Σ. δαιμονίου), early works: the latter is staged among the conspirators who seized the Cadmea.

2. *De sollertia animalium* (Πότερα τῶν ζῴων φρονιμώτερα, τὰ χερσαῖα ἢ τὰ ἐνδρα) and *Bruta ratione uti* (Gryllus) (Περὶ τοῦ τὰ ἄλογα λόγῳ χρῆσθαι), also early, contain Pythagorean elements and attack the Stoic denial of reason to animals; Gryllus is staged on Circe's island.

3. The two dialogues *De esu carniū* (Περὶ σαρκοφαγίας) draw the vegetarian moral.

4. *De musica* (Περὶ μουσικῆς) defends simple musical forms; probably early.

5. *Non posse suaviter vivi secundum Epicuri praecepta* ("Ὅτι οὐδ' ἡδέως ζῆν ἐστὶν κατ' Ἐπ.") attacks Epicureanism, stating P.'s ideals; Academic sources.

6. *De communibus notitiis* (Περὶ τῶν κοινῶν ἐννοιῶν πρὸς τοὺς Στωικούς), *De Stoicorum repugnantibus* (Περὶ Στ. ἐναντιματῶν), and *Stoicos absurdiora poetis dicere* (Σύνοψις τοῦ ὅτι παραδοξότερα οἱ Στ. τῶν ποιητῶν λέγουσιν), the last highly satirical, attack the Stoics.

7. *De facie in orbe lunae* (Περὶ τοῦ ἐμφανιζομένου προσώπου τῷ κύκλῳ τῆς σελήνης), also anti-Stoic, elaborates a cosmology and contains physical speculation.

8. *Amatorius* (Ἔρωτικός) discusses Eros, favouring heterosexual.

9. *De tuenda sanitate praecepta* (Υγιεινὰ παραγγέλματα), on dietetics.

10. *De ira cohibenda* (Περὶ ἀοργησίας) contains Peripatetic and Stoic material.

11. *De sera numinis vindicta* (Περὶ τῶν ὑπὸ τοῦ θεοῦ βραδέως τιμωρουμένων), staged in Delphi, justifies the postponement of divine justice to allow time for repentance.

12. Three Pythian dialogues, late works: *De defectu oraculorum* (Περὶ τῶν ἐκλειπτῶν χρηστηρίων), of wide scope, including prophecy and demonology; links the decline of the oracle with that of the population. *De E apud Delphos* (Περὶ τοῦ Εἰ τοῦ ἐν Δ.), interprets the word Εἰ at the temple-entrance. *De Pythiae oraculis* (Περὶ τοῦ μὴ χρᾶν ἔμμετρα νῦν τῇν II.) discusses why the oracle no longer answers in verse, seeks to restore belief; influenced by Posidonius.

13. *Quaestiones conviviales* (Συμποσιακὰ προβλήματα), in nine books, each containing about ten problems. The scenes are elaborate, the subjects wide; but the treatment is superficial, nor are original solutions attempted.

Diatribes: simpler and more vigorous, many showing Menippean influence.

14. *De fortuna Alexandri* (Λόγοι περὶ τῆς Α. τύχης ἢ ἀρετῆς), *De fortuna Romanorum* (Περὶ τῆς Ρ. τύχης), and *De gloria Atheniensium* (Πότερον Ἀθ. κατὰ πόλεμον ἢ κατὰ σοφίαν ἐνδοξότεροι) are early works, rhetorical and artificial; so, too,

15. *Aqua an ignis utilior* (Περὶ τοῦ πότερον ὕδωρ ἢ πῦρ χρησιμώτερον).

16. *An virtus doceri possit* (Εἰ διδακτὸν ἡ ἀρετὴ) is superficial.

17. *De virtute morali* (Περὶ τῆς ἠθικῆς ἀρετῆς) outlines the task of virtue in subordinating the unreasonable to the reasonable side of the soul, an idea developed in fifteen succeeding works containing many examples from the lives of the famous, some wise observations, but little originality.

18. *De fraterno amore* (Περὶ φιλαδελφίας), *De amore prolis* (Περὶ τῆς εἰς τὰ ἔκγονα φιλοστοργίας), and *Præcepta coniugalitatis* (Γαμικὰ παραγγέλματα) treat the virtues of family life.

19. *De liberis educandis* (Περὶ παιδῶν ἀγωγῆς),—authenticity doubtful,—*Quomodo adulescens poetas audire debeat* (Πῶς δεῖ τὸν νέον ποιημάτων ἀκούειν), and *De recta ratione audiendi* (Περὶ τοῦ ἀκούειν) discuss educational problems; influential during the Renaissance.

20. *De malignitate Herodoti* (Περὶ τῆς Ἡ. κακοηθείας), a piece of unscientific, Boeotian local-patriotism; *Comparatio Aristophanis et Menandri* (Σύγκρισις Ἀ. καὶ Μ.) prefers Menander on moral grounds.

21. With the formal *Consolatio ad uxorem* (Παραμυθητικὸς εἰς τὴν γυναῖκα τὴν αὐτοῦ), on their daughter's death, goes the *De Exilio* (Περὶ φύγης); the *Consolatio ad Apollonium* (Παραμυθητικὸς πρὸς Α.) is probably by a contemporary.

22. *Præcepta reipublicæ gerendæ* (Πολιτικὰ παραγγέλματα) and *An senī respublica gerenda sit* (Εἰ πρεσβυτέρῳ πολιτεύεσθαι), both written after A.D. 115, give P.'s political views: the former contains a collection of precepts, often from the *Lives*, the latter urges Euphances of Athens, though old, to continue his public work. *De unius in republica dominatione* (Περὶ μοναρχίας καὶ δημοκρατίας καὶ ὀλιγαρχίας) shows P. a monarchist. Stoic ideas appear in the short *Ad principem inermiditum* (Πρὸς ἡγεμόνα ἀπαίδευτον) and fragmentary *Maxime cum principibus viris philosopho esse disserendum* (Περὶ τοῦ ὅτι μάλιστα τοῖς ἡγεμόσι δεῖ τὸν φιλόσοφον διαλέγεσθαι).

23. Among works attacking Epicurean and Stoic doctrines are *Adversus Coloten* (Πρὸς Κωλώτην) and *De latente vivendo* (Εἰ καλῶς κηρύττει τὸ λῆθε βιωσας); P. mentions a defence of Plato against Chrysippus, and 'Lamprias' catalogues studies of the early philosophers.

24. Of P.'s extensive work on Plato survive *De animæ procreatione in Timæo* (Περὶ τῆς ἐν Τ. ψυχογονίας), a commentary on Plato, *Tim.* p. 35 a, and *Platoniacæ quaestiones* (Πλατωνικὰ ζητήματα), surveying superficially ten problems of Platonic metaphysics.

25. *Quaestiones naturales* (Αἰτια φυσικά) discuss natural history topics; so, too, *De primo frigido* (Περὶ τοῦ πρώτου ψυχροῦ), dedicated to Favorinus.

26. The early *De superstitione* (Περὶ δεισιδαιμονίας) reveals a hatred of superstition, *De Iside et Osiride* (Περὶ Ἰ. καὶ Ὁ.) (contemporary with the Pythian dialogues) a mystical approach to religion.

27. Of various collections of anecdotes and apophthegms claimed for P., *De mulierum virtutibus* (Γυναικῶν ἀρετῶν) may be genuine; many are spurious.

28. *Quaestiones Romanarum* (Αἰτια Ῥωμαϊκά) and *Quaestiones Graecarum* (Αἰτια Ἑλληνικά) are aetiological studies.

B. *Historical works*: In later years P. composed his biographies of soldiers and statesmen, mainly in pairs, first a Greek, then a Roman and a comparison. Twenty-three such pairs survive (including the tetrad *Agis, Cleomenes*, and the *Gracchi*), also four single *Lives*; four

comparisons are missing. With variations the *Lives* follow the scheme of 'peripatetic' biography—birth, youth and character, deeds, death with circumstances; frequent ethical reflections occur. Details, however, vary with the sources, which cover a wide field, including peripatetic anecdote-mongers, historians proper, and memoir-writers. P. prefers Greek sources, and often takes material at second-hand. His real concern is with the form: he seeks first to please, next to provide his reader with examples of political and moral virtues. The *Lives* probably appeared in A.D. 105–15. The order in which P. wrote them is undetermined; their present order follows the chronology of the Greek characters.

The following works are of doubtful authenticity: *Consolatio ad Apollonium* (see A. 21 above); *De liberis educandis* (see A. 19 above); *De mulierum virtutibus* (see A. 27 above); *De placitis philosophorum*; *De vita et poesi Homerī*; *Narrationes amatoriae*; *Parallela minora*; *Proverbia Alexandrinorum*; *Vitae decem oratorum*.

Plutarch has achieved perennial popularity by treating concrete human problems without raising disquieting solutions. Ambling pleasantly along the surface, he sacrifices literary form to a wealth of anecdote; he employs a not purely Attic, but simple, style, reflecting the colour of his sources. P.'s youthful rationalism yielded to mysticism: his philosophy was an eclecticism which grafted on to the Academy shreds from the middle Stoa and Pythagoras. Like Seneca he revelled in ethical problems: and he accepted uncritically both Greek superiority and the meritoriousness of the Empire. In private life P. was quiet, humane, and affectionate; he combined imperial office with a full civic life in Chaeronea. A foe to extremes, he succeeded, for all his mediocre talent, in illuminating the cultural darkness of first-century Greece. See also HISTORIOGRAPHY, GREEK, para. 7, and LITERARY CRITICISM IN ANTIQUITY, I. 6.

PLUTEUS, see SIEGECRAUT, ROMAN.

PLUTON (Πλούτων), see HADES.

PLUTUS (Πλούτος). Wealth, originally and properly abundance of crops, hence associated with Demeter (q.v.) at Eleusis (see Deubner, *Attische Feste*, 85 f.); he is son of Demeter (q.v.) and Iasion (Hesiod, *Theog.* 659 ff.). He is thus closely connected in idea with Pluton (cf. HADES), and presumably with the nymph Pluto, mother of Tantalus. Cf. Hesychius s.v. εὐπλοῦστον, πλούτος. Demeter and Kore tend idem to those

whom they favour (*Hymn. Hom. Cer.* 486 ff.). He appears mostly as a figure in popular, not merely literary, tradition, see especially the *Eiresione* (Ps.-Hdt. *Vit. Hom.* 465), in which he comes with Mirth and Peace to the house which the bearers of the *eiresione* visit. In art he is shown with Demeter in more than one connexion. In the higher literature he is mentioned as overthrowing the wealth which he once gave (Aesch. *Pers.* 163), wished in Tartarus because his blindness makes so much trouble (Timocreon, fr. 5 Diehl); and Aristophanes' *Plutus* takes up this theme, which may very well have been a popular proverb, and describes the curing of his blindness, after which, knowing where he goes, he visits honest men only. Here he is wealth in general, not only agricultural prosperity. See EIRENE.

H. J. R.

PNEUMA, see ANATOMY AND PHYSIOLOGY, paras. 2, 8, 13, 14.

PNIGOS, see METRE, GREEK, II. 5.

PNYX, the meeting-place of the Athenian Ecclesia, is a low hill west of the Acropolis. The earliest construction was probably due to Cleisthenes; the speaker faced the sea, the assembly sitting on a gently sloping hill. When it was rebuilt under the Thirty Tyrants, the speaker faced north (Plut. *Themist.* 19). The present massive retaining wall and rock-cut *bema* are a Hadrianic restoration.

K. Kourouniotes and H. A. Thompson, 'The Pnyx in Athens', *Hesperia* i. 90 ff.; H. A. Thompson, 'Pnyx and Thesmophorion', *ibid.* v. 151 ff.

T. J. D.

PODALIRIUS, see MACHAON.

POETELIUS LIBO, GAIUS, with his fellow consul L. Papirius, is reputed to have carried a law during the troubled period of the Second Samnite War, as a measure of social appeasement (probably in 326 B.C., or else 313). It prohibited imprisonment for debt, and enacted that loans should henceforward be based on the security of the borrower's property, not on his personal liberty. If the right of personal execution was not abolished until much later in spite of the *Lex Poetelia de nexis*, at least it was mitigated and made dependent on judgement.

E. Pais, *Storia di Roma* iv. 233 ff.

P. T.

POLA, at the southern end of the Istrian peninsula in the northern Adriatic, has always owed its importance to its fine land-locked harbour. This ancient town was probably founded by Illyrians, certainly not by Colchians in pursuit of Argonauts (reject Strabo i. 46; 5. 215). Presumably it came under the Romans' control when they conquered the head of the Adriatic (178 B.C.: Livy 41. 13). Destroyed in the Civil Wars, Pola was rebuilt by Augustus as the colony *Pietas Iulia* and became a flourishing town whose magnificent Antonine amphitheatre still survives (Pliny *HN* 3. 129).

E. T. S.

POLEMARCHUS (*Πολέμαρχος*), at Athens, one of the nine archons (see ARCHONTES). Originally he was, presumably, head of the military forces; but the only one whom we know to have commanded an army is Callimachus, at Marathon, and it is doubtful whether he was commander-in-chief. After the introduction of the lot in 487 the polemarch lost all his military duties. He conducted certain sacrifices and festivals of a military character (such as the yearly Epitaphia); but his main duties were judicial. He introduced private suits in which foreign residents (metics, q.v.) were involved, whether between themselves or with citizens (perhaps only when metics were defendants).

A. W. G.

POLEMON (1) I of Pontus was the son of a wealthy rhetorician, Zeno of Laodicea. With his father he won Roman favour and probably Roman citizenship by

defending his city against the Parthians in 40-39 B.C. Antony first made him ruler of Lycaonia and part of Cilicia Tracheia (38), then when he gave Tracheia to Cleopatra (36) compensated him with Pontus and later with Lesser Armenia. He accompanied Antony's Parthian expedition, was captured, and held to ransom. After Actium Augustus confirmed his title but withdrew Lesser Armenia from him. In 15 B.C. Agrippa awarded him the Bosporan kingdom and assisted him to occupy it. He was killed by Bosporan rebels in 8 B.C. T. R. S. B.

POLEMON (2) of Athens, head of the Academy from the death of Xenocrates (314-313 B.C.), who converted him from a dissolute life and whose zealous follower he was, to his own death in 270, when he was succeeded by his pupil Crates. He seems to have been impressive by his force of character, but nothing is known of any original contribution by him to philosophy, and Diogenes Laertius 4. 17 says he attached more importance to conduct than to dialectic.

See Zeller, *Phil. d. Griechen* ii. 1^a. 993-4.

W. D. R.

POLEMON (3), a Greek of Ilium (fl. c. 190 B.C.), Stoic geographer who collected geographical, epigraphic, and artistic material in Greece, published in *Περὶ τῶν κατὰ πόλεις ἐπιγραμμάτων*, including especially dedications and monuments at Delphi, Sparta, Athens. In another work P. attacked Eratosthenes (Ath. 6. 234 d; 10. 436 d; 442 e etc.).

E. H. W.

POLEMON (4) of Laodicea (c. A.D. 88-145), a Sophist who won political influence at Smyrna by his eloquence. A historical work and certain speeches of his are lost; but two surviving Declamations give evidence of his impassioned Asianist style, which was, however, free from the worst excesses (Norden, *Ant. Kunstpr.* i. 389).

J. W. H. A.

POLEMONIACUS, see PONTUS.

POLICE, GREEK. Athens in the late fifth and early fourth centuries possessed a corps of Scythian archers, public slaves; but these were rather ushers in the assembly and law-courts than real policemen. Civic police first appear in the Roman period. Magistrates named *νυκτοστάτηγχοι* are then found in some cities of Asia and (in the 3rd c. A.D.) in the *metropoleis* of Egypt; they commanded a corps of *νυκτοφύλακες*, who patrolled the town at night. Magistrates styled *παραφύλακες* occur throughout Asia Minor; they commanded mounted *ὀροφύλακες* and policed the city territory. More important than these were the *εἰρηνάρχαι*, who were instituted throughout the East (except in Egypt, where the corresponding *εἰρηνάρχης νομοῦ* does not appear till the 3rd c.) in the early second century A.D. They were appointed by the provincial governor from a list submitted by the city. Their principal duty was to catch brigands; they were assisted by mounted constables (*δωγμῖται*).

In Ptolemaic Egypt the police force was organized like the army. Its members were granted lots of land (*κλήροι*), varying in size from the 30 arurae (c. 18 acres) of the mounted desert patrols (*χερσέφιπποι*) to the 10 of the ordinary constables (*φυλακῖται*). The police force of each village was commanded by the *ἀρχιφυλακῆς τῆς κώμης*, that of each nome by the *ἐπιστάτης τῶν φυλακῖτῶν*. In the Roman period service in the police became a liturgy; the chief constable of each village was styled *ἀρχεφάδος*, his men *φύλακες*. More effective than these were the small detachments of the Roman army which were stationed all over the country.

Greek cities: O. Hirschfeld, *Kleine Schriften* (1891), 599-609; L. Robert, *Études anatoliennes* (1937), 98-110. Egypt: U. Wilcken, *Grundzüge und Chrestomathie der Papyrskunde* (1912), i. 411-16.

A. H. M. J.

POLICE, ROMAN. Under the Republic little was done to preserve order in the streets of Rome, and men like Clodius found it easy to create serious disturbances. The magistrates were provided with lictors and *viatores* who would keep order in their immediate vicinity, but the only officials to whom the name police can be applied were the *triumviri capitales* or *nocturni*, whose duties included that of dealing with nocturnal disturbances. Augustus created three *cohortes urbanae*, whose number was later greatly increased. These were distinct from the *vigiles*, who were primarily concerned with fires, and may fairly be regarded as police. The function of their commander, the *praefectus urbi* (Tac. *Ann.* 6. 11) was to control the unruly element in the city. He differed from the Chief Constable of a modern city in possessing judicial power, which he evidently exercised in a summary way; his court was apt to compete with the *quaestiones perpetuae* (Tac. *Ann.* 14. 41). Urban cohorts were stationed at Lugdunum and Carthage, and in the provinces the preservation of order was a duty of the governor, who might make use of soldiers for the purpose even in senatorial provinces. G. H. S.

POLIS (πόλις), the Greek city-state. Its origin reaches back to the times of Homer and Hesiod, when the old monarchy was disappearing. The Polis arose as an anti-monarchic State, and it remained so, in spite of tyranny (q.v.). It was a State of small size, there being several reasons for political particularism in the Greek world—firstly, the natural division of the country into many separate districts, islands, peninsulas, etc.; further, the division of the Greek people into many larger or smaller tribes, and accordingly of the Greek religion into numerous local cults. Several hundreds of city-states existed, most of them extremely small. It seems almost impossible (and this not only for lack of information) to write a general history of all these States. We can only describe the most characteristic features of the type which was to become the Greek State *par excellence*.

2. The territory of a Polis (in contrast with the 'ethnos', or tribal State) included both town and country (hinterland). There always was only one town, mostly walled round, with the citadel, the original πόλις (later: 'acro-polis'), and the agora or market-place. The citizens resided alike in town and country, but the government of the State was entirely concentrated in the town. Membership of the citizen body would depend upon the constitution of each Polis, but in every case the Polis was identical with the totality of its citizens. Therefore the name of the State was taken from the citizens, not from the town or territory: οἱ Ἀθηναῖοι etc.; ἄνδρες γὰρ πόλις, says Thucydides (7. 77. 7). The citizens were a ruling class, not only in aristocracies and oligarchies (qq.v.), but even in democracies (q.v.); for besides the slaves there always was a population not belonging to the State, e.g. dependent lower classes, resident strangers (metics), inhabitants of surrounding districts (*perioeci*), etc. Even in citizenship (q.v.) there were different degrees, and for a long time the internal development of the Polis was a struggle for equality in citizenship and political rights, as well as in social and economic conditions.

3. The State consisted of its citizens, considered less as individuals than as forming smaller communities of kinship, of cult, of locality. Each individual was tied to the life of all these communities and of the State. Moreover, the State was not only a political community. To be a citizen meant adherence to the cults of the gods of the Polis, as well as military and economic service to the State, and obedience to its laws. The perfect Greek citizen was Aristotle's ζῷον πολιτικόν, at the same time attached to his Polis, and a free man.

4. Liberty, autonomy, autarky were the ideals of the Polis, and its chief claim was to be ruled by law (*nomos*).

In actual fact government remained a question of power, but the sacred 'nomos' always directed and regulated actual politics. Government was carried on mainly by three institutions: Assembly, Council, magistracies, all derived from earlier times. Each of these preponderated according to the various types of constitution. The Council held the chief political power in aristocracy and oligarchy, the Assembly in democracy. Jurisdiction was performed partly by the Council, partly by special officials, the final court being mostly the people, i.e. the Assembly. In democracies the dicasteries (q.v.) gathered almost all jurisdiction into their hands.

5. Remembering always that it is wrong to generalize from the institutions of any single Polis, all of which differed in many ways, we may consider the Athenian democracy as having reached (and gone beyond) the highest standard of a Polis, the organization of which strongly influenced other States. In Athens during the fifth and the fourth centuries the rule of the people was realized most completely. The Assembly, although in fact consisting of only part of the people, especially those living in town, was open to any citizen, and was the true sovereign (τὸ κύριον). All foreign policy, all military and naval questions, all legislation, and the control of all executive officials were treated and decided by the Assembly. Its functions and its power were really unlimited. But all matters presented to the Assembly were prepared by a *probouleuma* of the Council. Therefore the decrees (ψηφίσματα) were finally resolved by Council and people in common (ἐδόξε τῇ βουλῇ καὶ τῷ δήμῳ). But the Assembly could always reject, add, or amend. In addition to its main task of *probouleusis* the Council collaborated authoritatively with the magistracies and controlled public finance. The councillors were elected by lot and not allowed to be re-elected more than once. Thus the majority of those citizens who attended the Assembly were councillors once in their life. The Council formed a committee of the people, its membership changing yearly. It was not a restraining power, as the Areopagus formerly used to be. The magistracies had to execute the people's decrees, but some rights of initiative and command were given to the higher of them. There was no real political power connected with any magistracy, although some of them carried a certain measure of influence.

6. The Polis lost its power and its function of leadership in Greek politics partly through the corruption of democracy, but more so through the overwhelming power of Alexander's empire and the Hellenistic monarchies. However, it did not vanish, nor even cease to appear politically autonomous. There were still political and economical struggles between the parties of the Polis, and oligarchy was often renewed. Some of the city-states remained centres of cultural or economic life, and in the monarchies of Asia newly founded cities, many of them originally military colonies, became the agents of hellenization of the East. The Hellenistic age owed most of its intellectual life to the traditions of the Polis. Perhaps its greatest efficiency issued from its part in Greek philosophy. In the fourth century, when the Polis began to decline, Plato designed his immortal picture of the ideal State, and Aristotle created political science. For both of them political theory was theory of the Polis, and even the Stoics considered the world as the unity of 'cosmo-polis'.

Ehrenberg, in Gercke-Norden, *Einführung in die Altertumswissenschaft* (1932), vol. III, pt. 3; W. W. Tarn, *The Greeks in Bactria and India* (1938), ch. 1; A. H. M. Jones, *The Greek City from Alexander to Justinian* (1939). V. E.

POLITES, in mythology, son of Priam (q.v.) by Hecuba (q.v.), a swift runner and consequently employed as a scout (*Iliad* 2. 79; ff., cf. 24. 250). He takes a minor

part in the fighting (13. 533; 15. 339). In Verg. *Aen.* 2. 526 ff. he is killed by Neoptolemus (q.v.); cf. Quint. Smyrn. 13. 214; source unknown. H. J. R.

POLLIO, GAIUS ASINIUS (76 B.C.–A.D. 5), fought on Caesar's side and later on Antony's in the Civil War. Consul in 40, he celebrated a triumph over the Parthini of Illyria in 39. After quarrelling with Antony he did not go over to Octavian but maintained a reserved attitude, consoling himself for political inactivity by devotion to literary pursuits.

In youth he had been an associate of Catullus and his circle, and later enjoyed the friendship of Horace (*Carm.* 2. 1. 1 ff.) and Virgil (*Ecl.* 4 is addressed to him). We hear that it was P. who suggested to Virgil that he should write a *carmen bucolicum*. P.'s own works included tragedies; *historiae*, an account of the Civil Wars (starting with the year 60 and ending possibly with Caesar's death) used by Plutarch and Appian; speeches, which, to judge from his criticism of Cicero, were Atticist in style (cf. Tac. *Dial.* 21. 13); poems (Verg. *Ecl.* 3. 86; Plin. *Ep.* 5. 3. 5); grammatical writings; and letters. As a literary critic P. was renowned for the severity of his judgments, among which is the celebrated sneer at Livy's *Patavinitas*. P. appears also as a patron of the arts. He founded the first public library in Italy (39) and organized the first *recitationes* of literary works. L. R. P.

POLLIO, see also POMPONIUS (6), VEDIUS.

POLLUX, see CASTOR.

POLLUX, JULIUS, of Naucratis (2nd c. A.D.), scholar and rhetorician. His *Onomasticon* was composed in the lifetime of Commodus, to whom are addressed epistles prefixed to each of its ten books: that introducing bk. 8 indicates that the author's appointment to a Chair at Athens (not before A.D. 178) preceded the completion of the work. In bks. 8–10 he replies to Phrynichus' criticism of points in 1–7. As an example of Atticism and other profitable vices of the age he comes under Lucian's lash in *Ῥητόρων Διδάσκαλος*: cf. ch. 24—οὐκέτι Ποσειδὸς ὀνομάσκειται ἀλλ' ἤδη τοῖς Διὸς καὶ Ἀθήδης παισὶν ὁμώνυμος γεγένηται. Like his other works, the *Onomasticon* in its original form has perished: the extant manuscripts from which it is now known are derived from four incomplete, abridged, and interpolated copies from an early epitome possessed (and interpolated) by Arethas, Archbishop of Caesarea, c. A.D. 900. The arrangement is topical, not alphabetical. The work partly resembles a rhetorical handbook, c.g. in its collections of synonyms and of subject-vocabularies, in collections of compounds (ὁμο- and some others), in the fifty-two terms for use in praising a king, or the thirty-three terms of abuse to apply to a tax-collector. The story of Heracles' discovery of purple is added expressly as a light relief for the student. Wider philological and encyclopaedic interests appear in the citations from literature and in the treatment of music and the theatre. Besides these, his subjects include religion, private and public law, human anatomy and ethics, war, the sciences, arts, crafts, and trades, houses, ships, husbandry, cookery, children's games, and a host of other matters. But the work is predominantly a thesaurus of terms, not of information.

Editions: Hemsterhuys and others, 1706 (reprinted with additions, Dindorf, 1824); Bekker, 1846; Bethe, in *Teubner's Lexicog.* Gr. ix. i–iii, 1900–31. P. B. R. F.

POLUS of Agrigentum, Sophist, younger than Socrates (Pl. *Grg.* 463 e), pupil of Gorgias; like his teacher he confined himself in later years to teaching rhetoric. He wrote a rhetorical *Τέχνη*, the beginning of which may perhaps be seen in Pl. *Grg.* 448 c. He is mentioned often by Plato and once by Aristotle.

See Zeller, *Phil. d. Griechen* i⁸, 1232.

W. D. R.

POLYAENUS (1) of Lampsacus, one of the chief direct disciples of Epicurus, who turned P.'s attention from mathematics to philosophy. He died before his master. Works: *Περὶ φιλοσοφίας: Τὰ πρὸς τὸν Ἀρίστωνα: Περὶ ὄρων*.

See Zeller, *Phil. d. Griechen*, iii. 1⁴. 379–80.

W. D. R.

POLYAENUS (2), a Macedonian rhetorician, in his later years dedicated his collection of *Stratagems*, in eight books, to the Emperors Marcus and Vcrus, to aid them in Verus' Parthian War (A.D. 162). His examples, true or false, are taken from every people of the known world, gods included. Similar collections of extracts, called *hypomnemata*, on every subject and from all sorts of sources, had been common in Hellenistic literature, and Polyaenus, who produced his book very quickly, did not make his own extracts but utilized earlier compilations; theories about his sources are useless. Some items are historically valuable, others worthless; each one must be judged separately.

W. W. T.

POLYBIUS (1) (c. 203?–c. 120 B.C.), the Greek historian of Rome, son of the Achaean statesman Lycortas, was born in Megalopolis probably towards 203 B.C. and, after a liberal education, entered politics early, following the Megalopolitan policy of Philopoemen and Lycortas. In 183 he carried Philopoemen's ashes, in 181–180 went on an embassy to Egypt, and in 169–168 was Hipparch of the Achaean League. After Pydna he was deported to Rome with the thousand Achaeans answering for their politics in the Third Macedonian War. Protected by Aemilius Paullus, he moved in Scipionic society, gaining the friendship of Scipio Aemilianus, and under their patronage began his great historical work. Free to travel in Italy, he also accompanied Scipio Aemilianus to Spain in 151, crossing to Numidia, and, perhaps on the return journey, saw south Gaul, the Alps, and Cisalpine Gaul. Returning to Achaea in 150, he again accompanied Scipio to Africa 147–146, exploring the coast of Mauretania. On the destruction of Corinth he helped in the settlement of Greece. He was probably at Numantia, and died, after a fall from a horse, towards 120.

2. Besides a panegyric on Philopoemen, a book on tactics, and a late work on the Numantine War, he wrote a *Universal History* in forty books on the period 220/219–145/144 B.C.; bks. 1–5 are fully preserved, bks. 6–40 in excerpts and in their use in Livy, Diodorus, Appian, and Plutarch. A *προκατασκευή* (bks. 1–2) gave a preliminary survey from the First Punic War, following on Timaeus. The main narrative first described the situation in Rome and Carthage (bk. 3) and the East (bks. 4–5) in 220–216 B.C., and then, after bk. 6, recorded by Olympiad years the course of events in the different theatres. Bks. 7–15 continued the Second Punic War, bks. 16–29 the Second Macedonian, Syrian, and Third Macedonian Wars, bks. 30–4 167/6–153/2 B.C., bks. 35–9 the final conquest of Spain, Africa, and Greece (to 145/4). At set points he balances his work, bk. 6 analysing the Roman constitution, bk. 12 discussing historiographical theory, bk. 34 Mediterranean geography, bk. 40 closing the work with a recapitulation and chronological survey.

3. Polybius' wide political and military experience, his access to official and historical records in Greece and Rome, and his intimate knowledge of personalities and events fitted him for his task. He followed the Roman Fabius Pictor and the pro-Carthaginian Philinus of Agragus for the First Punic War, Fabius Pictor for the Gallic Wars, the Roman senatorial tradition (e.g. perhaps Postumius Albinus) with (probably) Silenus from Hannibal's side for the Second Punic War, the senatorial tradition for events in the West in the second century B.C.; his use of Cato's *Origines* is doubtful. In Hellenistic affairs he had the Achaean tradition, including

Aratus' *Memoirs*, and histories such as those of the Rhodians Zeno and Antisthenes. He refers to archive records. Lycortas, Aemilius Paullus, and the Scipionic family gave eyewitness evidence for events before his own time.

4. Inspired by the rise of Rome, impressed with the strength and stability of her civic and confederate institutions, he saw in the protectorate of Rome over Greece by 168 B.C. an imperial fulfilment which admitted of political analysis. With this conception he began the writing of bks. 1-29, describing the Roman constitution in bk. 6 as an example of the ideal 'mixed' constitution of Peripatetic theory. Events after 168 then led him to treat the Roman domination, first to 153/2 (30-4) and later to the full conquest (35-40). His attitude to Rome became less favourable; senatorial degeneracy and Graeco-Roman radicalism destroyed his faith in her constitutional stability. References in bk. 6 to 'cyclic' degeneration from the aristocracy of the Hannibalic War towards ochlocracy, which represent Stoic theory, accompanied by criticism of 'Flaminian' policy, indicate that in preparing the later books, which appeared after Scipio Aemilianus' death, probably posthumously, he was also engaged in revising the earlier books, especially bk. 6.

5. An exponent of pragmatic historiography, in the tradition of Thucydides, like Hieronymus of Cardia, he brought to his historical analysis a mature appreciation of political causation, constitutional form, and character development. His conventional references to Fortune, in current Peripatetic phraseology, do not affect this historical position, which, together with the principle of full authenticity in narrative detail, he maintains against the rhetorical Isocratean elaboration of Timaeus and the dramatic Peripatetic technique of Phylarchus. His claims for himself cannot all be allowed. His pragmatism may work mechanically, for example, in combining Fabius Pictor and Philinus, or narrowly in estimating the mystical character of Scipio Africanus. His moralizing reflections, his characterization, of Philip V for example, even his historical criticism, of Phylarchus for example, may reflect political prejudice. And he conceals, or fails to realize, his own bias: Aetolian and Macedonian policy, pro-Roman politics in Achaia, the anti-Scipionic trends in Rome are vilified; Aratus, Philopoemen, Scipio Africanus, Aemilius Paullus, Scipio Aemilianus are glorified. Yet his theme was a great one, and he handled it with historical mastery, to illumine the imperial rise of Rome.

6. In composition he followed the Olympiad yearly division, modifying it for pragmatic or literary effect, e.g. at Cannae or after Zama. In narration he is circumstantial to the point of verbosity. His style is 'the style of the Chancery', but with a lack of grace that is his own. Yet he may set details in vivid scenes and report speeches in a form betraying the influence of rhetorical and dramatic method. An historian to be used with care, a writer read with difficulty, he yet gives invaluable material to the historian and to the reader a narrative that repays effort. See HISTORIOGRAPHY, GREEK, para. 7.

Rom.* iii, pt. 1 (1916), 200; F. Taeger, *Die Archäologie des Polybios* (1922); C. Wankel, *Polybios* (1927); F. Norden, *Ant. Kunst.* i (1923), 4th impression; W. Siegfried, *Studien zur geschichtlichen Anschauung des Polybios* (1925); F. W. Walbank, *JHS* 1928, 55; *CQ* (1928), 73; (1948) 1; A. H. McDonald, *CHJ* 1929, p. 136. A. H. McIl.

POLYBIUS (2) was one of Claudius' freedmen and his secretary, especially for literary and perhaps for legal matters (*a studiis* and later *a libellis*). He translated

Homer into Latin and Virgil into Greek. Seneca addressed to him (probably in A.D. 43) a *Consolatio* (*Dial.* xi) for the death of one of his brothers, hoping that it might be construed as a petition for recall from exile. He was killed in 47 through the manoeuvres of Messalina.

Consol. ad Polyb. in J. D. Duff's ed. of Seneca, *Dial.* x, xi, x (1915). *PIR*, P 427; A. Momigliano, *Claudius* (1934), 103. A. D.

POLYBOEA, (1) name of several mythological heroines (2) a goddess, sister of Hyacinthus (q.v.), identified with Artemis and Kore (Paus. 3. 19. 4; Hesych. s.v.).

POLYBUS (1), in mythology, king of Corinth or Sicyon a figure of some importance in the legends of Oedipus and Adrastus (qq.v.). Being childless, or at all event without sons, he and his wife adopt the infant Oedipus and rear him as their own (Soph. *OT* 1016 ff.). He is sonless again in the version preserved by schol. Pind. *Nem.* 9. 30, cf. Hdt. 5. 67. 4. In this tradition Adrastus is his daughter's son and inherits his kingdom. But he is either an extremely vague figure or a conflation of several persons, for we hear of him also as in Tenos (Strab. 8. 6. 22, p. 380), Boeotia (schol. Eur. *Phoen.* 28), and Argos (*Etym. Magn.* 207. 41 ff.).

See further Höfer in Roscher, s.v.

II. J. R.

POLYBUS (2), son-in-law of Hippocrates, see ANATOMY AND PHYSIOLOGY, para. 3.

POLYCLEITUS of Larisa, used by Eratosthenes as a geographical source. See ALEXANDER (3), Bibliography, Ancient Sources.

POLYCLETUS (Πολύκλειτος), Greek sculptor, a native of Argos, probably a younger contemporary of Phidias, and, like Phidias and Myron, a reputed pupil of Ageladas of Argos. He was the greatest exponent of the Peloponnesian tradition and school in the second half of the fifth century B.C., and he did not fall under the influence of Phidias and the Attic school. His earliest work is dated not before 452, his latest (the Spartan memorial for Aegospotami) at 405. Numerous Hellenistic and Roman copies of his work survive, and he had an immense popularity during his lifetime and after. By far the best copy is that of his famous 'Diadumenos', for which he was paid 100 talents, found at Delos, now in Athens. It is a late Hellenistic copy. He specialized in statues of Olympic victors, and three signed bases of such statues have been found at Olympia. His 'Spear-holder' is represented by a tolerably good Roman copy found at Pompeii, now in Naples Museum. The so-called 'West-macott' athlete, a Roman copy in the British Museum, is thought to preserve the type of his statue of the Olympic victor Cyniscus. A copy of an Amazon, now at Berlin, is thought to reproduce the style of the sculptor. Polyclethus worked mainly in bronze, but he also carved statues in marble and made the chryselephantine statue of Hera for the temple at Argos (after 423).

S. C.

POLYCRATES (1) seized Samos c. 540 B.C. with his brothers Pantagnotus and Syloson, but soon made himself sole tyrant. He made Samos a great naval power, annexed neighbouring islands (including Rheneia near Delos), and celebrated Delian Games. He formed alliances with Egypt and Cyrene, but later sent a force of disaffected Samians to help Cambyses against Egypt. These sailed back and attacked the tyrant unsuccessfully, though supported by a Spartan force, which Polycrates bought off with a bribe of specially struck false coins. C. 522 Polycrates was lured to the mainland by the satrap Oroetes, who pretended to be plotting against Darius, and there crucified. His piratical thalassocracy suppleanted a consistent effort, tempered by opportunism, to maintain an unconquered Samos as successor to Miletus (then under Persian rule). Polycrates built

many public works (aqueduct, harbour, temple, bazaar), encouraged the woollen industry, and patronized artists and poets (Theodoros, Anaereon). Athenaeus associates him with Samian industries even before he became tyrant, a statement borne out by an inscription on the statue of his father Aeaces.

Herodotus, bk. 3; Thucydides 1. 13, 3. 104; Aristotle, *Politics* 1313 b; Athenaeus, 540 d. E. Curtius, *Ath. Mitt.* 1906, 151 f.; P. N. Ure, *The Origin of Tyranny* (1922), ch. 3. P. N. U.

POLYCRATES (2) (4th c. B.C.), Athenian rhetor censured by Isocrates on account of the trivial nature of his rhetorical exercises. His works included *Βούσειρις*, which drew from Isocrates a more effective panegyric on the same theme, the *Κατηγορία Σωκράτους*, to which Isocrates also replied (*Bus.* 5 ff.; cf. also *Xen. Mem.* 1. 2), the *Ἑλένη*, a *παίγνιον* written in emulation of a similar work by Isocrates, as well as Sophistic *encomia* on trifling themes (a pot, pebbles, etc.). J. W. H. A.

POLYDAMAS (*Πολυδάμας*), in mythology, son of Panthoos (Homer, loc. cit. infra). In the *Iliad* he takes some part in the fighting, but is chiefly noteworthy for his sage advice, which Hector rejects to his cost (18. 249 ff.). His death is nowhere recorded and he seems to be thought of as surviving the war. H. J. R.

POLYDORUS (*Πολύδωρος*). There are some ten mythological persons bearing this name, the only ones of any importance being: (1) son of Cadmus (q.v.) and Harmonia, a purely genealogical figure, ignored by Euripides (*Bacch.* 43-4), but mentioned, e.g., by Herodotus (5. 59). (2) Youngest son of Priam and Hecuba (qq.v.). When the Trojan War was raging, Priam sent him with much gold to Polymnestor, a Thracian king, who murdered him for the gold after the fall of Troy. His ghost speaks the prologue of Euripides, *Hecuba*, and an important part of the plot is Hecabe's discovery and avenging of the murder. Cf. Verg. *Aen.* 3. 22 ff. H. J. R.

POLYEIDUS (1), a scer, one of the Melampodidae, a Corinthian. When Glaucus, son of Minos (q.v.) was drowned in a honey-jar, Polyeidus, after passing a test imposed by Minos, found the body and afterwards restored it to life by using a herb revealed by a snake.

See Hyginus, *Fab.* 136; Roscher's *Lexicon*, s.v. H. J. R.

POLYEIDUS (2) 'the Sophist' is known only from Aristotle (*Poet.* 16, 17), who refers to the recognition scene in his *Iphigenia* (if that was the title).

POLYGNOTUS (fl. c. 475-447 B.C.), painter, son and pupil of Aglaophon of Thasos; later an Athenian citizen. Friend of Cimon and probably of Sophocles. Pliny dates before 420 B.C. He painted the 'Iliupersis' in the Stoa Poikile soon after 460, the 'Iliupersis' and 'Nekyia' in the Cnidian Lesehe at Delphi probably between 458 and 447; according to a very probable emendation he painted in the Theseum soon after 475. The 'Rape of the Leucippidae' in the Anakeion, the 'Suitor Slaying' in Plataea, the 'Achilles in Scyros' and the 'Nausicaa' (both later in the Pinakothek) are undated. Contemporary and later vases, particularly the Niobid painter's Argonaut crater (Pfuhl, fig. 492), illustrate Polygnotan grouping and postures, as described by Pausanias, and the transparent drapery and freer treatment of the face, noted by Pliny. Many of the elements of his art had appeared sporadically before, but he combined them to represent men of high moral purpose (*ἦθος*) and 'better than ourselves', often either taking a decision or in the reaction after the event. For Theophrastus and others he was a primitive (he did not use shading), but still the first great painter.

Overbeck, 380, 614, 1042-79; Pfuhl, 688, 729; E. Löwy, *Polygnot* (1929); C. Dugas, *Rev. Ét. Gr.* 1938, 53. T. B. L. W.

POLYMNESTUS, see MUSIC, § 10.

POLYNICES (*Πολυνείκης*), see ETEOCLES, ADRASTUS.

POLYPEMON, see PROCRUSTES.

POLYPERCHON (b. c. 380 B.C.), son of Simmias a Macedonian noble, first appears when promoted 'taxiarch' to command a brigade of Alexander's Macedonian infantry after Issus (333). Under Alexander he rose no higher, and his first independent command was in the Lamian War (321), when he showed some skill. This, with his seniority and want of personal ambition, inspired the regent Antipater to recommend the army to elect him his successor (319); but, lacking Antipater's prestige, he had no chance of controlling the 'separatist' generals. He failed even to hold Macedonia and retain possession of the two kings, and degenerated into a mere general of mercenaries in Greece, employed alternately by Antigonus and Cassander against each other.

POLYPHEMUS, see CYCLOPES.

POLYPHRASMON (so spelt *IG* ii². 2325), son of the tragic poet Phrynichus, wrote a tetralogy on the subject of Lyeurgus, presented in 467 B.C., but defeated by Aeschylus' Theban tetralogy and by Aristias (Arg. Aesch. *Sept.*).

POLYSTRATUS, perhaps a direct disciple of Epicurus, followed Hermarchus (successor of Epicurus) as head of the school. Works: *Περὶ ἀλόγου καταφρονήσεως*, frs. ed. C. Wilke, 1905; *Περὶ φιλοσοφίας*, frs. ed. Crönert, *Kolotes u. Menedemos*, 36.

See Zeller, *Phil. d. Griechen* iii. 1^a. 381-2.

POLYXENA (*Πολυξένη*), in mythology, daughter of Priam (q.v.) and Hecuba (q.v.); not in Homer. In the *Cypria* she is mortally wounded at the fall of Troy and buried by Neoptolemus (fr. 26 Allen). In the *Iliu Persis* and later she is sacrificed to the ghost of Achilles (Proclus); cf., e.g., Eur. *Hec.* 220 ff.). Hence the story that Achilles in life was in love with her, e.g. Hyginus, *Fab.* 110. H. J. R.

POLYZELUS, Athenian comic writer. Suidas mentions *Νίπτρα*, *Ἀφροδίτης γοναί*, *Διονύσου γοναί*, *Μουσῶν γοναί*, and *Δημοσυνδράews*. Titles containing the word *γοναί* suggest Middle Comedy, but *Δημοστ.* is clearly a fifth-century production, for it mentions (fr. 3) Thracemenes, who died in 404 (*Xen. Hell.* 2. 3. 55) and Hyperbolus (fr. 5) who was killed in 411 (*Thuc.* 8. 73. 3).

FCG ii. 367 ff.; *CAF* i. 789 ff.; Demianczuk, *Supp. Com.* 82 f. M. P.

POMERIUM was the line demarcating an augurally constituted city, containing the *auspicia urbana*. The name was soon transferred to the strip between wall and urban property (*Livy* 1. 44; *Plut. Rom.* 11) and even to the *glacis* outside the wall (cf. *CIL* x. 1018, Pompeii). The original *pomerium* of Rome is the subject of conflicting statements: Tacitus (*Ann.* 12. 24) describes the Luperical circuit, Varro (apud *Solin.* 1. 17) the augural temple of the Palatine. The earliest known boundary, containing (by inference) the Capitol, Quirinal, Viminal, Oppian, Caelian, and Palatine hills, is based upon Varro's description (*Ling.* 5: 46-54) of the lustration of the Four Regions. This remained unaltered until Sulla extended it 'auctis p. R. finibus' (*Tac. Ann.* 12. 23). On these grounds it was extended by Caesar (*Dio Cass.* 43. 50), Augustus (*Tac. Ann.* 12. 23; *Dio Cass.* 55. 6; a claim of thrice is made in *Bull. Com. Arch.* 1919, 24-32), Claudius (*Tac. Ann.* 12. 24; *Aul. Gell.* 13. 14. 7; *CIL* vi. 31537 a-d; *Not. Scav.* 1909, 44, 45; 1912. 197;

1913, 68), Vespasian (*CIL* vi. 930, 14-16; 31538 a-c), Hadrian (*CIL* vi. 31539 a-c), and Aurelian (S.H.A. *Aurelian* 21). The Imperial *pomerium*, thus loosely defined by *cippi*, is thought to have coincided on the east with the Republican wall, breaking away to include the Aventine and Emporium, the southern half of the Campus Martius, and all the Pincian hill, at the last point extending beyond Aurelian's Wall. See also AUSPICUM.

M. Labrousse, *Mélanges d'arch.* 1937, 1 ff.

I. A. R.

POMONA, Roman goddess of *poma*, i.e. fruits, especially such as grow on trees, apples, etc. Her flamen (q.v.) was lowest in rank of all, corresponding apparently to the small importance of her province. She had a sacred place, *pomonal*, twelve miles out of Rome (Festus, p. 296, 15 ff. Lindsay), but no known festival. Ovid (*Met.* 14. 623 ff.) has a story (unconnected with facts of cult and clearly his own or another comparatively late author's invention) that Vertumnus (q.v.) loved her, pled his own cause in disguised shape, and finally won her.

H. J. R.

POMPAEDIUS (or, better, **POPPAEDIUS**) **SILO**, QUINTUS, a Marsian, was the chief Italian leader in the Social War. He ambushed and defeated Q. Caepio, but failed to force Marius to give battle. After most of the Italians had given up the struggle Pompaedius still remained in arms and retook Bovianum. He perished after being defeated by Metellus Pius in the last battle of the war (88 B.C.).

M. II.

POMPEIA, daughter of Q. Pompeius Rufus (cos. 88 B.C.) and of Mucia, Sulla's daughter, married Caesar in 67 and was divorced in 61, as Caesar's wife had to be above suspicion (see **CLODIUS** 1).

POMPEIANUS, TIBERIUS CLAUDIUS, see **CLAUDIUS** (15).

POMPEII, situated on a small volcanic hill, 5½ miles south-east of Vesuvius, was not a small town according to ancient standards, having an area of c. 160 acres. Its sudden end in the eruption of Vesuvius in A.D. 79, which was described by the Younger Pliny (*Ep.* 16 and 20), struck the imagination of the ancient world as well as the modern. The site, forgotten in the Middle Ages, was rediscovered in 1748; since then intermittent excavation has proceeded. About two-fifths of it have now been uncovered.

2. Pompeii served in Strabo's time as a port of Nola, Nuceria, and Acerrae (5. 4. 8). Its commercial and strategic position at the mouth of the Sarnus, one of the gateways of Campania, explains its historical development. Strabo (*ibid.*) states that it was occupied successively by Oscans, Etruscans and Pelasgians, Samnites, and Romans.

3. The Oscans were the descendants of the neolithic inhabitants of Campania, as appears from their rough pottery. From the eighth century B.C. they came under the influence of the Greek colonies of the coast, and Greek pottery (geometric, proto-Corinthian, Corinthian) and bronzes appear in their graves. In the seventh century Etruscan influence becomes apparent, issuing doubtless from Capua and Nola, and from this time Greek and Etruscan features occur together. The Samnites invaded Campania in the fifth century, occupying Capua in 432 and Cumae in 420, and their penetration south of Vesuvius must have followed soon.

4. The town-plan of Pompeii seems to contain an older portion and a newer portion, of which the former may follow the plan of an early Oscan settlement. If so, the question arises: when was the town enlarged to its present size, and by whom? The fortifications of the enlarged town suggest a date in the fifth century B.C., but without further excavation it is impossible to decide whether the impulse came from the Greeks, Etruscans, or Samnites.

5. From the end of the fifth century B.C. till the age of

Sulla, Pompeii was a Samnite town. Its language was Oscan. Coinage suggests that it belonged to a league of which Nuceria was the head. Its chief magistrate was a *meddix tuticus*, and under him were quaestors and aediles. An assembly (*kombennion*) appears in inscriptions, though it is not known whether it was an assembly of all citizens or a town-council. The period was one of great prosperity, based on agriculture and commerce. Culturally the town passed through two phases, the line between them falling about the middle of the third century B.C. The first (in which limestone was the chief building material) may be called Italian in the sense that it is a reflection of a more or less homogeneous civilization which was spread over most of south Italy at the time (cf. the Oscan and Lucanian tomb-paintings in the Naples and Capua museums). The street-plan, temples, and houses show that it was strongly permeated with Etruscan influences. The second phase (so-called 'tufa' period) was Hellenistic and received a great impetus from the ever-widening trade connexions of Campania during the second century B.C. Increasing prosperity is reflected in the dignified monuments which date from the third and second centuries B.C. The main Forum, hitherto a rough and unsystematic market-place, was converted into a dignified civic centre. The region of the Foro Triangolare was rebuilt after the manner of a Greek gymnasium to be a centre of the town's cultural life. Objects like bronzes, marble tables, terra-cottas, and mosaics were imported in large quantities from Hellenistic factories or made by local workmen after Hellenistic designs. In houses wall-decoration became markedly Hellenistic, and the Greek peristyle was added to the Italian atrium.

6. In the Social War Pompeii joined the Italians (Appian, *BCiv.* 1. 39) and in 89 B.C. was attacked by L. Sulla. The outcome of the siege is unknown, but the war as a whole completely changed the position of Pompeii. With the rest of Italy it received Roman franchise and the citizens were enrolled in the *tribus Menenia*. As a punishment for resistance to Sulla's army a colony of Roman veterans was planted on the town under the leadership of P. Sulla, the Dictator's nephew (*Cic. Sull.* 60-2). At this time, except for the incipient use of Latin in place of Oscan as the language of official life, the romanization of Pompeii had not gone far, but hereafter it made rapid strides. The names and functions of the magistrates were brought into line with those of other Roman colonies. The Oscan language was replaced by Latin, and Oscan weights and measures by Roman standards. Houses, wall-painting, metal-work, and pavements all took on a Roman tinge. Romanization in architecture was indirectly assisted by an earthquake in A.D. 63. Seneca (*QNat.* 6. 1. 1-2) and Tacitus (*Ann.* 15. 22) say that it left much of the city in ruins, and this is confirmed by the remains. In the parts that were rebuilt before the eruption the influence of Rome was strong.

7. Local families and traditions were not, however, entirely swamped by the Roman colonists. Indeed, inscriptions suggest that after initial difficulties the two groups lived amicably side by side. Municipal elections continued to be contested with vigour, and except to deal with irregularities and disorder (e.g. the riot in the amphitheatre of A.D. 59; *Tac. Ann.* 14. 17) there was little interference from the central government. The remains of the last half-century before the eruption present the picture of a prosperous town—a market for the produce of a rich country-side, a port with wide connexions in the Mediterranean, and an industrial centre producing certain specialities (mill-stones, fish-sauce, perfumes, and cloth) for which the demand was more than local.

BIBLIOGRAPHY

ANCIENT SOURCES: (a) Inscriptions: *CIL* iv. 207-1170, 2122-47, 2328-84; *Tab. Pompe.* nos. 26-40, 200; *Not. Scav.* 1927, 59-116; 1929, 435-27; 1932, 277-331; 1935, 250-352. (b) Authors:

POMPEIUS (1), QUINTUS, a *homo novus* and friend of Scipio Aemilianus, was consul in 141 B.C., when he succeeded his enemy Q. Metellus Macedonicus in Hispania Citerior. After failing to storm and blockade Numantia he accepted terms, receiving 30 talents. But on the arrival of his successor, M. Popillius Laenas, he disowned the treaty with senatorial connivance and escaped all punishment. Accused shortly afterwards of extortion, he was acquitted again. He returned to Spain as a legate of L. Furius Philus (136). He opposed Ti. Gracchus (133), and was censor with Metellus Macedonicus (131).

Drumann-Groebe, *Geschichte Roms* iv. 313; A. Schulten, *Numantia* (1933), 69. A. M.

POMPEIUS (2) RUFUS, QUINTUS (cos. 88 B.C.), was husband of Cornelia, daughter of Sulla; and father of Pompeia, Caesar's wife from 67 to 61. An active Optimatus, Pompeius as tribune in 100 proposed the recall of Metellus (q.v. 6) Numidicus. He was praetor in 91, and consul with Sulla in 88. He was driven from Rome in the struggle against his former friend Sulpicius, besides losing a son in the riots; he fled to Sulla's army at Nola. After Sulla's march on Rome and departure for the East, Pompeius was to have superseded Pompeius Strabo in command of the force still in the field against the Marsi, but Strabo had him assassinated.

For coin-portrait see *B.M. Coins, Rom. Rep.* i. 484. M. H.

POMPEIUS (3) MAGNUS, GNAEUS, see POMPEY.

POMPEIUS (4), GNAEUS, elder son of Pompey and Mucia, and son-in-law of Appius Claudius, in 49 secured an Egyptian fleet, with which before the battle of Dyrrhachium he destroyed Caesar's transports. Early in the African War he occupied the Balearics and crossed to Spain, where he was joined after Thapsus by his brother and Labienus, raised thirteen legions, and won most of the southern province. But after manœuvres which drove him south from Corduba he was defeated by Caesar in 45 in the hard-fought battle of Munda, and later captured and executed. He was both cruel and stupid (Cic. *Fam.* 15. 19, Plut. *Cic.* 39). G. E. F. C.

POMPEIUS (5), SEXTUS, younger son of Pompey the Great, accompanied his father from Lesbos to Egypt after Pharsalus, proceeded to Africa after the murder of Pompey, and joined his brother in Spain after Thapsus. He commanded the garrison of Corduba during the campaign of Munda, subsequently contrived to raise an army (partly of Pompeian fugitives), and won appreciable successes against the governors of Further Spain, Carrinas and Pollio. In 44 B.C. a settlement was effected by Lepidus, and in 43 the Senate appointed Sextus commander of the fleet. Outlawed under the *Lex Pedia*, he employed his ships to rescue fugitives from the proscription and occupied Sicily, which he used as a base for raiding and blockading the Italian coast. He repelled an attack by Octavian's *legatus* Salvidienus in 42, supported Antony against Octavian in 40 (when his lieutenant Menodorus occupied Sardinia), and was given the governorship of Sicily, Sardinia, and Achaea by the treaty of Misenum. In 38 Octavian accused him of breaking the treaty and again attacked him, but was defeated in naval battles near Cumae and Messana.

In 36 the attack was renewed, and after Agrippa's victory off Mylae and Octavian's defeat off Tauromenium the war was decided by the battle of Naulochus. Sextus escaped with a few ships to Asia Minor, where he attempted to establish himself and was captured and executed by Antony's *legatus* M. Titius (35). His wife was Scribonia, daughter of L. Scribonius Libo.

MODERN LITERATURE: J. Kromayer, *Philol.* lvi (1897); Drumann-Groebe, *Gesch. Roms* iv. 563-91; T. Rice Holmes, *Architect of the Roman Empire* i (1928); M. Hadas, *Sextus Pompey* (U.S.A. 1930). G. W. R.

POMPEIUS (6) SILO, rhetor, some of whose arguments are cited by the elder Seneca.

POMPEIUS (7) SATURNINUS, orator, historian, poet whose verse, in the manner of Catullus and Calvus, Pliny greatly admired (*Ep.* 1. 8 and 16). Pliny sent him for criticism his speech at the opening of the Como library.

POMPEIUS (8) (5th c. A.D.), grammarian, author of a *Commentum artis Donati* (ed. Keil, *Gramm. Lat.* v. 95-312). Cf. Teuffel, § 472. 2; Schanz-Hosius, § 1102.

POMPEIUS LENAEOUS, see LENAEOUS.

POMPEIUS, see also FESTUS (2), STRABO (1), TROGUS.

POMPEY (GNAEUS POMPEIUS, called MAGNUS after 81) (106-48 B.C.) served with his father Strabo at Asculum, and throughout the Marian domination preserved an army in Picenum with which he won victories for Sulla in 83. Impressed by his forces and self-confidence Sulla sent him with *imperium* to Sicily, where he defeated and killed Carbo, and then to Africa, where he destroyed Cn. Domitius and King Iarbas. Pompey was still an *eques*, but a marked man, for Sulla grudgingly allowed him to triumph; and in 77, after assisting Catulus to overcome Lepidus, he obtained proconsular *imperium* to reinforce Metellus Pius against Sertorius (q.v.) in Spain. Thence he returned in 71 and co-operated with the reluctant Crassus in finishing off the Servile War. Again he triumphed, and extorted from the Senate the consulate, emphasizing the illegality by surrendering his horse with great ceremony to the censors, whose office he now restored; in this year, too, the tribunes recovered their rights, and L. Cotta reduced senatorial representation on the courts to one-third (70 B.C.). From both tribunes and *eques* Pompey reaped his reward: in 67 the *Lex Gabinia* created for him an *imperium* with unprecedented powers against the pirates, whom he destroyed in three months; and to this *imperium infinitum aequum* Manilius next year added Lucullus' Asiatic provinces and conduct of the Mithridatic War. His Eastern campaigns were his greatest achievement: Mithridates was defeated immediately, and though attempts to pursue him over the Caucasus failed, he committed suicide in the Crimea in 63. Further, Pompey founded colonies, annexed Syria, settled Judaea, and laid the foundation of all subsequent Roman organization of the East (though he reached no agreement with Parthia). In 62 he returned, disbanded his army, and triumphed, for the moment a *popularis* no longer (Cic. *Att.* 2. 1. 6). But he made two requests: settlement of his veterans and ratification of his Eastern *acta*. But the Senate, led on by the Metelli, whose kinswoman Mucia he had divorced, and by Lucullus and Cato, frustrated him, until he was driven into partnership with Crassus and Caesar; he married the latter's daughter Julia (q.v. 1) in 59. His demands were satisfied by Caesar as consul; but his popularity waned, and in 58-57 Clodius (q.v.) deliberately flouted him. In 57, after backing Cicero's recall, he received control of the corn-supply for five years; but no military power was

attached, nor could he secure the commission to restore Ptolemy Auletes in Egypt next year. Again he wavered towards the *optimates*, but still preferred the 'Triumvirate', which was renewed at Luca in 56. Pompey became consul with Crassus for 55, and received Spain for five years; but he governed his province by proxy. The murder of Clodius in 52 caused his appointment as sole consul, with backing from extreme *optimates*. His immediate legislation, *de vi*, *de ambitu*, and *de iure magistratum*, was designed only to end the corruption at elections; but the prolongation of his *imperium* for five years from this date destroyed the balance of power with Caesar; and he took as his colleague Metellus (q.v. 11) Scipio, whose daughter Cornelia he had married, Julia (q.v. 1) having died in 54. Gradually his new alliance led him to support demands that Caesar be recalled before he was sure of the consulate of 48; and in 50, when negotiations with Caesar were breaking down, he accepted from the consul C. Marc'ellus the command of the Republican forces in Italy. In 49 he transported his forces from Brundisium to Greece and spent the year mobilizing in Macedonia. He met Caesar on his arrival in 48 with a force powerful in every arm, and inflicted a serious reverse when Caesar attempted to blockade him at Dyrrhachium. But later (9 August), perhaps under pressure from his senatorial friends, he joined in a pitched battle at Pharsalus, and was irretrievably defeated. He fled to Egypt, but was stabbed to death as he landed (28 Sept. 48).

The violence and unconstitutional character of Pompey's early career invites comparison with Augustus, whom in his constitutional position he so often resembled: in 67 he had twenty-four *legati* with praetorian *imperium*; from 55 he governed Spain through *legati*, and while doing so was made consul in 52. But still more significant was his unofficial power: by 62 in Spain, Gaul, Africa, the East, and parts of Italy, there were colonists and *clientes* bound to him by the relationship of *fides* and surrounding him with a magnificence unsurpassed by a Roman senator hitherto; the climax was reached with the dedication of his theatre in the Campus Martius in 55. He owed all to his military genius, which must have been of the highest order even though other commanders, Metellus, Crassus, Lucullus, often paved the way to his successes. In politics, where his chief ambition lay, he was unimaginative and irresolute, but he genuinely tried to re-establish order and dignity in the government of the Roman Empire. His private life, too, was of a high standard for such an age, and two women, Julia and Cornelia, married to him for dynastic ends, fell deeply in love with him. Cicero's earlier eulogies may be discounted, and even in early years there were bitter criticisms (cf. *Att.* 1. 13. 4); but despite the disappointments and suspicions of the war years Pompey's death brought from him a heartfelt tribute: 'hominem enim integrum et castum et grauem cognoui' (*Att.* 11. 6. 5).

Sources: (a) Ancient: Plutarch, *Sertorius* and *Lucullus*, Appian, *BCiv.* 1. 80 f. and *Mithridatica* are evidence for P.'s early career, with Plutarch's *Pompey*, an excellent life based probably on Nepos; see also under CAESAR (1), GABINIUS (2), MANILIUS (2).

(b) To the general works mentioned s.v. CAESAR add C. Lenzi, 'Sulla C. Pompeio', *Historia* 1933; A. E. R. Boak, 'The extraordinary commands from 80 to 48 B.C.', *Amer. Hist. Rev.* 1918-19; P. Groebe, 'Zum Seerauberkrieg des Pompeius Magnus', *Klio* 1910, 374; F. Giese, 'Die Feldzüge des dritten Mithradatischen Krieges in Pontus und Armenien', *Klio* 1926, 332. G. E. F. C.

POMPILIUS (c. 100 B.C.), epigrammatist quoted by Varro. Teuffel, § 146. 2; Bachr. *FPR* 274.

POMPONIUS (1) BONONIENSIS (fl. c. 100-85 B.C.), Latin poet, older contemporary of Novius (q.v.). These two made *fabulae Atellanae* literary and tended to fuse them with *fabulae*. Seventy known titles show the four stock Atellan characters (fool, boaster, old driver, old sly-boots), various occupations, political satire,

religious and mythological themes; in popular language, with coarseness and farcical scenes. He perhaps wrote *satura* also.

Fragments: O. Ribbeck, *CRF* 225 (3rd ed. Teubner, 1897). E. H. W.

POMPONIUS (2) RUFUS wrote *Collecta* from which Valerius Maximus (4. 4 *ad init.*) quotes 'maxima ornamenta matronis liberos'.

POMPONIUS (3) SECUNDUS, PUBLIUS [?CALY]-ISIUS SABINUS (Quint. *Inst.* 8. 3. 31; 10. 1. 98) (*cos. suff.* A.D. 44), friend of the elder Pliny who wrote his biography (Plin. *Ep.* 3. 5) and calls him 'consulare poetam' and 'uatem ciuicque clarissimum' (*HN* 7. 80; 13. 83). Endangered by prosecution under Tiberius, he survived (Tac. *Ann.* 5. 8). He wrote *Aeneas*, a *praetexta*. Under Claudius his verses on the stage drew insults from the mob (ibid. 11. 13). Legate of Upper Germany, he victoriously checked the Chatti in 50 (ibid. 12. 28). Pliny (*HN* 13. 83) mentions having seen the handwriting of the Graeci, about two centuries old, in his possession. W. Otto (*Philol.* xc. 4 [N.F. xlv. 4]) argues that he died not in the late sixties A.D., as Cichorius holds, but between 51 and 57. He was perhaps step-brother of Caesonius, Gaius' wife. His brother Quintus (*cos. suff.* A.D. 41) favoured the restoration of the Republic after Gaius' death; as an accomplice of Camillus Scribonianus in 42, he committed suicide or was killed.

POMPONIUS (4) MELA, of Tingentera (near Gibraltar), wrote under Gaius (A.D. 37-41) or early in Claudius' reign, a geographical survey in Latin of the inhabited world (*De Chorographia*) in three books. He describes (bk. 1) the earth's division into north and south hemispheres, and five zones (two habitable, the southern being an island of *Antichthonos*); then the relative positions and boundaries of the three continents, surrounded by Ocean which indented it by four seas, the Caspian (erroneously regarded as connected with the Northern Ocean), Persian Gulf, Red Sea, Mediterranean; then countries, Gibraltar Straits-Egypt, Palestine-Euxine; (bk. 2) Scythia, Thrace, Macedonia, Greece, Italy; south Gaul, Spain; then all the Mediterranean islands; then (bk. 3) the outercoasts of Spain, Gaul, Germany, unknown north Europe, and east Asia; British Isles, Thule, India, Persian Gulf, Red Sea; Ethiopians; west Africa. Inner Europe is neglected, so is inner though known Asia. Africa is all north of the equator. The work was a popular summary, with lists of names, but no mathematical details or distances, though there are some details of physical nature, climate, and customs of lands. Mela's idea of the known world is roughly that of Strabo.

Text: C. Frick (1880). Cf. E. Bunbury, *Hitt. Anc. Geog.* (1879), ii. 352 ff. L. H. W.

POMPONIUS (5) BASSULUS, MARCUS (? 1st c. A.D.) recorded in an inscription of Aelianum (*CIL* 9. 1164) as a translator of Menander and writer of original comedies (probably not for performance).

POMPONIUS (6) PROCULUS VITRASIUS POLLIO, TITUS, entering upon a senatorial career under Hadrian, was consul between 138 and 140, being thereafter successively governor of Hispania Citerior (c. 146), of Lower Moesia (c. 147-9), and proconsul of Asia (c. 151-2). He served on the staff of Marcus Aurelius in the German War, down to 175, and held a second consulship in 176. He married Annia Fundania Faustina, granddaughter of that M. Annii Verus who was father of Faustina the Elder and grandfather of M. Aurelius.

PIR, P 558; P. Lambrechts, *La Composition de l'histoire romaine*, (1917-1921) (1929), p. 37, no. 462. C. H. V. S.

POMPONIUS (7), **SEXTUS**, a Roman jurist of the time of Hadrian and the Antonines. He held no official post nor (probably) had he the *ius respondendi*; thus he could devote his time to literary activity. He was one of the most productive legal writers (more than 300 *libri*). But though not without critical ability, he is rather a compiler. Roman legal literature owed to him its biggest work: his commentary on the Edict, composed at Hadrian's order, seems to have had over 150 books, as a passage of the 83rd book, preserved in the *Digest*, deals with a subject treated little more than half-way through the Edict. It is curious that the work was not excerpted directly for the *Digest* and is known only by quotations due to the later commentaries on the Edict (of Paulus and Ulpian). His other works are also extensive: two text-books of *ius civile*, *Ad Sabinum* (36 books) and *Ad Q. Mucianum* (39 books); two (or one?) works of predominantly casuistic character, *Variae Lectiones* (41 books) and *Epistulae* (20 books). In addition, an epitome *Ex Plautio* and monographs on *Senatus consulta*, *Fidei-commissa*, and *Stipulationes*. Especially notable is the booklet *Liber singularis enchiridii*, a short compendium of the history of Roman legal sources, magistrates, and legal science up to the time of Julian, Pomponius' contemporary (*Dig.* 1. 2. 2). This small compendium contains a good many mistakes, copied from older writings, and has been shortened and deformed by Justinian's compilers; it is, nevertheless, of value, since it gives some new details which are preserved nowhere else. There is no reason to deny the authorship of Pomponius, as has been tried in recent times. Pomponius had a perfect knowledge of the older legal literature, and he himself is often quoted by later writers, his reports of other jurists' opinions being careful and accurate. His works have been utilized for the *Digest* with particular predilection; his contribution to it is, after those of Paulus and Ulpian, one of the largest.

A comprehensive monograph is lacking. On the language of Pomponius: W. Kalb, *Roms Juristen nach ihrer Sprache dargestellt* (1899), 63 ff. On the chronological sequence of his works: H. Fitting, *Alter und Folge der Schriften röm. Juristen* (1908), 33 ff. On the *Enchiridion*: F. Ebrard, *Sav. Zeitschr.* xlv (1925), 117 ff. (erroneous, cf. S. Riccobono, *Mélanges Cornil* ii (1926), 380). A. B.

POMPONIUS, see also **ATTICUS**, **MARCELLUS**, **PORPHYRION**.

POMPTINE MARSHES, a malaria-stricken region, formed by the stagnation of the Ufens and other streams, lying south-east of Rome between Volseian mountains and Tyrrhenian Sea. Pliny's statement that twenty-four cities once flourished here (*HN* 3. 59) is an exaggeration: Suessa Pometia, like the lands later assigned to citizens of the Pomptina and Oufentina tribes, lay outside the marshes proper (*Livy* 6. 21; 7. 15; 9. 20). The Via Appia crossed the marshes, but travellers apparently preferred to use the parallel, nineteen-mile-long ship-canal, since the marshes included highwaymen among other perils (*Strabo* 5. 233; *Hor. Sat.* 1. 5. 10 f.; *Juv.* 3. 307). From 160 B.C. or earlier numerous attempts were made by Cethegus, Trajan, and others to drain them—a task successfully accomplished only recently. E. T. S.

PONS MULVIUS carried the Via Flaminia across the Tiber north of Rome; it is first mentioned in 207 B.C. At the existing bridge of six arches, built by Aemilius Scaurus in 109 B.C., the Allobroges were trapped during the Catilinarian conspiracy in 63 B.C. and Maxentius was defeated by Constantine in A.D. 312. Of the four large 60-foot arches, only the southern pair remains. Above pointed outwaters, both up- and downstream, are flood-arches. The road makes a sloping approach on each side.

PONTICUS, an epic writer in Propertius' set, likened by him to Homer.

PONTIFEX, PONTIFICES. The word (cf. *artifex, aurifex*) means one skilled in the important magic of bridge-making (see Giuffrida-Ruggeri in *Journ. Roy. Anthropol. Inst.* 1918, 100; Birt in *Rh. Mus.* 1926, 115 ff.), and by extension a priest acquainted with the increasingly elaborate ceremonial of public cult (cf. Cicero, *Har.* 18). At Rome, and with local differences no doubt elsewhere, the *pontifices* were originally an advisory board (*collegium*) whose business it was to assist the chief magistrate in his sacral functions; this is strongly indicated by the fact that their normal meeting-place was the Regia (Pliny, *Ep.* 4. 11. 6). Their number seems to have been primitively three (this was the number at Colonia Genetiva Iulia, see *Lex Vrsionensis* [Bruns, *Fontes* 27], 67, and colonies were constituted on the model of Rome), but was successively increased to six, nine, fifteen, and finally (under Caesar) sixteen (*Livy, periocha* 89; Dio Cass. 42. 51. 4). In historical times the original meaning of their name was quite unheeded, and they presided over the State cult generally. Like all the State priesthood, the *pontifices* were originally patricians; but by the *Lex Ogulnia* of 300 B.C. (*Livy* 10. 6. 6; see Mommsen, *Staatsr.* ii³. 22) half the college was chosen from the plebeians. Their position as an advisory body remained unaltered, at least in theory, and their decisions were *decreta*, i.e. pronouncements on points submitted to them or coming within their competence; they were not laws and had in themselves no executive effect. In practice it does not seem that they were disregarded, but the magistracy, not the pontiffs themselves, must enforce them.

The head of the college was the *Pontifex Maximus*. The original manner of his appointment was presumably by choice either of the king or of the other pontiffs; in historical times (before 212 B.C., but the date is uncertain, see Mommsen, *ibid.* 27) he was elected by vote of seventeen of the thirty-five tribes, chosen by lot, and thus, by a curious compromise, never by a majority of the people, like secular magistrates. He was head of the whole State clergy, exercising disciplinary functions over some at least of them (Wissowa, *RK* 509 ff.).

The *collegium pontificum* included, besides the pontiffs themselves, the *flamines*, Vestals, and *rex sacrorum*, but not the augurs nor the minor colleges. In Imperial times the post of *pontifex maximus* was held by the reigning emperor, Gratian being the first to refuse it, about A.D. 375 (Zosimus 4. 36).

Literature: Mommsen and Wissowa, locc. cit.

H. J. R.

PONTIUS (1), **GAVIUS**, Samnite general who trapped a Roman army in the Caudine Forks, 321 B.C., and imposed his own peace terms. Patriotic annalists invented the story that Rome immediately repudiated the peace and defeated Pontius (*Livy* 9. 2 f.; F. E. Adcock, *CAH* vii. 599). Pontius himself is probably no mere annalists' figment modelled on Pontius Telesinus, Sulla's Samnite opponent. But the story that in 292 he defeated Fabius Gurgus, whose father Fabius Rullianus then proceeded to defeat, capture, and execute him, is fiction suggested by events of 213, when Fabius Cunctator was his own son's legate (*Livy, Epit.* 11; 24. 4). E. T. S.

PONTIUS (2) **TELESINUS**, a Samnite patriot, and leader of the last effort to break Rome's supremacy in Italy. After moving ostensibly to the relief of Praeneste in 82 B.C., he made a sudden night-march with 40,000 men upon the capital, then ungarrisoned. Sulla, arriving in the nick of time, defeated him at the Colline Gate after a terrible struggle. M. H.

PONTIUS (3) AQUILA, a wealthy man from Sutrium, was tribune of the plebs (45 B.C.). Because he did not stand up when Caesar passed in triumph after Munda, his properties were confiscated. He was among Caesar's murderers, was legate of D. Brutus in Cisalpine Gaul, and was killed at Mutina (43).

G. Niccolini, *I fasti dei tribuni della plebe* (1934), 343; E. Pais, *I fasti dei tribuni della plebe* (1918), 166, and *Dalle guerre puniche a Cesare Augusto I* (1918), 313.

PONTIUS (4) PILATUS, procurator of Judaea (A.D. 26–36), under whom Jesus Christ died. Jewish opinion thought him 'inflexible, merciless, obstinate' (Philo, *Leg. ad Gaium*, 38). Summoned to Rome by Tiberius on a complaint of the Samaritans, he arrived shortly after the Emperor's death. Therewith he disappears from authentic history. Eusebius relates that he committed suicide. The Christian opinion was not always hostile. Tertullian estimated him 'pro sua conscientia christianus' (*Apol.* 21); he is canonized with his wife in the Coptic Church. Pilate's alleged report to Tiberius of the condemnation of Jesus is a forgery. The apocryphal literature on him is large.

G. A. Müller, *Pontius Pilatus der fünfte Procurator von Judäa* (1888); E. Schürer, *Gesch. d. jüd. Volkes* I, 488; II, Peter, *Neue Jahrb.* 1907, p. 1. For the legend A. Harnack, *Gesch. d. altchristl. Liter.* I, pp. 21, 865; II, I, p. 603.

PONTUS (Πόντος), the sea mythologically personified; he is son of Earth (Hesiod, *Theog.* 131–2); father of Nereus, Ceto, and Eurybia (233 ff.); husband of Mare, i.e. Thalassa (Hyginus, *Fab., praef.* 5).

PONTUS, a region of north Asia Minor including the south coast of the Euxine between the Halys and Colehis and extending southward to Cappadocia and Lesser Armenia. A series of mountain ranges with deep valleys runs parallel to the coast. Two small coastal plains are formed by the deltas of the Halys and the Iris, which break through the mountains and provide the main lines of drainage and communication. It has but one convenient cross-road from Amisus to Sebasteia. Pontus is well watered and fertile, with a mild climate at the coast and in the valleys. Olives and other fruits, nuts, timber, pasture, and grain abound near the coast, but the inland is comparatively bare. Iron was mined along the coast (see CHALYBES).

The social and political structure of Pontus resembled that of Cappadocia; the same village population organized in territorial units, the same large temple territories with numerous sacred slaves ruled by priests, and the same feudal Iranian nobility. Some mountainous regions in eastern Pontus remained for long uncivilized tribal territories. The Greek colonies on the coast were simply trading stations with little or no territory.

The centre and strength of the Pontic kingdom was the Pontic territory proper, but the kings continually added to it until it reached its greatest extent under Mithridates VI (see MITHRIDATES I–VI, PHARNACES I). They apparently brought the priests and nobility under control, and established a regional administration, but they did little to develop cities. Pompey gave much of the kingdom to princes, Deiotarus of Galatia and the priest of Comana, and divided the rest among various centres, chosen with an excellent eye for natural advantages, which he raised to municipal status and included in the province of Bithynia and Pontus. Besides the coast cities these were Magnopolis, Amaseia, Cabeira-Diospolis, Zela, Megalopolis, Neapolis, and Pompeiopolis. Practically all of these reverted to native rulers under Antony, but in the early Empire they gradually resumed city form. The western part was known as Pontus Galaticus, with Amaseia as its metropolis. The eastern part remained under the rule of Polemon's dynasty, until it was annexed in A.D. 64, and retained

the name of Pontus Polemoniaca, with the former royal capital Neocaesarea (Cabeira-Diospolis) as metropolis. Thus Pontus became part of the Galatian-Cappadocian province, and it remained joined with Cappadocia from Trajan until Diocletian, who divided it between his two provinces of Diospontus and Polemoniaca. To the end Pontus kept much of its native character; the cities remained regional and artificial, the feudal aristocracy important, and in the eastern portion the native tribes were only slightly touched by Hellenic civilization.

PONTUS EUXINUS, see EUXINE SEA.

POPANA (πόπανα), a sort of cakes (q.v.).

POPILLIUS (1) LAENAS, GAIUS, consul in 172 B.C., when he defended M. Popillius, whose high-handed conduct in Liguria had incurred the Senate's disapproval, was envoy in Greece in 170, and in 168 led the embassy to Egypt which after Ptolemy forced Antiochus Epiphanes to withdraw his army immediately from Egypt; he demanded a decision before the king stepped outside a circle drawn by Popillius.

Livy 42, 10 and 21; 43, 17; 44, 19 and 29; 45, 10 ff.; Polyb. 28, 3–5; 29, 27.

A. H. McD.

POPILLIUS (2) LAENAS, PUBLIUS (cos. 132 B.C.), son of (1) above, was a vigorous opponent of Tiberius Gracchus; as consul he presided over the *Quaestio* for the trial of his supporters. He served in Sicily as praetor, and later built the Via Popillia from Capua to Rhegium (cf. Dessau, *ILS* 23). When C. Gracchus passed his declaratory law, 'ne quis de capite e. R. iniussu eiuius iudicaretur', Popillius left Rome, but was recalled after Gracchus' death by L. Bestia (tribune 121 or 120).

POPPLICOLA, see VALERIUS (1).

POPPEA SABINA, daughter of T. Ollius (d. A.D. 31), was married first to Rufrius Crispinus, then to Otho. She became Nero's mistress in 58. The murder of Agrippina and banishment of Octavia are attributed partly to her incitement. Nero married her in 62 and remained devoted to her till her death in 65. A daughter born in 63 died within four months.

G. W. H.

POPULARES came into use as a political catchword towards the middle of the second century B.C. It has wrongly been rendered as if it meant 'democratic'. At that time there were no political parties, and the struggle was between the wealthy members of the senatorial oligarchy, who controlled public finance and administration, and the newly enriched class of middlemen, business men, etc. The latter sought the support of the poor with the pretext that they defended their rights and interests. They thus came to be called *populares*, which merely means that they relied upon the lower classes or that they belonged to the coterie of a *popularis vir*, such as Marius or Caesar.

H. M. Lee, *CAH* ix, 137 ff.; W. Kroll, *Die Kultur d. römischen Zeit* (1933), I, 70 ff.

P. T.

POPULATION (Greeks). Most Greek States, from at least the sixth century, had a census, of various degrees of accuracy and detail, of their citizen population. In Athens every boy at age 18 was registered in his deme,

and the total of deme registers formed the list of those entitled to attend the *Ecclesia*. Every boy of 18 of zeugite census or over (*see* ZEUGITAI) was also entered in the hoplite-ranks of the army, and a list was kept of *thetes* (q.v.) liable for service in the fleet; boys and girls were entered as well into their phratries (q.v.). Metics (q.v.) were registered in their deme of residence; and there was perhaps a poll-tax on slaves. But, so far as we know, no ancient writer ever made use of such statistics, for Athens or any other State, to record the total population at any one time, still less the changes from one time to another. We have only (1) some approximate (and not always reliable) estimates by historians of total citizen populations, or of hoplite strengths in particular campaigns; (2) two or three Athenian lists (last third of the 4th c.), and a few more Boeotian lists (3rd c.), of men entered as hoplites at age 18. For the *thetes* we are even less well-informed: the light-armed troops were generally ill organized, and in the fleet foreigners (in various proportions) served as well as citizens. We have also figures, for one year, of the cereal production of Attica, and for another year those of cereal imports. These serve as a slight check on figures for total population.

2. A. General. There was undoubtedly a considerable natural increase of the Greek population during the great colonizing periods (10th to 6th cc. B.C.), for flourishing States were founded all over the Mediterranean, and the States of Greece proper were as populous as ever. In the fifth and fourth centuries over-population was still the Greek problem, and there was considerable emigration. After Alexander's conquests, particularly in the third century, very large numbers of Greeks settled in Asia. But Greece proper did not recover from this last drain on its numbers, and there the population declined in the third and second centuries. We do not know that the Roman peace produced any increase in numbers and prosperity.

3. B. *Separate States*. From the meagre evidence the following rough figures have been estimated for Attica (area, c. 2,500 sq. km.):

Date B.C.	Citizens: Men 18-59		Citizens: Total	Metics:		Slaves: Total	Total population of Attica
	Hoplites and cavalry	Thetes		Men 18-59	Total		
480	15,000?	20,000?	140,000?	?	?	?	?
431	25,000	18,000	172,000	9,500	25,500	110,000	140,000
425	16,500	12,500	116,000	7,000	21,000	80,000	117,000
400	11,000?	11,000?	90,000?	?	?	?	?
323	14,500	13,500	112,000	12,000?	42,000?	106,000?	260,000?
313	12,000	9,000	84,000	10,000	35,000	?	?

There must have been far fewer metics and slaves in 480, and again in 400 than in 431; but we have no figures even for a rough estimate. There was considerable emigration to colonies between 480 and 431, less between 400 and 323. Of the total population in 431 perhaps half lived in Athens, Piraeus, and environs (not entirely urban in character)—one-third of the citizens, nearly all the metics, and about two-thirds of the slaves; a hundred years later perhaps three-quarters of the total.

4. For other States we have only figures for the hoplite forces and their approximate areas. Argos (1,400 sq. km.) had in 400 a citizen population equal to that of Athens, but not as many metics and slaves; Corinth (880 sq. km.) in the fifth and fourth centuries less than half the hoplites of Athens in 400, so less than half the population—perhaps 80,000. Arcadia (4,700 sq. km.), a poor country from which men were always emigrating, had 6,000-7,000 hoplites in the fourth and third centuries; by comparison with Attica this would mean about 80,000-90,000 citizen population—two-thirds only of its population to-day—with but few slaves to add; there were probably far more men below the hoplite census. Elis, a much richer land, but rural in character, may have

had a population of 80,000. The population of Laconia (8,500 sq. km., of which Messenia had nearly 3,000) is much more difficult to estimate. It had much of the richest land in Greece, but it was thinly populated. The Spartiates of 21-50 years numbered some 3,000, so perhaps 4,000 in all (i.e. c. 12,000 total population); the *perioeci* in the army were also about 3,000, but in what proportion to the total of *perioeci* we do not know. Still less do we know the number of helots, except that they were more numerous relatively to the free population than in any other State.

5. Boeotia (2,600 sq. km.) was prosperous and agricultural, with few foreigners and slaves; it put 7,000 hoplites and 1,000 horse in the field in 424, and similar numbers in the fourth century; it had about 10,000 of hoplite rank in all the third century. In 424 there were 10,000 light-armed. This yields c. 25,000-30,000 adult males, 90,000-100,000 citizen population (rather larger than to-day). Of the islands Corcyra (720 sq. km.), parts of Euboea, Thasos (300), Lesbos (1,750), Chios (820), Samos (470), Naxos (450), Andros (400), Paros (200), and Rhodes (1460) were highly developed, and their density of population approached that of Athens in 323; Corcyra probably and Chios perhaps exceeded it, each with large numbers of slaves. Aegina (100 sq. km.) before its conquest by Athens, was exceptionally well populated (perhaps 25,000-30,000 persons, nearly half of them slaves). The cities of the Hellespont and Bosphorus and those in the Euxine were very prosperous, but we have no figures. Ionia and especially Miletus, had declined since their conquest by Persia; Erythrae and Ephesus were the richest of the Ionian cities in the fifth century, but neither half so rich as Byzantium.

6. In the West Syracuse (4,700 sq. km.) rivalled Athens in population, and in the early fourth century easily out-distanced it. Agragas (4,300 sq. km.) was not far behind, and Selinus, Gela, Himera, Messene were all populous. In all the Greek cities of Sicily (25,500 sq. km.) there may have been 700,000-800,000 persons (including numerous slaves). In south and south-west Italy Tarentum became in the fourth century the most populous, not much behind contemporary Athens; Sybaris and Croton had surpassed it in the sixth and fifth centuries. The total Italiote population may have equalled that of the Greeks in Sicily.

K. J. Beloch, *Bevölkerung der griechisch-römischen Welt* (1886), and 'Griechische Aufgebote' (*Klio* 1905-6); A. W. Gomme, *Population of Athens* (1933).

A. W. G.

POPULATION (ROMAN WORLD). All estimates can, at best, be only approximate, for they depend largely not on direct statistics, but on indirect evidence, often capable of more than one interpretation. The considerations are mostly of a very general character—the area of cities and countries, the varying density of population, the proportion of civic to rustic districts, the proportion of males capable of bearing arms to the whole free population or of that population itself to the slaves. All that is possible here is a study of a very few of the more reliable data, and some not unreasonable estimates of the population of the Empire as a whole.

2. First in importance stand the figures of the Roman census, in theory held once every *lustrum* (four years), and extending from the reign of the king Servius Tullius to that of the Emperor Vespasian. If we neglect the figures before 443, when the office of censor was established, we can trust these statistics to give us a fairly reliable picture of the increase of the Roman civic body. The general upward movement of the figures answers to historical probability, and one or two occasional drops can be reasonably explained. The fact that some difficulties are left over is no serious objection: the very unexpectedness of some figures entitles them to serious consideration. To take a few examples only

in round numbers, we have 262,000 (294-293 B.C.), 270,000 (234-233), 214,000 (204-203), 318,000 (131-130), 394,000 (125-124), 463,000 (86-85), 910,000 (70-69). Note the delay in increase due to the First Punic War, the severe fall in the Second, the sharp rises after the land legislation of Tiberius Gracchus and, again, after the Social War. The figures are usually and most reasonably taken to record the *libera capita*, all males above military age, about one-third of the total free population. The addition to be made for slaves will be small at first, increasingly large towards the close of the Republic. The Roman population of Italy will have amounted to about 1,000,000 in 294-293 B.C., to about 4,500,000 in 70-69. The figures under the Empire show much too large a rise to be explained simply by the extension of Roman citizenship. The 4,000,000 odd of 28 B.C., the 5,984,000 odd of A.D. 47, probably give the grand total of Romans, including women and children. It may be noted here that regular registration of births in Rome was only instituted by Marcus Aurelius.

3. Polybius has preserved an invaluable record of the total armed strength of Rome and her Italian allies, horse and foot, in 225 B.C.—nearly 800,000 in all. This fits in reasonably well with the figures of the Roman census, and leads to an estimate of about 3,500,000 Romans and allies.

4. For the city of Rome the numbers of recipients of free corn provide a useful control. The 320,000 of 53 B.C. were reduced by Caesar in 46 to 150,000, but raised by Augustus to 250,000 or more. From this it may be conjectured that Rome, at the beginning of the Empire, had not more than a million inhabitants.

5. Caesar's statements of the military strength of the Gallic tribes are perhaps somewhat exaggerated; they lead to an estimate of something like 5,000,000 inhabitants. Pliny gives a figure of nearly 700,000 for the three north-western districts of Tarraconensis, which might suggest about 6,000,000 inhabitants for the whole of Spain.

6. If the attempt must be made to estimate population for the Empire as a whole, the vast gaps in our exact knowledge can be filled in only from very rough-and-ready estimates of probability and arguments from analogy. Beloch's estimates, which may be regarded as a reasonable mean between the very high and the very low, give some 54,000,000 for the whole Empire—rather less than half in the West including Illyricum. Italy will have about 6,000,000, and Rome, the largest city of the Empire, something less than a sixth of these. The East, with its swarming cities, must have had many areas of relatively thick population. Seleucia ad Tigris, when taken by the Romans in 163, is said to have lost 300,000 or even 400,000 inhabitants: though outside the Empire, it may supply some measure for the great cities of the Roman East.

K. J. Beloch, *Die Bevölkerung der griechisch-römischen Welt* (1886); Frank, *Econ. Surv.*, see Index, s.v.; for Early Italy see A. Afzelius, *Die römische Eroberung Italiens* (1942).

H. M.

POPULUS meant the whole Roman community, independent of classes and social distinctions. Probably the original meaning was the citizens as a military body, as is shown by the title *magister populi* (see *dictator*). During the struggle of the Orders *populus* indicated the community as distinguished from the plebs. Finally, at the time of the crisis of the nobility, *populus* designated the classes supporting the *populares* (q.v.) in their opposition to the Senate.

Monum. Röm. Forsch. i. 165 ff.; Röm. Staat. iii. 3 ff. P. T.

PORCIA, a firm Republican, was daughter of Cato Uticensis and wife of Bibulus (cor. 59 B.C.) and afterwards of M. Brutus, Caesar's murderer. The best tradition (Plut. *Brutus* 53; Cic. *ad Brut.* i. 9) proves that she died before Brutus in 43 B.C., despite the affirmation (Val. Max. 4. 6. 5) that she killed herself by swallowing live coals, after Brutus's death.

A. M.

PORCIUS (1) **LICINUS** (fl. 2nd half of the 2nd c. B.C.)—not the Licinius of Cic. *De Or.* 3. 225—wrote a literary-historical poem in trochaic septenarii, eleven of which are preserved in Suetonius' *vita Terentii*. They contain a virulent attack on Terence and his sycophantic relationship with the Scipionic circle. Gellius ascribes to P. an erotic epigram, an imitation of Callimachus, and the famous lines

Poenico bello secundo Musa pinnato gradu
intulit se bellicosam in Romuli gentem feram.

R. Büttner, *P. Licinus u. der literarische Kreis des Q. Lutatius Catulus* (1893).

L. R. P.

PORCIUS (2) **LATRO**, MARCUS, Augustan rhetor; a Spaniard, contemporary and intimate friend of the elder Seneca. He was the most distinguished representative of the new rhetoric at Rome, more at home in the school than in the court but critical of its Asiatic excesses, and combined a vigorous and natural style with a vast capacity for work (Sen. *Controv.* i pr. 13-24); among his many admirers was Ovid, who borrowed ideas from him in his verse (*Controv.* 2. 2. 8). He died A.D. 4.

C. J. F.

PORCIUS, see also CATO, FESTUS.

PORFYRIUS, see OPTATIANUS.

PORPHYRION, POMPONIUS (early 3rd c. A.D.), scholar, whose commentary on Horace is still extant (ed. A. Holder, 1894), though not in its original form. Porphyry's exposition, intended for school pupils, includes subject-matter, grammar, and style. He incorporated the work of earlier commentators, including Aeron (q.v.).

J. F. M.

PORPHYRY (*Πορφύριος*) (A.D. 232/3-c. 305), scholar, philosopher, and student of religions. He was born at Tyre (or Batanea in Palestine); originally bore the Syrian name *Malechus*; studied under Longinus at Athens; became devoted personal disciple of Plotinus at Rome, 262-3; edited Plotinus' *Enneads*, after A.D. 300. His extremely numerous and varied writings (77 titles are listed by Bidez) fall into the following classes. (1) Early philosophico-religious works, written before his conversion to Plotinism: *Περὶ τῆς ἐκ λόγων φιλοσοφίας* (extensive fragments preserved, containing curious information about theurgic practices); *Περὶ ἀγαθμάτων* (fragments extant); perhaps *Φιλόσοφος ἱστορία*, a history of philosophy down to Plato, from which the extant *Πυθαγόρου βίος* is an excerpt. (2) Later works on philosophy and religion, written from the Plotinian standpoint. The following are completely or partially extant: *Ἀφορμαὶ πρὸς τὰ ἱερὰ*, a disjointed collection of edifying thoughts, borrowed or adapted from Plotinus; *Περὶ ἀποχῆς ἐμψύχων*, a treatise on vegetarianism in four books, drawing on Theophrastus, etc.; *Πρὸς Ἀνεβώ*, a letter on theurgy, strikingly sceptical in tone; *Πρὸς Μαρκέλλαν*, an *epistola moralis* addressed to his wife. An essay *De regressu animae* is known from quotations in Augustine. The important treatise *Κατὰ Χριστιανῶν*, in fifteen books, was condemned to be burnt in 448, but interesting fragments survive, from which we learn that Porphyry used the modern weapon of historical criticism, e.g. to establish the lateness of the Book of Daniel. Elsewhere he similarly proved the 'Book of Zoroaster' to be a forgery. (3) *Περὶ Πλωτίνου βίου καὶ τῆς τάξεως τῶν βιβλίων αὐτοῦ*: this has the double character of a biography of Plotinus and a preface to P.'s edition of the *Enneads*. (4) Numerous philosophical commentaries on Plato, Aristotle, Theophrastus, Plotinus, of which only a school-commentary on Aristotle's *Categoriae* survives complete. Here belong also the *Εἰσαγωγή εἰς τὰς Ἀριστ. Κατηγορίας* or *Περὶ τῶν πέντε ἐκείνων*, which became a standard medieval textbook of logic.

(5) Philological works include *Ὀμηρικὰ ζήτηματα*, a landmark in the history of Homeric scholarship which Schrader has reconstructed; and the extant *Περὶ τοῦ ἐν Ὀδυσσεύῃ τῶν νυμφῶν ἄντρον*, a specimen of allegorizing interpretation. Porphyry wrote also on grammar, rhetoric, and the history of scholarship. The *Bios Ὀμήρου* falsely included in Plutarch's *Moralia* is sometimes attributed to Porphyry. (6) Extant works on technical subjects are a commentary (incomplete) on Ptolemy's *Harmonica*; an introduction to Ptolemy's *Tetrabiblos*; and a treatise on embryology, *Πρὸς Γαῦρον περὶ τοῦ πῶς ἐμψυχοῦνται τὰ ἐμβρυα* (formerly attributed to Galen, but probably by Porphyry).

Though unoriginal and often uneritful, Porphyry is a remarkable polymath, and has the good habit of quoting his authorities by name; he has thus preserved many fragments of older learning. As a thinker he is unimportant: 'in the whole extant work of Porphyry there is not a thought or an image which one can confidently affirm to be his own' (Bidez).

Life and Works: J. Bidez, *Vie de Porphyre* (1913; includes collection of ancient sources and full bibliography). Texts: *Π. τῆς ἐκ λογίων φιλοσοφίας*, G. Wolff (1856); frs. of *Π. ἀγαλμάτων* and *De regressu animae* in Bidez, op. cit.; *Πυθαγόρου βίος*, *Π. ἀποχῆς*, *Π. τοῦ ἐν Ὀδ. τῶν νυμφῶν ἄντρον*, *Πρὸς Μορκ.*, and frs. of *Φιλόσ. ἱστορία*, Nauck, *Porphyrii opuscula* (1886); *Ἀφορμαί*, B. Mommt (1907); *Πρὸς Ἀνδρόν* in G. Parthey's ed. of Iamblichus, *Myst.* (1857); frs. of *Κ. Χριστιανῶν*, A. Harnack, *Abh. Berl. Ak.* 1916 and *Sitzb. Berl. Ak.* 1921; *Π. Πλωτίνου βίος* in editions of Plot.; works on Arist. in *Comm. in Arist.* *graeca* iv. 1; *Ὀμηρικὰ ζήτη.*, H. Schrader (1880-90); *Εἰς τὰ Ἀρμονικὰ Πτολ.*, I. Düring (Göteborg, 1932); *Εἰς τὴν ἀποτελεσματικὴν (Τετραβίβλον) Πτολ.*, H. Wolf (1959); *Πρὸς Γαῦρον*, K. Kalbfleisch, *Abh. Berl. Ak.* (1895, Anhang). An edition of the fragments, based on material assembled by the late Prof. Bidez, is in preparation.

E. R. D.

PORSEN(N)A, probably an Etruscan title interpreted by the Romans as the name of a chieftain. The story went that, summoned by the exiled Tarquinius Superbus, Porsenna of Clusium vainly laid siege to Rome. Another version, however, deriving from the Etruscan legend of Mastarna (q.v.), asserts that he ruled over Rome. Porsenna and Mastarna are therefore to be considered as the Roman and the Etruscan name of the same king who attained power at Rome towards the end of the sixth century. Later speculation fitted him into the list of the traditional kings of Rome only by equating Mastarna with Servius Tullius or by connecting the story of Porsenna with the Tarquins.

G. De Sanctis, *Klio* 1902; F. Schachermeyr, *PW*, s.v.; L. Pareti, *Studi etruschi* (1931), 154 ff.

P. T.

PORTICO. (1) In classical meaning (*porticus*: *stoa*), a colonnade, applied particularly to a roofed building in every Greek or Hellenistic town, consisting of a long rectangular unit with one row or two rows of columns in front, backed either by a wall or by a row of chambers used for shops or places of business. Good evidences of examples still existing are at Athens (Stoa of Attalus, etc.), Corinth, Delos, and other places. At Delos the 'Portico of Antigonos' (c. 254 B.C.) had a length of nearly 400 ft., including a projecting pavilion at each end; and the 'Portico of Philip' had two parallel porticoes divided by a wall. Often, as at Magnesia-on-Maeander, the Portico or Stoa formed one side of the large open space of the Market.

(2) As generally understood in modern times, a columned or pillared entrance feature—usually surmounted by a pediment—projecting from any important side or end of a classical building. In this sense the ends of Greek or Roman temples or the fronts of propylaea have porticoes, though the simplest form of temple entrance—'distyle-in-antis' (see **TEMPLE**)—is really a porch and can hardly be called a portico, as it forms an entrance enclosed between walls. In a different way, the projecting feature on the north side of the Erechtheum (q.v.) is appropriately termed a porch.

A. Marquand, *Greek Architecture* (1909), 320-3.

T. F.

A portico of Greek type was first erected in Rome in 193 B.C.; many more were constructed after that date, especially in the first century B.C. The most notable porticoes were (1) the porticus Minucia (110 B.C.), where public distributions of corn took place; (2) the porticus Pompeii (55 B.C.), adjacent to Pompey's theatre; (3) the porticus Octaviae (after 27 B.C.), which served as an art gallery.

M. C.

PORTORIA were duties on goods entering or leaving harbours, the upkeep of which was a charge on public funds. Such levies were made in Italian harbours under the Republic, though they were temporarily abolished between 60 B.C. and Caesar's dictatorship, and in provincial harbours such as Syracuse (Cic. *Verr.* 2. 185; cf. *ILS* 38. 1. 32 ff.). In the Principate a customs-duty was levied on goods crossing certain frontiers, and for this purpose several provinces might form a single unit, e.g. the Gallie and the Danubian provinces. The amount of this duty varied: it was 5 per cent. in Sicily, 2 per cent. in Spain, and 2½ per cent. in Gaul and elsewhere. There is some evidence that a higher charge was made at the frontiers of the Empire. The *portoria* were levied solely for revenue purposes and were not protective: the Empire was practically a free-trade unit. Their collection was let out to *publicani* (q.v.) during the Republic and the first two centuries of the Principate (Tac. *Ann.* 13. 50-1). The extent to which individual cities levied *portoria* is uncertain. Elaborate tariffs were imposed by Palmyra and the city of Zarai in Numidia.

G. H. S.

PORTRAITURE (GREEK). Commemorative statues were set up in Greece from early days, e.g. the statue of Pericles by Cresilas (q.v.); but until the fourth century they made no attempt to render a close likeness of their subject. Incipient realism in Greek portrait sculpture is discernible in the well-known statue of Demosthenes at Rome, which is probably a copy of a fourth-century original. But the aim of the Greek portraitists remained as before to bring out the distinctive *ethos* or personality of their subject, rather than to reproduce his features exactly. From the time of Lysippus (q.v.), who made a famous statue of Alexander the Great, portraiture attained a wide vogue. Hellenistic sculptors not only made authentic portraits of contemporary celebrities, but imaginary ones of earlier Greek worthies. Most of our surviving portraits are works by Hellenistic artists or copies of these.

Among Greek painters the only one to achieve a reputation as a portraitist was Apelles (q.v.), whose picture of Alexander ranked with Lysippus' statue. The only extant Greek portrait paintings are craftsmen's work from Greek cemeteries in Egypt.

J. J. Bernoulli, *Griechische Ikonographie* (2 vols., 1901); F. Poulsen, *Greek and Roman Portraits in English Country Houses* (1923).

M. C.

PORTRAITURE (ROMAN). The Roman ritual custom of preserving the features of departed ancestors by means of death-masks (*imagines*, q.v.) was a stimulus to the development of portrait art in Italy; but traces of death-masks are not common among existing portraits, and a Greek idealizing tradition, derived at first through Etruria and later by more direct contact, is generally present in some degree to modify Italic naturalism. The chronology of the earliest Italian portraits, which may go back to the early third century B.C., is still not entirely settled; they are of plastic materials, bronze, or clay. The use of marble began c. 100 B.C.; this was generally assisted by colour, of which traces occasionally remain. Late Republican portraits show a dry realistic style; historical identifications in this period are almost entirely fanciful.

In the case of Imperial portraits the coin-series provides a base for identification, while changes in the bust-form as well as in the sculptural style help to fix

the date of private portraits. The bust, which in the late Republic included little more than head and neck, incorporated the shoulders by Flavian times, and in the early third century had grown into a half-length figure, after which it grew smaller again. Stylistically, the portraits of Augustus show a strongly idealizing and dignified character, which in the later Julio-Claudians becomes often frigid. Republican naturalism persisted in private portraits and became the official style under the Flavians, with greater technical resource and ability. Trajanic portraits continue this tradition with more dryness, but Hadrian went back to a Greek idealism, more academic than that of Augustus; with him begins the row of bearded emperors. The Antonine emperors show a distinctive pictorial style, the abundant hair and beard drilled, and the marble surfaces polished or left rough, to secure effects of light and shade. Under the military emperors of the third century this picturesque style gave way to simpler treatment; hair and beard close-cut and rendered by pitted surfaces; and this style, after a short-lived reversion under Gallienus to more florid portraiture, leads to the stiffer, frontal portraits of the fourth century.

PORTUS ITIUS, a harbour of the Morini, used by Caesar (*B.Gall.* 5. 2 and 5) in the second British expedition (54 B.C.). The words seem to mean 'Channel Harbour', so that Boulogne, the port normally used, is the obvious identification, though there are arguments for Wissant.

T. Rice Holmes, *Ancient Britain*, 552-95; *CR* xxiii. 77-81.

C. E. S.

PORUS, i.e. the Paurava king, ruled the country between the Jhelum and the Chenab when Alexander arrived. Defeated by Alexander in a desperate battle at the Jhelum crossing, he became his ally; and Alexander, when forced to turn back at the Beas, abandoned the hard-won eastern Punjab and handed it over to Porus, who again became independent. If Porus be Parvataka of the *Mudrārākṣhasa*, he subsequently aided Chandragupta to conquer north-west India from the Macedonians. He was killed (before 318) by the Macedonian Eudamus, who secured his elephants.

Berve, *Alexanderreich* ii. p. 340.

W. W. T.

POSEIDON (*Ποσειδών*, Doric *Ποσειδάϊν*), Greek god of earthquakes and of water, secondarily of the sea, since he appears to be native Greek, not pre-Hellenic, and it is fairly certain that their former habitat was inland, cf. the paucity of Greek names for fishes (examples of non-Greek fish-names in J. Huber, *De lingua antiquissimorum Graeciae incolarum* (1921), 8 ff.). The name is of doubtful etymology, but almost certainly Greek, and the first two syllables are usually supposed cognate with *ποταμός*, *πόσις* (drink), etc. His most significant titles are *ἐροσίχθων* or *ἐροσίγαιος*, 'earthshaker', and *γαιήτοχος*, 'holder or possessor of earth', meaning probably husband of the earth-goddess. The latter is an appropriate name enough for a deity who, whatever his exact origins, certainly is closely connected with water, which fertilizes the earth; it need not be rain-water, though that is perhaps the most commonly spoken of in such a context (cf., e.g., Aesch. fr. 44 and Eurip. fr. 898, Nauck²). In general, the theory (Cook, *Zeus* ii. 582 ff.) that he is 'a specialized form of Zeus', or a sky-god of any kind, has the balance of evidence against it. Being a great god, he has functions not unlike those of his celestial brother, but the Greeks themselves consistently differentiate them. That he causes earthquakes is an idea which possibly reflects some early and crude attempt to explain

that phenomenon, cf. the later quasi-scientific theory (Seneca, *Q.Nat.* 6. 6 ff.) that it was due to the action of water in some way.

2. Mythologically, Poseidon is one of the three sons of Kronos; in Homer he is younger than Zeus (*Iliad* 15. 204); in Hesiod and most later writers (*Theog.* 453 ff.), Zeus is the youngest son. He has but little mythology of his own; he was one of those swallowed by Kronos and afterwards spewed up (ibid. 459), although obscure legends say that Kronos was tricked into swallowing a foal instead (a young horse instead of the young Lord of Horses, see below; Paus. 8. 8. 2, from Arcadia), or that he threw Poseidon into the sea (Hyginus, *Fab.* 139. 1). When the three brothers, after the defeat of their father, drew lots for the universe the sea fell to his share (*Il.* loc. cit. 190). It is to be noticed that at least one probably more ancient god, Nereus (q.v.), is thus displaced from the position which it would seem that he once held. His consort is the unimportant Amphitrite, and some legends of little significance are told of his wooing (see Rose, *Handb. Gk. Myth.* 63 f.). Of his various amours, the most interesting is that with Medusa the Gorgon, who became by him mother of Pegasus (q.v.). With Apollo (q.v.) he built the walls of Troy for Laomedon, was cheated of his pay, and in revenge sent a sea-monster to ravage the land (*Il.* 21. 441 ff., where Poseidon alone builds the walls, Apollo herding Laomedon's cattle; cf. ATACUS, IERACLES). For his quarrel with Odysseus, see ODYSSEUS. He is commonly the father of strong but rough and brutal men, or monsters such as the giant Antaeus, his son by Earth (Apollod. 2. 115). There are also several tales of his begetting horses, besides Pegasus; for one see ARCADIAN CULTS, DEMETER.

3. In cult he is, of course, prominent as sea-god and worshipped on all occasions connected with the sea and navigation. In addition, as already suggested, he is worshipped as a god of fresh water (Krenouchos, Nymphagetes; see Farnell, p. 5), and sporadically as god of earthquakes (Strabo 1. 3. 16, 57, the Rhodians found a temple to him on the volcanic island of Thera with the title Asphalios, a by-form of which—Asphalion—is rightly interpreted by Macrobius, *Sat.* 1. 17. 22, as *terram stabiliens*). It is quite natural that a god of water should occasionally be a god of vegetation, Phylalmios, Plut. *Qnaest. conv.* 675 f., which says the cult is practically universal in Greece. But it is less obvious why he should be Hippios, Lord of Horses. This cannot arise from a metaphor like Engl. 'white horses' for waves, since no such metaphor is known in Greek, and it is noteworthy that Cornutus (*Theolog. Graec.* 22, p. 44, 1 Lang) suggests only that it is because we use ships 'like horses', i.e. as means of transport. This is of course absurd, for cult-titles like this do not grow out of poetical figures. The real reason is, however, uncertain; possibly the title is due merely to the fact that the peoples worshipping him were themselves horse-breeders. That horses were bred and used in Thessaly is notorious, and the cult of Poseidon Hippios is especially Thessalian (Farnell, p. 23). In general, Poseidon is closely connected with the Minyans in mythical times, the Ionians in historical, though his cult spreads far wider than these parts of the Greek race.

4. Though popular and held in much reverence (partly because of his worship, as an ancestral god or otherwise, by many noble families; cf. the comparatively respectful handling of him by Aristophanes, whose conservatism is well known), he did not develop with the evolution of higher theological and ethical ideas, thus contrasting with Zeus and even with Hades. One reason for this may be the fact that these ideas were accompanied by a tendency towards monotheism, and hence Zeus hardly left room for another great god, even Hades being on occasion merely identified with him.

See R. Farnell, *Cults of the Greek States* (1896-1909) fr. 1 ff., and the relevant arts. in the larger dictionaries. H. J. R.

POSIDIPPUS (*Ποσειδῖππος*) (1), New Comedy poet, born in Macedonia after 316 B.C.; he won four victories from 289/288 onwards. Fr. 12, a version of the famous story of Phryne's acquittal; fr. 28, a Thessalian maintains his right to speak his native dialect and not adopt Attic.

Posidippus' importance is clear: his *Ἀποκληρομένη* was re-acted c. 180 B.C., his work was imitated on the Roman stage (Gell. 2. 23. 1), and his statue is extant.

FCG iv. 513 ff.; CAF iii. 335 ff.

W. G. W.

POSIDIPPUS (2) (fl. 270 B.C.), from Pella in Macedonia, was an epigrammatist, and a close friend of Hedylus and Asclepiades. He has about twenty fine poems in the Anthology, mostly about love and feasting; many of them can be paired with poems by Asclepiades (*Anth. Pal.* 7. 267, 284). Probably the works of the three friends were published together; still, Asclepiades was the leader, P. the follower.

R. Reitzenstein, *Epigramm und Skolion* (1893), 87; P. Schott, *Pos. epigrammata* (1905). G. H.

POSIDONIUS (*Ποσειδώνιος*) (1) of Olbiopolis, Sophist and historian, author of a work on the Dniester region, *Ἀττικά ἱστορίαι* and *Λιβυκά*, has been identified, though this is uncertain, with the Posidonius who, according to Plutarch (*Aem.* 19), was contemporary with Perseus of Macedon (179–168 B.C.) and described his reign, including the battle of Pydna.

FGH ii. B, p. 893; BD, p. 596.

A. H. McD.

POSIDONIUS (2) (c. 135–c. 51–50 B.C.), born at Apamea on the Orontes, after studying philosophy at Athens under Panaetius devoted several years of his life to scientific research in the western Mediterranean provinces and in North Africa. He then settled down at Rhodes, which became his adoptive country. Towards the end of 87 Posidonius was sent to Rome on behalf of the Rhodians to appease Marius, and he conceived for him an intense dislike, to which he later gave vent in his historical works. In 78 Cicero attended the school of Posidonius, to whom he often pays tribute in his writings, although the philosopher declined to revise Cicero's account of the conspiracy of Catiline. Another famous visitor of Posidonius was Pompey, who met him twice, after defeating the pirates and on his return from the East. Posidonius was such an enthusiastic supporter of Pompey that he devoted a separate treatise to the narrative of Pompey's eastern campaigns; it was from this that Strabo drew his strongly rationalistic explanation of the work of Moses as a Jewish lawgiver. The wars of Pompey seem to have been dealt with by Posidonius as an appendix to his *Histories*, the fifty-two books of which started from the point where Polybius left off, and included the history of the Eastern and Western peoples with whom Rome had come into contact, from about 146 B.C. to the dictatorship of Sulla. The meagreness of the fragments, which we owe chiefly to the learned curiosity of Athenaeus, makes a reconstruction impossible. But the fact that his work exercised a widespread and lasting influence is sufficient to give us an idea of Posidonius' literary skill as well as of his accuracy and matter-of-factness. Sallust, Caesar, Tacitus, and Plutarch were respectively dependent on Posidonius for the conception of history, for the ethnology of the Gauls and of the Germans (whom Posidonius probably did not distinguish from the Celts), and for the history of Marius and Marcellus; while the so-called universal historians (e.g. Timagenes, Trogus, Diodorus) did not hesitate to borrow even his doctrine of the unity of history, symbolized by the 'cosmopolis', or city of God, in which, ruled over as it is by His providence, all human beings have a share (see HISTORIOGRAPHY, GREEK, para. 7). In his *Histories*, which were, biased in favour of the *nobilitas*, and consequently strongly opposed to the Graeci and the equestrian party,

Posidonius aimed at showing that the Roman Empire, embracing as it did all the peoples of the known world, embodied the commonwealth of mankind and reflected the commonwealth of God, to which deserving statesmen and philosophers were to be admitted after the fulfilment of their earthly task. This theory Cicero expounds in his *Somnium Scipionis*, which is indisputably based upon the ideas of Posidonius or cognate thinkers. The *Histories* of Posidonius must therefore be considered as the complement and the practical application of his philosophical system. He thus vindicated Roman imperialism, which less civilized peoples were forced to accept, or rather to welcome, for the sake of their own improvement, while at the same time he gave a practical illustration of the doctrine of continual communion and mutual sympathy between the world of God and the world of man. According to Posidonius the end and destiny of the human race is exactly reflected in the vicissitudes of history. Political virtue, therefore, consists in turning humanity back to its state of prehistoric innocence, in which philosophers were the law-givers and instructors of their fellow-men and acted as intermediaries between the world of matter, in which men are compelled to live, and the world of God, from which alone law-abiding morality can spring. Thus politics and ethics are one, and any form of moral or political activity becomes a religious duty, by fulfilling which man frees himself and acquires knowledge of the gifts of the spirit, which enable him to enjoy a superior form of existence after death. Since the God of Posidonius is the creator neither of matter nor of soul, the latter cannot be considered immortal in itself. But since it is composed of the same substance as the heavenly bodies, it escapes from the human prison and returns to the sublime abode whence it originally came. Posidonius, moreover, introduced heroes and daemons as intermediary beings between man and God, in whose eternity they have a share. Their power and influence over earthly creatures is manifested in visions, divination, and oracles. The harmony which Posidonius observed in the world of man he discovered no less in nature. To prove that the same laws and processes were at work in both worlds, he devoted himself to scientific research. His study of primitive cultures led him to establish the principle that the present condition of semi-civilized peoples reflects the original stage of culture among those now civilized. His travels and observations enabled him to prove the connexion between tides and the phases of the moon, and to give an accurate description of the life and currents of the ocean. Nor was he merely a theorist; some important achievements witness his practical skill. For instance, he calculated the circumference of the earth, constructed a sphere, and drew a map. He showed also a lively interest in poetry, rhetoric, lexicography, geometry, etc. See also METEOROLOGY.

The contemporaries of Posidonius were more impressed by his personality and the width of his interests than by his system. His influence has often been over-emphasized, but it ought by no means to be underestimated. Although it is uselessly dangerous to attempt to rebuild his system by a mere mechanical spoliation of Lueretius, Cicero, Manilius, Seneca, and Pliny the Elder, it cannot be seriously doubted that they as well as Virgil and the historians mentioned above were largely dependent upon Posidonius. In the history of ancient thought he can be compared to no one but Aristotle. As Aristotle forms the epilogue of the culture of classical Greece, so Posidonius collected the heritage of the Graeco-Roman civilization, or shaped it afresh, bequeathing to the Renaissance the legacy of the Hellenistic age.

TEXTS: Apart from I. Bake's antiquated edition, no collection of the fragments of Posidonius is available, except for the passages from his historical works, which have recently been edited, with an

exhaustive commentary, by F. Jacoby, *FGH II* ii, no. 87. A new collection of 'the philosophical as well as the scientific material' is being prepared by L. Edelstein (cf. *AJPhil.* 1936, 322, n. 121).

MODERN LITERATURE: K. Reinhardt, *Potidonius* (1921); *Kosmos u. Sympathie* (1926); P. über *Ursprung u. Entartung* (1928); L. Heine-mann, *P. metaphysische Schriften* (2 vols., 1921, 1928); G. Rudberg, *Forsch. z. P.* (1918). A detailed bibliography is given in K. Praechter's appendix to Ueberweg's *Grundriss* i², 150 ff. P. T.

POSSESSIO. Roman terminology distinguished different kinds of *possessio*. *Possessio naturalis* signified physical control over the possessed object without regard to its rightfulness. *Possessio civilis* was such as was based on *iusta causa*, and was important in the province of the *ius civile*. *Possessio ad interdicta* was the true and proper *possessio*, protected by a remedy of praetorian law, *interdicta* (see LAW AND PROCEDURE, ROMAN, II. 11). This particular protection against disturbance by a third party represents one of the most characteristic marks of Roman *possessio*: it served exclusively to defend the existing condition of things, independently of ownership or other rights; but for the enjoyment of this kind of protection *possessio* must be *iusta*, i.e. not acquired violently or clandestinely or *precario* (if the holder was a tenant-at-will). In interdictal proceedings the possessor had only to prove a matter of fact, his possession, and no right. Acquisition of possession involved an objective element and a subjective one: effective control (*corpus*) and the consciousness and willingness to hold it (*animus possidendi*). For some methods of acquiring ownership *possessio* was one of the principal elements, as in *traditio* (transfer of ownership of *res nec mancipi* by informal delivery of possession), *occupatio* (when possession was taken of an ownerless object), and *usucapio* (uninterrupted possession for a certain time, see DOMINIUM). An important distinction lay between *possessio bona fide* and *mala fide*, depending upon the circumstance whether the possessor believed or not that he did not violate another man's right by his possession. Only *possessio bona fide* might be the basis for *usucapio*, and only a *bona fide* possessor became entitled to the fruits of the object by *separatio*.

G. Cornil, *Traité de la possession* (1905); S. Riccobono, *Scr. Zeitschr.* 1910; *Bullettino dell' Istituto di Diritto Romano*, 1911; P. Bonfante, *Corso di Diritto romano* ii. 2 (1928), iii (1933). A. B.

POSSESSION. That a human being might become possessed by a supernatural power was a fairly common ancient belief. The effect might be a prophetic frenzy, as in the case of the Pythia (cf. APOLLO); such a person was *ἐκλεος*. It might also be some terrifying disease, as epilepsy (Hippoc. *De morbo sacro*, especially p. 592 f. Kühn). Or it might be insanity; the victim was then commonly said *δαίμων*, as Aesch. *Sept.* 1001, or *κακο-δαίμων*, as Dinarchus, i. 91. Latin called him *larvatus* or *ceritus*, possessed respectively by the Larvae or Ceres, e.g. Plautus, *Men.* 890. Later, under Oriental influence (cf., e.g., the numerous references to demoniacs in the N.T.), the belief grew stronger and commoner, and mentions of magical cures and the activity of exorcists, pagan and Christian, are extremely frequent.

Julius Tamborino, 'De antiquorum daemonismo' (1909; *RGVP* vii. 3). H. J. R.

POSTAL SERVICE (GREEK). In the Persian Empire couriers and horses were maintained at stations spaced at intervals of a day's journey (*σταθμοί*) along the royal roads, and government dispatches were carried by relays; the system was called *ἀγγραπῆς*. Antigonos I reorganized this service of couriers (*βιβλιοφόροι*) in 302 B.C., and the same system is found in Ptolemaic Egypt. We possess the day-book of a station, specifying the couriers who went out and came in and the documents that they carried. The post was probably a liturgy incumbent upon the mounted militiamen, and those who preferred not to serve personally paid the tax *δυνατῆς* instead. Another papyrus records the wages of a postal staff; they

comprise forty-four *βιβλιοφόροι* (here probably runners), one *ἀγογράφος*, one *ἐφόδος*, and one *καμηλίτης*. This station probably belonged to a local postal service, distinct from the mounted post.

F. Preisigke, *Klio* vii (1907), 241-77.

A. H. M. J.

POSTAL SERVICE (ROMAN). Under the Republic no public post existed; both private individuals and government officials depended on hired *tabellarii* (q.v.). Augustus organized a regular *cursus publicus*, but this was employed simply for official dispatches, and only occasionally might individuals be granted a *diploma* entitling them to make use of it (Plin. *Ep.* 10. 120-1). At first (Suet. *Aug.* 49) relays of messengers were stationed along the roads, but later Augustus established posting-houses, where messengers travelling by carriage might change horses. The same messenger generally carried his dispatch to its destination (Tac. *Hist.* 2. 73). The cost of the post was usually borne by the local authorities, though several emperors temporarily transferred the burden to the fiscus (*ILS* 214). Even imperial letter-carriers often travelled on foot. The average speed attained by the Roman post has been estimated at fifty miles a day, though much higher speeds were possible if the news was urgent (A. M. Ramsay, in *JRS* xv. 60 ff.). The revolt of the Rhine army against Galba was known in Rome in about nine days, which implies a rate of about 160 miles a day. Dispatches were sent by sea if navigation was possible, but in winter normally travelled by land. The news of the accession of Pertinax, which occurred in the winter, took sixty-three days to reach Alexandria from Rome, a distance by road of rather over 3,000 miles. On the other hand, Galba's accession, which occurred in summer, was known in Alexandria within twenty-seven days, as it was possible to send the news by sea.

O. Hirschfeld, *Verwaltungsbeamten* (1905), 190 ff.; O. Seeck, *PIV*, s.v. 'cursus publicus'. G. H. S.

POSTLIMINIUM. The legal position of a Roman citizen captured by the enemy was similar to that of a slave, but many of his rights remained in suspense until he returned to Roman territory. By virtue of the right of *postliminium*, which was said to be *moribus constitutum*, the captive after his return recovered with his freedom all his former rights just as if he had never been captured by the enemy. Such rights, however, depended on actual exercise and could not therefore be held in suspension indefinitely. According to Justinian's law the marriage continued in spite of the husband's captivity. If the captives died in captivity, he died a slave; but a *Lex Cornelia* (of the dictator Sulla) enacted that his will, made before he was captured, remained valid, there being a fiction that he had died on Roman territory and as a free man and had never been captured. This so-called *fiction legis Corneliae* was applied to successions on intestacy and further extended by the jurists and Justinian.

The *ius postliminii* was applied also to things (slaves, ships, horses used in military service, and so on) and real estate which fell into the enemy's hand during war and were subsequently recovered by their owner.

L. Mitteis, *Röm. Privatrecht* (1908), 102 ff.; S. Solazzi, *Struttura del postliminio* (1918); W. W. Buckland, *A Text-book of Roman Law* (1932), ch. 2; U. Ratt, 'Studi sulla captivitas', *Riv. Ital. per le sc. giur.* 1926, 1927, *Bull. Ist. Dir. rom.* xxxv (1927), *Ann. Univ. Macerata* 1927 (1926); H. Krüger, 'Captivus redemptus', *Scr. Zeitschr.* li (1931), 293 ff.; E. Levy, 'Captivus redemptus', *CPhL* xxxviii (1943), 159 ff. A. B.

POSTUMIUS (1) TUBERTUS, AULUS, appointed dictator in 451 B.C. by his son-in-law Cincinnatus, won a notable and undoubtedly historical victory over the Aequi on the Algidum (traditionally on 19 June), but details of the campaign, which closely resembles that of Cincinnatus in 458, must be rejected. O. Hirschfeld (*Kleine Schr.* 1913, 246 f.) has wrongly assumed that the legend of Cincinnatus grew out of the story of Postumius. P. T.

POSTUMIUS (2) MEGELLUS, LUCIUS (*cos.* I, 305 B.C.; II, 294; III, 291). The victories over the Samnites, which tradition assigns to his two first consulships, were probably reverses. His alleged triumph 'de Samnitibus Etrusceisque' in 294 is an anticipation of that of 291; he was not in Etruria. In 291 he helped to end the Third Samnite War by storming Venusia. He is said to have 'triumphed' and to have been fined for conducting the war against the wishes of the Senate. H. H. S.

POSTUMIUS (3) ALBINUS, AULUS, Roman senator and historian, praetor in 155 B.C., consul in 151, commissioner for the settlement of Achaia in 146, and an enthusiastic philhellene, wrote a history of Rome from its origins, in Greek. Pragmatic in treatment, it belongs to the Senatorial tradition. Cato mocked his apology for his Greek (Gellius, 11. 8. 2), but Polybius, if grudgingly, recognized his culture and influence (Polyb. 39. 1) and, though his excessive philhellenism and wordiness offended the older Romans, Cicero praises him as 'disertus' (*Brut.* 81). References to a poem and to his *de adventu Aeneae* may point to one work; Macrobius' reference (3. 20. 5) may, but not necessarily, indicate a Latin version of his history.

H. Peter, *HRRel.* i, pp. cxxiv, 53; M. Gelzer, *Hermes* 1934, p. 48. A. H. McD.

POSTUMIUS (4) ALBINUS, AULUS, in the winter 110-109 B.C. was left by his brother Sp. Albinus, then consul, in charge of the Roman forces in Africa. He tried to finish the Jugurthine War at one stroke, by seizing Jugurtha in his treasure-city of Suthul, but was thwarted by Jugurtha's excellent intelligence service. Albinus was trapped with his army, and could only save it by 'passing under the yoke' and agreeing to leave Numidia in ten days. He is probably to be identified with the consul of 99, who was killed in a mutiny when serving as Sulla's legate at Pompeii in 89. He may be the adoptive father of Decimus Brutus, the tyrannicide. M. H.

POSTUMIUS (5) ALBINUS, SPURIUS, was sent as consul in 110 B.C. to renew the war with Jugurtha after Bestia's settlement of the Numidian question had been destroyed by Memmius' agitation. He made vigorous preparations, but no action was taken till his brother A. Albinus (while he himself was absent in Rome) attempted to entrap Jugurtha at Suthul. When this had failed (*see* POSTUMIUS 4) Sp. Albinus was condemned under the *Quaestio* of Mamilius. M. H.

POSTUMUS, MARCUS CASSIANUS LATINIUS, left in military command on the Rhine by Gallienus, when he set out to crush Ingenuus in Moesia, quarrelled over the disposal of booty with Silvanus, Praetorian Prefect and guardian of the young prince, Saloninus, in Cologne (early A.D. 259). He took the city, put both guardian and prince to death, and established himself as independent emperor in Gaul. Attacked by Gallienus in 263, he was defeated, but allowed to escape by the half-hearted pursuit of Aureolus. Gallienus was wounded and withdrew, and Postumus was left to develop an Empire of the West, to which both Spain and Britain adhered. Postumus certainly abetted the revolt of Aureolus in 268, but had himself to meet the revolt of Laelianus in Moguntiacum (*Mainz*). He took the city, but was murdered by his own troops when he forbad the sack.

Postumus successfully defended the Rhine frontier against German invasion. He had his own senate and struck coins at several mints, among them Cologne. Cologne, Mainz, and Treves were his chief cities. Victorinus, who succeeded after Marius, was his general, but never his colleague. His usurpation weakened central authority, but saved the West.

POTAMON of Alexandria, probably of the time of Augustus (31 B.C.-A.D. 14), founder of the Eclectic school. He attempted without much originality or consistency to combine Platonic and Peripatetic tenets with the Stoic creed (Diog. Laert. *prooem.* 21). The school had little influence.

See Zeller, *Phil. d. Griechen* iii. 1⁴, 639-41.

W. D. R.

POTIDAEA, a Corinthian colony, founded c. 600 B.C. for trade with Macedonia and along the line of the later Via Egnatia. It struck coins from c. 550 B.C. A strongly fortified port, it withstood a siege by Artabazus (480-479). It joined the Delian Confederacy; but its connexion with Corinth, which supplied its annual chief magistrate, rendered it suspect to Athens. After an increase of its tribute to fifteen talents (434 B.C.) it revolted (432), but although it received help from Peloponnesus it was reduced in 430. Athenian cleruchs occupied the site until 404, when it passed to the Chalcidians. It was recovered by Athens in 363 and received another cleruchy in 361; but in 356 it fell into the hands of Philip II of Macedon. It was perhaps destroyed in the Olynthian War (348); but it was re-founded by Cassander under the name of Cassandreia (c. 316). N. G. L. H.

POTITH and **PINARI**, *see* HERCULES.

POTITUS, *see* VALERIUS (2).

POTTERY. The earliest pottery of Greece, from neolithic deposits in Crete, is hand-made, of burnished dark clay, a ware characteristic of a wide Mediterranean area; the surface sometimes blacked, elsewhere reddened. In Asia Minor this ware persists through the Bronze Age and recurs later. Neolithic pottery from the Cyclades is so far unknown; on the mainland red polished and painted wares are followed by 'Dimini ware' with brown linear and spiral patterns on white, supposedly of Danubian origin. The recently discovered neolithic ware of Cyprus shows a similar sequence.

2. In the early Bronze Age the dark clay ware is followed by painted fabrics, dull dark on light ground. In Crete there is a change (c. 2300 B.C.) to light-on-dark painted ware, which continues throughout the Middle Minoan period. The slow potter's wheel is introduced, probably from Asia (c. 2100 B.C.), soon followed by the quick wheel. In the Late Minoan Age the dark-on-light technique returns, with a naturalistic style embracing floral and marine subjects. The Cyclades and Mainland favour the dark-on-light style throughout. On the Mainland an intrusive 'Minyan ware' appears c. 2000 B.C. of grey clay, wheel-made, the shapes recalling metal-work. After 1400 B.C. 'Mycenaean pottery' predominates, with lustrous brown ornament on buff, based mainly on Late Minoan; the pottery, found over a wide area, is remarkably uniform. Later the designs grow stylized, and in the sub-Mycenaean age are reduced to geometric elements.

3. Geometric pottery (1000-700 B.C.) develops from the earlier fabric with no change of technique, but with the addition of new patterns, such as the meander, and an enrichment of the decoration, which now covers the whole vase in horizontal bands. In contrast to Mycenaean ware, Geometric falls into local schools, the most important being the Attic, where 'Dipylon' vases often have funeral scenes and chariot processions, conventionally rendered.

4. In the late eighth century the Geometric style passes into the Orientalizing, as the result of closer acquaintance with Eastern art. The decorative repertory is enriched by floral patterns, animals, winged monsters, etc., which replace the Geometric patterns in the horizontal bands. Experiments in technique—outline drawing, incised

lines, polychromy—are found, the human figure is drawn with increasing naturalism, and mythological representations begin. The local styles are again clearly distinguished; the seventh century sees the high-water mark of the Island and East Greek schools; the chief Mainland fabrics are the Athenian (proto-Attic), proto-Corinthian, and Laconian.

5. By 600 Athenian potters had substantially evolved the Attic black-figured style, and the sixth century sees the gradual assimilation of other local styles to this, and ultimately their disappearance as Athenian wares under the Pisistratids obtain a monopoly. In black-figure the design is laid in dark paint, improved to the brilliant black Attic glaze, on the reddish buff clay; inner markings are made by incised lines; white is used for the flesh of women, red for men's beards and hair, etc. The decorative patterns are reduced, and the field of the vase occupied by a mythological or other subject.

6. About 525 Athens introduces a new technique, the red-figured, in which the decoration is left in the ground-colour and the background filled with black; inner details are rendered in thin glazed lines; accessory colours are sparingly used in the fifth century. In this style greater freedom of drawing was possible, and the artists pass from archaic stiffness to the classic style of the mid-fifth and to the free style of the late fifth century. The vases of the fourth century are characterized technically by greater use of accessory colours and gilding. A subsidiary Attic fabric of the fifth century is the 'white-ground' ware, in which the background is white, with designs in black glaze at first, later in matt polychrome; these vases were mainly used for sepulchral purposes.

7. In the late fourth century Greek pottery undergoes a change. The large painted vases disappear with the red-figure style, and the potter's art is restricted to the production of cheap clay substitutes for the costly vessels of metal which Hellenistic taste preferred. Painted decoration is limited to floral scrolls and patterns; both light-on-dark and dark-on-light styles are found; but painted wares are secondary to the new metallic styles, in which relief ornament is predominant. Sometimes moulded reliefs are added to wheel-made vases; in other fabrics the vase is thrown in a mould, as in the hemispherical 'Megarian bowls', the most widespread Hellenistic fabric. In the third century the black ground-colour inherited from Athens is modified in East Greece into red or bronze, and from this develops the *terra sigillata* (q.v.), the standardized fine pottery of Roman times.

8. Italian pottery of the Neolithic and Bronze Ages is mainly of the dark-clay Mediterranean type; painted wares, dark on light, occur sporadically in the south and have been compared with the wares of the Balkan peninsula. In the early Iron Age the hand-made dark-clay ware ('impasto') continues in several local styles; among them the Latin, characterized by its funerary 'hut-urns', and the Villanovan of Tuscany and Bologna, with biconical urns and incised geometric decoration. The 'bucchero' of Etruria (700–500) is also dark-clay ware, but wheel made, with polished black surface; early decoration is incised, later decoration is in relief. Painted wares imitating the contemporary styles of Greece appear on the west coast about 700, and by 525 the native pottery is largely displaced by Greek (mainly Attic) imported vases and local copies. There are independent schools of pottery in Apulia which, while borrowing the painted technique from Greece, remain barbaric in style. The Italian red-figured style begins in south Italy about 440, perhaps introduced by immigrant Athenian potters. There are four main schools—the south Italian, the school of Paestum, the Campanian, and the Etruscan. A large production of vases, often of great size and elaborate decoration, continued into the early third century.

9. In the Hellenistic period Apulia and Campania are

the chief areas of production. Light-on-dark painted ware and vases with applied reliefs are the main fabrics. Alexandria was the principal source of inspiration, and Italy long remained untouched by the East Greek experiments in red glazes and moulded wares; after 30 B.C., however, it took the lead in these with the appearance of Arretine ware (see *TERRA SIGILLATA*).

10. Apart from *terra sigillata*, the pottery of the Roman East is mainly plain earthenware, though moulded vases of the second to third century are not unknown. The pottery of the western provinces shows more character, and there are a number of local decorated fabrics, e.g. the Caistor ware of Britain, with elaborate relief ornament.

PRAECONES, see **APPARITORES**.

PRAEFECTI CAPUAM CUMAS, see **PRAEFECTURA**, **CAPUA**, **VIGINTISEXVIRI**.

PRAEFECTURA means an assize-town in Roman territory. When Capua became a *municipium* (q.v.) praefects with authority delegated by the *praetor urbanus* were occasionally sent there to assist in judicial rearrangements consequent upon the grant of *civitas sine suffragio*. The practice spread later to all other *municipia* and also to *oppida* and *conciabula* in the areas of full citizens (see **CITIZENSHIP**, **OPPIDUM**), and became annual. The *praefecti* did not replace but assisted the local authorities of *municipia*; in *oppida civium Romanorum* they were sometimes the only senior judicial authority. In Campania after the abolition of local autonomy following the revolt of 215–211 B.C. a new set of annual *praefecti*, minor magistrates elected at Rome, were instituted to take sole charge of local jurisdiction. Elsewhere the old system prevailed down to the Social War, but was not extended to the municipalities then incorporated. Between 89 and 44 B.C. the surviving *praefecti* were abolished and the *praefecturae* assimilated to *municipia*, though the title sometimes remained in use as a designation.

See the bibliography under **MUNICIPIUM**: Modern Views, Republic. A. N. S.-W.

PRAEFECTUS. Before the Social War each *ala sociorum* had six *praefecti*, three of whom were Roman officers. In Caesar's armies *praefecti* were the commanders of cavalry contingents. Under the Principate *praefecti* were regular officers of equestrian rank. They commanded the Praetorians, *vigiles*, and imperial fleet; the urban cohorts were under the *praefectus urbi*.

The legions in Egypt were commanded by *praefecti* instead of the normal *legati*, and Septimius Severus followed this precedent when he raised *Legiones Parthicae* I–III. Gallienus substituted *praefecti* for senatorial *legati* in all the legions (see **PAUSANIAS**). Each legionary camp had its commandant, called *praefectus castrorum* and later *praefectus (castrorum) legionis*, who was a promoted centurion.

In the *auxilia* each *ala* and *cohort* was commanded by a *praefectus*, who was before Claudius a promoted centurion, and subsequently a young man starting his equestrian career.

Praefecti also held extraordinary appointments, e.g. *praef. levis armaturae*; *praef. orae maritimae*. See also ALIMENTA, ANNONA, FABRI, PRAEFECTUS PRAETORIO, PRAEFECTUS URBI, VIGILES.

A. von Domaszewski, *Die Rangordnung des römischen Heeres* (1908); C. W. Keyes, *The Rise of the Equites in the Third Century of the R. Empire* (U.S.A. 1915). H. M. D. P.

PRAEFECTUS PRAETORIO. The commanders of the Praetoriani (q.v.), chosen by the emperor usually from the equestrian order, were normally two in number (sometimes one or three). Though occasionally jurists (see PAPINIAN, ULPIAN, PAULUS), they were essentially soldiers, until under Constantine they became civil administrators, four in number. They served as general adjutants to the emperors, sometimes acquiring great influence over them and becoming their chief advisers on matters of high policy (see SEJANUS, BURRUS, TIGELINUS, PLAUTIANUS). In cases of a disputed succession the praefects not infrequently played a decisive part in the choice of the next emperor. From the time of the Severi they perhaps became *ex officio* senators; they exercised a general jurisdiction in those civil and criminal cases which originated in Italy beyond the sphere of the Praefectus Urbi (i.e. 100 miles from Rome) and heard, *vice imperatoris*, appeals from the provinces. They overshadowed the Praefectus Annonae, were the most important members of the Consilium Principis, and gained increasing influence from the time of Diocletian in financial administration.

L. L. Howe, *The Praetorian Prefect from Commodus to Diocletian* (U.S.A. 1942); J.-R. Palanque, *Essai sur la préfecture du prétoire du Bas-Empire* (1933). H. H. S.

PRAEFECTUS URBI in early Rome was the deputy of the king, then of the consuls, in their absence from the city. With the institution of the praetorship such a deputy became unnecessary, although a *Praefectus Urbi Feriarum Latinarum* was needed. Following the precedent of Julius Caesar who had put praefects in charge of the city during his absence in Spain (late 46 B.C.), Augustus on occasion appointed a *Praefectus Urbi*. The office probably had become permanent before the end of his reign; it was held, for an indefinite tenure, by a senator of consular rank, who commanded the *cohortes urbanae* and was responsible for maintaining order in the city. The praefect's power of summary jurisdiction in criminal cases gradually increased; he encroached upon, and in the third century superseded, the *quaestiones*, when his criminal jurisdiction extended to 100 miles around Rome.

H. H. S.

PRAEFICA, see DEAD, DISPOSAL OF, para. 7; NENIA.

PRAENESTE occupied a cool, lofty spur of the Apennines 23 miles east-south-east of Rome; nowadays *Palestrina*, with interesting polygonal walls. Traditionally founded in the mythical period (Verg. *Aen.* 7. 678), it enjoyed by 700 B.C. an advanced, Etruscanized civilization. It is first mentioned in history in the fifth century B.C. as a powerful Latin city, its strategic site facing the Alban Hills being inevitably attacked by Aequi (q.v.). In the fourth century it frequently fought Rome and, after participating in the Latin War, was deprived of territory and became a *civitas foederata* which still possessed *ius exsilii* 200 years later (Polyb. 6. 14). Apparently Praeneste was a very privileged ally: Praenestines loyally resisted Pyrrhus (reject Florus 2. 18) and Hannibal, and actually preferred their own status to that of Roman citizens. After 90 B.C. Praeneste became a Roman *municipium* which Sulla's party sacked for its devotion to Marius' cause (82). Sulla transferred Praeneste to lower ground and settled veterans there. It remained a *colonia* in Imperial times, famed chiefly as a fashionable villa resort and seat of the ancient and

oracular *sortes Praenestinae* which Roman emperors, foreign potentates, and others consulted in the huge temple of Fortuna Primigenia, probably Italy's largest sanctuary (Polyb. 6. 11). Praeneste has yielded a spectacular marine mosaic, to which Pliny (*HN* 36. 25) possibly refers, the earliest specimen of Latin, whose peculiarities confirm Festus' statement (p. 157, 488 L.) that Praenestine Latin was abnormal, and Verrius Flaccus' calendar; Flaccus probably, and the Greek writer Aelian certainly, were natives of Praeneste. The Anicii were also prominent Praenestines.

Magoffin, *Topographical and Municipal History of Praeneste* (U.S.A. 1908); H. C. Bradshaw, *BSR* ix (1920), 257; D. Randall-MacIver, *Iron Age in Italy* (1927). E. T. S.

PRAEROGATIVA was the *centuria* that had the right of voting first. Originally the right was granted to the eighteen *centuriae* of the knights; but not later than 215 B.C. it was conferred upon the one of the seventy *centuriae* of the first class which had been chosen by lot. The voting of the *centuria praerogativa* was considered to be binding on the course of the polling.

PRAETEXTA, see FABULA and DRAMA, para. 2.

PRAETEXTATUS, see VETTIUS.

PRAETOR (etymologically connected with *prae-ire*, 'to lead', 'to precede') was originally the name borne by the highest Roman magistrate, later called consul (q.v.). His close connexion with military affairs is shown by the use of the adjective *praetorius* in such expressions as *praetorium*, *cohors praetoria*, and *porta praetoria*, and by the Greek translation of *praetor* as *στρατηγός*. According to tradition a praetor was first elected in 366 B.C. to supervise the administration of justice in Rome (*praetor urbanus*); the two earlier praetors would by that date have assumed their title of consuls. The view of De Sanctis (*Stor. d. Rom.* i. 404 ff.) that three original praetors divided their functions in 366, two (consuls) being responsible for military affairs, one (*praetor urbanus*) for legal, is discussed s.v. CONSUL. Plebeians were excluded from the praetorship until 337. Rome's closer relations with foreign Powers led to the creation (c. 242 B.C.) of a second praetor, called *praetor qui inter peregrinos ius dicit* (abbreviated to *praetor peregrinus*), who dealt with lawsuits in which either one or both parties were foreigners. The acquisition of overseas provinces greatly enlarged the sphere of the praetors' activities, so that in 227 B.C. their number was increased from two to four, to provide for the government of Sicily and Sardinia, and to six in 197 B.C., to administer Spain. By exercising the supreme provincial authority, the praetors became once again military magistrates, and in fact the difference of rank and power between them and the consuls decreased progressively, although the *praetor urbanus* was still subordinate to the consuls; he was preceded by six lictors only, and performed the consuls' functions of summoning the Senate and supervising the defence of Rome merely during their absence. In the second century the *praetor urbanus* and *peregrinus* dealt chiefly with the administration of justice. Sulla, who increased the praetors' number to eight, prescribed that all of them should remain in Rome as judges, or presidents of *quaestiones* (q.v.), and should proceed to the governorship of provinces in the following year by prorogation of their office. Sulla's reform, however, was abolished in the Augustan age. Although the beneficent influence of the praetorship in the domain of law continued to make itself felt under the emperors (thanks to the edicts in which it was customary for praetors to outline, on entering their office, the main principles of their jurisdiction), the praetorship

nevertheless declined rapidly, and its functions were soon reduced to minor jurisdiction, e.g. in matters relating to guardianship, the status of liberty, etc., or financial duties, performed by the *praetores aerarii* from 23 B.C. to A.D. 44. It eventually became a merely honorary appointment, the main feature of which was that the *praetor urbanus* had to superintend the games provided by him on entering his office, to win the favour of the Roman populace.

Mommsen, *Röm. Staatsr.* ii³. 1, 193 ff.; for the origins of praetorship cf. G. De Sanctis, *Riv. fil.* 1929, 1933. P. T.

PRAETORIANS. During the last two centuries of the Republic generals normally had a bodyguard or *cohors praetoria*. After Philippi 8,000 veterans were organized in such cohorts and divided between Octavian and Antony. Out of these a permanent corps of nine cohorts was created by Augustus in 27 B.C. To avoid any suggestion of military despotism some were stationed outside Rome, others billeted about the city, and in 2 B.C. two prefects were appointed from the equestrian order.

In a sense Sejanus may be called the real founder of the Praetorians. Appointed sole prefect in A.D. 23, he concentrated the cohorts in a single camp just outside the Walls of Rome. From this event dates the political importance of the Guard and its commanders.

The number of cohorts was raised by Caligula to twelve. In 69 Vitellius cashiered the soldiers who had supported Otho, and constituted sixteen cohorts from the German legions. Vespasian, however, reverted to the Augustan figure; a tenth cohort was added, perhaps by Domitian, and this number, apart from a possible reduction by Diocletian, remained unchanged till the Praetorians were disbanded by Constantine in 312.

Each cohort was probably 500 strong, with some additional *equites* and *speculatores* (imperial bodyguard), till its numbers were doubled by Septimius Severus. Its commander was a tribune, who since Claudius was regularly a promoted *primipilus* centurion. Under him were centurions, the two senior of whom were the *trecentarius*, who commanded the *speculatores*, and the *princeps castrorum*.

During the first two centuries, apart from the Vitellian episode, the praetorians were recruited from Italy and the romanized provinces. A change was made by Septimius Severus, who substituted a new guard recruited mainly from the Illyrian legions.

The Praetorians attended the emperor and members of his family at home and abroad. They served for sixteen years, were paid three times as highly as the legionaries and received frequent and large donatives. On discharge they were granted *diplomata* (see DIPLOMA, DONATIVUM, SIGNA MILITARIA).

M. Durry, *Les Cohortes praetoriennes* (1938); A. Passerini, *Le coorti pretorie* (1939). H. M. D. P.

PRAETORIUM denoted a general's tent (Livy 7. 12, 10. 32; Caes. *BCiv.* 1. 76) or his staff or council (Livy 26. 13. 6). Hence comes the *porta praetoria* of Roman castrametation (see CAMPS). By an extension of meaning *praetorium* signified the residence of a provincial governor (e.g. *ILS* 2298), a pleasure villa (e.g. Suet. *Tib.* 39), an official road-side rest-house (*CIL* iii. 6123), or an emperor's residence (*CIL* iii. 5050). It is also regularly used for the forces or services of the Praetorian Prefect (*CIL* v. 2837, viii. 9391, etc.). In permanent fortresses or forts it is distinguished from the *principia*, or headquarters building, and clearly refers to the commandant's house, a separate structural entity (Livy 28. 25; Tac. *Ann.* 1. 44; *CIL* vii. 446, 703, 704; *JRS* xix. 215).

See Mommsen, *Hermet* xxxv. 437.

I. A. R.

PRATINAS of Phlius (see TRAGEDY) is stated by Suidas (s.v.) to have been the first to compose satyric plays; and of his fifty plays thirty-two were satyric. He competed

at Athens about the beginning of the fifth century B.C. A fragment of one of his satyric plays (*Ath.* 14, p. 617 b) attacks the growing predominance of the flute accompaniment over the words of the dithyramb. His *Παλαίστρα* was brought out by his son Aristias in 467 B.C. (Arg. Aesch. *Persae*).

TGF 726. M. Pohlenz, *Das Satyrspiel und Pratinas von Phleius* (1926); A. W. Pickard-Cambridge, *Dithyramb, Tragedy, and Comedy* (1927), 28 ff., 92 ff. A. W. P.-C.

PRATUM (or PRATA), meaning miscellany, title of a lost work by Suetonius. Cf. SILVA.

PRAXAGORAS of Cos (second half of 4th c. B.C.), the teacher of Herophilus, was numbered by Galen among the greatest physicians; the few data preserved do not give a clear picture of his achievements. Praxagoras' anatomy was a strange mixture of correct and false notions. He recognized the connexion of the brain with the spinal cord; on the other hand, he believed that the arteries, coming from the heart, taper away and finally turn into nerves. Respiration he called, though not the cause, yet the re-creating source of the soul, and considered the arteries as air-channels. The discovery of the arterial pulse was ascribed to him. Diseases he explained by the (eleven) humours, also emphasizing the importance of the pncuma; he was particularly interested in fevers. His therapy is almost unknown; his operation on the ileus is mentioned.

Text: Fragments, C. G. Kühn, *Opuscula Academica Medica et Philologica* ii (1828), 128 f.; cf. also *Anth. Plan.* 16. 273.

LITERATURE: Only survey, E. D. Baumann, *Janus* (1937). Surgery, K. Sudhoff, *Quellen u. Studien z. Gesch. d. Naturg. u. d. Med.* (1933). Date, about 300 B.C., W. Jaeger, *Dioklet v. Karystos* (1938), following from later date of Diocles. An older and a younger P. (H. Schöne, *Rh. Mus.* 1903, p. 64), not yet clearly distinguished. L. E.

PRAXIDIKAI, 'the exactors of justice'; goddesses worshipped at Haliartus (Paus. 9. 33. 3). Their temple was roofless (it is common for oaths to be taken in the open air) and they were sworn by, but not lightly. They were daughters of Ogygus, i.e. ancient Boeotian (Dionysius of Chalcis in Photius, s.v.). In sing. an epithet of Persephone (q.v.; *Hymn. Orph.* 29. 5). H. J. R.

PRAXILLA (fl. 451 B.C. (Eusebius-Jerome)), poetess, of Sicyon, wrote dithyrambs (fr. 1), drinking-songs (Schol. Ar. *Vesp.* 1239), and hymns, including one to Adonis, in which a line was proverbial for its silliness (fr. 2, cf. Zenob. 4. 21).

C. M. B.

PRAXILLEION, 1st METRE, GREEK, III (15).

PRAXIPHANES of Mitylene, son of Dionysiphanes of Mitylene (*IG* 11. 4. 613; *Schol. Flor. Callim. PSI* 11. 1935, p. 146; Clem. *Strom.* 1. 309 a; *Vita Arati Lat.*, p. 149 Maass), or Rhodios (Strabo 14. 655; Epiph. *Adv. Haeres.* 3. 2. 9, *Dox. Græc.* p. 592 Diehl). Peripatetic writer. He was a pupil of Theophrastus (Procl. in *Tim.* 5 c, etc.) and is called the 'first grammarian' (Clem. l.c., etc.). As a literary critic he must have been well known; against him Callimachus wrote his book *Πρὸς Πραξιφάνην* (Callim. fr. 100 g Schn., cf. *Schol. Flor. Callim.* l.c.). He was honoured by the Delians (*IG* l.c.). He wrote a dialogue 'On poets' (*Περὶ ποιητῶν*) in which he introduced Isocrates talking to Plato on the latter's estate (Diog. Laert. 3. 8). Other writings are 'On poems' (*Περὶ ποιημάτων*, Phil. II. *πομπ.* col. 11) and 'On history' (*Περὶ ιστορίας*, Marcellin. *Vita Thucyd.*, § 28 f.). He probably also composed an ethical dialogue (see Crönert).

L. Preller, *De P. Praxiphanes* etc. (1842, with the fragments); R. Herl, *Der Dialekt* (1851, 310; F. Sauer, *Die Griech. arch. Lit.*, Alex. I. 144; W. Crönert, *Klein u. Mittelgriech.* (1926), 194; K. O. Brink, *CQ* 1946 (with the fragments). K. O. B.

PRAXITELES, sculptor, probably son of Cephisodotus (q.v. 1), Athenian. Pliny dates 364 B.C., probably by Aphrodite of Cnidos. Selected works, (i) *dated*: 1. Altar of Artemis at Ephesus, after 356. 2. Work on Mausoleum, after 351 (doubtful). 3. Artemis at Brauron, 346. According to Studniczka the bronze original of the Artemis of Gabii (Winter, *KB* 297. 6). 4. Signature from Leuctra, about 330. (ii) *Undated*: 5. Aphrodite of Cnidos. Marble; Lucian describes particularly the face and eyes and the setting which showed the front and back view (Pliny's 'undique conspicui' is mistaken). Recognized from coins in many copies (ibid. 295. 3-5); fragment in the British Museum is contemporary. Other Aphrodites, including draped Aphrodite of Cos, are recorded. A draped Aphrodite in the Louvre is ascribed by the copyist to Praxiteles; the Aphrodite of Arles (ibid. 312. 2) is attributed on style. 6. Hermes with infant Dionysus in Heraeum at Olympia (ibid. 294. 1-2; 295. 1). Marble; original, not copy as recently suggested. Later than Cnidian Aphrodite, perhaps 343. 7. Apollo Sauroctonus (lizard-slayer). Bronze, known from several copies (ibid. 294. 3). Early, the head nearer Cephisodotus than no. 5. 8. Group of Apollo, Artemis, and Leto with Muses and Marsyas on the base, at Mantinea. Pausanias dates to third generation after Alcamenes. The base has been discovered (ibid. 296. 1-3); dated by parallels on vases not long after 350. 9. Dionysus, Inebriation, and 'the famous satyr'. Bronze, later in Rome. The Dresden satyr (ibid. 297. 7), stylistically near no. 7, may reproduce the satyr. The leaning satyr (ibid. 295. 2) reflects a later original, perhaps Praxiteles' satyr in the street of Tripods. 10. Eros of Thespiae, later in Rome. 11. Eros of Parium, Leto in Argos, Artemis in Anticyra are reproduced on coins. 12. Phryne, Praxiteles' mistress, at Delphi (and Thespiae), gilded or golden. 13. Soldier and horse, on grave at Athens. 14. Niobid group, see under Scopas. (iii) *Attributed*: 15. Head from Chios in Boston, original (ibid. 297. 3; attributed from likeness to no. 5 above). 16. Hermes Farnese, copy (ibid. 294. 4; attributed from likeness to no. 6 above). 17. Aberdeen head in British Museum, original; later and heavier than Hermes. 18. 'Eubuleus' head (ibid. 297. 2) from Eleusis, original (copies also survive). Perhaps Iacchus. 19. (Doubtful) Apollo Lyceus, described by Lucian (*Anach.* 7). 20. Women from Herculaneum, copies (Winter, *KB* 394. 1; probably Demeter and Persephone; attributed from likeness to no. 8 above). 21. Many copies, including ivory statuette from Athenian Agora.

Praxiteles was thought most successful in marble and to excel in representing emotion; he preferred those statues which Nicias (q.v.) painted. Intimate feeling can be appreciated in the surviving originals, nos. 6, 15, 17, 18. Nos. 5, 6, 7, 9, 16, 19 are skilfully composed for a single view (no. 5 also for back view). Contrast the tridimensionalism of Lysippus. The assumption of an earlier Praxiteles is uncertain; for Praxiteles' sons see CEPHISODOTUS (2).

Overbeck, 525, 1165, 1178, 1180-1, 1188-1300; G. E. Rizzo, *Praxitele* (1932); C. Blinkenberg, *Knidia* (1932); R. Carpenter, etc., *AYArch.* 1931, 249. T. B. L. W.

PRAYER. Prayer was quite as prominent in ancient as in modern religions, and, then as now, could be formal or informal, accompanied by other acts of worship (in this case generally sacrifice) or used by itself. For the latter our earliest instance is *Iliad* 1. 37 ff., where Chryses prays to Apollo with no more ceremony than going away by himself to a retired place on the sea-shore, this probably for the practical reason that he did not want to be overheard by the men he was asking Apollo to injure. His prayer is formal and contains all the characteristic parts. First he addresses the god by complimentary phrases ('thou of the silver bow', 'thou who protectest Chryse and holy Cilla, mighty lord of Tenedos'), ending with his local title Smintheus. He then

reminds Apollo of his own acts of piety and finally makes his petition, that the god shall avenge him on the Greeks. But informal prayers are common also in and after Homer; for instance, in *Iliad* 7. 179 f., all the Greeks pray to Zeus that the lot may fall on one of three leading champions to fight Hector; they say simply *Ζεὺ πάτερ* and then state their request, using the imperative infinitive, common in prayers (cf., e.g., Aristophanes, *Ran.* 886 ff.; here the prayer is accompanied by an offering of incense). Even liturgies seem to have contained such informal petitions, for example the famous Eleusinian *ὕε κύε* (Hippolytus, *Haer.* 5. 7. 34, p. 87 Wendland), though this might be said to be artificial, even rhetorical brachylogy; cf. Schwenn, op. cit. infra, p. 7 f. Of elaborate formulae belonging to classical liturgies we have none left, the surviving specimens, when not literary or fragmentary, being late and magical; the most famous is that in the great Paris papyrus, *PGM* iv. 486 ff.; cf. A. Dietrich, *Mithrasliturgie* (ed. 3, with addenda by O. Weinreich, 1923); A. D. Nock in *JEG. Arch.* 15 (1929), 231.

For Italy we have a considerable amount of material; that concerning Rome is handily collected by Appel. Perhaps the most outstanding feature of the official prayers is the elaborate accuracy, like that of a legal document, with which they are phrased. Thus, the formula for the *consecratio* of a hostile city (Macrobius, *Sat.* 3. 9. 10-11; Appel, op. cit. infra, 14) not only invokes the appropriate gods but adds 'or by whatever other name it is lawful to name (you)', and is not content with mentioning the city which is to be destroyed by their help but goes on with 'which I feel that I am mentioning', lest there should be some other place with the same name. This savours on the one hand of the meticulousness of developed magical formulae, on the other of the exact and legalistic spirit of Roman public institutions generally; like precautions are taken in other prayers. The rest of Italy is represented, in this respect, by the famous *Tabulae Iguvinae* (q.v.; R. S. Conway, *Italic Dialects*, 356 ff.; C. D. Buck, *Oscan and Umbrian Grammar*, 260 ff.). They are hardly less exact and particular as to detail than the Roman formulae.

F. Schwenn, *Gebet und Opfer*, (1927); P. J. T. Beckmann, *Das Gebet bei Homer* (1932); G. Appel, *De Romanorum precationibus* (1909). H. J. R.

PRECATIO TERRAE, PRECATIO OMNIUM HERBARUM, two short iambic litanies to Mother Earth and to All Herbs, probably post-Augustan.

Text w. transl., J. W. and A. M. Duff, *Minor Lat. Poets*, 1935.

PRIAM (*Πρίαμος*), in mythology, son of Laomedon, (q.v.) and king of Troy at the time of its destruction by Agamemnon. In Homer he is already an old man, father of fifty sons, some by Hecuba (q.v.), the rest by other wives or concubines (*Iliad* 24. 495-7). His non-Greek name (for the popular but absurd etymology see HESIONE) and his harem both suggest that some memory at least of a real Oriental prince survives into Epic. He is an amiable character, tender and considerate to Helen, although he disapproves of the war and its cause (*Il.* 3. 162 ff.), respected even by his enemies for his faith and wisdom (ibid. 105 ff., 20. 183), and esteemed by most of the gods, including Zeus (though Hera implacably hates him (4. 20 ff.) and Athena is hardly less hostile), because of his piety. He takes part in the treaty (3. 259 ff.) and has returned to the city before it is broken (305 ff.). He tries to induce Hector to come within the walls after the rout of the Trojans (22. 38 ff.) and after his death goes, encouraged by Iris, to ransom his body (24. 159 ff.), succeeding by help of Hermes (360 ff.) and by the impression which his appearance and words produce upon Achilles.

He did not survive the fall of Troy. The account in

the *Iliu Persis*, that he took refuge at the altar of Zeus Herkeios in his own palace and was there killed by Neoptolemus (q.v.), remained classical; its best-known telling in surviving literature is Virgil's (*Aen.* 2. 506 ff.). Apart from the above incidents he has no story of any account. His name became almost proverbial for a man who had known the extreme of contrasting fortunes (Arist. *Eth. Nic.* 1101^a8, Juvenal, 10. 258 ff.).

He is a common figure in art; for examples see Höfer in Roscher's *Lexikon*, s.v.

H. J. R.

PRIAPE(IA), poems in honour of Priapus (q.v.). Among the Greeks poems had been addressed to him. The chief Latin collection contains eighty-five poems: two attributed to Tibullus, probably wrongly (Hiller, *Hermes* 18. 343); three from the *Catalepton*, possibly by Virgil (Teuffel, *Gesch. röm. Lit.* 230. 2); a series of eighty pieces (principally hendecasyllabic and elegiac) composed under Augustus and collected in the first century A.D. The two first of these eighty introduce the collection; the third is by Ovid (Sen. *Controv.* 1. 2. 22), the rest by unknown authors who show signs of Ovid's influence.

The subjects are mainly the shameful chastisements awaiting thieves, the phallus of the god, the offerings presented to him. Irreproachable in versification, lively and sometimes witty in style, they are, with rare exceptions, marked by extreme, even repulsive, obscenity.

Other *priapea*: Catullus, fr. 2; Horace, *Sat.* 1. 8; Tibullus 1. 4; Martial 6. 16, 49, 72, 73; Buecheler, *Carm. Epigr.* 193, 1504.

BIBLIOGRAPHY

Editions: E. Baeihrens, *Port. Lat. min.* i. 54 ff.; F. Buecheler, ed. minor of Petronius*, 1904 (86 poems, no. 80 being divided into two). See F. Buecheler, 'Vindiciae libri Priapeorum', *Rh. C. F., transl. J. W. D.

PRIAPUS (Πρίapos, Πρίηπος), a god of fertility, originally worshipped at Lampsacus on the Hellespont and in that neighbourhood. His symbol was the phallus, q.v., and indeed he himself may almost be said to have been a phallus provided with a grotesque body. It is clear that his original cult was important, and his local mythology connected him with great deities, for the Greek version of the story is that he was the son of Dionysus, his mother being either a local nymph or Aphrodite (i.e. the Oriental Great Mother) herself (Strabo 13. 1. 12; Paus. 9. 31. 2, who also testifies that he was the god most worshipped at Lampsacus). His local sacrifice was the ass; since this creature was thought of as the embodiment of lust quite as much as stupidity in antiquity, we may suppose that the purpose of the offering was to maintain the god's power of generation (aetiological account of the origin of the sacrifice, Ovid, *Fasti* 1. 391 ff.; an ass once brayed and woke a nymph, Lotis, who in *Met.* 9. 348-9, turns into a lotus-flower to escape him. It thus saved her from his attentions. He therefore hates asses). In any case, the victim is non-Greek, see Frazer on Ovid, *Fasti*, loc. cit.

His cult spread to Greece after Alexander, when interchange of ideas, religious and other, between East and West was common. It was popular also in the great Hellenistic cities, such as Alexandria, and made its way in due course to Italy. Greece had by that time outgrown most of the more crudely naturalistic worships, and Priapus seems to have been found broadly funny rather than impressive. He was adopted as a god of gardens, where his statue (a misshapen little man with enormous genitals) was a sort of combined scarecrow and guardian deity. For poems in his honour see **PRIAPEA**.

Helen Hester, *De Priapo* (1932)

H. J. R.

PRIENE, an Ionian city on the south-east flank of Mt. Mycale, in the Maeander valley and opposite Miletus. It was one of the twelve Ionian cities and claimed a Boeotian origin. When Croesus fell to the Persians Priene, which had been under his control, was subdued. It remained an unimportant town until the fourth century B.C. when it was rebuilt as a whole. It was planned on a rectangular grid-plan, covering a series of terraces cut in the rocky hill-side, and held a population of some 4,000. The site was surrounded by a powerful city-wall with an acropolis on the mountain. The Agora is situated in the middle of the city, with a temple of Athena a little higher up, and higher still a theatre and an Ecclesiasterium. The two latter buildings are in an excellent state of preservation, the Ecclesiasterium being an unusual and remarkable building. The theatre has features not found elsewhere. At the lower levels are a gymnasium and a boys' school. The site as a whole is of great beauty and better preserved than any other of the period. The city-walls in some places are intact. Its remains give a good idea of a typical planned city.

M. Schede, *Priene* (1934); T. Fyfe, *Hellenistic Architecture* (1936).
S. C.

PRIESTS (ιερείς, *sacerdotes*). In no ancient Greek or Italian State was there such a thing as a class or caste of priests, and none was under priestly dominance, as was often the case, for instance, in Egypt. This does not mean that priests had no influence or were not treated with great respect, nor that their office could not be hereditary; it results rather from the absence of any cleavage between the religious and secular life of the community, under normal circumstances at least. Whereas a priest, despite his office, was not generally interdicted from secular activities,* a magistrate was usually a priest as a part of his official functions, which is why, in Greek cities, they often wore wreaths, a very common mark of one engaged in religious duties, and in Rome all curule magistrates wore the *praetexta*. The gods were, during the classical epoch, a sort of superior class of citizens, and their servants were not normally cut off from the life of the State as a whole, any more than any other class of persons whose duties were chiefly directed towards some one part of the population, e.g. magistrates who, like Roman aediles and Greek *agoranomoi*, had to do mostly with traders.

2. Furthermore, the executive powers of a priest were as a rule narrowly defined. He was active chiefly as an expert adviser (cf. **PONTIFEX**), and was, for example, in sole charge of the conduct of a sacrifice or other piece of ritual which fell within his province. Thus, the priestess of Athena and no one else superintended the annual ritual of the Arrhephoroi (Paus. 1. 27. 3). But the clergy, in spite of responsibilities for sanctuaries, did not draw upon the public funds for the expenses of ritual; the revenues of a temple, usually not very large, were another matter. We have abundant records of the governing body of a State voting the money for sacred purposes, as it might for any other; for instance, in Athens, *IG¹ i supp.*, p. 66, no. 53 a (*SIG* 93) shows us the Council and People, not any sacred body, making the arrangements for some necessary work on a chapel sacred to Codrus and other worthies. *IG* i. 1 (*SIG* 42), though very fragmentary, is enough to show that innumerable details of the Eleusinian Mysteries, though of course not the secret ritual itself, were in the hands of the Athenian Government. At Rome Livy (22. 10. 1) gives the important evidence that according to the highest priestly authority of the day, the then pontifex maximus, a *rex satrnis* (q.v.) could not be vowed save by act of the popular Assembly ('*iniussu populi uocari non posse*');

* In Rome, for example, the *flamen Dialis* very seldom held a magistracy, cf. Platnauer, *Quint. Rom.* 113 and *Revue* 116c, but there was no definite prohibition against his doing so; for the position of the emperor see **PONTIFEX**.

accordingly, the vow was made in the form of a bill proposed to and passed by the Assembly. The chief pontiff did not even give his advice of his own motion, but after consulting his colleagues at the request of a secular magistrate. Even the possessions of a temple, though sacred, were not the absolute property of the deity, in fact at least, though in law they seem always to have been. Thucydides (2. 13. 3-4) represents Pericles as counting among the resources of the Athenian State the treasures of the various temples and even the golden ornaments of the cult-statue of Athena, and there is good inscriptional evidence (e.g. *IG* i. 32, *SIG* 91) that even in times of less stress than those of the Peloponnesian War the State felt at liberty to 'borrow' from the gods and, if able, to repay, thus re-establishing a reserve fund for emergencies. Since, then, the clergy of a State had neither executive nor economic independence, it is easy to see why they never were supreme.

3. In private life it seems to have been much the same. The average ancient did, indeed, commingle his religion with his daily occupations to a considerable extent, and hence must on occasion have needed priestly guidance in matters of ritual, for instance that of a professional diviner to tell him the best day for a marriage, or of a priest of some sort to perform the religious rites needed on that and sundry other occasions. But we have only to look at Theophrastus' sketch of the pietistic man (*Charact.* 16, especially §§ 7 and 12) to see that priestly interference in the normal household was slight. This man, whose foible is gross exaggeration of the religious practices in which his more sensible neighbours are moderate, consults the *exegetes* (q.v.) and goes monthly to the Orphic specialists to undergo their rites; we may conclude that the ordinary person did such things far less often.

4. As to the appointment of priests, in some cases the office was in the hands of a clan or family, as the Eumolpidae at Eleusis, or the Potitii and Pinarii in the cult of Hercules at the Ara Maxima. This presumably is the result of the rites having been originally domestic or clan-worships. Some priests served for life, while others were chosen to serve for a single year. Normally, a State priest was appointed in some way by the State, often by actual election; in Hellenistic times many priesthoods were publicly sold, e.g. *SIG* 1012 (Paton-Hicks, *Inscr. of Cos*, 27). Some were lucrative, but in later times priesthoods were often an expense. The tendency was towards abolishing rules which confined eligible candidates to any one class of citizens, although the restrictions remained in the case of some particularly venerable offices (see *HIEROPHANTES*); thus, the greater flamens at Rome remained patricians. Generally, no ethical tests were imposed, although some few positions were so hedged about with restrictions as to enforce at least an outward respectability of conduct.

5. Private religious organizations, permitted or tolerated by the State, and cults confined to a family, clan, or other group within the community, had their own rules, but these fall outside the scope of this article. H. J. R.

PRIMIPILUS was the senior centurion in a legion. Under the Principate each legion had in its complement of sixty centurions two officers bearing this title, the *primipilus* and the *primipilus iterum*. The *primipilus* commanded the leading century; on promotion he entered the equestrian order and after holding tribunates in the garrison troops at Rome might be appointed *primipilus bis*. As such he served on the staff of the *legatus*, retained his equestrian rank, and was qualified to receive command of the Egyptian legions or a senior procuratorship. See *CENTURIO*. H. M. D. P.

PRIMUS, MARCUS ANTONIUS, born at Tolosa in Gallia Narbonensis c. A.D. 20, was a turbulent and ambitious character—'strenuus manu, sermone promptus, serendac

in alios inuidiae artifex, discordiis et seditionibus potens, raptor, largitor, pax pessimus, bello non spernendus' (Tac. *Hist.* 2. 86). Exiled for his share in the forgery of a will (61), he was restored by Galba and put in charge of legio VII in Pannonia. In the summer of 69 he declared openly for Vespasian, won over the other Danubian armies and, spurning a cautious strategy, invaded Italy across the Julian Alps. His dash and vigour carried all before him to victory at the second battle of Bedriacum. He pressed on to Rome, but came too late to save Flavius Sabinus. For a short time he was in supreme control, but after the arrival of Mucianus he was gradually thrust aside. Lapsing into private life, he enjoyed a quiet and happy old age. R. S.

PRINCEPS. When Augustus selected 'Princeps' as the word which indicated most satisfactorily his own constitutional position, he chose, typically, a word which had good Republican associations.

2. It was not an abbreviation of 'Princeps Senatus', though that, also, was a Republican title and one which Augustus held. The 'Princeps Senatus', or First Senator, was, before the time of Sulla the man who had been placed by censors at the head of the list of members of the Senate, and ranked as the senior member of that body. Augustus in the census of 28 B.C. enrolled himself as 'Princeps Senatus' (Dio Cass. 53. 1; *Res Gest.*, c. 7), and succeeding emperors held the same position.

3. 'Principes' in the plural, meaning the 'chief men of the State', was a phrase commonly employed by late Republican writers, as Cicero, and it continued to be used in the Empire (Suet. *Aug.* 66; *Res Gest.*, c. 12).

4. It was the singular 'Princeps', however, applied to one prominent statesman, especially Pompey, in Republican times, which supplied Augustus with something of a precedent (e.g. Sallust, *Hist.* 3. 48. 23 M.; Cic. *Har. Resp.* 46, *Pis.* 25, *Domo* 66, *Sest.* 84, *Red. Sen.* 5 and 29, *Red. Pop.* 16). Early in 49 B.C. Cornelius Balbus wrote to Cicero (*Att.* 8. 9. 4): 'Nihil malle Caesarem quam principe Pompeio sine metu uiuere.' Cicero used this designation of other statesmen besides Pompey. In 46 B.C. he used it of Julius Caesar (*Fam.* 9. 17. 3). He used it also of himself in connexion with the renown that he won by his action against the Catilinarian conspirators (*Phil.* 14. 17) and by his rallying of the Senate against Antony at the end of 44 B.C. (*Fam.* 12. 24. 2). The phrase 'Princeps Ciuitatis' is also used of the 'Moderator Reipublicae' in Cicero's *De Republica* (5. 7. 9, where the reading is probably sound in spite of the doubts of Dessau, *Gesch. der röm. Kaiserzeit* i, 61, n. 2), though here, almost certainly, he was not thinking of Pompey. In this work Cicero foreshadows a Principate of the Augustan type, a revived Republic, with a statesman in the background strong enough to ensure that it should function properly. Augustus' choice of the word 'Princeps' to designate his position was typical of his 'ciuilis animus'; it contrasted strongly with the 'Dictatura' and the suspected monarchical intentions of Julius Caesar and, in indicating an unquestioned but not a narrowly defined or clearly determined primacy, the word suited perfectly Augustus' definition of his own authority in the *Res Gest.*, c. 34: 'Auctoritate omnibus praestiti, potestatis autem nihil amplius habui quam qui fuerunt mihi quoque in magistratu conlegae.' *Principatus* was in sharp opposition to *dominatio*, 'Princeps' to 'Dominus', and both Augustus and Tiberius took pains to suppress the use of the title 'Dominus', though it was a conventional form of polite address within the Roman family (Ovid, *Fasti* 2. 142; Suet. *Aug.* 53; Dio Cass. 57. 8). The importance of this choice of title was appreciated by Roman historians; cf. Tac. *Ann.* i. 1: 'Cuncta discordiis ciuilibus fessa nomine principis sub imperium accepit'; i. 9: 'Non regno tamen neque dictatura, sed principis nomine constitutam rem publicam' (cf. 3. 28).

5. 'Princeps' was not an official title (like, for example, *Pater Patriae*). It was assumed by Roman emperors at their accession and not conferred upon them by definite grant of the Senate; nor does it appear in the list of official titles in documents and inscriptions. On the other hand, by itself it might be used in inscriptions (e.g. on the funerary urn of Agrippina: 'Ossa Agrippinae . . . matris C. Caesaris Aug. Germanici principis', Dessau, *ILS* 180). Claudius, in his edict *de Annuorum civitate*, wrote: 'Gai principatu' (Dessau, *ILS* 206). The Greek form of the word, ἡγεμὼν, appears in the fifth Cyrene Edict of Augustus (line 86, *JRS* 1927, 36): 'Αυτοκράτωρ Καίσαρ Σεβαστός, ἡγεμὼν ἡμέτερος.'

6. The nuance of the word, chosen by Augustus for its inoffensive character, was soon lost (though the use of the word itself persisted) as the government of the Roman emperors became more autocratic. It may be doubted whether the Greeks ever appreciated its subtlety; Dio Cassius, for instance, in recording Tiberius' very typical remark (57. 8. 2), 'I am dominus of my slaves, imperator of my troops, and princeps of the rest', loses the point by using, for 'Princeps', not ἡγεμὼν, but πρῶκτιστος, which means 'Princeps Senatus'. The title 'Princeps' in Latin survived the reorganization of Dioeletian, though such phrases as 'Gloriosissimus Princeps' show that its original significance had been lost.

7. Further light is thrown on the significance of the word 'Princeps' by the title 'Princeps Iuventutis', meaning Leader of the Equestrian Order, or, more probably, of the 'Iuventus' of that Order (see PRINCEPS IUVENTUTIS), which was given in certain cases in the early Empire to princes of the Imperial house who might be considered as 'Heirs apparent', the relation of the 'Princeps Iuventutis' to the 'Princeps' being well illustrated by Ovid's words (*Ars Am.* 1. 194): 'Nunc iuenum princeps, deinde future senum.'

M. Hammond, *The Augustan Principate* (U.S.A. 1933); Mommsen, *Röm. Staatsr.* ii. 2 (1887), p. 3. Further, see the bibliographies of M. Hammond, op. cit. and *CAH* x. 913 ff. J. P. B.

PRINCEPS IUVENTUTIS or PRINCEPS IUVENUM. The phrase occurs in the Roman Republic (Cicero, *Vatin.* 24, applies it to the younger Curio), but first appears with constitutional significance after the reorganization of the *Iuventus* by Augustus (see IUVENES). Probably in 5 and 2 B.C. respectively the *Ordo equester* gave silver shields and spears to Augustus' grandsons, Gaius and Lucius, and hailed them as *Principes Iuventutis*. The same honour was paid possibly to Germanicus and Drusus, son of Tiberius; certainly to Tiberius Gemellus, adopted son of Gaius, in A.D. 37; to Nero, after his adoption by Claudius and, much later, to Commodus. The title was retained by these princes when they were no longer *Iuvenes*, and had something of the significance of 'Crown Prince'. This was lost when, occasionally after Domitian, and regularly in the third century, reigning emperors used the title; its connexion with the *ordo equester* also disappeared in the third century.

J. P. B.

PRISCIANUS (early 6th c. A.D.), grammarian, born at Caesarea in Mauretania, taught in Constantinople. His *Institutiones grammaticae* in eighteen books (ed. M. Hertz in Keil's *Gramm. Lat.*, vols. ii and iii) is the most voluminous work of any Latin grammarian. The first sixteen books deal with the parts of speech in great detail, the last two with points of syntax; but there are no sections devoted specifically to the *ritia et virtutes orationis* or to metre. Priscian made use of Greek grammars, and appears to have been well acquainted with all the more important of his Latin predecessors. His expositions are liberally illustrated by quotations from the standard school authors such as Cicero, Virgil, and Horace; he also drew, especially for bks. 5 to 10, on sources which afforded him many quotations from

Republican writers; and his Greek authorities provided him with Greek examples. During the Middle Ages this work was widely read and commentaries were written upon it. Besides the long treatise, we possess the following shorter works: (a) *De figuris numerorum*, (b) *De metris fabularum Terentii*, (c) *Præexercitamina rhetorica*, (d) *Institutio de nomine et pronomine et verbo*, (e) *Partitiones XII versuum Acucidos*, (f) *De accentibus* (of doubtful authenticity), (g) *De laude imperatoris Anastasii* (312 hexameters), (h) *Periegesis e Dionysio* (1087 hexameters). Of these, (a), (b), and (c) were dedicated to Symmachus (consul 485); (a)-(f) are in Keil, *Gramm. Lat.* iii. 406-528, (g) and (h) in Bachrens, *PLM* v. 264-312. See also SCHOLARSHIP, LATIN, and cf. Teuffel, § 481; Schanz-Hosius, §§ 1111-15. J. F. M.

PRISCUS, see HELVIDIUS, NERATIUS.

PRISON. Roman criminal law did not recognize the imprisonment of free persons as a form of punishment. The public prison (*carcer*, *publica vincula*) served only for a short incarceration applied as a coercive measure (*coercitio*) by magistrates for disobedience or recalcitrance against their orders. During inquiry in a criminal trial the accused person could be detained (*custodia reorum*) so as to be at the disposal of the authorities; condemned persons could be imprisoned so as to ensure the execution of the sentence, but as the rules were very lax and no term for such a detention was fixed, the magistrates postponed the arrest of the malefactors in order to give them the chance of going into voluntary exile (see EXSILIUM). Private, domestic prisons existed in larger households for the imprisonment of slaves. See also TULLIANUM. A. B.

PRO CONSULE. This term was applied to a consul whose *imperium* had been extended by *prorogatio* (q.v.) after his year of office. In the later Republic it normally denoted the governor of a province, as this duty was rarely performed by a magistrate in office. The proconsulship came to be dissociated from the magistracy and was conferred, e.g., on Pompey in 77, 66, and 65 B.C., when he was a private citizen. In 52 a law of Pompey fixed an interval of five years between the magistracy and the promagistracy. In the Principate the term proconsul was applied to governors of senatorial provinces, whether *consulares* or *praetorii*. The power of the emperor himself was largely derived from his proconsular *imperium*.

G. H. S.

PROAGON, a kind of dress-parade in the Odeum of choregi, poets, actors, and choruses a few days before the Great Dionysia at Athens, and probably also before the Lenaea. Probably the names and subjects of the plays were announced. At the *proagon* next after the death of Euripides, Sophocles appeared in mourning and his actors and chorus did not wear the usual crowns (Aeschin. 3. 66-7 with schol.; Pl. *Symp.* 194 a; Vit. Eurip. und schol. on Ar. *Pesp.* 1104). A. W. P.-C.

PROBA (4th c. A.D.), poetess, besides an epic on the civil war between Constantius and Magnentius, composed out of Virgilian scraps a cento (q.v.) on parts of the Old and New Testaments.

Text: K. Schenkl, *GSEL* 16 (1887); cf. Teuffel, § 422. 3.

PROBOULOI (πρόβουλοι). (1) A magistracy of eight members in Corinth, after the overthrow of the tyranny (early 6th c.); found also in Coreyra and a few other States.

(2) A body of ten men above age 40, appointed at Athens in 413 B.C. (after the Sicilian disaster), to act as a council to 'prepare business' (πρόβουλεύειν) more efficiently than the Boule of 500. It was the first break

with the democratic tradition. In 411 the oligarchs carried a proposal that they and twenty other elected citizens should form a commission of *ἐνυγραφεῖς* to draw up proposals for constitutional change (see FOUR HUNDRED). A. W. G.

PRÖBUS (1), VALERIUS (late 1st c. A.D.), of Berytus, scholar. He interested himself in Republican authors and somewhat in the fashion of Aristarchus worked over the texts of Terence, Lucretius, Virgil, and Horace, indicating his views by critical signs. He himself published little (cf. Suet. *Gram.* 24), but communicated his learning in conversation with friends. It is improbable that he wrote full commentaries, but some information about his work on Terence and Virgil is found in scholia to those authors. He is not mentioned in the scholia to Horace. Aulus Gellius and later grammarians quote him with some frequency on points of grammar. The *Libri iuris notarum* (cd. Th. Mommsen in Keil's *Gramm. Lat.* iv. 271-6) attributed to him is not the original work. Other treatises: *Ars catholica*, *Instituta artium*, *Appendix Probi*, *De nomine*, and *De ultimis syllabis* (ed. Keil, *Gramm. Lat.* iv. 3-43, 47-192, 193-204, 207-16, 219-64) are neither genuine notes of Probus nor based on his writings; apocryphal also is the extant commentary on the *Eclogues* and *Georgics* of Virgil (ed. H. Hagen in Thilo's *Servius* iii. 2). As early as the fifteenth century a 'younger Probus' was conjured up to account for the false ascription of these works. See SCHOLARSHIP, LATIN, and cf. Teuffel, §§ 300-1; Schanz-Hosius, §§ 477-9.

J. F. M.

PROBUS (2), MARCUS AURELIUS, whose earlier career has become confused with that of Tetricus Probus and is little known, was in A.D. 276 in command of Syria and Egypt. Set up as rival to Florian after the death of Tacitus, he outmanoeuvred Florian at Tarsus and succeeded him (summer of that year).

The main task of Probus was to restore peace and order to the reunited empire of Aurelian. Turning first to Gaul, which was overrun by Germans, he recovered the province in an arduous campaign and restored the Rhine frontier (277). Alamanni and Senones, Franks and Burgundians, all succumbed to his arms. Then, moving eastward, he defeated the Vandals on the Danube and put down the insurrection of Lydius (or Palfuerius?) at Cremna in Pisidia. In Egypt the Blemmyes captured Ptolemais and Coptos, but were defeated by Probus' generals. In 280 he settled the Bastarnae in Thrace. He celebrated a splendid triumph in Rome in 281. In 282 he was at Sirmium, preparing for a campaign against Persia, when the troops in Raetia proclaimed Carus, the Praetorian Prefect, emperor. A corps, sent by Probus, deserted to Carus, and Probus was killed by his own troops in the Iron Tower.

The rebellions of Saturninus in the East (277-8) and of Proculus and Bonosus in Gaul (280), and an attempt at revolt in Britain, though all successfully quelled, point to serious discontent in the army. The stern discipline of Probus and his employment of troops on the planting of vineyards were both unpopular. The danger of settling barbarians in the Empire was revealed by the exploit of a band of Franks, who made their way home after extensive ravages in the Mediterranean. Probus sought the co-operation of the Senate in government, but did not take the decisive step of putting senators back into military commands.

PROCEDURE, CIVIL AND CRIMINAL, see LAW AND PROCEDURE.

PROCELEUSMATIC, see METRE, GREEK, III (4).

PROCESSION. Processions were very prominent features of Greek festivals. There are various kinds. Best known is that in which people who take part in a festival go in an orderly procession to the temple of the god; so, for instance, in the Panathenaic procession as represented on the Parthenon frieze (cf. PANATHENAEA). The gods are waiting for the procession; certain men look after its order; virgins carry sacred implements, elderly men green branches; youths conduct the sacrificial animals; chariots, which are to partake in the following contest, and the cavalry follow. Later the *peplos* brought to the goddess was hoisted on a ship set on wheels. Everyone's place in the procession was fixed and there was a special building, the Pompeion near the Dipylon gate, where the procession was arranged and from which it started. An inscription from Andania prescribes arrangements in detail (*SIG* 736). Sometimes a procession went to a mountain-top in order to perform a weather ceremony or fire-ritual, e.g. the Daidala to Mt. Cithaeron. Another kind of procession is due to a connexion between two cult-places. The outstanding example is the Iacchus procession, in which the people went to Eleusis in order to celebrate the mysteries. First the sacred things were brought to Athens, on the 14th Boedromion they were taken back to Eleusis together with the image of Iacchus, conducted by the priests, the magistrates, the ephebi, and the great mass of *mystae*. Sometimes a god was brought to visit another temple, e.g. Artemis from the suburb of Mesoa to Patrae; Dionysus was brought from his temple into the orchestra of the theatre in order to be present at the performances. Processions in which a god made his epiphany are peculiar to Dionysus. At the Anthesteria in Athens he was brought into the city on a ship set on wheels. Sometimes the image of a god was brought out to be cleansed; so that of Athena Polias in Athens was taken to the shore of Phaleron. The carrying of the image of a god in procession has always a special reason. In Greece, unlike many other countries, the god was not carried about in procession in order to give blessings and to be venerated. Blessings were distributed by carrying round sacred or rather magical things—the phallus, which was absent from hardly any Dionysiac procession, the 'may' (*eiressione*), the swallow, etc.; the last are rural processions, sometimes conducted by children collecting contributions.

PROCLUS, see EPIC CYCLE.

PROCNE (Πρόκνη), see PHILOMELA.

PROCONSUL, see PRO CONSULE.

PROCŌPIUS, born at Caesarea in Palestine, was a notable personage of the Byzantine court during the reign of Justinian I. His career has two sides—the official and the literary. Beginning life as a professor of rhetoric at Constantinople he became secretary in A.D. 527 to the great general Belisarius, with whom he visited in turn Asia, Africa, and Italy, undertaking, apart from his secretarial duties, important charges in connexion with the commissariat and the navy. He returned with Belisarius to Constantinople in 542, was advanced to the rank of *illustris* and senator, and, in 562, became prefect of Constantinople. He died in 565.

He is best remembered for his literary activity. He had a quick mind, a lively interest in facts and events, and a good command of Greek style. His own experience of affairs and his long service under Belisarius gave him unique qualifications for writing the history of his own times. His general history of his age (in eight books) was devoted mainly to the Vandal War (two books), and the

Gothic Wars (four). A thorough acquaintance with good classical models enabled Procopius to shape his personal experience into a work of major historical importance. His knowledge of medical matters is considerable, but perhaps not enough to prove that he was himself a doctor. His religion seems to be a lukewarm and not very decided Christianity. Six books of *Κτίσματα* described buildings, and various orations are also preserved under his name.

The great historical puzzle connected with Procopius is the authorship of the *Ἀνέκδοτα*, 'Historia Arcana', a 'Chronique scandaleuse' of the age. This 'curious' book, with its malignant revelations about the great personages of the age—the early career of the Empress Theodora may be read as a choice sample—is a surprising and not very creditable production for a man of Procopius' rank and service. But Suidas directly assigns it to him, and the onus of proof seems to rest on those who deny his authorship.

J. B. Bury, *History of the later Roman Empire* ii (1923). H. M.

PROCOPTAS, see **PROCRUSTES**.

PROCRIS (*Προκρίς*), wife of the Attic hero Cephalus (q.v.). After sundry adventures, which have come down to us in late forms (Ovid, *Met.* 7. 794 ff.; Hyginus, *Fab.* 189), she was accidentally killed by him.

PROCRUSTES (*Προκρούστης*; also called **Damastes**, *Δαμάστης*, Apollod. *Epit.* 1. 4, Plut. *Thes.* 11, or **Polypemon**, *Πολυπήμεων*, Paus. 1. 38. 5, or **Procoptas**, *Προκόπτας*, Bacchylides 17. 28). All these names refer to his activities. He lived in some part of Attica (see Jebb on Bacchyl. loc. cit.), and having 'overcome' (*δαμάζω*) strangers would force them to lie down on one of his two beds. Here he caused them 'much woe' by hammering them out (*προκρούω*) to a sufficient length to fit the longer bed (so Bacchyl. and Apollod.) or racking them out with weights (Hyginus, *Fab.* 38. 3). If they were longer than the shorter bed he lopped them (*προκόπτειν*). Theseus (q.v.) killed him in like manner. His father was Poscidon (Hyginus), or is called by one of the names elsewhere given to Procrustes himself (see, e.g., Bacchyl.).

See further Höfer in Roscher, *Lex.*, art. 'Polypemonides', and refs. there. H. J. R.

PROCULIANI, see **SABINUS** (2).

PROCULUS, a prominent Roman jurist of the first half of the first century A.D., was a teacher and had the *ius respondendi* (see **JURISPRUDENCE**). The School of Proculians took its name from him (see **SABINUS** 2). Author of *Epistulae* (11 bks.), a collection of opinions and discussions based on his practice and of *Notae* to Labeo, the precursor of the School. He was frequently cited by later jurists. A. B.

PROCULUS, see also **POMPONIUS** (6).

PROCURATOR, an agent, especially a financial agent. Augustus, like any other Roman, employed such agents, and in his service they attained new rank and responsibilities.

Procurators of the emperor might be either knights or freedmen, but the knights always held the more important posts and, from Hadrian onwards, tended to displace freedmen. The title 'procurator Augusti' belonged strictly to the knight alone, who qualified for employment by serving in a number of officers' posts (usually three—*tres militiae*). Procurators came to be graded in salary-classes, *sexagenarii* and *centenarii* (60,000, 100,000 HS.: *vir egregius*) and *ducentarii* (200,000 HS.: *vir perfectissimus*).

The duties of procurators were essentially financial. (1) Procurators of provinces dealt with the imperial finances in their districts. Claudius gave them jurisdiction

in cases affecting the *fiscus*. In the imperial provinces the procurator worked under the *legatus*, in the senatorial his position was more independent beside the governor and his quaestor. In both he could occasionally act as a check on the governor. In the third century the appointment of procurators to govern 'vice praesidis' was one of the main ways in which knights displaced senators in the provincial administration. The procurator had no troops under him, but could, at need, obtain small detachments from the governor.

(2) Procurators of a great variety of departments under the emperor's control—the mint, the gladiatorial schools, the mines, the *annona*, the *vicesima hereditatum* (see also **ALIMENTA**). The heads of departments, such as the *a rationibus* and *ab epistulis*, were regularly knights after Hadrian and stood high in the equestrian career.

(3) A third class of procurators governed minor provinces, such as Thrace and Judaea, which were assigned to the emperor, but had no important garrisons. These 'procuratores et praesides' were not restricted to finance and enjoyed the power of life and death (the *ius gladii*). In practice they might sometimes be placed in semi-dependence on the governors of larger provinces. The best known of such procurators is Pontius Pilate, who ordered the Crucifixion.

The knight who entered the imperial service, after serving as officer in the army or, from Hadrian, in such civil posts as those of the *advocati fisci*, spent most of his life passing, by advancement, from one procuratorship to another. Procurators first supervised the private collection of taxes and then undertook direct collection. The office continued into the fourth century, under the new name of *rationalis*.

O. Hirschfeld, *Die kaiserliche Verwaltungsbeamten*, etc. (1905); H. Mattingly, *The Imperial Civil Service of Rome* (1910); A. N. Sherwin-White, 'Procurator Augusti', *BSR* xv (1939), 11 ff. H. M.

PRODICUS of Ceos, a Sophist and a contemporary of Socrates. We have very little reliable information about his life. We learn from Plato that he was employed by his native city on diplomatic missions and that he took advantage of the opportunities these afforded to further his professional interests. He gained considerable repute in his profession and demanded high fees for his courses of instruction. These are described as being concerned with the right use of words and were marked by their subtle discriminations between the precise meanings of kindred terms. Plato represents Socrates as being on friendly terms with him and paying tribute to the value of his teaching, though always with a touch of irony. There are also references to discussions, or perhaps rather exhortations, on moral questions, and he was the author of the famous myth 'The Choice of Hercules'.

Testimonia and frs. in H. Diels, *Vorlesr.* ii. 308–19. Zeller, i. 2^a. 1311–13; T. Gomperz, *Griechische Denker* (Engl. Transl. i. 425–30). G. C. F.

PRODIGIA. A *prodigium* is an event contrary to the supposed or known workings of nature, taken as a sign that the *pax deorum* is broken or in danger of being broken; whereas an *omen* is commonly a natural and ordinary event, observed by a diviner under certain circumstances. Examples are frequent in Livy, and collected by Julius Obsequens, *Prodigiorum liber*, from him. For example, in 136 B.C. (Obs. 25) the town of Rhegium was mysteriously burned, many objects in various places struck by lightning, streams at Puteoli ran blood, and a slave-girl bore a monstrous child. To deal with such things (*procurare*), Etruscan experts were often summoned (cf. **HARUSPICES**), as in the above instance; by their advice the child was burned and his ashes thrown into the sea. Other examples are mysterious voices of warning (Obs. 24, in 137 B.C.); rains of milk, blood, etc. (ibid. 28, 30, 31, 35, 51, 54); meteors and other like phenomena; the *Lancæ Martis* or the *ancilia* moving of their own accord

(ibid. 44 a, 47); earthquakes and eruptions; statues sweating or weeping (ibid. 6, 28, 52); phantoms of various kinds (ibid. 17, 18, 51). Sacrifices, lustrations, and a *nouendiale sacrum*, or ceremony lasting nine days, were among the commonest forms of *procuratio* (e.g., ibid. 4, 12, 23).

See bibliography to DIVINATION.

H. J. R.

PROEDROI (πρόεδροι). (1) A general name for presidents. (2) At Athens, from early in the fourth century, the nine men who presided at the meetings of the Ecclesia and Boule (cf. PRYTANIS for the 5th c. practice). The *Epistates* of the *prytanis*, before each meeting of the Boule and of the Ecclesia, chose by lot one man from each of the *phylae* other than the *prytaneuousa*; these nine then chose their *epistates* from their own number, who was the actual chairman of the meeting. No one served as *proedros* more than once.

A. W. G.

PROETUS (Προῖτος), a mythical king of the Argolid, who first appears in Homer, in the story of Bellerophon (q.v.). Later (Apollodorus 2. 24 ff.) he and Acrisius are sons of Abas son of Danaus (q.v.); for their quarrel see ACRIUS. The only other legend of importance concerns his daughters. These insulted the statue of Hera, or would not receive the rites of Dionysus (the latter is the Hesiodic story, the former and more probably original from Aeusilaus, Apollod. 26). They were driven mad by the offended deity and wandered about the country 'with all manner of unseemliness'. In particular, they fancied themselves cows (Verg. *Ecl.* 6. 48). Melampus (q.v.), being asked to heal them, demanded a third of the kingdom; this was refused, and they went madder still and killed their own children. Proetus now agreed to Melampus' terms, although they were raised to include another third for his brother Bias. The women were then caught at Sicyon and cured, except one, Iphinoe, who had died.

H. J. R.

PROGYMNASMATA, or preliminary exercises, constituted the elementary stage of instruction in schools of rhetoric (1st c. B.C. or earlier), and were represented later in the *Προγυμνάσματα* of Aelius Theon, Hermogenes, and Aphthonius (Spengel, *Rhet.* ii. 59 ff., 3 ff., 21 ff.; see also Quint. 2. 4). Designed to introduce pupils to the art of speaking, these works expounded various devices which were held to contribute to that end, notably the use of *μῦθος* (fable), *διήγημα* (narrative), *χρεία* (moral essay), *γνώμη* (maxim), *ἀνασκευή* and *κατασκευή* (refutation and confirmation of a story), *κοινὸς τόπος* (amplification), *ἐγκώμιον* (panegyric), *σύγκρισις* (comparison), *ἡθοποιία* (character-drawing), *ἐκφρασις* (description), *θεσις* (abstract question). As manuals of composition in Sophistic school-practice such works were defective, but their later influence was considerable. Exercises in *διήγημα* prepared the way for Greek romances, while *ἐκφρασις* and *ἡθοποιία* were to persist as important elements in medieval Poetics (C. S. Baldwin, *Medieval Rhetoric and Poetic* (1928), 17, 35, etc.).

See also G. Saintsbury, *History of Criticism* (1900-4), i. 89 ff.; Kroll, *Rhetorik*, § 37.

J. W. H. A.

PROLETARI were the citizens of the fifth class of the centuriate constitution (see CENTURIA), who were too poor to contribute to the State except by their children (*proles*). Originally they were exempted from military service, which depended on the financial resources of the citizens. But with increasing military, and especially naval, needs, the *proletarii*, whether identified with or distinguished from the *capite censi*, were called up and armed by the State. The reforms of Marius terminated the system of levying troops on the census.

P. T.

PROLOGUE, see TRAGEDY, AESCHYLUS, SOPHOCLES, EURIPIDES.

PROMETHEUS (Προμηθεύς, 'the forethinker'; all other etymologies of his name are merely fantastic; the word is used as a common noun, Aesch. *PV* 86), an ancient and popular demi-god, one of the Titans (son of Iapetus, Hesiod, *Theog.* 510, where his mother is Clymene the Oceanid). Originally, his character is entirely non-moral; he is the supreme trickster (cf. the like figure, Coyote or another, in Amerindian mythologies, W. Schmidt, *Origin and Growth of Religion*, 189, citing Kroeber), and as such is on occasion opposed to Zeus, whom he outwits. It would appear that he developed in common belief into a supreme craftsman, and was worshipped as such by craftsmen, particularly in Attica (see L. Deubner, *Attische Feste* (1932), 211 f.). Probably it is in this connexion that he is associated with fire and with the creation of man.

Hesiod has two principal tales of him. The first is that when Zeus hid fire away from man, Prometheus stole it and brought it to earth again (*Theog.* 562 ff.). Zeus would not give fire to the ash-trees for man's use, i.e. prevented the hardwood fire-sticks from being effective when rubbed against the soft ones; Prometheus therefore stole from the gods enough fire to make the pith of a stalk of giant fennel smoulder, and from this men got fire once more. It is a tale of common enough type, see Stith Thompson, A 1415 and references. Hesiod gives it, what probably did not originally belong to it, a preface explaining why Zeus acted so. Prometheus had tricked him with regard to the respective share of gods and men in burnt offerings (*Theog.* 535 ff.); he wrapped all the poorest parts of the victim up in fat, the best parts in another bundle, and bade Zeus choose; the simple-minded god taking the fat, man has ever since kept all the best of the meat for himself. This is a manifest aetiological myth to explain sacrificial usage, and its hero may always have been Prometheus. The story is also given an epilogue. Zeus punished mankind in general by creating woman to their confusion; the first woman was called Pandora, because she had 'all gifts' from the gods (she probably is in reality an earth-goddess, the All-giver); Prometheus' simple brother Epimetheus ('After-thinker') married her despite his brother's warnings, and she let out all evils from the store-jar where they were kept (*Theog.* 570 ff., *Op.* 50 ff.). This tale, for which cf. the part played by Eve in the Hebrew myth, is a piece of satire against women with which Prometheus has no necessary connexion.

The other tale is the vengeance of Zeus on Prometheus. He chained him and sent an eagle to eat his liver, which was as immortal as the rest of him and grew at night as fast as the eagle could devour it by day. In this torment he remained until Heracles released him. In Hesiod the reason of the punishment is the deceit regarding the sacrifices (*Theog.* 534 ff.); in Aeschylus (*PV* 7 ff.) it is the theft of fire. But a further complication is introduced, by Aeschylus himself so far as we know. Prometheus knew the secret regarding Thetis (q.v.), and would not reveal it till, apparently, he at last gave it up as the price of his liberty. Aeschylus also gives Prometheus high moral dignity as the friend of man against the tyranny of Zeus.

Prometheus, as master-craftsman, makes man from clay (Paus. 10. 4. 4) or from clay plus bits of other animals (Horace, *Carm.* 1. 16. 13 ff.).

H. J. R.

PRONUNCIATION, GREEK. The main features of ancient Greek pronunciation have been established by the skilful handling of very various types of evidence. For many details, naturally, only approximate accuracy can be claimed.

A. VOWELS AND DIPHTHONGS

(1) α, ι, υ. These symbols represented both short and long vowels. The exact quality of *ᾱ* and *ῑ* cannot be

certainly stated. It seems probable, however, that *a* sounded like *a* in Eng. *father*, that *i* was a close vowel like *ee* in Eng. *meet*, and *ī* a short vowel of similar quality. *ū* and *ū* in Attic, Ionic, and some other dialects were modified approximately to the sound of French *u* or Germ. *ü*. (2) *ε*, *η*, *αι*. In the Ionic alphabet, which eventually came into universal use, *ε* is a close short vowel (*ē* as in Fr. *été*), *η* a long open vowel (*ē* as in Fr. *fête*). Consequently, in many dialects, including Attic and Ionic, the *ē* which resulted from contraction (*ε*+*ε*) or compensatory lengthening (e.g. *τιθεις* > *τιθεις*, later *τιθεις*) could not be expressed by *η*. It continued to be denoted by *ε* until at different periods in different places the original diphthong *αι* had changed in pronunciation from a true diphthong to a long *e* of close quality (*ē* like the *e* of Eng. *prey*). The symbol *αι* then became available to express *ē*, whether this sound had developed from an original diphthong or not. (3) *ο*, *ω*, *ου*. Similarly *ο* was a close short vowel (*ō* like the final syllable of Eng. *below*), *ω* a long open vowel (*ō* somewhat less open than *au* in Eng. *ought*). *ου* represented originally the diphthong, but when this became a simple *ō* the symbol was used to represent also the lengthened *ο* (*ō*) which arose from contraction or compensatory lengthening. This *ō* (spelled *ου*) had developed by 350 B.C. into *ū*. (4) *αι*, *οι*, *υι* denote genuine diphthongs. Not until the second century A.D. did *αι* generally become an open long *e* (*ē*), although in Boeotian this change had already taken place by the fourth century B.C. Confusions between *οι* and *υι* in the third century A.D. show the development of *οι* to a monophthong, presumably *ū*, and again the change is evidenced for Boeotian many centuries before. In the diphthong *υι* (= *ūi*) the *υ* seems to have shared the modification of *υ* mentioned above. (5) *αι*, *ωι*, *ηι* were long diphthongs. Before the Christian era their second element (*i*) was lost in pronunciation although retained in educated spelling. The use of *iota subscript* is a late Byzantine device. (6) *αυ* and *ευ* remained genuine diphthongs throughout the ancient period. Their *υ*-element did not share the development of simple *υ* into *ū*.

(7) *Later developments.* In Modern Greek distinctions of quantity have disappeared save that the stressed vowel is longer than the unstressed. *ι*, *η*, *αι*, *υ*, *οι*, and *υι* have all the sound of a close *i* (*ī*); *αυ* and *ευ* have become *av* (*aβ*) and *ev* (*eβ*) before voiced sounds, *af* (*aφ*) and *ef* (*eφ*) before unvoiced.

B. CONSONANTS

(1) Like the corresponding sounds in English, *π*, *τ*, *κ* were voiceless and *β*, *δ*, *γ* voiced stops. (By 'stop' one means a consonant involving a momentarily complete stoppage of the expiration, by 'voice' the vibration of the vocal chords, and 'voiceless' indicates the absence of such vibration.) *φ*, *θ*, *χ* were voiceless aspirates approximately like *ph*, *th*, and *kh* in Eng. *top-hat*, *pot-hook*, *ink-horn* respectively. (2) *μ* is the labial, *ν* the dental nasal. The guttural nasal (= *ng*) is usually expressed by *γ* (as in *ἄγγελος*), which in this use is called by the ancient grammarians *asma*. *ρ* was a trilled *r* pronounced with the tip of the tongue against the gums and voiced like the *r* in Scottish *hard*, except in the initial position (*ρ*-) and in some other positions, where it was voiceless. (3) *σ* (*ς*) was a voiceless dental spirant like *s* in Eng. *fast*, except before voiced consonants in the combinations *σβ*, *σδ*, *σγ*, *σμ*, where it became the voiced spirant (= Fr. *z*). The *spiritus asper* was like Eng. *h*, a slight rustle of breath heard before the beginning of the vowel-sound; its absence was denoted by the *spiritus lenis*. (4) *ξ* and *ψ* represented *ks* and *ps* respectively. For *ξ* there is strong evidence of a pronunciation *zd* in the older period. Etymological considerations (e.g. *ἀντίξος* > *ἀντίξω*) suggest also *dz*. Probably both pronunciations were current at different times or in different dialects. Already in the fourth century B.C. in Attic *ξ* had developed into

the voiced spirant *z*. (5) The Ionic *-σσ-* and the *-ττ-* which takes its place in Attic and some other dialects offer special difficulty. In the period of the *Koine* these represented *-ss-* and *-tt-* respectively, but in the older period the evidence points to a more complex sound. One suggestion is that *-σσ-* represented *ʃ* (= Eng. *sh*) and that *-ττ-* denoted *tʃ* (= Eng. *th* in *not thin*). There are other views, however, and no final decision has been reached. (6) Even after the introduction of the Ionic alphabet, *ϝ* (digamma) continued in some dialects to represent *u* (Eng. *re*). This was a voiced sound, but a voiceless form of it (*FH*, i.e. digamma + Eng. *H*, perhaps like Scottish *wh*, i.e. *hw*) is found in some dialects.

(7) *Later developments.* By the fourth century A.D. *β* and *δ* had become voiced spirants = Eng. *v* and *th* (as in *then*) respectively. In Modern Greek *γ* before *ε*, *ι*, *υ* is like our *y*: before *α* and *ο* it has become a voiced guttural spirant (a sound which English does not possess, although the Scottish *ch* is its voiceless equivalent). *φ*, *θ*, *χ* became early in the Christian era voiceless spirants like Eng. *f*, *th* (as in *thin*), *ch* (as in Scottish *loch*) respectively.

C. ACCENT

(1) The Greek accent, up to at least the beginning of the Christian era, was an accent of pitch. The accented syllable of a word differed from the others mainly because it was pronounced on a higher musical note, and not (as in English and many other languages) with greater expiratory force or stress. No doubt the higher musical note involved also some degree of greater stress, but the preservation of the quality and quantity of vowels and the absence of syncope make it clear that for the ancient period any stress element was secondary. On the other hand, early in the Christian era the musical accent was yielding place to an ever-increasing stress accent. The beginning of the process can be detected as early as the third century B.C., and the change becomes really marked about the fourth century A.D., when we find the choliambics of Babrius so constructed that the penultimate syllable of the line always has an accent. Modern Greek has a stress accent, usually on the syllable which formerly carried the musical accent.

(2) The terminology employed in references to the accent (which begin with Plato, *Cra.* 399) is clearly musical in character. The signs were invented by Alexandrian grammarians (probably by Aristophanes). The Acute (*προσῳδία ὀξεῖα*), for which the sign was *´*, indicated a note which we are told (Dion. Hal. *Comp.* 11) was a musical fifth higher than the Grave (*προσῳδία βαρεῖα*) of the other syllables. The circumflex, which could stand only on long vowels or diphthongs, denoted a combination of the other two accents whereby the voice first rose and then fell. The sign *˘* and the name *προσῳδία περισπωμένη* (where the participle means 'drawn round') indicate this peculiarity. The Grave meant the absence on any syllable of Acute and Circumflex and, eventually, was left undenoted except in the special case where an Acute on the last syllable of a word before another word in the same sentence underwent a lowering of tone (e.g. *ὁ ἐγὰρ ὁ ἀνὴρ*). Papyri, however, show older methods of accentuation which placed a Grave on several syllables of a word (e.g. *μαῖστροι*, *φίλοις*), or on the syllable immediately before an Acute or Circumflex, which were then left unexpressed (e.g. *ἰλθε*, *κρατῖσαι*).

(3) In the Indo-European language from which Greek was derived the accent was free: in other words, it might rest on any syllable of a word. In Greek this freedom was so restricted that in a polysyllabic word only one of the last three syllables might bear the accent, and the third last (Antepenult) only if the last was short. For the conditions governing the accentuation of these syllables, as well as the complication introduced by the close attachment in pronunciation of some words

(Enclitics and Proclitics) to others, a Greek grammar should be consulted.

Vendryes, *Traité d'accentuation grecque* (1904). J. W. P.

PRONUNCIATION, LATIN. For the pronunciation of Latin various types of evidence are available. Besides the tradition of the schools (inaccurate in several respects) we have numerous phonetic descriptions by Latin grammarians which, though sometimes lacking in clarity, yield valuable information when interpreted by experts. Important evidence is also derived from the forms which Latin loan-words assume in foreign languages, and again from changes in orthodox spelling or departures from that spelling made by people of inferior education who attempted to write as they pronounced. In addition, we have certain evidence furnished by phonetic change within the Latin period and by the development or preservation of Latin sounds in the various Romance languages. It must be remembered that for many of the conclusions thus reached about the pronunciation of a 'dead' language only approximate accuracy can be claimed.

A. VOWELS AND DIPHTHONGS

The vowels *a, e, i, o, u* may be either long or short. It is probable that *a*, long and short, had approximately the same quality as the *a* of Eng. *father*. Between the long and the short forms of each of the other vowels there was a difference of quality. Thus while *ē* was open (ē) like *e* in Eng. *met*, *ē* was close (ē) like *é* in Fr. *été*. *ī* was open (ī) like *i* in Eng. *fit*, while *ī* was close (ī) like *ee* in Eng. *feed*. Similarly *ō* was open (ō) like *o* in Eng. *not*, and *ō* close (ō) like *au* in Fr. *faute*. *ū* was approximately like the *u* of Eng. *full* and *ū* like the *oo* of *fool*. There was also a modified *u* (ū) resembling Fr. *u* and Germ. *ü*, which, as in *maximus*, *maxumus*, was written sometimes as *u*, sometimes as *i*. In educated pronunciation of the classical period *ae* was a diphthong, approximately like *ai* in German *Kaiser*; in Imperial times it became an open long *e* (ē). *oe* was also a diphthong (like *oy* in Eng. *boy*) in classical times, becoming later close *e* (ē). *au* was normally a diphthong like *ow* in Eng. *how* throughout the Latin period. Sporadically, however, in vulgar usage *au* got the sound of *ō* and in some words (e.g. *coda* for *cauda*) this seems to have been a very general pronunciation. The rare *eu* must have sounded approximately like *ew* in Eng. *new*. *ui* in *cui* and *huic* seems to have contained the vowel *u* followed in the same syllable by the sound of *i*.

B. CONSONANTS

(1) The voiceless stops *p, t, c* (*k*) and the voiced stops *b, d, g* must have been approximately like the corresponding sounds in English. *c*, even before *e* and *i*, remained a stop during the classical period (i.e. *Cicero* was pronounced *Kikero*) and for long afterwards. Romance developments show that in the late Imperial period it had in this position undergone some degree of assibilation, thereby starting the process of change which led to the pronunciation of *c* in Fr. *cent* and Ital. *cento*. Similarly *g* remained a stop in all positions until about A.D. 500, when before *e* and *i* it developed into a *y*-sound. *b* between vowels became the spirant (bilabial) *v* fairly generally by the third century A.D. (2) *f* was originally a bilabial but later a labio-dental spirant like Eng. *f*. *s* was a voiceless sibilant (like the voiceless *s* in Eng. *past*) in all positions. In contact with voiced stops it caused them to become voiceless, so that a word like *urbs* was pronounced *urps*. (3) *h* was weakly articulated from an early period. Uneducated pronunciation tended to drop it, and in the later Empire it was lost altogether. The reaction against the tendency to omit it caused sometimes an intrusive 'h' in the affected pronunciation of some people (e.g.

hinsidia for *insidia*). This habit is satirized in Catullus, 84. (4) *n* before a guttural became the guttural nasal *ŋ* (*ng*); and *g* in -*gn*- probably had the same pronunciation. Thus *anguis* would be pronounced *anguis*, and *dignus* *dignus*. Final *m* before an initial vowel in the following word had a reduced pronunciation, of which the exact nature is disputed. Even before initial consonants final *m* eventually weakened and, except in monosyllables, leaves no trace in Romance. (5) *r* was trilled, with the point of the tongue probably against the gum. There were two varieties of *l*, one palatal approximately like Eng. *l*, the other velar or guttural like *ll* in Eng. *all*. Palatal *l* occurred before another *l* and before *i*; *l* final and before *a, o, u* or a consonant (except another *l*) was velar. (6) *i* (written *i*) and *u* (written *u*) were semi-vowels = Eng. *y* and *w* respectively. By the third century A.D. this *u* had become a spirant, either bilabial or labio-dental *v*, except in the combinations *qu, gu*, which continued to be pronounced as in English *queen* and *anguish*.

C. ACCENT

(1) *Early accent.* Many scholars hold that at a period before the beginning of literature the first syllable of every word carried a stress accent or, in other words, was pronounced with greater expiratory force than the remainder. This theory explains most easily the syncope which many Latin words had undergone (e.g. *quindecim* for *quinq̄uēdecem*) and the changes which had affected vowels (e.g. in compounds; *caedo* but *incido*, *cado* but *incido*). Authorities on Plautine prosody tell us that even in Plautus' period words consisting of four short syllables were still accentuated in the old way (e.g. *fāciliūs* instead of the classical *facilius*).

(2) *Accent of the Classical and later periods.* (a) *Position.* If the above theory is correct, a change must have taken place in the accentuation of polysyllabic words in the period before Plautus. Thereafter the position of the accent is regulated by the Penultimate Law, whereby if the penult is long by nature or position, the accent rests on it, but goes back to the antepenult if the penult is short (*confringo* but *cōncido*). Apart from some exceptions like *illuc* (for *illice*), where a final syllable has been lost, disyllabic words were accented on the first syllable.

(b) *Nature.* Descriptions by Latin writers suggest that during the classical period, and for several centuries afterwards, the language had a pitch accent whereby the accented syllable was pronounced on a higher musical note than the others. The terms employed (*accentus acutus, gravis, circumflexus*) are all translations of the Greek musical terminology, and there is no hint in the Latin accounts that the Latin accent differed in character from that of Greek. Not until the fourth century A.D. do we find in the grammarians' phraseology which clearly implies the presence of a stress accent. The form assumed by Latin words in the Romance languages points unmistakably to the existence of a stress accent in the Late Latin period.

Scholars differ about the interpretation of these facts. Some accept the grammarians' accounts at their face value and believe that the classical accent was musical but gave way to a stress accent in the late period. Others hold that the accent throughout was one of stress and that the evidence of Latin writers is vitiated by an unscientific dependence on Greek theory. Some, again, adopt an intermediate position and believe that, while evidence in the language itself points to a stress accent having always been predominant, especially in the pronunciation of the lower classes, the influence of Greek education on the higher classes in the classical period had brought about a considerable degree of musical accent.

PROOEMIUM. (1) *Verse.* See HOMERIC HYMNS and LYRIC POETRY, GREEK.

(2) *Prose.* With the development of Attic oratory in the last quarter of the fifth century B.C. the custom arose of compiling collections of stock openings to forensic and political speeches (also of perorations, *ἐπιλογοί*). The first collection was made by Cephalus (Suidas, s.v.), others by Antiphon, Critias, and Thrasymachus. The extant set attributed to Demosthenes numbers fifty-six, five of which are identical with the openings of Dem. 1, 4, 14, 15, 16. Blass argues cogently for the authenticity of the set, often impugned, pointing out that the historical background, in the few places where it is defined, is everywhere that of the first war against Philip, a restriction only explicable on the supposition that D. himself wrote the proemia between 349 and 346, for his own use when required (cf. Cicero's practice, *Att.* 16. 6. 4), with the exception that some, including those to 14-16 (354-350), were specially composed for particular speeches. Ephorus wrote a prooemium to each book of his history, in which practice he was followed by Diodorus (*Diod. Sic.* 16. 76. 5). The theory of the prooemium is discussed by Aristotle (*Rh.* 3. 14), Hermogenes (*Inu.* 1. 1-5, and *Apsines* (*Rhet.* ad init.).

R. Swoboda, *De Dem. quae feruntur proemia* (1887); F. Blass, *Die attische Beredsamkeit* iii. 1^a (1893), 322-3; E. Stemplinger, *Das Prologat in d. griech. Lit.* (1912), 223-7. J. D. D.

PROPEMPTIKON (*προπεμπτικόν*), a composition wishing a friend a prosperous voyage.

I. GREEK. The earliest extant example is Sappho's *χαλκοῖς ἔρχομαι* κ.τ.λ. (*Berl. Klassikertexte* 5. 2. 12 f.). Others are Erinna (?) fr. 2, Theoc. 7. 52-70, and Callim. fr. 114. Parthenius wrote one. The genre is discussed by Menander (q.v. 4) Rhetor (Spengel, *Rhet.* 3. 395-9). J. D. D.

II. LATIN. The first propemptikon known in Latin literature is Helvius Cinna's poem written in Bithynia in 56 B.C. and addressed to Asinius Pollio when he was starting on a journey to Greece. This was an imitation of Parthenius and so obscure that Hyginus wrote a commentary on it. Other poems of this genre are Tibullus 1. 3, Propertius 1. 17 and 2. 26, and Ovid, *Am.* 2. 11. But the first complete specimen that faithfully adheres to the rules laid down by rhetoric is Statius, *Silvae* 3. 2. Horace, however, in *Carm.* 1. 3, a poem addressed to Virgil when on his way to Athens, departs from the usual schema in that instead of laying imprecations on the first inventor of ships he loses himself in wonder at the daring of the first mariner.

F. Jäger, *Das antike Propemptikon*, 1913.

L. R. P.

PROPERTIUS, SEXTUS (wrongly styled *Sextus Aurelius Nauta* in some MSS.), born between 54 and 48 B.C., probably at Assisi (4. 1. 121-6 *Asis*; Plin. *Ep.* 6. 15; 9. 22), though claims have been made by other Umbrian towns. His father was an *eques* and died while the poet was a boy; soon after his property was reduced by distribution of lands among veterans of Antony and Octavian (41-40); love and poetry claimed him early (4. 1. 127-34; 3. 15. 3-6). Beyond this little is known save the story of his love for Cynthia, a lady of easy virtue whose true name was Hostia (Apul. *Apol.* 10). The course of his love did not run smooth; he idealized her at first; but she was faithless and after five or six years (perhaps 29-24 B.C.) he broke with her (1. 1; 3. 24). Whether the breach was permanent is uncertain; later (4. 8) he describes a quarrel with her and again (4. 7) tells us of her death; both poems are probably retrospective. He may even have married; for Passennus Paulus, the poet-friend of Pliny, claimed to be descended from him (Plin. *ll. cc.*). Maecenas was his patron (2. 1 and 3. 9); if the poet who claims to be a second Callimachus (Hor. *Epist.* 2. 2. 100; cf. Prop. 4. 1. 64) was Propertius, he knew Horace and was disliked by him. Ovid was his

friend (*Tr.* 4. 10. 45); this reference (A.D. 2) to him shows that he was no longer alive; as the latest date assignable to any poem of Propertius is 16 B.C. (4. 11), his death must fall between those two dates.

2. **WORKS.** Four Books of Elegies survive (the division into five books found in some texts is without authority); they may be dated (precisely) as: bk. 1 (33-28 B.C.); bk. 2 (28-25); bk. 3 (24-22); bk. 4 (21-16). The first (known in antiquity as the *Cynthia Monobiblos* (Mart. 14. 189)) deals almost entirely with love, his own or others', and has a freshness and charm which is all its own. Books 2 and 3 are likewise mainly concerned with his love. But the first ecstacy is gone; neither he nor Cynthia is faithful; quarrels ensue to close in a brusque and violent renunciation (3. 24). But elements of another type begin to intrude; cf. the two elegies addressed to Maecenas (2. 1; 3. 9) and those in praise of Augustus (2. 10; 3. 4) together with poems on his own art (3. 1, 2, 3, 5, and esp. 2. 34 which closes with a fine panegyric of Virgil). To these must be added letters to friends (3. 12 and 22), general reflections on the wickedness of woman-kind, illustrated from myth and history, and two laments—for Pactus drowned and for the 'young Marcellus' (3. 7 and 18). In bk. 4 we find ourselves in a new world. Two poems only are directly concerned with Cynthia (7 and 8), the former tragic and deeply moving, the latter humorous. Of the remainder one (5) is a cynical *Ars Amoris*; one (3) is a letter from a wife to her husband at the wars, and another—his noblest work—an epitaph for the tomb of a noble Roman Lady (11). The remainder are, in the Alexandrian manner, poems on the origin of Roman cults (Vertumnus (2), Tarpeia (4), the anniversary of Actium (6), the Ara Maxima (9), and Jupiter Feretrius (10), all introduced by an obscure preface (1) in the form of a dialogue between the poet and an astrologer).

3. Propertius is not a flawless poet, and few of his poems are of sustained excellence. But they reveal a living, if not always an attractive, personality, and have many moments of real greatness. And this gift of exaltation is enhanced by his mastery of the metre, which in his hands has a weight, a force, and a majesty which is unique in Latin. 'Sunt qui Propertium malint', said Quintilian (10. 1. 93) of Roman Elegists: and the same is true to-day. As his passion fades, his poetic ideals change, and he begins to claim Philetas and Callimachus as his masters—not in erotic verse, but in narrative coloured with mythological learning, finding their full expression in the legends of bk. 4, inspired by the *Aitia* of Callimachus. His later work has a harder and more mannered brilliance; but loss of freshness in feeling and colour is compensated by increased strength, incisiveness, and (cf. 3. 7; 4. 7 and 11) imagination as well. His metrical technique also changes; in bk. 1, three-, four-, or five-syllable endings to the pentameter are frequent (39 per cent.); in bk. 2 they drop to 14 per cent., in bk. 3 to 4 per cent., and in bk. 4 to 2 per cent. But there is no loss of beauty or of power. See also ELEGIAC POETRY, ALEXANDRIANISM.

4. The text of the poems presents a difficult problem—thought is often obscure and transitions violent. That lines have been lost or at times displaced is almost certain. But it is hard to justify wholesale transposition, and the attempts that have been made in this direction are not encouraging; nor has any satisfactory theory for such wholesale dislocation been forthcoming.

PROPHECIES (χρησμοί, *vaticinia*). Besides the oracles of the greater and lesser shrines, there were in circulation in antiquity a number of prophecies, sometimes nameless, often attached to the name of some inspired person. Of these, the most famous was the Sibyl, or the Sibyls (q.v.); but in addition, there were several men, some known to have lived during the historical period. Herodotus (i. 62. 4) mentions Amphilytus, a contemporary of Pisistratus, tyrant of Athens, and preserves the text of an oracle which he was suddenly inspired to give the latter. Such persons were known as *χρησμοῦδοι* in Greek (e.g. [Plato], *Theages*, 124d) or *χρησμολόγοι*; in Latin, *vates*; for a list of them, with some account of their lives or legends, see Bouché-Leclercq, *Histoire de la divination* ii, ch. 2. Naturally, their alleged utterances were particularly rife in times of stress; cf. Thucydides 2. 8. 2, who speaks both of oracular sayings (λόγια) quoted and *χρησμολόγοι* 'singing' their prophecies at the outbreak of the Peloponnesian War. In 2. 54. 2 he quotes the text of one nameless utterance, ἥξει Δωριακὸς πόλεμος καὶ λοιμὸς (or λιμός) αἶψ' αὐτῶ. This craze is a favourite subject for Aristophanes' mockery, particularly in the *Knights*; an especial butt is a certain Bacis (q.v.), whose oracles were extremely popular.

The most celebrated Italian *vates* was perhaps a certain Marcius, or a pair of brothers, the Marcii, for whom see Cicero, *Div.* i. 115; 2. 113, with Pease's notes; Cicero also mentions one Publicius. Here again, such effusions were multiplied in times of crisis; Augustus collected and destroyed a number of unauthorized collections (Suetonius, *Aug.* 31), many of them in Latin, no doubt in large measure a legacy of the Civil Wars.

H. J. R.

PROPHETES (προφήτης), the title of the mortal who speaks in the name of a god or interprets his will. It is properly used only of seers and functionaries attached to an established oracular shrine; the unattached seer is called *mantis*, etc. (see PROPHECIES). Moreover, it is more often used of the officials who interpreted signs at non-inspirational oracles or the cries of the god's medium at inspirational oracles than of the actual receivers of mantic inspiration. At Claros the prophet remained the direct mouthpiece of the god; but at Delphi and Didyma a woman who could be described as *prophetis* (προφήτις) was directly inspired by Apollo. She was assisted by the male prophet, who interpreted her incoherent remarks and reduced them to an intelligible response. At Didyma the prophet was an annually elected magistrate. At Delphi the title was not used officially; the two magistrates, elected for life, who performed this office had the title of priest (ἱερεῖς).

For further information and for bibliography see ORACLES; also E. Fascher, *ΠΡΟΦΗΤΗΣ* (1927).

J. E. F.

PROPYLAEA, a monumental roofed gateway; but pre-eminently one of the most renowned buildings of antiquity, that on the west side of the Athenian Acropolis (q.v.) designed by Mnesicles (q.v.), built of Pentelic marble, with some steps of black Eleusis stone, c. 435 B.C. and still largely intact. The plan, with its deep 'hall', its Doric hexastyle porticoes fronting outwards and inwards, and with its single division-wall pierced by five doorways, is of early origin (cf. the 'South Propylaeum' at Knossos); but Mnesicles provided wing-buildings of lesser height (the south one being curtailed) projecting from the front, forming loggias with Doric columns and rooms beyond. Larger wing-buildings to the east were intended. An inclined ramp continuing the slope of the natural rock formed the approach, and there were five steps at the doorways. The central avenue had a span of nearly 14 ft. and was flanked by Ionic colonnades; the ceilings were formed of marble beams

and of slabs with deeply hollowed square coffers, richly decorated in blue and gold. The room of the north wing was adorned with wall-paintings by Polygnotus.

Anderson, Spiers, and Dinsmoor, op. cit. under ARCHITECTURE, p. 133. T. F.

PROROGATIO. As early as the Samnite Wars (Livy 8. 23) the Romans realized the disadvantages inherent in their system of annual magistracies, and adopted the practice of retaining the services of magistrates after their period of office had expired. The activities of such men were confined to the *provincia* (q.v.) to which they had been appointed. At first a vote of the people was required for these extensions, but before long the Senate secured the power of prorogation (Polybius 6. 13). Flaminius (*cos.* 198 B.C.) retained his *imperium* till 194 and L. Lucullus (*cos.* 74) till 66. *Prorogatio* became the rule rather than the exception with the growth of the Empire. The practice of *prorogatio imperii* created the *proconsulare imperium* (see PRO CONSULE).

G. H. Stevenson, *Roman Provincial Administration* (1939), 55 ff. G. H. S.

PROSCRIPTIO. (a) A notice of sale of a debtor's property. (b) The publication of a list of persons who were declared outlaws and whose property was confiscated. This method was used by Sulla (82-81 B.C.) and by Antony, Lepidus, and Octavian (43-42) to rid themselves of their political and personal enemies. Rewards were offered for the execution of the proscribed, and in the former case their sons and grandsons were excluded from political office.

Ancient sources: Velleius 2. 28 and 66-7; Plutarch, *Sulla* 31 f., *Cicero* 46 f. and *Antony* 20; Appian, *BCiv.* i. 95 and 4. 5 ff.; Dio Cassius, fr. 109 and 47. 3 ff. Modern Literature: H. Kloevekorn, *De proscriptionibus ann.* 43 a. C. (1891); Drumann-Groebe, *Gesch. Roms* i. 265 ff. and 470 ff., ii. 399 ff.; T. Rice Holmes, *Roman Republic* i (1923), 59-60; *Architect of the Roman Empire* i (1928), 72 ff. G. W. R.

PROSE-RHYTHM. By prose-rhythm we mean here the quantitative or accentual arrangement of syllables, articulating the sentence and defining its close. We exclude from discussion: rhythm in general (E. A. Sonnenschein, *What is Rhythm?* (1925); De Groot, *Der Rhythmus*); correspondence of sound and sense (Norden, *Die antike Kunstprosa*); Gorgianic figures. For rhythm emphasized by rhyme see ASSONANCE. For *Hiatus in Greek Prose* see s.v.

2. *Ancient theory*. From Thrasymachus onwards, prose-rhythm (ῥυθμός, *numerus*) was a recognized branch of rhetoric. Our chief authorities are Aristotle, Demetrius, Dionysius, Cicero, Caesius Bassus, Quintilian. They are generally agreed that prose-rhythm should be distinct from verse-rhythm, varied, and not too obvious. Cicero adds that sentence-endings (*clausulae*) are rhythmically most important, though the rest of the sentence is not to be neglected. According to him, the last syllable of a *clausula* is *anceps*; Quintilian disagrees.

3. Extant Greek theory gives few precise details. Aristotle recommends - u u u as an opening rhythm, u u u - as a *clausula* (he perhaps has Plato in mind; in the *Ethics* - u u u is sought as a *clausula* and u u u u somewhat avoided). Demetrius and Dionysius are vague, and neglect important contrasts of rhythm in the authors they quote.

4. Latin theorists confuse matters by borrowing from Greek theorists without regard to differences of language. Cicero (whose sources include Aristotle's *Rhetoric* and lost works of Ephorus, Theophrastus, Theodectes, Hicronymus of Rhodes) apparently recommends the *clausulae* - u u u -, - u u u -, u u u -, all of which he strongly avoids in practice. However, he also recommends certain of his favourite forms, e.g. - u u - -, - u - - u -, - u - -, - u u u - -. (See, further, Laurand,

— — — — —, — — — — —. The preferred clausulae reappear at the end of cola and commata, but with more exceptions; — — — — — is commoner there, and — — — — — less strictly avoided. The variations in C.'s practice belong to subject-matter rather than chronology (see Laurand); but there is a gradual diminution of the 'Asiatie' clausula — — — — —. C. shows in the clausula some desire for coincidence of accent and ictus. For — — — — — there is a coincidence of 60.5 per cent. in C. as against 54 in unrhythmical prose and 51 in Livy: for — — — — —, 63.5 as against 49.5 and 40; for — — — — —, 35 as against 31.5 and 29. Broadhead and Zieliński exaggerate the influence of accent.

17. We may here group together as a Ciceronian school: Caesar, Nepos, Seneca, Suetonius, Quintilian, the younger Pliny, Apuleius, Tertullian. Their clausulae are in general Ciceronian, except that — — — — — is avoided by most of them, and that — — — — — is tolerated by Caesar and Nepos. — — — — — is avoided by Sen. and Tert., and — — — — — by Sen.

18. Opposed to Cicero's practice are Brutus ('Attie school'), Sallust, Livy. They seek — — — — —, but avoid — — — — —, — — — — —, — — — — —; and they tolerate or seek — — — — —, — — — — —, — — — — —, and — — — — — (Livy 36.5 per cent.). Tacitus in his early work is fairly Ciceronian, but always avoids — — — — —. In his mature work he is indifferent to most clausulae, only favouring somewhat — — — — — and — — — — —.

19. The 'Greek' clausulae — — — — —, — — — — — have little currency in Latin; but — — — — — seems to be sought by Sallust (Cat.), Brutus, Pomponius Mela, Apuleius (*Met.*), — — — — — by Sallust (*Jug.*), Brutus, Mela, Apuleius (*Apol. Flor.*, *Met.*).

20. *Latin accentual prose.* There is a transitional period when clausulae remain quantitative, but are gradually restricted to forms where (a) accent and ictus coincide, (b) there are 2 or 4 unaccented syllables between the last two accents. Thus *esse debētis*, *esse confiteor* are retained, but (*nūmquam reliquisset*, *agere debētis* are avoided. Alone among '3-forms', *esse videtur* keeps a certain prestige, but diminishes. The form *gladio petebatur* passes as a combination of quantitative — — — — — and accentual — — — — —. These tendencies may be observed in the choice of clausulae recommended by Sacerdos (3rd c.; see Nicolau's commentary) and in the detailed studies of Cyprian-Jerome, Arnobius, Faustus by P. C. Knook, H. Hagendahl, A. G. Elg. For coincidence of ictus and accent compare these percentages with Cicero's: — — — — —, Augustine 78, Arnobius 95, Leo 93. — — — — —, Augustine 73.5, Arnobius 95.3, Leo 99.5. Much material of this period has yet to be investigated, and unless the works examined are of some length the evidence is apt to be inconclusive; thus it is perhaps impossible to decide whether the rhythms of Niceta's *Te Deum* are purely quantitative or not.

21. In the Middle Ages quantity is neglected, and favoured rhythms are practically reduced to the three accentual cursus-forms: — — — — — (*planus*), — — — — — (*tardus*), — — — — — (*velox*)—which are used, e.g., by Gregory of Tours, Bernard of Clairvaux, Héloïse, Dante.

22. *Applications.* Study of prose-rhythm has been useful in some questions of chronology (Plato) and authenticity (for Plutarch's *Συγκρίσεις*, against *Consolatio ad Apollonium*). In textual criticism rhythmical criteria may help to distinguish between manuscript variants and to reject mistaken emendations. Original emendation should be very cautious, taking into account not only a writer's preferences but also his margin of exceptions. In *Somnium Scipionis* 12, it is simple to change 'ingeniūque tui consiliūque' to 'ingenique tui consiliūque'; it would be rash to change *πρὸς ἐμὲ* to *πρὸς με* everywhere in Demosthenes, setting 'Blass's Law' above normal usage.

PROSERPINA, *see* PERSEPHONE.

PROSODIAC, *see* METRE GREEK, III (6).

PROSTITUTION, SACRED, existed in two main forms. (1) The defloration of virgins before marriage was originally a threshold rite, whereby the dangerous task of having intercourse with a virgin was delegated to a foreigner, since intercourse was in many, if not all, cases limited to strangers. The custom was observed at Babylon (Hdt. 1. 199) and at Heliopolis-Baalbek (Sozom. *Hist. Eccles.* 5, 10; Soerates, *Hist. Eccles.* 1, 18, 48); in Cyprus (Hdt. l.c.; Just. *Epit.* 18. 5), in Lydia (Hdt. 1. 93; Ael. *VH* 4. 1), and at Sicca Veneria in Numidia (Val. Max. 2. 6. 15) girls are said thus to have earned dowries. In Acilisene well-born maidens were dedicated to Anaitis as prostitutes for considerable periods (Strabo 532-3), thus constituting a half-way step to (2) regular temple prostitution, generally of slaves, such as existed in Babylonia, in the cult of Ma at Comana Pontica (Strabo 559), of Aphrodite at Corinth (Strabo 378; Athen. 573), and perhaps at Eryx (Strabo 272; Diod. 4. 83), and in Egypt (*PTeb.* 6).

Nilsson would derive all sacred prostitution from the first type, which, he further claims, was originally non-religious, but readily became attached to fertility cults. It might then develop into type 2, or as at Byblus in the cult of Adonis (Lucian, *Syr. D.* 6), where, though the original purpose had been lost, the 'market' was still open only to strangers. The (unfulfilled) vow of the citizens of Loeri Epizephyrii to prostitute their virgins (Just. *Epit.* 21. 3), unique in Greek annals, was a desperate measure to secure divine aid in war. The hereditary *παλλακαί* at Tralles were concubines, and perhaps prophetesses, of the god, not temple prostitutes. The evidence for Thebes in Egypt (Hdt. 1. 182; Str. 816) is contradictory.

PROTAGORAS of Abdera, one of the earliest and most successful of the Sophists. His date is uncertain but his birth cannot be placed much later than 485 B.C., and was probably earlier, while he was about seventy years old at the time of his death. During forty of these he practised the profession of Sophist with great success, probably mainly at Athens. He claimed to teach 'virtue' (*ἀρετή*), which can perhaps be better expressed as efficiency in the conduct of life. He was evidently a man of high character and generally respected. When Thuri was founded by the Athenians in 444, he was appointed to draw up a code of laws for the new colony. The well-known story of his trial and condemnation at Athens is inconsistent with the statements of Plato and may probably be dismissed as an invention or error of later writers.

His chief significance in the history of thought rests on the doctrine expressed in his well-known dictum 'Man is the measure of all things'. There can be little doubt that this was generally understood in antiquity as being a doctrine of the relativity of all knowledge or opinion to each particular person, and that it involved a complete scepticism about the claims of any science to universal validity. He also adopted an agnostic attitude towards belief in the gods. He does not, however, seem to have extended this scepticism to the claims of morality. Here he apparently adopted conventional moral ideas without much question, and advocated respect by each man for the moral code of his particular community.

Testimonia and Fra. in H. Diels, *Vorsokr.* ii. 253-71. Histories of Ancient Philosophy, Zeller, i. 2^a. 1296-1304; T. Gomperz, *Griechische Denker* (Engl. Transl. i. 438-75); L. Robin, *La Pensée grecque* (1923, Engl. Transl. 141-7); J. Burnet, *From Thales to Plato* (1914), ch. 7. G. C. F.

PROTESILAUS, in mythology, commander of the contingent before Troy from Phylace and other places in Thessaly. He was killed in landing by one of the defenders (*Iliad* 2. 695 ff.). Homer also states that 'his wife was left mourning and his house half-finished'. From this it is a natural conclusion that he was newly married, whence a touching legend developed, preserved almost solely in Latin authors (Catullus 68. 73 ff.; Ovid, *Her.* 13; Hyginus, *Fab.* 103 f.). Protesilaus had offended the gods by not sacrificing before he began his house (Catullus); or he knew that the first man ashore was fated to be killed and patriotically took it upon himself to fall (Hyginus). His wife Laodamia grieved so for his loss that the gods granted her prayer to see him again for three hours. At the end of that time she killed herself (Eustathius on the *Iliad*, p. 325, 23 ff., who makes Protesilaus the prime mover throughout, because owing to Aphrodite's anger he desired his wife even after his death); or she spent so much time with an image of him that her father Aeacus burned it and she flung herself on the fire (Hyginus 114, cf. Ovid 151 ff.). The author and date of this legend are unknown.

For his cult see Farnell, *Hero-Cults*, p. 412, note 102. H. J. R.

PROTEUS (*Πρωτεύς*), a minor sea-god, herdsman of the flocks of the sea, seals, etc. In Homer (*Od.* 4. 385 ff.) he is an Egyptian daimon, servant of Poseidon, who has the power to take all manner of shapes, but if held till he resumes the true one, will answer questions. Virgil (*G.* 4. 387 ff.) imitates this. But in Euripides, *Helena* 4, Herodotus 2. 112 ff., he is a virtuous king of Egypt, who takes Helen (q.v.) and her wealth from Paris and keeps them safe till at length Menelaus arrives and claims them. The relation of this to Stesichorus' palinode is not clear.

H. J. R.

PROTOGENES (late 4th c. B.C.), painter and sculptor, of Caunus; connected by anecdotes with Apelles, Aristotle, Demetrius Poliorcetes. His pictures included 'Alcylus', 'Resting Satyr', 'Alexander and Pan', 'Paralus and Hammonias' (allegories of the Athenian State galleys), portraits of Aristotle's mother, Antigonus, and Philiscus. He wrote two books on painting. His works showed excessive elaboration, but according to Apelles lacked charm (*χάρης*).

T. B. L. W.

PROTREPTICUS, exhortation (to philosophy). The prose-form of the Greco-Roman *protrepticus* was based on the *protrepticus* to rhetorical and political education which the Sophists had first brought forward. The sophistic form again can be tracked back to the old poetical *πρότρεξαι* or *παραινέσεις* (exhortations) of Hesiod, Theognis, and others. The few Greek exhortations preserved (e.g. Galen's *Π. ἐπ' ἀρχαίῃ*) are only late examples of the genre. The most famous classical exhortation was Aristotle's *Protrepticus*, based partly on the sophistic *protrepticus* which Plato gives in the

Euthydemus (278c f.). Cicero wrote his *protrepticus Hortensius* after the model of Aristotle, but turned it into a dialogue. It was the reading of the *Hortensius* which led the young Augustine to philosophy.

Wendland, *Anaximenes von Lampsakos* 81 f.; W. Jaeger, *Paidria*, Engl. Transl., i. 30 f., passim (on the poetical and sophistic *protrepticus*). K. O. B.

PROVINCIA designated the sphere of action of a magistrate possessing *imperium*, and originally was applied to any district in Italy or overseas in which authority was exercised by a representative of Rome. Macedonia, for instance, and Spain were allotted to Roman generals as their 'provinces' long before their annexation. Italy itself might be the 'province' of one of the consuls whose colleague had a command elsewhere. The word was also applied to the duties of other magistrates: the *praetor urbanus* had the *provincia urbana*, and the *praetor peregrinus* the *provincia peregrina*. Later, however, the word was specially associated with the overseas possessions of Rome, which were sharply distinguished from Italy by the fact that their inhabitants paid tribute. The Roman confederacy in Italy was based on treaties involving military obligations but not taxation; but when extra-Italian districts were included in the Empire tribute was paid, except by individuals or communities who had been granted *immunitas* (q.v.).

2. When a province was annexed a *Lex Provinciae* was drawn up by a Roman general with the assistance of a commission of ten nominated by the Senate. In this document were laid down the general principles according to which the area was to be administered. It divided the province into administrative districts, and dealt with taxation, the administration of justice, and local government. Well-known examples are the *Lex Rupilia* of Sicily and the *Lex Pompeia* of Bithynia. Every governor on entering office supplemented the provisions of the *Lex Provinciae* by issuing an edict. This was mainly concerned with financial and judicial questions; but a governor had considerable freedom in making experiments which might or might not be taken over by his successor. Cicero conferred upon the cities of Cilicia a degree of autonomy to which they were not accustomed.

3. The earliest provinces were governed by magistrates specially elected for the purpose. Two additional praetors were elected from 227 B.C. to govern Sicily and Sardinia, and two more from 197 for the two Spanish provinces. No further addition, however, was made to the number of magistrates till the dictatorship of Sulla, though meantime several provinces had been acquired. Provinces were governed either by magistrates actually in office or by those whose *imperium* had been extended by *prorogatio* (q.v.), and fairly long commands became common. The Senate, which was normally responsible for the allocation of provinces, decided annually which were to be consular and which praetorian, after which the consuls and praetors settled the final distribution by lot. By a law of C. Gracchus the Senate was required to determine the consular provinces before the magistrates concerned were actually elected. In the last century of the Republic important commands were often conferred by plebiscitum, e.g. the appointment of Marius against Jugurtha, of Pompey against the pirates and Mithridates, and of Caesar in Gaul. Pompey in 52 fixed an interval of five years between the holding of a magistracy and of a provincial governorship. Under the Principate a distinction was made between 'senatorial' or 'public' and 'imperial' provinces. The former were governed by ex-consuls and ex-praetors with the title of proconsul, who normally held office for a year, while imperial provinces were entrusted to *legati Augusti propraetore* of senatorial rank, or to equestrian officials selected by the emperor, whose term of office was indefinite. Under

Augustus and Tiberius, Poppaeus Sabinus governed provinces for 24 years (Tac. *Ann.* 6. 39). Consular *legati* of imperial provinces had legions under their command. No legions were stationed permanently in senatorial provinces (except Africa), nor in imperial provinces of the second class. The equestrian *praefectus* of Egypt had a legionary force, but provinces governed by *procuratores* were garrisoned by *auxilia* only. The governor of a province under the Republic had supreme authority in both civil and military matters with the assistance of his quaestor (q.v.) and his *legati*, over whose appointment he had some control. In the Principate the financial administration of an imperial province was in the hands of an equestrian procurator, who was appointed independently of the *legatus* and was sometimes regarded as a rival. In senatorial provinces this duty belonged to the quaestor, but even in them procurators looked after the interests of the *fiscus* and *patrimonium*. Rome had so few official representatives in the provinces, even in the Principate, that government would have been impossible without the co-operation of local authorities. Accordingly, much was done to foster municipal life, which flourished greatly during the early centuries of the Principate, when the central government still allowed much local autonomy. With the growth of bureaucracy this autonomy was diminished by the encroachments of the central government, until the holding of municipal office came to be regarded as a burdensome duty.

4. The provinces of the Republic were acquired in a piecemeal fashion, and it is not till the Principate that a definite policy is apparent. As a result of the Punic Wars Rome acquired Sicily (241 B.C.), Sardinia and Corsica (231), and Hither and Farther Spain (197). Macedonia was annexed in 148 after an unsuccessful experiment in autonomy, and Achaëa and Africa in 146, Asia in 133. Bithynia and Cyrene (74) were bequeathed to Rome by their kings. Southern Gaul became a province in 120, and Roman rule was extended over the whole of Gaul by Caesar. Pompey added Syria to the Empire, and by the first century B.C. Cilicia and Illyricum were regarded as provinces (their previous status is obscure). In the reign of Augustus the Danube was fixed as the northern frontier of the Empire, and the four Danubian provinces (Raetia, Noricum, Pannonia, and Moesia) were annexed. After the defeat of Varus in A.D. 9 no serious attempt was made to extend the Empire to the Elbe, though a considerable area in south-west Germany lay within the 'limes' connecting the Rhine with the Danube, the construction of which began in the Flavian period. Egypt became a province after the defeat of Antony and Cleopatra in 31 B.C. The most important provinces acquired after the reign of Augustus were Britain and Dacia, annexed by Claudius and Trajan, but certain regions previously ruled by 'client kings' were transformed into provinces, e.g. Cappadocia in A.D. 17, Mauretania in 40, and Thrace in 46. Most of the extensive conquests made by Trajan east of the Euphrates were abandoned, but the province of Arabia between Palestine and the Red Sea was retained and a province of Mesopotamia was organized under Marcus Aurelius. The process of subdividing the provinces, which began under Domitian and Trajan, was continued much farther in the period of Diocletian and Constantine.

ANCIENT SOURCES: Our chief sources of information for the provincial government of the later Republic are the speeches of Cicero (especially the *Verrines*) and his letters from Cilicia and to his brother Quintus. For the Principate we depend mainly on references in Tacitus, the Younger Pliny, etc. For details inscriptions are invaluable, and the *Natural History* of the Elder Pliny contains much statistical information. For the later period the *Digest* should be consulted.

Marquardt, *Röm. Staatsverw.* i and ii (1881); Mommsen, *The Provinces of the Roman Empire* (1909); G. H. Stevenson, *Roman Provincial Administration* (1939). G. H. S.

PROVOCATIO in the regal period was the appeal to the royal grace, and in early Republican times it was a political weapon against arbitrary administration of justice. But it soon became a right which every male Roman enjoyed. Whatever the reasons for his condemnation to a capital punishment (or, at a later stage, to a fine), he was allowed to appeal (*provocare*) to the *Comitia Centuriata*, while the appeal against a fine was made to the *Comitia Tributa*. The magistrate who disregarded the appeal and executed the sentence was considered guilty of murder and punished, unless the right of appeal was suspended by proclaiming a state of siege (see *SENATUS CONSULTUM ULTIMUM*) or superseded by dictatorship. *Provocatio* was such a characteristic feature of the Republican conception of liberty and citizenship that the Romans thought of it as contemporary with the foundation of the Republic, and attributed a law *de provocazione* to Valerius Publicola (q.v.) which is a mere anticipation of the *Lex Valeria* (c. 300 B.C.). The right of appeal was introduced or reinforced by the decemvirs, and remained intact until superseded by *appellatio* (q.v.) in the imperial age.

Mommsen, *Röm. Strafr.* (1899), 167 f., 473 ff.; G. W. Botsford, *The Roman Assemblies* (1909), 239 ff. P. T.

PROVOCATIO, in later classical jurisprudence, see APPELLATIO.

PROXENOS. Since Greek States did not send permanent diplomatic representatives abroad, local citizens served as *proxenoi* to look after the interests of other States in their community. By the beginning of the fifth century this system had developed from earlier practices of hospitality under which some relied on hereditary ties with foreign families and others on the more general respect for strangers and suppliants. Survivals from this were the continued existence of private friends in foreign States (*ἰδιόγενοι*) and the practice of a few States of appointing *proxenoi* to look after visitors. More commonly States selected their own *proxenoi* in other States and, in return for services already rendered and expected in the future, bestowed honours and privileges upon them. Such appointments were much coveted, and many voluntarily assumed the burdens in the hope of gaining the title. The position usually was hereditary. A *proxenos* must be a citizen of the State in which he served and not of the State he represented. Later, however, when honours were bestowed more freely and had little practical significance, *proxenia* and honorary citizenship frequently were combined in the same grant.

C. Phillipson, *The International Law and Custom of Ancient Greece and Rome* (1911), ch. 6; E. Szanto, *Das griechische Bürgerrecht* (1892), ch. 1. J. A. O. L.

PRUDENTIUS AURELIUS CLEMENS (b. A.D. 348), the greatest of the Christian Latin poets, was a native of Spain (probably Tarraconensis). After a good education and a period devoted to vice he began a successful career as advocate and administrator and attained a position at court. He then broke with his past and dedicated himself to Christian poetry. After 405 traces of his life are lost. His works are remarkable for skill in various metres and for profound knowledge of pagan Latin poetry. The titles are *Cathemerinon*, 'The Diary'; a series of hymns, *Apotheosis*, in which he battles for the Catholic doctrine of the Trinity; *Hamartigenia* on the origin of sin; *Psychomachia*, 'The battle for the soul', an allegory; *Peristephanon*, 'On the (martyrs') crowns'; *Contra Symmachum*, where the events of 384 are vividly recalled after an interval of about twenty years (see SYMMACHUS 2); and the *Dittochaëon*, a collection of forty-nine hexameter tetra-stichs on biblical topics.

Ed. W. Bergman (*CSEL* lxi, 1926); Concordance by Deferarri and Campbell (Medieval Academy of America, 1932). A. S.

PRUSIAS, see BITHYNIA.

PRYTANIS (πρύτανις). (1) A general term for a presiding officer. (2) The chief magistrate of some States (e.g. Mytilene) in early times, or, as in Chios, the *eponymos*. Elsewhere (chiefly in Asia Minor), *prytaneis* were the magistrates who presided over the boule and the ecclesia. (3) In Athens, from the time of Cleisthenes, and elsewhere, the *prytaneis* were a section of the Boule, acting as a committee for the preparation of business. They consisted either of all the members of one *phyle* or of members chosen in equal numbers from each *phyle*. At Athens the fifty members from each of the ten *phylae* served as *prytaneis* for one-tenth part of the year in an order determined by lot (the *φύλη πρυτανεύουσα*). Their period of office was normally therefore 36 or 37 days, in intercalary years 38 or 39. When there were twelve *phylae* (after 307–306), their office lasted 30 or 31 days.

They met daily in the Tholos or Skias, a circular building near the Bouleuterion, and fed there. A third of their number must remain in the building night and day. They chose each day by lot one of their number as their *epistates* or chairman, who also presided over the Boule and Ecclesia, if they met on his day. (For later procedure see *PROEDROI*). The *prytaneis* summoned both Boule and Ecclesia and set out the agenda; they saw to it that only qualified persons attended the meetings. They received and introduced to the Boule all magistrates, private citizens, or foreign ambassadors who wished to meet it or were summoned to it. They had certain powers of arrest as a committee of the Boule (see *BOULE*). In Aristotle's time they were paid 6 obols a day. For the *πρυτάνεις τῶν ναυκράρων* see *NAUKRARIAI*. A. W. G.

PSAON OF PLATAEA, Hellenistic historian, continuing Diyllus from 297/6 B.C., covered partly the same period as Phylarchus and may have been contemporary with him; his work perhaps extended to Ol. 140 (220–217), where Polybius began, and was continued by Menodotus.

FGH II, A, p. 158; C, p. 131.

A. H. McD.

PSELLUS, MICHAEL (earlier *CONSTANTINE*), probably of Nicomedia (A.D. 1018–78/9), after studying law at Constantinople held a judicial post at Philadelphia. Under Constantine IX (1042–55) he became professor of philosophy at the Academy in Constantinople. He was now one of the most influential figures in the Eastern Empire and was appointed State Secretary and Vestarch. Apart from a brief period of retirement in a monastery (1054–5), he was a member of all the governments at Constantinople until the reign of Michael VII (1071–8), under whom he became Prime Minister. The ingratitude of this emperor caused him to spend his last days in obscurity.

WORKS. (1) Scientific and philosophical treatises on mathematics, music, astronomy, physics, metaphysics, ethics, theology, alchemy, demonology, medicine, jurisprudence, topography, etc.; e.g. the miscellany *De Omnifaria Doctrina* (Διδασκαλία παντοδαμῆ), his literary masterpiece *De Operatione Daemonum* (II. ἐπερχίας δαιμόνων), his discussion of Athenian judicial terminology, and his short account of the topography of Athens.

(2) Paraphrases of the *Iliad* and of Aristotle, *Categories*, an abridgement of Porphyry, *De Quinque Vocibus*, a commentary on Aristotle, *De Interpretatione*, a treatise on Plato, *Phaedrus*, and an allegorical study on Homer. Also works in letter-form on rhetoric, and poems on rhetoric, grammar, and Greek dialects.

(3) *Chronographia* (Χρονολογία), a lively and colourful history of the century 976 to 1077, is valuable, though somewhat inadequate.

(4) Funeral orations, panegyrics, *apologies* written in a style of persuasive dignity. His letters, of which about 500 survive, are interesting for their picture of Byzantine civilization and of their author himself.

(5) Rhetorical exercises and essays on set themes.

(6) Occasional verse, satirical and epigrammatic.

Psellus was a man of encyclopaedic learning and great literary gifts. At a time when scholarship was at a low ebb, he had a keen though rather self-conscious love of classical and patristic literature and was passionately devoted to Plato and the Neoplatonists. His own style owed much to Plato, Aelius Aristides, and Gregory Nazianzen.

In his public life he reflects the faults of the age. Amid the atmosphere of palace-intrigue and court-flattery, scruples and sincerity found no place, and his political career was disfigured by servility and unrestrained ambition.

PSEUDEPIGRAPHIC LITERATURE. Antiquity has left us a number of writings which evidence, internal or external, proves not to be the work of the authors whose names are traditionally attached to them. The causes of this seem to be chiefly: (a) a tendency to ascribe anonymous pieces to a well-known author of like genre. Thus, the whole Epic Cycle and other hexameter poems were at one time or another ascribed to Homer; in Latin several compositions more or less epic in style, as the *Culex* and *Ciris*, have become attached to the name of Virgil, others, in elegiacs, to those of Tibullus and Ovid. (b) Works by the followers of a philosopher tended to be credited to their master; for instance, several short dialogues by members of the Academy bear the name of Plato, and, e.g., the *Problemata*, which are Peripatetic, are preserved as by Aristotle. (c) Rhetorical exercises in the form of speeches, letters, etc., supposed to be by well-known persons, now and then were taken for their real works. Thus, no. 11 of our collection of Demosthenes' speeches is a clever imitation of him, said by Didymus, *In Demosth.*, col. 11, 10, to come from the *Philippica* of Anaximenes of Lampsacus. The Epistles of Phalaris are the most notorious work of this kind, thanks to Bentley's exposure of them. (d) The existence of deliberate forgeries, made to sell (see *FORGERIES, LITERARY*), is vouched for by Galen (*In Hipp. de nat. hominis* 2, p. 57, 12 Mewaldt). (e) Various mechanical accidents of copying account for a few pseudepigraphies. (f) But the most frequent cases are of rather late date and connected with the craze for producing evidence of the doctrines one favoured being of great age. For instance, the numerous Neopythagorean treatises, whereof specimens are preserved chiefly in Stobaeus, are regularly attached to the names of prominent early Pythagoreans, including Pythagoras himself (q.v.), despite the fairly constant tradition that he wrote nothing. The Sibylline oracles (see *SIBYLLA*) are an outstanding instance of this; Phocylides (q.v.) is the alleged author of a long set of moralizing verses pretty certainly the work of an unknown Jew and of late date. Christian literature has some glaring examples of this practice, notably the Clementine Recognitions and Homilies, most certainly neither by Clement of Rome nor any contemporary, and the works attributed to Dionysius the Areopagite, really produced some three centuries or more after his death. Cf. also *HERMES TRISMEGISTUS*. H. J. R.

PSEUDO-ASCONIUS, see *ASCONIUS*.

PSEUDO-CALLISTHENES. The so-called *Alexander Romance* (Βίος Ἀλεξάνδρου τοῦ Μεγάρου) is extant in three Greek versions. The oldest belongs to

c. A.D. 300, but may contain elements derived from a romantic account of Alexander's life written soon after his death.

Text: W. Kroll, *Historia Alexandri Magni* (1926). A. Ausfeld, *Der griechische Alexanderroman* (1907). See also CALLISTHENES and NOVEL, GREEK. R. M. R.

PSEUDO-OVIDIANA, see CONSOLATIO AD LIVIAM and ELEGIAE IN MAECENATEM; cf. *Nux* under OVID.

PSEUDO-QUINTILIAN, see DECLAMATIONES.

PSEUDO-VERGILIANA, see APPENDIX VERGILIANA.

PSYCHE, the soul or, in later usage, the soul as a butterfly, does not appear as a clearly individualized mythological being before the fourth or the fifth century B.C. The notion of the soul occupied the Greeks from very early times. It has been suggested that the soul was first conceived as a bird, on the strength of the passages in Homer where the soul of Patroclus utters a faint noise (*Il.* 23. 101) and the souls of wooers chirp like bats (*Od.* 24. 6). In art a bird is shown flying over the head of a dying hero and birds are often seated on funeral stelae (cf. *Sirenes*). But Homer explicitly depicts the soul as a kind of a double, resembling the dead in 'height, eyes, voice' and wearing the same garments (*Il.* 23. 66), and the archaeological evidence is ambiguous. The Homeric souls, often called *eidola*, disappear like smoke, in the manner of our ghosts, if somebody attempts to touch them (*Od.* 11. 206). They dwell in Hades on the barren asphodel meadow and lack the vitality and memory which they can regain only by drinking blood (*Od.* 11. 25, cf. 24. 1). The Homeric notion remained current down to Plato's times (*Phd.* 81 c, d). On vases we see the soul of Patroclus in full armour watching Achilles as he drags the corpse of Hector; the soul of Sarpedon leaving the body (E. Haspels, *Attic Black-Figure Lekythoi* (Paris 1936), 51); the souls of Achilles and Memnon weighed by Zeus; and the souls of commoners at a funeral, in the cemetery, and in Hades. On some vases they are shown with Charon, on others with Hermes Psychagogus.

Different notions of the soul were developed by Greek philosophers and poets. The most important change is the elevation of soul from a rather materialistically conceived double to a dematerialized divine being, of a nature totally different from the body. 'The body is the tomb of the soul', said the Orphics (see ORPHISM). The inscriptions honouring the warriors fallen at Potidaea claims that their souls were received by the aether, their bodies by earth (Kaibel, *Epigr. gr.* 21). The Homeric connexion with the individual had been severed so far that all *Psychai* could be conceived as female. The earliest representation of P. in that form, of the late fifth century, appears in south Italy, the home of Pythagoreans and Orphics. It would appear that the type which represents P. as a butterfly was evolved approximately at the same time. Plato's inspired vision of the chariots of souls in *Phaedrus* presupposes a connexion of Eros and P. Roughly contemporary with Plato are some beautiful bronze reliefs from Asia Minor (Devambez, *Les Grands Bronzes du Musée d'Istanbul*, 1935) on which Eros and P., a maiden, are shown in quiet harmony. They are united in the Hellenistic 'Invention of the Kiss', a marble group which was copied in Roman (E. Strong, *JRS* 1924, 71) and early Christian art, perhaps as symbol of heavenly happiness (F. Cumont, *Syria* 1929, 231). On the other hand, Eros (q.v.), who had before plagued individual victims of love, now turns also on P., since she, the soul, is recognized as the seat of passions. In Hellenistic poetry and art Eros is represented inflicting innumerable tortures upon P. (G. Hanfmann, *AJArch.*

1939, 240). In Apuleius (*Met.* 4. 28) the motif of the tormented Psyche is combined with a *märchen* of the Fairy Bridegroom type. The goddess P., who appears in some late writings, is according to Reitzenstein an Iranian goddess in Greek disguise.

E. Rohde, *Psyche* (1907); O. Waser in Roscher, *Lex.*, s.v. O. Weinreich in L. Friedländer, *Sittengeschichte* iv. 89; Apuleius, *The Story of Cupid and Psyche*, ed. L. C. Purser (1910); R. Reitzenstein, *Sitz. Heidelberg* 1914 and 1917. G. M. A. H.

PTAH, called *Ḫḫā* or *Ḫḫās* and also Hephaestus by the Greeks, was an old deity of Memphis. Originally a god of artisans, a fashioner and maker of things, he acquired later a solar character and became one of the chief deities of Egypt. The temple of Ptah was one of the chief buildings in the complex of structures at Memphis which included the temple of Apis and others. T. A. B.

PTOLEMAEUS (1) of Ascalon, of uncertain date, is said by Steph. Byz. to have been a pupil of Aristarchus, and in Suidas to have been father (or teacher) of Archibius (a grammarian at Rome under Trajan). P. joined the Pergamenes and disputed the Aristarchan texts of Homer. He also wrote *Περὶ διαφορᾶς λέξεως*, *Περὶ ὀρθογραφίας*, and *Περὶ μέτρων*. P. B. R. F.

PTOLEMAEUS (2) CHENNOS ('quail') of Alexandria (fl. c. A.D. 100) wrote the *Sphinx*, a mythologico-grammatical work, perhaps in dramatic form (*ιστορικὸν δράμα*, Suid.), though this is disputed; *Ἀνθόμυθος*, in twenty-four rhapsodies, correcting Homer's errors; *Παράδοχος* (or *Καὴν*) *ιστορία*, of which Photius gives an extract.

A. Chatzis, *Der Philosoph und Grammatiker Ptolemaios Chennos* (1914). J. D. D.

PTOLEMAEUS (3) ὁ ἐπιθέτης, grammarian, pupil of Hellanicus the Chorizontist, and a pertinacious opponent of Aristarchus, wrote commentaries on Homer and Bacchylides and kindred monographs.

PTOLEMAEUS (4) of Mendes, a priest, wrote on the *πράξεις* of the Egyptian kings in three books; he is scarcely the Ptolemaeus who published a life or history of Herod the Great, soon after 4 B.C.

FHG iv. 485; *FGrH* ii, BD, 625.

PTOLEMAEUS (5) of Naucratis (2nd c. A.D.), Egyptian rhetor, uninfluenced by the Second Sophistic, except in style, where he follows Polemon.

PTOLEMAEUS (6) PINDARION (i.e. commentator on Pindar) (2nd c. B.C.), a pupil of Aristarchus, wrote also on Homeric antiquities and on analogy. See CRATES (3) OF MALLOS.

PTOLEMAIA, see RULER-CULT.

PTOLEMAIS (1) (ACE). The Phoenician port of Ace was named Ptolemais c. 261 B.C. by Ptolemy II. From Antiochus IV's reign its people, renamed the 'Antiochis in Ptolemais', issued municipal coins, sometimes inscribed 'Ace' in Phoenician. Claudius made Ptolemais a Roman colony, planting in it veterans from the four Syrian legions. A. H. M. J.

PTOLEMAIS (2) HERMIU, a foundation of Ptolemy Soter, with a substantial Greek population and a Greek constitution, was the centre of Hellenism in Upper Egypt throughout the Graeco-Roman period; Strabo classed it with Memphis in importance, and later it ranked second to Alexandria. Hardly any remains of buildings are visible, but inscriptions have been found recording decrees of the Ptolemaic senate, and references in papyri from other districts show the continued influence of its citizens in Roman times.

G. Plaumann, *Ptolemais in Oberägypten* (1910)

J. G. M.

PTOLEMAIS (3) THERON ('of the Hunts'), on the west coast of the Red Sea, probably at Aquiq (Crowfoot, *Geog. Journ.* xxxvii. 523). Founded by Ptolemy II for elephant-hunts, it was used as a port for a trade-route to Meoec and the Nile.

Agatharchides (*GGM* i. 174); Strabo 17. 768-71. E. H. W.

PTOLEMY (1). The name of all the Macedonian kings of Egypt.

PTOLEMY I SOTER (c. 367/6-283 or 282 B.C.), son of the Macedonian Lagus and a certain Arsinoe, who was, perhaps, a mistress and not, as was later believed, a second cousin of Philip II. He was exiled as Alexander's friend, recalled after Philip's death, and appointed *hetairos*, *somatophylax*, and *edektros* ('Companion', 'Life-guard', and 'Seneschal') to Alexander. He fought with distinction during Alexander's campaigns, which he subsequently described in an historical work. He married Artacama, Artabazus' daughter, in 324, divorced her after Alexander's death, and subsequently married Eurydice and (with or without divorce) Berenice I (q.v.). He became satrap of Egypt in late summer 323, executed Cleomenes (q.v. 3), and fought without much success against Antigonus Monophthalmus and Demetrius Poliorcetes (315-301). He declared himself king early in 304, finally conquered Palestine, Cyprus, and many possessions in the Aegean Sea and Asia Minor (c. 301-286), but took little active part in government after 285.

He was the originator of the cults of Sarapis and of Alexander in Egypt, and the founder of Ptolemais in Upper Egypt. The legal and military organization of his Empire—the army consisting of military settlers, mercenaries, and native levies—and the main outlines of Ptolemaic administration were due to him (cf. *ALEXANDRIA, EGYPT UNDER THE GREEKS AND ROMANS, EPIMELETES, EPISTATES, NOMOS*). Registers of land, houses, slaves, cattle, and tax-payers were compiled in the villages, and summaries of these were made for nome registers and the central register in Alexandria, which was used for preparing the State budget. The highest State office was that of the *dioecetes* (= manager) whose *oeconomi* administered the Empire like a royal estate. F. M. H.

Ptolemy I wrote, when king, the best of the histories of Alexander. He used Alexander's official *Journal* and other official material, but much was his own recollection; he was in a better position to know than almost anyone. So far as can be made out his book was a genuine history and not merely a military record; Alexander was a supreme figure, but yet a human man. Probably it was defective on the political side; when he wrote he had long lost sympathy with some of Alexander's ideas. He probably desired to correct current popular history and beliefs, and his silences were part of his criticism; but bad history ousted good, and, but for Arrian, practically all knowledge of his work would have perished. See *ALEXANDER (3)*, Bibliography, Ancient Sources. W. W. T.

PTOLEMY II PHILADELPHUS (308-246 B.C.), son of Ptolemy I and Berenice I, was born at Cos, and married Arsinoë I c. 289-288. He was elected joint ruler with his father in 285, succeeded to the throne in 283-282 and married Arsinoë II c. 276-275, uniting her Aegean possessions with the Empire. He conquered important districts in Syria and Asia Minor during the First Syrian War (c. 276-271). In the Chremonidean War against Macedonia (266-261) he incurred slight losses; the Second Syrian War (c. 260-253) was indecisive, and was concluded by a marriage between Antiochus II and Berenice Syra (q.v.). East African and south Arabian coastal districts received garrisons as outposts for trade.

Ptolemy II and his advisers created most of the scientific system of Ptolemaic financial administration (cf. *AGRICULTURE, BANKS, COMMERCE, FINANCE, INDUSTRY, MONOPOLIES, PASTURAGE, VITICULTURE*), planted Greek settlements in Egypt, especially round L. Moeris (q.v.),

and instituted the Ptolemaic ruler-cult with its priests of Alexander and a growing number of deified members of the dynasty. He built the Pharos, the Museum, the Library, and other edifices and institutions of Alexandria as well as a canal from the Nile to the Red Sea.

PTOLEMY III Euergetes, son of Ptolemy II and Arsinoë I, was born between 288 and 280 and died in 221 B.C. After his (presumable) adoption by Arsinoë II and his succession to the throne in 246 he married Berenice II (q.v.) and united Cyrene with Egypt. In the Third Syrian War (246-241) he acquired important towns in Syria and Asia Minor. Ptolemaic expansion ceased after this, perhaps owing to difficulties in Egypt.

PTOLEMY IV PHILOPATOR (c. 244-205 B.C.), son of Ptolemy III and Berenice II, married Arsinoë III (q.v.) in 217. The main events of his reign were: his succession to the throne (221); the poisoning of his consort Arsinoë III (q.v.); invasions of Palestine by Antiochus III (221 and 219-217). He gained a decisive victory over Antiochus (q.v. 3) at Raphia (217), but only with the help of the native Egyptians, who for decades revolted afterwards. Almost the whole Thebaid was ruled in consequence by the Nubian kings Harmachis and Anchemachis (208/7-187/6).

PTOLEMY V EPIPHANES (210-180 B.C.), son of Ptolemy IV and Arsinoë III. He was joint ruler with his father from 210; he succeeded to the throne in 205, the death of Ptolemy IV being kept a secret for a considerable time. The official succession (of uncertain date) was followed by revolts throughout two decades, and, from 203 onwards, by plans of the Seleucid and Macedonian kings to partition the outlying Egyptian territories, the consequence of which was the loss of most possessions in the Aegean, Asia Minor, and Palestine, where his troops suffered a final defeat at Panion in 200. The king was declared of full age in 197 and married the Seleucid princess Cleopatra I (q.v.) in 193. His *epistrategus* Hippalus reconquered the Thebaid in 187-186, and the last native revolt of this period in the Delta was quelled in 184/3.

PTOLEMY VI PHILOMETOR, son of Ptolemy V and Cleopatra I, was born in 186 or (perhaps) 184/3 and died in 145 B.C. He succeeded to the throne in 180 in joint rule with his mother, who died in 176; he formally married Cleopatra II in 175/4. In consequence of three invasions from Antiochus IV (170, 169, and 168), he established a joint rule with Ptolemy VIII and Cleopatra II from 170 to 164. He defeated native revolts, but fled from Ptolemy VIII, to return as sole ruler in 164/3. His struggle with this brother continued for a decade. After a successful campaign beginning in 150 he was elected Seleucid king in joint rule with Demetrius II, but was killed in a victorious battle against Alexander Balas.

PTOLEMY VII NEOS PHILOPATOR, son of Ptolemy VI and Cleopatra II, was born c. 162-161, became joint ruler with his father in 145, sole ruler from his father's death until Ptolemy VIII's return to Egypt, and was killed by his uncle's orders in August 144.

PTOLEMY VIII Euergetes (c. 182/1-116 B.C.), brother of Ptolemy VI. He was joint ruler with Ptolemy VI and Cleopatra II in 170-164; sole ruler in 164-163; king of Cyrene in 163-145; returning to Egypt in 145. He married Cleopatra II in 144, and took Cleopatra III to wife in 142 without being able to divorce Cleopatra II, who led a successful revolt against him in 132. He reconquered Alexandria in 127, and an amnesty and a peaceful reign with the two queens followed from 124. The king's final testament gave all power to Cleopatra III. An earlier testament during his rule in Cyrene bequeathed his possessions to Rome.

PTOLEMY IX SOTER II (LATYRUS) (c. 141-81 B.C.), eldest son of Ptolemy VIII and Cleopatra III. He was

priest of Alexander from 135/4; subsequently became governor of Cyprus and married Cleopatra IV, his sister, during Ptolemy VIII's last years. Elected joint ruler with Cleopatra III against her wishes in 116, he divorced Cleopatra IV and married Cleopatra Selene, another sister. He had to accept his brother Ptolemy X as joint ruler in 110. He reconquered the kingdom, but another revolt of his brother compelled him to flee to Cyprus in 108/7, and from there to Seleucid Syria. Cleopatra Selene divorced him; but he reconquered Cyprus very soon, was victorious in Syria against the Jewish State allied with his mother, and reconquered Egypt in 89-88. Cleopatra Berenice, his daughter, returned from exile as joint ruler in 88, after Ptolemy X's death, and remained sole ruler from Ptolemy IX's death to 80. The Thebaid revolted against the new rule from 88 to 86.

PTOLEMY X ALEXANDER I (c. 140-88 B.C.), younger brother of Ptolemy IX, was governor of Cyprus from 116; was recalled to Egypt by his mother in 110, but resigned after a short joint rule with the title 'king' of Cyprus. Another joint rule in 108 prepared the way for his final third joint rule with Cleopatra III under pressure from the insurgent Alexandrians. After Cleopatra III's (possibly natural) death, the king married Cleopatra Berenice, daughter of Ptolemy IX, a few days later. Expelled from Egypt by a military revolt, he made successive attempts to recover his kingdom by land from Syria and by sea from Asia Minor, and died in a naval battle (89-88).

PTOLEMY XI ALEXANDER II (c. 100/99-80 B.C.), son of Ptolemy X and his unknown first wife. Sulla made him joint ruler with and husband of his step-mother Cleopatra Berenice. He murdered her nineteen days after the wedding, and was killed by the Alexandrians, in spite of his being the last legitimate male descendant of the dynasty. His (doubtfully genuine) testament gave Egypt to Rome.

PTOLEMY XII THEOS PHILOPATOR PHILADELPHUS NEOS DIONYSUS (AULETES), son of Ptolemy IX and a mistress, was born between 116 and 108 and died in 51 B.C. He succeeded to the throne in 80, and married Cleopatra V Tryphaena, his sister, in 80/79. He fled to Rome from the insurgent Alexandrians in 58, but was restored by Gabinius in 55.

PTOLEMY XIII, brother of Cleopatra VII (q.v.), was born in 63 and died in 47 B.C. In 51 he married his sister, who became joint ruler with him but was presently expelled by him. After the murder of Pompey by his ministers (48) he was forced by Caesar to share the throne again with Cleopatra. He subsequently made open war against Caesar, was defeated and drowned in the Nile.

PTOLEMY XIV (c. 59-44 B.C.), another brother of Cleopatra VII. Caesar made him king of Cyprus in 48, and joint ruler and husband of Cleopatra in 47. He was murdered by her orders.

PTOLEMY XV CAESARION, ostensible son of Caesar and Cleopatra VII, was born in 47 B.C., was made joint ruler with his mother in 43 or by Antonius in 34, and was killed by Octavian's orders in 30 B.C.

See APOLLONIUS 3, ARSINOË, BERENICE, CLEOMENES, CLEOPATRA.

Wilcken, *PIV*, s.v. 'Arsinoë', 'Berenike'; Stähelin, *ibid.*, s.v. 'Kleopatra'. E. Bevan, *A History of Egypt under the Ptolemaic Dynasty* (1927). A. Otto, *Abhandlungen der bayerischen Akademie*, Phil.-Hist. Klasse, 1928 no. 1, 1934 no. 11, 1938 no. 17, 1939 pt. 3; W. Peremans and J. Vergette, *Papyrologisch Handboek* (1942); Rostovtzeff, *Hellenistic World*. Numerous articles in *JHS*, *JEGArch.*, *Arch. Pap.*, and other periodicals. The administration of Ptolemaic Egypt is illustrated by inscriptions and numerous papyri (Greek and Demotic). A recent survey in Cl. Préaux, *L'Economie royale des Lagides* (1933), with complete bibliography and an index of important passages. F. M. H.

PTOLEMY (2) of Cyrene revived the sceptical school of philosophy about 100 B.C. (Diog. Laert. 9. 115).

See Zeller, *Phil. d. Griechen* iii. 24. 2.

PTOLEMY (3) (CLAUDIUS PTOLEMAEUS) of Alexandria, born at Ptolemais ἡ Ἐρμείου, made observations between A.D. 121 and 151. His great work, originally called *Μαθηματικὴ σύνταξις*, became known as *Μεγάλη σύνταξις*, *Great Collection*, in contradistinction to the *Μικρὸς ἀστρονομούμενος (τόπος)*, the 'Little Astronomy', comprising smaller introductory works; the Arabs turned *μεγίστη* into *al-Majisti*, whence *Almagest*. It is the definitive account of the Greek achievement in astronomy according to Hipparchus, with some additions of Ptolemy's own. Trigonometry is the method used; it is first applied in Book 1 to the calculation, by means of 'Menelaus' Theorem' and trigonometrical formulae based thereon, of a Table of Chords of arcs subtending angles from $\frac{1}{2}^\circ$ by steps of $\frac{1}{2}^\circ$ to 180° , equivalent to a Table of Sines of half the angles respectively. There follow formulae in the solution of spherical triangles for the purpose of relating arcs of the equator, ecliptic, horizon, and meridian, and so on. Book 3 is mainly on the length of the year and the motion of the sun on the eccentric and epicycle hypotheses; bks. 4, 5 on the lunar month, lunar theory, sizes and distances of sun, moon, and earth; bk. 6 on conjunctions and oppositions of sun and moon, solar and lunar eclipses; 7, 8 on the fixed stars and the precession of the equinoxes; 9-13 on the movements of the planets.

2. Other works extant in whole or in part are: (1) *The Analemma*, on orthogonal projection, in a Latin translation from the Arabic by William of Moerbeke, plus a few Greek fragments.

(2) *The Planisphere*, on stereographic projection, Latin translation from the Arabic.

(3) *Φάσεις ἀπλανῶν ἀστέρων*, on the fixed stars, Book 2 only.

(4) *Υποθέσεις τῶν πλανωμένων*, first book in Greek, second in Arabic.

(5) Inscription in Canopus.

(6) *Προχείρων κανόνων διάταξις καὶ ψηφοφορία*. (All these are included in Heiberg's edition, Teubner, 1898-1907.)

(7) *Optics*, five books (bk. 1 and end of 5 missing), translated from the Arabic by Admiral Eugenius Siculus in 12th c. (see Govi, *L'Optica di Claudio Tolomeo*, 1884), remarkable as containing (bk. 5) the first attempt at a theory of refraction, details of experiments, etc.

(8) *Geography* (*Γεωγραφικὴ ὑφήγησις*), see below.

3. Other works attributed to Ptolemy are: *Περὶ ῥοπῶν*, on balancings or turnings of the scale; *Περὶ διαστάσεως*, on dimensions; three books of *Mechanics*. For Ptolemy's attempt to prove Euclid's Parallel Postulate, see Proclus on Eucl. I.

4. Ptolemy's *Geography* (*Γεωγραφικὴ Ὑφήγησις*) was a treatise in eight books, with an atlas of maps. Its object was 'to reform the map of the world' by bringing up to date the map of a previous geographer, Marinus of Tyre (c. A.D. 120?). Ptolemy's map extended from c. 20° S. to 65° N., and from a basic meridian through the Canary Islands to 180° E.; drawn from the standpoint of an astronomer, it was intersected by curved lines of latitude and longitude, to which all his data were (theoretically) referred.

5. Ptolemy's scientific ideal outstripped his practical application. Adopting Posidonius' estimate of 180,000 stades for the earth's circumference, in preference to Eratosthenes' more correct calculation of 250,000 stades, he systematically underrated the distance between any two positions of longitude, and the errors due to this false graduation accumulated in the outer or eastern portion of his map. Moreover, with rare exceptions, his positions were not really determined by astronomic

observation, but by dead reckoning from (often inexact) reports of travellers. Though Ptolemy recognized the danger of this method of computation, he tabulated all his data in exact terms of latitude and longitude, thus giving a delusive appearance of scientific certainty to his deductions. Furthermore, he rejected the theory of a circumfluent ocean round the three continents, and while he left blank the map of the unknown world to west, north, and east, he assumed the existence of a large sub-equatorial continent.

6. The most conspicuous errors in Ptolemy's map were the extension of the Eurasian land-mass over 180° of longitude (instead of 130°), and the invention of a Terra Australis connecting the east coast of Africa with China and converting the Indian Ocean into a huge lake. Of its innumerable errors and deficiencies of detail the following are most notable. (1) *Europe*. The Atlantic coast of the continent has an almost unbroken north-east trend. Scotland lies on its back in a west-east direction (probably the result of a wrong join of two sectional maps). Scandinavia is a small island. Germany, Poland, and Central and Northern Russia are largely left blank. The Sea of Azov is greatly magnified. (2) *Asia*. The Caspian Sea is correctly conceived as a lake, but is greatly elongated from west to east, and the Persian Gulf is similarly distorted. India is a rectangle with its main axis running from west to east, and Ceylon is magnified fourteen times. The Malay peninsula is determined with fair accuracy, but the Chinese coast curves away to east and south so as to meet Terra Australis. (3) *Africa*. The Mediterranean coast runs almost continuously from west to east. Two unidentifiable rivers, Gir and Nigir, cross north Africa in the same direction. The White Nile is correctly derived from two Central African lakes, but the mountains on either side are connected into a continuous west-east chain ('Mountains of the Moon').

7. But despite its faults, the treatise of Ptolemy was on the whole the most accurate of ancient geographical works, and it was the most comprehensive. It therefore remained standard until modern times.

Texts: C. Nobbe (1843); Ch. Müller and C. T. Fischer (bks. 1-3) (1883-1901). Commentary: E. H. Bunbury, *History of Ancient Geography* (1879), ii. 519 ff. Text, maps, and commentary: P. J. Fischer, *Cl. Ptolemæi Geographiæ codex Urbinae Græcus* 82 (3 vols., 1932). E. H. W.

PUBLICANI were principally collectors of taxes, but this was only one of the functions performed by them for the Roman government. At least as early as the Second Punic War there existed a class of man (*ordo publicanorum*, Livy 25. 3) accustomed to undertake contracts for the State such as the erection of buildings, the provision of food for the armies, or the working of mines. In 167 B.C. the government decided to close the mines of Macedonia in order to avoid the necessity of employing *publicani* to exploit them (Livy 45. 18). The influence of the *publicani* was increased by the privileges conferred by C. Gracchus on the equestrian order, with which they were closely associated, and they acquired a great source of wealth in the collection of the *decumæ* of the new province of Asia. In disputes with provincial governors the *publicani* could count on the support of the equestrian order in Rome. In the later Republic they were organized in *societates*, presided over by a *magister* with whom *socii* were associated. The *societates* were represented in the provinces by a *pro magistro* (Cic. *Verr.* 2. 169) with a staff of assistants. There is some evidence for the existence of a class of shareholders (*participes*) with a financial interest in the company: Polybius (6. 17) emphasizes that many people were affected by the terms on which contracts were let. The *publicani* were most prominent in the provinces which paid *decumæ* (q.v.), but Cicero (*Verr.* 3. 27) enumerates a large number of provinces in which they were active, and it is probable

that their services were employed not only in the collection of indirect taxes but in connexion with the *stipendium* (q.v.). (For *pactiones* between the *publicani* and cities see Cic. *Att.* 5. 13. 1; *Prov. Cons.* 5. 10.)

In the early Principate *publicani* were still used for the collection of *vectigalia* (q.v.). In Nero's reign such complaints arose about their misbehaviour in the collection of *portoria* that measures were taken to control them (Tac. *Ann.* 13. 50-1). Their activities were from an early date supervised by imperial *procuratores*. The companies employed a large number of slaves and freedmen (ILS 1851-76). As late as the time of Trajan the word *publicanus* designated tax-collector (Tac. *German.* 29). In the course of the second century the *societates* disappear and are replaced by individual *conductores* (q.v.).

M. Rostovtzeff, 'Gesch. der Staatspacht' (*Philol. Suppl.* ix, p. 329 ff.); O. Hirschfeld, 'Verwaltungsbeamten' (1905), 81 ff.; G. H. Stevenson in *Comp. Lat. Stud.* 342 ff. G. H. S.

PUBLILIUS (1) **VOLERO**, tribune of the plebs in 471 B.C., is traditionally credited with a law that transferred the election of plebeian magistrates from the assembly of the *curiae* to the tribal assembly, i.e. officially recognized the tribunes. As such a concession by the patricians is unlikely at so early a date, the *rogatio Publilia* must be considered as an anticipation of the *Lex Publilia* (339 B.C.; see **PUBLILIUS** 2).

G. W. Botsford, *The Roman Assemblies* (1909), 270 ff., 300 f. P. T.

PUBLILIUS (2) **PHILO**, **QUINTUS**, the first plebeian dictator (339 B.C.), is credited with three laws which were a landmark in the struggle for social equality: (1) censorship should be opened to plebeians; (2) *plebiscita* should be binding on the whole community (an anticipation of the *Lex Hortensia*); (3) the *auctoritas patrum* should be reduced to the formal ratifying of proposals, before they went forward to the centuriate assembly. Publilius was the first plebeian praetor (337), and, as censor (332), helped towards creating the new tribes Mæcia and Scaptia. As consul he besieged Naples (327) and was appointed pro-consul for 326 (the first known example of *prorogatio imperii*). The tradition which records his triumphs (over the Latins in 339, and over the Samnites and Palaeopolitae in 326) is not altogether trustworthy. He played a leading part in the recovery of Rome after the Caudine catastrophe, but details of his later career (e.g. his alleged implication in the rebellion of Capua in 314) are uncertain.

CALII vii. 482 f., 530 f., 595 ff.; G. W. Botsford, *The Roman Assemblies* (1909), 299 ff. P. T.

PUBLILIUS (3) **SYRUS** (not Publius, Woelflin, *Philol.* xxii (1865), 439) came to Rome as a slave in the first century B.C., presumably from Antioch (Plin. *H.N.* 35. 199). Intellectual ability, psychological discernment, and wit ensured him manumission. He devoted his gifts to the latinized form of the mime, where his one rival was the veteran knight Laberius (q.v.), whom he surpassed in the competition between them ordered by Julius Caesar. Only two of his titles, both doubtful, are recorded: *Putatores* (? *Potatores*) and *Murmido* (Nonius, 2. 133; Priscian, *Inst.* K. 2. 532. 25). His clever improvisations suffered through being entrusted to the frail security of actors' copies, but some retained a scenic vogue at least until Nero's time. The elder Seneca commended his power of expressing some thoughts better than any other dramatist; Petronius seems to cite from him a passage of 16 lines; and Gellius quotes for their neatness 14 maxims (Sen. *Contr.* 7. 3. 8; Petron. 55; Gell. 17. 14).

In the first century A.D. it was realized that, whatever the harm wrought by the immorality of mimes, the apophthegms uttered by various dramatic personages might well be selected and alphabetically arranged to inculcate on schoolboys a proverbial wisdom founded on

human experience. So it came about later that Jerome learned in class the line which he quotes twice, 'aegre reprehendas quod sinas consuescere' (Hieron. *Epist.* 107. 8; 128. 4). The great textual difficulty is to disengage truly Publilian *sententiae* from accretions due to paraphrases of genuine verses, or insertions of Senecan and pseudo-Senecan ideas, or such distortions of the original iambic senarii and trochaic septenarii as induced copyists to mistake them for prose.

There could be no unified ethical standard among maxims spoken by different characters in different scenes. Some are platitudes; some contradict others, as proverbs often do. Many advocate self-regarding behaviour; yet the prevailing terseness of expression is an undeniable attraction.

Text: J. K. Orelli, *Publii [sic] Syri Mimi et aliorum Sententiae* (1822; 791 iambs and 83 trochaics, with Scaliger's Greek verse translations. Editions: W. Meyer, *Publii [sic] Syri Sententiae* (1880; 733 lines). R. A. H. Bickford-Smith, *Pub. Syr. Sent.* (1895; 722 lines). Translation: J. Wight Duff and A. M. Duff in *Minor Latin Poets* (Loeb 1934, revised 1935; 734 lines). J. W. D.

PUDICITIA, personification of the chastity or modesty of women. According to Livy (10. 23), she was originally worshipped as Pudicitia Patricia in a small shrine in the Forum Boarium, but in 296 B.C. a rival cult of Pudicitia Plebeia was founded in the Vicus Longus. At first limited to women who had married but once, the cult degenerated and was forgotten.

For criticism see Wissowa, *Gesammelte Abhandlungen*, 254 ff.; Platner-Ashby, 433 ff., where more references are given; for other cults, see Wissowa, *RK* 334. H. J. R.

PUGILLARES, see BOOKS, II. 3.

PULCHER, see CLAUDIUS, CLODIUS.

PULVINAR, (1) a couch, such as was used for the images or symbols of gods at a *lectisternium* (q.v.; Horace, *Carm.* 1. 37. 3 and often). This seems to be a purely Greek rite, adopted in Rome. (2) A platform on which such objects were placed, either to be adored at a *supplicatio* (q.v.), or for other ritual purposes, see [Acro] on Horace, loc. cit. and literature under SUPPLICATIONES.

H. J. R.

PUNIC WARS: three wars in which Rome gradually superseded Carthage as the dominant power in the western Mediterranean. The early relations of Rome and Carthage had been friendly. The interests of Rome, which were primarily agricultural and confined to Italy, did not clash with those of the Carthaginians, who gained a commercial monopoly in the Western Mediterranean. Treaties were negotiated (probably in 509 and 348 B.C.), confirming this Punic monopoly and guaranteeing Italian coast-towns against Carthaginian attack, while the hostility of Pyrrhus to both Rome and Carthage resulted in a supplementary agreement between the two powers (279). But in 264 when the Carthaginians occupied Messina in north-east Sicily a dangerous situation was created, since Rome was now the ally of the Greek cities in south Italy, who saw a threat to their trade or security if Carthage dominated Sicily and the Straits of Messina. When therefore the Mamertines (q.v.) in Messina appealed to Rome for help, the Senate hesitated, foreseeing the possibility of war with Carthage, but the People decided to accept the Mamertine alliance whatever the consequences. When Appius Claudius (q.v. 5) Caudex crossed to Sicily war was declared. In fact both Rome and Carthage had rushed in to secure a key position, but with different motives: defensive imperialism dominated Roman policy; an exploiting commercial imperialism actuated Carthage. Neither side used the Messina affair as an excuse for a predetermined war, but being different in race, culture, and religion, with divergent moral and material interests,

Rome and Carthage would gravitate more quickly towards conflict when the minor States between them had been eliminated or assimilated. In the Hellenistic East a common culture held the three great monarchies in a precarious balance of power, which Rome later tried to maintain when she had absorbed something of that culture. In the West dissimilarity made compromise more difficult.

2. THE FIRST PUNIC WAR (264-241) opened with a successful Roman offensive conducted by Appius Claudius Caudex and M. Valerius (q.v. 4) Messalla against the Carthaginians and Hieron in north-east Sicily; this resulted in Hieron entering into alliance with Rome (263). In 262 the Romans won Segesta and, after a siege, Agrigentum, but since Carthage continued fighting they realized that peace could be secured only by driving the Carthaginians completely out of Sicily: this involved challenging their naval supremacy. By a magnificent achievement the Romans built some 160 vessels equipped with grapnels (*corvi*) which helped to thwart their enemy's superior naval skill. The new fleet commanded by Duilius (q.v.) defeated the Carthaginians off Mylae (260). When no decisive result was reached in Sicily, the Romans sent an expeditionary force under Regulus (q.v. 1) to Africa; after the way had been opened by a great naval victory off Ecnomus, it landed in Africa (256), but was defeated in 255. A relieving fleet defeated the Punic navy off the Hermacan Promontory, evacuated the survivors of Regulus' army, but was wrecked by a storm off Pachynus on the way home. In Sicily the Romans captured Panormus (254), thus confining the Carthaginians to the western end of the island, but a newly raised fleet was wrecked off Cape Palinurus (253). Both sides were exhausted. After L. Metellus (q.v. 1) had repulsed a Punic attack on Panormus (250), the Romans blockaded Lilybaeum and Drepana. A naval attack by P. Claudius (q.v.) Pulcher on Drepana failed, while the rest of the fleet was wrecked off south Sicily (249); the Romans, however, seized Mt. Eryx (q.v.), thus cutting off the land-communications of Drepana. Despite the fresh efforts in Sicily of Hamilcar (q.v.) Barca, 247-241, the Romans at length raised a new fleet under C. Lutatius Catulus (q.v.), who defeated the Carthaginians off Aegates Insulae and negotiated peace-terms, which ultimately included the evacuation of Sicily and an indemnity of 3,200 talents to be paid in ten years.

3. Carthage immediately had to face a serious revolt of her mercenaries (the 'Truceless War'). Scarcely had she crushed this, when the Romans occupied Sardinia in answer to an appeal from some mercenaries there (238). To Carthaginian protests Rome replied by refusing arbitration and declaring war: Carthage had to submit, surrender Sardinia and Corsica, and pay an additional 1,200 talents. The desire to deprive Carthage of an island base against Italy may partly explain this wanton aggression, which embittered relations which were just becoming more friendly. Primarily as compensation for the loss of Sicily and Sardinia the imperialist party at Carthage turned to Spain, which would also furnish abundant natural wealth and man-power in the event of future hostilities with Rome. The conquest of Spain was achieved from 237 to 219 by Hamilcar, Hasdrubal, and Hannibal (qq.v.). By attacking Rome's ally, Saguntum, Hannibal deliberately precipitated the Second Punic War. The question of war-guilt is complicated. Possibly it was not a long-premeditated war of revenge championed by the family of Barca, but when the Romans interfered south of the Ebro (the Punic sphere of influence *de facto* and possibly *de jure*), Hannibal refused to contemplate a recurrence of bullying such as Carthage had suffered in 238: he struck before Rome was ready.

4. THE SECOND PUNIC WAR (218-201). The Romans prepared to send one army to Africa, a second to Spain, but were foiled by Hannibal's bold invasion of north

Italy (see HANNIBAL and SCIPIO 3). They wisely, however, sent an army to Spain where P. and Cn. Scipio (q.v. 4 and 3) prevented reinforcements reaching Hannibal, won a sea-battle which gave Rome naval supremacy, and took the offensive until their deaths (211); their successor Claudius Nero (q.v. 2) still held the line of the Ebro. Meantime Hannibal had defeated Roman armies at Trebia (218), Trasimene (217), and Cannae (216), but as Rome refused to admit defeat and retained the loyalty of central and northern Italy he attempted to encircle her with a ring of enemies. But this wider strategy ultimately failed: in the west his brother Hasdrubal's offensive in Spain was repulsed (215), while a Carthaginian landing in Sardinia proved abortive (215); in the north the hostile Gauls failed to take decisive action; in the east an alliance was made with Philip V of Macedon, who, however, unaided by the Punic fleet, gradually lost interest in the First Macedonian War (214-205) and negotiated the Peace of Phoenice with Rome (see VALERIUS 5 and GALBA 2); in the south Greek cities were encouraged to revolt, but their leader Syracuse was reduced to submission by 211 by Marcellus (q.v. 1). Meantime in Italy Hannibal's strength was being worn down by Fabius, Sempronius Gracchus, Marcellus, and Fulvius (qq.v.) Flaccus, who avoided further pitched battles and recovered Capua (which had revolted after Cannae) in 211 and Tarentum in 209. Hasdrubal, who at length broke through to Italy from Spain, was defeated at the Metaurus by Claudius Nero and Livius Salinator (q.v.) in 207, and thereby Hannibal's last hope of receiving reinforcements died, despite the attempt of Mago (q.v.). Scipio (q.v.) Africanus victoriously drove the Carthaginians from Spain by his final victory at Ilipa (206) and led an expeditionary force to Africa where his successive victories forced the recall of Hannibal from Italy. Thanks to his tactical reforms and the help of Masinissa (q.v.), Scipio defeated Hannibal at the battle of Zama (q.v., 202). In 201 peace was signed: Carthage surrendered her navy and Spain, retained her autonomy and her territory within the Phoenician Trenches (i.e. roughly modern Tunisia), became a dependent ally of Rome, and paid an indemnity of 10,000 talents in fifty annual instalments. But the Romans evacuated Africa. Factors which gave Rome the victory included her superiority by sea and in man-power, the loyalty of the Italian allies, the wisdom of the Senate and the doggedness of the People, the blocking of reinforcements to Hannibal, the defensive strategy of Fabius in Italy combined with the offensive strategy of Scipio, who forged a weapon which drove the Carthaginians from Spain and vanquished Hannibal himself. Against such factors Hannibal's untiring gallantry and genius were unavailing. The war was a turning-point in ancient history; it had profound effects on the political, economic, social, and religious life of Italy, while thereafter for centuries no power could endanger Rome's existence.

5. THE THIRD PUNIC WAR (149-146). Carthage, no longer a great Mediterranean power, made a remarkably quick economic recovery, thanks partly to Hannibal's financial reforms, but she was continually provoked by Masinissa, whose aggression the Romans did little to check until they feared that his African kingdom might soon embrace Carthage itself. Cato (q.v. 1), from motives of revenge and fear, urged the destruction of Carthage; Nasica (see SCIPIO 10) advocated a more lenient policy. There is little evidence to suggest that Roman policy was dictated by commercial jealousy. Intervention was legally justified when Carthage was goaded into attacking Masinissa, Rome's ally (150). Rome declared war on Carthage (149), and a Roman army under Manilius (q.v. 1) landed in Africa. Carthage surrendered, handed over hostages and arms, and then heard the Roman terms that the city itself must be destroyed. Unexpectedly she refused to comply, and with desperate heroism withstood

a Roman blockade until 146, when Scipio (q.v. 11) Aemilianus stormed and sacked the city. Carthage having been destroyed, her territory was made into the Roman province of Africa.

BIBLIOGRAPHY

ANCIENT SOURCES: For the First Punic War, Polybius, bk. 1 based mainly upon the pro-Roman Fabius Pictor and the pro-Carthaginian Philinus (see F. W. Walbank, *CQ* 1945). For the Second Punic War, Polybius, bk. 3 and fragmentary notices in 7-15. He drew upon both Roman material (public archives, family records, oral tradition from survivors, and writers as Fabius) and Punic material (the Greek writers Sosylus and Silenus who lived with Hannibal). Livy, bks. 21-30, provides a detailed narrative, based partly upon Polybius, partly upon less trustworthy Roman annalists. For the Third Punic War Polybius' account is fragmentary (bks. 36-9). Appian's account (*Libyca*, 67-135) is based upon Polybius, though contaminated with inferior annalistic material. Subsidiary authorities add little.

MODERN LITERATURE: General. Tenney Frank and B. L. Hallward in *CAH* vii, ch. 21, and viii, chs. 2-5, 15; H. H. Scullard, *A History of the Roman World* (1935); S. PUPIENUS, see BALBINUS.

PUPIUS, PUBLIUS, contemporary with Horace, who calls his tragedies 'laetissima poemata' (*Epist.* 1. 1. 67).

Cf. Bachr. *FPR* 348; Morel *FPL* 112.

PUPIUS, see PISO (4).

PURPLE. The purple dye, which the Romans valued so highly that it became for them the symbol of power and luxury, was obtained from several species of shellfish—*πορφύρα*, *κίχρυς*, *purpura*, *murex*, *buccinum*. The fish had to be opened as soon as it was caught, for the dye was contained in a vein which dried up after death. When these veins had been extracted they were steeped in salt water for five days and the liquid was then boiled in vats. It was found that the dye from the *purpura* was very dark, while that from the *murex* was brighter, so that a mixture was often made, one part of *purpura* to two of *murex*. In this the wool was left for five hours, then taken out and dried, and finally given a second dipping until all the dye was absorbed. This was the famous twice-dyed Tyrian purple; a pound of wool so dyed cost 1,000 *denarii* (£40). Purple robes often formed part of the insignia of kings, magistrates, and commanders in the field. At Rome magistrates, senators, and *Equites* wore garments with a purple border. See also DYEING.

Pliny, *HN* 9. 36-65. D'A. W. Thompson, *A Catalogue of Greek Fishes* (1947), s.v. *πορφύρα*. F. A. W.

PUTEOLI, nowadays Pozzuoli, a town near Naples (see PAUSILYRUS MONS). Samian colonists from Cumae founded Diacaearchia here (c. 521 B.C.). When Diacaearchia became Puteoli is unknown (Strabo 5. 245 f.). Presumably Puteoli became a Roman dependency at the same time as Capua in 338 (cf. Festus p. 262 L.). In the Hannibalic War it was an important military and trading-port (Livy 24. 7; 26. 17), and in 194 became a citizen colony which was subsequently recolonized several times (Dessau, *ILS* 5317; Plut. *Sulla*, 37; Tac. *Ann.* 14. 27; Pliny, *HN* 3. 61). As the harbour of Rome, Puteoli became a great commercial entrepôt, by 125 B.C. second only to Delos (Festus p. 109 L.). All Rome's eastern

imports and exports, including grain, passed through Puteoli (Strabo 3. 145; 17. 793; Pliny, *HN* 36. 70; Seneca, *Ep.* 77). Its trade guilds, fire-brigade, imperial post station, its special road (Via Domitiana) joining the Via Appia, its lighthouse, artificial harbour-works and surviving monuments (e.g. amphitheatre), attest a prosperity which survived the rivalry of Ostia. Devastations by Alaric (410), Genserik (455), and Totila (545) finally ruined Puteoli. In its heyday Puteoli was a fashionable villa resort, e.g. of Sulla, Cicero, Hadrian.

PYGMALION, (1) Legendary king of Tyre, brother of Elissa (Dido), whose husband, Acherbas or Sychaeus, he killed in the hope of obtaining his fortune. (See Verg. *Aen.* 1. 343–64, Justin. *Epit.* 18. 4, and *ibid.*) (2) Legendary king of Cyprus, who having fashioned an ivory statue of a woman fell in love with it. Aphrodite gave it life, and the woman bore P. a daughter, Paphos, the mother of Cinyras (Ovid, *Met.* 10. 243–97), though according to Apollod. *Bibl.* 3. 14. 3 Cinyras was P.'s son-in-law. Philostephanus (*FHG* iii. 31, fr. 13) calls the statue a figure of Aphrodite. P. was perhaps, like Cinyras (q.v.), a priest-king, associated with the cult of Aphrodite-Astarte (cf. J. G. Frazer, *Adonis Attis Osiris* i, ch. 3).

F. R. W.

PYGMIES, dwarfs of ridiculous appearance who live in Africa, or India, or Scythia. They are mentioned and discussed in Greek mythology in connexion with their fight against the cranes. Homer (*Il.* 3. 6) says that the cranes flee before the winter to the (Southern) stream of Oceanus and bring death to the Pygmies. Heceataeus of Miletus, who definitely located the P. in Southern Egypt, Ctesias, and the writers on India (e.g. Megasthenes) considerably elaborated the story. The P. disguise themselves as rams, or ride on rams and goats. They battle with the cranes to protect their fields, or even conduct operations to destroy the eggs of the cranes. Other mythographers invented explanations for the struggle, tracing the enmity back to a beautiful pygmy girl transformed into a crane (Boeas in Athen. 9. 393 e).

As Herodotus hinted (2. 32. 6) and Aristotle (*Hist. An.* 8. 12. 597 a) confirmed, the dwarfs of central Africa may have been the origin of the myth. Modern explorers report that the Alka dwarfs hunt cranes and that the birds vigorously resist. Around this core of fact, possibly conveyed to Greeks through Egyptian sources (R. Hennig, *Rh. Mus.* 1932), grew a solid shell of dwarf folklore (R. Dangel, *SMSR* 1931, 128) and novelistic invention. The geranomachy is often shown in Greek art, the François vase being the earliest instance. In Hellenistic art dwarfs or P. are often used for parodies of mythological and *genre* scenes, or shown in Nile landscapes (W. B. MacDaniel, *AJArch.* 1932, 260). G. M. A. H.

PYLAEMENES, in mythology, king of the Paphlagonian Eneti (*Iliad* 2. 851). He is distinguished chiefly for coming to life in *Il.* 13. 658, cf. 643, after being killed in 5. 576, a slip of Homer's from which most ridiculous consequences have been drawn by ancient and modern critics.

H. J. R.

PYLOS was the name of three places in western Peloponnese (Strabo 8. 339; cf. Ar. *Eq.* 1059). *Messenian Pylos* lay at the north end of Navarino Bay, on a rocky peninsula joined by a sandspit to the mainland, and separated by a narrow channel from the island of Sphaetria. Uninhabited in 425 B.C., the Athenians fortified it and held it with a Messenian garrison until 409 (Diod. 13. 64). Its subsequent history is obscure. It is surprising that this fertile district, with one of the best harbours of Greece, was not more important; its only great period was the Mycenaean. A palace of the

thirteenth century has recently been discovered on a hill four miles to the north, with more than six hundred clay tablets inscribed in characters descended from the latest Minoan script. This may well be called the palace of Neleus and Nestor. There are also beehive-tombs near.

Thuc. bk. 4. R. M. Burrows, *JHS* 1896, 55 ff.; 1898, 147 ff.

T. J. D.

PYLOS in Triphylia, a little south of Samikon, was taken by Strabo (followed by some moderns) for the Homeric town of that name. Rich beehive-tombs of the sixteenth century have been found in this district, near Kakovatos.

Strabo 8. 344 ff.; W. Dörpfeld and K. Müller, *Ath. Mitt.* 1908, 295 ff.; 1909, 269 ff.

T. J. D.

PYRAMUS and **THISBE**, hero and heroine of a love-story almost unknown except from Ovid, *Met.* 4. 55 ff., who says, 53, that it is not a common tale. They were next-door neighbours in Babylon, and, as their parents would not let them marry, they talked with each other through the party-wall of the houses, which was cracked. Finally they arranged to meet at Ninus' tomb. There Thisbe was frightened by a lion coming from its kill; she dropped her cloak as she ran and the lion mouthed it. Pyramus, finding the bloodstained cloak and supposing her dead, killed himself; she returned, found his body, and followed his example. Their blood stained a mulberry-tree, whose fruit has ever since been black when ripe, in sign of mourning for them.

H. J. R.

PYRENEES (Πυρρήνη, τὰ Πυρρηναία ὄρη; *Pyrenaean mons*), the range of mountains between Gaul and Spain. The name was derived from a city, or port of call, frequented by traders from Massilia. Herodotus (2. 33) places near it the source of the Ister (*Danube*). Avienus (559) knew both the town and the mountains, the former near Portus Veneris (*Vendres*). Silius Italicus (3. 441) and Diodorus (5. 35) present other more imaginative derivations. The error of Polybius (34. 7. 4), ascribing a north-south direction for the range, was corrected by Pliny (4. 110), but all classical estimates as to length were excessive. The chief highway (Via Augusta) crossed the mountains near their eastern limit. It was supplemented by a road from Jaca to Pau (*Itin. Ant.* 452. 6), and another from Pamplona to Dax (*ibid.* 453. 4). Timber, hams, and bacon appear to have been the important contributions of the Pyrenees to the economic life of the peninsula.

Classical references in *PW*, s.v. 'Hispania'. Excellent modern description in M. Sorre, *Les Pyrénées* (1922).

J. J. Van N.

PYRRHON (Πύρρων) of Elis (c. 360–c. 270 B.C.), son of Pleistarchus (Diocl. Magn. ap. Diog. Laert. 9. 61; Aristocl. ap. Euseb. 14. 18. 1; etc.), founder of Scepticism. The son of poor parents, he earned his livelihood by painting (Apollod. and Antig. Car. ap. D.L. 61 f.; etc.). He got his first philosophical lessons from the Megarian Bryson; later he joined the Democritean Anaxarchus, whom he accompanied on Alexander's expedition (Alex. Polyh. ap. D.L. 61; Suid. s.v. 'Pyrrhon' and 'Socrates'; etc.). In later years he lived a single and secluded life in modest circumstances at Elis, honoured and admired by his fellow citizens (Pausan. 6. 24. 5; D.L. 64). P. had several pupils, of whom Timon was the most important. He left no writings.

Pyrrhon aims at imperturbability of mind (Timon ap. Sext. Emp. *Math.* 5. 141, cf. *Pyr.* 1. 10). It is only possible to arrive at this end, he argues, if we understand the nature of things and our relation to them. Seeing that their nature makes it impossible for us to have any undeniable knowledge, P. drew the conclusion that we should not trouble about things we cannot really understand and refrain from idle talk and assertion (*ἀφαρία*, Timon ap. Aristocl. ap. Euseb. 14. 18. 3 f.). Between

'yes' and 'no' there will be no difference. This equilibrium of judgement will immediately create the desired equilibrium in our soul and free us from passion and anxiety.

Pyrrhon's aim in putting forward his theory was ethical. It was not before its connexion with the logical theory of Arcesilaus that Pyrrhonism began to exercise any considerable influence upon philosophical thought. See also SCEPTICS.

For bibliography see under SCEPTICS.

K. O. B.

PYRRHUS (319-272 B.C.), the most famous of the Molossian kings of Epirus. After reigning as a minor from 307 to 303 he was driven out and followed the fortunes of Demetrius the Besieger. By the influence of Ptolemy II, whose step-daughter Antigone he married, and of Agathoeles (q.v.), he became joint king with Neoptolemus (297). He removed Neoptolemus and attempted to set up a Hellenistic type of monarchy over Epirus and to emancipate Epirus from Macedonia. By intervening in a dynastic quarrel in Macedonia Pyrrhus obtained the frontier provinces of Parauaea and Tymphaea, together with Ambracia, Amphiloehia, and Acarnania. On the death of Antigone he acquired Coreya and Leucas as the dowry of his new wife, the daughter of Agathoeles, and made an alliance with the Illyrian chief Bardylis, whose daughter he also married. Before he could consolidate his kingdom he went to war with Demetrius, now king of Macedonia (291-286), obtaining half of Macedonia, Thessaly, and an alliance with Aetolia and Athens; but he was driven back by Lysimachus (283).

Pyrrhus next undertook to assist Tarentum against the Romans, and with a force of 25,000 men and twenty elephants he defeated the Romans at Heraelea (280). He marched close up to Rome, but failed to impose peace. In 279 he again defeated the Romans at Asculum, and then transferred his forces to Sicily, where he met the Carthaginians, at that time the allies of Rome. He almost expelled the Carthaginians from the island, but broke off the war and returned to Italy. After a drawn battle against the Romans at Beneventum (275), he retired to Epirus with one-third of his expeditionary force. In a new attempt to conquer Macedonia he penned up Antigonus Gonatas in Thessalonica but suddenly moved off to Peloponnesus, where he failed in a siege of Sparta and was killed in a street fight at Argos.

A brilliant tactician and adroit opportunist, Pyrrhus impressed his contemporaries but never won a lasting victory. His death left Epirus exhausted.

Plutarch, *Pyrrhus*; G. N. Cross, *Epirus* (1932). N. G. L. H.

PYRRHUS, see also NEOPTOLEMUS.

PYTHAGORAS (1), son of Mnesarehus of Samos, emigrated c. 531 B.C., perhaps to escape the tyranny of Polycrates, to Croton. He was a devotee of Apollo, and the Crotoniates identified him with Apollo Hyperboreus. He wrote nothing (though works were later fathered on him) and already in Aristotle's day his life was obscured by legend; but a rife of Xenophanes (fr. 7 Diels) establishes his belief in metempsychosis, and Heraclitus (frs. 40, 129), Empedocles (fr. 129), Ion of Chios (fr. 4), and Herodotus (4. 95) testify to his spiritual powers and learning. These and later statements indicate that he believed the soul to be a fallen divinity confined within the body as a tomb and condemned to a cycle of reincarnation as man, animal, or plant, from which, however, it may win release by cultivation of an Apolline purity. The spirit, he held, is purified by study; accordingly he taught a 'way of life' (Pl. *Resp.* 600 b), in which the investigation of nature (*ιστορίη*) became a religion. He is reliably said to have discovered the numerical ratios determining the principal intervals of the musical scale,

whence he was led to interpret the world as a whole through numbers, the systematic study of which he thus originated (Aristox. fr. 23 Wehrli; Eudem. fr. 84 Spengel). He is possibly the discoverer (though not in its Euclidean form) of 'Pythagoras' Theorem' (Eucl. 1. 47).

In Croton P. founded a religious society, under the government of which this city rose to supremacy among the Achaean towns in Italy. A conspiracy under Cylon led, however, to P.'s retirement to Metapontum, where he died; and at some date between 460 and 400 the order was almost wholly destroyed. Survivors settled in Thebes (Lysis, Philolaus) and Phleius, some afterwards returning to Tarentum, which became the chief seat of the school till its extinction in the late fourth century B.C. Membership of the order, open to women equally with men, entailed a strict discipline of purity, elements in which were silence, self-examination (*πῇ παρέβην, τί δ' ἔρεξα, τί μοι δέον οὐκ ἐτέλεσθῃ*; Diog. Laert. 8. 22), abstinence from flesh, and the observation of precepts originally taboos but later interpreted symbolically (*ἀκουσµατα, σύµβολα*). Fourth-century writers distinguish divergent religious and scientific groups, *ἀκουσµατικοί* (*Πυθαγορίσται*) and *µαθηµατικοί* (*Πυθαγόρειοι*).

Starting from P.'s discovery of the intervals, his followers devoted themselves to arithmetic, using a notation consisting probably of patterns of dots; the most important of these was the *τετρακτύς*, which represented the number ten as sum of the first four integers and was traditionally attributed to P. himself. They said the universe was produced by the First Unit (the Heaven) inhaling the Infinite (or Void), so as to form groups of units or numbers (Ar. *Metaph.* N 1091^a15 f., *Phys.* 213^b22 f.), and that all things (even, e.g., opinion, opportunity, injustice, Ar. *Metaph.* A 990^b22) were numbers and had position. Their earlier geocentric astronomy was based on that of the early Ionians, but probably by about 500 B.C. they had reached the hypothesis that the earth is spherical. Aristotle attributes to them (*Cacl.* 293^a18 f.) an astronomical system presupposing a central fire, around which circle the celestial bodies, including sun, earth (which thus first becomes a planet), and counter-earth (*ἀντίχθων*, intended to account for lunar eclipses). This system, to which the older belief in a 'harmony of the spheres' was accommodated, appears to date at earliest from the late fifth century. See also ASTRONOMY, MATHEMATICS.

For Pythagorean writers of independent importance (Alcmaeon, Philolaus, Archytas, etc.) and for Neopythagoreanism see separate articles.

A. H. C.

PYTHAGORAS (2), Greek sculptor of the first half of the fifth century B.C. A native of Samos and later resident at Rhegium in Italy, whither he probably emigrated on the fall of Samos in 494. He is reputed to have introduced greater realism into art and was the first to emphasize the importance of 'rhythm' and 'symmetry' in art. No work of his is known, and only one Roman copy is thought to reflect his style—the so-called 'Omphalos Apollo' at Athens.

S. C.

PYTHEAS (c. 310-306 B.C.), Greek navigator of Macedonia. From Strabo, Diodorus, and Pliny mostly we learn (from evidence distrusted by the ancients) that, sailing from Gades (*Cádiz*) past Cape Ortegal, the Loire, north-west France, and Uxisame (*Ushant*), he visited Belerium (*Cornwall*) and the tin-depot at Ictis (*St. Michael's Mount*), circumnavigated Britain, described its inhabitants and climate, reported an island Thule (q.v.) (*Norway or Iceland*), sailed perhaps to the Vistula,

and reported an estuary (*Frisian Bight?*) and an island (*Heligoland?*) abounding in amber. P. calculated closely the latitude of Massalia and laid bases for cartographic parallels through north France and Britain.

Cf. M. Cary and E. Warmington, *Ancient Explorers* (1929), 33 ff.; E. Warmington, *Greek Geog.* (1934), 169 ff.; G. E. Broche, *Pythéas le Massaliote* (1936). E. H. W.

PYTHERMUS (1), poet, of Teos, wrote drinking-songs, of which one line survives. He composed in the Ionian mode and was mentioned by Hipponax (Ath. 625 c).

E. Diehl, *Anth. Lyr. Graec.* ii. 60.

PYTHERMUS (2) of Ephesus, writing after Antiochus I or II and followed by Hegesandrus (c. 150 B.C.), published *Ἰστορίαι* in eight books, treating Hellenistic history.

FHG iv. 487.

PYTHIA, see APOLLO, para. 4.

PYTHIAN GAMES. From early times there had been a festival at Delphi in connexion with the oracle of Apollo, with a musical competition consisting of a hymn to the god—*νόμος Πυθικός*—sung to a cithara accompaniment. This took place every eighth year, but in 582 B.C. the festival was reorganized and placed under the management of the Amphiclonic Council. Henceforth it was celebrated in the third year of each Olympiad. The musical competitions—in instrumental music,

singing, drama, and recitations in verse and prose—still took the first place, but to them now were added athletic and equestrian contests modelled on those at Olympia. The stadium for the foot-races lay close under Mount Parnassus, the chariot-races were held in the Crisaean plain, where a hippodrome was constructed. The prize was a crown of bay-leaves cut in the valley of Tempe. The Pythian Games ranked next in importance after the Olympic.

F. A. W.

PYTHIUS of Priene (4th c. B.C.), architect. He designed the Mausoleum (q.v.) at Halicarnassus and the temple of Athena Polias at Priene, both in the Ionic Order. He held the opinion that architects should be well versed in the arts, and objected to the use of the Doric order in sacred buildings because of the complications arising from the spacing of the triglyphs. His books on the temple and the Mausoleum have not survived. (Vitruv. i. 1; 4. 3; 7, *praef.*)

H. W. R.

PYTHON (mythological), see APOLLO, paras. 4 and 5.

PYTHON of Catana or Byzantium was said to be author of a satyric play called *Agon*, produced in 324 B.C. in the camp of Alexander the Great on the Hydaspes (in the Punjab); some attributed it to Alexander himself. It contained references to Harpalus and other contemporary persons in the style of the Old Comedy (Ath. 13. 95 f.).

Q

QUADI, a German tribe of the Suebic group, left the Main region (c. 8 B.C.) and went to Moravia; they were closely connected with the Marcomanni. Vannius established a kingdom between the March and the Waag, but was overthrown c. A.D. 50, his followers being settled by the Romans in Pannonia. After a war against Domitian the Quadi maintained peace till the great Marcomannic Wars. Though overwhelmed by Rome, they remained a permanent danger, and often with Marcomanni or Sarmatae-Jazyges plundered Roman land (e.g. under Valerian and Gallienus and in 282, 358, and 375). Later some of the Quadi joined the Vandals and Alani and went to Spain.

QUADRIVIUM, see EDUCATION, I. 9.

QUAESTIO. The introduction of *quaestiones*, permanent criminal courts, composed of thirty or more jurymen under the presidency of a praetor, resulted in a thorough reform of criminal justice in Rome. First appointed as commissions for inquiry in exceptional cases, they became later a standing institution; the first *quaestio perpetua* was constituted by the *Lex Calpurnia* (149 B.C.) for the *crimen repetundarum* (see REPETUNDAE). This example was followed by several *leges*; under Sulla, Caesar, and Augustus the *quaestiones* were systematized and extended. They were never organized by a general statute, but Augustus' *Lex Iulia iudiciorum publicorum* brought some order into the variety of procedural rules produced by copious legislation. The

quaestiones were gradually extended to all the more serious crimes, superseding the jurisdiction of magistrates and *comitia*; for each category of such crimes new tribunals were created. Members of the jury were originally senators; subsequently, after long political struggles—for justice in criminal matters acquired a political character—*equites* (see EQUES) replaced them or shared the courts with them. (See also GRACCHUS (4), DRUSUS (2), COTTA (3).) *Tribuni aerarii* (q.v.), an intermediate class between *equites* and *plebs*, substantially independent, were admitted to the jury from 70 B.C. to the time of Augustus.

Criminal prosecutions in the *quaestiones* were not initiated by the magistrate, but by an accusation (*nomini delatio*), which could be made by any citizen who on request (*postulatio*) obtained an authorization from the chairman of the competent court. The accusation was presented in writing to the magistrate, who entered the charge in the official record (*nomen recipere*) and directed the trial. The court for judging each case was constituted with the co-operation of both the parties, accuser and accused. They had a limited right of challenging the jurors, who were chosen by lot from a panel of persons qualified for this function. The jurymen gave their verdict on the guilt of the accused by a majority of votes; the presiding magistrate had no right to vote, but he inflicted the statutory penalty. No appeal was admitted. The crimes for which particular *quaestiones* were instituted were *res repetundae* (q.v.); murder and poisoning (by the *Leges Sempronia* and *Cornelia de sicariis et veneficis*); murder of near relations (see PARRICIDIUM); *maiestas* (see PERDUELLIO); *peculatus* and *sacrilegium* (theft of *res publicae* and *sacrae*); bribery by candidates at elections (*ambitus*); falsification of coins, weights, documents, wills, etc. (*falsum*); grave cases of injury; violence (*vis*); traffic in free persons (*plagium*); adultery and contraventions against the provisioning of the people

(*ammona*). The *quaestiones* disappeared in the first half of the third century A.D., when criminal jurisdiction was conferred upon other organs of the State.

A. B.

QUAESTOR. In spite of a definite statement of Tacitus (*Ann.* 11. 22), it is generally held that no quaestors existed under the monarchy, and that the office was created at the beginning of the Republic. At first they were nominated by the consuls, but from 449 B.C. were elected by the tribal assembly. Their number was originally two, but in 421, when the office was opened to plebeians, it was raised to four (*Livy* 4. 54). We do not hear of any increase till the time of Sulla, who fixed the number at twenty. Caesar appointed forty, but Augustus reverted to the number of twenty. In early times the quaestors exercised judicial powers (*quaestores parricidii* are mentioned in the XII Tables), but later they were concerned mainly with finance. Their connexion with the consuls was originally very close, and the relation between a quaestor and the higher official to whom he was attached was always considered to be that of a son to a father (*Cic. Planc.* 11. 28). The quaestorship, in spite of its antiquity, was the lowest office in the *cursus honorum* and was held by young men.

Among the quaestors the most important were the two *quaestores urbani*, who were responsible for the *aerarium* (q.v.), in which were stored not only reserves of money but public documents such as decrees of the Senate and accounts. Quaestors conducted sales on behalf of the treasury, and sometimes made financial statements in the Senate, though they did not become regular members of that body till the time of Sulla. Under the Principate the *aerarium* was put in charge of more senior officials, but from A.D. 44 to 56 specially selected quaestors were chosen for this purpose and held office for three years (*Tac. Ann.* 13. 29; *ILS* 966). The remaining quaestors were attached to generals in the field and to provincial governors, and their duties, though primarily financial, were not exclusively so. As a provincial quaestor a young man gained experience which later would prove useful. He might command troops or administer justice, and might even be left in charge of a province as *quaestor pro praetore*. The *provinciae* of the quaestors were determined by the Senate and distributed among the various holders by lot, though a general might have a say in the choice of his quaestor. The practice of *prorogatio* (q.v.) must have been applied to the *provinciae* of quaestors if their number did not exceed four before Sulla's dictatorship. Each provincial governor had one and the governor of Sicily two. In addition to the *quaestores urbani* and the provincial quaestors there were *quaestores classici* and a *quaestor Ostiensis*, connected with the fleet and the corn-supply. In the Principate a quaestor was attached to the proconsuls of senatorial provinces (e.g. *Tac. Agr.* 6), while in the imperial provinces finance was in the charge of an equestrian procurator. The name quaestor was employed by municipal towns and by *collegia* to designate their financial officials.

A. H. J. Greenidge, *Roman Public Life* (1901), 212 ff., 369 ff.

G. H. S.

QUEROLUS, the 'Grumbler', anonymous comedy, also called *Aulularia* because of a superficial resemblance to Plautus' *Aulularia*. It was written in Gaul, possibly c. A.D. 400. Rutilius, to whom it is dedicated, may thus be Rutilius Namatianus (q.v.); but this common view is not unchallengeable, and some evidence suggests a later date. The play is written in iambic and trochaic cadences, half-way between metre and prose.

Ed. L. Hermann (introd., app. crit., 1929, 1937).

O. S.

QUIETUS, see LUSIUS.

QUINCTILIUS, see MAXIMUS (2), VARUS.

QUINCTIUS CAPITOLINUS, TITUS, consul on six occasions between 471 and 439 B.C. His chief recorded achievement, dated 464, when (allegedly as proconsul appointed by a *senatus consultum ultimum*) he extricated the consul Furius from a trap set by the Aequi, bears so great a resemblance to the exploits of Cincinnatus (q.v.) as to suggest that it was an invention (cf. Valerius Antias; *Livy* 3. 4. 9 to 3. 5. 13).

P. T.

QUINCTIUS, see also ATTA, CINCINNATUS, FLAMININUS.

QUINDECIMVIRI (originally *Duoviri*, then *Decemviri*, *Livy* 6. 37. 12, first mentioned as *Quindecimviri* in 51 B.C., Caelius in Cicero, *Fam.* 8. 4. 1) **SACRIS FACIUNDIS**, one of the *quattuor amplissima collegia* of the Roman clergy. They were originally custodians of the Sibylline books (*Livy* 5. 13. 5-6 and often), but their activities were probably widened to cover the supervision of all foreign cults recognized or tolerated in Rome (*Wissowa, RK* 543) on the authority of these books. They were of course originally patricians, but after 367 B.C., when their number was raised to ten, half of them were chosen from the plebs. The method was election, probably as for the *pontifices* (q.v.; Cicero above). Caesar increased them to sixteen (*Dio Cassius* 42. 51. 4), and supernumeraries were common under the Empire (cf. *ibid.* 51. 20. 3).

H. J. R.

QUINQUATRUS, see MARS, MINERVA.

QUINQUIREME. The standard warship in the fleets of the Hellenistic States and of the Roman Republic was the quinquireme (*πεντήρης*), a galley accommodating more rowers than the smaller but similar trireme (q.v.) and gaining thus greater force. The crew on a Roman quinquireme numbered 300, in addition to the marines (*Polyb.* 1. 26. 7). The arrangement of rowers on a quinquireme is even more uncertain than that on a trireme; probably groups of five oarsmen pulled one large oar in the fashion of the medieval Venetian galleys a *scaloccio*. Since the quinquireme did not appear at Athens until 325 B.C., the report that Dionysius of Syracuse introduced the craft is doubtful; possibly it was Phoenician in origin. Expensive to maintain and difficult to man, this vessel lost its supremacy in the first century B.C. but it still found use in the Roman imperial navy.

C. G. S.

QUINTILIANUS, MARCUS FABIUS, born probably between A.D. 35 and 40 at Calagurris in Hispania Tarraconensis (*Auson. Prof. Burd.* 1. 7), the son perhaps (cf. *Inst.* 9. 3. 73) of a rhetorician, who may even have practised at Rome (*Sen. Controv.* 10. *pr.* 2). He was sent to Rome for his education and was, if we may believe the scholiast on *Juv.* 6. 451, a pupil of the *grammaticus* Remmius Palaemon; at a later date he attached himself to the famous orator Domitius Afer (*Inst.* 5. 7. 7; 10. 1. 86; *Plin. Ep.* 2. 14. 10), from whom he must have learned the practical side of rhetoric and the methods of the courts. Later (but not before A.D. 57 when he was present at the trial of *Cossutianus Capito*) he went back to Spain, but returned to Rome with Galba in 68 (*Hieron. Chron.*). There he became famous as a teacher and was appointed a salaried Professor of Rhetoric by Vespasian (*Hieron. Chron.* on A.D. 88; but his appointment must have been earlier). Pliny the Younger (l.c.) was one of his pupils. After teaching rhetoric and practising at the bar for twenty years (*Inst.* 1. *pr.* 1) he retired (perhaps in 85, more probably in 90, since he can hardly have settled down as a teacher during the civil wars of A.D. 69). He was well off (*Juv.* 7. 186-9), and devoted his retirement to writing (see below, *WORKS* i and ii). While thus

engaged he was appointed by Domitian to instruct his two great-nephews (*Inst.* 4. *pr.* 2), and through the influence of their father Flavius Clemens received the *ornamenta consularia* (Auson. *Grat. Act.* 7. 31). Not long before his retirement he married a young wife who died at the age of 19, leaving him two sons, of whom the younger died when 5, the elder when 9 a few years later (*Inst.* 6. *pr.* 3 ff.). The date of his own death is uncertain; it is rashly assumed that he died before A.D. 100 on the strength of Pliny's words (l.c.) 'ita certe ex Quintiliano praeceptore meo audisse memini' (written 97-100).

WORKS

(i) *De causis corruptae eloquentiae*, of which nothing remains; our knowledge of its contents does not go beyond four brief references in the *Institutio*. It was begun at the time of the younger son's death (6. *pr.* 3); in view of the mother's youth, not more than three years or less than one can divide the two sons; the work was therefore begun from four to two years before the writing of *Inst.* 6. *pr.* 3.

(ii) *Institutio oratoria*, published c. A.D. 95; for it was composed in little more than two years (*Ep. ad Tryph.*) after long solicitation by his friends; Domitian was still alive when bk. 10 was written (10. 1. 91-2). The work opens with a letter to his publisher Trypho, followed by a dedication to Marcellus Victorius. It covers the education of an orator—from his cradle almost to his grave. Bk. 1 discusses his education in boyhood, and is so sane, penetrating, and sympathetic in general outlook that it has real value even to-day, while its later chapters on grammar and language are of importance to every student of Latin. Bk. 2 deals with the Schools of Rhetoric and the declamations, which played such a large part in instruction, and with the nature and value of oratory. Bks. 3-9 are of a more technical character; in bk. 3 types of causes are analysed with excess of subtlety, bks. 4-6. 1 discuss the formal structure of a speech in great detail. The rest of bk. 6 provides an oasis on emotional appeal, which contains an illuminating and entertaining chapter (3) on wit and humour. Bk. 7 deals with arrangement, points of law, syllogistic argument, etc. Bk. 8 treats of style, propriety of words, ornament, general reflexions (*sententiae*), and metaphor; bk. 9 of figures of thought and speech, concluding with an interesting chapter (4) on artistic structure and rhythm. Quintilian apologizes for the dryness of his technical details; but through all these books there runs a vein of shrewd wisdom and a sense of reality; he denounces the fantastic absurdity which marked so many themes for declamation. Nevertheless, bk. 10 brings relief; in it he discusses the value of reading, merely as an aid to oratory, it is true; but his review of Greek and Latin authors is deservedly famous, and the exposition of the way in which a speech should be prepared forms a worthy close to an admirable book. Bk. 11 contains an interesting discussion of memory and mnemonics, while its chapter (3) on delivery, gesture, and dress is both instructive and amusing. Bk. 12 deals with higher themes. Accepting Cato's definition of an orator as 'a good man, skilled in speaking', he discourses on the importance of character, the educative value of philosophy, the ideals which should guide the orator, the appropriate use of different styles, and the age at which the orator should retire—a fine book written with grave and attractive dignity. The style is still under the influence of Ciceronianism, lucid, vigorous, and sound, yet marked by the compression and point learned in the schools of his age—a perfect vehicle for his purpose. And he leaves the impression of a man of high ideals, wise, kindly, and in the widest sense humane. See also LITERARY CRITICISM IN ANTIQUITY, II. 5; RHETORIC, LATIN, para. 4.

(iii) *Pro Naevio Arpiniano* (accused of throwing his wife out of a window), the sole speech published by himself

(7. 2. 24). Two others in defence (1) of Queen Berenice (4. 1. 19), (2) of a woman accused of forgery (9. 2. 73), were published against his will from shorthand reports.

(iv) *Artes rhetoricae*. Two were published from lecture notes against his will (1. *pr.* 7).

(v) *Declamationes* (q.v.). Two collections, *Maiores* and *Minores*, survive under his name. The style and the fantastic nature of much of their contents prove them to be spurious. Their date is uncertain.

QUINTUS (1), anatomist and physician of the eclectic school in Rome, in the age of Hadrian (A.D. 117-38), and pupil of Marinus. He founded an important medical school, to which the teachers of Galen belonged. Later he was banished from Rome and died in Pergamum. He left no written works, but his anatomical teaching had great influence, e.g. on Galen. W. D. R.

QUINTUS (2) **SMYRNAEUS** (4th c. A.D.), epic poet, author of a Greek poem, the *Posthomerica*, found in Calabria, headed 'H ποιησις τοῦ Ὀμηρικοῦ Κοινου', on a manuscript containing also Colluthus, *Rape of Helen* (? 6th c. A.D.). Hence Quintus is sometimes called Calaber, but more often Smyrnacus, from the single recorded fact about him, that in his youth he lived at Smyrna near the Hermus (Quint. Smyrn. 3. 306-13). The poem, continuing the story of the *Iliad* to the start of the Achaeans for home, shows thorough acquaintance with Homer, but some slight misunderstanding of Homeric Greek, and it may have been meant to form a substitute, in closer agreement with Homer, for the account of the events given in the Epic Cycle (q.v.). The sources are various, some Hellenistic, and one a poem of unknown identity much used by Virgil, possibly the poem indicated by Macrobius (*Sat.* 5. 2) under the name of Peisander. The poetry of Quintus is prolix, never exalted, and sometimes macabre; the parts are greater than the whole, which lacks structural unity; but it has some freedom, competence, eloquence in representing emotion, and pathos, and frequently the similes are attractive.

Kehmptzow, *De Quinti Smyrnaei fontibus ac mythopoeia* (1891); G. W. Paschal, *A Study of Quintus Smyrnacus* (1904); W. F. J. Knight, *CQ* xxvi (1932), 178-89. W. F. J. K.

QUIRINAL, the northernmost hill of Rome, traditionally occupied by Sabines, and certainly the site of an early settlement (*Mon. Ant.* 15. 776 ff.) which became one of the Four Regions of Republican Rome. On it were many famous temples, including the age-old *Capitolium vetus* and those of Semo Sancus (466 B.C.), Salus Semonia (311 B.C.), Quirinus (293 B.C.), Honos (*CIL* vi. 30915), Fortuna Publica (204 B.C.), and Venus Erycina (181 B.C.). Later, the hill was the site of houses of famous associations or luxury, as of Atticus, Narcissus, and Martial. Domitian built the *templum gentis Flaviae* on the site of his ancestral home. Constantine erected large *thermae*. The north fringe of the hill was bordered by cemeteries and by Julius Caesar's gardens, which became the notorious *horti Sallustiani*. I. A. R.

QUIRINALIS, see **CLODIUS** (3).

QUIRINIUS, **PUBLIUS SULPICIUS** (eos. 12 B.C.), a *novus homo* from Lanuvium (on his career cf. Tacitus, *Ann.* 3. 48). Quirinius defeated the Marmaridae (Florus 2. 31), perhaps as proconsul of Crete and Cyrene (? c.

15 B.C.). Between 12 B.C. and A.D. 2 he subjugated the Homanadenses, 'Cilician' brigands on the southern borderland of the province of Galatia (Strabo 569). The precise date of this war and the command held by Quirinius are disputed. It has been argued that he must have been legate of Syria at the time; but the war could have been conducted only from the side of Galatia, which province, though normally governed by imperial legates of praetorian rank, might easily have been placed under a consular (cf. L. Calpurnius Piso, c. 13 B.C.). Quirinius prudently paid court to Tiberius at Rhodes, succeeded M. Lollius as guide and supervisor of C. Caesar in the East (A.D. 2), and shortly after married Aemilia Lepida, a descendant of Sulla and Pompey. Legate of Syria in A.D. 6, he superintended the assessment of Judaea when that territory was annexed after the death of Archelaus (Josephus, *AJ* 17. 1 ff., cf. *ILS* 2683; also Acts v. 37, which mentions the insurrection of Judas the Galilaeen *ἐν ταῖς ἡμέραις τῆς ἀπογραφῆς*). In order to reconcile and explain St. Luke ii. 1 and establish a date for the Nativity before the death of Herod the Great (i.e. before 4 B.C.), various attempts have been made to discover an earlier governorship of Syria by Quirinius, and, by implication, an earlier census in Judaea. It is by no means certain that the accephalous elogium from Tibur (*ILS* 918) should be attributed to Quirinius, and, in any case, it cannot prove two governorships of Syria.

Quirinius lived to a wealthy and unpopular old age. In 21 he died and was granted a public funeral on the motion of Tiberius, who recounted his meritorious services (*Tac. Ann.* 3. 48).

E. Groag, *PN*, s.v. 'Sulpicius (99)'; L. R. Taylor, *AJPhil.* 1933, 120 ff.; R. Syme, *Klio* 1934, 122 ff., and *Roman Revolution* (1939), see Index. R. S.

QUIRINUS, a god of Sabine origin (Ovid, *Fasti* 2. 475 ff., whereon see Frazer), worshipped from very early times on the Quirinal. Except that his functions resembled those of Mars and that he had sacred arms (Festus, p. 238, 9 Lindsay), we know little of him; he regularly forms a third with Jupiter and Mars (qq.v.; e.g. Livy 8. 9. 6); his flamen (q.v.) is the lowest of the three *flamines maiores* and the third *spolia opima* belong to him (Servius on *Aen.* 6. 859). His flamen's activities are known only in the service of other deities (Gellius 7. 77. 7; Ovid, *Fasti* 4. 910; Tertullian, *De Spect.* 5). His festival is on 17 Feb.; his cult-partner is Hora (Gell. 13. 23. 2), of whom nothing is known. The name must mean 'he of *quirium*'; as this is not a possible word for the labializing Sabine speech, the most plausible etymology is that of Kretschmer (*Glotta* 10. 147 ff.), that it was originally **co-uiri-um*, 'assembly of the men', hence also *Quirites*. See further Wissowa, *RK* 153 ff.; cf. *ROMULUS*. H. J. R.

R

RABIRIUS (1), **GAIUS**, had, as a young man, been implicated in the death of Saturninus in 100 B.C. Early in 63 Caesar wished to stress the dangerous situations which might arise from the *senatus consultum ultimum*. At his instigation the tribune Labienus therefore charged Rabirius with murder, resuscitating for his purpose an obsolete method of impeachment. The Senate pronounced the sentence invalid; and when a more regular action was brought before the Comitia Centuriata Cicero himself defended Rabirius. The trial had served its purpose; and with Caesar's connivance the praetor Metellus Celer broke up the court by a convenient legal fiction.

See Cicero, *Pro Rabirio*. Cf. E. G. Hardy, *Journ. Phil.* xxxiv (1918). J. M. C.

RABIRIUS (2) **POSTUMUS**, **GAIUS**, known unofficially as *Postumus Curtius*, being posthumous son of C. Curtius, adopted under the will of his uncle C. Rabirius (q.v.). A banker like his father, he placed loans throughout the Empire, until to recover vast sums from Ptolemy Auletes he took up residence at Alexandria, called himself the king's minister, and requisitioned Egyptian supplies. After the condemnation of Gabinius (q.v. 2) in 54 Rabirius was prosecuted as receiver, but Cicero's extant speech secured his acquittal, mainly on technicalities; the defence of fact was merely that Rabirius was now poor. Caesar assisted him, and by 49 he was a senator, Caesar's ardent partisan, and was employed on commissariat work for the African War; by 45 he had designs on the consulate.

Cf. H. Dessau, *Hermes* 1911, 61 ff.

G. E. F. C.

RABIRIUS (3) **GAIUS**, epic poet mentioned alongside of Virgil by Velleius (2. 36. 3). Ovid alludes to his 'mighty utterance' (*Pont.* 4. 16. 5). He may have written the poem on Actium of which a fragment was recovered in papyrus 817 from Herculaneum. See *HELLO ALTYPTIACO*, *CARMIN DE*.

Truffaut, 1 252. 9; Merz, *FPL*.

RACES, HORSE- AND CHARIOT-, see *CIRCUS*.

RAETIA, a Roman province in the Alps, including Tyrol and parts of Bavaria and Switzerland. The Raeti were partly Illyrian, partly Celtic, their language having been affected by Etruscan elements (cf. J. Whatmough, *Harv. Stud.* 1937, 181 ff.). After the Camunni and Vennores had been defeated by P. Silius Nerva (16 B.C.) Drusus and Tiberius in a combined operation from the south and from Gaul conquered the Raeti and the Celtic Vindelici, whose territory became a province together with the Vallis Poenina; the latter was disconnected from Raetia after Claudius and before M. Aurelius. At first under the command of the governor of Gaul (who appointed a *praefectus* in A.D. 16-17 after Germanicus had been recalled from the Rhine), Raetia got its own governor, who according to the *communis opinio* was an equestrian procurator with *ius gladii* (Ph. Horowitz, *Rev. Phil.* 1939, 61 ff., tries to prove that until Trajan the governors of Raetia were *praefecti*, and then were replaced by equestrian *procuratores*). The governor, who resided at Augusta Vindelicorum, commanded the troops: 4 *alae* and 11 *cohortes* in A.D. 107 (*CIL* xvi. 55), and 3 *alae* and 13 *cohortes* in 166 (op. cit. 121). During the Marcomannic Wars under M. Aurelius the newly raised Legio III Italica Concord was quartered in Raetia at Castra Regina, its commander becoming the provincial governor as a *legatus Aug. pro praetore*. At least since Gallienus Raetia was again placed under equestrian administration, and was divided under Diocletian for civil administration into Raetia I (capital probably Curia) and Raetia II (capital Augusta Vindelicorum), both provinces being under the military command of the *dux Raetiarum* who resided at Augusta Vindelicorum (on the frontier see R. Heuberger, *Klio* 1931, 348 ff.). Alamannic pressure increased and the Lake of Constance-Argen-Ilser-Danube defence-line was given up soon after A.D. 389; the Alamanni occupied the relinquished territory, though temporarily forced back in 430. About

450 the Alamanni and other German tribes again mastered nearly the whole plain. Before 482 the last outposts on the Danube were evacuated and only the Alpine regions remained under control from Italy.

Instinsky, *Klio* 1938, 33 ff. (Septimius Severus). F. A. W. S.

RAMNES, TITIES, LUCERES, *see* TRIBUS.

RAVENNA, an important port in Cispadane Gaul on the Adriatic. The name Ravenna is certainly Etruscan; the original population was probably Etruscan and Umbrian mixed. It is only legend that assigns its foundation to Thessalians. Pliny seems to be plainly in error when he calls it a city of the Sabines. Of its earlier history practically nothing is known. A *civitas foederata* in the later Republic, it received Roman citizenship in 89 B.C. or from Julius Caesar in 49 B.C. and ranked thenceforth as a *municipium*.

The course of the later history of Ravenna was determined by Augustus when he made it the station of his Italian fleet of the north, corresponding to Misenum in the south. The presence of the fleet ensured to Ravenna a certain permanent importance: occasionally, as in A.D. 69, it gave it a temporary historical significance. With the sea to the east and with marshes almost cutting off approach from the west, Ravenna was a natural residence of notable State prisoners: it was there that Maroboduus was interned by Tiberius. The life of Ravenna centred round the sea and the fleet. The *praefectus classis* was the most notable personage of the town, and the suburb by the harbour was itself called 'classis'. The local government presents unique features (cf. *CIL* xi, p. 6). There was a considerable export of wood, asparagus, and fish.

In A.D. 404 Ravenna became the main residence of the Emperor of the West, who was drawn thither by its uniquely protected position. Its mint came to dominate the Western coinage. After the fall of the Empire Odoacer and Theodoric still resided at Ravenna, and finally, when Justinian recovered Italy, Ravenna became the seat of the Imperial viceroy, the Exarch. The last phases of Ravenna's greatness are represented by mosaics of great interest and beauty.

Rosenberg, *PW*, s.v.

REBILUS, CANINIUS, *see* CANINIUS REBILUS.

RECITATIO, the public reading of a literary work by the author himself. In Greece, Herodotus' reading of parts of his works may be taken as an anticipation of the Roman practice. At Rome Crates' lectures suggested the idea of a public reading of the verses of dead poets (Suet. *Gram.* 2). But the real creator of the *recitatio* was Asinius Pollio: he was the first Roman to read before an audience his own works (Sen. *Controv.* 4 *praef.* 2). Under the influence of the same causes which explain the expansion of Augustan literature the custom soon spread extraordinarily. It still flourished under Domitian. Afterwards we find fewer allusions to it, although it survives to the sixth century.

Before the construction of Hadrian's Athenaeum, no definite place set apart for *recitationes* existed. Very rarely they took place in a theatre, sometimes at a banquet, oftener in some hall, hired by the author or lent by a patron; the reader had to supply the necessary furniture (Tac. *Dial.* 9), which cost him dear, as readings did not pay. So starving poets recited anywhere (forum, thermac, circus, etc.).

There were two kinds of *recitationes*: the one meant for

a restricted audience, the other for the public (Plin. *Ep.* 7. 17. 11-12). Invitations were given by the author himself, or by means of short notes (*codicilli*) and programmes (*libelli*). Women were not excluded. From a sort of platform the *recitator*, standing up, first delivered a preamble (*praefatio*), then read seated. Sometimes he preferred to get a freedman to read, supplying gestures himself (Plin. *Ep.* 9. 34. 2). Readings might extend over several days. They were chiefly of verse (epic, tragic, lyric), more rarely of prose (history, philosophy, discourses). The hearers expressed their approval—with occasional support from hired clappers—by applause and by cries ('effecte', 'euge', 'pulchre', 'sophos', etc.); they might even rise and kiss the reader.

The *recitatio* at first offered genuine advantages: by it an author made his works quickly known, realized whether they were worth publishing, and obtained the criticisms of competent judges. But very soon it degenerated, becoming an end in itself, encouraging the conceit of authors, and exercising on the literature of the Empire the same untoward influences as *declamatio* (q.v.)—love of the showy, of smart sayings, with defects in composition and neglect of depth in favour of form.

Th. Herwig, *De recitatione poetarum apud Romanos* (1864); L. Valmagg, 'Le lecture publique a Roma nel primo secolo dell' era volgare' (*Riv. Fil.* xvi (1888)); J. E. B. Mayor, *Thirteen Satires of Juvenal* i (1893), 173-82; F. Orlando, *Le lecture publique in Roma imperiale* (1907); Funaioli in *PW* ii. A, s.v. 'Recitationes'; L. Friedlaender, *Sittengesch. Roms*¹⁰, Bd. ii (1922), 225-30.

C. F., transl. J. W. D.

RECUPERATORES were jurymen who acted in the second stage of Roman civil proceedings in place of *unus iudex*. They were first established by international treaties between Rome and other States, to act as exceptional courts for litigation between their citizens. The competence of *recuperatores* was extended to lawsuits between two *peregrini*, and by a later development to proceedings in which both parties were Roman citizens; for the procedure of this court enjoyed a great popularity by reason of its celerity (restricted number of witnesses, short limit of time for delivering of judgement), though the court was composed of three members. We find *recuperatores* in trials on different matters, so that a general rule for their competence cannot be laid down; probably they were competent above all for controversies which required an accelerated hearing. Presumably a petition of the litigants could induce the magistrate to allot the case to this court. In post-classical procedure there was no place for *recuperatores*. In Justinian's Digest the compilers deleted this term and replaced it by *iudices*.

A. B.

REDICULUS. When Hannibal, attempting to raise the siege of Capua in 211 B.C., made a demonstration against Rome, a shrine was erected to the unknown power which made him go back again, under the name of Rediculus (Festus, p. 354. 25; 355. 6 Lindsay). It stood outside the Porta Capena, and the deity may have been surnamed Tutanus (Varro, *Sat. Men.*, fr. 213 Buechler).

H. J. R.

RED SEA ('Ερυθρὰ or 'Ερυθραία Θάλασσα: *Rubrum Mare*). Derivation of name uncertain, perhaps from 'Red Men' = Phoenicians). This name was extended by the ancients to cover all eastern waters, including the Indian Ocean, but referred specifically, as it does now, to the Arabian Gulf. The Red Sea proper was navigated by the Egyptians, by Israelites and Phoenicians, and by the Persians, through whom it became known to the Greeks. It was mentioned by several of the Attic dramatists, and Herodotus (2. 11; 3. 107 ff.) was acquainted with its shape. In an attempt to circumnavigate Arabia, Alexander sent ships from Suez which sailed as far as Yemen (Theophrastus, *Hist. Pl.* 9. 4. 1). The Ptolemies opened up the Red Sea completely. Under Ptolemy I the west

coast was explored; under Ptolemy II forts and stations for elephant-hunts were founded here (see BERENICE, MYOS HORMOS, PTOLEMAIS THERON) and the Arabian shore was made known as far as Hedjaz and Al 'Ula; under Ptolemy III piracy was suppressed, and in the first century B.C. a 'strategus of the Red Sea' makes his appearance. Under the Caesars the Red Sea became an important channel for trade between the Roman Empire and the eastern seas.

Periplus Maris Rubri (translation and notes by W. H. Schoff, 1912); Cary-Warrington, *Explorers*, 67-8, 222. E. H. W.

REGIA, the traditional home of King Numa, was the seat of authority under the Republic of the *pontifex maximus* and contained his archives. It was situated at the east end of the *forum Romanum*, between the Sacra Via and the precinct of Vesta. Its orientation by the cardinal points matched that of the pre-Sullan forum; foundations of the buildings of the early Republic, 390 B.C. and 148 B.C., still exist. The trapezoidal plan of the main existing structure, an elegant building in marble erected by Calvius in 36 B.C., reconciles older and newer orientations. The view that the *fasti* (q.v.) *consulares* were affixed to its walls is now doubted (cf. A. Degrassi, *Rend. Pont.* xxi (1945-6) and *Inscr. Ital.* xiii. i (1947), who attributes them to the adjacent Arch of Augustus). The courtyard contained the *sacrarium Martis*, with *hastae* and *ancilla*, and the shrine of Ops Consiva. I. A. R.

REGIFUGIUM. 24 Feb. is marked on the calendars *Q(uando) R(ex) C(omitiauit) F(as)*. The even number indicates that it is not a lucky day; the only other even-numbered festival is the second Equirria (14 Mar.). 24 Mar. and 24 May have the same letters attached, for unknown reasons, but 24 Feb. was called the Regifugium, because the *rex sacrorum* (q.v.) concluded the ritual by running away from the Comitium (Plut. *Quaest. Rom.* 63, where see Rose for suggested interpretations). H. J. R.

REGILLUS, LUCIUS AEMILIUS, praetor in 190 B.C., defeated the fleet of Antiochus at Myonesus, securing the Scipios' passage over to Asia Minor. He celebrated a naval triumph, vowing a temple to *Lares permarini*, which was dedicated in 179.

Livy, bk. 37 and 40. 52; Polyb. bk. 21; Appian, *Syr.* 27.

REGILLUS LACUS can probably be identified with the volcanic depression called *Pantano Secco* near Tusculum (T. Ashby, *Roman Campagna*, 148). Here Rome conquered the Latins c. 496 B.C. in a battle said to have been decided by the intervention of Castor and Pollux (Livy 2. 19; Dion. Hal. 6. 3 f.). E. T. S.

REGIO. (1) At Rome *regio* denoted particularly the city wards, four in number (Livy 1. 43; Varro, *Ling.* 5. 45) during the Republic, and assumed to represent a regal synoecism of the Palatine and Esquiline settlements. By 7 B.C. Augustus had reorganized the whole system, creating fourteen numbered *regiones* (see ROME, TOPOGRAPHY) administered by *aediles*, *tribuni plebis*, and praetors chosen by lot (Dio Cass. 55. 8), and divided into *vici* (see VICOMAGISTRI). Under Hadrian the administration had passed to libertine *vicomagistri* and one, or two, *curatores* responsible to the *praefectus vigilum* (CIL vi. 975). Under Alexander Severus fourteen consular *curatores* were instituted (S.H.A. *Alex. Sev.* 33. 1) under the *praefectus urbi* (CIL x. 6507; xiv. 2078). Each ward possessed a sub-station (*excubitorium*) of the *vigiles*.

(2) *Regio* is also used of the eleven *regiones* of Italy, instituted by Augustus, probably as a basis for the census (see ITALY). I. A. R.

REGIUM, see RHIGIUM.

REGULUS (1), MARCUS Atilius, as consul reduced Brundisium (267 B.C.). As consul II in 256 with L. Manlius Vulso (q.v.) he won the naval battle of Ecnomus,

thus opening the way for the invasion of Africa. After Manlius' return Regulus was left in sole command in Africa. He defeated the Carthaginians but offered impossible severe terms. In spring 255 he was defeated on ground chosen by Xanthippus (q.v.) and was captured; only 2,000 Romans escaped from this disaster, which ended the African expedition. Later (? 249) he was sent on parole to Rome to arrange an exchange of prisoners (or to negotiate peace-terms which he urged the Senate to decline) and returned to Carthage, where he died in captivity. The story of his death by torture on his voluntary return to Carthage became a national epic (Horace, *Carm.* 3. 5), but is probably untrue: the barbarity of the Carthaginians was perhaps invented to palliate the action of his widow in torturing some Punic prisoners in Rome. On the Regulus legend see E. Klebs, *PIW*, s.v. 'Atilius (51)', and T. Frank, *CPhil.* 1926.

H. H. S.

REGULUS (2), MARCUS AQUILIUS, who had been a notorious informer in the Neronian period, was detested by the younger Pliny as 'the biggest scoundrel on two legs' ('omnium bipedum nequissimus', *Ep.* 1. 5. 14). His hysterical talent ('ingenium insanum', *ibid.* 4. 7. 4) and effrontery led many to take him for an orator; but for Herennius (q.v.) Senecio he was 'uir malus dicendi imperitus', exactly the opposite of Cato's famous definition. Defects notwithstanding, he secured many convictions in trials for *maiestas*. We know of two lost publications of his: (1) a pamphlet satirizing Arulenus (q.v.) Rusticus after his death; (2) a biography of his own dead son, of which he had 1,000 copies made for circulation. Martial mentions him several times in complimentary terms. J. W. D.

REHTIA, see RELIGION, ITALIC.

REIZIANUM, see METRE, GREEK, III (9).

RELEGATIO was at first the expulsion of a Roman citizen or a *peregrinus* decreed by a magistrate as a coercive measure. In this application it was a mere administrative act. As a penalty in criminal trials, introduced by several *leges*, *relegatio* was applied in different gradations; the mildest one was a simple temporary expulsion, without confinement or death penalty in case of return, and without loss of citizenship or property. The severest form was *deportatio* (introduced by Tiberius), a perpetual banishment to a certain place, combined with confiscation of property and loss of citizenship. *Relegatio* consisted either in the exclusion of the *relegatus* from residence in certain places or territories (Rome, Italy, or the provinces), or in his confinement to a particular place of abode. A very common form was *relegatio* (or *deportatio*) *in insulam* or *in Oasim* (near Egypt). Banishment in all its variations was especially a punishment for the higher classes (see HONESTIORES). The lower classes were punished for similar crimes with forced labour (*in opus publicum* or *in metalla*) or even with death.

RELICS. The cult of heroes (see HERO-CULT), at their real or supposed graves, had occasionally curious results. Naturally, many of these monuments were not real graves at all, as the Pelopion at Olympia; many places also claimed to possess the buried remains of heroes not native to them, and had legends explaining how they came there (Oedipus at Colonus in Attica, Soph. *OC.* 576 ff.; Eurystheus in the deme Pallene, Eur. *Herad.* 1031; Hector at Thebes, see W. R. Halliday in *Liverpool Annals* xi. 3 ff.). Moreover, unburied remains were

venerated here and there, as the 'honoured bones' mentioned by Pausanias at Asopus in Laconia (3. 22. 9), without even a name, and the bones of the Sibyl at Cumae (Paus. 10. 12. 8), in Apollo's temple. But this was not confined to the cult of heroes. The most remarkable instance of such a thing in the cult of a deity was the Hellotis in Crete, a festival of Athena (q.v., cf. Nilsson, *Griechische Feste*, 95 f.). Here a very large wreath, called a *hellotis*, was carried and said to contain the bones of Europa (q.v.; Seleucus in Athenaeus, 678 a-b). What the 'bones' really were is unknown. Furthermore, many relics were not bodies or parts of them. Aniconic cult-objects were occasionally explained as relics, as the stone at Delphi said to have been swallowed by Kronos (q.v.; Hesiod, *Theog.* 497 ff.), cf. the 'sceptre of Agamemnon' at Chaeronea (Paus. 9. 40. 11) and the 'shield of Diomedes' at Argos (I. R. Arnold in *AJArch.* xli. 436 ff.).

H. J. R.

RELIGION, TERMS RELATING TO. No word in either Greek or Latin corresponds exactly to English 'religion', 'religious'. In the former language perhaps *δῶος* and *εὐσεβής*, with their corresponding abstract nouns, come closest. *δῶος* seems to mean primitively 'usage', 'custom', hence 'good, commendable, pious usage' or the feelings which naturally go with it. It tends to specialize into meaning that which is proper and lawful with regard to holy things, or to traditional morality; it is, for instance, *ἀνδρόσιον* to commit murder. To say that a man is *εὐσεβής* does not of itself mean that he is what we call pious, unless some such phrase as *πρὸς τοὺς θεοὺς* is added; the famous *εὐσεβεῖς* after whom the *εὐσεβῶν χώρα* in Sicily was named (see *Aetna*, 623 ff., and R. Ellis ad loc.) were loving and self-sacrificing sons, and so *πί* (see below). Cf. in general J. C. Bolkestein, *Ὅσιος ἐν Εὐσεβείῃ: Bijdrage tot de godsdienstige en zedelijke Terminologie van de Grieken* (1936). A word belonging essentially to the religious vocabulary in classical times is *θέμις*, since that which it is or is not *θέμις* to do is respectively allowed or disallowed by religious law or custom; but the Homeric *θέμιστες* are traditional laws, not purely religious. *ἱερός* means properly 'tabu', hence 'consecrated' to some deity, and a man careful in his religious duties may be called *ἱερός*, as Ar. *Ran.* 652; *ἱερά* are religious rites, or materials, especially victims, for them. *δαισιδαίμων* varies between 'pietistic' and 'pious', but is usually the former, see H. Bolkestein, 'Theophrastos' Charakter der Deisidaimonia' *RGVV* xxi. 2; 1929). The word *ἅγιος* so distinctly indicates something belonging to the sacral sphere that it is tempting, despite the difference of breathing, to connect it etymologically with *ἄγιος*, a tabu or the evil state resulting from the violation of one (see E. Williger, 'Hagios, Untersuchungen zur Terminologie des Heiligen', *ibid.* xix. 1; 1922). As regards outward observances, the simple word *τιμῆ* is common; a worshipper is often said to 'attend on' or 'serve' the gods, *θεραπεύειν* and synonyms (never *δουλεύειν* in a purely Greek context). To be a regular worshipper, e.g. of the gods of a State, is *νομίζειν θεοὺς*, which later comes to mean to believe in their existence (see J. Tate in *CR* 1 (1936), 3; *li* (1937), p. 3). Occasionally *θρησκεύειν* has the former sense (as Hdt. 2. 64. 3); *θρησκεία* is a common, though mostly late, word for 'worship'. A *τελετή* or *τέλος* is any rite, though in Hellenistic it tends to mean a mystical rite or even secret doctrine (see C. Zijderveld, *Τελετή*, diss. Purmcrnd, 1934; cf. H. Bolkestein, *Τέλος ὁ γάμος, Mededeelingen* lxxvi B, no. 2 (1933)).

In Latin *religio* seems to be properly a bond or restraint of a non-material kind, and so develops into 'sacral or religious observance or scruple'; *religiones*, a complex or system of such restraints, is perhaps the nearest Latin

for 'a religion'. Generally, *religio* has a good meaning, though to a materialist, as Lucretius, it is nearly 'superstition', and in Hor. *Sat.* 1. 9. 71 it is something to be slightly ashamed of. *Religiosus* usually means 'pietistic', but denotes a laudable quality in the mouth of an uneducated man (Petronius 44. 18). In its good sense *religio* approaches Hellenistic *εὐλάβεια* (K. Kerényi in *Byzantinisch-Neugriechische Jahrbücher* 1931, 306 ff.). *Sacer* is almost exactly 'tabu', opposed to *profanus*, that which is used in ordinary life, cf. CONSECRATION. It is thus ambivalent, meaning on occasion 'accursed'. That which is actually *sacer* might also be *profanus*, as a temple or a human being, whereas a god is *sanctus*, as is also a man of venerable life or conduct; the inviolable walls of a city are *sanctae res* (Gaius 2. 8, cf. Plut. *Quaest. Rom.* 27 and Rose, *Rom. Quest. of Plut.* (1924), 181), but a table, which may be used for domestic ritual, is *sacra* (Juv. 6. 0 4). *Pius*, *pietas* correspond fairly closely to *εὐσεβής* and *εὐσεβεία*, see above; Virgil's Aeneas is *pius* because he observes right relations to all things human and divine. Outward observances are *ritus*, properly no more than 'customs', *honores*, again by no means a peculiarly religious term, *cura caerimoniarum* (Cicero, *Inu. Rhet.* 2. 161, cf. W. Warde Fowler, *Rel. Exper.* (1911), index s.v.), or simply *caerimoniae*. *Sacra* denotes the holy objects and the ritual (*sacra facere*, to perform a religious ceremony).

H. J. R.

RELIGION, CELTIC. The subject of this article is the religion of the Celtic-speaking peoples, in so far as it was known to the Greeks and Romans. The term 'Celtic' will not be used in an anthropological sense, and no attempt will be made to distinguish among the component races of the Celtic population. They were scattered over a wide area, and their recorded history covers centuries. They must have had a great variety of beliefs and practices. But it is possible to recognize in the ancient accounts of the Celts certain common characteristics which justify us in speaking of Celtic religion, and the testimony of the classical writers finds some confirmation in the archaeological monuments and in Irish and Welsh literature. This evidence from neo-Celtic, however, is too late to be considered in the present discussion.

2. Notices of the Celts (*Κελτοί*; perhaps sometimes meant by *Υπερβόραιοι*—see HYPERBOREANS) are found in the classical writers from the time of Hecataeus, and there are occasional references to their worship in the historians who deal with the age of the migrations. But the most systematic ancient account of Celtic religion is that of Caesar in several familiar passages in the sixth book of the *De Bello Gallico* (chapters 13, 14, 17, 18). Caesar there deals with the three aspects of the subject which chiefly interested the Greeks and Romans: (1) the gods (17, 18); (2) the Druids (13); and (3) the ideas of a future life (14).

3. (1) With regard to the gods, Caesar declares that the Gauls worship Mercury above all others, and after him Apollo, Mars, Jupiter, and Minerva. They associate Mercury with the arts, with roads and travel, and with wealth and commerce; and of the remaining four divinities they entertain much the same opinion as other nations. In the next chapter (18) he adds Dispatar to his list, saying that the Druids taught the people that Dispatar was the father of their race, and that they consequently reckon time by nights and not by days.

4. Caesar's account is of course of very little use as a description of Celtic religion. In the terms in which it is given, with the identification of Gaulish and Roman divinities, it cannot possibly be true. And even if we accepted the existence of six greater divinities corresponding to those named, Caesar's conventional characterization would tell us very little of their nature and functions. It is comparable to Tacitus' description of the Germanic worship of Mercury, Hercules, and Mars;

but in the case of the Teutons a considerable body of later mythology has been preserved, whereas in Gaul we have little to build upon except the *interpretatio Romana*, q.v., which not only obscures Caesar's account, but also appears in the great majority of the inscriptions and monuments.

5. The archaeological evidence in part bears out Caesar's statements, in part corrects or qualifies them. Many monuments have been found which show the worship of the gods he names, or of divinities who were assimilated to them. But in the inscriptions the name of Mercury occurs much less frequently than that of Mars. This may mean that in the Gallo-Roman times, as apparently also in the earlier period of the invasions, the god of war was more worshipped than in Caesar's Gaul. It is possible also that the two names describe only different aspects of the same great Celtic god.

6. Caesar supplies us with no native names for his divinities, but Lucan (1. 444-6) mentions Teutates, Taranis, and Esus, and Lucian (*Heracles*, 1-3) gives an account of Ogmios. A few other Celtic names of gods are given by the authors, and the inscriptions supply many more, which usually occur as epithets accompanying the name of a Roman god.

7. Whether any of their names represent divinities with a widely diffused cult is a matter of dispute. Some authorities are disposed to deny the existence of any pantheon of greater gods among the Celts, and certainly most of the evidence points to a lower mythology with local cults. But the distribution of certain names in Celtic territory seems to indicate that there were a few greater gods. (See also *DEAE MATRES*, *EPONA*.)

8. (2) Of the Druidical priesthood Caesar speaks at some length. It is sometimes objected, to be sure, that the Druids were not properly a sacerdotal order, and they are doubtless to be distinguished from common priests, who are called by various other names (*sacerdotes*, *antistites*, and *gutuatri*). But Caesar clearly ascribes to them religious functions, as well as educational, judicial, and political. He describes them as a privileged class, exempt from taxes and military service. They practised divination and were present at sacrifices. They were organized and had a single chief, elected by the whole body, and there was a general assembly held every year among the Carnutes. They acted as judges in personal and intertribal disputes. One of their chief functions was the education of the young, whom they taught by oral tradition.

9. Caesar's statements are confirmed by many passages in other authors, who add various details. Pliny (*HN* 16. 249 ff.) describes one striking ceremony, the gathering of the mistletoe, in which the Druids took part. The authority for the subdivision of the order into *druidae*, *ovates*, and *bardi* comes not from Caesar but from Strabo (4. 197; cf. also Amm. Marc. 15. 9. 8 and Diod. Sic. 5. 31). Several writers speak of human sacrifice in Gaul (for example Lucan 1. 446 and Diod. Sic. 5. 31). But the accounts were probably exaggerated and there is no evidence that the Druids were responsible for the practice. We read (Pliny *HN* 30. 4. 13; Suetonius, *Claud.* 25) of a violent abolition of the Druids by Roman authority. But it is more likely that their influence declined when their rights and powers were withdrawn. The later history of the Druids, when they appear to have sunk to be a magic-mongering order, is reflected in Pliny (*HN* 29. 52-3) and Tacitus (*Hist.* 4. 54).

10. (3) The Druids were commonly described by the ancient writers as philosophers, and the teaching most often ascribed to them is that of immortality. In fact the Greeks and Romans were especially impressed by the vividness of the Celtic belief in a future life—witness the story told by Valerius Maximus (2. 6. 10) and Pomponius Mela (3. 2) of men who made loans against repayment in the next world. Some authors speak simply of their belief in a life beyond the grave (cf. Timagenes,

in Amm. Marc. 15. 29; Strabo 4. 197; Mela 3. 2; Lucan 1. 455 ff.). But others refer definitely to a doctrine of transmigration (q.v.), and associate the Druids with Pythagoras (cf. Val. Max. 2. 6. 10; Alex. Polyhistor, in Diod. Sic. 5. 28; Caesar, *BGall.* 6. 14). In the light of later Celtic tradition, Irish and Welsh, it seems not improbable that the ancient Celts held some sort of a doctrine of metempsychosis or rebirth. But there is no clear evidence that it carried with it any idea of moral retribution.

For an account of Greek and Latin testimonia see H. d'Arbois de Jubainville, *Principaux auteurs de l'antiquité à consulter sur l'histoire des Celtes* (1902). Notices of Celts in Greek authors from Hecataeus to Posidonius are printed, with English translation, by W. Dinan, *Monumenta Historica Celtica*, vol. 1 (1911; no more published). Greek and Latin materials, from inscriptions as well as literature, are collected by A. Holder, *Altceltischer Sprachschatz* (1896-). On Gaulish religion in particular see A. Bertrand, *La Religion des Gaulois* (1897); C. Julian, *Histoire de la Gaule* (1908); Charles Renel, *Les Religions de la Gaule*, etc. (1906); and J. Toutain, *Les Cultes païens dans l'empire romain*. On Druidism, in addition to the foregoing, H. d'Arbois de Jubainville, *Les Druides et les dieux celtiques à forme d'animaux* (1906); T. D. Kendrick, *The Druids* (1927). On the Celtic ideas of the future life there are valuable special studies by A. Nutt in Meyer and Nutt, *The Voyage of Bran* (1895). F. N. R.

RELIGION, ETRUSCAN. Our knowledge of Etruscan religion is limited by the imperfect nature of our sources. Archaeological material is abundant but ambiguous. Religious documents written in Etruscan are largely unintelligible. References to Etruscan religion in Greek and Roman sources are fragmentary and are derived from authors who may have contaminated Etruscan ideas with non-Etruscan notions (C. O. Thulin, *Die etruskische Disziplin* (1909), 1 ff.).

2. **ETRUSCAN SOURCES.** The Etruscan inscriptions are collected in the *Corpus Inscriptionum Etruscarum* (CIE). We have many shorter funeral inscriptions and dedications from archaic times on. Longer and more important inscriptions are: (1) the clay tablet from Capua assigned to the sixth or the fifth century B.C. on which names of several deities occur (*Studi Etruschi* 1934, 227); (2) lead tablets found at Magliano, Volterra, and Campiglia, perhaps, like their Greek and Roman parallels, curses (CIE 5237); (3) the Hellenistic bronze liver from Piacenza (discussed later); (4) a rectangular cippus found in Perugia, perhaps an agreement between two families about the division of a mausoleum (ibid. 4538); and (5) the comprehensive Etruscan text inscribed on the wrappings of an Egyptian mummy now in Zagreb (ibid., Suppl. Fasc. i, 1921, and M. Runes, *Der etruskische Text der Agrambinder* (1935)). The form of some passages suggests prayers, and names of gods and sacrificial implements have been recognized, but the significance of the whole is uncertain.

3. **ROMAN SOURCES.** Valuable information is found in Livy and in Cicero, *De Divinatione* (ed. A. S. Pease) and *De Haruspicum Responsis*. Claudius Pulcher, Nigidius Figulus, Tarquitius Priscus, Aulus Caecina, Julius Aquila, Umbricius Melior, the Emperor Claudius, and many other Roman writers discussed various aspects of Etruscan religion, but we have only fragments of their work. Some of this writing was derived from Etruscan sources, but there was also a strong tendency to add assorted religious information or to interpret Etruscan material in the light of Hellenistic religion or Hellenistic philosophy. All these authors knew only the very latest phase of Etruscan religion. There is nothing in Greek classical writers that would elucidate the earlier phases; Plato's reference to 'Tyrrhenian' cults is thought to refer to the Samothracian Cabiri (P. Boyancé, *Le Culte des muses* (1937), p. 22, n. 1).

4. **ETRUSCAN DISCIPLINE.** Roman writers of Cicero's time seem to imply the existence of a code of Etruscan

religious practices and beliefs. These books are variously referred to as Etruscan books, verses of Tages, books of Begoe; or, by their contents, as Books of Haruspices, Books on Lightning, Books on Ritual (Cic. *Div.* 1. 33. 72), Books on Fate (Livy 5. 15. 11), Books on Animal Gods (Serv. in *Aen.* 3. 168). It is not clear which of these were written in Etruscan and which in Latin; several names may refer to the same books. They must have contained genuine Etruscan beliefs with many later accretions. Many of these books had probably grown out of the records of answers given by Etruscan diviners and soothsayers to Romans; and all of them may, in some manner, have been fitted for Roman consumption, but we cannot doubt the antiquity of the Etruscan notion that thunderbolts are thrown by various gods and that these thunderbolts portend events in human life. Tinia, the chief god of the Etruscan pantheon (perhaps originally a great storm-god of the kind known in the religions of mountainous Asia Minor), threw three kinds of thunderbolts. Eight other gods threw one kind each, among them Juno and Minerva, the partners of Tinia in the great Etruscan triad of gods, and Vulcan (Sethlans?) the god of fire (Plin. *HN* 2. 138; Serv. in *Aen.* 1. 42). Spots which the thunderbolt had struck were sacred; the deity was propitiated with a sacrifice, the spot enclosed, and the thunderbolt regarded as buried (*fulmen conditum*). The wide porch in front of the Etruscan temples was probably used for observation of thunderbolts.

5. In an Etrusco-Latin bilingual from Pesaro (CIL xi. 6363) we see that the priest who interpreted thunderbolts (*fulgurator*) was also concerned with interpreting signs in the livers of victims (*haruspex*). This procedure was regarded as an Etruscan specialty: its antiquity is proved by the Etruscan mirror on which the Greek seer Calchas is shown so employed (E. Q. Giglioli, *L'arte etrusca* (1935), pl. 298. 1). On another mirror, of the third century B.C., a *haruspex Pavatarchies* foretells the future from the liver in the presence of the god Veltune (Vertumnus?) and the hero Tarchon (q.v.); some other representations of haruspices have been recognized from the peculiar costume (H. Dragendorff, *Studi Etruschi* 1928, p. 177). The Etruscan bronze liver from Piacenza (G. Körte, *Röm. Mitt.* 1905, 348) was divided into forty regions inscribed with the names of gods. The right half of the liver counted as lucky, the left as 'hostile' (Cic. *Div.* 2. 28), but the appearance and colour of the liver (Luc. 1. 618) were also taken into account in making predictions, of which we have some examples (Livy 5. 21. 8; Plin. *HN* 11. 90). Hepatoscopy was also known in the Near East, and in spite of differences in details a connexion with the Etruscan *haruspicia* appears possible.

6. The ritual appertaining to prophecy, greatly as it was valued by the Romans who called in Etruscan specialists, formed only a small part of the Etruscan discipline. Solemn foundation of cities, temples, and altars, and religious rites concerning distribution and division of land, are traced to Etruscan sources (Festus, p. 285 Müller; Blume-Lachmann-Rudorff, *Schriften d. röm. Feldmesser* i. 350). Processions, sacrifices, marriages, funerals, and funeral games are represented in Etruscan art. They, too, may have been codified in religious books. An interesting vase of the seventh century B.C. shows the 'Troy Game', apparently an ancestor of the Roman equestrian procession (E. Q. Giglioli, *Studi etruschi* 1929, 111), the *ludus Troiae*.

7. Much concern for the dead was shown by the Etruscans. The prevailing notion from the beginning to the end of Etruscan culture makes the dead continue their life in their house-like tombs. Other works of art show them on their journey to the lower world in the company of demons who are at times of ugly and terrifying character. Funeral games were held in honour of the deceased; gladiatorial games may have originated on these occasions (L. Malten, *Röm. Mitt.* 1923-4). The deification

of souls imputed to Etruscans by Arnobius (*Adv. Nat.* 2. 62) need imply no more than a belief in after-life. If phallic cippi really adorned male tombs, and house-urns female (R. Mengarelli, *Studi Etruschi* 1936, 90), it might be argued that the Etruscans regarded the sexual and procreative power as the lasting part of mankind. This would connect with the Roman belief in *genii* and *Junones* (see also L. Euing, *Die Sage von Tanaquil* (1933), 24). From the fourth century B.C. on credence was also given by some Etruscans to Greek ideas of an underworld presided over by Hades and Persephone to which Hermes Psychopompos brings the dead.

8. The Etruscans also had a peculiar system of world ages (*saecula*). They apparently believed that a certain number of *saecula* were allotted to each nation, this number being ten in the case of the Etruscans.

9. Etruscan mythology includes Etruscan, Greek, and Italic gods. Unquestionably Etruscan in name are *tinia*, *cilens*, *fufuns*, *sethlans*, *turms*, *culsu*, *acavisr*, *alpan*, *vecu* or *Begoe*, *mean*, *mlacuch*, *snenanth*, *thalna*, and some others. Early relations with Greece led to equation of *tinia* with Zeus, *fufuns* with Dionysus, *turms* with Hermes, *turan* with Aphrodite, *sethlans* with Hephaestus. As early as the sixth century B.C. the Etruscan cities of Caere and Spina (or their Greek inhabitants) had treasures in the Delphic sanctuary; Greek dedications to Hera have been found in a temple precinct in Caere (R. Mengarelli, *Studi Etruschi* 1936, 67). Among the gods of their Italic subjects Juno and Minerva rose to a place in the highest Etruscan triad (F. Altheim in *PW*, s.v. 'Minerva'), and Mars, Neptune, Silvanus, and Janus were also among the Etruscan high gods. The Greek Heracles, Apollo, Artemis, Hades, Persephone, and Charon retained their Greek names, while many other gods, though Etruscan or Italic in name, retained their Greek functions and mythology. Native Etruscan gods such as *tinia* and *turan* probably had an original mythology of their own; *turan* carrying the child *tinia* (D. Levi, *Not. Scavi* 1931, 204) indicates a myth unknown in Greek tradition. Some traits of native mythology are perhaps reflected in the representations of Oriental deities in early Etruscan art and in the peculiar mythological variations which have been observed in the Etruscan representations of Heracles and Charon (J. Bayet, *Herclé* (1926); F. De Ruyt, *Charun* (1934)).

10. Many names of gods are related to names of cities or to family names. Nortia, Hostia, Soranus, Feronia, Angerona are often called family deities, i.e. deities which belonged first to one family and then became more popular. It is true that sometimes a deity is described as belonging to one particular family (*culsu leprenei* and *uni urmsnei*), but these formulae resemble the Latin *Fortuna Flavia* and should rather be taken as an indication that the family claimed a well-known deity as their special patron (H. J. Rose, *SMSR* 1928, 209). Possible theophoric names of cities are Populonia, connected with *fufuns*, and perhaps Vetulonia. In other instances the priority is not clear: Tarchon, Tarquinia, and the family of Tarquinii; the god *Vel*, *Veltune*, Voltumnus, the cities Volsinii, Veltur (Capua?), Volturum, and numerous Etruscan names from the root *vel-* or *velz-* are good examples.

11. Apart from a few high gods such as *tinia*, *uni* (Juno), Minerva, Mars, Apollo, *turms*, *fufuns*, *sethlans*, and Heracles, we find that the Etruscan deities seem to belong to definite spheres. Some gods are known only from documents referring to the *disciplina*. Others such as Charon, Tuchulcha, Mantrns (Mantus), and Vanth are peculiar to the funerary sphere. On mirrors, which were primarily designed for women, *turan* as goddess of love and subsidiary deities such as *acavisr*, *thalna*, *snenanth* are prominent, and minor demons designated as *lasae* are frequent.

12. Etruscan religion is a complex phenomenon. Certain features, such as the combination of political and religious powers in the hands of the princely *lucumones*; the worship of Tinia on the mountains, and his importance as thunder-god; the ritualistic codification of beliefs; the prophecies from thunderbolts and from the liver; and the quality of fervid and strange mythological imagination are suggestive of pre-Greek, possibly Oriental religions. On the other hand, the significance attached to agriculture and to distribution of land and the peculiar designation of one god as belonging to another (*turms aitas* = Hermes of Hades) are reminiscent of Roman religion (Gellius 13. 23), and many scholars have recognized similarities between Etruscan rituals and the *Tabulae Iguvinae* (q.v., and K. Olzseha, *Klio*, Beiheft 1939). It would appear that the influence of primitive Italic religion extended not only to mythology but to belief as well. Greek influence produced genuine transformations of some Etruscan gods and added considerably to mythological variety. It failed to affect very deeply the ritual or the general tenor of Etruscan religion.

Clemen, *Die Religion der Etrusker* (1936); E. Fiesel, 'Die Namen des griech. Mythos im Etruskischen', *Zeitschr. f. vergleichende Sprachforschung, Ergänzungsheft*, vol. v (1928); F. Altheim, *A History of Roman Religion* (1938). *Studi Etruschi* i-xiii (1927-39) contain important articles, reports on new material, and bibliographies. Other articles in *Studi e materiali di storia delle religioni* iv-xii (1928-36), esp. vols. iv and v, and in Roscher, *Lex.*, and *PII* under the names of Etruscan deities. See also TAGES and TARENION. G. M. A. H.

RELIGION, ITALIC. The history of a religion needs documents, and those written in the language of the people of whose religious beliefs and practices it is proposed to give an account. The documentary evidence from ancient Italy, other than Latin and Greek, is meagre or, in some cases, imperfectly understood. But it is enough to make certain two facts: (1) the development of religion among the Italic tribes was essentially parallel to what took place at Rome—the differences are differences of detail; (2) hence, as at Rome, so in Italy at large, religion during the period c. 400-90 B.C. (which is the only period in which its activity is attested and also remained comparatively independent) was a composite affair that had received contributions from a very old and persistent stratum of Mediterranean people, from the waves of trans-Alpine immigrants—starting in prehistoric times and including the Gauls—who brought several forms of Indo-European language into Italy, from Illyrian settlers on the east coast, from others on the west (the Etruscans—probably of Anatolian origin), from Greek colonists, and, through them, from the Near East. It was, therefore, especially by the end of that period, ripe for the identification of its deities with those of Rome, to whom many of them were sufficiently akin (e.g. Umbrian *cuhrar matrer*, at Fulginia, gen. sing. 'Bonae matris', or Picene *dea Cupra*, cf. the Roman *Bona dea*), or even identical (e.g. Oscan *diuēt*, i.e. 'Ioui', *manrt[ei]* 'Marti'), as well as for identification with Greek and other deities of the kind that went on in Roman religion. Greek cults are by no means missing from the dialect-records, e.g. Messapic *aprodita* and *damatar*, which interpret themselves; Oscan *apellun*—'Apollo' (Messana, Pompeii), *herēko*—'Hercules' (Lucania, Campania, Samnium, Vestini, Paeligni, and at Praeneste), *medukitels*—'Meduŋŋiu' (Pompeii), *euklūt*—'Εὐκλόης' (i.e. Hermes, in Samnium); and, in the fastness of Corfinium even, *persephonas* (i.e. Persephona, gen. sing.), *urianas* 'Οὐρανίας'. If *liganakdikel* (Samnium) is a translation of *Θεοπεδοπόρ* rather than an independent compound (quasi **ligāde-dic*, qualified by the epithet *central*, i.e. 'inmost-forest-revealing goddess'), then a Greek cult-title has been borrowed.

2. But there is much that is genuinely native, as the

enumeration which follows shows (for the *Tabulae Iguvinae* see that article). The fundamental Italic conception of deity, like the Roman, was 'act rather than personality' (e.g. *herentas* 'desire' at Herculaneum and Corfinium, compare the Roman *Venus*, lit. 'charm'; *vezkel*, perhaps 'Lucinae' [?], *patanai* 'Pandae', *genetel* 'Genitae', cf. the Roman *Genita* *Mana Venus*, *Genetrix*—these three all from the *Tabula Agnonensis*, Samnium). The greater part of the beliefs of Italic tribes were concerned with the innumerable aspects of natural order (*diumpals* [cf. *Lumphicis*, Νύμφαις *CIL* i². 1624, Naples] and *anafriss* 'imbribus' both *ibid.*—and both with the epithet *kerrio*—'Cerealis', i.e. 'genialis', *cerfu semuni*, Corfinium, gen. pl., and cf. Lat. *seunius* acc. pl., *Carm. Arv.*, *Semo Saucus*, and, for *cerfu*, Lat. *diuonus cerus*, *Carm. Sal.*, ap. Varr.) or of human life (Venetic *rei-tia*, called *sahmat-ei* 'healer', Ven. *wrota* 'turner', cf. *Postuorta*, *Autenorta*; or Ven. *lah-w-na*, cf. Messapic *logetibas* dat. pl., Sicel *Λάγχοις*, Messapic *lahoua* dat. sign., perhaps all connected with Gr. *Λογία*, and so maieutic; Ose. *ammal*, *Tab. Agn.*, clearly nurturing in function, *mautis* *ibid.*, cf. 'Manibus' or possibly *Matutinus*, *Mater Matuta* [?]).

3. Then, too, just as in Roman religion, there are gentile cults, proper to certain families, e.g. Raetic *velxanu*, Ven. *Volkanus*; *Diua Plotina* (Ariminum), *Ancharia* (Asculum), *anagtiai diuŋiai* 'Angitia Diae' (Samnium, also found among the Marsi and Vestini), and *Pelina* (Paeligni), the last named perhaps already tribal or local, like *Planatica* (Histri), *Minuera Cabardiaccensis* (Travi, Aemilia), *Matronae Vcellasiacae Concananuae* or *Matronae Braccorium Gallianatum* (Transpadana). From Capua and Cumae comes a large group of inscriptions, which call themselves *iueilas* (n. pl.), cf. *leima iuila*, i.e. 'Linia Iouia' (Raetic). Each regularly bears a heraldic emblem and records or prescribes an annual sacrifice to certain tutelary deities, or in honour of the ancestors of the family, on a fixed date. Jupiter 'Flagius' (cf. *Ioui Flazzo*, *Flazo* at Pozzuoli) is expressly mentioned, and a goddess analogous to the Roman *Lucina* seems also to be concerned. The wording of these inscriptions is very similar to that of a number of early Theran inscriptions (e.g. *IG* 12. iii Suppl. 1324, cf. iii. 452), and this interpretation of them is thereby confirmed. During the Social War the confederate Italic tribes represented Italia on coins (*Vitelini*), just as the Romans had *Roma* long before.

4. Last we have to note the recognition and worship of certain greater personalized powers, which, again as at Rome, were like enough to some of the Olympian deities to be identified with them, or had been borrowed from them—Jupiter himself, *regenai peai cerie iouia* 'Reginae Piae Cereri Iouiae', Castor and Pollux (Paelignian *puelois iouiois* dat. pl.), and the 'first-born daughter of Jove' (*diouo filea primocenia*, Praeneste)—to name no others. Even Juno and Diana appear to have been Latin in the first place rather than Roman. To the most remote times goes back the worship of mother-goddesses, attested by non-epigraphic remains at opposite ends of the peninsula in Liguria and in Malta (compare the later Celtic *Matronae* in Cisalpine, also called *Iunones*), or of mother-earth (Sicel *Alve*, Messapic *ana*, Ose. *Damia*, with a festival *ēapria* at Tarentum, cf. Lat. *damium*, Ose. *damuse* . . . **Damonia*), whose cult was extremely ancient all through the Mediterranean basin, or of infernal deities (attested by several Oscan *defixiones*); and not much later is the worship of animals, often disguised subsequently as eponymous ancestors, Messapic *Damua* (the wolf), *Hirpu* (Sabini, Hirpini—also the wolf), Messapic *Menzana* (the harte), Sicel *Ἰερός* (the bull), or of natural features such as the mountain-top (Celtic *Perrinus* in the Alps, *ceres tarinensis* gen. sp., Marrucini), hot springs (Ligurian *Barro*), or rivers (*Padus pater*). Agricultural deities and festival,

like the Ligurian *Leucimalacus* ('apple-ripeners') and *plöstralia*, or the Oscan *fiuusatals* (loc. pl., 'Floralibus'), are a commonplace. There is, in short, every reason to suppose that, together with the same elements (magic, taboo, animism) that are fundamental in early Roman religion, there went, among the Italic communities, the same kind of development of local and functional spirits as at Rome, worshipped in the same way by sacrifice, prayer, lustration, and vow.

BIBLIOGRAPHY

The primary sources are collected in R. S. Conway, *The Italic Dialects* (2 vols. 1897), and in R. S. Conway, J. Whatmough, and S. E. Johnson, *The Prae-Italic Dialects of Italy* (3 vols., 1933). J. Whatmough, *The Foundations of Roman Italy* (1937), includes brief surveys of the known facts from all the dialect-areas. A full discussion of the problems of Italic religion, with much theorizing and some questionable assertion, may be had in F. Altheim, *A History of Roman Religion* (1938; to be used with caution). J. W.

RELIGION, MINOAN-MYCENAEAN. As very few finds of religious importance are reported from the Early and Middle Helladic (Bronze Age) periods of the mainland of Greece, our knowledge of the religion of the pre-Greek population of Greece is almost exclusively derived from Crete, where the Bronze Age is called the Minoan Age (q.v.). In the Late Helladic period the immigrant Greeks dominated the mainland, especially its eastern parts. (We revert later to this period, which is also called Mycenaean.) The cult-places in Minoan Crete were partly natural caves or rock-shelters. Some caves, e.g. at Psychro and Arkalochori, have yielded numerous votives, double axes, bronzes, rings, gems, etc. The rock-shelter at Petsofa is peculiar by reason of its terra-cottas representing limbs and parts of the body; they cannot, however, be votives to a healing god. There were no great temples, but rustic sanctuaries and small chapels in houses and palaces, e.g. at Cnossos, Gurnia, etc. Their type of façade is known from wall-paintings and pieces of gold foil; it has three compartments with columns and horns of consecration and is crowned by the same horns. At the back is a raised dais on which idols and vessels were placed, other vessels being placed on the floor. There were altars and several kinds of sacrificial vessels too. We very often see an object consisting of two hornlike projections united by a common base; it is called 'horns of consecration'. Sacred vessels or branches were put between the horns. 'Horns of consecration' were often used in a purely ornamental way on vase-pictures and buildings, etc. The symbol of Minoan religion is the double axe which is very often depicted on vases and found among votives; the blades are generally curved and so thin that they are useless for practical purposes. Paintings show it crowning a high pole beneath which a sacrifice is performed. Probably it is the sacrificial axe. In the opinion of Evans the cult of pillars was frequent, but most of the pillars have a structural purpose, and the columns surrounded by symmetrically grouped animals on gems, etc., seem to be an abbreviation of a temple. A few cases seem, however, to prove a cult of baetyls (sacred stones). Tree-cult is proved by many gems and especially by the paintings of the sarcophagus from H. Triada, showing a tree in a holy enclosure. Some representations show a dance of an ecstatic kind. The cult-idols are female, bell-shaped, and very primitive; they are often found in houses. A few of better workmanship carry snakes in their hands, e.g. the faience statuette from Cnossos and the chryselephantine statuette in Boston. Gems and seal-impressions show the epiphany of gods in bird-shape and also in human form, sometimes as small figures hovering down from the air, sometimes full-sized. There is further a great number of daemons, monsters, and fabulous animals.

2. Many scholars, headed by Evans, think that the Minoans believed in a Great Goddess who ruled this

world and the Nether World and compare her with the Great Mother of Asia Minor. A famous seal-impression from Cnossos shows a goddess holding a spear, standing on a mountain between two lions; the similarity is undeniable, but does not prove identity. From this and other data a kind of monotheism is inferred, and when a boy god is joined with the Mother Goddess as her paramour, just as Attis with the Great Mother, it is even termed a 'dual monotheism'. This last suggestion is highly hypothetical. It is more likely that the Minoans, just as other peoples, had a polytheistic pantheon. On seals, rings, and gems we discern gods and goddesses of various functions, the goddesses being in a considerable majority: a master and a mistress of animals who also are gods of hunters, who worshipped the so-called Mother of Mountains mentioned above, a goddess of tree-cult whom the great gold ring from Mycenae shows seated under a tree and approached by votaries, a goddess seated on board a ship, and finally the snake-goddess. The snake is believed to characterize her as a goddess of the Underworld, but the snake is to this day, even in Greece, still more venerated in domestic cult than in the cult of the dead. Since the snake-idols are found in houses and house chapels, it is clear that the snake-goddess has her origin in the cult of the house-snake. She is a domestic goddess, not the Lady of the Underworld. Of the cult of the dead little is known except for the paintings of the sarcophagus from H. Triada which probably represent a deification of the dead man. The heavenly bodies are sometimes represented; it is uncertain whether worship was paid to them. The alleged bull-cult cannot be proved; the bull-ring which gave rise to the Minotaur myth was hardly anything other than a secular sport. Egyptian influence is apparent in details, Babylonian is less prominent; but, generally speaking, the Minoan religion has a native character of its own.

3. Since the beginning of the Mycenaean age the Greeks took over Minoan religion with Minoan culture. To judge from the monuments above, they seem to have been wholly minoized; very many rings, gems, etc., with quite Minoan representations, for a great part certainly made in Crete, have been found on the mainland. Differences are few. In a room at Asine there is a bench with idols and vessels just as in Crete; the difference is that the bench is located in a corner of a hall and that to the idols are added a stone axe and a large male head, perhaps Zeus. On a limestone tablet from Mycenae is painted a goddess covered with a great shield, probably a forerunner of Athena. In the shaft-graves at Mycenae were found gold leaves representing a nude woman with birds who is called Aphrodite; an Oriental origin is probable, for nudity (like the phallus) is not found in Minoan religion. But the Mycenaeans were Greeks and certainly had their own religion, though in art it was concealed by the Minoan exterior.

4. The Homeric epics, which go back into the Mycenaean age, set us on its track. The Greeks brought with them Zeus from their old home; their State of Gods is, just as always, modelled after the State of men; like the Mycenaean war-king Agamemnon, Zeus is surrounded by vassals, and there is even a popular assembly in which the small gods take part. The Greek State of the Gods corresponds precisely to the feudal organization of the Mycenaean age. There is in Homer a simple belief in Destiny which recurs among other warlike peoples and helps them to brave the risks of warfare; it probably developed during the warring Mycenaean age. Athena, the special protectress of certain heroes, is the Minoan palace-goddess—she, too, has the snake as her attribute—and the Mycenaeans transformed her into the warlike protectress of the king. Hera is perhaps another palace-goddess; her name signifies simply 'the Lady' (it is kindred with *ἡρως*, in Homer 'Lord', 'Sir'). Another discrepancy is that plenty of idols are found in Mycenaean

tombs and almost none in Minoan, except for the very end of the Minoan age when it was influenced by the Mycenaeans. The Mycenaeans built stately beehive tombs for their kings which have no parallel in Crete, and the dead were buried unburned. Homer, on the contrary, knows only cremation and speaks always of mounds. Cremation began at the end of the sub-Mycenaean age; the question is too difficult to be treated here; but offerings, though not the dead, were sometimes burned in Mycenaean tombs. The beehive tomb was covered by a mound, at least the top of which projected above the surface. A cult was of course given to the dead kings and princes, who when alive were heroes—to use the word as Homer does. The cult of ancestors ceases with the extinction of the family, but if the people also are devoted to it, it may survive the extinction of the family and even the forgetting of the name of the dead man. There is evidence that at one Mycenaean tomb the cult was continued down into the historical age—at Menidi (Acharnae), in fact, to the beginning of the Peloponnesian War.

5. The cult of heroes has its origin in the Mycenaean age. There is other evidence for cult continuity from Mycenaean to historical times; the temple of the city goddess was built on the ruins of the palace of the Mycenaean king at Athens, Mycenae, Tiryns. Thus Minoan religion was transformed by the Mycenaean Greeks and handed down to the historical age. Certain myths of an un-Greek appearance, especially the myth of the birth and death of Zeus, show that Minoan elements were taken over directly. Hyakinthos, whose Minoan origin his name proves, is another representative of the dying and revival of vegetation. The Divine Child abandoned by its mother and nourished by others represents another Minoan myth which is coupled with the former. Again, the concept of Elysium, or the Islands of the Blest, seems to be a Minoan heritage. The two great antitheses in Greek religion are not, as many say, the Olympian and the Chthonic religion, but the emotional Minoan and the sober Greek religion. Historical Greek religion is a fusion of the two, but the contrast lingered on in the archaic age and gave the mystic movements their force.

Nilsson, *The Minoan-Mycenaean religion and its survival in Greek religion* (Lund, 1927); 'Homeric and Mycenaean religion' (*ARW* xxxiii (1936), 84 ff.; *Gesch. d. griech. Religion* i. 237 ff.). M. P. N.

RELIGION, PERSIAN. The Greeks had, from about the fifth century B.C., a fairly good acquaintance with Persian religion, not always, however, with its native form, but with the mixed beliefs and practices brought about by the extension of Persian influence to Babylonia and elsewhere; hence, e.g., the frequent assertion that Zoroaster (q.v.) was an astrologer; cf. Bidez-Cumont, p. vi. Further colouring is due either to the general opinion that all barbarians are too stupid, or too sage, to worship any but the natural and visible gods, as heaven, earth, and sun (cf. Ap. Rhod. 3. 714 ff. [Colchians], Caesar, *BGall.* 6. 21. 2 [Germans]), or to the recurrent, but especially Hellenistic, craze for finding deep philosophical learning among Orientals. Hence the numerous statements about Persians worshipping the sun and earth should be read with caution, though some no doubt refer to real cults of Mithra (q.v.) and of a mother-goddess; and such passages as Dio Chrysostom, 36, 39 ff. von Armin, which puts a quasi-Platonic myth into the mouths of the Magi, may be disregarded. Something was known of Persian gods from fairly early times, though the oldest surviving mentions of Mithra and Ahura-Mazda (*Ἄφροδιτης*, *Ἀφροδιτης*, *Ἀφροδιτης* respectively, Herodotus i. 121, 3 and [Plato], *Alch.* i. 122 a, make the former a goddess, the latter Zoroaster's father. Of surviving authors, Plutarch, *Mer.* 369 d ff., 1026 b, gives a correct account of Ahura-Mazda and Angra-Mainyu or Anri-

man (*Ἀρεμάνιος*). Other statements substantially correct are, e.g., Herodotus i. 132 and Phoenix of Colophon, f. 1 Powell, about the method of sacrifice; Strabo 15. 3. 15 on the holy fire; Cicero, *Leg.* 2. 26, on Persian objection to temples of Greek type, and numerous remarks about the Magi, although Hdt. 3. 61. 1 ff. may be neglected in this context, because it rests on confusion between *magāsu*, a palace official, and *magawan*, members of the priestly order (see F. W. König, *Der falsche Bardija* (1938), 93, 180). Some knowledge of their sacred writings may be presumed on the part of Hermippus (Pliny, *IIN* 30. 4) and those who drew upon him; some were known by name and a certain amount of truth blended with the falsehoods told about them, see Bidez-Cumont, *passim*.

For bibliography see ZOROASTER, and add C. Clemen, *Fontes historiae religionis Persicae* (*Fontes historiae religionum*, fasc. 1, 1920); M. Haug, *Essays on the Religion of the Parsis*, ed. E. W. West, London, n.d., ch. 1. II. J. R.

RELIGION, TEUTONIC. Information concerning Teutonic religious ideas and observances furnished by classical authors is a welcome supplement to the knowledge gained from the much more abundant Germanic sources, for two reasons particularly: the comparatively early date of the references, and their value as illustrating the religion of the south Germanic tribes, for which the vernacular materials are scanty. The inscriptions, extant in considerable number, transmit native divine names which are rarely found in the literary sources, the authors of which usually substitute the name of a Roman god who bears a real or fancied resemblance to the Teutonic deity (see INTERPRETATIO ROMANA).

2. Among ancient writers Tacitus has most to say concerning Germanic religion. His statements about Teutonic gods contradict directly the testimony of Caesar, *BGall.* 6. 21: 'Deorum numero eos solos ducunt, quos cernunt et quorum aperte opibus iuvantur, Solem et Vulcanum et Lunam, reliquos ne fama quidem acceperunt.' Tacitus says, *Germ.* 9: 'Deorum maxime Mercurium colunt, cui certis diebus humanis quoque hostiis litare fas habent. Herculem et Martem concessis animalibus placant.' *Mercurius* undoubtedly represents the Teutonic *Wōdanaz (OE Wōden, ON Óðinn); *dies Mercurii* is translated by *day of Wōdanaz* (OE *Wōdenes dæg*, Engl. *Wednesday*). Later references confirm this equation. Similarly, Mars = Teutonic *Tiwaz (etymologically related to Dyāus, Zeus, Jupiter), the Indo-European heaven-god who became among the Teutons a god of war. *Dies Martis* = OE *Tiwes dæg*, Engl. *Tuesday*. Hercules is usually (and probably rightly) equated with the Germanic thunder-god *Þunraz (ON Þórr, Thor). But here the equation is not supported by *interpretatio Romana*, for OE *Þunres dæg*, Engl. *Thursday*, German *Donnerstag* = *dies Iouis*. The fourth chief deity of the Teutons, *Inguz or *Ingwaz, a god of fertility, appears *Germ.* 2 in the tribal name *Ingaevones*. Cf. Yngvi-Freyr in Scandinavia, whose statue 'cum ingenti priapo' in the temple at Uppsala is described by Adam of Bremen in the eleventh century. (*Ing-* related to Gr. ἔγχος 'lance', i.e. phallus, phallic image?). The names of the other two tribal groups, *Istactones* and *Hermiones*, may contain by-names of Wōdanaz and Tiwaz respectively.

3. We are better informed concerning the Teutonic names of female divinities, both from literary sources and from inscriptions. Tacitus describes (*Germ.* 40) the cult of the goddess Nerthus, *Terra mater*, whose name corresponds exactly to that of Njörðr, the Norse fertility-god. Nothing is known of two other goddesses mentioned by him, Tanfana (*Ann.* i. 51) and Baduhenna (*Ann.* 4. 73), except that the latter name contains in its first element a Germanic word for 'battle'. The inscriptions show a large number of additional names: Nehalennia, Iludana, Haeva, Vagdavecutis, Sandaudeiga,

Hariasa, Harimella, Garmangabis, Alateivia, Vihansa, and others. Many of these are recognizably Teutonic, but only partially capable of interpretation. A special group is constituted by the *Matres* and *Matronae*, who were also venerated in Celtic territory; see *DEAE MATRES*. In the case of male gods the names appear as by-names: *Mercurius Cimbrianus* or *Cimbrius*, *Mercurius Chamminus* (*Channo?*), *Mercurius Leudisio*, and others; *Hercules Magusanus* (eight inscriptions); *Mars Halamarthus* (slayer of men?), *Mars Thingsus* (god of the thing or folk-moot; cf. German *Dienstag* vs. Engl. *Tuesday*). This last inscription, found at Housesteads near Hadrian's Wall, can be dated between A.D. 222 and 235, during the reign of Alexander Severus.

4. For an account of Teutonic ritual and sacrifice (in which fertility-cults played a prominent part from the early Bronze Age to the end of the pagan period), of priests and priestesses, and of oracles and prophecy, the reader is referred to Much's article cited below.

C. Clemen, *Fontes historiae religionis Germanicae*; *PW*, Suppl. 3, 579 ff. (R. Much); K. Helm, *Altgermanische Religionsgeschichte* i; J. de Vries, *Altgerm. Religionsgesch.* i (Pauls Grundriss², 12/1).

F. S. C.

RELIGION, THRACIAN. This was crude and barbaric before Greek influences transformed it. There is evidence of primitive animal-worship, human sacrifice, magical ceremonies, orgiastic rites. The earliest evidence, however, shows a belief in a future life. They brought to their worship powerful religious emotions that were still evident in later times.

Their native gods were vaguely conceived until individualized in Greek forms. The chthonian powers were especially favoured by them. Dionysus (q.v.) was their greatest god and their chief contribution to Greek religion. He was a god of vegetation and fertility, worshipped in wild, ecstatic rites. He was closely related to Sabazius (q.v.), whose cult was widespread among Thracians and Phrygians. He was originally conceived in animal form, and the animals thought to embody the god were torn to pieces and devoured raw by his worshippers, who thereby filled themselves with the god's power.

Other important Thracian deities are Bendis (q.v.), goddess of the chase and fertility, identified with Artemis; the closely related Cotys (q.v.) or Cotyto; Bedy, a spring and river god; Heros, god of vegetation and the chase, guardian of houses and roads (see *RIDER-GODS*); the closely related Rhesus (q.v.), the mysterious Zalmoxis (q.v.), of whom we know little; water-spirits, identified with the Nymphs; a war-god, identified with Ares; the Cabiri (q.v.). Several Greek gods were widely worshipped: Apollo, Zeus, Hera, Hermes, Heracles, Helios, Hades, Persephone, Asclepius, Hygieia, Telesphorus. The Thracians had a well-developed cult of the dead, for whom they raised impressive mounds.

REMUS, see *ROMULUS*.

REPETUNDAE (or more fully *Res repetundae*). Several Roman laws of the time of the Republic dealt with the repression of illicit enrichment of public officials at the cost of people subject to their power. Frequent cases of abuse committed by provincial governors and their subordinates led to the provision of a legal remedy. Wrongdoing of this character was called *crimen repetundarum*, since the original legal provisions conferred upon the person who suffered loss the right to demand return of *res* or *pecuniae* extorted. The first Republican law against these offences was the *Lex Calpurnia* (149 B.C.), which introduced a special criminal procedure (*quaestio*, q.v.), though the trial somewhat resembled a civil action,

being directed to the return of the *res repetundae*. Subsequent legislation extended farther the circle of persons responsible for such abuse, and enlarged considerably the sphere of illicit acts to be punished as *crimen repetundarum*. The last *lex* on the matter was the severe *Lex Iulia repetundarum* (59 B.C., by Caesar), the provisions of which were accepted in the *Digest*, together with extensions introduced by classical jurists. Finally, *pecuniae quas quis in magistratu, potestate, curatione, legatione uel quo alio officio, munere, ministerio publico cepit*, could be claimed back from all officials. Penalties varied in course of time and were not identical in all cases: fines, loss of political rights (removal from the Senate), *infamia* (q.v.), *deportatio*, in graver cases.

A. B.

REPOSIANUS (3rd c. A.D.), author of a poem in 182 hexameters on the intrigue between Mars and Venus, preserved in the codex Salmasianus.

Text with transl., J. W. and A. M. Duff, *Minor Lat. Poets* (Loeb, 1935).

REPUDIUM, see *MARRIAGE, LAW OF*, II. 6.

RES PRIVATA, a new department of imperial finance, distinct alike from *fiscus* and *patrimonium*, created by Septimius Severus to receive the enormous estates confiscated from his political enemies. Why Severus chose to apply this special treatment is not clear. He might well decline to merge them in the *fiscus*, but the *res privata* could no more remain private property than the *patrimonium*, and, actually, it passed from emperor to emperor. It was under a procurator of a special rank (*trienarius*—300,000 HS per annum) and administered vast landed estates, especially in Asia Minor. H. M.

RES REPETUNDAE, see *REPETUNDAE*.

RESCRIPTUM, see *CONSTITUTIONES*.

REX, the Roman word for 'King' (etymologically connected with *regere*, to lead), is in itself evidence for a period of monarchy, the existence of which is postulated by the general process of political development in the Greek and Roman world, and attested by literary tradition, by archaeology, and by juridical and religious survivals. The word *rex* occurs in the Lapis Niger inscription in the Roman Forum, but the doubtful date of this makes it a matter of dispute whether the *rex* referred to is actually a king or the *rex sacrorum* (q.v.). Moreover, the name *Regia*, meaning the palace of the supreme pontiff, and such compounds of *rex* as *rex sacrorum* (or *sacrificolus*) and *interrex* prove that these republican officials were preceded by kings, whose name and powers they inherited.

That the king had ritual duties is confirmed by the analogous obligations fulfilled by his counterpart in Athens, the (ἄρχων) βασιλεύς. But the question of the power actually held by the king, and the legal foundation of the Roman monarchy, cannot be answered satisfactorily, owing to the lack of contemporary evidence. The only documents mentioned by ancient authorities are an agreement between Tarquin the Elder and Gabii, and an alliance between Servius Tullius and the Latin League. Therefore, annalists and jurists, in setting forth their theory of kingship and in relating the history of the regal period, merely applied the political system of the Republic to the original constitution of the city, substituting for the consuls one magistrate called *rex*, who was supposed to have had the right of being preceded by twelve lictors, since he combined in his person the authority and power

of the two consuls. Although Roman tradition wrongly connected the origins of several Republican functions and customs with the regal period, it seems certain that some of these rights were actually enjoyed, and some of these duties fulfilled, by the kings—e.g. the wearing of a purple robe, the triumphal procession after a victorious campaign, etc. The king administered justice sitting in an ivory chair on a chariot (hence the term *sella curulis*); he made war and peace; in time of war he assumed the chief command and exercised a supreme right of life and death over every soldier and citizen.

The Roman monarchy was supposed to be elective, and not hereditary, on the analogy of the procedure followed in consular elections. The traditional list of the seven kings provides no proof to the contrary, although it contains two Tarquins, since one Tarquin may be merely a duplication of the other. The traditional kings certainly represent neither gods nor the personification of the seven hills, but not all of them can be accepted as historical figures. If nearly all details referring to the history of the regal period must be rejected, yet tradition is indisputably right in dating the fall of monarchy at the end of the sixth century B.C. It is difficult to say whether this was due, as traditionally related, to a revolution, or to a gradual evolution, although the fact that legal measures were taken not later than the fourth century to prevent any attempt at the re-establishment of monarchy seems to favour the former alternative. The example and influence of the Hellenistic kingdoms caused at Rome a change of attitude towards both the conception of monarchy and its practice, thus paving the way for the monarchical restorations of Sulla, Caesar, and Augustus.

Mommsen, *Röm. Staatsr.* iii. 1. 4 ff.; A. Rosenberg, *PIV* s.v.; K. J. Beloch, *Röm. Gesch.* (1926), 225 ff. On the idea of kingship in the age of Caesar see J. Carcopino, *Points de vue sur l'impérialisme romain* (1934), 102 ff. P. T.

REX NEMORENSIS, the 'king of the grove', i.e. Diana's grove near Aricia. This unique official was an escaped slave who acquired office by killing his predecessor, after a formal challenge in the shape of a violation of the grove by plucking a branch. See Strabo 5. 3. 12, p. 239; Suetonius, *Calig.* 35; Servius on *Aen.* 6. 136; more in Frazer, *GB* i, p. 11, note 1. The man was Diana's priest; for attempted explanations of his position see Frazer, *op. cit.* passim; A. Lang, *Magic and Religion*, 206 ff.; Rose, *Roman Questions of Plutarch*, 91. H. J. R.

REX SACRORUM. On the expulsion of the kings from Rome, their sacral functions were confided to a priest who bore the title of *rex sacrorum* officially, less formally *rex* simply; Livy (2. 2. 1), which see for the institution, calls him *rex sacrificolus* (not *sacrificulus*). He was subordinate to the Pontifex Maximus (*ibid.*), but superior to all the flamens, Festus, p. 198, 30 Lindsay. He was a patrician born of confarreate marriage (Gaius 1. 112), might hold no other post and was chosen for life (Dion. Hal. *Ant. Rom.* 4. 74. 4), and his wife, the *regina*, had certain sacral duties, Festus, p. 101. 6.

See Marquardt-Wissowa, *Staatsverw.* iii. 321 ff. H. J. R.

RHABDOMANCY, see DIVINATION, para. 6.

RHADAMANTHYS, in mythology, son of Zeus and Europa (q.v.); he did not die but went to Elysium (*Od.* 4. 564). There he is a ruler and judge (*Pind.* *Ol.* 2. 75 ff.). He is uniformly represented as just (*id.* *Pyth.* 2. 73 f., and often). He is one of the judges of the dead (Plato, *Apul.* 41 a), along with others renowned for their justice, and so often in later authors, e.g. Verg. *Aen.* 6. 566, where he presides over Tartarus. Apart from this he has not much legend; his genealogy varies, Cinethon ap. Paus. 8. 53. 5 giving Cres-Talos-Hephaestus-Rhadamanthys. See further Jensen in Roscher's *Lexikon*, s.v. H. J. R.

RHAETIA, see RAETIA.

RHAMPSINITUS, i.e. Ramses (III?), to whom a folk-tale (Stith Thompson, K 315. 1) is attached in Herodotus 2. 121. The builder of his treasury left a secret entrance and after his death his two sons stole therefrom. One being trapped, the other beheaded him, avoided capture himself, and at last was reconciled to the king. H. J. R.

RHAPSODES were reciters of epic poetry, *ῥαπτοὶ ἐπέων δοῖδοι*, as the Homeridae (q.v.) are called (*Pind. Nem.* 2. 1), including both poets themselves, even Homer (*Pl. Resp.* 600 d), and minstrels reciting the work of others. Minstrels mentioned by Homer partly extemporize and partly recite from memory. An important part of the duty of a minstrel was to select and join passages of existing poetry, adapting them with greater or less alteration, a method which is indicated by the frequent notices (especially Clem. Al. *Strom.* 6. 2 25. 1-26. 3) of the appropriation or plagiarism by one poet of the work of another, and to which the name rhapsode is clearly suitable. Rhapsodes interpolated work of their own into Homer (*schol. Pind. Nem.* 2. 1); see CYNÆTHUS. Later, rhapsodes came to be more distinct from poets, as a class making their living by recitation (*Hdt.* 5. 67); but they were expected to give their own interpretations of the poets (*Pl. Ion* 530 e), and always tended to expand the texts, the main source of the interpolations detected by the Alexandrians. At first they accompanied their own recitations on the lyre, but later they carried a staff, which suggested the ancient but improbable derivation of their name from *ῥαβδος*. Rhapsodes performed at an early date in Delos, where an unknown poet claims that he and Homer together sang hymns to Apollo, *ῥάβδ' ἄρ' ἐδοῖδ' ἑσθλὰ* (Hes. fr. 34); the introduction of the custom of recitation at various places is recorded, as at Syracuse; see CYNÆTHUS. At Athens Homer, and presumably recitations, had been introduced before the fighting for Sigeum (*Hdt.* 5. 94). The recitations at the Panathenaea were regulated by laws, sometimes attributed to Solon, Pisistratus, or Hipparchus (*Lyeurg. Leoc.* 102; *Diog. Laert.* 1. 2. 9. 57; [Plato], *Hipparch.* 228 b, etc.). The facts are obscure; but apparently the requirements were that only the authentic poetry of Homer should be recited, and in correct sequence, not arbitrary extracts, and that more than one rhapsode should be available to recite in turn. Rhapsodes came to be unfavourably regarded; but their performances lasted at least till the time of Sulla.

RHEA SILVIA, see ROMULUS.

RHEDA, see CARRIAGES.

RHEGIUM (*Ῥήγιον*; Regium is probably more correct, the name being pre-Greek), nowadays *Reggio*, a Greek colony in the 'toe' of Italy opposite Messina, was founded c. 720 B.C. by Chalcis (its inhabitants, however, included Messenians, after 600 at least). Originally an oligarchy using the legislation of Charondas of Catana (*Arist. Pol.* 2. 9; 5. 12), Rhegium later became subject to Anaxilas (q.v.), who extended its authority, e.g., over Messina (q.v.). But Syracuse, traditional enemy of Chalcidian cities, supported Rhegium's rival Locri and ultimately destroyed Rhegium (357; see DIONYSIUS 1). Soon rebuilt, Rhegium, although temporarily held by Campanian mercenaries (280-270), successfully resisted Brutii, Pyrrhus, and Hannibal. Becoming a favoured and loyal Roman ally, it acquired municipal status after 90 B.C. (*Cic. Arch.* 3), and colonists but not colonial status under

Augustus. Despite frequent earthquakes it remained a populous, Greek-speaking city throughout Imperial times. The lyric poet Ibycus was born here.

Strabo 6. 257 f.; Hdt. 6. 23; 7. 165, 170; Thuc. bks. 4, 6, 7; Diod. bks. 11-16; Livy 23. 30; 36. 42. P. Larizza, *Rhegium Chalcidense* (1905); J. Bérard, *Bibliogr. topogr.* (1941), p. 85. E. T. S.

RHENUS was the Celtic name for the Rhine. This river (850 miles long) became the Roman frontier in Caesar's time, and between the river Vinx and Holland it always so remained, though from the Flavian period until c. A.D. 260 the frontier of Germania Superior lay farther east. In Classical times, as always, the river, with its important tributaries, was a great channel of commerce, and the Romans maintained a fleet on it from 12 B.C., the *classis Germanica*, with headquarters at Bonn and later at Cologne. The first extant description of the river is that of Caesar (*BGall.* 4. 10), who notes its rise in the St. Gotthard, enumerates the tribes along its banks, and mentions that it divides into several streams on nearing the sea. Ancient writers generally regarded the Rhine as having two or three mouths, probably the Waal (Vahalis), Old Rhine, and the Vecht (cf. Strabo 4. 193; Pliny, *HN* 4. 101; Ptolemy 2. 9. 1). Drusus canalized the Vecht outlet (see FLEVO L.), and he also raised a dike, near the delta, completed by Pompeius Paulinus in A.D. 55 (*Tac. Ann.* 13. 53), to regulate the flow of the Rhine. Civilis cut it in 70 to hinder the Roman pursuit (*Hist.* 5. 19). Corbulo dug a canal, the Vliet, between Rhine and Meuse (*Ann.* 11. 20). Roman bridges existed above Basle and at Mainz, Coblenz, and Cologne; Caesar's bridges were built near Andernach.

Haug, in *PIF* i A. 733-56, s.v. 'Rhenus'.

Another Rhenus (*Renio*) flowed into the Po near Bononia, and on an island here the Second Triumvirate was formed in 43 B.C. O. B.

RHESUS, in *Iliad* 10. 435 ff. a Thracian ally of Priam. On his first night before Troy Odysseus and Diomedes (qq.v.) stole upon his camp, killed him and twelve of his men, and carried off his magnificent horses. Homer makes him son of Eioneus; [Euripides], *Rhesus*, 279, 393-4, of the river Strymon and a Muse (Euterpe, according to schol. *Il.* loc. cit.). The scholiast on *Iliad* loc. cit. says (cf. Verg. *Aen.* 1. 469 ff., with Servius auctus there) that if Rhesus' horses had tasted Trojan pasture and he and they drunk of the Scamander, Troy could not have fallen. As the *Rhesus* (962 ff.) says he shall not go to Hades but live on as a demi-god (*ἀνθρωποδαίμων*) in a cave, he is perhaps originally a Thracian deity. H. J. R.

RHETOR, see EDUCATION, III. 3.

RHETORIC, GREEK. Rhetoric (*ῥήκη ῥητορική*; the term *ῥήτωρ* appears first in Ar. *Achl.* (425 B.C.), *ῥητορική* first in Plato), or the art of oratory, was first taught at Athens by the Sicilians Corax and Tisias, followed by Gorgias and other Sophists. From the first the main object was held to be that of persuasion; and Corax and Tisias, concerned solely with oratory of the law-courts (forensic), prescribed as essentials plausible (*εἰκός*) arguments and their arrangement according to fixed rules. Ceremonial oratory (epideictic) was treated by Gorgias, who emphasized the value of an emotional appeal in winning persuasion. Aiming at prose expression which should rival poetry in its effects, he advocated the use of many devices, including symmetrical clauses, figures, and poetic diction; and thus laid the foundations of Sophistic rhetoric. Of Gorgias' contemporaries, Thrasyllachus, moreover, indicated the value of the period and rhythmical effects in prose; Protagoras, Prodicus, and Hippias by their philological studies prepared the way for a more precise use of words; and further developments came from Polus with his tricks of expression, from Theodorus of Byzantium with

his complicated rules, his divisions and subdivisions, while by Evenus the rules were presented in metrical form.

2. Criticism of this system came, however, from Plato, who condemned the spurious arguments based on probability (*Grg.* 453 ff.), the fixed divisions assigned to a forensic speech (*Phdr.* 266 e), as well as the mechanical use of stylistic ingenuities (*Grg.* 462 c). Such rhetoric he refused to recognize as an art, and described it as a mere knack (*ibid.* 463 b), empirically acquired and devoid of rational basis. On the other hand, he made some far-reaching suggestions when he insisted on the need for subject-matter based on truth (*ibid.* 453 ff.), or again, on the fact that organic unity (not arbitrary divisions) determined the form of a speech (*Phdr.* 264 c). He also pointed out that artificial devices were not enough, that native endowment (*φύσις*), a knowledge of art (*ἐπιστήμη*), and practice (*μελέτη*) were needed (*ibid.* 269 d), and that in all matters of expression psychological considerations were important (*ibid.* 270 ff.).

3. Meanwhile a new conception of rhetoric was being formulated by Isocrates, who regarded it as a cultural study in which fitting expression was sought for lofty themes. This study he described as a sort of practical philosophy, the best form of training for life and citizenship; and thus began the long conflict between philosophy and rhetoric in the educational sphere. In developing his theory Isocrates first decried the trivial subjects favoured by Polycrates and others, and then directed attention to those great political issues on which great utterance was possible. With interest thus centred on political oratory he elaborated what was largely a new technique, which gave to Attic prose fresh dignity and grace, and he established a tradition which, handed down by pupils and later writers, has persisted to the present day. He was, in short, one of the great formative influences in technical rhetoric.

4. Yet more significant was Aristotle's contribution when, in his *Rhetoric*, he defended the art against Plato's strictures and included it in his philosophical course, after modifying the prevailing conception of its nature. To him rhetoric was a genuine art, the counterpart of dialectic, both being branches of the art of reasoning; and its function he defined, not as persuasion, but as 'the observing of all the available means of persuasion' (*Rh.* 1. 1. 14). His approach is thus of a philosophical kind. He is primarily concerned with establishing sound sense as the main essential in oratory, in accordance with Plato's teaching. In bks. 1 and 2 he deals at length with processes of argument, with proofs sophistical and valid. He then proceeds to a consideration of style (bk. 3), based apparently on his earlier treatise, *Theoetitia*; and his exposition of this branch is highly suggestive and illuminating. Here again, however, his philosophical bent affects his treatment. It is as if he distrusted stylistic effects in general, as appealing to the emotions instead of to the understanding; and two qualities alone he regards as essential, namely *σαφήνεια* and *πρέπον*, thus leaving to later writers a more complete analysis. Yet his achievement was of the first importance. With him originated the later threefold classification of rhetoric, as well as the systematic treatment of *εὐρεσις*, *τάξις*, and *λέξις*; and in general he may be said to have laid the foundations of philosophical rhetoric.

5. To the further advance of rhetorical study but little was contributed at this stage. The work of Theophrastus alone is of lasting importance, in that he developed the doctrines of Isocrates and Aristotle, and gave fresh impetus to the study of style. In his *Περὶ λέξεως* he described its main virtues (*ἀρεταί*) as four in number—*Ἑλληνισμός*, *σαφήνεια*, *πρέπον*, *κατασκευή*—and pointed out other effects, such as the value of *ὑπόκρισις* (action) in oratory, and of euphony and variety in all prose expression. His later influence was considerable, and is seen

in the works of Cicero, Dionysius of Halicarnassus, and others.

6. A new phase began about the middle of the third century B.C., when great oratory ceased owing to political conditions, and rhetoric became merely a scholastic discipline in the spread of Greek culture. Of manuals dealing with this school rhetoric nothing survives. It seems to have been a continuation of Sophistic teaching, adapted for school purposes, and modified in the light of current literary tendencies. Those tendencies, already visible in the Attica of the fourth century B.C., developed later in Asiatic centres, and thus gave rise to florid and emotional styles subsequently known as 'Asianist', of which Hegesias of Magnesia was the chief representative. With the cultivation of these styles school rhetoric was largely concerned. It prescribed exercises of a declamatory kind, dealing often with fictitious and fantastic themes, besides panegyrics and memorial speeches, all written in accordance with fixed rules and methods. It provided instruction also in letter-writing; and characteristic of its methods were those *Progymnasmata* (q.v.) or preliminary exercises employed in the schools of the first century B.C.

7. In the meantime a renewed attack was being made on rhetoric by the philosophical schools, the main charges being that it possessed no clear subject-matter and no definite aims, and was thus of little use in education. The Peripatetics, it is true, were interested in matters of style. But for the rest, Epicurus had denied the value of rhetoric for either philosopher or statesman; while the Stoics, who treated of definitions, correct diction, and the like, also attached to it but little importance. This hostility was sustained in the second century B.C. by Carneades, Critolaus, and others. A reaction set in when Hermagoras (c. 150 B.C.) claimed for the subject-matter of rhetoric a more serious treatment. Maintaining that all non-technical problems (*πολιτικά ζητήματα*) fell within its scope, both particular (*ὑπόθεσις*) and general (*θέσις*) problems, he prescribed four questions (*σπράσεις*) which he held to be adequate for the solution of all such problems, thus establishing a system which was to be discussed throughout later antiquity. With details of style he did not deal; and his contemporary, Athenaeus, did little to fill the gap, beyond perhaps inspiring the treatise on Figures by the first-century Gorgias. Meanwhile, fresh activities were developing at Rhodes under Apollonius and Molon; the philosophers Posidonius and Philon were adopting a less hostile attitude. And by the first century B.C. insistent demands for instruction came from Rome, to which Apollodorus and Theodorus (followers of Hermagoras) responded, thus carrying on the rhetorical tradition, with some differences, it is true (see ALEXANDER 12), into the Imperial period.

8. Of yet greater importance was the new direction given to rhetorical study by the Atticist movement, which assumed definite form c. 50 B.C. and stood, first, for a rejection of the prevailing Asianist styles (see Norden, *Ant. Kunstpr.* i. 131 ff.), and secondly, for a return to the standards of the great Attic writers. The reaction was due partly to Roman influence and good sense, still more to the tendency of Greek minds to revert under Roman domination to a glorious past. Earlier grammarians had preserved and explained something of the literary legacy of ancient Greece. And now the main object became that of imitation, and of modifying rhetorical principles in accordance with classical ideals. Among the main agents in effecting this change were Caecilius of Calacte, Dionysius of Halicarnassus, and later Demetrius and 'Longinus', all of whom, however, with their wider interests, subordinated technical instruction to criticism of an aesthetic kind (see LITERARY CRITICISM, GREEK). Nevertheless, the main developments at this stage are clear. Caecilius alone specifically condemned Asianism (*Ἀ. ὀρτυγισμός*); but all alike advocated the

doctrine of *μίμησις*, which, previously enunciated by Isocrates (*K. τῶν σοφιστῶν* 18), and intermittently practised by the Rhodians and others, was now restated and developed by Dion. Hal. (*De Imit.* A. iii. 28) and 'Longinus' (*Π. ὕψους* 13. 2). The models commended were chiefly those comprised in the canon of the ten Attic orators (due to second-century grammarians, probably of Pergamum); and while Plato, Thucydides, Xenophon, and others were also included, Demosthenes was finally proclaimed as the greatest of them all. In the meantime efforts were devoted throughout the first century A.D. to the teaching of classical style. A systematized theory of Figures had been submitted by Caecilius; the three main types of style—grand, middle, and plain, as defined by earlier theorists—were expounded by Dion. Hal. and Demetrius; and new graces to be won by *σύνθεσις* (composition) were also pointed out by the same writers, notably the effects of an artistic word-order, euphony, rhythm, variety, and the like.

9. By the beginning of the second century A.D. ancient rhetoric was entering on its last phase (the so-called 'Second Sophistic'). Firmly entrenched by now in the educational system, and having received fresh impetus from a revival of the Greek spirit, it took on a new colouring from the Asiatic centres of that movement (Smyrna, Ephesus, Tarsus), and discarded for the most part first-century teaching. With the aim of reviving the glories of ancient Greece, epideictic oratory became now the main occupation (cf. Atticus Herodes and Aristides). Teachers of rhetoric sought to cultivate an ornate expression by adopting the methods of the earlier school rhetoric. And the characteristic contributions of the second and third centuries were thus *Προγυμνάσματα* (Theon, Minucianus, Hermogenes), *τέχναι* (Alexander, Aristides, Theon, Menander, Longinus, Apsines), *μελέται* (Adrianus, Polemon), and letters (Alciphron, Lesbonax). Of special interest historically was the work of Hermogenes, who, besides modifying the stasis-doctrine of Hermagoras, attempted to reduce the study of style to a fixed system. Taking over from others the conception of certain forms (*ἰδέαι*) of style (distinct from the *ἀρεταί* of Theophrastus and the three later types), he sought by analysis of his impressions of classical writers to arrive at definitive laws of style. The result was his *Περὶ ἰδεῶν*, a treatise notable for its obscure terminology, its endless classifications, distinctions, definitions, and rules, which added but little to the vital appreciation of style. Yet this work, together with his *Progymnasmata* and his stasis-teaching, represented the authoritative doctrine for later generations; and since poetry also entered into his treatment (under *παρρηγορικός*), his influence extended ultimately to medieval poetry as well as prose. Thus in the second and later centuries did Greek rhetoric revert to sterile scholastic standards and methods. It gave rise to a system which had disastrous effects on literature for centuries to come; and what was of value in the earlier teaching was left for later ages to rediscover.

RHETORIC, LATIN. The study of rhetoric at Rome dates from the second century B.C. It formed part of those Greek traditions which were being assimilated by Romans; and although, then as later, its teaching rested mainly in Greek hands, Latin works (lost) came from Cato, and subsequently from M. Antonius and Hortensius, in which were expounded Hellenistic scholastic doctrines. During the first century B.C. efforts were made to adapt this instruction to Roman needs; and first came the attempt of L. Plotius Gallus (c. 95 B.C.) to drive out Greek teaching by founding a Roman school of rhetoric. More significant was the appearance of *Rhetorica ad Herennium* (q.v.: c. 86 B.C.), sometimes ascribed to Cornificius, which aimed at giving a Roman colouring by latinizing Greek terminology, omitting Greek subtleties, and supplying Latin illustrations, while submitting in schematic form Hellenistic doctrine, notably Hermagoras' stasis-teaching, figures, and the like. The treatise, moreover, is one of great historical interest. The first surviving work on rhetoric after a lapse of three centuries, and the first complete Latin manual, it throws valuable light on Hellenistic teaching; and, widely accepted later as Cicero's work, it exercised decisive influence on medieval poetic theory.

2. Yet more drastic were the modifications proposed by Cicero under Aristotelian and Rhodian influences; though his *De Inventione* (84 B.C.) and certain later writings provided merely conventional matter, and he wrote no complete manual. In his famous dialogues on oratory and orators (55-46 B.C.), however, he criticizes constructively the prevailing mechanical methods; and what he advocates is a more generous conception of rhetoric, an advance beyond the technical study of arguments and style, and in general the discarding of Hellenistic doctrine for the ideals and standards of classical Greece. He also applies his teaching to the solution of the contemporary Asianist-Atticist problem (see LITERARY CRITICISM IN ANTIQUITY, II. 2). Thus his contribution to rhetorical study was mainly critical in kind; it lay in suggesting the larger vision, and in pointing the way to more fruitful theories and methods.

3. Developments along these lines were, however, stayed by changed conditions in the Augustan era, when, owing to the decline of popular assemblies and alterations in legal procedure, oratory vanished from public life to be cultivated mainly in the schools. Some amount of theorizing still went on. Now began the controversy between Apollodorus (q.v. 5) and Theodorus (q.v. 3) in which the Apollodoreans M. Calpidius and Clodius Turrinus, the Theodorean Vallius Syriacus, and others joined; the *τέχνη* of Apollodorus was translated by C. Valgius Rufus; while other contributions were Junius Otho's *Colores* and a dissertation on style by Domitius Marsus. But such activities were of academic interest only. In practice a new conception of rhetoric was forming in the schools, where study was limited to exercises in *controversiae* and *suasoriae* (q.v.), which aimed at inculcating a declamatory style suitable for scholastic show-pieces (see EDUCATION, III. 3). That this innovation was not without its effects is revealed by the elder Seneca. Moreover, from now on, rhetoric became the predominant factor in education, and a false idea of style invaded all branches of literature.

4. Nor, apart from Quintilian's *Institutio*, were substantial additions made to rhetorical theory during the first century A.D., despite Imperial patronage. Critical comments on the decline of style came from various quarters; and technical treatments of the subject from rhetors and others. Celsus (following Varro) had a section on rhetoric in his *Encyclopaedia*; manuals came from the elder Pliny, Verginius Flavius, Tutilius, and Visellius; and P. Rutilius Lupus translated the *Περὶ σχημάτων* of Gorgias (1st c. B.C.). From Quintilian alone came a contribution of value; and in his great treatise

he does for school rhetoric what Cicero had tried to do for public oratory. Reviewing earlier teaching in the light of his own rich experience, and preserving both in form and substance what was valuable in that teaching, he propounds a new system, based on first principles and psychological grounds, and consisting mainly of a restatement of Cicero's classical ideals, yet with a full sense of the inevitability of development. Judicious in its outlook, illuminating and convincing in its methods, the *Institutio* is a lasting monument of the Latin genius, which, eminently practical, had little taste for abstract theorizing on a discipline originally Greek.

RHETORICA AD HERENNIIUM. The treatise on rhetoric addressed to C. Herennius (written c. 86-82 B.C.) is by an unknown author. Some, interpreting passages of Quintilian, assign it to 'Cornificius'. It is ascribed in the manuscripts to Cicero, and has often been printed with his works; but the Ciceronian authorship, first challenged in the fifteenth century, is no longer accepted. Its relationship to Cicero's *De Inventione* has not been satisfactorily determined. Rhetoric is treated in five divisions: Invention in judicial, deliberative, and demonstrative causes; Arrangement; Delivery; Memory (an important discussion); and, with abundant illustrations, Style (the oldest surviving treatment in Latin). The doctrine is a fusion of Greek systems; the illustrations, terminology, and spirit are Roman. The style is generally clear, and less archaic and 'plebeian' than scholars once maintained.

RHIANUS, of Bene, less probably of Ceraea, in Crete: a contemporary of Eratosthenes (born 276 B.C.). R. began life as a slave and custodian of a wrestling-school. After a belated education he attained fame as a poet and Homeric scholar, probably at Alexandria.

WORKS

Verse: R. wrote epic poems and epigrams, but was best known for the former (Ath. II. 499 d), of which one was a *Heracleias*. Four others, *Thessalica*, *Achaica*, *Eliaca*, *Messenica*, were tribal epics, rich in myth, history, and geography. The last was used by Pausanias (bk. 4, cf. especially 6. 1) as one source for the history of the Second Messenian War. Episodes in the poem seem to have been modelled on Homer or the rest of the cycle. More romantic scenes, e.g. the escape of Aristomenes from prison and the love-affair which betrayed the Messenians, show the influence of a later school of writing. The longest fragment (1) of R., possibly complete in itself, consists of twenty-one hexameters on the folly of mankind. Most of the epigrams (frs. 66-76) have a paedcrastic motif.

Prose: R. produced an edition of the *Iliad* and *Odyssey*. It was more conservative than that of Zenodotus, and the forty-five readings from it which have survived have led critics to judge it favourably.

To some extent R. falls into line with Apollonius Rhodius against Callimachus and his own contemporary Euphorion. Like Apollonius he preferred epic to epyllia, but his language seems to have been simpler than that of Apollonius. In the extant fragments he uses neologisms, but hardly any 'glosses'. His epics must have been agreeable reading; but it is possible, in view of the numerous citations by Stephanus of Byzantium, that they were too cumbered with geography.

Meineke, *Analecta Alexandrina* (1843), 171-212; C. Mayhoff, *De Rhiani studiis Homericis* (1870). E. A. B.

RHINTHON, of Tarentum, a potter's son, writer of phylax-plays (*ῥαπορπαγῳδία*, later known as *fabulae Rhintonicae*; see **PHYLAKES**); contemporary with Ptolemy I (early 3rd c. B.C.). He was honoured with an epitaph by the poetess Nossis of Locri in south Italy (*Anth. Pal.* 7. 414): she calls him Syracusan, and claims originality for his 'tragic phylaxes', i.e. for raising the crude phylax-drama by comic treatment of tragic themes. Of thirty-eight pieces attributed to R. nine titles are known (almost all are burlesques of Euripides), but very meagre fragments survive. One (fr. 10) from *'Ορέστας* (Doric form) mentions 'the metre of Hipponax', i.e. scazon: a character in the play (violating dramatic illusion) points out that a curse just uttered will not scan as a tragic iambic trimeter.

South Italian vases give scenes from the *phylaxes* of Rhinthon and others.

RHIPAEI MONTES (*'Ριπαῖα Ὀρη*), the 'gusty' and ever snowy mountains, imagined from Homer onwards to exist north of the known parts of Europe. From them blew the North Wind; beyond, down to the Northern Ocean, dwelt Hyperboreans (q.v.). Herodotus ignored the Rhipaeans and Strabo denied their existence. Those who believed in them differed as to their location. Aeschylus and Pindar regarded them as the source of the Danube, and Posidonius thought originally that the Alps were meant. On the other hand, Aristotle placed them beyond Scythia, and Roman poets put them in the extreme north. In general, their latitude was moved northward as knowledge increased. Ptolemy, who considered that they were of moderate altitude, located them in Russia (lat. 57° 30'–63° 21'), between rivers flowing into Baltic and Euxine. They remained on maps until modern times.

Ptol. *Geog.* 3. 5, 15, 22; Kiessling, *PW*, s.v. *'Ριπαῖα Ὀρη*.

RHODES, an island of about 420 square miles, close to the mainland of Caria, was settled by Dorian Greeks who formed three city-states, Ialysus, Lindus, and Camirus. Their development was normal for the time and place—colonization (including Gela, Rhegium, and Phaselis, all Lidian colonies), tyranny, Persian conquest. In the fifth century, till 412–411 B.C., they were members of the Athenian Confederacy, and their constitutions were presumably democratic.

The war with Athens (411–407) combined with internal stresses to produce the union ('Synoecism') of the three cities into one State with a new federal capital *Rhodos*, though the original cities kept the greatest possible local autonomy. The 'Rhodians' remained democrats, perhaps even extremists, till revolutionary disturbances (c. 397–388) resulted probably in a moderate democracy which was overthrown only for a period of Persian domination (355–333); its stability later depended on a compromise between the interests of the large citizen proletariat and of the wealthy citizens (see especially Strabo 14. 652).

The prosperity of Rhodes must always have come mainly from the carrying trade. It received a great impetus from the conquests of Alexander, giving unrestricted access to Egypt, Cyprus, and Phoenicia, and in the third century Rhodes became easily the richest of the Greek city-states. Politically, too, the partition of Alexander's empire after 323 enabled it to reassert its independence and steer its own course in foreign affairs. This independent policy provoked the famous siege by Demetrius (305–304); but its survival on this occasion increased its prestige and self-confidence, so that in the third century it successfully avoided subservience to any of the 'great powers'. Like Athens earlier, it stood as a centre of exchange and capital and the enemy of piracy

on the high seas. The Rhodian fleet was fairly large and always efficient: it was the 'senior service'—its officers were drawn from the best families, its crews (and the workers in the shipyards) from the poor citizens.

Rhodes (with Pergamum) was largely responsible for the first major intervention of Rome in eastern affairs (201). It co-operated with Rome (not previously an ally) in the wars against Philip V and Antiochus, and was rewarded with territory in Caria and Lycia. But Rome punished the equivocal attitude of Rhodes in the Third Macedonian War by proclaiming Delos a free port (167): this unfair competition, and perhaps an increase in piracy which Rhodes could no longer check, crippled it so severely that in three years its annual harbour revenues fell from a million to 150,000 drachmae. It became an ally of Rome on unfavourable terms, and ceased to be a power in the world. It successfully withstood a siege by Mithridates in 88, but was captured and pillaged by Cassius in 43. Nevertheless, under Roman rule Rhodes kept a modicum of prosperity and no small distinction as a beautiful city and a centre of higher education, with Panaetius and Posidonius its greatest savants.

RHODES, CULTS AND LEGENDS OF. The most noteworthy cult at Rhodes was that of Helios (q.v.); the festival was called Halicia, celebrated yearly with sacrifice of a four-horse team thrown into the sea (Festus, p. 190, 28 Lindsay) and quadrennially with more elaboration. An ancient cult at Lindos was directed to a goddess identified with Athena; she was, however, plainly chthonian, being worshipped with fireless offerings (Pind. *Ol.* 7. 48); for the remarkable chronicle-inscription of her temple see C. Blinkenberg, *La Chronique du temple lindien*, Acad. royale des sciences et des lettres, Copenhagen, 1912, and *Die lüdische Tempelchronik* (1915). There were also festivals to Kronos, Poseidon, Apollo (Sminthia), Dionysus, probably the Dioseuri, Heracles and his son Tlepolemus (the Tlapolemeia, an agonistic festival of some importance; cf., for such events in Rhodes, I. R. Arnold in *AJArch.* xl (1936), 432 ff.). For authorities, see M. P. Nilsson, *Griechische Feste* (1906), 478. Athenaeus, 360 c, records a custom of Lindos; children in the month Boedromion (presumably Badromios in the local dialect) went about singing a traditional song about the coming of the swallow and collecting contributions from the houses. This was called *χελιδονίζειν*.

A few legends are known. Helios himself chose the island, which had not then risen above the surface of the sea (Pind. *Ol.* 7. 54 ff.). His children by the nymph Rhodos, daughter of Aphrodite (ibid. 14), were instructed by him to offer sacrifice to Athena the day she was born. In their haste they forgot to bring fire (ibid. 39 ff.), hence the custom of fireless sacrifice (above). The sons of Helios were Lindus, Ialysus, and Camirus, eponyms of the three chief cities of the island (schol. rec. Pind. ibid. 34).

RICINIATA see *fabula*: see **FABULA**.

RIDDLES. A riddle (*ῥαῖδος*) in its proper sense may be described as a species of *εἰρηγὰ* or 'dark saying', which in turn belongs to the wider category of *αἰῶς* ('story'). It is

essentially designed to baffle or challenge the intelligence of the hearer; its subject-matter may be derived from a variety of sources, e.g. natural phenomena, social custom, or myth. The Oracle, for example, is typically expressed in enigmatic form. Early examples of riddles in Greek literature are Hesiod fr. 160 Rz. (contest of Calchas and Mopsus, perhaps rather to be described as a direct test of intelligence) and Theognis 1229 f.; the later *Certamen Hom. et Hes.* (ad fin.) preserves the traditional story of Homer and the Fishermen. By the fifth century B.C. the propounding of γρίφοι had become a regular diversion of Greek society, especially at the symposium (Ar. *Vesp.* 20 f.); Aristotle (*Rh.* 3. 11. 6) mentions τὰ ἐδ' ἡνιγμένα among the pleasurable seasonings of discourse. The authorship of early collections of riddles was ascribed to Cleobulus of Lindos and his daughter Cleobuline (Suidas; Wilamowitz, *Textgesch. d. gr. Lyr.* 40. 3; O. Crusius *Philol.* 55). The Peripatetic Clearchus of Soli (frs. 61-8 in *FGH*) composed a work *Περὶ γρίφων*, which was used by Athenaeus. Athenaeus himself (10. 448 b-459 b) gives a copious selection of riddles from comedy and other sources. A short collection of metrical examples is contained in *Anth. Pal.* 14. The general tendency to enigmatic expression, not unknown in earlier literature, becomes stronger with the Alexandrians, for example in the *Alexandra* of Lycophron.

Riddles occur sporadically in Latin literature. Aulus Gellius (12. 6) cites a metrical one from Varro; Pctronius (58) provides examples of the popular type. The Greek term *aenigma* is habitually employed; Gell. (loc. cit.) gives *scirpus* as the native word. The metrical collection bearing the name of *Symphosius* (q.v.) (4th-5th century A.D.) is composed in imitation of the Greek convivial type.

As might be expected from the character of the two peoples, the Greeks liked a riddle—γρίφος—and the Romans did not. 'The investigation of riddles,' said the philosopher Clearchus, who divided them into seven classes, 'is not unconnected with philosophy: a riddle is a sportive problem, and to find the answer we have to use our intellect.' The most famous riddle was that proposed by the Sphinx and answered by Oedipus: 'What is that which walks on four legs, and two legs, and three legs?' Answer: 'Man.' Another was: 'A man and not a man, with a stone and not a stone, hit a bird and not a bird sitting on a tree and not a tree.' Answers: 'A eunuch, a pumice-stone, a bat, a fennel-stalk.' A third ran: 'What is the strongest of all things?' 'Love: iron is strong, but the blacksmith is stronger than iron, and love can subdue the blacksmith.'

W. Schultz, *PW* i A. 1 (1914), s.v. 'Rätsel'; *Rätsel aus d. hellen. Kulturkreise* (1909); K. Ohlert *R. u. Gesellschaftsspiele d. alt. Gr.* (1912); E. Cougny ed. *Anth. Pal.* (1890), 3. 563 (metrical examples from various sources); Christ-Schmid-Stählin; Teuffel-Kroll² 1 (1916), 3 (1913). W. M. E. and F. A. W.

RIDER-GODS AND HEROES. Theriomorphic gods were well-known to the Greeks in prehistoric times, witness Poseidon (Hades) and the Dioscuri and their association with the horse; we may add the wind-god Boreas. As the horse was unknown to the old Crctan civilization, the connexion of these gods with horses may be pure Greek. The god soon became a rider of a horse (as the dead man, originally represented as a horse, became a rider in the 6th c. B.C.). Epithets (Hippios, Hippias), sacrifices, priesthoods, myths, however, still remind us of the origin. Further evidence is afforded by works of art (cf. the horse's head on the so-called Totenmahl reliefs, on which the dead man is shown on a couch, banqueting). Very widespread is a type of relief on which a hero or god appears as a rider or hunter (the Dioscuri are shown mounted or standing beside their horses). We see them also on horseback in the air, approaching the festal table set ready for them (cf. their apparition to the Romans after the battle of Lake

Regillus), see THEOXENIA. In Thrace and neighbouring countries the type was exceedingly popular during later periods and the Roman age. Copies of the 'Thracian rider' (hunter) were often found in shrines, dedicated 'to the Lord Hero' or to local deities, heroes or heroized dead.

L. Malten, 'Das Pferd im Totenglauben', *JDAI* xxix (1914), 181 ff.; Gawril I. Kazarow, *Die Denkmäler des thrakischen Reitergottes in Bulgarien* (Text und Tafelband, 1938). S. E.

RINGS (δακτύλιος, *anulus*) were used in Minoan and Mycenaean times both as signets and as ornaments. They are not mentioned in Homer and are rarely found in Early Iron Age deposits. Since the early sixth century they were in regular use as signets. The practice of wearing rings as ornaments is rare before the fourth century and reaches its height under the Roman Empire. Collections of rings are mentioned at this period. Rings also had special uses at Rome: the gold ring as a military decoration and as a mark of rank, originally limited to *nobiles* and *equites*, extended under the Empire to denote *ingenuitas*; and the betrothal ring, first of iron, later of gold (apparently unknown in Greece).

RIPARIENSES, see LIMITANEI.

RIVER-GODS. The cult of the river-gods was no doubt brought by the Greeks from their home in the north, but it was also a primitive inheritance surviving from the original population of the Greek peninsula. A number of rivers (and mountains) retained their names from this pre-Hellenic period (Ilissus, Pamisus, Peneius, Enipeus, etc.; in Asia, e.g., Scamandrus, Maeandrus). As for Italy we may suppose a parallel evolution.

All rivers, seas, etc., according to Homer (*Il.* 21. 196 ff.), are ultimately derived from Oceanus (father of all rivers, Hesiod, *Theog.* 337 ff.), or they are 'fallen from heaven' (fed by rain; Xanthus in Homer is even 'son of Zeus'). The old superstition that river-gods had children by mortal women gave to the local rivers quite an exceptional position in Greek genealogies. The river Inachus is, e.g., the father of Io, and rivers are the ancestors of whole tribes and of the oldest heroes (for the offering of hair to rivers as *κουροτρόφοι* see Hom. *Il.* 23. 46, Aesch. *Cho.* 6, Paus. 8. 41. 3; cf. Agamemnon's oath, *Il.* 3. 276 ff.). A vision of rivers is a sign of offspring to the dreamer (Artem. 2. 38). Divine origin from local rivers is attested by many personal names, especially in Boeotia and Attica (Ismenodorus, Cephisodorus, etc.; cf. Bechtel, *Personennamen*, 145 ff. and 529). Yet the river belonged to a lower stratum of polytheism, 'the river power remained only half-personal, an animate nature-power, to whom altars might be erected, but rarely a temple' (Farnell, *Cults* v. 424). A reminiscence of religious primitivism is the ritual of casting victims such as horses and bulls into streams. The bovine nature of rivers is well attested, e.g., by coin-issues of Sicily (river-gods as man-headed bulls or horned youths), but full human shape became conventional, e.g. for Nile and Tiber. The widespread cult of Achelous, for which the Dodonaean oracle made an intense propaganda, is of special interest.

O. Waser, s.v. 'Flussgötter' in *PW* vi. 2774-815; L. R. Farnell, *Cults of the Greek States* v. 420-4 and in Hastings, *ERE* ix. 225-7. S. E.

ROADS. Paved roads were unusual in Greece except in the neighbourhood of important sanctuaries, such as Delphi; and there is no record of road-construction by Hellenistic kings. But from an early date in their history the Romans were aware of the importance of good communications, and their road-system was one of their outstanding achievements. The spread of Roman

influence through Italy was marked by the construction of such roads as the Via Appia (312 B.C.) from Rome to Capua and later to Beneventum and Brundisium, and the Via Flaminia from Rome to Ariminum (268) which in 187 was extended to Bononia under the name of Via Aemilia. By the end of the Republic all parts of Italy were connected by good roads. In the Principate the main work of road-making was in the provinces, though the Republic had already constructed the Via Egnatia from Dyrrhachium to Thessalonica and the Via Domitia from the Rhône to the Pyrenees, and the Alps could be crossed easily by the pass of Mt. Genève. Augustus made roads across the Great and Little St. Bernard, and his stepson Drusus made one farther east 'from Altinum to the Danube' (ILS 208). Much information can be derived from milestones (q.v.) as to the part played by different emperors in road-building: we find, for instance, that Tiberius was specially interested in Dalmatia, Claudius in Gaul, and Hadrian in Africa and the Eastern Provinces. (For a useful summary of the development of the road-system, see H. S. Jones, *Companion to Roman History*, 40-5, and see in the present work the articles on the Chief Roman roads, VIA AEMILIA, etc.)

Under the Republic the censors were responsible for the roads and let out the contracts for their construction and repair; but even before the Principate *curatores* of particular roads are found (ILS 5800, 5892). In 20 B.C. Augustus established a board of senatorial *curatores viarum*, and from the time of Claudius or Nero we find many *curatores* of particular Italian roads (ILS III. 1, pp. 359-60), usually of senatorial rank. No *curatores* of provincial roads are known: for them the governors were probably responsible.

The cost of the roads was probably divided between the public treasury (whether *acrarium* or *fiscus* is uncertain), the local authorities, and the owners of the land through which they passed, but the emperors often made large personal contributions. The arch of Ariminum (ILS 84) records that the Via Flaminia and the most important roads of Italy were repaired at the cost of Augustus. Hadrian added a sum to the amount contributed by the *possessores agrorum* to the cost of repairing part of the Via Appia, and paid for the bridges on a road in Africa (ILS 5872, 5875).

No general rule was followed in the construction of Roman roads. We generally find a foundation of flags covered by a layer of rubble and above it a bed of concrete. The metalling might consist of flagstones, of rammed gravel, or of concrete, according to the material available.

Roads were made by the Romans primarily for the rapid movement of troops to the frontier and from one part of the frontier to another. But their existence did much to foster trade and social intercourse, and so to create a homogeneous civilization within the Roman Empire.

L. Friedländer, i. 268-80; Sir W. Ramsay, 'Roads and Travel in the New Testament' (Hastings, *Dictionary of the Bible*); T. Codrington, *Roman Roads in Britain* (1918); G. H. Stevenson in *Legacy of Rome*, 141-72; O. Hirschfeld, *Verwaltungsbeamten* (1905), 205-11; H. F. Tozer, *Ancient Geography* (1935), 299 ff. G. H. S.

ROBIGUS, the *numen* of rust in wheat. His festival (Robigalia) was on 25 Apr. (Ovid, *Fasti* 4. 905 ff., whereon see Fraser), at the fifth milestone of the Via Claudia (*Fasti Praenest.* on that date). The Flamen Quirinalis offered a dog and a sheep and prayed that rust might not attack the crops. Possibly the original intention was to destroy Robigus, Rose in CR xxxvi (1922), 17.

I. EARLY ITALY AND REGAL ROME

1. Long before the emergence of Rome as an influence in Italian affairs a variety of peoples, whose civilization outshone that of nascent Rome, had populated Italy (q.v.). After the early Terremaricoli and Villanovans the standard of civilized life was gradually raised by Etruscans, Oscans, and Greeks, and it is particularly against the background of the history of the Greeks in southern Italy and of the Etruscans in the centre and north that the development of early Rome must be set.

2. Of the Indo-European peoples who entered Italy from north of the Alps, the Umbrians and Sabellians formed one branch, the Latins another. The latter, who occupied the plain of Latium, soon developed a sense of common origin, from which in time there grew one or more Latin Leagues, and their early hill-top settlements gradually increased in size and influence. One of these shepherds' villages was Rome, perhaps founded as an offshoot from Alba Longa. It quickly surpassed many of its neighbours, thanks to its geographical position near the sea and the centre of Italy, its command of the Tiber-ford, and its control of a primitive salt-route from the Tiber mouth to the central hills. The Latin and Sabine settlements on the different hills gradually coalesced to form a city (see ROME, TOPOGRAPHY). Of primitive Rome we are ill-informed, since it was not until the end of the third century B.C. that the Romans began to write its history (see HISTORIOGRAPHY, ROMAN) and that at a time when national pride led them to connect their history with that of the Greek world and to forge links with Greek mythology. Hence were evolved the foundation-stories which attributed a Trojan origin to the Romans through Aeneas, and the founding of the city to his descendants Romulus and Remus (at varying dates: 814, 753, 751, 748, 729 B.C.). Tradition records six kings after Romulus: Numa Pompilius, Tullus Hostilius, Ancus Marcius, Tarquinius Priscus, Servius Tullius, and Tarquinius Superbus, some at least of whom were historical figures. There is no doubt that there were kings in early Rome and that some of them were Etruscan. The king (*rex*) was advised by the Senate, a council of elders, representatives of the noblest patrician clans (*gentes*), which enjoyed political and religious privileges. The People (*populus*), which included the less privileged classes (plebeians and clients), were divided into thirty *curiae*. To Servius Tullius are attributed administrative reforms, which in essence are probably his work. He created the *tribus*, which gradually increased to thirty-five, and divided the people into five *classes* and each class into *centuriae* on the basis of a registration of the citizens and their property (*census*). Gradually a new assembly (Comitia Centuriata) superseded in importance an older assembly of the *curiae* (Comitia Curiata).

3. Under the Etruscan kings Rome advanced in power and civilization. The process of urbanization was accelerated; commerce and industry increased; religious and political institutions underwent changes; the boundaries of the *ager Romanus* were extended to include some 350 square miles. But the debt to the Etruscans must not be exaggerated. Under the veneer of a dominating

Etruscan caste Rome remained essentially a Latin city, and agriculture remained her chief industry.

II. ROME AND ITALY (509–264 B.C.)

4. With the expulsion of Tarquinius Superbus (510) Rome threw off the Etruscan yoke, and despite the efforts at restoration by Lars Porsenna the monarchy was abolished. An aristocratic Republic was established, and two annually elected magistrates, later called consuls, were invested with *imperium*, though in times of national emergency they might temporarily be superseded by the appointment of a dictator. The history of the Republic during the next 250 years is marked by two struggles: an internal class-struggle, during which the Republican constitution was hammered out and which ended in a compromise, and an external struggle with surrounding peoples, which ended in the assertion of Rome's supremacy as the head of a confederacy which embraced all Italy.

5. The Roman citizens were divided into two classes, patricians and plebeians, perhaps as a result of economic development. The plebeians suffered grievances which they sought to redress by means of pressure brought by *secessiones* and by virtually creating a separate State within the State. The poorer plebeians sought more land, more liberal laws of debt and personal security against the oppression of patrician magistrates; the wealthier plebeians sought political and social equality with the patricians. During this struggle of the orders the plebeians (*see* **PLEBS**) established their own officers (tribunes and aediles) and assembly (*concilium plebis*) and gradually forced the patricians to recognize these. Landmarks in the struggle are the *Lex Publilia Voleronis* (471), the appointment of *Decemviri* and the codification and publication of the XII Tables, which formed the basis for the future development of Roman law (451–450), the Valerio-Horatian laws (449), the *Lex Canuleia* (445), the Licinian-Sextian rogations (367), the *Leges Publiliae* (339), the reforms of Cn. Flavius (304), the *Lex Ogulnia* (300), and finally the *Lex Hortensia* (287), which after earlier attempts (449, 339) gave *plebiscita* the force of laws binding on the whole community. Meantime, increase in public business, and, still more, patrician attempts to thwart the plebeian assaults on the patrician monopoly of office, led to the establishment of new magistracies. From 445 to 376 *tribuni militum consulari potestate*, an office open to plebeians, replaced the consuls, some of whose powers were transferred to newly established censors (443). The plebeians gradually gained admission to the quaestorship (421), the restored consulship (366), the dictatorship (356), the censorship (351), and in 337 to the praetorship, which had been established in 366 and led through the praetorian edict to the building up of Roman law.

6. Economic problems, such as shortage of food and land and harsh laws of debt, which tended to reduce freemen to serfdom, were attacked by legislators (e.g. Poetelius). Further, the conquest of Italy and the consequent distribution of land and establishment of colonies helped to alleviate economic distress. But while much hardship was lessened, only a small group of plebeian families became sufficiently rich and influential to enjoy the newly gained political privileges, and there grew up a new patricio-plebeian nobility which through the Senate and magistracies exercised a monopoly of government scarcely less exclusive than that enjoyed earlier by the patricians alone. But in theory the sovereignty of the People was ended; by common sense and compromise the Romans, without bloodshed, had solved a problem which in many Greek States led to unending class-warfare.

7. Rome's external history was even more stormy. Following the collapse of Etruscan power in Latium the Romans, after a conflict with the Latins at Lake

Regillus (496?), negotiated through Sp. Cassius a new alliance with the Latin League. Union in Latium was necessitated by external danger on all fronts: in the north were Etruscans, in the north-east Sabines, eastwards lay the Aequi, and south-east the Volsci. All these peoples were pressing on the plain of Latium. In the first half of the fifth century, in wars adorned by the exploits of Coriolanus and Cincinnatus, a Triple Alliance of Romans, Latins, and Hernici held their own against Aequi and Volsci; in the second half they moved to the offensive and victory. Then under Camillus' leadership Rome besieged and finally captured the Etruscan outpost, Veii (396), but thereafter a predatory horde of Celts led by Brennus swept down from the north, defeated the Roman army at Allia (387) and sacked the city, although Manlius held the Capitol. Thereafter the city was rebuilt and refortified, while Rome's shaken prestige and power in central Italy were slowly re-established. In 358 the treaty between Rome and the Latin League was renewed on less favourable terms for the Latins, who later fought an unsuccessful war of independence (340–338), saw their League dissolved, and entered into fresh relations with Rome.

8. Roman interests were now spreading to Campania, where they became predominant after an alliance with Neapolis (326). This brought Rome into conflict with the Samnite hill-tribes, and bitter struggles ensued. After the perhaps apocryphal First Samnite War (343–341), the Second lasted intermittently from 326 till Roman victory in 304 and was marked by a major disaster at the Caudine Forks (321). Roman ascendancy in Etruria was extended, and alliances were made with Umbrian cities, the Picenes and Marsi, and with northern Apulia. Early in the third century the Samnites made a new bid for freedom; in alliance with fresh Gallic invaders, Etruscans, and Umbrians they were defeated at Sentinum (295) and finally subdued by 290. Further Celtic tribes and some Etruscan towns gave trouble until the Boii were defeated at Lake Vadimo (283) and again in 282. With the Samnites reduced, Rome was next drawn into southern Italy, where the Greek cities were being hard pressed by Lucanian tribes. When in 282 Rome sent a protective garrison to Thurii at that city's request, Tarentum resented Rome's interference in her sphere of influence, picked a quarrel with Rome, and summoned the help of Pyrrhus of Epirus, who landed in Italy (280). After two 'Pyrrhic' victories at Heraclea and Asculum he withdrew to Sicily (278); after his return (276) he was defeated by Rome (275) and retired to Greece, leaving Rome now undisputed mistress of Italy.

9. Rome's conquest of Italy had been achieved not merely by the sword; indeed, Rome was certainly no more aggressive than her neighbours, since the *ius fetiale* forbade wars of aggression. By founding Latin and Roman colonies at strategic points, and by the construction of roads, Rome had bound Italy together. But she had done more: she had created a political confederacy which embraced all Italy except Cisalpine Gaul. By the principle of incorporation Roman citizenship, in whole or part, had been extended to a large area of Italy, while the rest of the peninsula was bound to Rome by alliances of varying type, the most privileged being *ius Latii*. All citizens and allies alike, were subject to military service, but only the citizens paid direct taxes. Peace was thus at length substituted for war as the normal condition of life in Italy; very gradually, since Rome did not force her civilization on others, local languages, customs, and cults gave place to a common culture based on the Latin tongue and Roman law. Finally, by this political unification of Italy, Rome was no longer merely a Latin city but had become a world power, with whom Egypt entered into a treaty (273). The era to which later Romans looked back as the formative period of their national character, when life was simple and austere,

was passing. Rome was now politically linked with the Greek South and in direct contact with Hellenic influences.

III. ROME AND THE MEDITERRANEAN (264-133 B.C.)

10. As a world power Rome came into contact with Carthaginian interests in the western Mediterranean and with the Hellenistic world in the East. Her conflicts with Carthage are described under PUNIC WARS; they resulted in the elimination of Carthage from the western Mediterranean and in the acquisition by Rome of overseas *provinciae*, Sicily (241), Sardinia (238), Spain (201), Africa (146). The Romans had to face another Gallic invasion of Italy, which was shattered at the battle of Telamon (225). Thereafter the northern frontier was secured by the defeat of the Boii and Insubres (224-220; 200-191), the pacification of Cisalpine Gaul, and the protection of its flanks by the reduction of the Ligurians (197-154), Istrians (178-177), and Dalmatian coast (156-155; 129). Thus Roman authority was extended from near Massilia (*Marseilles*) round the sweep of the Alps to Istria and thence down the west coast of the Balkan peninsula.
